mediately following the name of the Companion in an ḥadīth strand. Reports, furthermore, in which Muhammad’s tacit approval, in Arabic takrib (plural takrīrāt). Moreover, although Muhammad’s name is not mentioned, additional statements in a ṣanhā such as: ... while the Kur’ān was still being revealed”, or a Companion’s assertion that the role of the ṣanhā pertained to one particular situation to which he bore witness, were likewise considered to be marfuʿa-supported, but only by implication.

RAF (see Tālāk).

RAFAH, conventional modern rendering Rafah, originally a town 5 km/3 miles inland from the eastern Mediterranean (lat. 31° 18’ N, long. 34° 15’ E.), on the borders of Egypt and Palestine and now administratively divided between Egypt and the Israeli-occupied Gaza Strip as two separate towns.

The name is ancient, and appears in Egyptian records of ca. 1300 BC as RPH. In Byzantine times it was part of Palestine Prima and a prosperous place, depicted on the famous Madaba map. At the time of the Arab invasions, it seems to have surrendered to ʿAmr b. al-ʿĀṣ on condition of paying the poll-tax and the waṣf (q.v.) in return for security of life and property; subsequently, it was included in the ḥudūd (q.v.) of Ḥilaṣṭin. The Arabic geographers often mention it as a stage on the route between Damascus and Egypt and as being in the zone of ḍafar, sand dunes difficult to traverse. However, water was easily available through digging, and in the 18th century Asad al-Lukayymi (d. 1765), en route for Jerusalem, compared the water from Rafah’s well to that of the Nile in its vicinity. The geographer al-Muḥallabī (d. 376/986), cited by al-Kalḵashandi, says that the population of this madīna was composed of Lakhm and Ḍūdḥām tribesmen; it had a market, a mosque with a minbar, fundūks, and was administered by a wālī al-maʿṣūma who had a force of soldiers at his disposal. Modern archaeological surveys and investigations have disclosed a number of derelict settlements in the neighbourhood, including on the coast, Tall Rafah, which served as the town’s landing-place. Yāḳūṭ describes Rafah as ruinous in his own time, and for several centuries it is hardly mentioned.

But in the 19th century it regained some of its old importance, being from 1865 a telegraph station on the Damascus-Cairo line. In 1870 the Khedive Ismāʿīl visited the place, and two granite columns were erected to define the border there of Egypt and Ottoman Syria. Subsequently, however, Rafah became a point of dispute. In 1898 Ḍūbkā Hīlī (q.v.) visited it after threats of an Ottoman annexation of the Sinai peninsula, discounted at this time by British diplomatic intervention; but in April 1906 the Ottomans occupied Rafah, removed the two columns and uprooted the telegraph poles. Negotiations followed, and the borders were defined in October 1906, with the telegraphic service restored and telephone and camel postal services introduced. During the First World War, British forces under Sir Edmund Allenby occupied Rafah in June 1917, establishing a military camp; a double-track, standard-gauge railway from al-Kantara to Rafah, thence to Beer-Sheba, was built. The town later grew by the settlement of Bedouins there and, after 1948, of Palestinian refugees; and in 1956 and 1967 it was occupied by Israeli forces. Following the Camp David Accords and the peace treaty between Israel and Egypt of 1979, Palestinian Rafah was again separated from its Egyptian counterpart.

RĀFĪ b. LAYTH b. NASR b. SAYYAR, apparently the grandson of the last Umayyad governor of Khurāsān ʿAbd Allāh b. Ṣaʿīd b. Māḥān [see IBN MAḤĀN]. As well as receiving support from the local Iranian population, Rāfī secured help
the Turks from the Inner Asian steppes, the Toghuz-Oghuz [see GHUZZ] and Karluk [q.v.]. The first application of the term appeared in the "History of Tabari" (700–818), where it is used to refer to the political move by the Turks to desert Zayd ibn al-Harith after he had rejected the first two caliphs, or both.

The name is used to refer to the proto-Imamiyya in the 9th century, particularly Mu'ta bi-rasâ'il, the celebrated traditionist in his time, in India. He died on 6 Shawwal 1233/9 August 1817, at the age of 70 (lunar years), of a stroke, and was buried in his family graveyard outside the city of Dihlī.

He wrote about 20 works, mostly in Arabic and Persian, and a few in Urdu. He is praised for the subtlety of his ideas and the conciseness of his style. Among his works in Urdu:

1. translation of the Kūrān, in the Persian style, which follows closely and faithfully. He and his brother 'Abd al-Kādir [q.v.], were the pioneers in this field, though their work was considerably facilitated by their father Shāh Wāli Allāh's Persian translation of the Kūrān (entitled Path al-Rahmān fi tārdjumāt al-Kūrān). The first edition of Shah Rafi's translation appeared in Calcutta in 1258/1838-9 and another, in 1266/1849, was published in 1847. For some of its numerous editions (from 1866 onwards) see Blumhardt, Cat. of the Hindustān printed books of the Libr. of the British Museum, London 1889, 290-1, and its Supplement, London 1909, 403.

In Arabic: 2. Tawkīl al-sinā'a or Tawkīl li-sinā'a al-ajdāḥ, dealing with a. logic, b. tahsil, i.e. principles of dialectics, teaching, learning, authorship and self-study, c. masābīḥ min al-umār al-lemma (some metaphorical discussions) and, d. tadbīr al-dīrār (i.e. an enquiry into causes and the criteria for judging conflicting opinions in religious matters). A considerable portion of the work has been quoted in the Abjad al-ulām, 127-35 and 235-70; 3. Mukaddmat al-ṣā'il, see Abjad al-ulām, 124; 4. Risālat al-Mahabba, a discourse on the all-pervading nature of love; see Abjad al-ulām, 254; 5. Tafṣīr Aṣūl al-Nār, a commentary on sūra XXIV, 35; 6. Risālat al-ʿArṭā wa l-kāfīya; see Abjad, 915; 7. Danāgh al-bāṣīl, dealing with some abstruse problems of the īlam al-bākāʾik; 8. a gloss on Mir Zāhid al-Harawi's commentary on Kūb al-Dīn al-Rāfi'i's Risālat al-Tasawwur wa l-ḥikāḥīq (see GUL, ii, 271); 9. Iḥāṣ al-barāhīn al-bikmāḥiyā 'llah wa il-ḥukmā'.

In Persian: 10. Kiyāmat-nāma (Lahore 1339; Haydarābād, undated ed.), on the last judgment also called Maḥdār-nāma (see Browne's Supplementary handlist, 189). For the two poetical versions, in Urdu, of this popular work, viz., Aghīr-i maḥdār (chronographic name, which gives 1250/1834-5 as the date of composition), and, Blumhardt, Cat., 290, and for an Urdu prose version, Kiyāmat-nāma o Dar al-ʿājadīrāt, see Blumhardt, loc. cit. 11. Fītūstā, Dihlī 1312; 12. Madmīna'ī tūl rasā'il, Dihlī 1314, small treatises on religious and mystical topics; 13. Shahr al-Sudār bi-tharb hul al-mawṣūla wa l-kūbur, an eschatological work, in a ms. copy in the Dār al-ʿUlām, Deoband, which institution also possesses the ms. of his 14. Laylat ʿal ḥamma, a mystical work (ff. 32).

Biography: Besides the references given above, Malāfīzā Shāh 'Abd al-ʿAzīz Muḥaddīd Dihlawī (composed 1233/1818), Meerut 1314, 79, 83-4; Muḥammad b. Yāhūdī (commonly known as Muḥsinī-al-Thirhti, a-ʿYānī o-ʿl-gani fi asāṣān al-Shaykh Abīl-Qāmi (litogr. on the margin of the Kūfik al-ʿasār 'an nājīl maʿānī al-ʿlāẓ̄) and composed in Medina in 1280/1863), Deoband 1349, 75; Siddīk Ḥasan Kāhan, Abjad al-ulām, Bhopāl 1295, 124, 914-15, and other works mentioned in the article; Karim al-Dīn, Faraḍ-dār dahr, Dihlī 1847, 410; Sayyid Ahmad Kāhan, Aghīr al-sanādīd, Dihlī 1270, 106; Faḵīr Muḥammad Dīhlīmān, Ḥādīth al-hanafīya, Lucknow 1891, 496; Rāhāmīn ʿAlī, Taḥkīra al-ulāma'-i Hind, Lucknow 1914, 66 and 4, 24, 51, 63, 223, 276 for notices, etc., of the Shāh's sons and pupils; Baqīr al-Dīn Ahmad, Wādīʿe Dihlī, Agra 1918, ii, 588-9; Garcin de Tassy, Histoire de la littérature hindoue et hindoustanie, 2nd ed., Paris 1870, ii, 548-9; Saksena, History of Urdu literature, Allahābād 1927, 253; Maʿarif (an Urdu monthly published from Aʿzamgah, India) for Nov. 1928, 344 ff.; The Oriental College Magazine, Lahore (an Urdu quarterly) for Nov. 1925, 42-9 (life, including a biographical notice, of the unpublished Nuzhat al-khwāṣūṭ by Mawwī ʿAbd al-Hāvy of Lucknow, and a list of works.).

MUHAMMAD SHAFI' AL-RĀFIDA OR AL-RAWĀFI'IDAR, a term that refers to (i) the proto-Imāmiyya (and, subsequently, the Twelver Shi'a); (ii) any of a number of Shi'i sects. In this article it is used in the former sense unless otherwise indicated.

The origin of the term is a matter of dispute. 1. Early Imāmī heresiographers maintain that the name was first applied to the adherents of Dja'far al-Sādiq by al-Mughīra b. Sa'īd (executed in 119/737), immediately after they had dissociated themselves from him (see MUGHRĪYAH). 2. Other reports, in contrast, relate it to the abortive uprising of Zayd b. ʿAlī against the Umayyads (in 122/737). According to these reports (including one from the Kūfān historian Awānī b. al-Farākarn and another from Abu Mūsā al-Khāl), some Kūfāns who had initially joined Zayd's camp made their continued support conditional on his rejection (raf') of Abū Bakr and ʿUmar (or of the entire sāḥāba). When Zayd refused to accede to their demands they deserted him (rafātā), thus bringing about his defeat. The term Rāfīḍa is therefore variously said to recall the desertion of Zayd, the rejection of the first two caliphs, or both.

The name is used to refer to the proto-Imāmiyya in
statements of dubious authenticity ascribed to the traditionist al-Sha'bī (d. 103/721 or 110/728), and was current by the mid-2nd/8th century, when it was reportedly used by (among others) the Zaydi notable Rauḍāt al-Maṣāḥiḥ. Not surprisingly, Hasani circles were particularly active in propagating anti-Rāfīḍī traditions. Zaydi himself is said to have quoted the Prophet as telling ‘Ali that he should kill any Rāfīḍī whom he meets; the reason given is that they are polytheists (Náhnáv al-Himyari, al-Ḥurūf al-ʿin, Cairo 1948, 185). Muhammad is also said to have declared: "At the end of time there will appear a group of people called RauḍaT al-Maṣāḥiḥ who will reject (yafundil) Islam." According to an account attributed to al-Ṣuddī (d. 127/744-5), Zaydi compared the Rāfīḍī desertion with the Khāridjī revolt against ‘Ali ( Ibn Ṭasikr, TaRīkh Kūmūd Dimāšḵ, facsimile ed., vi, 648). Detractors argue that rāfīḍ is based on Judaism; they allege that ‘Abd Allāh b. Sāba’ (q.v.) was of Jewish origin, and claim that anthropomorphism (taghḥūt), allegedly a hallmark of Judaism, was first introduced into Islam by the Rāfīḍī (cf. J. van Es, Religion und Gesellschaft, i, 399-403).

While Rāfīḍī was originally intended as a pejorative term, the Imāms soon turned it into an honorific term. The traditionist al-ʿAṣmāʾī (q.v.) quotes Djaʿfar al-Ṣādiq as explaining that it was bestowed on the Shīfīs by God and is preserved in both the Torah and the Qur’an (al-Masāʾil, ed. Muḥammad b. Ṣalāḥ, 3 vols., al-Kūmūd, 1935, i, 126; ii, 359). Muhammad is also said to have declared: "At the end of time there will appear a group of people called RauḍaT al-Maṣāḥiḥ who will reject (yafundil) Islam." According to an account attributed to al-Ṣuddī (d. 127/744-5), Zaydi compared the Rāfīḍī desertion with the Khāridjī revolt against ‘Ali ( Ibn Ṭasikr, TaRīkh Kūmūd Dimāšḵ, facsimile ed., vi, 648). Detractors argue that rāfīḍ is based on Judaism; they allege that ‘Abd Allāh b. Sāba’ (q.v.) was of Jewish origin, and claim that anthropomorphism (taghḥūt), allegedly a hallmark of Judaism, was first introduced into Islam by the Rāfīḍī (cf. J. van Es, Religion und Gesellschaft, i, 399-403).

While Rāfīḍī was originally intended as a pejorative term, the Imāms soon turned it into an honorific term. The traditionist al-ʿAṣmāʾī (q.v.) quotes Djaʿfar al-Ṣādiq as explaining that it was bestowed on the Shīfīs by God and is preserved in both the Torah and the Qur’an (al-Masāʾil, ed. Muḥammad b. Ṣalāḥ, 3 vols., al-Kūmūd, 1935, i, 126; ii, 359). Muhammad is also said to have declared: "At the end of time there will appear a group of people called RauḍaT al-Maṣāḥiḥ who will reject (yafundil) Islam." According to an account attributed to al-Ṣuddī (d. 127/744-5), Zaydi compared the Rāfīḍī desertion with the Khāridjī revolt against ‘Ali ( Ibn Ṭasikr, TaRīkh Kūmūd Dimāšḵ, facsimile ed., vi, 648). Detractors argue that rāfīḍ is based on Judaism; they allege that ‘Abd Allāh b. Sāba’ (q.v.) was of Jewish origin, and claim that anthropomorphism (taghḥūt), allegedly a hallmark of Judaism, was first introduced into Islam by the Rāfīḍī (cf. J. van Es, Religion und Gesellschaft, i, 399-403).

While Rāfīḍī was originally intended as a pejorative term, the Imāms soon turned it into an honorific term. The traditionist al-ʿAṣmāʾī (q.v.) quotes Djaʿfar al-Ṣādiq as explaining that it was bestowed on the Shīfīs by God and is preserved in both the Torah and the Qur’an (al-Masāʾil, ed. Muḥammad b. Ṣalāḥ, 3 vols., al-Kūmūd, 1935, i, 126; ii, 359). Muhammad is also said to have declared: "At the end of time there will appear a group of people called RauḍaT al-Maṣāḥiḥ who will reject (yafundil) Islam." According to an account attributed to al-Ṣuddī (d. 127/744-5), Zaydi compared the Rāfīḍī desertion with the Khāridjī revolt against ‘Ali ( Ibn Ṭasikr, TaRīkh Kūmūd Dimāšḵ, facsimile ed., vi, 648). Detractors argue that rāfīḍ is based on Judaism; they allege that ‘Abd Allāh b. Sāba’ (q.v.) was of Jewish origin, and claim that anthropomorphism (taghḥūt), allegedly a hallmark of Judaism, was first introduced into Islam by the Rāfīḍī (cf. J. van Es, Religion und Gesellschaft, i, 399-403).

While Rāfīḍī was originally intended as a pejorative term, the Imāms soon turned it into an honorific term. The traditionist al-ʿAṣmāʾī (q.v.) quotes Djaʿfar al-Ṣādiq as explaining that it was bestowed on the Shīfīs by God and is preserved in both the Torah and the Qur’an (al-Masāʾil, ed. Muḥammad b. Ṣalāḥ, 3 vols., al-Kūmūd, 1935, i, 126; ii, 359). Muhammad is also said to have declared: "At the end of time there will appear a group of people called RauḍaT al-Maṣāḥiḥ who will reject (yafundil) Islam." According to an account attributed to al-Ṣuddī (d. 127/744-5), Zaydi compared the Rāfīḍī desertion with the Khāridjī revolt against ‘Ali ( Ibn Ṭasikr, TaRīkh Kūmūd Dimāšḵ, facsimile ed., vi, 648). Sāba’ (q.v.) was of Jewish origin, and claim that anthropomorphism (taghḥūt), allegedly a hallmark of Judaism, was first introduced into Islam by the Rāfīḍī (cf. J. van Es, Religion und Gesellschaft, i, 399-403).
Muʿtazili Bishr b. al-Mutʿamir and the third by the Zaydi al-Kasim b. Ibrahim (on which see W. Made- lung, Der Imam al-Qasim ibn Ibrahim, 98, ed. B. Abrahamow, in The theological epistles of al-Kasim ibn Ibrahim, Ph.D. diss., Tel-Aviv University 1981, un-publ.). While some Sunni scholars permitted traditions to be transmitted on the authority of Rāfidis, others did not (al-Khaṭṭāb al-Baghdādī, al-Kifāya fiʿilm al-ruwaḥ, Haydarābad 1357, 120-3). Opposition to the Rāfidīs also came to the fore in the legal sphere: the term "Rāfīqīa" in Imdāmi Shīʿī usage, in JAOS, xcix (1979), 677-9; idem, Belief and law in Imdāmi Shīʿism, Alder- Cairo 1366-9/1947-50, iii, 133; al-Majdūsī, Bihār al-anwār, lixvi, 156), while one of his successors as kāfīd, the Kūfan traditionist Hāfs b. Ghiyāḥ al-Naḥḥāʾī (d. 194/809-10), is said to have denied permission to women to marry him. His stated reason was that the Rāfidīs consider a triple repudiation (tādāk) pronounced in one session to be tantamount to a single repudiation, and hence revocable; Rāfidīs who pronounced this formula therefore regarded themselves as still married (Waklān, 388, 253/867), as cited by al-Malati, refers to fifteen Rāfidīs who pronounced this formula as objectionable. Rādīddīn, and members of the Kufan family which in itself is not Alī and his descendants, therefore regarded themselves as still married (Waklān). Yet in general the term continued to denote the Kufan traditionist Hāfs b. Ghiyāḥ and his family which in itself is not objectionable. As already noted, the appellation Rāfīda had wider applications. For example, Khusayyā b. Asrām (d. 253/867), as cited by al-Malāfī, refers to fifteen Rāfīda groups, most of whom were extremist Shīʿīs, and al-Šahrastānī also includes the ghulāt in the term Rāfīda; and the Rāfīds who ascribe the ghulāt to the Zaydi leadership, to the Christian dhikr of Jesus may likewise be seen as the ghulāt. Ibn Ḥanbal (as cited in Ibn Abī Yaʿlā, Tabakāt al-anwār, i, 33), Ibn Kusayyā, ʿAbd al-Kāhir al-Baghdādī, Abuʿl-Muṣafir al-Isfaraṇīyīn and others used the term Rāfīda to refer, in- ter alia, to the Zaydis.

AL-RAGHIB AL-ISFAHANI

shot 1991; index; D. Gimaret and G. Monnot, Livre des religions et des seictes, i, Peeters-Unesco 1986, in-

dex; M. van Ess, Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidscha, i, Berlin and New York 1991,

[272-403. See also §HI ABU 'L-KASIM AL-HUSAYN b. Muhammad b. al-Mu'adhdhin, religious and

Arabic literary scholar. Despite the consider-

able popularity of his works, at least a dozen of

which are extant, and his demonstrable influence on

al-Qazâli and his later figures, al-Râghib's name

is missing from almost all the standard biogra-

phical collections, and information about his life is

extremely scanty. Although late sources place him in

the 6th/12th century, more recent scholarship has

confirmed al-Suyûti's statement (Budwa, ii, 297) that he
died early in the 5th/11th. In his literary anthologies

he alludes a number of times to contemporaries who

can be identified as members of the circle of the Bûyid

vizier Ibn 'Abâbî (d. 385/995 [q. v.];) and the fact that he

refers to Ibn 'Abbâbî's successor, Abu 'l-'Abbâs al-

Dabbî (d. 399/1008), exceptionally, by his full title

suggests that he may have been writing during the lat-

ter's vizierate. There is no sound evidence that al-

Râghib ever visited Baghdad or left his native

Isfâhan.

Further knowledge of al-Râghib comes almost en-
tirely from his own works, whose variety made it dif-
ficult for later biographers to pigeonhole him; al-

Suyûtî calls him simply an "author" (jâhid al-
musannafât). His best-known work, the Muhaddîth al-

'udabâ' wa-muhaddîth al-suwarâ' wa 'l-bulaghât (2 vols.,

Beirut 1960, and earlier editions), is a comprehensive

adab encyclopaedia, organised in twenty-five chapters

covering such topics as intellect, rulership, crafts,

food, courage, love, death, and animals, and in-

cluding poetry and short prose anecdotes from all

periods of Islamic history in approximately equal pro-

portions; particularly prominent are verses by al-

Mutanabbi and al-Shanf al-Râjiî [q. v.].

The pre-eminen
c...
with the Asfâm al-balâgha mentioned by al-Suyûti and later sources.

Al-Rãghib's predilection for subtle semantic analysis, apparent in the Mâdîna' al-balâgha, is even more pronounced in his alphabetical lexicon of Kur'ânic vocabulary, the Mufradât al-fâsîk al-Kur'ân (ed. Nadîm Marraghli, Beirut 1972, and other editions). This work, whose influence can be traced in later ta'fîr as well as lexicography, was one of a series of monographs by al-Rãghib on the Kur'ân; in its introduction the author refers to his previous Risâlât manabîbî 'alâ 'arâdat al-mufradîn wa 'l-istabâr wa 'l-arâfat, al-Kubrãzi CAbd al-Rahman Ahmed Pasha (1763-1767), and, lastly, to Hekîm-zade CAbt Pasha. In 1141/1728 he returned to Tahkik mundsabdt al-interd, a study of phrases repeated in the Kur'ân in tanzil, Risdâlû munabîs/sir. This work, whose influence can be traced in later monographs by al-Rãghib on the Kur'ân; in its introduction, the author's Dâmî al-ta'fîr, which accords with other information on al-Rãghib but not on al-Iskãfî.

Al-Rãghib's ta'fîr, of which only the initial sections are known to be extant in manuscript, is quoted in the ta'fîr of al-Baydîwî (anonymously) and Fâghr al-Dîn al-Rãzî (explicitly). It may never have been completed. Most celebrated was its methodological introduction, which was often copied separately and has been printed several times (most recently, as a muhâk to al-Nãhî, al-Khawâdid [see Bibl.]). A model of clarity, this brief essay combines traditional philology with concepts derived directly from the philosophical tradition in an elegant and novel way.

The same combination of traditional religious scholarship and falsafa is even more apparent in al-Rãghib's best-known ethical work, al-Dharî a madârîn al-sharî' (ed. Abû Yazîd al-Adâmî, Cairo 1985, and earlier editions). This work is structured in terms of a Platonic-Aristotelian psychology, with separate chapters on man's faculties in general, his intellect, the concupiscent and irascible faculties, justice, labour and money, and human acts. The pervasive philosophical influence is highly reminiscent of Miskawayh [g. a.] (who died and was buried in Isfahân in 421/1030), although no textual parallels between the two authors' works have been identified (except for a brief quotation from Miskawayh in the Muhãdãrât). Al-Rãghib's falsafa is, however, considerably more Islamicised than Miskawayh's, with virtually every assertion being backed up by appropriate citations from Kur'ân and hadîth. The statement by al-Bayhâkî (Ta'ãrîkh hukmât al-Islâm, ed. M. Kûrd 'Alî, Damascus 1946, 112-13) that al-Rãghib combined the Isfahânî and Baghdadî schools in his works is particularly appeciable to the Dharî a. The work's ultimate influence was considerable, as it was al-Ghazâlî's direct source for a good half of his Mîzân al-'amal, as well as for significant sections of his îlyâsî 'ulûm al-din and Mû'ãridî al-khods. Al-Rãghib also wrote a companion piece to the Dharî a, the Ta'ãfîl al-nâzî'în wa-ta'ãfîl al-sâdî'ayn (ed. 'Abd al-Majîd al-Nâjîdhâr, Beirut 1988), which presents many of the same ideas but stresses even more explicitly the complementarity of 'akl and sharî'.

Influence from the falsafa tradition is equally apparent in a theologically treatise by al-Rãghib published (very imperfectly) under the title al-'îdãbât (ed. Shãrmân al-'Adlî, Beirut 1988). Its proper title is unknown, although one of the three known manuscripts of the work calls it (rather implausibly) Ta'ãfîl al-bayyân fi ta'ãfîl al-Kur'ân, a title referred to by the author himself in his Dharî a. In this work, al-Rãghib deals with a series of standard kalâm topics, such as the attributes of God and the problem of free will, but much of his argumentation is philosophically, including his conception of God as the Necessary Existence (wâdîgî al-wujûd bi-dhâtî) and the Unmoved Mover. Repeated attacks on the Mu'tazilis, and occasional ones on the Shî'a, show traditional questions about al-Rãghib's adherence to either of these positions to be groundless, although the existence of such questions from an early period suggests that this work was never widely known. Al-Rãghib's actual theological stance seems in fact to have been close to that of the Ash'ûrîs, although he attacks them once for denying the existence of a rational moral order in the universe; his pointed omission of Abû Hanîfah from a list of major formative figures in jurisprudence can be added to other evidence for his adherence to the Shâfi'i school in law. He also explicitly supports Sunnîsm in some form.

Al-Sârîsî has noted the existence of four brief epistles by al-Rãghib in an Istanbul manuscript (Esad Efendî 3645), with the titles R. fi anna fuqûl al-insân bi 'l-'ulûm, R. fi ãbir al-wujûd wa 'l-âhad, R. fi adåd mughãl'lât al-nâs, and R. fi marâdî al-'ulûm. The status of a few other titles in manuscript catalogues and bibliographical sources remains to be investigated. Apparently uninfluenced by his contemporary Ibn Sinâ, al-Rãghib is significant as a precursor of al-Ghazâlî in accepting and utilising a more diffuse form of falsafa in maintaining a rationalised but relatively conservative Islamic stance.

RAGHIB PASHA — RAGHUSA

391

the capital and in the following year went back to Baghdad as deputy to the reis efendi. He, but very soon received the post of chief of the petition department of the mały office in Istanbul. Two years later he accompanied the governor Ahmed Paša, who had been appointed serasker of Baghdad, as deputy of the reis efendi, and returned to the capital as chief of the poll-tax office (dişye mühasebeyii). In this capacity he went into the field in 1149/1736 and took a leading part in the peace negotiations of Nišmow. In July 1731 he was given a seat in the nishndfi-bashi office in his house, and three years later was promoted to be governor of Egypt. For five years he struggled with the factions of the Mamluks [q. v.], but had finally in Ramâdân 1161/September 1748 to yield to the superior power of the beg. He returned to the capital, and as nişhâbi-bashi was given a seat in the divân. After brief periods as governor in Rakka and Aleppo, he was appointed to the highest office in the state, the Grand Vizierate, in succession to Mustafa, who had been dismissed on 20 Rabî' I 1170/13 December 1756. He filled this office gloriously for seven years till his death, and was the last outstanding Grand Vizier of the Ottoman empire. He died in Istanbul on 24 Ramâdân 1176/8 April 1763 and was buried in the garden of the noble foundation founded by him (see J. von Hammer, GOR, viii, 249).

Mehmed Râghib Paša was not only one of the greatest of Ottoman statesmen but is one of the classical authors of Turkish literature. His works, which are distinguished by beauty of style as well as by graceful presentation, cover all possible fields (see J. von Hammer, GOR, ix, 625, nos. 3338-3653). His translations into Turkish of two Persian histories, Mîrkhânândî's [q. v.] Rawdat al-safa and 'Abd al-Razzak b. Ishak al-Samarkandi's history of the Timûrsids, Mâdad al-sa'dayn, unfortunately only survive in fragments but even in this state are masterpieces of Ottoman prose. Râghib Paša is no less highly esteemed as a poet. His Divân (printed at Krakow in 1718 and [in Bûlûk] in 1253) contains his most important poems, some of which are in praise of great contemporaries.

On mss. of his works, see Babinger, GOW, 290 (to which may be added Istanbul, Hamâdiyye, no. 598; Zagreb Acad. of Sciences, orient. coll., no. 833, 1 and 2 (with Divân), both containing his telkhisât; Uppsala, no. 706 (see Zettersen, Cat., ii, 106-7) obviously contains another work).

Bibliography: See F. Babinger, GOW, 888 ff., and the sources given on 290; LA, art. Râgup Paşa (Bekir Stukâ Baykal-Abdulkâdir Karahan)

RAGHUSA, the mediaeval Arabic form of the name of the Dalmatian city of Ragusa, until the advent of Bonaparte a free state, the modern Dubrovnik in Croatia (see 2. below), situated in lat. 42° 40' N., long. 18° 07' E.

History up to the beginning of the 19th century.

Ragusa, the Roman Ragusium (see PW, 2, Reihe, 1.A. 1, col. 130), is situated on the south side of a peninsula which runs out into the Adriatic, picturesquely situated (50 feet) at the foot and on the slopes of Mount Srgujius, and was founded in the 7th century by Romance fugitives from Epidaurus which had been destroyed by the Slavs; it later belonged to Byzantine Dalmatia which had been settled by a Romance population.

At the end of the 10th century the town had become strong and rich through its prosperous maritime trade, was paying homage to the Venetians, under whose suzerainty it remained after various interludes continuously from 1204 to 1358. In this year, Ragusa passed to Hungary and soon attained such power through its flourishing trade that it formed a free state with an aristocratic form of government. Authority was in the hands of the nobles (Grand Council) who chose the Senate (45 members).

The latter, in 1240, was given a seat in the Grand Council (45 members) which chose every month a Rector (rettere) as head of the state. Al-Idrîsî [q. v.] mentions Ragusa in his Opus geographium (761, 769, 790, 791) as (râgus, etc. (other readings: rûgus) and is evidently quoting Frankish sources (cf. thereon W. Tomasek, Zur Kunde der Hâmus-Halbinsel. II. Die Handelswege im XII. Jahrh. nach den Erkundungen des Arabers Idriisî, in SB, Ak. Wiss. Wien, phil.-hist. Kl., viii. cxxiii [1887], fasc. 1). In the Ottoman period, the Slav name Dubrovnik is found exclusively, in place of Ragusa.

Ragusa's relations with Islam, at first completely hostile, go back to a remote date. When the Arabs in the 9th century conquered Sicily and established themselves on the mainland in Bari (Apulia), they besieged Ragusa on one occasion, which defended itself bravely and was relieved by the navy of the emperor Basil I (867-86). Under the emperor Romanus III (1028-34) the Ragusans distinguished themselves in the sea-fights between Byzantines and Arabs. It was not till a later date that relations became more peaceful, when Ragusan commerce, which extended to Egypt and Syria, to Tunis and as far as the Black Sea, began to flourish. As early as the 14th century, corn was exported to Ragusa from the harbours of Anatolia and the relations to the beyliks (tâwâyîf-i mâlik) in Anatolia were well established. The first documented relations between Ragusa and the Ottoman empire belong to the period of Bayezid I Yildirim (791-805/1389-1403 [q. v.]), as the relations of the free state with Orkhan [q. v.] and Murâd I [q. v.] mentioned in later Ragusian histories will not bear serious investigation. It is, however, certain that at no time prior to 1237 was it possible for the Ragusans to remain on good terms with the Ottomans, who were advancing westward, for the sake of their trade. They were able to deal with tact and skill with their new neighbours. Ragusan trade in Turkey developed considerably as the many frontiers and customs offices of the numerous petty rulers of the Balkans, who had been dispossessed by the Turks, disappeared and the Turkish duties were uniform and low. Artisans manufactured in Ragusa itself, cloth, metal, soap, glass, wax, etc., or goods imported from Italy for the Balkan peninsula, were taken into the interior on safe roads. There was a caravan trade which went from Ragusa via Trebinje, Tienitîle, Foča, Gorađe, Plevje, Prijeplœ, Trigoviće, Novibazar, Niš [see Niš], Sofia and Plîvod to Edirne and later to Istanbul (cf. C. J. Jirecke, Die Handelsstraßen und Bergwerke von Serbien und Bosnien während des Mittelalters. Prague 1879, 74 ff.; Von Ragusa nach Niš). In the interior of the Peninsula, there were the factories of the Ragusans like Rudnik, Prizren, Novo Brdo, Priština [see Priština], Zvornik, Novibazar, Skopje and Sofia, with many other settlements extending as far as the mouths of the Danube. On 12 May 1392 the Little Council of Ragusa gave the nobleman Teodor Gisla in Novo Brdo orders to travel to the Turkish sultan and to
make representations about the capture of some Ragusan merchants. There is a Turkish safe-conduct (litera securitatis) of 20 June 1396 prepared for Ragusan merchants. In 1397 Sultan Bajazet I allowed the Ragusans to trade unhindered in the Ottoman empire, and a few years later (1399), the first Ottoman embassy led by Kefala Feriz (Firuz)-Beg arrived in Ragusa from the citadel of Zvečan (in Kosovo) (cf. F. von Kraelitz-Greifenhorst, op. cit. below, 7). The first embassy from Ragusa to the Sublime Porte was, however, not sent until 1430. It was received by the sultan in his palace in Edirne and received from him the first extant charter of trading privileges, dated Edirne, 6 December 1430 (cf. Ćiro Truhelka, Türkenstoffsämi spomenici dubrovačke arhive, in Glasnik zemaljskog muzeja u Bosni i Hercegovini, Sarajevo, xxii [1911], no. 2). To protect her widespread trade in the Balkan Peninsula, Ragusa, after the first temporary conquest of Serbia by the Ottomans, found herself forced to offer the Porte an annual present of 1,000 ducats in silver plate (argenteria), but when Georg Branković restored the independence of Serbia in 1444 this promise was promptly withdrawn; on the final subjection of Serbia by the Turks in 1459, this tribute (korpora) became a regular institution. From 1459 it was 1,500 ducats and gradually increased to 15,000 ducats. From 1481 it was 12,500 ducats and was annually brought to the imperial court by special oratores tributi with very detailed instructions (cf. the text of one of these commissiones for the Paladins Marino de Gondola and Pietro di Luccari of 1458, and of a later one for the ambasciatore del tributo Giov. Mar. di Resti of 1572, in Ludjo Knež Vojnovic, Dubrovnik i osmansko carstvo, Prva knjiga: Od proge ugovora s portom do usvojenja Hercegovine, Belgrade 1898, 118-55, 256-66); cf. Jireček, Die Bedeutung von Ragusa, etc., no. 49. A number of the earliest documents relating to these missions have been published by F. von Kraelitz-Greifenhorst, in his Die osmanisch-türkischen Urkunden im Archive des Rektoren-gorc, in Festschrift fur Georg Kl. von Hammer, Berlin 1930, 346-81, with erroneous conclusions). The relationship that Ragusa cunningly used every opportunity to avoid its oppressive obligations (cf. the significant saying in the Levant quoted by von Hammer,GOR, vii, 29: Non sismo Christi, non sismo Ebrei, ma poveri Ragusi), until the peace of Carlowitz (1699) [see Karlovec] made it possible for the Ottomans to collect the tribute again (cf. von Hammer, GOR, vii, 29). From 1703 it was paid every three years and, in 1804 delivered for the last time in Istanbul by the envoys Paul Gozze and Blasius Menze.

In the Turkish wars of 1663-69 and 1714-18 the Venetians occupied the hinterland of Ragusa and Trebinje, but at the peace of Carlowitz and Passarowitz [see Passaré] the Ragusans, protected by Austria and the Porte, negotiated so skilfully that Turkey was not only left the land as far as the Ragusan frontier but also two strips of territory on the coast (Klek and Sutorina) so as not to become direct neighbours of Venice. This was the last great coup of Ragusan policy.

With the decline in Ragusan trade, which came about for the same reasons as the general decline of Italian trade in the Levant, the political decline of the republic set in, with only a final revival during the Napoleonic era (see 2. below).

The Ottoman traveller Ewliya Celebi [q.v.] in his Seyahet-nâme (vi, 443 ff., esp. 445-53) gives a full description of Dehber Venedik which he contrasts with Bundukâni Venedik, i.e. Venice proper (cf. on these terms, F. Babinger, Aus Südtürkischen Türkischen, Berlin 1927, 38 n., and H. v. Mäik, Beiträge zur Kartographie Altbaniens, in Geographia Hungarica, series geologica, tomus iii, Budapest 1929, 639-19 n. 88). In 1074/1664 he came via Ljubomir, Popovo to Dubrovnik, whence he went on to Castelnuovo (Hercegovini). On Hungarian and Serbo-Croat translations of this section, cf. Babinger, Ewliya Celebi's Reiseaue in Albanien, Berlin 1930, 1 and 2, n. B.

Statistics regarding the population of Ragusa in the older period are not available. With the prosperity and long period of peace, a literary life began; poetry—Latin and Slav—was definitely cultivated from the end of the 15th century. Latin was used in the offices for over 1,000 years, in recording the proceedings of the Senate till 1806. Within its walls there was a considerable number of foreign fugitives from Turkish persecution (e.g. Skanderbeg).

The archives of Ragusa, kept in the Rector’s palace, still await thorough study and contain a large number of unpublished Turkish documents and countless documents of value for the history of Turkish rule in southeastern Europe. Cf. F. Giese, Die osmanisch-türkischen Urkunden im Archiv des Rektoren-palastes in Dubrovnik (Ragusa), in Peticstvke fur Georg Jacob zum siebzigsten Geburtstag, Leipzig 1932, 41-56. Cf. also J. Gelich (Djelčić), Dubrovački arhiv, in Glasnik zemaljskog muzeja u Bosni i Hercegovini, xxii (1910), and Milan v. Reletar, Dubrovački arhiv, in Narodna Enciklopedija, i, 584 ff.

Ragusa had busy commercial relations with other Muslim states besides Turkey. In 1510, for example, Ragusa received from the Mamûl sultan Kânsaw al-Ghawri a charter which gave its trade with Egypt protection and freedom (cf. Giacomo Luccari, Copioso ristretto degli Annali di Rausa, Venice 1605, 126, and thereon Fr. M. Appendini, Notizie sulle istoriane critiche antichità, storia e letteratura de’ Ragusei, Ragusa 1802, i, 213, with erroneous conclusions). The relations were, it is true, not always of a peaceful nature, as the “state of war” in 1194/1780 between Ragusa and Morocco showed (cf. thereon, F. Babinger, Ein marokkanisches Staatsarchiv an den Freistaat Ragusa von...
393

Bibliography: In addition to the works mentioned in the text, see also the older travellers in so far as they describe the road through the Balkan Peninsula (Szlownica), especially, Jean Chesneau, *Les Voyages de Monsieur d'Armand* (1547), Paris 1887, ed. Ch. Schefer; Sieur D[es Hayes de] C[journemin], *Voyage du Levant* fait par le commandement de M. de C. en l'année 1621 par le Sieur D.C.3, Paris 1632; *Les Voyages de M. Queliot à Constantinople par terre*, Paris 1664 and later printings; Sir George Wheeler, *Journey into Greece*, London 1682, or French translation, *Voyage de Dalmatie, de Grèce et du Levant*, Amsterdam 1689, 2 vols.—A scholarly account, particularly one based on the documents, of the relations of Ragusa with the Ottoman Empire is still lacking; as is a full commercial history of the republic.—The principal work on the history of Ragusa is the Geschichte des Freistaates Ragusa, Vienna 1807, by Johann Christ. von Engel (1770-1814). On other relations between Ragusa and the lands of Islam, see Vladimir Mažuranić, *Südost im Dienste des Islam* (vom X. bis ins XVI. Jahrhundert), German tr. publ. by Camilla Lucia Zagar, Zagreb 1928, 55 pp., which does, however, on every point stand the test of strict examination.—On the coinage of Ragusa, see Milan v. Reletar, *Dubrovacka numizmatika*, 2 parts, 1924-6.—Of the Ragusan historians of the older period, in addition to S. Razzi, *La storia di Ragusa*, Lucca 1588, and Jan. Resti, *Chronica Ragusina* (in the Monumenta Slav. Medii, xxv, Zagreb 1895), Giacomo di Pietro Lucciari [= Jakov Lukarević (1551-1615)] most deserves mention, but a thorough study of the probably unreliable sources of his *Cipsoo ristratto degli annali di Raua* (Venice 1605, xxxvi, 176 pp., 4°, and Ragusa 1790, xxiii, 325 pp., 8°) is still a desideratum; see for the present Vl. Mažuranić, *Izvori dubrovačkoga historika Jakova Lukarevića*, in Narodna Starina, Zagreb 1924, no. 8, 121-53.—An excellent and exhaustive bibliography on Ragusa is given in the introduction to the work of Ivan Dužek, *Avioni di Ragusa: Documenti sull'Impero turco nel secolo XVII e sulla guerra di Candia*, Rome 1935, which is also of great importance for the history of relations between Ragusa and Turkey.—There is no collection or edition of the surviving reports of Ragusan envoys on their journeys to the Porte on the lines of the long-available Venetian relazioni. The only possible exception is the *Relazione dello stato della religione nelle parti dell'Europa sottoposte al dominio del Turco*, Paris and the Hague 1961.

RAHÀ [see tâhûk].

AL-RABA, RHABAT MÄLIK B. TAWK OF RHABAT AL-ŠÀHM, a town on the right bank of the Euphrates, the modern al-Miyädin.

Hardly anything definite is known about the history of the town before the Muslim era. In the Middle Ages it was usually identified as the Rehebat han-Nahr of the Bible (Gen. xxxvi, 37) in which the river (Euphrates) especially in the Talmud and by the Syriac authors (e.g. Mich. Syr., cf. index, 63°; Barhebraeus, *Chron. syr.*, ed. Bedjan, 273 and passim), who usually call it Reheboth, Rahabat (M. Hartmann, in *ZDPV*, xxiii, 42, n. 1). A. Musil (*The Middle Euphrates*, New York 1927, 340) takes it to be the Thapsakos of Ptolemy, which he—certainly wrongly—wants to distinguish from the well-known town of the name at the bend of the Euphrates (ibid., 318-20), instead of seeing only an erroneous location by the Alexandrine geographers (cf. the article *Thapsakos*, in *Paulus-Wissowa, RE*, v. a, cols. 1272-80). The name al-Rahba is explained by Yakût (*Maqâm*, ii, 764, following the grammarian al-Naḍr b. ʿUmamī) as the flat part of a wadi, where the water collects (E. Herzfeld, *Anthologie des Euphrat- und Tigris-Gebiet*, ii, 382; cf. A. Socin in *ZDPV*, xxv, 43).

According to Arabic accounts, it was at one time called Furdat Nuʿm (al-Tabarî, i, 917) or simply al-Furda (Musâkawaih, *Tafhîr*, ed. Caetani, 87); in the vicinity was a monastery, Dayr Nuʿm (*Yâkût*, ii, 704, iv, 797).

According to al-Baladhurî, *Filîh*, 180, there was no evidence that al-Rahba below Karkisîya is an old town; on the contrary it was only founded by Mâlik b. Tawk b. Ṭirâb al-Talghibi (cf. Ibn Taghribird,
Nudjum, ed. Popper, ii, 34) in the caliphate of al-Ma’mun (198-218/813-33) (a legendary embellishment of the story of its foundation by Umar al-Bistami, in Yahya, ii, 764). The new foundation was in the form of a long, rectangular head cloth (tajlasan). After the death of its founder (Ibn al-Addajib, vii, 188) in 260/873-4, he was succeeded as ruler of the town by his son Ahmad, who was, however, driven out of it in 270/883 by Muhammad b. Ali ‘l-Sadiq, lord of al-Anbir, Tarik al-Furat and Rabatb Tawk (al-Tabari, ibid., 394).

The Karmafi Abu Tahir al-Djaunibi took the town on 8 Muharram 316/3 March 928 and killed many of its inhabitants (Miskawayh, Taqfird, ed. Amedroz, i, 182-3; al-Masudi, Tanbih, 384-5; Ibn al-Addajib, vii, 132; ‘Arib, 134). In the following decades, the town suffered much from civil wars until ‘Adil, who had been sent from Baghdaid by Badjkan, in 330/941-2 took possession of the town and the whole province of Tarik al-Furat and a part of al-Khabur (Ibn al-Addajib, ii, x, 267). In the reign of the Hizam Najar al-Dawla, the Taghlibi Djamibl rebelled in al-Rahba, and the town suffered very much; he was finally driven out and was drowned in the Euphrates (op. cit., 357-8).

After the death of Najar al-Dawla (330/941-2), his sons Hizam, Abu ‘l-Barakat and Abu Taghibl disputed for the possession of the town, which finally remained lord of al-Rahba, Ahmad b. ‘Shadi of Dwin, Sa’lal al-Din’s uncle, in 559/1164, al-Rahba and Hims (Mich. Syr., iii, 325; Barhebr., Chron. syr., 330). The latter entrusted the government of al-Rahba to an officer named Yusuf b. Mallah. Shirkib built al-Rahba of al-Djafora with a citadel around 1055, and also provided the town with the Euphrates, because the town of Rabatbl Malik b. Tawk was then in ruins (Abu ‘l-Fida’, Takvim al-buldan, ed. Reinaud, 281; Hadijih Khalifa, Dykhun-nima, Istanbul 444). The new town of al-Rahba became an important caravan station between Syria and the ‘Irak, as we learn from Ibn Bati’ta amongst others (iv, 315) who travelled from there via al-Suhkma to Tadmur.

The town remained for a century in Shirkib’s family until in 662/1264 Baybars installed an Egyptian governor there (Ibn al-Addajib, xi, 341, xii, 189; Abu ‘l-Fida’, Annals of Islam, ed. Reiske-Adler, iv, 142, v, 16). Sunkur al-Ashkar of Damascus, who rebelled against Kala’un in 678/1279, fled after a defeat to al-Rahba to the amir ‘Issa and from there appealed to the Mongol Abaka for protection (Barhebr., Chron. syr., 543).

The Mongols under Kharbanda besieged al-Rahba in 712/1312-13 on their way to Syria. On his return, Kharbanda (1273) occupied the town without resistance, and it was taken by the defenders of the town into the citadel (Abu ‘l-Fida’, v, 268-9; al-Hasan b. Habib b. ‘Umar, Durat ul-aslak fit dauat al-atrak, in H.E. Weijers, in Orientalia, ed. Juvnibol, ii, Amsterdam 1846, 319). Its government at the time, Ibn al-Arakabhi, died in 715/1315-16 in Damascus (Abu ‘l-Fida’, v, 300). Al-Muhannia and his family, the ‘Issa, were driven from the district of Salamiyya in the spring of 720/1320 and pursued by the Syrian troops as far as Rabah and ‘Ana (Abu ‘l-Fida’, v, 340-1); the town was perhaps destroyed on this occasion.

In 731/1331 the Euphrates inundated the country round al-Rahba (Ibn al-Addajib, Vienna ms. in Musil, The Middle Euphrates, 3, n. 3). According to the Muslim geographers, al-Rahba lay on the Euphrates (Kudama, 233; al-Mukaddasi, 130; al-Idrisi, tr. J. Massaert, ii, 137; al-Dinmaqubhi, ed. Mehren, 93; Abu ‘l-Fida’, ed. Reinaud, 51) and also on the canal Sa’id led off from it at Fam Sa’id on the right bank, which rejoined the Euphrates below the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281).

The town lay 3 farsakhs from Karshiyas (al-Addajibi, ‘Ana, in Abu ‘l-Fida’, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above al-Daliya also called Daliyat Malik b. Tawk (Suhrab, ed. Reinaud, 281) and, as the historian of the town, the gardens of which it watered, and above
According to al-Mukaddasi, 149, a day's journey each from this town, al-Daliya and Bīrā (the latter statement is quite inaccurate; cf. Musil, op. cit., 253-4). Musil (ibid., 250) wrongly takes al-Daliya to be al-Sālibiyya, which is impossible, as 8-10 miles above it the Euphrates flows close to the foot of Djabal Abu 'l-Kāsim, so that the Sa'id canal must have flowed north of it back into the Euphrates (cf. the 

The town of al-Rahba was a Jacobite bishopric (a list of the bishops in Mich. Syr., iii, 502); that it—for a time at least—was also a Nestorian bishopric is shown from a life of the Catholica Eliyā I (on him, see Baumstark, Geschichte der syr. Literatur, 266-7) who, shortly before his death on 6 May 1049, appointed a bishop to this town (Assemani, in iii, 263).

In the statements of the Arab geographers, it is clear that the old Rabbbā Mālīk b. Tawk lay by the town on 6 February 1588 on the Euphrates, according to Abu 'l-Fida" (ed. Reinaud, 281), towers were still standing among the ruins of the old town. Opposite al-Rahba on the left bank of the Euphrates stood a fortress taken by Marwān II (127-32/744-50) in the fighting with Ḥishām (Māhbi b. Manbijū, Kītāb al-'Unwān, ed. Vasiliev, in Patr. Orient., viii, 517-18). In this fortress Musil (op. cit., 338-9) has recognised al-Zaytūna (al-Baladhurī, Futūḥ, 180; al-Tabarī, ii, 1467-8; Ibn Khurarādādībih, 74) and the ancient Zūdā which is still called al-Marwānīyya after this caliph, but is not really opposite al-Miyyadīn but four or five days' journey down.

Ibn Hawkāl, 155, praises the fertility of the well-watered region of Rahba, where the orchards on the east bank of Euphrates also produced date-palms; their quinces were also famous (al-Mukaddasi, 145). The Karte von Mesopotamien (1 : 400,000) marks at 90), with a detailed bibliography. The mediaeval Arabic texts on al-Rahba have now been published over the last half-century. For the period 64-1060, for which no further publication of importance is to be expected, a tentative sketch of its history has been made by Th. Bianquis, Rabba and les tribus arabes avant les Croisades, in BEO, xliii (1899-90), with a detailed bibliography.

Numerous projects have been carried out since 1970 on the material culture of the region in mediaeval and post-mediaeval times. Archaeological excavations have been made on the site from 1976 to 1981 by the General Directorate of the Syrian Museum of Antiquities, the Institut Français d'Études Arabes de Damas and the University of Lyons II. Recently, some 20-25 American multi-disciplinary teams, working on the societies of the desert margins, have carried out surveys on both banks of the Euphrates and on those of the Ḥabūr. Our knowledge of the past of al-Rahba and its region has thus been considerably enlarged, but the sparse publications so far available are still only provisional. Work has been carried out at three sites. To the south of the town of al-Miyyadīn, a stretch of territory on the banks of the Euphrates, near an old Ottoman caravanserai, was excavated from 1976 to 1981, mainly revealing dwellings from the Ayyubid period and with abundant material. The excavation had to be relinquished in the face of contemporary building operations just when an old level, probably 'Abbasid (4th/10th century) had been uncovered beneath a layer of material abandoned when irrigated gardens were laid out, corresponding to an urban decline in the 5th/11th century. The coins discovered at this site have been published by A. Nègre, Les monnaies de Mayādīn, in BEO, xxxii-xxxiii (1980-1), and the pottery will shortly be published also. Some urban life then continued along the Euphrates banks long after the earthquake of 531/1156.

The great citadel on a cliff some 2.5 miles/4 km from the Euphrates (for earlier illustrations of this, see
Musil, The Middle Euphrates, 7, fig. 2, and Sarre-Herzfeld, Arch. Reise, iii, pls. LXXIX ff.) is now deteriorating rapidly, with erosion eating away the supports of the walls. A study made 1976-78 allowed the drawing up of plans and elevations of the site, bringing out the complexity of the building, which was destroyed, rebuilt and enlarged on several occasions; see J.L. Paillet, Le chateau de Rahba, Etude d'architecture militaire islamique médiévale, diss. Univ. of Lyons II 1983, unpubl. Large numbers of feathers for arrows, cut out of the paper of registers, have been found at Rahba. From the end of the Abbasid period onwards, the building no longer had any military value and provided shelter for sheep-raising villagers.

From 1976 to 1978, work was undertaken at the foot of this fortress in the abandoned ruins of an urban settlement. A great enclosure, quadrangular in shape with sides of some 30 m, surrounded by a wall one metre thick, restored on various occasions and in some places more than 4 m in height, has been partially revealed. One can guess at an ensemble comprising a public building—a khân, a cavalry barracks or a great mosque, probably including a small oratory—with a complex network of canals for the bringing in of fresh water and for carrying away waste and dirty water. The pottery and coins which have been analysed are mainly Mamluk, with some Ayyubid sherds in the deeper layers. The houses around this great building have not yet been excavated but offer a clearly more rural aspect than the houses spread along the Euphrates banks.

Until the end of the 5th/11th century al-Rahba was a riverine port to which came caravans arriving via Tadmur or Palmyra from Damascus, Hims, Salamiyya and Hamât. After then, this river traffic declined, for reasons not yet clear; lack of wood for the construction of river craft? Decrease in the amount of water through desiccation? Insecurity? Caravan traffic running parallel to the river, on the plateau above the right bank, now enjoyed a corresponding increase. The ability to survey the steppe lands, which stretch as far as eye can see, always justified the building of a progressively stronger citadel on the river banks. To the north-east, it dominated the valley and could easily block or hold up the advance of an army venturing into the 4 km wide plain along the right bank of the Euphrates. The fortress being at a lower level, on the edge of the cliff, on the alluvial plain, and unable to command a view of the steppes at a higher level, lost some of its value.

al-Rahba formed part of various types of regional groupings: the Euphrates valley in the context of the administration of the tarîk al-Farûq, the Dîyarizân principality of Mawsil under the Ilkhânid Nasr al-Dawla, Fâtimid Egypt and southern Syria at the beginning of the 6th/12th century, northern Syria under the Killâbi Mirdâsids after 416/1025, the Saljûq principality of Damascus at the end of the 5th/11th century and the Syrian steppe principality extending from Salamiyya to the Euphrates in the Zangid and Ayyubid periods. Under the Mamluks, the citadel was rebuilt and held an important garrison, and it protected the new town which had grown up right at its feet. The commanding officer of the Mongols had a horse at the military hierarchy. It played a notable role at the time of the Turco-Mongol invasions between 1260 and 1400, forcing these invaders to detach from their fighting force powerful contingents to watch over and besiege the fortress. There are several mentions of al-Rahba in the Ta'rikh of Ibn Kâdi Shuhaba, ed. Adnan Darwich, Damascus 1977; on p. 479 the author states that, in 795/1392-3, when Timûr Lang had conquered Mesopotamia, he sent messages to the nâhib of al-Rahba, who after having read them, put the Turco-Mongol emissaries to death.

H. Honigmann-[Th. Bianquis]

RAHBÂNYIYYA (a.), monasticism. The term is derived from nabi [g. v.] "anchoive, monk"; it occurs in the Kurâ'ân only once, in a complicated passage (sûra LVII, 27) that has given rise to divergent interpretations: "And we put in the hearts of those who followed Jesus, compass and mercy, and the monastic state (rahbânîyya); they instituted the same (we did not prescribe it to them) only out of a desire to please God. Yet they observed not the same as it ought truly to have been observed. And we gave unto such of them as believed, their reward; but many of them have been doers of evil."

According to some of the exegesis, the verb "we put" has two objects only, viz. compassion and mercy, whereas the words "and the monastic state" are the object of "they instituted". Accordingly, the monastic state or rahbânîyya appears here as a purely human institution, which, moreover, has been perverted by evil-doers.

According to others, however, the object of the words "and we put" is compassion, mercy and the monastic state. According to this exegesis, monasticism is called a divine institution, although not prescribed for mankind. But it has been perverted by evil-doers. This exegesis seems preferable to the other, although the juxtaposition of compassion, mercy and the monastic state seems rather unnatural. Of the two, the first interpretation displays a much less favourable view of the monastic state than the second. L. Massignon pointed out that this latter exegesis is the older one; the younger one expresses a feeling hostile to monasticism, which coined the tradi-

This tradition does not occur in the canonical collections. Yet it is being prepared there. When the wife of ʿUṯmān b. Maʿzûn [g. v.] complained of being neglected by her husband, Muḥammad took her part,
saying: “Monasticism (rahbaniyya) was not prescribed for us” (Ahmad b. Hanbal, vi, 226; al-Dārīmī, Nīkāb, bāb 3). The following tradition is less exclusive: “Do not trouble yourselves and God will trouble you. Some have troubled themselves and God has troubled them. Their successors are in the hermitages and monasteries, ‘an institution we have not prescribed for them’” (Abū Dāwūd, Adab, bāb 44).

Islam, thus rejecting monasticism, has replaced it by the ḥadīth: “Every prophet has some kind of fahr, and that its interpretation as a journey to the djihād: “Every prophet has some kind of djihād” (a tradition ascribed to Muhammad, in al-Bukhārī, ii, 205; Muslim, trad. 46, 47; Tirmidhī, trad. 73; al-Nasāʾī, ed. Eisenberg, 155-6, 160, tr. W. M. Thackston, The Tales of the Prophets of al-Kisaʾ, Boston 1978, 165, 167, 181; Neumann Ede, A muhammedān jōzef monda, Budapest 1891, 12, 39-40; Grünbaum, Gesammelte Aufsätze zur Sprach- und Sagenkunde, ed. F. Perles, Berlin 1901, 523, 534-8, 548; W. Bacher, Zwei jüdisch-persische Dichter, Schahin und Imrānī, Budapest 1907, 119. See also ḫusūb and yūsūf. (B. Heller)

RAHIL (A.), “travelling by camel”, a term applied in Arabic poetry to themes involving a desert journey. In its specific meaning it denotes a section of the ploythematic kasida [q.v.], following the nasīh [q.v.], which is divided into nasīb, kasida [q.v.], following the maddīh [q.v.], introducing it, like other themes of poetry, nor is the term used in a technical sense. Mediaeval critics usually paraphrase the theme (cf. Ibn Kutayba, ḥurr, 14). In the ḥusla [q.v.], poets allude to the perilous desert journey at the beginning of their self-praise [see muqāfāhah], introducing it, like other themes of fahr, by way rubba (‘and many a...’) or by kad preceding a verb in the imperfect tense (‘and often I...’). But already in early texts, there is a tendency to connect the rahil with the nasīh. The poet, after his disappointment in love, turns to his camel for consolation, or he asks whether it will be strong enough to carry him to his beloved. Then usually follows a detailed description of the camel’s trip across the sands, embellished by scenes of animal life, introduced as comparisons, the camel being compared to a wild bull, an onager, an ostrich, and, very rarely, to an eagle. If the oed ends with a maddīh [q.v.], the poet sometimes adds, by way of transition (taṭalluf), that he is travelling towards the maddīh, the addressee of his panegyric. From the corpus of pre-Islamic verse it appears that the rahil originally formed a theme of fahr, and that its interpretation as a journey to the

555, al-Zamakhshāri, al-Baydāwī, Ibn al-Q̄ārī, etc. Al-Kiṣāʾi even thinks that Yaʾkūb only married Rahlī after the death of Liyā and of his two concubines. Here again Muslim legend differs from the Bible, in making him not marry Rahlī until after 14 years of service; in the Bible, Jacob serves seven years, marries Leah and, after the wedding week, Rachel and serves another seven years. Yaʾkūb’s wooing and Lābān’s trick by which he substitutes Liyā for Rahlī as ‘neither lamp nor candle-light’ illuminate the bridal chamber, is embellished in Muslim legend. Rahlī is also of importance in the story of Yūsuf. Yūsuf inherits his beauty from Rahlī; they had half of all the beauty in the world, according to others two-thirds, or even according to the old Haggadic scheme (Kidduṣin, 49b), nine-tenths (al-Thālābī, 69). When Yaʾkūb left Lābān, he had no funds for the journey; at Rachel’s suggestion, Yūsuf steals Lābān’s idols. As Yūsuf, sold by his brothers, passes the tomb of Rahlī he throws himself from his camel on the grave and laments: ‘O mother, look on thy child, I have been deprived of my coat, thrown into a pit, stoned and sold as a slave.’ Then he hears a voice: ‘Trust in God.’ The old Haggada does not know this touching scene. But it has found its way into the late mediaeval book of stories Sefir Hayyāḥ (ed. Goldschmidt, 150). The Judeo-Persian poet Shaḥīn (13th century) adapts this motif from Firdawṣ’s Yūsuf u Zulaykha in his book Zwei judisch-persische Dichter, Schahin und Imrānī, Budapest 1907, 119. See also ḫusūb and yūsūf. (B. Heller)

RAHIL, in the Bible Rachel, wife of Jacob, mother of Joseph and Benjamin, is not mentioned in the Kurʾān. There is, however, a reference to her in sūrā IV, 27: ‘Ye may not have two sisters to wife at the same time; if it has been done formerly, God now makes an exception for the pious individuals, it is evident that there was nothing odious about it then; see, however, the article RAHBANIYYA.

In Hadīth, the rahīb is frequently encountered in stories of the nature of the kisas al-anbiyāʾ (see al-Bukhārī, Anbiyāʾ, bāb 54; Muslim, Zuhd, trad. 73; Tazabba, ed. Eisenberg, 46, 47; al-Tirmīzhī, Tafsīr, sūrā LXXV, trad. 2; Manṣūkh, trad. 1; al-Bayḍawī, Abū al-Nasrār, Masādīq, trad. 2; al-Māṣūkhanī, Fitān, trad. 20, 23; al-Dārīmī, Faddalīl al-Kurʾān, trad. 16; Ahmad b. Hanbal, i, 461; ii, 434; iii, 337, 347, v, 4; vi, 17 bi).

From the fact that in the Islamic literature of the early century A. H. the epithet rahīb was given to various pious individuals, it is evident that there was nothing odious about it then; see, however, the article RAHBANIYYA.

In the Kasida [q.v.], the theme of travel, rahil, is of considerable importance. It is not classified among the ‘genres’ (aḥrāf) of poetry, nor is the term used in a technical sense. Mediaeval critics usually paraphrase the theme (cf. Ibn Kutayba, ḥurr, 14). In the ḫusla [q.v.], poets allude to the perilous desert journey at the beginning of their self-praise [see muqāfāhah], introducing it, like other themes of fahr, by way rubba (‘and many a...’) or by kad preceding a verb in the imperfect tense (‘and often I...’). But already in early texts, there is a tendency to connect the rahil with the nasīh. The poet, after his disappointment in love, turns to his camel for consolation, or he asks whether it will be strong enough to carry him to his beloved. Then usually follows a detailed description of the camel’s trip across the sands, embellished by scenes of animal life, introduced as comparisons, the camel being compared to a wild bull, an onager, an ostrich, and, very rarely, to an eagle. If the oed ends with a maddīh [q.v.], the poet sometimes adds, by way of transition (taṭalluf), that he is travelling towards the maddīh, the addressee of his panegyric. From the corpus of pre-Islamic verse it appears that the rahil originally formed a theme of fahr, and that its interpretation as a journey to the
mandāh is a secondary development. For poets in the Djahiliyya do not travel towards a destination; ... applied to God, it means “beneficence and generosity” (inḍum wa-ifḍal) (al-ZadjdjadjI, Ishtikdk, 41, 8-9). Al-

During the first part of the 7th century, a transformation of the camel-section sets in, which is continued in the Umayyad period. As a result, the traditional description of the poet's camel is replaced by a rahil by the mandāh, by which the poet emphasises the dangers and hardships which he took upon himself on his way. In the Umayyad rahil, the destination is always stated, and the length of the way dwelled upon. The poet mentions a group of travellers and their mounts, and describes their state of weariness and exhaustion. Some odes begin with a rahil, which is often blended with the madīth in an ingenious way. Thus the rahil is now entirely determined by the panegyrical function of the ode, as described by Ibn Kutayba (loc. cit.), who evidently had the Umayyad kaṣida in mind, when explaining the genre (cf. R. Jacobi, The camel-section of the panegyrical ode, in JAL, xiii (1982), 1-22).

In the early ’Abbasid period, the rahil is gradually reduced in length or omitted altogether (Jacobi, op. cit., 32-21). ’Abbasid ode-writing is a rule bigraphy, a structure, a development already beginning in the Umayyad period. However, later poets occasionally fall back upon traditional patterns, and there are some original variations of the travel theme. As part of the panegyrical ode, the rahil survives until modern times.

_Bibliography:_ In general works, the rahil is treated in connection with the kaṣida, cf. GAP, ii (index), CHAL, ii (index); E. Wagner, Grundzüge der klasischen arabischen Dichtung, i-ii, Darmstadt 1987-8 (Index). Studies limited to the Qāhīyya: R. Jacobi, Studien zur Poetik der alarabischen Qasidé, Wiesbaden 1971, cf. 49-65; A. Hamori, The poet as hero, in _On the art of medieval Arabic literature_, Princeton 1974, 3-30; W. Rümiyya, al-Rihla fi ’i-kasida al-Qāhīyya, 1975. (R. Jacobi)

RAHIM [see ALLAH].

RAHMA (a., a transliter. of a Kurānic term (attested 114 times), denoting either kindness, benevolence (synonym of ra‘a) or—more frequently—an act of kindness, a favour (synonym of ni‘ma or faḍl). Almost invariably, the term is applied to God; in only three verses is there reference to the rahma which humans have, or should have, in their relationships with others: sons towards their father and mother (XXV, 24), married couples between themselves (XXX, 21), Christians among themselves (LVII, 27).

The French translation by “miséricorde”, although often used, is misleading, since in current usage, particularly in religious vocabulary, “miséricorde” essentially includes the notion of forgiveness, this being the kindness whereby God forgives men for their sins (the same observation applies moreover, although less precisely, to the English “mercy” and the German “Gnade”). It is true that the qiyād, left out with regard to animals, is an eminent form of his kindness, and in fact in some instances the Kurānic associates the two notions (cf. for example XVIII, 58; XXXIX, 53; XL, 7). It is also possible to understand in this sense (although not necessarily, cf. al-Ṭabarṣ’s commentary) the formula of VI, 12 and 34: kataba ’aḍā nafṣik al-rahma. But in the majority of cases, the notion of the forgiveness of sins is totally absent from Kurānic usages of rahma. As previously stated, this term is to be understood most often as a simple equivalent of ni‘ma. It represents a “kindness” which God grants (āḏā, waḥāb) to men (cf. III, 8; XI, 28; XVIII, 10, 65), a good which He makes them taste (ṣafā), or which He in fact, it is an affliction (ṣa‘d, ṭarār) which He wills upon them, and sometimes a rahma (cf. XXXIII, 17, and XXXIX, 38).

These rahma which God gives as benefits to men, or to one or another individual, are of various kinds. There is the “Book given to Moses”, described as hūd wa-rahma (VI, 154; VII, 154), ʿinān wa-rahma (XI, 17; XLVI, 12); the Kurānic itself, also frequently described as hūd wa-rahma (XXVII, 77; XXXI, 3; etc.) or as ʿaṭā‘a wa-rahma (XVII, 82); Jesus (XIX, 21); Muhammad (XXI, 107). Also a rahma is the fact of having given to Moses, to assist him, his brother Aaron (XIX, 53), to Zachariah a son (XIX, 2); of having saved from annihilation Hūd and his supporters (VII, 12; XI, 58). Rahma is furthermore the treasure destined to the two orphans of XVIII, 82; the wall erected by Dhu ’l-Karnayn (XVIII, 98); the maintenance (riżk) which the Prophet awaits from God (XVII, 28); the rain (VII, 57; XXV, 48; XXVII, 63; XXX, 50); and the alternation of day and night (nāfak al-dam). Rahma also passes for “mercy” and the German “Gnade”). It is true that, regarding the original meaning of the term, a disagreement which essentially divides, it seems, lexicographers from theologians. For the former, rahma denotes at the outset an aggregate of related emotional states, of which the most characteristic is that of ṣa‘d al-kalb, which may be translated, for want of a better choice, by “sensitivity”, the “fact of having a sensitive heart”. Al-Mubarrad would define rahma by tabāhnun (“tenderness”) wa-riżk (according to al-Za’idjadi, Iṣhtikhār asmā‘ Allāh, Beirut 1986, 41, 8), ṭa‘āf ṭarāf (“benevolence”) (according to Abū Hātim al-Rāzī, al-Zina, ii, Cairo 1958, 23, 7-8; cf. also LA). In his “exoteric” commentary on the bashmāla, al-Shahrastānī gives the following definition: “In Arabic, rahma denotes sensitivity (ṣa‘d al-kalb), compassion (ṣafā), softness (רָקֵק), tenderness (רָקַק). This term has for antonyms hardness (faṣṣa) and severity (ghilzat al-kalb)” (Maftūḥ al-asrār, facsim. ed. Tehran 1989, fol. 33b). Lending force to this interpretation is a saying of Ibn ʿAbbās, glossing rahmān with ṭa‘āf ṭarāf and rahmān with ṭa‘āf (cf. Gimaret, _Les noms divins en Islam_, Paris 1988, 379). The question which is posed is, for a theologian, whether, thus understood, rahma can truly be used in connection with God. On account, no doubt, of what this term implies in the sense of vulnerability, fragility, it is generally reckoned in fact that ṭa‘āf could not be counted among the divine attributes (thus al-Khaṭṭābī and the Husayn b. al-Faḍl al-Baghdālī, according to al-Bayhākī, al-ʿAsmā‘ wa-l-ṭifār, Cairo 1939, 51, 13-18). A ṭa‘āf, explains al-Ghazālī, is a cause of suffering, and it is in order to alleviate this suffering that the “sensitive” man performs an act of benevolence; God, on the other hand, is not susceptible to suffering (al-Maṣṣūl al-arzān, Beirut 1961, 66, 1-11). For this reason al-Zamakhshāri considers that, when rahma is applied to God, it is to be taken in a figurative sense, signifying His benevolence (inṭām) towards His creatures (al-Kashaf, Cairo 1385/1966, i, 44-5). For al-Mubarrad, the term is frankly ambiguous. Applied to men, it signifies “tenderness and sensibility”; applied to God, it means “benevolence and generosity” (inṭām wa-ṭifār) (al-Zaddjādji, Iṣhtikhār, 41, 8-9). Al-
Djubba'i, for his part, goes further; for him, the true sense of rahma is that which makes it an...

The question of the origin and meaning of the divine name al-Rahmān, as well as of the formula al-Rahmān al-Rahim, has already been discussed [see BASMALA; KURGAN].

Some, including the...certain, al-Ash'ari, according to Ibn Furak, attributed this name to God, while al-Asmā', according to Ibn Babawayh [q. v.], claims that only God has, in addition, the power of removing this sufficiency and is said to have at one time been called Nadjaf 1387/1968, 203-4). However, later authorities—these being the majority—attribute to rahmān a stronger precision, precisely because the word is applied only to God, and because, according to a frequent exegesis, rahmān is reckoned to have a broader "extension" than rahim.

It is said that God is rahmān while rahim, the only difference being that rahmān is applied to believers (in conformity with Kurān, D 9:1), and is said to have at one time been called Gashtul-T al-Djurdjurl al-Azharl Abu Kabrayn, who after, and from the following year, though the order continued to win adherents, it divided into independent branches. This was owing to the objections raised by the Ayt Smā'il to the succession of al-Hāджj Baghīr, another Maghribī. In spite of the support of the amīr 'Abd al-Kādīr [q. v.], he had to quit his post, which was held for a time by the widow of 'Abī b. Ḥāṣā, who, however, owing to the dwindling of the revenues of the zuwīya, had ultimately to summon Baghīr back.

Meanwhile, the founders of other zuwīyas were assuming independence. After the death of Baghīr in 1259/1843, the widow's son-in-law al-Hāджj Annār succeeded to the headship of the order. Finding his influence waning owing to his failure to participate in the attack on the French organised by Bū Baghīr, in Dhu '1-Hijājah 1272/August 1856 he called his followers to arms and obtained some initial successes; he was, however, compelled to surrender in the following year, together with his wife (or mother-in-law) at the head of a hundred khālaq shortly afterwards.

Annār retired to Tunisia, where he endeavoured to give up the exercise of his functions, but he was not generally recognised as head of the order, and his place among the Ayt Smā'il was taken by Muhammad Amezzyan b. al-Haddad of Sadduk, who at the age of 80 on 8 April 1871 proclaimed dijahī against the French, who had recently been defeated in the Franco-Prussian War. The insurrection met with little success, though it spread far, and on 13 July Ibn al-Haddād surrendered to General Saussier, who sent him to Bougie. The original zuwīya was closed as a precautionary measure.

His son 'Azīz, who had been transported to New Caledonia, succeeded in escaping to Djouda, whence he endeavoured to govern the community; but various mulkaddams who had been appointed by his father, as well as other founders of zuwīyas, asserted their independence. Lists have been given by Depont and Coppola...the people of the zuwīyas, which extended into Tunisia and the Sahara. In their work, the numbers of the adherents to the order were reckoned at 156,214 (1897). In 1954, L. Massignon revised this number to 156,000 adherents, with 177 zuwīyas, whilst in 1961 Fauque estimated them at 230,000. It should be said that the Rahmāniyya constitute the most important Šūfi order in Algeria, with more than one-half of the khālaq of the land. It predominates in the towns of the Constan-

RAHMA b. DJĪBĪR [see KURŚAN, iii].

RAHMĀN [see BASMALA; KURŚAN]...

RAHMĀNIYYA, Algerian Šūfi order (arṭika) called after Muhammad b. 'Abd al-Rahmān al-Gaḥṭulī al-Djurdjurl al-Azhārī Abū Kabrayn, who died in 1208/1793-4. It is a branch of the Khalwatiyya [q. v.] and is said to have at one time been called Bakhīyya after Muḥṭafa al-Bakrī al-Shāmī, at Naṭṭa al-Ayt Saḥīl, and in Tunisia, and some other places it is called Azzuzyiyya after Muḥṭafa b. Muhammad b. 'Azūzī.

Life of the founder. His family belonged to the tribe Ayt Smā'il, part of the Gashṭula confederation in the Kābiyya Djuḍurjura; having studied at his home, and then in Algiers, he made the pilgrimage in 1152/1740, and on his return spent some time as a student at al-Azhar in Cairo, where Muhammad b. Sinan al-Hājjī taught (al-Tawhid, Beirut 1987, 47, 21-3; al-Djuwaym, iv, 1950, 145, 4-6). However, later authorities—these being the majority—attribute to rahmān a stronger precision, precisely because the word is applied only to God, and because, according to a frequent exegesis, rahmān is reckoned to have a broader "extension" than rahim.

It is said that God is rahmān while rahim, the only difference being that rahmān could be applied only to God (thus, in particular, al-Ādhārī, according to Ibn Fūrāk, Muṣṭarada, Beirut 1987, 47, 21-3; al-Djuwaymī, Irthā', Cairo 1950, 145, 4-6). However, later authorities—these being the majority—attribute to rahmān a stronger precision, precisely because the word is applied only to God, and because, according to a frequent exegesis, rahmān is reckoned to have a broader "extension" than rahim.

tunous such as Constantine, Annaba, Souk-Ahrag; Batna, Biskra, etc., and naturally in Kabylia, where it originated. Rinn noticed that the Rahmaniyya of Tolga regularly maintained good relations with the French authorities.

Practices of the order. The training of the murid consists in teaching him a series of seven "names", of which the first is the formula la išrāt ila 'llāh, to be repeated from 12,000 to 70,000 times in a day and night, and followed by the others, if the sheykh is satisfied with the neophyte's progress; these are: 2. A'llāh three times; 3. Allāh-A'llāh three times; 5. kyllām three times; 6. kabhār three times (Rinn's list differs slightly from this). Rinn stated that the dhikr of the order consists in repeating at least 80 times from the afternoon of Thursday to that of Friday the prayer ascribed to al-Shāfi‘ī (q.v.), and on the other weekdays the formula la išrāt ila 'llāh. Favourite lessons are the "Verse of the Throne" followed by sūras 1, CXII-CXIV (prescribed in the Founder's diploma, translated by A. Delpech, in RA (1874), and the Seven Visions mentioned above (translated by Rinn, 467).

Literature of the order. Most of this would seem to be still in ms.; the founder is credited with several books. A. Cherbonneau, in JA (1852), 517, describes, [q.v.], at least 80 times from the afternoon of Thursday to the following day, and if the preparation of a written document is overdue or is not paid. Mortgage is unknown, as well as a graded series of rights to the same object of pledge. To be distinguished from the pledge is the detention (habis) of a thing to enforce fulfilment of a legal claim, which represents a concrete right afforded by the law in individual cases so that it has contacts with the legal right to pledge.

AL-RAĪ (A.), pledge, security; rāihān, the giver and murshīn, the taker of the pledge. The Kurān (II, 283), obviously in confirmation of pre-Islamic legal usage, provides for the giving of pledges (rāihān marakibā) in business in which a definite period is concerned, if the preparation of a written document is impossible. The part here played by the security as evidence of the existence of an obligation is in Islamic law much less important than that of securing the fulfilment of a demand. From the latter point of view, the traditions are mainly concerned with two questions: a. whether the security in case of non-fulfilment passes without more ado into the ownership of the creditor or not (the two answers are crystallised in the legal maxims al-rahn bi-mdījih and al-rahn laṣṣ̱āla); and b. who is entitled to use it and is bound to maintain it (the answer is given in the earlier authorities that the taker of the pledge may enjoy its use if he sees to its maintenance, later fell out into disuse). According to the doctrine of Islamic law, the giver of the pledge is bound to maintain it, but can enjoy the use of it only according to the Shāfi‘ī; its use by the taker of the pledge is also forbidden (except by the Hanbals); the yield (increase) belongs to the giver of the pledge but also becomes part of the security (except with the Shāfi‘īs); the taker of the pledge is responsible for it according to the Hanafis and (with limitations) the Mālikis. A. Cherbonneau mentioned that the Al-Raī's agreement regarding the security is regarded as a bailment relationship (with much less responsibility). The basis for the condition of a pledge must be a claim (dāyān); the accessory character of the security is in general allowed; but exceptional cases are recognised in which the debt is extinguished by the disappearance of the security, i.e. the risk passes to the taker of the pledge. When the ownership of the pledge remains with the debtor, the latter is in no position to dispose over it and possession passes to the creditor; the latter has the right to sell to satisfy his claim if the debt becomes overdue or is not paid. Mortgage is unknown, as well as a graded series of rights to the same object of pledge. To be distinguished from the pledge is the detention (habis) of a thing to enforce fulfilment of a legal claim, which represents a concrete right afforded by the law in individual cases so that it has contacts with the legal right to pledge.

AL-RAĪ, Jakob of a poet of the Banū Numayr (q.v.) who lived in the 1st/7th century. His real name was ʿUbayd b. Husayn (see his genealogy in Ibn al-Kalbi, Dīnakarāt al-nasab, ed. W. Caskel, Leiden 1966, Taf. 92 and 112; for other sources see R. Weipert, Studien, 27-8), but he was commonly known as al-Ra‘ī al-Numayrī. His kuṣūf Abū Dīnjal refers to his son Dīnjal, who inherited his father's poetical talent and produced some poems (for a collection of some fragments see N.H. al-Kaysī and H. Nādi, ʿShīr al-Ra‘ī, 8-13).

Al-Ra‘ī was a sayyid of his tribe and commanded great respect. He spent a considerable part of his life in ʿIrāk, especially in Basra, where he lived in good terms with Umayyad rulers and governors, e.g. Bishr and ʿAbd al-Malik b. Marwān, Yazīd and ʿAbd Allāh b. Muʿāwiya (q.v.), Khālid b. ʿAbd Allāh b. Khālid b. Asid and Sa‘īd b. ʿAbd al-Ra‘īm b. ʿAttāb, to whom he addressed his panegyrical odes. It is evident that he kept these close relations with wealthy men of political influence for his personal profit, because, as many of his invectives against other tribes and poets like ʿAdī b. al-Rīkā, al-Aḥkāl, and Dījārī (q.v.) show, he did not get on easily with neighbours or fellow poets. When he interfered in the nābīd (q.v.) between Dījārī and al-Farazdak (q.v.) and gave preference to the latter, Dījārī was deeply hurt and reacted by composing his famous kasida "al-dammāgha" (see his Dīnān, ed. Nufmān Muhammad Amin Tahā, Cairo 1969 f., ii, 815 ff. no. 3), in which he slighted Dījārī and the Banū Numayr entirely. This poem silenced al-Ra‘ī at once and, as many traditions say, led to his premature death less than a year after this event (see M.N. Ḥidājāb, al-Ra‘ī, 76-7, who fixes the date of his death in 96/714 or 97/715).

Al-Ra‘ī's verses are a typical example of Old Arabian Bedouin poetry; he excels in the description of the camel and its shepherd (hence his nick-name), the wild bull, the oryx, the wild ass, and other animals of the desert. The Arab literary critics highly esteemed
al-Rāʾi's qualities and ranked him besides Humayd b. Thawr and Ibn Mukbil [q. vv.]... capacity as controlling Minister (mubdshir) and as Prime Minister.

During the peasant insurrection of 1864, led by Ibn [17x514](see the index). Other recensions ed the first philological recension of his Muntahd 'l-talab min ashlar al-^arab for his (ms.

Weipert and, less critically, by N.H. al-KaysiT and H. ANBARI, ABU BARK], and Tha[17x437]lab's recension and com-

About a century later, al-Asma [17x497]c[17x471]tions of al-Ra[17x273]r asruhu, haydtuhu, shi^ruhu, ... al-Rāʾid al-Numayri ...

The contents of al-Rāʾid fell under two major headings: an official section (kišm rasmi), devoted to national news and scientific items. Sources were Beylical governmental ordinances for the kism rasmi, and European, principally French journals, for international news.

Although providing strictly-regulated information, and in spite of three intermissions (1867-8, 1875 and 1890-2), al-Rāʾid is of undeniable documentary and historical interest for the pre-colonial period of Tunisia (1860-81); it was definitely the chronicler of the constitutional era, from 1860 to 1864 (promulgation in April 1861 of the first Tunisian constitution [see DUSTUR] and the lavish festivities which marked the event), and of the reforms of Khayr al-Din between 1870 and 1877, in his capacity as controlling Minister (mubāshir) and as Prime Minister.

During the peasant insurrection of 1864, led by Ibn
Ghâdhâmum [q.v. in Suppl.], al-Râ'îd, although experiencing a few very brief interruptions, displayed objectivity and calmness, all relative of course, but worthy of recognition.

It compensated for the interruption of the publication of the texts of laws and decrees relating to reforms with the publication of literary articles, consisting in most cases of excerpts from works published by the masha'â (some 70 titles, from 1860 to 1880).

Thus, as admitted by the eminent historian Ibn Abî 'l-Diyyâf, Ihâf ahl al-zamân bi-âkhâr mulâk Tûnis wa-'âshîd al-amân, Tunis 1964, iv, 31-2, vii, 117-40; M. Chenoufi, Le problème des origines de l'imprimerie et de la presse arabes en Tunisie dans sa relation avec la renaissance "Nahda" (1847-1887), i-li, thesis reproduction service, University of Lille III, 1974, passim.

Râ'îka, a slave singing-girl (kayna [q.v.]) in the earliest days of Islam. She is mentioned as being in the poesy and music-making circles of Medina in 'Ujîmân's caliphate, i.e. the middle years of the 7th century A.D., and as being the teacher (ustâdîya) of the celebrated singer "Azza al-Maylâ [q.v.].

Râ'îs (â.), pl. ru'âsâ, from ru', "head", denotes the "chief, leader" of a recognisable group (political, religious, juridical, tribal, or other). The term goes back to pre-Islamic times and was used in various senses at different periods of Islamic history, either to circumscribe specific functions of the holder of the office of "leadership" (ru'âsâ) or as a honorific title (ru'âsâ [q.v.]).

In the sense of "mayor" in the central Arab lands.

Here, the ru'âs is most commonly referred to was the head of a village, a city, or a city-region. He emerged as a kind of local "mayor" and was particularly active from the 4th/10th to the 6th/12th centuries. Although references to such ru'âsâ well before that time do exist, the exact date of origin, as well as its place, remains open to question. The areas of activity of the ru'âsâ were located in 'Irâk and the Persian regions, in Syria and the Dîjâzrâ. Thus ru'âsâ (in the sense of mayors) established their position mainly in territories under Bûyûd, Fâtîmîd and Saljûq rule.

The degree of power exercised by the ru'âs was dependent on the weakness or strength of the political authorities. Just as, if not more, important were groups of the local population who lent support to the ru'âs. Most famous were native-born, non-professional militias of "young men", the âdhâb [q.v.], as they were called in Syria and the Dîjâzrâ, and the fitûn [see Fâtâ] or ayyûrân [see A'Yîrû], in 'Irâk and Persia. Together with such popular elements, the ru'âs, himself as a rule of local origin, constituted a dynamic force of urban self-representation vis-à-vis the central rulers, usually foreigners. This situation was most evident in Syrian cities, in Damascus more than in Alepppo, when the ru'âs succeeded in transforming "classical" government offices, such as that of the police (ghâras [q.v.]), the supervision of the market and public order (âshîtâ [q.v.]), and the vizierate (wa'âs [q.v.]), into local self-representative institutions. Things evolved so far that the ru'âsâ complemented or even replaced the official rulers and their garrisons.

In time, they became institutionalised collaborators within the régimes. By forcing the authorities to recognise the ru'âs al-âdhâbâ as the ru'âs al-balâd ("mayor of the city"), symbolised through the grant of robes of honour (sexârâ) and estates, the latter rose to a semi-official position. Competition even cooperation between the ru'âs and the central government became more frequent than resistance by local leaders against foreign rule (which earlier had been the case when the ru'âs was only leader of the âdhâbâ). An illustrative example of this new arrangement of power was the appointment of several ru'âsâ in Damascus to the office of vizier. Another was the political and military cooperation against common enemies from outside. With the increase of functions attributed to or gained by the ru'âs, some cities established hereditary dynasties of ru'âsâ, comparable with the dynasties of kâdîs [q.v.] in Syrian coastal cities (Tyre, Tripoli) at that time, but lacking in their degree of "urban independence". Concerning the social origin of the ru'âsâ, it seems that some of them came from low social milieu, even from rural background. This holds true for those ru'âsâ who did not acquire official recognition through the rulers. On the other hand, most ru'âsâ obviously were members of wealthy families—a fact which also may have eased their access to a semi-official position.

After the middle of the 6th/12th century, the urban office of the ru'âs started to experience a gradual, but irresistible decline. Due to a new policy of centralising rule by the Saljûkids and their successors, who installed military commanders (âshîtâ [q.v.]) at the head of each city, the ru'âs was doomed to political insignificance. Military, political, and administrative functions were now exercised by the âshîtâ, and the control of the urban economy was returned to the classical holder of this office, the muhtâsib. The ru'âs as mayor of the city became much more rarely mentioned by the sources, only to disappear from them altogether during the second half of the 7th/13th century.

With regard to 'Irâk also and Persia, many cities also had a ru'âsâ who appears sometimes to have been the ru'âs of the fitûn or ayyûrân in his place. Parallels to conditions in Syria are existent, but just as important are dissimilarities which also must be seriously taken into consideration, if one wants to understand the varieties of the institutional history of Islamic cities.

(A. Havemann)

2. In the sense of "mayor" in the Eastern Islamic lands. As the lands further west also, the rijâsa was an office that was concerned to both the state and to the urban bourgeoisie and notables what Bulliet has styled, with regard to Nishâpûr, the patriciate although the actual functions of a ra'si were less easy to pinpoint than those of e.g. the kâhid and the kâtîf, who were in a similar, dual position as state nominees and as socially significant members of the local a'yân or notables. In general, the ra'sa of the 4th-5th/10th-11th centuries seem to have been prominent in those towns which did not form normally the residences or courts of rulers; thus they are seldom mentioned for the courts of rulers; thus they are seldom mentioned for 1. In the mediaeval Islamic world.

KurDânic use of the verb racâ and its derivatives

In the larger towns, although under the Buyûds, the ra'sa of quite small towns in provinces like rural Pars and Gurgân could play significant political roles (see R.P. Mottahedeh, Loyalty and leadership in an early Islamic society, Princeton 1980, 150-3).

In Khurāsân, the position of the ra'sa of Nishâpûr is quite well known to us because of the plethora of biographical information on its scholars and notables. One of the greatest of Nishâpûr families, the Mîktâfs [q.v.], who were the confidantes of and diplomatic representatives for princes, held the office there for most of the Mâsûdî period and that of the Ghanâwids, i.e. ca. 431/1040, interspersed with members of the Hanâfî Sâ'dî family and one Ibn Râmiš, equally from top Nishâpûr families. From the pages of the Ghanâwids historian Abu 'l-Fadl Bayhâkî, it emerges that, during Sultan Mâsûdî's reign at least, when firm control over Khurāsân in the face of the Turkmen incursions was vital to the ruler, the state nominated or at least approved the ra'si and marked him out by the award of official robes, a fine horse, etc., the ra'si being responsible to the central government for the town's internal security and taxation (see Bosworth, The Ghaznavids, 180 ff., 184-5; R.W. Bulliet, The patricians of Nishâpûr. A study in medieval Islamic social history, Camb., Mass. 1972, 66-8).

In Saljuq times, the central government certainly appointed the ra'si on some occasions, e.g. the vizier Nîgam al-Mulk [q.v.] appointed to Nishâpûr an outsider from Marw al-Rûgh Abu 'Ali Hasûn al-Mânsî, as ghâykh al-İslâm and ra'sî of the town, intending to use him as the agent for favouring Ashârî theology and Şâfi'i law there, with Abu 'Ali holding office there ca. 465-82/1073-89; but after Al-Mansî's death, the office of ghâykh al-İslâm reverted to a member of the Şâfi'î family, a former persecutor of the Ashârîs in Nishâpûr (Bulliet, op. cit., 45, 52 n. 13; 66, 68, 74, 170). During the Mâsûdî period, the Saljuq sultans continued to nominate ra'sâs for the larger towns, although in the smaller ones, the ra'sâs tended to emerge from the local urban notables without any outside interference. We possess the texts of various administrative documents nominating these heads of towns or regions, such as that for Tâdj al-Dîn Abu 'l-Mâkârim Ahmed as ra'sî over Mazândarân, Gurgân and Dihistan during Sandjâr's reign, in which Tâdj al-Dîn is granted by the sultan's dîwan full civil powers over the populations there and is invested with splendid insignia of office consonant with the exaltedness of his office. As before, the ra'sî, whether appointed by an outside ruling body or not, was not simply a salaried official of the state but the representative of his town and its interests vis-à-vis the provincial or central government, above all, over questions of the taxation due from the town, and he could report back to the sultan's dîwan if any of the state officials were grossly abusing their power locally. The ra'sî seems often to have had an office or dîwan of his own and to have been paid for his official duties by dues (ru'sâm) levied locally; but most ru'sâs were men of substance anyway (see A.K.S. Lambton, in Camb. hist. of Iran, v, 251-2; eadem, The administration of Sanjar's empire as illustrated in the 'Atabat al-kataba, in BSOAS, xx [1957], 383-7; H. Horst, Die Staatsverwaltung der Großseßighäfen und Häfnzmächte (1038-1231), Wiesbaden 1964, 53-6 and index s.nn. ra'si, rijâsi).

The ra'sîs recede from mention in the history of the Persian lands by the time of the Mongol invasions, but it should be noted that the Âl-i Burhân, the line of Hanâfî ru'sâs in the Transoxanian city of Bûkhârâ, held hereditary office there from the mid-6th/12th century well into the middle years of the 7th/13th one, with the additional title, expressive of their religious leadership also in the city, of sadîr al-sadur [q.v.] or sadr-i qâldâh (see Bosworth, Efr art. Âl-i Burhân).

Within Persia, during Âk Koyunlu, Safawid and subsequent times, up to the 19th century, many of the functions of the earlier ra'sîs were assumed, as the link between the central government and the taxpayers, by the headman of a town or district, who was then known as the kalântar [q.v.], although the parallels are not completely exact.

Bibliography: Given in the article.

3. In the sense of "sea captain".

Here ra'sî, in Turkish re'sî, with its derivation from ra's "head", followed the same semantic process as "captain" from capit "head", and came to mean "ship's captain" in Ottoman Turkish. The names of most major figures of the empire's naval history from the 15th and 16th centuries are followed by this epithet: Kemâl Re'sî, Piri Re'sî, Selmân Re'sî, Seyyid Re'sî, Turgut Re'sî [q.v.]. Towards the end of the 16th centuries, however, re'sîs began to be restricted to captains of single units, while kapûdan or kapûdan was applied to those who commanded fleets (see Kapûdan Pâsha). Meanwhile, in the semi-independent beylerbeylik of Algiers [see AL-DJAZAIR], the term became associated with commanders of corsair ships (the sipahi of the ru'sâm), an institution that died with the Turkish âjâbât of Janissaries or their off-spring (the kul-âğhâs [q.v.]) for political power. In modern Turkish, the word, spelt rêsi, means "captain of a small merchant vessel, skipper; able-bodied seaman" (Redhouse Yeni türkçe-ingilizce sözlük, Istanbul 1974, 953). For the completely different usage in Ottoman bureaucracy, see re'sî ul-küttâb.

(S. Soucek)

RA'IYYA (A.), pl. ra'âyâ, literally "pasturing herd of cattle, sheep, etc.", a term which in later Islam came to designate the mass of subjects, the tax-paying common people, as opposed to the ruling military and learned classes.

1. In the mediaeval Islamic world.

Kur'ânic use of the verb ra'sî and its derivatives

RA'IS — RA'IYYA

403
covers the two semantic fields of ‘to pasture flocks’ (e.g. XX, 56/54; XXVIII, 23) and ‘to tend, look after someone’, withrestes (e.g. XXIII, 8; LVII, 27: LXX, 32). Since other Near Eastern religions and cultures have evolved the image of the ruler, in both a theocratic and a secular sense, as the shepherd superintending his flock, sc. the subjects (the obvious example being that of Christianity with Jesus as the Good Shepherd), it is not surprising that Islam evolved similar ideas. In the later developments of the personality and role of Muhammad—development which were in many cases influenced by the figure of Christ, his characteristics and his miracles, in Eastern Christianity—the Prophet is said by the Kādī ʿIyāḍ al-Yaḥṣūbī (d. 544/1149 [q. v.]) to have been awarded the epithets al-raʾiyya ‘the kindly one’ and al-rāḥīm ‘the merciful one’ by God from amongst His own Most Beautiful Names [see AL-ĂSMĀʾ-AL-HUSNĀ (al-Șifāʾ bi-taʾrîf ḥukūk al-Maṣāfqa, cited in T. Andrae, Die Person Mohammeds in Lehre und Glauben seiner Gemeinde, Upsala 1917, 254), and he is described by the mystic Muhammad b. ʿAlī al-Hakim al-Tirmidhī (flor. later 3rd/9th and early 4th/10th centuries, see Brockelmann, I, 216, S 1, 353-7, and Sezgin, i, 653-9) as the shepherd of mankind, whose sheep the latter are: he guides them in the right way, gives them pure water, provides them with winter and summer pasture, keeps them from the wolves,рошес the newly-born lambs, etc. (Nawādīr al-ʿasf, fi muʿṣaf akhkhār al-raʾiyy, cited in Andrae, op. cit., 254-5).

Both the image from Islamic ethics of the secular ruler (as opposed to the Prophet) as rāʾi “shepherd” and that of his subjects as raʾiyya “flock” appear in the manuals of constitutional law and the “mirrors for princes” literature [see NASBĀT AL-MUʿLŪK]. But there further developed, in the eastern Islamic world in particular, the additional concept—foreign to the emirates of early Islam on piety and worthiness of God’s grace as ideally determining the conduct of worldly-affairs—that the raʾiyya were the lowest stratum of a hierarchical social structure, the taxable classes of traders and cultivators, whilst above them were the ruling military and civilian classes, the ahl al-raʾiyya l-ašlaam. The roots of this conception probably lay in Sasanid Persia, where such a stratum had been divided into the military aristocracy; the secretaries; the Zoroastrian clergy; and finally, the peasants, artisans and merchants, who paid taxes. Certainly, the duties of treating the raʾiyya with benevolence and equity are stressed in the mirrors and in other sententious and moralising literature. Thus ch. 5 of Niẓām al-Mulk’s [q. v.] ʿAṣbāt al-ʿasf deals with the holders of land grants, muṣarāt, and the need for their enquiring into the condition of the raʾiyya, and solicitude for the interests of the taxpayers who financed the armies and administration of the Mongol Il-Khāns is expressed by Raḡḥūd al-Dīn [q. v.] in the maxim ‘there are no raʾiyya if there is no justice.’

But the ethical aspect of the ruler-subject relationship, the ruler’s duty to further agriculture and trade and the prosperity of the cultivators and artisans, tended to fall into the background in the face of non-taxable groups such as the military and in some cases even the duties of the docile taxpayers were emphasised but not the reciprocal duties of the rulers. The lot of the peasantry in particular deteriorated in the Saldjūq and Mongol periods, not least from the incessant warfare in the lands stretching from northern Syria to Transoxania and from the alienation of much land to feuatories, with a consequent loss of direct control by the ruler [see ÎBTĀʾ]. Although legally free in status, their freedom was in practice a fiction, and they were op-presssed and ill-treated, liable e.g. for forced labour (būgdi, buhdi); for housing and feeding officials, messengers, soldiers, etc. and their stalls (nasādī); and for providing mounts for the postal couriers (ṣuqā). These requirements had, of course, existed before, but they became much more onerous in the central and eastern lands of Islam from the 5th/12th century onwards (see A.K.S. Lambton, Landlord and peasant in Persia, London 1953, chs. II-IV; I.P. Petrushevsky, in Camb. hist. of Iran, v, 492-514, 515, 527 ff.; 535 ff.; B. Fraeger, in ibid., vi, ch. 9).

Hence it was during these centuries that the word raʾiyya became narrowed down in the eastern lands to its present meaning in Persia, sc. that of ‘peasantry’ pure and simple, and this meaning was carried into Indo-Muslim society, yielding the Anglo-Indian term ryot = “farmer, cultivator” (see Hobson-Jobson, a glossary of Anglo-Indian words and phrases, new ed. London 1903, 777). Raʾiyya also tended increasingly, in the central and eastern Islamic lands of the later mediaeval period, to have the connotation of “those classes in society who were not allowed to bear arms”, and this usage passed into Ottoman official terminology, for which see section 2. below.

(C.E. Bosworth)

2. In the Ottoman empire.

Here, the plural raʾiyya and the singular raʾiyya has been commonly used. In the Ottoman context down to and including the 12th/18th century, the term denotes the tax-paying subject population as opposed to the servitors of the Ottoman state (sakrīs). The reʾiyya paid taxes and possessed few opportunities for legitimate political activity. From the 12th/18th century onwards, the term is increasingly used for the Christian taxpayers only; 13th/19th century population counts distinguish between reʾiyya and Islâm; all statements in the present context refer to members of the subject population regardless of religion. In the 9th/15th and 10th/16th centuries, reʾiyya status was proven by showing that the person in question or his father had been recorded in the Ottoman tax registers as one of the reʾiyya. In later periods, the evidence of witnesses was regarded as decisive.

Reʾiyā and the sakrīs: boundaries and boundary crossing.

Exemption from certain taxes, particularly the ʿawārid-i divānīyye [q. v.], were quite readily granted to reʾiyya performing special services to the Ottoman state, such as the guarding of dangerous passes, the repairing of bridges or auxiliary services to the military. Down to the 10th/16th century, reʾiyya soldiers formed special corps in the Ottoman army, known as y 판단 and müsâlem [q. v.]. Certain members of those corps performed military service, while others engaged in agriculture on special landholdings (fīlīkhū [q. v.]) to finance their fellows’ campaign expenses. Detribalised nomads in the Balkans (yürüks [q. v.]) also were originally employed as soldiers. But from the late 10th/16th century onwards, the yûrûs and müsâlem corps were abolished and their members denoted to the status of ordinary peasants, while the yûrûs increasingly were confined to guard duties. In principle, tax exemptions for special services did not place a reʾiyya classified as muʾāṣar (or muʾāṣar wa müsâlem) in the šakrī category. However, certain reʾiyya doubly used tax-exempt status as an opportunity to claim the privileges of the ruling group.

From the point of view of established šakrīs, people born as reʾiyya could only under very specific conditions legitimately abandon their station. The study of religious law and subsequent careers as kâdi, müfti and müdarris were open to all Muslims. While
minor mosque personnel often were reconsidered *'askeri* only for the duration of their appointments, the higher ranks of the *ti'miyye* (q.v.) permanently left their subject status behind. More problematic was the position of *ázimadrise* in charge of the numerous Ot-
toman dervish convents; in the 9th/15th and 10th/16th centuries, they could sometimes claim *'askeri* status by default, if able to demonstrate that in the contemporary tax registers they had not been recorded as *rajîyed*. Dervishes suspected of herodoxy were occasionally reclassified as *reşâyâ* by way of punishment. Down to the 11th/17th century, the levies of boys (*devûrîmê* (q.v.) normally permitted the young men thus recruited unchallenged entry into the Ottoman ruling group, provided they survived the often arduous training period. In later centuries, it was possible to enter the ranks of the *'askeri* by service in the household of a high official. In particular, the sultan could move the young men he called into his service from their humble status as *reşâyâ* to a position of power. More problematic was the status of mercenaries of *reşâyâ* background who were awarded *timdrâs* (q.v.) for service on the frontiers. Such promotions occurred, for instance during the Habsburg-
Ottoman "Long War" (1001-15/1593-1606), but the beneficiaries might find their status challenged at a later time. *'Askeri* could frequently count upon support from the Ottoman sultans in their attempts to limit upward mobility on the part of the *reşâyâ*. In the later 10th/16th and throughout the 11th/17th century, the *reşâyâ* best placed to wage a struggle for *'askeri* privileges were the musket-armed mercenaries who now constituted the bulk of Ottoman armed forces on the Habsburg and Persian frontiers. Time and again, the attempts of these former peasants turned mercenaries to obtain the regular pay and privileges of Janissaries and other regular military corps resulted in full-scale civil war. The authorities armed peasant militias (*il erleri*) against the rebellious mercenaries, and in extreme cases mobilised militias over entire provinces (*nefr-i ğâmê* (see *nefîr*)). Some mercenaries of *reşâyâ* background doubtlessly gained admission to the *'askeri* class in the course of this unrest, but most were unable to shake off their subject status. From the 11th/17th century onwards, merchants and craftsmen increasingly protected themselves from unforeseeable demands for supplementary taxes by joining the Janissary and other military corps of the major cities. By paying fixed dues to the corps to which they adhered, the Muslim merchants and ar-
tisans of *reşât* origins became pro-forma soldiers and joined the lowest ranks of the *'askeri*. This process has been particularly well studied in the case of Cairo, where it was virtually completed by the middle of the 12th/18th century.

*Competition for economic resources.*

The *reşât* constituted a political and not an economic category. In terms of economic activity, this group was extremely diverse; town dwellers, nomads and peasants all counted as *reşât*. Disparities of wealth were equally great. While rich merchants of *reşât* status were active in 9th/15th century Bursa of 10th-11th/16th-17th century Aleppo and Cairo, the majority of *reşât* were peasants of modest income, who, from the evidence of their estate inventories, must have reproduced their families with great diffi-
culty. Moreover, in the 9th/15th and 10th/16th cen-
turies substantial merchants of *reşât* status could not compare in wealth with even quite modest *'askeris*.

In principle, *reşât* were able to transfer their wealth to their descendants, while the inheritances of *'askeris* were largely confiscated. However, debts to the fisc, incurred particularly by tax farmers, led to the confis-
cation (mûcûdere (see *muşaddârê*) of *reşât* estates as well. Heirless estates reverted to the state; the right to collect these properties was often farmed out and sometimes gave rise to major abuses. Toward the end of the 12th/18th century, previous rules concerning mûcûdere were frequently disregarded, as the central administration confiscated the estates of wealthy *reşât* in an effort to raise cash.

The competition between *reşât* and *'askeri* for the control of economic resources constitutes an impor-
tant aspect of Ottoman commercial history. While substantial merchants of *reşât* status engaged both in internal and external trade, governors and other im-
port officials had the grains, cotton and other pro-
ducts of their *khâss* (q.v.) marketed, and gained economic advantage from their political position. Ot-
man officials sometimes also used their political
power to make loans to peasants, or to market peasant produce. After the institution of the *mâlûkàne* (q.v.) (life-time tax form) in 1106/1695, *'askeri* gained a fur-
ther advantage over their *reşât* competitors, as the latter were barred from direct access to this form of in-
vestment. The attempts of Christian *reşât* merchants to gain tax-exempt status by association with Euro-
pean consulates thus may be seen as a move in their challenge to the economic supremacy of the *'askeri*.

The Ottoman system of taxation depended upon the marketing of peasant produce. Peasants were obliged to carry the *timdrâ* holders' grain to the nearest market, while tax farmers supplied provincial towns and thereby remitted to the central administration in money taxes which they had collected in kind. In the 9th/15th century, low-level administrative districts (*kaşfâ* generally possessed a single market; but by the end of the 10th/16th century, markets in villages, and in some areas even in the open countryside, multiplied. In Thessaly and Thrace during the same period, minor local fairs developed into centres for inter-regional and at times even international ex-
change. Pious foundations profited by this upsurge of rural trade by providing shops and booths and by col-
lecting rents in return. From the later 10th/16th cen-
tury onwards, peasants also made money by selling, often illegally, grain, cotton or raw silk to European
merchants.

However, the profits from this trade were not for the most part retained by the peasantry but collected by the central government or local administrators in the shape of taxes or interest on loans. In addition, a 10th/16th century peasant paid at least 15% and up to 50% of his gains from agriculture in the form of tithes and other taxes; this percentage does not in-
clude the money which he needed to set aside for dues such as *awari* and *vûsat*, whose level was not predetermined as it depended on the demands of cur-
rent campaigns. When comparing the estates of peasants and townspeople from one and the same area, the substantially lower standard of living in the villages immediately strikes the eye. (On farming and peasant tenure, see *öğmânîl*. II. Social and
economic history.)

*Peasant *reşât* and local government.*

Most Ottoman peasants ran their smallholdings inde-
pendently, with minimal involvement on the part of *timdrâ* holders and other tax grantees. But since the tax registers specified that taxes in kind were levied on specific crops, and the taxes were assessed on the village as a whole, the pressure to conform to locally established crop patterns was very strong. This situa-
tion did not, however, preclude changes in response to
market conditions. The expansion of a town or city encouraged the conversion of fields into gardens and vineyards, and from the 11th/17th century onwards the villages surrounding Bursa switched over to mulberry orchards and silk cultivation.

Disputes between peasants and local administrators focussed on taxes and the manner of their collection. Frequent tours of inspection on the part of governors, accompanied by numerous armed men, resulted in spoliation of the re'âyâ, concern about peasant flight and erosion of the tax base caused Sultan Murâd III to totally prohibit these named incursions in the 990s/1580s. This prohibition did not last long, but re'âyâ complaints continued to refer to their existence for a much longer time. Monetisation of the economy formed another source of complaints, as tax collectors increasingly demanded payments in coin from peasants whose access to markets remained limited. Re'âyâ at times sought redress of their grievances by complaining to the Dîwân-i kâmûyên [q.v.] and demanding an official commission in charge of redressing grievances (mekhidyifmufettishi). At the height of the Dîjâli rebellions [see qâlalâ] in Suppl., some villages also built strongholds for use in emergencies. Others fled to neighbouring provinces, the cities or remote areas. The frequent flight of re'âyâ to some degree checked the abuses committed by local administrators, as such events were considered "bad points" in the official's record on the part of the central government. However, financial considerations often induced the latter to allow governors and tax farmers notorious for their oppression of the re'âyâ to go unpunished. The abolition of re'âyâ status. With the Khuṭṭâ'ī'l-šerîf [q.v.] of Gûlûhâne, promulgated in 1255/1839, all subjects of the Ottoman sultans were accorded equal rights, and the disappearance of 'sâkeri privileges entailed the abolition of the re'âyâ as a special legal category. However, increasing nationalist and communal rivalries among the inhabitants of the Ottoman Empire and the political, economic and cultural interventions of the various European powers nullified the attempt to create a unified Ottoman citizen body irrespective of social, religious and national differences.

(Suraiya Faroqhi)

RAK'Â (a.), literally "the act of bowing, bending", a sequence of utterances and actions performed by the Muslim believer as part of the act of worship or salât, involving utterance of the takâbir and Fâtîha, then the bending of the body from an upright position (râkî) and then two prostrations (sudjâd). See further SALât. (Ed.)

AL-RAKâSHI [see ABîN B. 'ABBâD AL-HAMîD]

RAKÎB (a.), from a root signifying "to guard", "to wait", "to observe, watch over", is one of the names of God, with the sense of "guardian, vigilant one who knows everything that takes place", but it is especially familiar as a term in Arabic love poetry, ghâzal [q.v.], where it denotes the person who, by watching or simply being present, prevents the lovers from communicating with each other. The character first appears in the amorous poetry of the Umayyad period (B. Blachère, Les principaux thèmes de la poésie érotique au siècle des Umayyades de Darnas, in AIEO, v [1954-41], 82-128 = Analecta, Damascus 1975, 333-78), in particular, in the poetry which Blachère (Histoire de la littérature arabe des origines à la fin du XV° ds. J.-C., iii, 620 ff.) calls "of Hijâzîan spirit", in company with other enemies of lovers, such as the kâshîh, "secret, spiteful enemy", the wâqîj, "slanderer" and the ًhâdil, "censorious person", who, in the poems of 'Umar b. Abî Ra'îba' [q.v.], appear to make reference to real individuals (Ibn Abî 'Aitîk [q.v.], for example), but who, very soon, became pure fictional characters inhabiting the world of the lovers.

In this early period, the figure of the rakîb appears relatively infrequently (it does not appear in the diṭānî of Qâmil al-‘Udrî [q.v.]), in comparison with that of the kâshîh and especially that of the wâqîj. The same applies to the poetry of al-‘Abbâs b. al-Hâfîd (d. 193/808 [q.v.] but, in the course of the 3rd/9th century, through the influence, perhaps, of amorous narratives and the romanticised biographies of love poets, the rakîb becomes one of the principal obstacles to the union of the lovers. He appears as such in the treatises on love written by the Arabs, in particular in the work of those authors who are more interested in the psychology of love or in the situations in which lovers find themselves (Ibn Dâwûd, Ibn Hazm and Ibn Abî Ḥâjîdâ [q.v.]), than in the ethical problems posed by unrestrained love. Ibn Hazm, in the concluding chapters of the Ta’kw al-hâmāma to the ًhâdil, the wâqîj and the rakîb, classifies the last-mentioned according to three categories: the unobtrusive, but not malevolent witness to the meeting of the lovers; the curious who seeks to discover, by observing the lovers, whether his suspicions are justified; the guardian charged with watching over the loved one—this last being, in his opinion, the one about whom the poets complain. The similarity between this type of

**RĀKID** (A.) "the sleeping child". This term (in Maghribi dialects, ráged or bā mergud) is used to indicate a foetus which is considered to have stopped its development, continuing to stay in the womb in an unchanged condition for an indefinite period of time, after which it may "wake up" again and resume its development until it is born. The "falling asleep" and "waking up" may either take place spontaneously or (at least in the Maghrib) be induced by a religious scholar (jāhid) or by a midwife (kūbab) with the help of charms (a written charm to that effect is found in ms. Leiden Or. 14048, B2 fol. 12b) and herbs (see Gaudry, *Societé féminine*, 370).

This belief is firmly rooted in Islamic culture as far back as the earliest Islamic times, and has been incorporated into the systems of four legal heads of maghābās. Some famous cases are mentioned by Ibn Kutayba (K. al-Maṣārīj, Cairo 1960, 594-5), among them Mālik b. Anas, the founder of the Mālikī law school; by Mālik himself (Mauzaṭa, Cairo 1951, 740, = K. al-Adiyā, no. 21), where a case is discussed that dates back to Dāhiliyya days; and by ‘Arīb b. Sa’īd al-Kurṭūbī, *Kabk al-dīwān*, 32. The latter text, which is of a medical nature, also illustrates the fact that Islamic physicians were little inclined to include the idea of the rakīd in their theoretical considerations; they took their ideas from the Greek rather than from the ancient Arabian tradition, which implied that the eleven-month pregnancies sometimes allowed for by Hippocrates were the maximum that they were prepared to consider.

From early Islamic times onwards, jurists have disagreed about the possible duration of the prolonged pregnancy; some saw two years as a maximum, but according to others it could last much longer. Even in the midst of the 20th century, Libyan Courts of Appeal were prepared to accept pregnancies of up to twelve years, as A. Layish’s research into the practice of Libyan ḥari’a courts (which have yielded a number of cases of children legally born after prolonged pregnancies) has shown (*Divorce in the Libyan family, New York etc. 1991, 161*). Recent law reforms in Muslim countries have generally abolished the practice and have put the maximum duration of pregnancy at one year, although sometimes allowing for extension, as for instance in the Moroccan Civil Code of 1958, the *Mudawwana* (arts. 76, 84).

Although the idea of the rakīd is accepted by all four Sunni law schools, it seems to have taken root mainly under Mālikī law, especially in North Africa, where until very recent times it was firmly incorporated into the social system, thus creating a device to protect women as well as children against the sanctions attached to illegitimacy and births out of wedlock: a rakīd might be born legally long after its parents’ marriage had come to an end by death or divorce. At the same time, the system offered barren wives an escape from the odium of infertility and the practical and psychological consequences attached to it, such as depression, loss of social status and reputation.

**RAKK, Ragg, rakk, rakk, or rakk, parchment**

1. History of the use of parchment in the Islamic world.

Rakk is the term employed by the Arabs to denote parchment, alongside certain other terms used in a less specific manner, such as kīrītā [q.v.] (from the Greek χάρτης, through the intermediary of Aramaic) denoting papyrus, a sheet of papyrus or even a scroll of papyrus; warak, which was later to be reserved for paper; and qidāl [q.v.] (leather). Furthermore, all these words occur from time to time, in reference to the early years of Islam, to denote writing materials in general, whereas ḥarḍ or warak al-ḥarḍī was the particular term for papyrus [see PAPYRUS] and rakk the particular term for parchment. The latter is derived from the verb rakka "to be thin, fine" (hence the ex- planatory terms observed at a later stage, such as qidāl rakk, or "leather paper"). Parchment (on the subject of which Grohmann wrote a very fine article, see Bibl.) was fashioned initially, in most cases, from the hide of certain animals such as sheep, goats or calves, but sometimes also from the hide of gazelles (see below).

Its usage in Arabia may conceivably be attested from the 7th century A.D., as may be observed in the *Kasidah of Kudam b. Kādim* (A. D. 400-80) (on this see Griffini, *Il poemetto*, 352, v. 56), if this is not—as
seems very probable—later 'Ali or 'Abbásid propaganda (Caskel); at a later stage, Tarafa speaks of kirtds al-Shdm, and Labid mentions a tīr nātāk ("speaking parchment"). Tīr is a palimpsest, of which only a few exist dating from the Arabic period. Such a fragment is preserved in the papyrological collection of Florence: on the recto is a Latin fragment of the Bible, Exodus xviii, 16, and on the verso an Arabic economic text of the 1st century A.H. (on this, see Vaccari, and on Labid, see A. von Kremer, Über die Geschichte des Labid, 383).

Before the time of the Arabs, parchment had been in use among the ancient Babylonians, and, in particular, among the Egyptians from the 2nd century B.C., and it was subsequently to become ever more important. The Prophet Muhammad is said to have used, alongside leather, a very fine variety of parchment for his correspondence; evidence of this is a document allocating territory to the Tamlm tribe, written by ʿAll and mentioned by Ibn Durayd, K. al-Iṣlahād, ed. Wüstenfeld, 226, n.b. The Kurʾān itself (LIL, 2) declares that it is written on rakk manshūr (LII, 2-3) declares that it is written on "unfolded parchment"). It is known that certain fragments (rīḵā), containing what the Prophet left behind, must have contained verses of the Kurʾān, some of them written on parchment (cf. al-Suyūṭī, Itkān, 137, ii, 11-13; idem, Mukaddimatān, i, 36, l. 22; 49, i. 8; L. Marraccius, Prodromus, ii, 257; A. Sprenger, Das Leben, iii, 39); the corpus of the Holy Book of Islam, the assembly of which was undertaken by Zayd b. Thābit, must have been written on parchment, warak (on this, see Sprenger, ibid., iii, 40; al-Suyūṭī, Itkān, 138, l. 3); the ancient sections of the Kurʾān which have survived provide convincing evidence of this (see e.g. the Vienna collection, published by Loebenstein).

This tradition was continued under the Rightly-Guided Caliphs, as is noted by Ibn Khaldūn (see Mukaddima, index; cf. Karabacek, MPER, ii/3, 1887, 119), since by this means their correspondence, their instructions and their edicts had a more artistic and attractive appearance, and were better assured of long-term survival; furthermore, use of this material added to the renown of the scribes. The earliest known and datable Arabic parchment is a leaf which belonged to a Kurʾānic manuscript, the material has been dyed or if this is merely the effect of long-term storage. On the other hand, there is at least one undisputed example of the use of blue dye: this is a leaf which belonged to a Kurʾānic manuscript of Maghīd (Persia) datable to the 2nd/8th century. In addition, manuscripts on purple parchment are well known among mediaeval Latin documents.

Initially, it was usually the recto, this being the smoother surface, which was written on; when space was insufficient, the verso was used. Judicial documents were often bound up with a strip of leather or a thread of some kind. The dimensions of parchments vary between 85.2 × 82 cm (see P. Lond. B.M. Or. 4684/III) and 4.8 × 1.8 cm (see PER Inv. Perg. Ar., 35). Some of the Vienna fragments are safīf, that is, from colouring and from dyed by the material has been dyed or if this is merely the effect of long-term storage. On the other hand, there is at least one undisputed example of the use of blue dye: this is a leaf which belonged to a Kurʾānic manuscript of Maghīd (Persia) datable to the 2nd/8th century. In addition, manuscripts on purple parchment are well known among mediaeval Latin documents. The earliest known and datable Arabic parchment is a fragment which Ernst Kühnel saw in the possession of a German consul in Luxor, of which neither Grohmann, during his stay in Egypt, nor the writer of this article, have succeeded in finding any trace. The most recent is from the year 498/1105 (P. Berol. 9160). Naturally, these observations apply to known parchments; it is possible that there are others which will come to light in the future, either in private collections or in the unclassified stocks of certain libraries. The "Papyrus" in the article (Bibliotheca arabica) was used as writing material (see the article: 1. Sources. Djawhari, Tāǧ al-lugha wa-sīlah al-ʿarabīya, Cairo 1282/1865; Manūfī, Lāṭā'yf al-ʿawwal fi man ṣaṣāraṣ fi Misr min arāb al-duṣūl, ms.; Suyūṭī, al-Ītikāf fi ʿulūm al-Kurʾān, al-Carkutta 1857; idem, Mukaddimatān fi ʿulūm al-Kurʾān, ed. A. Jef- fery, Cairo 1954; Tarafa, Muʿallaka, in Zawzānī, Sharḥ al-Muʿallakāt al-sabī, Beirut 1963, v. 31 (cf. the lexicographer al-Djawhari, Sībakī, ii, 28-15, 28, provides testimony in support of the use of these two words. And when the diwāns were ransacked, under Muhammad b. Zubayda, the caliph al-Amin [q.e.], the parchments taken from them, from which the texts had been obliterated, were used as writing materials (tīr). At Kūfa and Edessa (al-Ruḥā [q.e.]), parchment of the finest quality was produced. But as paper progressively gained acceptance in administrative circles, the use of parchment declined, before coming to a definitive end. In the 11th and 12th centuries A.D. it was still being used alongside paper (see Umād al-kuḥīd, Codex gothanus 1537, fol. 11b).

In al-Andalus, as late as the time of al-Mukaddasī, who composed his work after 373/985, parchment was still being used for all copies of the Kurʾān and books of accounts (Aḥsan al-takāsīm, 239). As for the Maghībī, the situation there was the same, as has been proved by the discovery of hundreds of literary codices on parchment in the mosque of Stīʿ Ukbā at Kayrawān (on this, see Sprenger, Das Leben, iii, 43; see also ibn al-ʿArabī, karawani). Recent discoveries in the Great Mosque of ʿAṣṣā ṣā ʿii confirm this well-established tradition. Besides the other types of hide described above, the fine hide of gazelles was also used for the making of parchment, especially for copies of the Kurʾān, as is attested by codices preserved e.g. in Cairo (see Fīhrīs al-kuḥīd al-ʿarabīyya, i, 2; Ahmed Moussa, Zur Geschichte der islamischen Buchmalerei, 45-6; Muhammad Tahir al-Makki al-Khaṭṭāʿī, 81) or in Medina (Spies, 102-3). Furthermore, in the various collections of papyrus, which contain not only documents on paper but also texts written on hide and all other kinds of ancient material, striking examples of all types of parchment are to be found (see A. Grohmann, Einführung, 3; Khoury, art. Papyrus in EP, 7; Chrestomathia, 7).

It was usually the recto, this being the smoother surface, which was written on; when space was insufficient, the verso was used. Judicial documents were often bound up with a strip of leather or a thread of some kind. The dimensions of parchments vary between 85.2 × 82 cm (see P. Lond. B.M. Or. 4684/III) and 4.8 × 1.8 cm (see PER Inv. Perg. Ar., 35). Some of the Vienna fragments are safīf, that is, from colouring and from dyed by the
2. The production of parchment and modern

Islamic parchment

Parchment was used in the early Islamic period as one of the more durable writing materials for books, chancery documents, letters and registers, the less durable material being papyrus. In Europe, it remained in use till well in the 15th century. In Ethiopia, which may have given Islam the term mushaf [q.v.], parchment remained in use as a writing material for religious and superstitious texts till well in the 20th century. Although its primary and main use in the Middle East was as a writing material, it was used for other purposes as well. Most notable in this respect is its use in musical instruments and in puppets for shadow plays [see KHYAL AL-ZILL]. For these uses, parchment may have been made of the skin of other, larger, animals as well.

Parchment is manufactured by cleaning the skin from hair and impurities, by applying lime or certain other preserving materials to it and by then letting it dry under tension, the skin being pasted on a frame. This stretching and the absence of tanning make parchment different from leather. In many parchments it is still possible to discern the flesh side from the hair side, the latter being recognisable from its grained appearance caused by the roots of the hairs. Techniques were developed in mediaeval times visually to diminish this difference as much as possible. This was done either by finely thinning and scrubbing or chafing the skin or by splitting it. The use of the skin of unborn animals also vouches for a soft and minimally hairy appearance of the parchment.

Being of natural origin, parchment had its limit in size determined by the size of the animal it was made of. Many of the large Kur'ānic manuscripts of the early period consist of single or at best double leaves of parchment only. For smaller-sized books, the parchment may have been folded once or twice more, thereby making quarto or octavo arrangements. Depending on whether the first fold was in the length or in the width, the end result from this operation would be oblong shaped or not. The square shape of Maghribi books on parchment may be explained by supposing that the animal-shaped material was first folded two times in the width and then once in the length, whereby a quire of six almost square leaves of moderate size was produced. In the Middle East, Gregory's rule, by which parchment leaves in a quire are so arranged that flesh sides would only face flesh sides and hair sides only hair sides, was as often as not unobserved. This rule apparently did not matter as much in the Middle East as it did in Europe.

The basic tools for a comprehensive study of the Middle Eastern parchment book are lacking. A catalogue of a corpus of parchment codices does not exist. There are a few large collections of parchments books and fragments that together would constitute the main elements of such a corpus. The most important of these are the Kur'ānic fragments in the Bibliothèque Nationale of Paris (a varied collection which served as the source of the typology of the graphics of the early Kur'ān codex as developed by François Déroche); the Nasser D. Khalili collection in London, which contains coloured fragments as well (extensively described by Déroche), the fragments that were discovered in ca. 1970 in the Great Mosque of Shanṣa'a and that are now kept in the Dār al-Makhāṭir in Shanṣa'a (studied by G.-H. Puin, H.C. Graf von Bothmer and Ursula Dreibholz; no major description published as yet); and, finally, the Shanṣa'evaki, the Kur'ānic fragments that were transferred some one hundred years ago from the Umayyad Mosque in Damascus to Istanbul and that are now kept in the Türk ve İslam Eserleri Müzesi in Istanbul (studied by Déroche; no major description published as yet). The library of the Monastery of St. Catherine in Sinai contains an important number of Christian Arabic codices on parchment. It would seem that the use of parchment persisted longer with the Oriental Christians than among Muslims. Parchment of several types has continued to be used for religious reasons by Oriental Jewry till the present day. Their extensive technical literature on the subject is also of relevance to the study of Islamic parchment. Many parchment fragments of the Kur'ān, and to a limited extent also of other Islamic texts, have surfaced since ca. 1970 in the international art market, a fact witnessed by their frequent appearance in the auction catalogues of Christie's and Sotheby's of London. Parchment material is present in virtually all larger collections of Middle Eastern manuscripts.
AL-RAKKA, a mediaeval Islamic town on the left bank of the Middle Euphrates, at the junction of its tributary the Nahr al-Balikh. Today it is the administrative centre of the al-Rakka governorate of the Arab Republic of Syria; in mediaeval Islamic historic toponography it was considered to be the capital of Diyār Muhtar [q.v.] in al-Dżazira/Northern Mesopotamia.

The origin of settlement on opposite sides of the Nahr al-Balikh is attested by the Tall Zaydān and the Tall al-Bī'a, the latter identified with the Babylonian city of Tuttul (excavated since 1980; reports published in MDOG, cxii [1981] and later). To the south of the Tall al-Bī'a, on the edge of the Euphrates, Seleucos I Nikator (301-281 B.C.) founded the Hellenistic city of Nikephorion, later probably enlarged by Seleucos II Kallinikos (246-226 B.C.) and named Kallinikos/Callinicum after him. Destroyed in A.D. 542 by the Sāsānid Khusraw I Anūšhrīwān [q.v.], the emperor Justinian (527-65) soon after rebuilt the town in the course of an extensive fortification programme at the Byzantine border alongside the Euphrates (on the pre-Islamic city, see the article by M. al-Khalaf and K. Kohlmeier in Damaszener Mitteilungen, ii [1985], 133-62).

The classical city was conquered in 18/639 or 19/640 by the Muslim army under ʿīyād b. Ghānūm, who became the first governor of the Dżazira (in this connection, see W. E. Kaegi, Byzantium and the early Islamic conquests, Cambridge 1992). Renamed al-Rakka, the Muslim faith was heralded by a congregational mosque, founded by the succeeding governor Saʿād b. ʿAmīr b. Ḥidhyam, which was subsequently enlarged to monumental dimensions of c. 73 x 108 m. Recorded by the German scholar Ernst Herzfeld in 1907, the mosque, together with the square brick minaret (Pl. XXVI, 1), supposedly a later addition from the mid-4th/10th century, has since vanished completely.

In 36/656 ʿAlī crossed the Euphrates at al-Rakka on his way to Siffin [q.v.], the place of the battle with Muʿawiyah b. Abī Sufyān, the governor of Damascus and founder of the Umayyad dynasty. Located near the village of Abī Hurayra opposite the mediaeval citadel of Kaʿfāt Dżāl bar [q.v.] ca. 45 km/28 miles west of al-Rakka, the burials of ʿAlī’s followers remained. Continuing when, in 158/775, al-Mahdī was summoned to the construction of an entire new city about 200 m/660 feet west of al-Rakka. Named al-Rāfīka, “the companion (of al-Rakka)”, the city, according to ʿAlī’s death of his father. Purposely modelled after the construction of the city, which was eventually implemented by his son and heir-apparent al-Mahdī, as quoted by al-Baladhurī, 173-4, stipulated that the Christians should retain their places of worship but were not allowed to build new churches, the non-Muslim community is recorded to have thrived well into the Middle Ages. Till the 6th/12th century a bishop is attested to have resided there, and at least four monasteries are frequently mentioned in the sources, the most famous of which, the Dayr Zakkā, can be identified with recently excavated ruins on the Tall al-Bī’a (on the Christian sources and the newly-detected remains, see M. Krebernik, in MDOG, cxxiii [1991], 41-57). To this monastery belonged the estate of al-Sālābiyya, a favourite hunting place for hunting expeditions (described by al-Bakri, iii, 582, and Yākūt, ii, 644-5), possibly to be associated with the ruins of al-Suwayla near the river al-Balikh, ca. 4 km/2.5 miles to the northeast of al-Rakka (recently investigated archaeologically and recorded in Damaszener Mitteilungen, ii [1985], 98-9). There also existed a large Jewish community maintaining an ancient synagogue, still operating during the visit of Benjamin of Tudela in about 1167 (see his Travels, tr. M. N. Adler, London 1907, 32).

The early ʿAbbāsīd period. Early in the ʿAbbāsīd programme of border fortifications in all of the Muslim empire resulted in the construction of an entire new city about 200 m/660 feet west of al-Rakka. Named al-Rāfīka, “the companion (of al-Rakka)”, the city, according to al-Yaʿqūbī (Taḥrif, i, 238) was already conceived in the time of the first ʿAbbāsīd caliph al-Ṣaffāḥ (132-6749-54); nevertheless, al-Ṭabarī attributes the foundation of al-Rāfīka to his brother and successor al-Manṣūr (136- 58/754-75), who in 158/770-1 decided on the construction of the city, which was eventually implemented by his son and heir-apparent al-Mahdī from 155/771-2 onwards. Construction work was still continuing when, in 158/775, al-Mahdī was summoned to Bagdad to be invested as caliph upon the sudden death of his father. Purposely modelled after the only recently completed residential city of Bagdad, the partly surviving city fortifications testify to the military might of the ʿAbbāsīd empire. In the form of a parallelogram surmounted by a half circle with a width of 9000 m/4,265 feet, the city was protected by a massive wall of almost 5000 m/16,400 feet in length (Pl. XXV, 1). Fortified by 132 round projecting towers, an advance wall and a moat further improved the defence system (see Murhaf al-Khalaf, in Damaszener Mitteilungen, ii [1985], 123-31). Originally accessible by three axial entrances, the recently ex-
cavated northern gate (Pl. XXV, 2) has revealed stately dimensions, with a portal opening of four metres/13 feet. Remains of iron door posts attest the existence of massive or metal-plated doors, which attracted special praise in the Arabic chronicles. One of the doors, according to the mediaeval tradition, is identified with spoils from the Byzantine city of Amorion or 'Ammiyya [g.e.] in Asia Minor, transported by al-Mu'tasim (218-27/833-42) in 223/838 to his newly-founded residence at Sāmarrā'; in central Mesopotamia, from where it supposedly reached al-Rakka towards the end of the 8th/9th century. Only about half a century later, the door was again dismantled in 353/964 on behalf of the Hamdanid Sayf al-Dawla al-Ali (333-56/945-67), to be later incorporated in the Bāb al-Kinnasīn at Aleppo (E. Herzfeld, CIA, part ii, Northern Syria, Inscriptions et monuments d'Alep, i, 60).

In the centre of al-Rāfiqah another Great Mosque was constructed with monumental proportions of 310 x 290/1,014 x 954 feet in a central position opposite the residence of soldiers from Kūrāshān (Pl. XXVI, 3). Built with massive mud brick walls, strengthened by burnt brick facing and encircled by a chain of round towers, the plan layout is characterised by triple aisles on brick piers in the prayer hall and by double arcades on the three other sides of the interior courtyard (see Creswell, Early Muslim architecture, ii, Oxford 1940, 45-8, and recent project reports). This first pillar mosque in Islamic architecture obviously served as a model for later Friday mosques at Bagdād (enlarged from 192/808 till 193/809 by Hārūn al-Rashīd), Sāmarrā' (both mosques of al-Mutawakkil, inaugurated in 237/852 and 247/861 respectively) and at Cairo (Mosque of Ahmad b. Tūlūn, completed in 265/879).

Al-Rakka as capital of the 'Abbāsid empire. The new city al-Rāfiqah alone almost matches the traditional Syrian capital Damascus in size; but the two sister cities of al-Rakka and al-Rafīqah together formed the largest urban entity in Syria and northern Mesopotamia, probably only surpassed by the 'Abbāsid centre of power, Bagdād, in central Mesopotamia. Therefore, it was a logical choice that the caliph Hārūn al-Rashīd (170-93/786-809), when searching for an alternative residence in 180/796, settled on al-Rakka/al-Rafīqah, which remained his base for a dozen years till 192/808. This resulted not only in a new city, but also in a monumental complex, on the eastern gate of al-Rakka, the Bāb al-Sibāl, quoted by Ibn Shaddād, iii/1, 71), but more importantly, in the construction of an extensive palatial quarter to the north of the twin cities. This caliphal residence of almost 10 km², as attested by aerial photographs, includes about twenty large-size complexes, of which the most monumental of ca. 350 x 300 m/1,150 x 984 feet in a central position obviously served as the main residence of Hārūn al-Rashīd (Pl. XXVII, 1), probably to be identified with the Kaṣr al-Salām mentioned by Yāqūt. The other structures were evidently used for housing the family members and court officials residing with Hārūn al-Rashīd at al-Rakka, or else were devoted to service functions.

The huge area of ruins outside the twin cities has since 1944 attracted archaeological investigations. First trial soundings were conducted by the Syrian Antiquities Service at the Main Palace, but were soon discontinued due to the poor state of preservation. Instead, another major complex of ca. 120 x 150 m/393 x 492 feet, only 400 m/1,312 feet north of the city wall of al-Rakīfa, named Palace A, was partly excavated. Excavations eventually continued at three other complexes to the east of the Main Palace: Palace B (1950-52), Palace C (1953), and Palace D (1954 and 1958), all of rather monumental dimensions measuring ca. 170 x 250 m/557 x 246 feet, 150 x 110 m/492 x 360 feet and 100 x 100 m/328 x 328 feet respectively; (see the series of reports by Nassib Sāliby in Les Annales Archéologiques de Syrie, iv- [1954-5], 205-12, Arabic part 69-76; vi [1956], Arabic part 23-40). Additionally, further soundings in the vicinity of and at Palace A were implemented between 1966 and 1970 (summarised by Kassem Touier in the excavation review by P.H.E. Voûte [ed.], in Anatolica, iv [1971-2], 122-3). Since the modern town development has encroached the overbuilding of most of the palace city, the German Archaeological Institute in Damascus has conducted ten seasons of rescue excavations from 1982 till 1992. At the eastern fringes of the site, four larger buildings bordering on a public square were investigated: the so-called Western Palace of ca. 110 x 90 m/360 x 295 feet divided into representative, living and infrastructural units; the North Complex of ca. 150 x 150 m/492 x 492 feet, probably the barracks of the imperial guards; the East Complex of ca. 75 x 50 m/246 x 164 feet, mostly of recreational functions; and the Eastern Palace of ca. 70 x 40 m/230 x 131 feet, reserved entirely for representative purposes. On the northeastern limits of the palace area, another large-size complex with an extension of ca. 300 x 400 m/984 x 1,312 feet was also partly excavated, revealing an elongated double courtyard structure enclosed by round towers, which was obviously left unfinished (see the reports by J.-Chr. Heusch and M. Meinecke).

All the investigated buildings depended on mud as the major construction material, either in the form of sun-dried bricks or of stamped mud, only occasionally strengthened by burnt bricks. The ground plans, on the other hand, are generally characterised by precisely calculated geometrical subdivisions, indicating the careful laying-out of the built fabric. The publicly visible parts, on the exterior as well as in the interior, received a coating of white plaster, masking and protecting the mud core of the walls. On the representative units the buildings were decorated by stucco friezes in deep relief (Pl. XXVII, 2-3), depicting mostly vine ornament in numerous variations (partly documented by Meinecke, in Rezeption in der islamischen Kunst, ed. B. Finster, forthcoming). Genetically, these patterns are only very sparingly related to the classical models. Instead, the dependence on classical models indicates an intended revival of the ornamental corpus of the monuments from the 2nd and 3rd centuries A.D. at Palmyra (see Meinecke and A. Schmidt-Colinet, in the exhibition catalogue by E.M. Ruprechtsberger [ed.], Syrien. Von den Aposteln zu den Kalifen, Linz 1993, 352-9). Selections of excavation finds and decorative elements from the Rakka palaces are exhibited at the Damascus National Museum and at the archaeological museum at al-Rakka.

Though the investigated complexes lack building inscriptions pointing to their original function or to the patron, their history can be clearly defined by the numismatic evidence. Among the coins collected during the recent excavations on the eastern border structures of the palace belt, items minted at al-Rāfiqah in the year 189/804-5 in the name of Hārūn al-Rashīd are particularly interesting, while only individual items minted at al-Rakka in the names of the succeeding sons al-Ma'mūn (208/823-4 and 210/825-6) and al-Mu'tasim (226/840-1) have been recorded (on the 'Abbāsid mint at al-Rāfiqah, see now L. Llisch, in Numismatica - witness to history. IAPN publication, viii [1986], 101-21). Consequently, those structures
investigated recently must have been in use towards the end of Harun al-Rashid's tenure of power at al-Rakka. After the removal of the court back to Baghdad on the death of Harun al-Rashid in 193/809, the palace were obviously in use briefly and occasionally.

This extensive residential city was evidently founded in 180/796 by Harun al-Rashid and continuously further enlarged for over a decade. These buildings formed the backbone of the political events of this period, described in great detail by al-Tabari and others. From there, the yearly raids (saudd') into the Byzantine empire and the frequent pilgrimages to the Holy Cities of Mecca and Medina were organised. In these palaces lived the family of the caliph, including his wife Zubayda and his heirs apparent, al-Amin, al-Ma'mun and al-Kasim, and also al-Mut'asim, for much of their youth (as described by N. Abbott, Two Queens of Baghdad, Chicago 1946). Here was the military centre with the army command and the administrative centre of the vast 'Abbasid empire, where the treasuries and the material wealth of the caliph were safeguarded (al-Tabari, iii, 654). Here the members of the Barmakid family managed the affairs of the state until they were executed or imprisoned in 187/803.

For his periodic centre of administration, Harun al-Rashid also improved the infrastructure decisively. For the irrigation of the palace city, two canals were laid out: one channeling the water of the Euphrates from about 15 km/9 miles further west, and another of over 100 km/62 miles collecting water from the Anatolian mountains to the north. According to Yâkût, one of these (probably the Euphrates canal) was named Nahar al-Nil (described by Kassem Toueir, in Techniques et pratiques hydro-agricoles traditionnelles en damoiselles de l'Arabie, ed. B. Geyer, Paris 1990, 217-20).

About 8 km/5 miles to the west of the city, the Euphrates canal passes by another monument to be investigated. Round buttons and four portals on the cardinal points, the centre is occupied by a massive square building of ca. 100 m/328 feet for each side, with two vaulted stately halls on the main axis, from where ramps lead to the upper storey, which was not, however, completed. This curious stone structure was investigated archaeologically, with the traditional name of Hirakla obviously alluding to the characteristic slant cut and related ornamental patterns of the city of al-Rafika received a new stucco decoration with incised or moulded decoration, as well as the fragile glass vessels featuring incised, relief or lustre decoration, which are known from the inventories of the excavated palaces, were thus evidently for the most part fabricated locally.

The later 'Abbâsîd period. Shortly after the sudden death of Harûn al-Rashîd, his widow Zubayda in 193/809 organised the transfer of the vast state treasures to Baghdad, where her son al-Amin (193-809-13) was enthroned as ruler of the Abassid empire (al-Tabari, iii, 775). Here was the reinstallation of Baghdad as the administrative centre of the Muslim world, and the city of al-Rakka remained of regional importance as seat of the governor of the Qâdirî province until the mid-4th/10th century.

In opposition to al-Ma'mûn (198-218/813-33), who succeeded in capturing Baghdad from his brother al-Amin, a revolt caused the destruction by fire of the market quarter between the sister cities of al-Rakka and al-Rafika in 198/813 (Michael Syrus, ed. J.-B. Chabot, iii, 26). To police the situation, al-Ma'mûn sent the general Tâhir b. al-Husayn as governor of the Qâdirî to al-Rakka, followed by his son 'Abd Allâh b. 'Tâhir until 210/825-6, when he was nominated governor of Egypt. In the time of the Tâhirîs, the palace belt outside the city walls was already evidently falling into disrepair. Nevertheless, a last reactivation is attested for the time of al-Mu'tasim on the basis of fresco inscriptions with the written name found at the Palace B to the east of Harûn al-Rashîd's central residence (A. Grohmann, Arabische Paläographie, ii, Vienna 1971, pl. 18). This is to be connected with the last military campaign into the Byzantine empire conducted from al-Rakka, which resulted in the conquest of the city of 'Ammoriyyâ/Amorium in 223/838 (Ibn Shaddâd, ii/1, 941). From there, the caliph carried off the famous iron doors to his newly-founded capital of Sâmarrâ', to be set up at the main entrance, the Bâb al-'Amma, of his residential palace, then under construction.

Instead of utilising the palace city of Harûn al-Rashîd, new structures were built up on top of the suburb between the sister cities; soundings conducted by the Syrian Service of Antiquities (1953 and 1959) have revealed that these structures are founded on the remains of the site of Sâmarrâ' from the mid-3rd/9th century. About the same time also, the prayer-niche of the Great Mosque at al-Râfîka received a new stucco decoration with similar features. A series of stone capitals, now scattered to many museum collections, featuring the characteristic slant cut and related ornamental patterns, bear witness to continuous building activities (M.S. Dimand, in Ars Islamica, iv [1937], 308-24; Meinecke, in Bilâd al-Shâm during the Abbasid period, in Proceedings of the fifth International Conference on the History of Bilâd al-Shâm, 232-5).

Though the size of the inhabited area became drastically diminished, the city of al-Rakka remained the only real antipode to Baghdad. Therefore, it was the obvious alternative for caliphs in exile or seeking refuge, as it was the case with al-Mustâfîn in 251/865, al-Mu'tamid in 269/882, al-Mu'ta'qid in 286/899 and 287/900, and finally with al-MutÂ'akî in 332-3/944, as recorded by al-Tabârî and other historians. But the fame of the city at that period did not result from political might or artistic achievements but from the scholars living and teaching at al-Rakka, for instance the famous astronomer Abu 'Abd Allâh Muhammad al-Battânî (d. 317/929 [g.e.]), or Muhammad b. Sâ'id al-Kušâyî (d. 334/945), the author of Ta'rikh al-Rakkâ, ed. Tâhir al-Nâšînî, Hama 1959.

Medieval Cities of al-Rakka and al-Rafika. Topographical map based on aerial photographs, in scale 1:15,000 (drawing by Silke Vry and others/German Archaeological Institute Damascus 1995); extension of modern city indicated in gray.
central administration of the ʿAbbāsid caliphate affected also the city of al-Rakka. Since the conquest by the Hamdanids in 330/942, the urban centre on the Euphrates was contested between the rulers of Mawsil and Aleppo, as being the gate for supremacy in Northern Mesopotamia. The founder of the Aleppo branch of the Hamdanid dynasty, Sayf al-Dawla ʿAli, (333-356/945-967) is blamed by Ibn Hawkal and Ibn Ṣaddād for the devastation of the Ḍazira and the former capital al-Rakka. Political instability caused, for example, the destruction by fire of part of the city of al-Rakka/Nikephorion in 332/944, resulting in a gradual depopulation of the initial urban settlement. The dismantling in 353/964 of the iron doors from an entrance gate to the city is another proof for a marked reduction of the population (on the history of this period in general, see M. Canard, Histoire de la dynastie des Hamdānides de Jazira et de Syrie, i, Algiers-Paris 1951). This development is also mirrored by the Umayyad Great Mosque, which, according to the position of the minaret in the interior courtyard, only remained in use with part of the initial prayer hall.

After the Hamdanids there followed a century of turmoil, when the governorship of al-Rakka was fought over by the Arab tribal dynasties of the Numayrids, the Mirdāsids and the ʿUkaylids (described in great detail by Ibn Ṣaddād, iii/1, 74-8). Nothing is attested of any significant constructions in the urban fabric; on the contrary, the shrinking population retreated increasingly from the initial city al-Rakka to the ʿAbbāsid foundation of al-Rāfīqa, according to Yaḥyā, followed by al-Dimāghki, eventually also took over the name of the sister city.

The revival of al-Rakka in the Zangid and Ayyūbid periods. The fate of the city only changed with the appearance of the Zangids in the region (on the history of that period, see C. Altekin, The reign of Zangi (521-541/1127-1146), Erzurum 1978). Conquered by ʿImād al-Dīn Zangi in 529/1135, al-Rakka was soon to regain importance, as attested by building activities (listed partly by Ibn Ṣaddād, iii/1, 71). When Zangi was murdered in 541/1146 whilst besieging Kafr ʿAṭībar further up the Euphrates, he was first buried in a crater, but his corpse was transferred to a domed mausoleum constructed for this purpose in the Maḥshad quarter of al-Rakka (Ibn ʿAdīm, ii, 285). Following the death of Zangi, his ważir Djamāl al-Dīn Mūhammad al-Īsfāḥānī, organised from al-Rakka the succession of Zangi’s son, Nūr al-Dīn Muhāmmād (N. Elisséeff, Nūr al-Dīn, Damascus 1967, 390-2). In this connection a palace is mentioned, which may eventually be identified with the Čašqar (al-Banāt (Pi. XXVII, 2), a ruined structure from that period (on the archaeological investigation since 1977, see Toureir, in Damasenzer Mitteilungen, ii (1985), 297-319). Ibn Ṣaddād in addition also mentions a kḥāmsah of the same patron, as well as another commissioned by Nūr al-Dīn Muhāmmād, together with a hospital (ḥimārsan) and two madrasas, one for Ṣaffā’īs and the other for Ḥanāfīs, presumably all erected by or in the name of the same ruler. Most indicative for the reactivation of the city during this period is the ʿAbbāsid Great Mosque of al-Rāfīqa, which already attracted minor construction and decoration activities in 541/1146-7 and 553/1158, as recorded on re-used inscription fragments (photographed by G.L. Bell in 1909) and on newly-discovered inscription panels (excavated in 1986, now on display at the Rakka Museum). The surviving parts of the mosque, the façade of the ḥabl al-musṭaqb, and the cylindrical minaret (Pi. XXVI, 1), are due to the reconstruction programme of Nūr al-Dīn Muhāmmād, completed in 561/1165-6. The reduced size of the reactivated mosque, limited to the former prayer hall, mirrors the comparatively modest period on the eastern half of the ʿAbbāsid city, where evidently most of the lost other religious buildings mentioned were also located. As the main entrance to the mediaeval city, there functioned the Bāb Bahgādhād at the southeast corner of the ʿAbbāsid city walls, according to the brick decoration erected at this time (Pl. XXVIII, 1) (re-dated by J. Warren, in Art and Archaeology: Islamic Art, ii [1989], 22-3; and R. Hillenbrand, in The art of Syria and the Jazira 1100-1250, ed. J. Raby, Oxford 1985, 27-36).

With the conquest by Schālāb al-Dīn in 578/1182, the city passed into the control of the Ayyūbids. As one of the chief towns of the principality of Dīyār ʿUṯmān, al-Rakka was especially favoured by the Ayyūbid prince al-Malik al-ʿAdil Abī Bakr, who took up residence at the city between 597/1201 and 625/1228. He is attested to have constructed palaces and bath complexes, and laid out many gardens with extensive plantations (Ibn Ṣaddād, iii/1, 71-2). Of these Ayyūbid additions to the town, nothing has survived. But in this period, al-Rakka emerged as a major production centre for glazed ceramics of high artistic perfection, which were exported widely. Most frequent among these are figural or vegetal designs in black under a transparent turquoise glaze, but other variations with lustre on turquoise and purple glazes, or coloured designs, including red, under a colourless glaze, are also recorded (see the detailed studies by E.J. Grube, in Kunst des Orients, iv [1963], 42-78; V. Porter, Medieval Syrian pottery (Raqqah ware), Oxford 1981; and also the extensive bibliography by Cr. Tonghini and Grube, in Islamica, iii [1989], 59-93). The pottery workshops were located in the immediate vicinity of the urban settlement, even partly within the ʿAbbāsid city walls to the south of the Great Mosque (on a kiln excavated in 1924 immediately outside the east wall of the city, see J. Sauvaget in Art Islamica, xiii-xiv [1948], 31-45).

The Ayyūbids successfully repulsed occasional attacks on the city by the Saljuqs of Asia Minor and the Khwarazmians, but finally had to yield to the Mongol forces, who lowered northern Mesopotamia in 657/1259 (on the history of that period, see R.S. Humphreys, From Saladin to the Mongols, Albany 1977). Urban settlement at Dīyār ʿUṯmān ceased in the early years of the Mamluk era, when in 663/1265 all the fortified cities on the middle Euphrates were destroyed for tactical reasons, including al-Rakka (L. Ilisch, Geschichte der Artusdienenherrschaft von Mardin zwischen Mamluken und Mongolen 1260-1410 AD, Münster 1984, 51-2).

The Ottoman period. Throughout the Mamluk period, al-Rakka remained practically deserted, as certified by Abu ʿl-Fida. Only after the Syrian campaign of the Ottoman sultan Selim I (918-26/1512-20), which resulted in the downfall of the entire Mamluk empire in 923/1517, was it reactivated as a military outpost. In the time of Sultan Süleyman I (926-74/1520-66), al-Rakka was the nominal capital of a province of the Ottoman empire, probably in memory of its past glory. A building inscription commemorating the restoration of a castle and a sacred building (bāram) by Sultan Süleyman b. Selim Khan remains the only testimony to this limited reactivation as a military and administrative centre (originally located at the Mausoleum of ʿUways al-Karant, now on display in the archaeological museum of the modern city). Due to destruction by Türkmen and Kurdish tribes, the governorship was transferred
to the city of al-Ruha/Urfa ca. 135 km/84 miles further north (according to Ewliya Celebi, Seydhat-ndme, tr. J. von Hammer, v. 1, London 1834, 95, 101, 104, 110; tr. Danisman, v. 1, Istanbul 1970, 41, 52-3). On the visit of Ewliya Celebi in winter 1059/1649, the place was deserted following recent raids, though the ruins of the glorious past and formerly-irrigated gardens still remained visible.

The site was only repopulated in the late 19th century, when the Turkish government settled there a group of Circassians in order to police the region. Initially a village of about 1,000 persons, in southsouthwest corner of the ʿAbbāsid city, the population grew slowly but steadily, counting somewhat less than 5,000 in 1937.

1. Palace City of Hārūn al-Rashīd, main palace and neighbouring structures on the southeast, aerial view ca. 1930 (reproduced from M. Dunand, De l’Amanus au Sinai, 1953); for identification see map.

2. Western Palace, stucco frieze (photo German Archaeological Institute Damascus: P. Grunwald 1985).

A few traces of the Aghlabid foundation are still to be seen at the present day. A great rectangular reservoir with thick walls strengthened by buttresses may be identified with the lake (bahr) which gave its name to one of the palaces. A pavilion (?) of four stories stood in the centre. Nothing is left of it, but on the west side of the reservoir may be seen the remains of a building which must have been reflected in the great mirror of water. Three rooms may still be distinguished with their mosaic pavements. The technique and style of decoration closely connect these Islamic buildings of the 3rd/9th century with the Christian art of the country.

Excavations under the auspices of the National Institute of Archaeology of Tunisia have been carried on at the site since 1962. The finds have only been very partially studied until now (1993), but are preserved in a rich National Museum of Islamic Art established not far from the ruins, whilst awaiting a fuller examination.

RAKKÂS (a.), in French rakkas, a term which has several meanings but which only merits an entry in the EI because, amongst several technical senses, it particularly denotes, in the Muslim West, a messenger who travels on foot long distances in order to carry official or private mail. The name is derived from the noun raks meaning "trotting" (of a horse or camel; see LA, s.v.), but is also applied to a man who "trots", as is the case with the rakkâs. The development of various means of communication has put an end to this calling, now unnecessary, and the word rakkâs can now only denote an occasional messenger, above all in time of war.

Dozy, Supplément, s.v., gathered together a certain number of references in the Arabic sources (notably al-Maâkârî, Analectes, i, 557, since the term was used in Spain, as P. de Alcala indicates in his Voaulistula and also in the accounts of Western travellers, and also indicated various other technical senses of rakkâs, notably "pendulum", "hand of a watch" (cf. Fr. "trotteuse"), "trigger of a fire-arm" and, after Mehren in Acts of the Royal Society of Scienas, Copenhagen 1872, 286), "part of a mill which produces a noise through the movement of the millstone". It is nevertheless also useful to note that the Kabyle arkękas (with de-emphasis of the sibilant) is equally applied to the hand of a watch and the pendulum of a clock, as well as to a piece better described by J. Dallet (Dict. des langues berbères, Paris 1982, 732) than by Mehren: "a simple contrivance of a water-wheel, formed from a pin fixed on a small stick floating above the moving mill-stone; this pin, fixed to the trough containing grain, transmits a vibration to it which ensures the regular feeding of the grain into the mouth of the mill."

Bibliography: Given in the article. (Ed.)
dances, which might end in a frenzied group ecstasy (as the poet Djami [q. v.] describes it ironically in his Sufi lyrics). The Persian world, as Shafi' in whirlings, dances, with their long sleeves resembling wings. The normative believer disliked the fact that the presence of a shahid, a handsome young man, was regarded as necessary during the sama'i; in fact, the very contemplation of such a person might induce the Sufi involuntarily to dance (as would any overwhelming experience).

It is related that al-Hallâlî [q. v.] (executed in 309/922) went dancing in his letters to the execution, and a "dance in chains" occurs as a literary cliché, as does the Persian expression of the raks-i bismi'îl, the "dance" of a ritually slaughtered bird, that is, the convulsions of the lover who resembles "a headless chicken".

Although dance as part of the sama'i occurred in various dervish groups, especially among the Chîgîtîyâ [q. v.], it was institutionalised only in the Mewlewî order [see MAHALWAHY]. Mâlvânâ Dîâbîl âl-Dîn Rûmî (604-72/1207-73 [q. v.]) had composed most of his lyrical poetry while listening to music, and many of his ghazals [q. v.] can easily be accompanied by rhythmical handclapping. Terms like "clapping" and "stamping" and the like abound in his lyrics, especially in his rubbâ'îyât [q. v.], for the rubbâ'î was the poetical form generally used in sama'i sessions. For Rûmî, the whole universe is moving in a wonderful dance, from the moment that Not-Being heard God's primordial address "Am I not your Lord?" ( sûrû VII, 172) and came into existence by dancing (Dâruyn, no. 1852), an idea alluded to as early as in Dîjunayd's sayings. Dance and sama'i are the ladder to heaven, that is, the true mi'ribîl, and angels and demons participate in it. Stamping the ground makes the water of life gush forth; it is like treading the grapes out of which the spiritual wine is made. The trees, touched by the spring breeze, move their twigs in happy dance. Rûmî's son Sultân Walad [q. v.] institutionalised the music and dance from which his father had drawn much of his inspiration. Thus the dance of the Mewlewîs is by no means a wild ecstatic act but rather a well-organised "ballet" in which the individual derivations of al-qâfûl, and numerous miniatures, mainly an ecstatic rapture. But it is "a dance for God", a way of praising God. The whirling is often compared to the movement of the stars around the central sun, or of praising God. Bibliography: H. Corbin, Quietude et inquiétude de l'âme dans le soufisme de Râbizâbî Bâqî, in Erans Jahrbuch, xxvii (1958); S. Haq, Samî (in veröffentlichter, among the western Persia. Râm-Hurmuz lies about 53 miles southeast of Ahwâz, 65 miles south-south-east of Shûhîr, and 60 miles north-east of Bibbihân. Ibn Khurredâdhbih, 43, reckons it 17 farasâğhs from Ahwâz to Râm-Hurmuz and 22 farasâğhs from Râm-Hurmuz to Arrâdân. Kudâmâ, 194, who gives a more detailed list of stages, counts it 50 farasâğhs from Wäsi't to Bâshra, thence 35 farasâğhs to Ahwâz, thence 20 farasâghs to Râm-Hurmuz, and then 24 farasâghs to Ar-râdân. The importance of Râm-Hurmuz lay in the fact that it was situated at the intersection of the roads from Ahwâz, Shûhîr, Ispâhân and Fârs (via Arrâdân); that it is the natural market for the Bakhtiyârî and Küh-gülî tribes [see LUR] and that there is oil in its vicinity. The town lies between the rivers Âbî KurDISTâN and Gûpûl. The first of these (also called Dîjûr) is made up of the following streams: Âbî Gilâl (Âbî Zard), Âbî Aflâ (coming from Mungasht), Rûd-i Pûtag and Âbî Darra-yi Kûl. A canal is led from the right bank of the Dîjûr to supply the town of Râm-Hurmuz. Further down, the Dîjûr joins the Âbî Mârûn which comes from the southeast in the region of Bibbihân and of the old town of Ar-radân [q. v.]. Their combined waters are known as the Dîjarâbî. The other little river (Gûpûl) runs north of Râm-Hurmuz and is lost in marshes. Râm-Hurmuz (160 m/500 feet above sea-level, in lat. 31° 15 'N., 41° 10 'E.) is situated above the plain to the northeast of which rise the hills of Tûl-Gorgûn 490 m/1,600 feet high.

The town is rarely mentioned by historians. The Pahlavi list of the towns of Iran, § 46 (ed. Markwart), A catalogue of the provincial capitals of Eranshahr, 19, 98) attributes the building of Râm-Hurmuz to Hurmuz b. Shâhpûhr (272-3) (cf. also al-'Tabârî, i, 833). Accord-
ing to Hamza, ed. Gottwald, 46-47, the town was built by Ardashir I and its name was Râm-(i) Hurmuz (Asak, Bustan, Sasan, kuras). According to the researches of S.F. Goitein, Zur Entstehung des Ra.

RAMADAN (א.), name of the ninth month of the Jewish calendar. The name from the root r-m-d refers to the heat of summer and therefore shows in what season the month fell when the ancient Arabs still endeavoured to equate their year with the solar year by intercalary months [see Nasi].

Ramadm is the only month of the year to be mentioned in the Kur'an (II, 181/185). "The month of Ramadn is (that) in which the Kurgan was sent down", we are told in connection with the establishment of the fast of Ramadn. Concerning the origins of this, to what is said in E'I. Šawm should be added the researches of S.F. Goitein, Zur Entstehung des Ra.

fast, within a very short time) and although the final settlement of the term as a whole month is not thereby satisfactorily explained. On the other hand, to strengthen Goitein’s position, it ought perhaps to be pointed out that the Laylat al-Bara’ (on which see G.E. von Grunebaum, Muhannadun festivals, repr. London and Ottawa 1976, 53-4) precedes Ramadan in the middle of the preceding month of Sha`b`an. The ideas and practices described by Wensinck in El’art. sha`ban, which are associated with this night, really to some extent resemble Jewish conceptions associated with the New Year—which precedes the Day of Atonement by a rather shorter interval than the Laylat al-Bara’ precedes Ramadan—that the connection between the latter and the Day of Atonement is thereby strengthened. If we try to connect the so far unexplained word bara’ with the Hebrew br’i’ (‘creation’) and reflect that, according to the Jewish idea, the world was created on New Year’s Day (numerous references in the liturgy of the festival), we have perhaps a further link in the chain of proof; but first of all the age of the ideas associated with the Laylat al-Bara’ must be ascertained.

The legal regulations connected with the fast of Ramadan are given in sawm [see also tarawih]. Of important days of the month, al-Biruni, among others, mentions the 6th as birthday of the martyr al-Hasan b. ‘Alī, the 10th as the day of death of Khadija, the 17th as the day of the battle of Badr, the 19th as the day of the occupation of Mecca, the 21st as the day of ‘Alī’s death, and of the Imām ‘Alī al-Rida’s, the 22nd as birthday of ‘Ali and finally the night of the 27th as Laylat al-Kadr [q.v.].

The name of this night is Kur`anic; sūra XVII is dedicated to it. It is there described as a night ‘better than a 1,000 months’ in which the angels ascend free and (bi-idhn Allah min hull amr) which means blessing till the appearance of the red of dawn. The revelation of the Kur`an, as already mentioned, is expressly located in it. The same night is obviously referred to in sūra XLIV, 2, as a ‘blessed’ one. The date, the 27th, is not, however, absolutely certain: the piou therefore use all the odd nights of the last ten days of Ramadan for good works, as one of them at any rate is the Laylat al-Kadr [see MKT].

### AL-RAMĀDI

ABU ‘Umār YUSUFL B. HARUN AL-KINDI AL-KURTUBI AL-RAMĀDI, poet of Muslim Spain, who lived in the 4th/10th century and died in 403/1013, according to Ibn Hayyān (in Ibn Baškuwāl, cf. *Bibl.*), in 413/1022-3 according to al-Makki (quoting the same Ibn Hayyān); he was buried in the cemetery of Cordova known as Makbarat Kala†.

The ethnic al-Ramādī is explained in two ways: 1. the poet is said to have come from al-Rammāda, a little town between Alexandria and Barka; this explanation is to be rejected, for this toponym would not give an ethnic like al-Ramādi (with one *m*); 2. the second explanation, which derives Ramādī from ramād “ordinary ashes” or “ashes for washing”, is the only possible one; the poet perhaps in his youth followed the trade of an ash-merchant; in confirm-
tion of this we may call attention to the Romance surname which was originally given to him of Abu Ḥanīfah (wrongly: Abu Sabīlī in the Yātimat al-dahr, i.e. padre cinder, father cinder or the man with the cinders).

Al-Ramādī, a native of Cordova, spent all his life in his native town except for a brief period of exile in Saragossa. His life was dominated by three great factors: his attachment to al-Kālīf [q.v.], his devotion to the cause of the hājījī al-Muṣṭafā [q.v.] and his love for Khalwa.

All Al-Ramādī, summoned from the east to Spain by the Umayyad caliph ʿAbd al-Rahmān III al-Nāṣir (300-5/912-61) had from his arrival in Cordova in 330/942 no more faithful disciple than al-Ramādī, who studied under his direction the Kitāb al-Nawādir. This young scholar’s admiration found expression in a poem which has remained famous ( rhyme -li, metre kāmil) of which some thirty lines are preserved in the Yātimat al-dahr of al-Thaʾālibī and the Muṣāhaf al-anfus of al-Ṭāfī b. Khākān. It is this poem which gained him the title of Mutanabbi al-Qibārī which had already been given to Ibn Ḥānī al-Andalusī and which was later to be given to Ibn Dārāḏ al-Kastālī and to Abū Taḥīb ʿAbd al-Jabārī. Al-Ramādī studied also under an Andalusian scholar named Abū Bakr Yāḥyā b. Ḥudhayl al-Kalīfī or al-Aṣmāʾ (the blind), of whom we know very little.

When at the height of his powers, al-Ramādī became laureate to the Umayyad caliph al-Hakam II al-Mustanṣīr (350-66/961-76), then to his son and successor Ḥishām II al-Muʿayyad (366-99/976-1009); but his attachment to the cause of the hājījī Abū l-Ḥasan al-Muṣṭafā and his participation in the plot fomented by the eunuch Dāwḏār to overthrow Hakam II and proclaim a caliph other than his son Ḥishām brought down upon him the wrath of the great minister al-Mansūr Ibn Abī ʿAmīr [q.v.]. Thrown into prison at al-Zahrāʾ, he suffered all sorts of ill-treatment; during his imprisonment, he wrote the most touching verses (including a poem in -ki, metre tawīl, and another in -luḥu, metre tawīl) and he prepared a poetical work on birds, the description of which concluded with a poem in praise of the heir-presumptive Ḥishām II. Liberated through the intervention of friends, he had to go into exile. He went to Saragossa to the governor ʿAbd al-Rahmān b. Mūhammad al-Tudžībī, whose merits he celebrated in a poem in -mi. Amnestied by al-Mansūr, he was able to return to Cordova, but on condition that he did not go into society. Finally pardoned, he entered the entourage of the all-powerful hājījī as a recipient of allowances (muṣatāzak) and it was in this capacity that he took part in an expedition against Barcelona in 375/985. During the fits which were to lead to the collapse of the Umayyad caliphate and the formation of petty independent states ruled by the muḥākāt al-tawīl [q.v.], al-Ramādī led a miserable existence and it was in the greatest distress that he died in the early years of the 5th/11th century.

Al-Ramādī became celebrated chiefly for his chaste love for the enigmatic Khalwa (wrongly: Halwa or Hulwa), whom he met one Friday in the public garden of Cordova, at the time when the fairs which were to lead to the collapse of the Umayyad caliphate at the end of the bridge but was never able to see again. It was Abū Mūhammad Ibn Ḥazm, whose ascetic tendencies on this subject are well known, who did most to spread this lovesong; but it seems that the memory of Khalwa occupied the heart or mind of the poet only very little. If it still possessed him at Saragossa to the extent of inspiring all the nasīb of the panegyric in honour of the Tudžībī governor, on his return to Cordova, it disappeared completely, for we see al-Ramādī henceforth completely overwhelmed by a new passion, the object of which is not a woman but a Mozarab boy to whom the poet gives the name of Yahyā (John) or Nuṣayr (Victor?).

Al-RAMĀHURMUZĪ, Abu Mūhammad al-Ḥasan b. ʿAbd al-Rahmān b. Khallād, often referred to in mediaeval Arabic literature as Ibn al-Khallād, kādi and author of various works of adāb [q.v.]
who died in 360/971. His date of birth is unknown, but judging by the death dates of his alleged tradition masters, he must have been born some one hundred years earlier, if credence were to be granted at all to the usual longevity ascribed to transmitters of that period. For references to biographical notices on him, see CAS, 1, 193. Of the poetry attributed to him a few lines have been preserved in Yatimah al-dahr, ed. Cairo, iii, 423-7, by al-Dh’ufalib [q.v.], also al-Yakub, irshad, iii, 140-4. Of his prose works, only two seem to have survived, both related to hadith. In 1968, a collection called Amgil al-nabi, which comprises some 140 proverbs and other assorted wise sayings attributed to the Prophet and moulded in the form of hadith, cf. the editions of Amatul Karim Qureshi, Haydaraband (Sind) 1968, and A.A. al-A’azzmi, Bombay 1983. For the amgil genre in general, see R. Sellheim, Die klassischen Arabischen Sprichwortensammlungen insbesondere die des Aba’ Ubaid, The Hague 1954. Rammurmuza’s fame squarely rests, however, on a comprehensive, theoretical work on the science of hadith entitled Al-Muhaddith al-fasiy bayna l-‘rawi wa l-‘ara’i, the first such work to be written in Islam, which exerted a lasting influence on all theoretical hadith works to follow.

The title refers to two sorts of hadith transmitters which he distinguishes from one another: those who merely transmit without paying proper heed to all aspects of a tradition, whose transmission they call risa’ayu; and those who have learned to discern between all transmission minutiae, whose activities he summarises under the term diraya. Examples of these minutiae are (1) the proper distinction between namesakes and people bearing names with (nearly) the same consonantal pattern (rasam); (2) the identification of transmitters not known by their patronymics but by forefathers, other forebears or (grand-) mothers; (3) the identification of transmitters who share kunyas or nisbas, etc. Rammurmuza’s exploration of this thorny terrain is exemplary and constitutes to this day an indispensable tool for any approach towards isnad analysis. His is in fact the first systematic attempt to unravel an, until his time ever-present, array of traditions, together with the (possible) Persian origin of ramal, the possible Persian origin of ramal, which he identifies as containing the basic structures of transmitting traditions in order to collect traditions (fi islab al-tur [q.v.] is the first such survey and is remarkable for its exhaustiveness as well as the relatively late chronology he proposes for its onset. Moreover, Rammurmuza is fully aware of what Islam owes to its musallat of the first hour by emphasising time and again their undeniably important role in the development of juridical thinking and in transmitting traditions in order to derive fikh precepts from them. This book is available in the reliable edition of Muhammad A’zadi-Khatib, Beirut 1971. Bibliography: Given in the article. See further, G.H.A. Juynboll, Muslim tradition. Studies in chronology, provenance and authorship of early hadith, Cambridge 1983, 29, 47, 66, 135, 141. (G.H.A. Juynboll)

RAMAL (a.). 1. As a poetical metre. This is the name of the eighth metre in Arabic prosody [see aruq], based on the foot fas’ilatuin in which the first syllable may be either long or short (\( \varepsilon \)). Of the two current types, one has three feet to the hemistich with 22 syllables to the line (\( \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \)). The other one, called magziz al-ramal (ramal shortened by a foot or qussa), has 16 syllables to the line: \( \varepsilon \varepsilon \varepsilon \varepsilon \varepsilon \). The final syllable of the line is normally long, but occasionally poems with overlapping last syllables are found. In modern poetry, so-called “free verse” (al-shi’r al-lurr) in ramal is built on the fas’ilatuin foot, but shows lines of unequal length.

Ramal poems are few in pre-Islamic poetry, but some are ascribed to Imru’ al-Kays [q.v.] and Abib b. al-‘Abbas [q.v.]. (cf. Ibn al-Sarradj, Misiyir fi dawzan al-aghar, ed. M.R. al-Daya, 1979, 156-7). One of the three Muwadda’iz sayyid [q.v.] in ramal is by al-Muhabib Mubarak, ed. M. A’zadi-Khatib, Arab al-Awast [q.v.] (Kitab al-Arid, ed. S. al-Bahrivaz, in Fusul vi/vi [1986], 152) a lot of ramal poetry was practised by the Bedouins, but this may refer to ramal as a genre name for “poetry which is neither kashid nor radda’” (al-Akhshab, Kitab al-Kawafi, ed. ‘Izza Hasan, Damasco 1970, 68; Lane, s.v. r-m-f), apparently referring to magziz poetry. This fits in with al-Tahmawi’s division of Arabic poetry into four classes (al-ka’ida, al-ramal, al-ra’ga’ and al-khaffi) in Kitab fi sittidat al-funun, Calcutta 1862, 745, where a poet who writes mainly verse of the second class is called a rimil (cf. W. Stoetzer, Theory and practice in Arabic metrics, Leiden 1989, 61-73). Al-Djwari [q.v.] labels both variations of ramal as ancient (kadim) (see Arud al-waraka, ed. Muhammad al-Alami, Casablanca 1984, 52). As from the Umayyad period, both types of ramal are regularly found in monostrophic poems, in muwashshah and zaghal (cf. M. Ben Cheneb, Tahfat al-adab, Paris 1954, 117 and 131), popular ballads (cf. P. Cachia, Popular narrative ballads of modern Egypt, Oxford 1989, 103) and modern poetry, where it has gained popularity over the years (S.K. Jayyusi, Trends and movements in modern Arabic poetry, Leiden 1977, 608 n.).

According to Hāzim al-Karīadjānī [q.v.], ramal, together with madīd, comes, aesthetically, after jauwil, basīṣ, wafir and khaffi and is characterised by “smoothness and harmony, therefore more suitable for elegies and the like” (see his Minhād al-balqilāh, ed. M.H. Belkhodja, Tunis 1966, 268-9).

For the role of ramal in the relationship between music and verse, see O. Wright, in Arabic literature to the end of the Umayyad period (= The Cambridge history of Arabic literature, i) Cambridge 1983, 450-9. One of the indigenous explanations of the name is precisely that ramal is a kind of music characterised by this pattern (yakhrudju’ alā li khdja’t w-awzn) (see Ibn Barri, Shahr al-ghumār min masā’il al-‘arād, ms. Esorial 288, fol. 46a = 410, fol. 171a). See also section 2. below.

For a discussion of the arguments for and against the possible Persian origin of ramal, see E. Wagner, op. cit., 47-8.

Bibliography: Given in the article.

(Stoetzer)
the mnemonic syllables tanna tan tan which represent the length of the notes (and also correspond to the metric scheme of the prosodic ramal):

\[
\begin{align*}
(3/2) & \quad \text{tanna tan + fāsiла} \\
(2/2) & \quad \text{tan tan tananan} \\
(2/2 + 3/2) & \quad \text{. . .}
\end{align*}
\]

Ibn Sinā’s disciple Ibn Zayla (d. 440/1048) added the alternative form of (3/2) which was confirmed later by Šafi al-Dīn al-Urmawī (d. 693/1294) and his successors up to the 9th/15th century. They transcribed it by substituting a consonant for each quaver, and define the length of the notes by the number of syllables:

\[
(3/2) \quad \text{tan tan tananan}
\]

Simple ternary patterns such as these were also attested in Muslim Spain and still survive in the naqsha [q.v.] of North Africa, though the name ramal vanished there long ago.

As a result of “duplication” (taqżif), the ramal developed into the very popular form of (6/2) j j j j j j which was called a Persian variety and first occurs in 7th/13th century sources. ʿAbd al-Kādīr al-Marāḡī (d. 838/1435) expanded this pattern in his own compositions, as he says, from 12 to 48 and even 96 units per period.

Another sophisticated form developed in Ottoman Turkey (al-ramal al-turki; remel). Its basic scheme consists of 28 units per period (or 56 units, when “doubled”):

\[
(2/2 + 3/2) \quad \text{. . .}
\]

Here, the mnemonic syllables represent the quality but no longer the length of the beats.

The “light” version of ramal had a basic pattern of (3/4) j j j, plus some variant forms, as listed in Arabic sources from the 3rd/9th to the 7th/13th centuries. From Ibn Sinā’s time on, a “limping” (aṣṣaṭ) variety (2/8 + 3/8), j j j, is also recorded. In al-Urmawī’s school, both patterns were transmitted side by side.

(E. Neubauer)

RĀMĪ MEHMED PASHA, an Ottoman Grand Vizier and poet, was born in 1065 or 1066/1654 in Eyyūb, a suburb of Istanbul, the son of a certain Hasan Ağha. He entered the chancellery of the Reṣū Efendi as a probationer (ṣawād), and through the poet Yusuf Nābi [q.v.] received an appointment as maṣraf kābīrī, i.e. secretary for the expenditure of the palace. In 1098/1684 through the influence of his patron, the newly-appointed Kapudān Paşa [q.v.] Mustafā Paşa, he became diwan efendi, i.e. chancellor of the Admiralty. He took part in his chief’s journeys and campaigns (against Chios) and on his return to Istanbul became reʾūs kesadārī, i.e. pursuverage to the Reṣū Efendi. In 1102/1690 he was promoted to Beylukdāy, i.e. Vice-Chancellor, and four years later, Reʾūs Efendi in place of Abū Bakr, in which office he was succeeded in 1108/1694 by Kökük Mehmed Çelebi the sources of the back of Zenta (12 September 1697), he became Reʾūs Efendi for a second time and was one of the plenipotentiaries at the peace of Carlowitz [see Karlovoa], by the conclusion of which “he put an end to the ravages of the Ten Years War but also for ever to the conquering power of the Ottomans” (J. von Hammer). As a reward for his services at the peace negotiations, he was appointed a vizier of the dome with 3 horse-tails (tugh) in 1114/1703, and in Ramāḏān 6, 1114/24 January 1703, appointed to the highest office in the kingdom in succession to the Great Vizier Daltaban Mustafā Paşa. In this office he devoted particular attention to the thorough reform of the civil administration, through the abuses in which he saw the security of the state threatened (cf. von Hammer, GOR, vii, 64). “By lessening the burden of fortresses on the frontiers in east and west, by raising militia against the rebel Arabs, by securing the pay of the army from the revenues of certain estates, by making aqueducts, by restoring ruined mosques, by taking measures for the safety of the pilgrim caravans and for the security of Asia Minor, by settling Turkmen tribes, by ordering the Jewish cloth manufacturers in Selānīk and the Greek silk manufacturers in Bursa in future to make the stuffs that hitherto imported into Turkey from Europe”, he exercised a most beneficent activity, which however soon aroused envy and hatred, and, especially as Rāmī Mehmēd Paşa, as a man of the pen entirely and not of the sword, was unpopular with the army, particularly the Janissaries, finally was bound to lead to his fall (cf. GOR, vii, 72). In the great rising in Istanbul which lasted four weeks, beginning with the enthronement of Sultan Muṣṭāfā II and ending with his deposition (9 Rabīʿ II, 1115/22 August 1703), his career came to an end. He was disgraced, but pardoned in the same year and appointed governor, first of Cyprus, then of Egypt (October 1704). His governorship there terminated as unhappily as his grand viziership (cf. GOR, vii, 133, following Rashīd and La Motraye). In Djamādā 1 1118/September 1706 he was dismissed and sent to the island of Arz, and in the same year he was made pointed governor, first of Cyprus, then of Egypt (October 1706). Finally was bound to lead to his fall (cf. GOR, vii, 134, quoting the internuntius Talman). Rāmī Mehmēd Paşa is regarded as a brilliant stylist, as the two collections of his official documents (inšāʾ) containing no less than 1,400 pieces, distinguished by their simple clear and elevated style, amply show (cf. the ms. in Vienna, Nat. Bibl. nos. 296 and 297, in G. Flügel, De arab., pers. u. türk. His., i, 271-2). Rāmī Mehmēd Paşa also left a complete Diwān, of which specimens are available in the printed Tadhkīrāt of Sālim (cf. F. Babyger, GOW, 272-3: Istanbul 1315). His poetical gifts were inherited by his son ʿAbd Allāh Reʾṣī (cf. Bursal Mehmēd Tāhir, ʿOṭmānī māʾṣūlīleri, i, 187). His son-in-law was the taḥkīrātī Sālim [q.v.].

(Bekir Sürekli Babyger).
flourished in the middle of the 8th/14th century. Very little is known about his life and the few chronological indications that we possess are either imprecise or unreliable. Dawlathān states that he was the poet laureate (mlk l-thuʿrā) [q. v.] of ʿIrāq during the reign of the Muzzafarrād Shāh Manṣūr (reigned 789-95/1387-93), but dedications in his two most important works prove that he attended the court of Sultan Abū ʿl-Fath Uways Bahādūr or Shaykh Uways (757-761/1356-74) of the Djalāyirids [q. v.], presumably after the latter's conquest of Ḡdār ābāyān in 761/1360. In his Mathnawi-mashūk, Ḡuṭrat al-matadādīn (d. 738/1337) as a contemporary and Ḥasan b. Ṣalih Kāšī, who died as early as 710/1310, as his teacher (cf. Ikbr, introd., p. ḏāl). A late and unlikely dating for his death is 795/1392-3 (see Storey, iii, 182-3).

His most original work is Anīs al-ʿusḥshāk, a short treatise on the poetical description, "from head to foot"; of a beautiful person. According to his own statement, the author made up his mind to compile this book while he was in Maʿrāgha on a visit to the observatory of Naṣīr al-Dīn Ťūsī [q. v.]. He dedicated it to Shaykh Uways. In this treatise, Rāmī discusses the conventions of ghazal poetry, as well as of romantic mathnawis, in depicting the charms of a maʿṣūkūn, male or female (see Efr, iv, s.v. Beloved). Twelve of the nineteen chapters deal with parts of the head: the hair, the temple, the eyebrows, the eyes, the eye lashes, the nose, the face, the down on the cheeks (khāṭṭ), the beauty spot (kħāf), the lips, the teeth, the mouth and the chin; then follow the neck, the breasts, the fore-arm, the fingers and finally the stature, the waist and the legs. The Persian text, preserved in a great number of manuscripts, was published by ʿAbbas Ikbr (Tehran 1325 Sh/1946, with a short introd.) and was translated into French by Cl. Huart (Anīs al-ʿusḥḥāk. Traité des termes figurés relatifs à la description de la beauté, Paris 1975).

Under the title Ḥadāʾik al-ḥadāʾik (erroneously called Ḥadāʾik al-hakāʾik) by Dawlathān, Rāmī prepared a commentary on the well-known textbook of rhetorical figures Ḥadāʾik al-sihr fr dāʾik al-šūrī by Ṣaḥḥī al-Dīn Watwāt [q. v.]. To the order of Shaykh Uways, he removed the Arabic quotations from the basic text. This work was edited by Sāyīd Mīr, Dowlathān (Tehran 1341 Sh/1962, with an introd. and extensive notes).

Rāmī's Diwan, containing ḵaṣīdas, muʾṭaṣāfāt and quatrains, was in the days of Dowlathān still available in western Persia but now seems to have disappeared. Only a few poems are preserved in anthologies (cf. Imām, introd. 12 ff.). Other works ascribed to Rāmī are known to exist only in very few copies: Badāʾik al-sānaʾī or Tafsīl al-fakhir, treating of sixteen figures of speech (Munznw, iii, 2127-9); Dāʾik fārī, a mathnawis in the metre of Djalāī al-Dīn Rūmī's Mathnawi-yi maʿnawi (Munznw, iv, 2817-8); Sīfāt i ʿamār-i išīʿ wa ʿalā āmār-i (Munznw, iii, 2142) and Muhkhasar-i sānaʾī-i išīʿ. About Ḫulayt al-maddādā, a work also attributed to Rāmī (Hāddīd Ḵallafla, iii, 112) nothing else is known.

(E. BERTHELS-J.T.P. DE BRUIN)
country, those of a position in the plain with the pro-
ximity of hills and sea, of places of pilgrimage like
Jerusalem and whose splendid minaret was much
admired. Figs were the chief export of al-Ramla. The
name of the province of Filastîn was also given to
the capital al-Ramla (Clermont-Ganneau, Recueil d'Arch.
ner., vi, 101).
Salâh al-Dîn in 583/1187 destroyed the town so that
it might never again fall into the hands of the Franks
and it remained in ruins (Yâkût, i, 818; Safî al-Dîn,
Marâsid, i, 483). Ibn Banût'â visited it in 756/1355; he
mentions the Dîmâtî al-Abyad, the mihrab of which
was regarded as the largest of all that were
known, the pulpit of which was second only to that in
Jerusalem and whose splendid minaret was much
admired.
Whether there had been an older town on the site
of al-Ramla is problematic. The old attempts to iden-
tify it with Arimathia, Ramathâ or Ramatham have
now been generally abandoned. An ancient Παμε-
βόλη, "Camp" (> al-Ramla, the initial Greek p
being interpreted as the Coptic article, as in ushuf (< εψαυφος), should rather be considered, a place-name
particularly frequent in Palestine, which was borne
for example by the camp of Jerusalem (Hebr., xiii,
11, 13; Acts, xxii, 34-xxiii, 32) and bishops and
bishops in Palestine I. (now Bijr al-Zarâ'a, cf. Féderlin
in Génér., Vie de S. Euthyme le Grand, 104-11) and in
Phoinike Libanesia (R. Aigrin, art. Arabie, in Dict.
d'hist. et de géogr. eccles. iii, 1194-6); for the Egyptian
al-Ramla four miles to the north-east of Alexandria
corresponds to an ancient Nicopolis and later Parem-
bole. But the Arabic writers say there was no town
previously on this site but only a sandy area, after
which the town was named (al-Baladhuri, 143, etc.).
The population of al-Ramla was in the time of al-
Yâkób (Buildân, 327) a mixture of Arabs and Pers-
ians (on the settlement of Persians in Syria, cf. al-
Kindî, Governors of Egypt, ed. Guest, 19); the clients
were Samaritans.
The great cistern 'Unayziyya ("Anâziyey" to the
north-west of al-Ramla near the road to Yâfsa, called
as the cistern of St. Helena, has a Kûfic inscription of
Dhu 'l-Hiddjâ 172/My 789, i.e. of the time of
Hârûn al-Rashîd (van Berchem, Inscr. arabo de Syrie,
Cairo 1897, 4-7; M. de Vogüé, La citerne de Ramla,
in Comptes-rendus de l'Acad. des Insér. et Belles-
lettres, xxix [1911], 362-3, 495-4).
By the Frankish pilgrims the town is first mentioned
in 870 as "Ramrala". The Crusaders made it a
bishops and in the centre of its market-place was the
chief mosque, Dîmâtî al-Abyad, the mihrab of which
was a noted building stone and brick. The town's wares were exported chiefly to Egypt.
Al-Ramla had several gates, enumerated by the
geographers, and in the centre of its market-place was the
chief mosque, Dîmâtî al-Abyad, the mihrab of which
was a noted building stone and brick. The town's wares were exported chiefly to Egypt.
Al-Ramla had several gates, enumerated by the
gateway opposite it (Mudjir al-Dîn, Bulâk, 418, tr.
Sauvaire, 207; the inscription in van Berchem, op.
cit., 57-64). The minaret, the so-called "tower of al-
Ramla" or "Tower of the 40 martyrs", was, accord-
ing to Mudjîr al-Dîn and an inscription over its
gateway, rebuilt in 993/1018. (Zuet
Shāfiʿī jurist of his day and held the high post of nāzir al-ḥāṣaṣ in 905/1499-1500 under the Mamlūk sultan al-Zāhir Kānsūh ( Ibn Iyās, Badīʿ al-zāhir, ed. M. Muḥtāf, Cairo 1385/1963, iii, 424, 440).

Al-Ramlī’s principal teacher was his father, who instructed him in the entire range of religious sciences. Upon the elder al-Ramlī’s death, Shams al-Dīn took over his teaching duties in the Azhar mosque (al-Sha’rānī, 122). He also held teaching positions in both Shāfiʿī and ḥadīth, including Syria as well as Egypt. Of his father’s contemporaries, the most prominent was the Egyptian Shāfiʿī jurist Nūr al-Dīn ʿAbd b. Ḥayyā al-Zayyādī ( d. 1300/1882), whom the sources cite as one of his students (e.g. al-Muḥīfī, i, 117). However, it is also noted that Shams al-Dīn personally studied under the authority of Shams al-Dīn ʿAbd al-Ḥamīd al-Ḥajī ( d. 1304/1887), cited by al-Shawkāmī in his al-Tadhkīrah ( On the margin of Ibn Hadjār al-Haytāmī’s Tuhfat al-muhīdī, ii, 568-78; al-Muhībī, iii, 195-7), and in the realm of letters Shabīḥ al-Dīn al-Khafṣālī ( d. 1069/1659). His influence also extended to the Ḥaramayn ( cf. Ibn ʿAbd al-Rabbīh al-Ṭabarānī, Bayānī fi sharḥ zubd Ibn Rāzīl, Cairo 1348, ii, 102) through his teaching in Mecca ( cf. Ibn Ṭūlūn, Bayānī al-ḥāṣaṣ, Haydārābād 1328/1910, 48, 54), where he made the pilgrimage on numerous occasions (Lūtf al-samār, iii, 80) and where he sent a period of muqāṣada in 991/1583 (al-Muhībī, ii, 458). Like his father, al-Ramlī was the pre-eminent Egyptian Shāfiʿī muftī of his day, and was officially recognized as such (al-Muhībī, i, 117).

Both father and son were favourably disposed toward the Sūfīs. They were familiar with terms from the famous Egyptian Sūfī ʿAbd al-Wahhab al-Shaʿrānī ( d. 973/1565) (M. Winter, Society and religion in early Ottoman Egypt: studies in the writings of ʿAbd al-Wahhab al-Shaʿrānī, New Brunswick, N.J. 1982, 221-2), and Shams al-Dīn’s son-in-law Abū l-Mawāḥib al-Ansan, Shihāb al-Dīn Ahmad b. Zakariyyā ( d. 1037/1628) was a son of the Sufī leader and poet Muhammad al-Bakrī ( d. 994/1586) (al-Muhīfī, iii, 342, 344, 346-7).

Shīhāb al-Dīn al-Ramlī’s lineage as Muhammad b. Ahmad b. Hamza, creating some confusion (e.g. Kahhāla, i, 147-8) with another student of Shams al-Dīn ʿAbd al-Ḥamīd al-Ḥajī ( d. 994/1586) (al-Muhīfī, iii, 424, 440).

Al-Ramlī’s most important writings are his large-scale commentary on the Minhādī al-ṭalibīn of Abū Zakariyyā al-Nawawī ( d. 676/1278), entitled Nihāyat al-muḥāḏkāt ʿinda ʾibād al-muḥāḏkāt, begun in 963/1556 and completed in 973/1566, some fifteen years after the completion of Tulfat al-muḥāḏkāt bi-šahr al-muḥāḏkāt of his father’s student (al-Khafṣālī, i, 112) Ibn Ḥadjār al-Haytāmī (p. 7) ( Tulfat al-muḥāḏkāt, i, 3 gloss). Although apparently neglected at first in favour of Ibn Ḥadjār’s Tulfat al-muḥāḏkāt (al-Muhībī, iii, 176), Al-Ramlī’s commentary came to be recognized as the leading Shāfiʿī work on authority outside of Yemen (including Ḥadramawt) and part of the Hidjaz, where Ibn Ḥadjār’s commentary was followed (Muhammad b. Sulaymān al-Kurdī ( d. 1194/1780) quoted in Bā Ṣabrānī, Ḳīmād al-ṣayyākīn, 4-5).

The esteem in which al-Ramlī was held and his significance in the history of the Shāfiʿī madhhab are indicated by the honorific title bestowed on him of al-Shāfiʿī al-ṣagīr and by his being reckoned by many as the mudājud of the 10th century of the Ḥadīẓ (al-Muhībī, iii, 342, 344, 346-7).

Al-Ramlī’s printed works include Nihāyat al-muḥāḏkāt (8 vols., Cairo 1286, Būlāk 1292, and later), Ḳīmād al-ṣayyākīn (5 vols., Cairo 1305, and later), and his collection of his father’s Fatāwā (on the margin of Ibn Ḥadjār al-Haytāmī’s Fatāwā al-ṭalibīn, Cairo 1308, 1329, and later) (Sarkīs, Muḥījam al-muḥāḏkāt al-ṣayyākīn ʿinda ʾibād, Cairo 1346/1928, i, 952).

The title-page of the Fatāwā gives al-Ramlī’s lineage as Muhammad b. Ahmad b. Hamza, which apparently led Hurgronje, Verehr. Geschr., ii, 333 n. 1, to misidentify the Fatāwā as those of Ahmad al-Ramlī, “the brother [sic] of the author of the Nihāyat”, although he later, ibid., 423, 425 n. 1, more erroneously, identified them as those of Shams al-Dīn al-Ramlī.

The nība al-Ramlī refers to the Egyptian village Ramlat al-Manṣūfiyya (al-Shaʿrānī, 67 and al-Zāhīdī, Tādī al-ʿarūs, vii, 352, s.v. Ramla). This is the present-day Ramlat Banhā ( lat. 30° 26′ N, long. 31° 10′ E) (U.S. Dept. of Interior, Office of Geography, Gazetteer No. 45, Egypt and the Gaza Strip, Washington, D.C. 1959, 57) in al-Khaybīsīyya Province (M. Ramūsī, al-Kānūs al-ṣuyūṭī fī al-ḥilal min-l miṣrīyya, Cairo 1954-68, ii/1, 19; H. Ḥalm, Ägypten nach den mamlukischen Lehenregistern, Wiesbaden 1979-82, ii, 669 and Map 24), incorrectly identified as Ramlat al-Ansan outside of Yemen, which is also the case of those of Ṣhams al-Dīn al-Ramlī.

Biographies of Shīhāb al-Dīn al-Ramlī: Shaʿrānī, 67-9; Ḥazzā, al-Kawdārī, al-Suyūṭī, Ahmad ʿAta, Cairo 1390/1970, 121-3, nos. 131-2; Muḥījam al-ṣayyākīn, Ramsūdī, Cairo 1367/1948, iii, 115; Brockelmann III, 418-19, i, 442.

Biographies of Shīhāb al-Dīn al-Ramlī: Shaʿrānī, 67-9; Ḥazzā, al-Kawdārī, al-Suyūṭī, Ahmad ʿAta, Cairo 1390/1970, 121-3, nos. 131-2; Muḥījam al-ṣayyākīn, Ramsūdī, Cairo 1367/1948, iii, 115; Brockelmann III, 418-19, i, 442.
RAMPUR — RAMZ

State of Rohilkhand [q.v.] in northern India. In British times, the state was under the political supervision of the government of the United Provinces. In the post-1947 Indian Union, Rampur became a district of Uttar Pradesh, bounded on the north by Naini Tal, on the east by Bareilly, on the south by Badaun and on the west by Muradabad districts, with an area of 2,318 km²/895 sq. miles and a population in 1961 of 701,537; in 1931, 45% of the population was Muslim.

The early history of Rampur is that of the growth of Rohilla power [see Rohillas] in Rohilkhand. After the establishment of Muslim rule in India, large bodies of Afghans or Pathans settled down in the country. So powerful did they become that they were twice able to establish their rule in northern India, under the Lodis [q.v.] in the second half of the 15th century, and under the Surs [q.v.] in the time of Sher Shah. After the death of Awrangzib and with the decline of the Mughal empire, Afghan settlements increased until in the words of the Syed al-mutawa durrani "they seemed to shoot up out of the ground like so many blades of grass". The name Rohilla was applied to those Afghans who settled in what is now known as Rohilkhand.

The real founders of Rohilla power were an Afghan adventurer, named Daud Khan, who arrived in India immediately after the death of Awrangzib, and his adopted son, Ali Muhammad Khan, who succeeded him as leader of a band of mercenary troops. It was during the lifetime of Ali Muhammad Khan that his possessions came to be called Rohilkhand or the land of the Rohillas. In course of time, Ali Muhammad Khan became so powerful that he refused any longer to pay his revenues to the central government, in which course he was encouraged by the anarchy consequent upon the invasion of Nadir Shah [q.v.]. The growth of his power so alarmed Safdar Jang [q.v. of Oudh] [see awan] that he persuaded the emperor to send and expedition against him, as a result of which Ali Muhammad Khan surrendered to the imperial forces and was taken prisoner to D hilar. After a time he was pardoned and appointed governor of Sirhind. In 1748, according to the Gulistān-i rahmat, he was transferred to Rohilkhand, but it seems more probable that that affair took advantage of the invasion of Ahmad Shah Durrani [q.v.] to recover his former possessions. Two factors had contributed to the growth of Rohilla power: the weakness of the central government and the fact that they were able to take advantage of the internal struggles between the various Rajput chiefs and zamindars of Rohilkhand.

Ali Muhammad Khan left six sons, but the absence of the two eldest in Afghanistan, combined with the extreme youth of the other four, meant that all real power remained in the hands of a group of Rohilla sardars, the most important of whom were Hafiz Rahmat Khan [q.v.] and Jundi Khan. This naturally produced intrigues and disputes and eventually weakened the Rohilla power. In 1771 the Marathas [q.v.] turned their attention to the conquest of Rohilkhand, whereupon the Rohillas applied for aid to Shudja al-Dawla, the nawab waizir of Oudh. It was agreed that Shudja al-Dawla would provide forty lakhs of rupees for his services (Atichison, i, 6-7), but the Rohillas later refused to abide by their pecuniary engagements. In accordance with his promise at the Conference of Benares in 1773, Warren Hastings agreed to assist the nawab waizir in expelling the Rohillas from Rohilkhand, for which he was to receive forty lakhs of rupees. On 23 April 1774, the Rohillas were defeated and their leader, Hafiz Rahmat Khan, slain. At the end of this war Fayd Allah Khan, a son of Ali Muhammad Khan, concluded a treaty with Shudja al-Dawla at Laldang (India Office mss.; Bengal Secret Consultations, 31 October 1774; see also extracts from the Persian interpreter's journal, 14 February 1775).

By this treaty, Fayd Allah Khan received a da'ir consisting of Rampur and other districts with a revenue estimated at approximately fifteen lakhs of rupees. To prevent him from becoming a menace to Oudh, he was not allowed to retain in his service more than 5,000 troops. After the death of Shudja al-Dawla, in 1775, Fayd Allah Khan was informed that his engagements with the later nawabs-uzair still continued in force with his son, Araf al-Dawla (Bengal Secret Consultations, 17 April 1775. Draft correspondence with the Country Powers, no. 34).

In 1780, the English Company needed additional troops and Hastings urged Araf al-Dawla to demand from Fayd Allah Khan the 5,000 horses he had engaged to supply by treaty. This demand for cavalry was an unwarrantable interpretation of the Treaty of Laldang for which no justification has ever been attempted. In 1781 Hastings empowered Araf al-Dawla to resume Fayd Allah Khan's da'ir, but fortunately this order was never carried out, and it was eventually decided to solve the problem by means of a fresh agreement whereby the obligation to provide troops for the nawabs-uzair's service was commuted under the Company's guarantee to a cash payment of fifteen lakhs of rupees. In 1801, on the cession of Rohilkhand to the British, Fayd Allah Khan's descendants were continued in their possessions. For his services in the Sepoy Rebellion of 1857, Muhammad Yusuf Ali Khan, the ruler of Rampur, received a grant of land and was assured by sanad that, on the failure of natural heirs, any succession in his state, which might be legitimate according to Islamic law, would be upheld by the Government of India.

Modern Rampur City, situated on the left bank of the Kosi River in lat. 28° 48' N., long. 79° 03' E., had a population in 1961 of 135,407. The rulers of Rampur were great patrons of learning, and the state-supported Madrasa 'Aliyya attracted for its Arabic teaching students from as far as Central Asia; the modern Radha College is affiliated to Agra University. Rampur also retains a famed library with an outstanding collection of Islamic manuscripts.

(C. COLLIN DAVIES*)

RAMZ (s.), a verbal noun with the original meaning of 'winking', 'signalling with your eyes and eyebrows, or by forming words with your mouth without a sound' (see also section 3. below, first para.). This developed into a concrete noun, with the pl. rumz, denoting a variety of indirect methods of ex-
pression, such as "allusion", "symbol", "cypher".
1. In rhetoric.
Here the term is used sparingly. It does have its
place in a rhetoric discipline based on al-Sakkālī’s
(d. 626/1229 [q.v.]) Mītāf al-salām, where it denotes a
specific subcategory of kināya [q.v.], here used in the
sense of "circumlocution" ("leaving the direct men-
tion of a thing for the mention of something concomi-
tant with it") (Mītāf, 402); note that the definitory
statements in the entry kināya do not always reflect
the Sakakī tradition). More specifically, ramz has the
following position within al-Sakkālī’s system: for the
subcategory kināya is characterised either by oblique intention, in
which case it is called ta’rīd, or not so; the latter is
characterised either by many intermediaries between the
allusion and the thing alluded to — this is called
taluwâ — or by few; if the latter, it is either marked by a
certain obscurity (khufrā) — this is ramz — or it is not,
in which case it is called ish dra or imâ (Mītāf, 411-12).
An example is tari' al-wasāda (with flattened pillow),
meaning "sleepy, stupid." This system ultimately
finds its way into the nineteenth-century Western
handbooks (Mehren, Ar. text, 46, 62; 95-6; Garcin de
Tasay, 75). It is noteworthy that ramz does not occur
in the great compilations outside the Sakakī tradi-
tion, such as the Tābrīz al-tābbîl of Ibn Abî I-‘Isâba’
(d. 654/1256) and the Badī’yya commentaries of Ibn
Hīqdja al-Hamawî (d. 837/1434 [q.v.]), Ibn Maṣ‘ūm
(d. 1708/1307), and ‘Abd al-Qâlin al-Nâbulusî (d.
1143/1731 [q.v.]).
Earlier, the term ramz is used by Ibn Ragîk (d.
456/1064 or later [q.v.]) for one of the thirteen sub-
categories of ish dra, "allusion", although for lack of a
definition one cannot clearly identify its meaning
(‘Unâda, i, 305-6). The two examples adduced by the
author allow the assumption that it refers to an
enigmatic turn of phrase, which can only be solved
with reference to an earlier line of poetry — though,
whether or not this last qualification is a necessary
prerequisite cannot be said with any certainty. The
first example is by an anonymous ancient poet: "As
bloodmoney for her husband I have paid her the
number of pebbles at morning time or in the
darkness of every evening." The enigmatic "counting of pebbles" is explained as going back to a line
of Imran al-Qâlini: "I based a certain branch with my
trunk over my head, counting the pebbles,
my tears never ceasing." (Diwān, ed. M. Abu I-‘Fadl
Ibrâhîm, no. 6, v. 3); in other words, it is a sign of
grief, and grief is all she will ever receive. Ibn
Ragîk’s jumble of ish dra subcategories is brought into
a neat logical system, bearing little resemblance to al-
Sakkālī’s, by al-Sidjilmasî (d. after 704/1304-5),
who enumerates šâhid (letter riddle), ramz, ta‘rīfya (mispos-
tioning information for secrecy), and hadīth (truncation
of words) as different types of ta‘miyya (mystification),
which in turn is a subcategory of ish dra. Since again
ramz is not defined and only exemplified by a single
šâhîd, it cannot be adequately identified; however,
the author does call it "riddle-like (lughât). Thus,
whereas in the Sakakī tradition ramz belongs to the
place in the scholastic discipline, "enigmatic dis-
location," with the Maghribī authors it is one of a number of literary types of riddles.
The enigmatic plays a role in both.
2. Related uses.
(a) Ramz as "code." Ibn Wābih al-Kārisī (first half of 4th/10th century) includes a chapter on ramz in his
book on the four ontological stages of expressivity (i.e.
bayān on the successive levels of the thing, thought,
speech, and writing). Since the author deals with the
conveyance of information in a general rather than a
strictly literary sense, ramz here has the meaning of
"code," especially "code names" (Burhân, 137-8). The
sender (mutakallim) would use, for a word or a let-
ter, the name of a bird or a wild animal or another let-
ter; the resulting message would be clear to sender
and recipient, but cryptic to anyone else (marmûzun ‘an
ghayrinhmâ). The author contends that the books of
the ancient philosophers and scientists were full of ramz,
most of all those of Plato. Furthermore, there are
highly important ramz in the Kur’ân, from which one
cannot prophesie the major events of Islamic
history, the duration of reigns, momentous upheavals,
etc. This shows that one should not confine oneself
to the oaths at the beginning of a number of suras. Knowledge of this code belongs to the Imam’s,
who have been entrusted with the knowledge of the
Kur’ân. Here the author reveals his Shi’i persuasion.
The idea that the Ancient sages used ramz to make
their writings inaccessible to the uninitiated is not
uncommon. One has to distinguish here between (1)
the level of language, i.e. ramz in the sense of code,
names, symbols, and allegories, and (2) the level of
script, i.e. ramz meaning secret characters and
alphabets.
(i) The Imam’s thinker Abû Hâtim al-Râzî (d.
322/933 [q.v.]) says that the ancient philosophers
were using to coin analogies (darb al-ähâlî), in
which they followed the methods of the prophets (alba ‘ab ha ... makhâb al-ahâlî); people say that most of Plato’s
speech is ramz (al-Muhammadi-Nabawi, opus Kraus, Jâbi. ii.
274). Occult sciences such as alchemy are particularly
prone to the use of such codes. The author of the
Djâbir corpus again mentions Plato as the most
the representative of ramz use (ibid., 281) and
contrasts him with Aristotle who uses yihmâd, "obscuri-
ty," rather than ramz for the same effect (ibid., 48).
He himself, although conversant with the Ancients’
use of ramz, does not approve of it, using instead the
principle of tabâdîl al-‘ilm, "the scattering of
knowledge" throughout the corpus with elaborate
cross-references, to make access to the "art" difficult
for the unworthy (ibid., 32-3). Because of the
enigmatic language of the Ancients — here he uses the
term lughâ — their books are less profitable than those
of the moderns (mata’al-killârân, i.e. the Arabs), who
are the commentators (mufassirân) of the Ancients
(ibid., 281), and who have been entrusted with the
knowledge of ramz in later alchemical writings.
Nor did it inhibit philosophers like Ibn Sinâ
(d. 428/1037 [q.v.] and Shâhâb al-Dîn al-Suhrawardi
(d. 587/1191 [q.v.]) from composing stories in the
allegorical-symbolic mode.
(ii) One specific type of ramz was the secret
alphabet. Ibn Wâbihyya (first half of 4th/10th cen-
tury [q.v.]) is credited with a collection of existing
scripts, entitled Shâhâb al-mustâsa’d fî mar’îf ramz al-
aklâm. "The yearning of the infuriated for the
knowledge of the signs of the alphabets" (cf. also
mu’ammâ). This is a strange mixture of (a) regular
alphabets (Arabic, Syriac, Hebrew, Greek, and others),
(b) invented alphabets said to be those of an-
cient nations, such as the Nabat (q.v.) and the
Chaldeans, (c) secret alphabets attributed to various
ancient philosophers, sages, and kings (including the
well-known Kurgan script, al-kalam al-mushadjud, at-
tributed to Dioscorides and, in another form, to Plato,
and the scripted script invented by "Kalafarîyyât"
(cf. kalâfîfyyât, xarûfisât, xàlûfisât, "Brillenbuchstaben",
see Ullmann, Natur- und Geheimwissenschaften, 362),
(d) planetary and zodiacal alphabets for magical pur-
poses, and (e) the non-alphabetical symbols invented
by the Hermes (Harâmis), which they wrote on
Egyptian temples and pyramids and "made as a
shield for their sciences and treasures" ([fa-dja^alu hadhhi 'l-rumuza sitr^n *~ald ^ulumihim wa-kunuzihim, Ibn Wabghiyi, 91-2]. The latter clearly refer to the hieroglyphs, and a number of them are easily recognisable, albeit fancifully explained, in Ibn Wabghiyi's book. The double function of these symbols becomes clear: they are said to encode (a) occult (alchemical, magical, astrological) knowledge, and (b) information about hidden treasures. In his book on the pyramids, Abu Dja^far al-Idrisi (d. 649/1251) reports about people who claim to be able to decode the hieroglyphs ([kalam al-kalam, berbaar]) and thus to find the hidden treasures ([Ahram, 36, 61, 141]. As a result of this idea Hall (or Fakk) al-rumu^i fi ka~af al-kunuz becomes a very popular book-title, not only in the field of the occult sciences (cf. Brockelmann, P. 139-40, S I, 144, 430, 531, 712, 783, S II, 768, etc., and the indices of GA5).

In all this, it is important to be aware of the fact that the rame, whether linguistic or graphic symbol, can be used for encoding as well as for decoding, and that the latter, interpretive, function may be applied to texts that were not encoded in the first place. Allegories of non-allegorical technical writings (cf. e.g. Kraus, Fajb, p. 12-13, n. 7) and symbolic interpretation of hieroglyphs are both instances of this phenomenon.

(b) Ramz as "symbolic action". This may refer to communication between the sender and the recipient that the recipient needs to interpret. In a chapter entitled "cryptic remarks (rumuz) current among literary men and their playing with allusions (mas^arid) which only the eloquent can understand", Abu l-Abbas Ahmad b. Muhammad al-Djurjani al-Thjaffi, al-Mani^ukhab min kinay^id al-utdab^a uta^radh al-utdab^a, ed. [together with Tha'alibi, K. al-Kinay^a tua 'l-tul^ij] Muhammad b. Duj-Duj the Na^safi al-Halabi, Cairo 1326/1908; Kalkashandi, Subh al-a~sh^a, ix, Cairo 1334/1916, introd., tr. and annot. C.E. Bosworth, Some historical gleanings from the section on symbolic actions in Qalqashandii's Subh al-A^sh^a, in Arabica, x (1963), 148-53; Ibn Abi ('l-) Sarb, K. al-Rumu^z, ed. S.M. Husayn, in RAAD, ix, 1931, 641-55; tr. and ann. J. Bellamy, in JAOS (1961), 224-46.

3. In mystical and other esoteric discourse. Like its counterpart, rame originally meant "gesture" or "sign", usually a silent one, especially a speechless movement of the lips practiced by interlocutors in order to conceal the contents of their conversation from a third party. By extension, the term also denotes any silent gesture made by the lips for conveying certain messages, which the recipient needs to interpret. In a chapter entitled "cryptic remarks (rumuz) current among literary men and their playing with allusions (mas^arid) which only the eloquent can understand", Abu l-Abbas Ahmad b. Muhammad al-Djurjani al-Thjaffi, al-Mani^ukhab min kinay^id al-utdab^a uta^radh al-utdab^a, ed. [together with Tha'alibi, K. al-Kinay^a tua 'l-tul^ij] Muhammad b. Duj-Duj the Na^safi al-Halabi, Cairo 1326/1908; Kalkashandi, Subh al-a~sh^a, ix, Cairo 1334/1916, introd., tr. and annot. C.E. Bosworth, Some historical gleanings from the section on symbolic actions in Qalqashandii's Subh al-A^sh^a, in Arabica, x (1963), 148-53; Ibn Abi ('l-) Sarb, K. al-Rumu^z, ed. S.M. Husayn, in RAAD, ix, 1931, 641-55; tr. and ann. J. Bellamy, in JAOS (1961), 224-46.

As a statement implying more than its words and thus evoking a host of various associations, rame was employed by mediaeval literary critics (see above, section 1.). In its broader meaning, rame was often used to describe literary works which utilised the allegorical language, vague symbols, allusions and obliquities, e.g. "an allegorised poem" (ka~ista maruzza), mentioned by al-Makkarri [q.v.] in [Analetes, i, 608].

In early Sufi literature, it was also overshadowed by ishdra. A striking example of the wide currency enjoyed by the latter word is Abu l-Hasan al-Tawhidi's [q.v.] al-Ishdra al-idhiyya, in which Sufi knowledge is forthrightly equipped with the capacity to comprehend mystical symbols and allusions. Throughout the work, the author constantly referred to them as rame but never as rumuz (see al-Tawhidi, op. cit., ed. Waddad al-Kadi, 2/Beirut 1982). In other Sufi writings, rame almost invariably appears in conjunction with, or as an explanation of, ishdra. According to early Sufi authors, symbolic language and allusions play a double role. On the one hand, they are the only way to...
convey the elusive spiritual experiences and ineffable visions bestowed upon the ‘friends of God’ (awlīyāʾ) [see al-Futūḥāt, etc.]. To Sufis, they were means to preserve the essence of these higher mysteries and insights from the uninitiated, who should satisfy themselves with the ‘externals’ (zāhir) of religion. Hence the knowledge of rumūz pertains exclusively to the Sufi masters, and is not to be divulged to the outsiders (see Abd al-Malākūja Ein Handbuch zur islamischen Mystik aus dem 4./10. Jahrhundert, ed. B. Radtke, Beirut 1991, 20, 34, 70-1). Attesting the importance of the word ramz to Sufi doctrine, the mystical doctrines of the Sūfs, Abū Naṣr al-Sarrāḍ (d. 378/988) included ramz in his list of the specifically Sūfī terms. According to this author, ramz designates ‘an inner meaning hidden under the guise of outer speech, which no one will grasp except for its people (ahlulu).’ Such symbols should be looked for primarily in the correspondence between the Sufi masters, rather than in works addressed to the uninitiated reader (al-Sarrāḍ, al-Lumaʾ, ed. Aḥmad al-Halīm Māhmūd and Tāḥā Surūr, Baghdād 1960, 414, cf. 314). Rūzbihān Bākī Shīrāzī (d. 606/1209 [q. v.]), who cites a similar definition of ramz, adds that it allows one to grasp ‘the mysteries of the unseen by the sublimest of knowledge, which, in turn, find their expression in the language of mysticism through the words opposite to their meanings’ (Com- menter par les paradoxes des sources, ed. H. Cortinas, Tehran-Paris 1966, 561). Thus, when dealing with the language of the Sūfs, one should be careful in distinguishing between the verbal shell (lafz) and the kernel of an allusion (ramzubu). A person unaware of such a symbolic method of expression can be easily misled by some Sūfi utterances and condemn them as an expression of the worst kind of unbelief. At the same time, a more perspicacious interpreter will find them in complete accord with the inner meaning (bātin) of the Kurʾān and the Sunna (see Ibn ʿAbd al-Salām al-Sulāmī, Hall al-rumūz wa-mafātih al-kumūz, Cairo 1961, 5-20, et passim). In a sense, the opposition between lafz and ramz reflects the irreducible contradiction between the normative, outward aspects of religion (gīhārāʾ [q. v.]), and its spiritualised interpretation and interiorisation practised by the Sūfī gnostics (batiktā [q. v.]). The Sufis perceived the latter (la-tāfṣīl) as the most convenient way to express the latter without disclosing it to those from whom it ought to be withheld (see al-Ghazzālī, Miṣḥāt al-anwār, ed. Abu ʿI-ʿAlī ʿAṣḥāfī, Cairo 1382/1964, 40). Ibn al-ʿArabī (d. 638/1240 [q. v.]), who often treats ramz as a synonym of lughāt [q. v.] (puzzle or enigma), defines it as ‘a speech which does not convey the meaning implied by the speaker.’ In his view, the use of ramz is not an end in itself, because what matters is the implicit meaning behind it. Due to his overall proclivity toward allegorisation of reality, Ibn al-ʿArabī tends to envision the whole cosmos as a giant arrange-ment of symbols that require an explanation. In keeping with their ability (or inability) to comprehend the true meaning of these cosmic symbols (which, in many respects, are similar to the verbal symbols and allusions permeating revelation), people are divided into several categories ranging from the greatest knowers, the ‘men of symbols’ (riḍūl al-rumūz), who can grasp the allegorical meaning of all things and events through supersensory unveiling (kaṣf [q. v.]), to the ignorant populace, who accept everything at face value and are, therefore, doomed to wander in darkness. Ibn al-ʿArabī’s magnum opus, al-Futūḥāt al-makkiyya, focuses on the description of various cosmological events and personalities, whose real meaning is sometimes disclosed but, more often, is tantalisingly left open to a wide variety of interpretations. On many occasions, Ibn al-ʿArabī draws close parallels between Sufi modalities of self-expression and poetic language and both of which, in his view, endeavour to clothe their meanings in intricate symbols and allegories. No wonder that in his major works, al-Futūḥāt al-makkiyya and Fusūs al-hikam, this author normally introduces his daring insights in the form of symbolic verses, then proceeds to elucidate them in prose (al-Futūḥāt al-makkiyya, ed. O. Yāḥyā and I. Mādkūr, Cairo 1972, i. 67, 218, 251, iii. 120, 196-7, 201, et passim; Fusūs al-hikam, ed. Abu ʿI-ʿAlī ʿAṣḥāfī, Beirut 1946, passim; cf. idem, Dīwān, Bulāq 1271/1855, passim). Stressing Ibn al-ʿArabī’s propensity for an abstruse and allegoric style meant to hide his real intentions, his compatriot Ibn Khāṭīmī [q. v.] wrote that this Sūfī thinker ‘spoke from behind the veil (kīhāb), fortifying himself with the use of ramz in an impenetrable mountain citadel, and seeking refuge in the tāhāra of dūnus wa-tawhīd’ (see al-Makkārī, Asbār al-nīyād fi ʿalāmātī ḫyāfī, ed. Muṣṭāfī al-Ṣākākī, Ibrāhīm al-Abāyīrī and ʿAbd al-Haǧf Shalābī, Cairo 1361/1942, iii, 54-5). Ibn Sināʾ’s [q. v.] usage of ramz is a corollary to his theory of prophecy which, in his view, should of necessity be communicated to the masses in a sym- bolic or allegorical form lest they misinterpret the prophetic message, thus ruining the divinely-established order. Therefore, the prophet should inform them (cf. the message of God’s majesty and greatness through symbols (rūmūz) and images (anshīla) derived from things that for them are majestic and great.’ The same is true concerning other articles of faith, e.g. divine punishment and reward, destiny (kādir), etc. Basically, however, symbols communicate the same knowledge that can be stated in demonstrative or expository language employed by the rational philosophers (see D. Gutas, Ascenion and the ascension tradition, Leiden 1988, 300-1). Because ‘the majority of humans are ruled not by pure intellect but rather by their lower passions’, they are unqualified to grasp such an abstract language and the syllogistic argumentation it conveys. Conversely, symbols and images primarily appeal to imagination and not to intellect. Hence they are more likely to be comprehend-able by those whose intellects are not conditioned to the rational style of thought (see D. Gutas, Ascenion and the ascension tradition, Philadelphia 1992, 150-2). Irrespective of whether or not Ibn Sināʾ actually regarded the allegorical method of communication as inferior to the demonstrative and expository language (Gutas, op. cit., 302; cf. Heath, op. cit., 153-65), he was convinced that ‘those individuals with philosophical propensity’ were in a position to penetrate the authentic meaning of the symbols found in the revelation, and would eventually acquire a philosophical vision of the universe (Gutas, op. cit., 307). A similar view of the function of ramz was adopted by the later philosophers of Muslim Spain, namely Ibn Tūfayl and Ibn Rūḥān [q. v.]. According to the former, ‘true truth does not at all suit the vulgar, enslaved by senses.’ In order to penetrate those materialistic intelligences, ‘it is obliged to clothe itself with the wisdom that constitutes the revealed religions’, in other words, with symbols and allegories (L. Gauthier, Ibn Tūfayl, Paris 1909, 63). Symbols can also be helpful as a means to present some abstract philosophical ideas. Thus Ibn Tūfayl’s Hāyy b. Yākūn [q. v.] may be taken as a sym- bolic representation of the evolution undergole by the human active intellect. Ibn Rūḥān seems to have en- visaged ramz as an essential part of rhetoric argument (as opposed to demonstrative and dialectical), which the prophet addresses to his companions because most of the people are not intellectually mature.
enough to understand the more sophisticated types of discourse. This fact accounts for the necessity to explain revelation allegorically [see ta'wil] with a view to reconciling it with the conclusions reached through the syllogistic argument.

Proponents of messianic expectations, who sought to substantiate their claims regarding the imminent advent of the mahādī [q.v.] by exploiting the numerical values and occult properties of the Arabic characters, often viewed the latter as ramūz—esoteric signs pointing to the inevitable fulfillment of their predictions. To decipher such signs contained, for instance, in the mysterious letters preceding some Kur'ānic sūras and the divine names (see al-ASMA’AL-HUSNĀ, and cf. above, section 2(a), first para.), Muslim esotericists—primarily, the Ḡァh, including the Ismā‘īlīs, and some Sufi leaders harbouring messianic hopes—elaborated elaborate divinatory techniques known as ḡaf [q.v.; see also ḡurūj]. Kur’ānic stories and certain hadīth, mostly of an eschatological nature, were also treated by the esoterically inclined Muslims as symbols and signs, whose true meaning could only be elucidated by means of an allegorical interpretation. A curious mixture of Ismā‘īlī and Sufi views utilising both types of ramūz can be observed in a divinatory poem by a purported Ismā‘īlī dā‘i [q.v.], 2Amīr b. 2Amīr al-Bāṣrī, d. in the early 8th/14th century (see Y. Marquet, Poésie érotique ismaïlienne, Paris 1985, 73-4, 81, 107, etc.; cf. J. Djemal, Ibn ʿArabi, ʿAnkā mughrīb, Cairo n.d., where in similar predictions the word ramūz (spelt rams) is never mentioned).

Ahmad al-Būnī (d. 622/1225 [q.v. in Suppl.]), the celebrated fortune teller and master of “letter magic” (simiyya), considered the usage of ramūz to be part and parcel of the occult sciences permitting to predict the future. As in the case with the philosophers and Sūfīs, simiyya, according to al-Būnī, serves the twofold function: They conceal the secrets of the divinatory procedures from the uninitiated, while at the same time helping to impart them to the deserving few (see Manba‘ū usul al-hikma, Cairo 1370/1951, 5, 6, 325).

Interestingly, ramūz (spelt rams) is one of the few Arabic words mentioned by the great Catalan philosopher, missionary, and mystical Rāmūn Llull (d. 1316), who, for it apparently meant a tropological-moral emblem, the counterpart of the Hebrew piel variables (see Ch. Lohr, Christianus arabicus, in Freiburger Zeitschrift für Philosophie und Theologie, xxxi [1984], 59). Normally, however, when referring to the moral concerns contained in the Kur’ānic text, Muslim exegetes would rather use such terms as mathal [q.v.] and hadā’ (see G. Bowering, The mystical vision of existence in classical Islam, Berlin 1980, 138-41).

4. In modern Arabic literature.

This literature, which took shape under the strong influence of European literary trends, ramūz became an exact equivalent of the Western term “symbol” defined as “a deliberate use of a word or a phrase to signify something else, not by analogy (for, unlike metaphor and simile, it lacks a paired subject), but by implication and reference” (S. Jayyusi, Trends and movements in modern Arabic poetry, Leiden 1977, ii, 709). As in the West, in the Middle East also, for instance in the extensive use of symbols gave rise to a literary movement known as “symbolism” (al-ramziyya) that flourished from the 1920s to the 1940s, but then gradually lost ground as a cohesive literary trend. Its representatives, primarily poets such as Adīb Mażhār, Sa‘īd ʿAkl, Bāṣrī Fāris, and, to a lesser extent, Abu ʿl-Ḥāsim al-Maḥbūbī have employed symbol as “a vehicle for feelings, for complex and valuable states of awareness” as well as a means to express an idea or a set of ideas. While most of the Arab symbolists drew their inspiration from the European literary notions of “universal relationships” and “latent affinities” which they sought to convey through symbolist imagery (K. Abu Deeb, Al-farājīnī’s theory of poetic imagery, Warminster, Wilts. 1979, 124-6; Jayyusi, op. cit., 478-81), they seem to have neglected the fact that similar approaches to creative process had already been maintained, albeit spontaneously and unconsciously, by their Muslim predecessors, namely, Ibn al-Fārid, Ǧalāl al-Dīn Rūmī and many other mediaeval religious writers. They employed their super-rational and intuitive perception of being by having recourse to elaborate symbols and allegories (see e.g. Ibn al-Fārid’s masterful use of wine symbolism to convey his mystical vision of reality, Ibn al-Fārid, Diwān, Beirut 1962, 140-3). Sufi imagery and symbols were more readily adopted by the less Westernised poets and prose writers, who, being well versed in the Islamic ʿusūl, succeeded in creating original works in which Islamic and Western influences were inextricably intertwined (see, e.g. Nadjīb Mahfuẓ, ʿAdnīn, Muẓaffar al-Nawwāb, Ǧāmāl al-Ghiṭānī, etc.). On the other hand, some symbols, which became particularly popular with the modern Arab poets (e.g. the sea, the rain, the wind etc.), have suffered from over-use and have gradually developed into mere conventions devoid of any poetic originality (Jayyusi, op. cit., 710).

Biography: Given in the article.

(A. Knysy)
a year later at the age of 46 and with him, Mewaf lost its power as an independent kingdom.

**RANGAN, the tooth of several Indian poets.** The *Riyād al-ʿajnābī fī Ḍhū ʿl-Fikr* ʿAlli biographic groups of Persian poetry (ed. and tr. by the *Tibjīs* of Yūsuf ʿAlī Khān, analysed by Sprenger, *A catalogue of the Arabic, Persian and Hindustan ms*. of the *King of Oudh*, i, 168, 280) mention five of them. The first, a native of Kashmir, lived in Dihli in the reign of Muhammad Shāh (1719-48): his ghazals were sung by the dancing-girls. The most celebrated, however, was Saʿādat Yār Khān of Dihli. His father, Tāhmasp Beg Khān Tūrānī, came to India with Nādir Shāh and settled in Dihli where he attained the rank of haff-hazarī and the title of Mubkīm al-Dawla. In his turn, Saʿādat Yār Khān entered the service of Mīrzā Sūlaymān Shīkhūn, son of the emperor Shāh ʿAlam II, who lived in Lucknow. He was a good horseman and able soldier; for a time he commanded a part of the artillery of the Nizām of Haydarābād, but he gave up this post to go into business. He was in his youth a friend of the poet Inglīs, a pupil of the poet Muḥammad Ḥātim of Dihli (cf. Ram Babu Saksena, *A History of Urdu literature*, 48; Sprenger, *op. cit.*, 235), he afterwards submitted all his verses to the criticism of Nūrī (cf. Sprenger, 273), then of Muḥafīz (cf. Saksena, 90); he died in 1251/1835 aged eighty (or a year later; cf. Garcin de Tassy). The following are his works in Urdu: *Māḥnāvī dīhrāz*, a poem of romantic adventures (1213/1798); *Īṣāq-i Rangīn*, a mathnāwī of fables and anecdotes (Lucknow 1847, 1870); another *mathnāwī* of anecdotes: *Māḥzār al-ṣāḥib* or *Ghāzī al-mashīr* (lyric. Agra and Lucknow); four *dīwāns* collectively known as *Nau rūān* (*the Nine Jewels*), the two first lyrical, the third humorous and partly in rehāfī language peculiar to women, the fourth in this same language with a preface by Rangīn explaining the principal words (on the development of rehāfī and Rangīn's skill in this licentious genre see *Urdū*, and Saksena, *op. cit.*, 94); in a prose treatise on horsemanship (*Paras-nāmas*, 1210/1775, several times edited) and a collection of critical observations on a number of poets, entitled *Marāṭās-i Rangīn*. In Persian (if the work is really his, cf. Sprenger, *op. cit.*, 54, no. 462), Rangīn under the title Mīhr u-māh, sang of the adventure of a son of a sayyid and of a daughter of a jeweller, based on an incident that occurred in Dihli in the reign of Dihāngārīr (cf. *Grīph*, ii, 254).

Bibl. zu Berlin*, iv, index, 1157; Blumhardt, *Cat. of the*... *Hindustan ms*. in the *British Museum*, no. 74. (H. Massf.)

**RANGOON,** a city of the Pegu district of Burma and the country's capital, situated on the Rangoon (Hlaing) River (lat. 16° 47' N., 96° 10' E.). It was developed as a port in the mid-18th century by the founder of the last dynasty of Burmese kings, with a British trading factory soon established there and with British managers. In 1832, during the Second Anglo-Burmese War, it passed definitively under British control, and Rangoon became a more modern city, and also, through immigration, largely Indian in composition. These last included Muslims, who in 1931 comprised 17% of the population of Burma. The Indian and European population was reduced by the Japanese occupation of 1941-5, and after Burma's opting for independence in 1948, the Indian and Muslim element in Rangoon was reduced still further by the policies of governments hostile to non-Burmese in general and Muslims in particular (for these in Burma, see Arakan, Burma, Mergui). Today, 90% of Rangoon's 750,000 inhabitants are Burmese Muslims only a small part of the remaining 10%.

**AL-RANIRI** (see Indonesia, vi).

**RANK** (v.), literally "colour, dye", a term used in mediaeval Arabic sources primarily to designate the emblems and insignia of amirs and sultans in Egypt, Syria, and al-Djazira. Mamlūk historians occasionally also use it as a generic term for emblem in general, such as the ranks of merchants' guilds (al-Kalkaghāndi, *Subh al-aʿṣā*, Cairo 1913-18, v, 207), those of Bedouin chieftains in Tunisia (Ibn Shaddād, *Taʾrīkh al-Maḥāl al-Zāhir*, Wiesbaden 1983, 196), and, oddly, the rank of Kassim, a Damascene rebel under the Fātimids who lived even before the word was in common use (Ibn al-Dawdārī, *Durr al-mudhiyya fi akhābīr al-duwal al-Fātimiyya*, Cairo 1961, 195, 210).

There is no indication otherwise that the term, or the practice of having ranks, was known beyond the historic or geographic limits of the Ayyūbīd and Mamlūk states.

From the Ayyūbīd period there are a number of references to ranks (Ibn Taghbūbīdīrī, *Manḥal al-safī*, Cairo 1888, v, 296; Ibn al-Dawdārī, *Durr al-dhakīyya fi akhābīr al-duwal al-turkiyya*, Cairo 1971, 56-7) but no corresponding, conclusive material to show how they looked. The fleur-de-lis associated with Nūr al-Dīn Māhmūd b. Zangi (541-70/1146-74) (qvn.), and the truncated bicephalic eagle in the Cairo Citadel attributed to Saḥāb al-Dīn (Salādīn) are no longer acceptable (L. Mayer, *Sculptures and Paintings*, London 1938, 152, 195; M. Meinecke, *Zur mamlukischen Heraldik*, in *Mitteilungen des Deutschen Archäologischen Instituts Abteilung Kairo*, xxvii (1972) 215-16). The earliest firmly established rank is the feline motif of al-Zāhir Baybars (658-76/1260-77) (qvn.), many more or less identical examples of which are attested on buildings, coins, and other objects. From Baybars' time until the end of the Mamlūk period, ranks were adopted by sultans, amirs, and perhaps other high officials. They were carved on buildings, painted on glass, wood, and pottery, engraved on metalwork, struck on coins, and embroidered or dyed on textiles. But the profusion of material evidence is not matched by contemporary textual testimony. Mayer counted less than fifty references in the sources he knew. Today, we have perhaps seventy. This paucity of historical information led early studies to consider ranks in terms of European heraldry, but most authors today caution against doing this and try to study ranks on their own terms.

Mamlūk ranks come in different shapes and forms. They may be monochromatic or multicolored, free-standing or enclosed in round, pointed, or polygonal shields. The first appeared as single-element emblems. Horizontal strips, called shatfa in the sources, were introduced to the shields in the early
14th century, and, in the 15th and early 16th centuries, ranks developed into composite shields with three fields, each containing one sign or more. Some rare ranks may be termed representative, such as the felines of Baybars, which may have implied power and courage or illustrated his own name bay bars, meaning “chief panther” in Kipchak Turkish. Others are denotive, displaying the attribute of the office held by the amir, such as Kawṣūn (d. 743/1342) who started his career as a cupbearer (sāḥi) and who carried a rank showing a cup. Still others combine more than one sign of office, or a sign and an image, such as the rank of Ṭīkūṭīmar (d. 746/1345) which includes an eagle over a cup.

Initially, the sultan assigned ranks to his newly appointed amirs as symbols of their positions at court (Ibn Taghribirdi, *op. cit.*, vii, 4). Thus, for instance, the rank of a dawādār (secretary) [q. v.] was a pen box or an inkwell, and that of a djamādar (wardrobe master) [q. v.] was a lozenge. This practice may have been inherited from earlier Islamic rulers, notably the Khūrāzmn-Shāh Muhammad b. Tekhsh (596-617/1200-20), who is said to have honoured his close pages with emblems (designated by the Arabic term ʿalāma) representing their offices (Abu ʿl-Fiḍāʾ, *Kitāb al-Mukhtasar fi akhbār al-bashar*, Beirut 1979, vi, 49). Amirs usually held their ranks for their entire careers, whether or not they subsequently held other offices. Midway in the Mamluk period, ranks appear to have become the choice of the individual amir, irrespective

---

**Fig. 1.** Examples of single-element ranks: a) *rank* of dawādār (secretary); b) *rank* of sāḥi (cupbearer); c) *rank* of jamādar (wardrobe master). (Drawing Nasser Rabbat 1993).

**Fig. 2.** Examples of composite ranks. (Drawing Nasser Rabbat 1993).

of the insignia associated with his original office (al-
Kalkashandl, Subh, iv, 61-2). Later still, ranks became
composed of each containing a number of elements
from a fixed repertoire disposed in three strips. Mayer
noted that the composite ranks of a group of amirs who were
mamluks of a given Sultan exhibited the same ar-
range ment (Saracenic heraldy, 29-33). They appear
to have differed chiefly in the attribute of the position
held by each individual which was inserted some-
where in his own rank. This may mean that ranks had
by then become an indication of an affiliation with a
royal household in addition to being a sign of office
(see Meinecke, 258-78). Furthermore, additions to
ranks appear to have been made as the amir ascended
up the Mamluk hierarchy. Yashbak Min Mahdl al-
dawādar added a lion (sabū) to his rank in 885/1480
before he led a campaign to Anatolia (Ibn Iyās,
Baddī' al-zuhār fi wa'dā'ī al-zuhār, Cairo 1982-84, ii,
127).

Ranks of Sultans were different from those of amirs. Round,
tripartite shields with the name, title, and a short
motto inscribed on one, two, or all three strips
became the norm in sultans' ranks from the beginning of
the 14th century. But they were not exclusively
used, especially in the Burdji period (784-922/1382-
1517) when most Sultans were former amirs with
denotative ranks, which they sometimes displayed
alongside their inscribed shields.

Very little is known about the significance of ranks
in Mamluk society. Like European nobility, Sultans
and amirs seem to have used their ranks both as
decipherable codes and as signatures displayed on
their buildings and objects or on those they wanted
to claim as their own (Ibn Taghribirdi, op. cit., xiii,
199). But, unlike coats-of-arms in Europe, ranks do
not seem to have carried any heraldic potential. In
rare instances, sons of amirs who became amirs them-
selves inherited their fathers' ranks. But even then,
these individuals did not acquire the offices or
privileges that had originally pertained to their
fathers' ranks, perhaps because of the peculiar struc-
ture of the Mamluk ruling class whose members passed
their power to recruited mamluks rather than to their
own sons. This apparent absence of a hereditary mechanism points to the major
reason why the institution of rank died out after the fall
of the Mamluks and the coming of the Ottomans in
1292.

(RASER RABBAT)

RAPAK (Javanese: rāp) is a technical term used
among the Javanese, in this case only, for
charge made by the wife, at the court for matters of
religion, that the husband has not fulfilled the
obligations which he took upon himself at the tašīk of talāk
or divorce (see TALAK). These obligations are of a
varied and changing nature. Among the conditions
the following always occurs: "If the man has been ab-
sent a certain time on land or (longer) over seas" i.e. without
having transmitted nafaqa, i.e. payment for
maintenance to his wife. A clause that is never omit-
ted is the following: "If the wife is not content with this. " She is therefore at liberty to be quite satisfied
with the husband's non-fulfilment of his vows, with-
out taking steps for a divorce. The work of the court
is only to ascertain the fulfilment of its conditions and
the arising of talāk. As always, the talāk is still entered
in a register. It is evident that this procedure
guarantees the integrity of the law otherwise en-
dangered.

RA'S (a. pl. ru'ā'ī/ar'ūs), "head", in geography
the common word for "cape" (cf. Latin caput — cape),
but it is also used with the meaning of "headland,
promontory". The Musandam Peninsula in
'Uman is sometimes called Ra's Musandam, while
the small territory occupying the northern tip of the
Peninsula is called Ru'ūs al-Dībāl "the Mountain tops". Ra's Tanūta (q.v.), the terminal of pipelines
in eastern Saudi Arabia, derives its name from the tip
of a small peninsula, at which the modern port is
situated. In the name Ra's al-Khayma (q.v.) "Tent
Point", the word ra's is not geographical, but refers
to a large tent formerly used as a navigational device.

(Ed.)

RA'S AL-'ĀM (A.) means New Year's Day, lit.
"beginning of the year". i.e. 1 al-Muharram. For the
difference with Ra's al-sana, see Lane, Lexicon, s. v.
'Ām. Sunni Muslim law does not prescribe any par-
cular celebration for the first month of the year,
except that a voluntary fast-day is recommended on the
tenth [see Ẓa'īr]. However, the first ten days of
the month are considered as particularly blessed
(Lane, Manners and customs, chs. ix, xxiv). The Shī'a
know several celebrations during this month [see
MUHAMMAD]. Also, in most Islamic countries, New
Year's Day has long been indicated by the Persian
word Nawruz (q.v.), Arabic variant Nayrūz.

(Ed.)

RA'S AL-'AYN or 'AYN WARDA, Syriac Rēş
Aynā (Ayn Warda, "a town of classical and mediaeval Islamic
times of al-Djazira, deriving its name ("spring-
head") from the famed springs of the locality (see below). It is situated on the Greater Khābūr (q.v.) af-
fluent of the Euphrates in lat. 36° 30' N. and long.
40° 02' E. It was a small town, about 90 m. above
the modern border between Syria and Turkey, with
the Syrian settlement still known as Ra's al-'Ayn
and the Turkish one as Resulayn or Ceylanpınar.

In classical times it was known as Resaina-
Theodosiopolis, receiving from the Emperor
Theodosius I (379-95) urban rights and its latter
name, one also borne by the Armenian town of Karin
(Erzurum [q.v.]), probably from the time of
Theodosius II (408-50), so that it is sometimes dif-
ficult in the sources to distinguish which one is meant.
The Persian general Adharmahan twice (in 578 and
580) destroyed Rēş 'Aynā, according to Michael
Syrus, and in the reign of the Emperor Phocas the
Persians captured the rebuilt town.

In 19tod 464/1070 b. Ghann, after the subjection
of Orthosien, marched against the province of
Mesopotamia and by 'Umar's orders sent 'Umayr b.
Sa'd against the town of 'Ayn Warda or Ra's al-'Ayn,
which was besieged and stormed by him (al-
Balāḏūrī, ed. de Goeje, 175-7). When a portion of
the people of the town abandoned it, the Muslims
consecrated their property. Among the rebels who rose
against the caliph 'Abd al-Malik in ca. 700 was
'Umayr b. Hubāb of Ra's al-'Ayn (Abu ʿl-Faraj, Kitaţ al-
Aghāţ, Bābīl., xx, 127; Ibn al-Aqīl, iv, 254-
5; Mich. Syr., ii, 469; Barhebruen, Chn. syr., ed.
Bedjan, 1111. In the reign of al-Ma'mūn, Hubayb
Feline rank from the entrance of Khan al-Wazîr, Aleppo (1682).

Composite rank on the metal sheathing of the entrance to the Khan of Khâyîr Bek, Aleppo (1516).
took the town in 1125 Sel. (A.D. 942) (Mich. Syr., iii, 217; Barhebraeus, op. cit., 137). The Jacobite patriarch Yohannân III died on 3 December 673 in Ra's 'Aynî (Mich. Syr., iii, 116; Barhebraeus, Chron. eccles., ed. Abbeloos-Lamy, i, Lyons 1872, col. 387). After their campaign against Dârâ and Naṣîbîn (A.D. 942) the Byzantines in 943 took Ra's al-'Ayun, plundered it and carried off many prisoners (Ibn al-'Athîr, viii, 312). A man from Ra's al-'Ayun, Ahmad b. Husayn Asfar Taghîlî, called al-Asfar, disguised as a derishî, in 905/1005-7 made a raid into Countenance territory as far as Shabakhtan, Mabresh near Anṭâkiya but was driven back by the Patriarch Bîghâs. The governor Nicephoros Uranus in the following year undertook a punitive expedition to the region of Sarûdî, defeated the Banû Numayr and Kilâb and had al-Asfar thrown into prison by Lu'lu', lord of Aleppo in 979/1007 (Yahyâ b. Sa'id al-Anṭâki, in Patro. Orient., xiii, 1932, 466-7; Georg. Kedren.-Sklitz., Bonn, ii, 454, 8; Barhebraeus, Chron. syr., ed. Bedjan, 229). In a. 523/1129 the Franks were lords of the whole of Syria and Dîyâr Muḍâr and threatened Amîd, Naṣîbîn and Ra's al-'Ayun. The latter was taken by Joscelin and a large part of the Arab population killed and the remaining taken prisoners (Mich. Syr., iii, 228; Barhebr., Chron. syr., ed. Bedjan, 289). But the Franks cannot have held the town for very long.

Sayf al-Dîn of Mawṣîl and ìzz al-Dîn Mas'ûd of Aleppo in 570/1174-5 attacked Salâh al-Dîn and besieged Ra's al-'Ayun, but were soon afterwards defeated by him at Kurûn âHamî. In 581/1185-6 Salâh al-Dîn crossed the Euphrates and marched via al-Ruhâ second by Ra's al-'Ayn and Dârâ to Balad on the Byzantine territory as far as Shayzar and Mahruya (ROL, v, 46). Al-Malik al-Muwazzar, al-Rakka and the district belonging to it (Camal al-Dîn, in Futûh Dîydr Rabîa wa-Dîydr Bakr [1911], ii, pi. 18), the Nestorian church in the town and several gates (in the Chron. ecd., i, pi. 18), the springs at Ra's al-'Ayn al-Husain, al-'Ayn al-Zarkî, according to Taylor (JRAS, xxxvii, 349 n.; 'Ayn al-Baydâ and 'Ayn al-Hasan are the most important; he also gives the names of 10 springs in the north-east and 5 in the south of the new town. The Arab geographers talk of 360, i.e. a very large number of springs, the abundance of water from which makes the vicinity of the town a blooming garden. One of these springs, 'Ayn al-Zâhirî, is said to be bottomless. According to Ibn Hawkal, Ra's al-'Ayn was a fortified town with many gardens and mills; at the principal spring there was according to al-Muṣaddasî a lake as clear as crystal. Ibn Rusta (106) mentions Ra's al-'Ayn, Karkîsâtî, and al-Râkka as districts of al-Dîzârî. Ibn Dîubayr in 580/1184-5 saw two Friday mosques, schools and baths in Ra's al-'Ayn on the bank of the Khâbûr. According to Hamd Allâh Mawârî (6th/14th century), the walls had a circumference of 5,000 paces; among the rich products of Ra's al-'Ayn he mentions cotton, corn and grapes. The historical romance Futûh Dîydr Râbi'a us-Dîydr Bakr (10th/16th century?) wrongly ascribed to al-Wâkidî, which contains much valuable historical geographical information, mentions at Ra's al-'Ayn a plain of Muṭḥâkab and a Mardj al-'Tir (var. al-Dary); it also mentions a Nestorian church in the town and several gates (in the translation by B. Nidhunter and A.D. Mordmâstern in Schriften der Akad. von Hamburg, i, part iii, Hamburg 1847, 76, 87. The "gate of Istacherum" in the east and the "Mukhtâsir or Chabur" are not precisely located.

At Ra's al-'Ayn were the Jacobite monasteries of Beth Tirai and Speculos (speculæ; Ps.-Zachariâs Rhet., viii, 4, tr. Althens-Kruger, 157, 2; so also for Asphulos in Mich. Syr., iii, 50, 65, cf. i, 513, n. 6; Saphylus in Mich. Syr., iii, 121, 449, 462;
Barhebraeus, Chron. ecl., ed. Abbeloos-Lamy, i, 281-2; Sophilis, ibid., 397-8, probably so to be read throughout.

The plain of the southwest of Ra’s al-‘Ayn on the right bank of the Khabur is the great mound of ruins, Tell Halaf, where M. von Oppenheim excavated the ancient palace of Kapara (see Bibli.).

Bibliography: The Arab geographers and historians and Syriac chroniclers already mentioned; also Khārāzmi, Kūtib Sarūt al-ard, ed. von Mīkāl, in Barhebraus, Hist. pers., iv, Leipzig 1894, 205-206; Sophilis, ibid., 397-8, probably so to be read ibid., 397-8, probably so to be read.

There are numerous tombs associated with the 3rd-1st millennium in northern Ra’s al-Khayma, on the Daya plain and around Shimāl. There are also early sites further south at al-Khaṭūj and along the course of Wādī al-Kawr in southern Ra’s al-Khayma. Ceramic finds suggest activity in the 3rd century A.D. on Dżazīrat al-Hulayla on the coast, north of al-Rams.

There is also a large enclave of Ra’s al-Khayma today. The Persians were finally expelled in 1157/1744. During the latter part of the 12th/18th century, Ra’s al-Khayma passed under the Al Kāsimī dynasty, of the Hawalā Arab tribe, which has elements on both the Arab and the Persian coasts. The Al Kāsimī have continued to rule Ra’s al-Khayma until the present time. In the framework of

The Amirate is ruled by the Al Kasimī, members of the Al Kāsimī dynasty, of the Hawalā Arab tribe, which has elements on both the Arab and the Persian coasts. The Al Kāsimī have continued to rule Ra’s al-Khayma until the present time. In the framework of
the traditional 'Umanî factions, they espouse the Ghîfîr cause as close to the Hînawî.

The Al Kasîmi adopted Wahhâbîmism under the influence of the Al Suûdî, with whom they still maintain good relations. As a sea-power, they engaged in piracy in the Gulf in the latter years of the 18th and the early 19th century, challenging East India Company shipping and the British Navy. In 1224/1809 British and Indian forces from Bombay attacked Ra's al-Khayma to suppress the 'Joasmee' (Kawasimi) forces. These operations were repeated in 1234/1819, which led to the reduction of the Al Kasîmi and the demolition of their fortresses, the destruction of their fleet and a brief British occupation of Ra's al-Khayma. A General Treaty between the British and the Al Kasîmi was signed at al-Falâya near to Ra's al-Khayma town in 1235/1820, aimed at suppressing piracy in the Gulf: it was to this treaty that other Al Kasîmi along the coast acceded, creating the foundation of the Trucial 'Umanî states. The Treaty was finally reinforced by The Perpetual Maritime Truce of 1853 which set the framework of relations between the various shaykhoths and the British until 1971. Ra's al-Khayma underwent a period of decline with its power sharply reduced by the British attack.

The main political concern of the Al Kasîmi during the following years was to prevent incursions on their territories by the Band Yas of Abu Zabi.

The Al Kasîmi ruled their territories from either Sharjah or Ra's al-Khayma, but after 1921 the family territories were conclusively divided and Ra's al-Khayma was recognised by the British as an independent Amirate. The British recognition of the Amirate of Fuqîyârî in 1952 marked the formal ending of al-Kasîmi control of this part of the east coast of the 'Umanî Peninsula: today the border of Ra's al-Khayma with Fuqîyârî lies at the western edge of the Dijâbîl Hâdad.(3)

With the ending of the British treaty relationship with the Trucial States in 1971, Ra's al-Khayma acceded to the newly created United Arab Emirates on 10th February, 1972. The Ruler of Ra's al-Khayma since 1948, Shâykh Sakr b. Muhammad al-Kasîmi, is a member of the Supreme Council of the U.A.E. Today, Ra's al-Khayma, lacking oil in any quantity, is one of the poorer members of the U.A.E. Its major exports are stone from the Dijâbîl Hâdad and cement, and its manpower contributes to the federal administration and the armed forces.

The term 'Musandam' is taken by D.G. Hogarth (The penetration of Arabia, repr. Beirut 1966, 230) to mean 'Anvil Head'. The name is not known to the Classical or Arabic geographers and it seems to enter the literature in the Portuguese period, and, thereafter, the northern tip of the Oman Peninsula regularly appears as Ra's Musandam. Ra's Musandam and Ruûs al-Dijâbîl reflect marked geological activity in the late Quaternary. The highlands are formed of limestones and dolomites, while sandy gravels form slope deposits and alluvial fans, a characteristic of the entire Oman Peninsula.

The earliest reference to Ra's Musandam dates to 326 B.C., when Alexander's admiral Nearchos saw it from the Persian side of the straits of Hormuz and was told it was called Makteta. It is further mentioned by Eratosthenes and Strabo, and possibly by Pliny, whilst the Periplus of the Erythraean Sea refers to the mighty range of the Asabôn, Miles (op. cit., 10) suggested that Asabô is preserved in the place-name Khasab, a village on the northern end of the promontory.

Al-Mukaddasî (70-1) refers to a sequence of places between Maskât and Dîjlûrî, but makes no reference to the villages of Ra's Musandam that we know today. Al-Idrîsî refers to al-Khâyî, al-Dijâbîl or Habal lying between Maskât and Dîjlûrî (Opus geographicum, ed. A. Bombaci et alii, Naples-Rome 1972, ii, 162, tr. J. Jaubert, i, 109). The Dijâbîl river, mentioned by Ibn Fadlan, is an appropriate reference to Dijâbîl Hâdad, Ruûs al-Dijâbîl and Ra's Musandam.

Evidence of early settlement at Ra's Musandam is slender, although the accumulation of gravels in the alluvial fans may mask early archaeological sites. The earliest evidence of settlement in the region is indicated by a site on Dîjârât al-Ghânam attributed to the Sâsânîd period (B. de Cardi, A Sasanian outpost in northern Oman, in Antiquity, xvi, no. 184 [1973], 305-
politically, Ra's Musandam and Ru`us al-Djibal are under the jurisdiction of the Sultanate of `Umman (Oman), although the southern areas of Ru`us al-Djibal lie in the Amirate of Ra`s al-Khayma, while Dibba is under the joint jurisdiction of `Ummal, al-Fujayra (Fujairah) and al-Sharika (Sharjah).

(G.R.D. Kino)

**R`as (al)-Tannura**, a cape in eastern Saudi Arabia on the Persian Gulf, in lat. 26° 40’ N, 50° 13’ E, north of al-Katif [*q.v.*]. The word *tannur* occurs in Kur`an, xi, 42, and XXIII, 27, in the story of Noah, meaning “oven”, while it is also implied in the phrase from which water pours forth (*Lane*, *Lexicon*, *s.v.*). In July 1933 King `Abd al-`Aziz gave the concession for drilling oil in the eastern part of Saudi Arabia to the Standard Oil Company of California. The first concession of Saudi oil was sent away from Ra`s Tannura in 1939. Its refinery is connected by a pipeline with the Dammam field, about 60 km/32 miles away.

**Rasha`ida**, habitat al-Rasha`ida, an Arab and Muslim nomadic people of the eastern Sudan and Eritrea, which emigrated from the coast of Arabia in the middle of the 19th century. Inhabited an area on the sabil between Sawakin (Suakin) and Doka, they were forced by the Mahdiyya [*q.v.*] to move southwards. Some of them then returned to the Anglo-Egyptian Sudan, so that today they can be found dispersed along the coast from Port Sudan to Massawa (*see Masa`wa*) and on the left bank of the Atbara beyond Kassala. In the Sudan, their number was estimated in 1922 at one to two thousand and in 1986 at 40,000. They are less numerous in Eritrea.

They herd goats in the more confined areas and, more often, camels in the wider expanses. The most northerly group nomadises, for example, along the axis of the Atbara over 500 km/310 miles. In the wet season, from the end of June to October, the herds (from 50 to 70 head) are between Kassal and Goz Regeb. In the dry season, they go down towards Doka and the Dibbi in search of water to graze on the fields of sorghum which have just been watered.

The Rasha`ida have other resources. The camel reapers of the fringes are carriers and have benefited from the Eritrean war up to 1991. Certain of them sometimes engage in agriculture. One group has even tried to live by fishing on two of the Dahlik [*q.v.*] islands.

They do not ally either with the Cushitic peoples of whom they are neighbours (Bichari, Hadendowa, 10; *cadem*, *Archaeological survey in Northern Oman*, 1972, in *EW*, xxv [1975], 24-6). It included foundations of rectangular buildings along the foreshore to which a door or Shqdp II had occupied parts of eastern Arabia has been suggested (early 4th century A.D.), based on ceramic evidence. Evidence of ainrid occupation is limited elsewhere in this area and most ceramics recovered from the Musandam settlements indicate a 14th to 15th century A.D. date range.

Information increases about Ra`s Musandam with the coming of the Portuguese. A Portuguese fleet is stated to have passed through the straits of Hurmuz in 1571: Sibi is indicated in Dourado’s map of 1575. Ruy Freyre de Andrade visited Kumzum and Khasab in 1620 during the last period of Portuguese dominion. Finding a fort at Khasab, de Andrade reinforced and garrisoned it (*C.R. Boxer* (ed.), *Commentaries on Ruy Freyre de Andrade*, London 1930, 189; *Miles*, 446; *De Cardi, Archaeological survey in Northern Oman*, 1972, 28). An inscription in the fort also records restoration in 1649 by the Portuguese. There are other Portuguese forts at Lima, at Dzairat al-Ghanam to graze. By contrast, Khasab was 13,750 in 1908 (*‘Oman*, in *C.P. Harris, Standard Oil Company of California. The first concession of Saudi oil was sent away from Ra`s Tannura in 1939. Its refinery is connected by a pipeline with the Dammam field, about 60 km/32 miles away.

**Rasha`ida**, habitat al-Rasha`ida, an Arab and Muslim nomadic people of the eastern Sudan and Eritrea, which emigrated from the coast of Arabia in the middle of the 19th century. Inhabited an area on the sabil between Sawakin (Suakin) and Doka, they were forced by the Mahdiyya [*q.v.*] to move southwards. Some of them then returned to the Anglo-Egyptian Sudan, so that today they can be found dispersed along the coast from Port Sudan to Massawa (*see Masa`wa*) and on the left bank of the Atbara beyond Kassala. In the Sudan, their number was estimated in 1922 at one to two thousand and in 1986 at 40,000. They are less numerous in Eritrea.

They herd goats in the more confined areas and, more often, camels in the wider expanses. The most northerly group nomadises, for example, along the axis of the Atbara over 500 km/310 miles. In the wet season, from the end of June to October, the herds (from 50 to 70 head) are between Kassal and Goz Regeb. In the dry season, they go down towards Doka and the Dibbi in search of water to graze on the fields of sorghum which have just been watered.

The Rasha`ida have other resources. The camel reapers of the fringes are carriers and have benefited from the Eritrean war up to 1991. Certain of them sometimes engage in agriculture. One group has even tried to live by fishing on two of the Dahlik [*q.v.*] islands.

They do not ally either with the Cushitic peoples of whom they are neighbours (Bichari, Hadendowa,
etc.) nor with other Arabs, and have preserved their own dialect and traditions. They live in small family groups (dār) of two to eight tents, grouped together in the dry season in an encampment (jāra) of 100 to 200 persons who recognise the authority of an 'umda. The cohesion of the community as a whole is not kept together by any central authority able to represent them vis-à-vis the political authorities. The men wear a long shirt over trousers with wide legs, have on their heads a voluminous turban and never move anywhere without a long whip. The womenfolk wear long black robes and a veil that covers material and leather decorated with embroidery in which two square holes are made for the eyes. Among the young girls, the veil, decorated with cowrie shells, hides only the nose and mouth.

**RASHID, ROSETTA, a town in Egypt, situated in lat. 31° 24' N., long. 30° 24' E., on the western bank of the River Nile (nizām).*

The men wear a long shirt over trousers with wide legs, have on their heads a voluminous turban and never move anywhere without a long whip. The womenfolk wear long black robes and a veil that covers material and leather decorated with embroidery in which two square holes are made for the eyes. Among the young girls, the veil, decorated with cowrie shells, hides only the nose and mouth.

**RASHID, AL, an Arabian tribal dynasty belonging to the ‘Abda clan (‘ashira) of the Shammar tribes and ruling over parts of northern and central Arabia from 1251/1835 until 1340/1921.**

The family of Al Rashid is closely linked with that of Al Su‘ūd [see su‘ūd, A], at first as their allies and supporters, later as their rivals for domination over central Arabia. The founder of the Rashid dynasty, ‘Abd Allāh b. Rashid, is usually presented as a close friend and supporter of the Su‘ūd amīr Faysal b. Su‘ūd and, on a religious and military level, enthusiastic to promote the Wahhābi cause. He managed to establish himself as ruler in Ḥayl in 1251/1835 after a power struggle with cousins from the rival family of Ibn ‘Ali, but to what extent he owed his position to the Su‘ūdīs or to his personal abilities and tribal backing is a subject of dispute. He was not for his largely successful efforts to enforce security, and despite resistance from some quarters of the Su‘ūdī tribe and Wahhābi stance. He was succeeded on his death in 1264/1847 by his eldest son Ṭalāl.

Ṭalāl’s rule from 1264-84/1847-67 saw the achievement of a high point in commercial prosperity and stability due to his encouragement of trade. More religiously tolerant than his father, he accepted the settlement of Shī‘ī merchants from ‘Iṣrā, generally hated by the Wahhābis. His apparently accidental death from a gunshot wound led to a brief period of
interminable struggle, characteristic of the Rashīdīds and a major cause of their downfall, before Muhammad, a younger brother of Ta'ilāl, came to power following his massacre of all Ta'ilāl's sons.

Despite its bloody beginnings, the long reign of Muhammad b. Rashīd (1289-1315/1872-97) witnessed the expansion of Rashīdī power over al-Ka'imīs [q.v.] and the Wahhābi heartlands of southern Nabd, including the Su'ūdī capital, al-Riyād [q.v.]. After a long contest with Al Su'ūdī he defeated them decisively at the battle of al-Mulayda in 1309/1891, expelling them from Nabd, after which they sought refuge in al-Kuwayt, among them the young 'Abd al-'Azīz [q.v.], future founder of the modern kingdom of Su'ūdī (Saudi) Arabia. The amīr Muhammad was noted for his military skills and the energy with which he sought to control recalcitrant tribes. European visitors to Hāyil during his reign included C.M. Doughty, the poet Wilfred Scawen Blunt and his wife, Lady Ann.

Following the death of their last great amīr, Al Raqsīd sank into their final decline, faced with the rising new power of 'Abd al-'Azīz b. Su'ūd as well as with the Ottoman and British, especially during World War I and its aftermath. Muhammad's immediate successor, his nephew 'Abd al-'Azīz, was killed in battle with the Su'ūdīs, and the Rashīdīds then fell prey to the ruindīs, notably his nephew Dawūd b. Mahmūd, and the šaykh Zangi to Mawsīl (al-Bundarl, 180; Ibn al-Azrak, 76). His caliphate had lasted about eleven months (Ibn al-Azrak, 78). Zangi's support for the exiled Al Raqsīd proved short-lived. The caliph soon felt too insecure to remain in Mawsīl and he moved to the western Šaljuks, where his power was recognized by the exiled Al Raqsīd's uncle, Al-Raqsīd's uncle, Al-Mustarshīd [q.v.], who now, after his clashes with Al-Mustarshīd, was proclaimed the new caliph. After the death of the exiled Al Raqsīd, his caliphate had been confirmed by the Šaljuks, who now, after his clashes with Al-Mustarshīd, had been pronounced in Dāwil's name on 14 Safār 530/23 November 1135 (Ibn al-Djawīzī, x, 55; Ibn al-Athīr, x, 23). Al Raqsīd hastened to besiege Baghdad and the intimated šaykhs soon dispersed in disarray. After an initial display of bravado, Al Raqsīd fled in panic with Zangi to Mawsīl (al-Bundārī, 180; Ibn al-Arzak, 76-7). He was proclaimed by his father, he had a ruddy complexion and dark blue eyes. (ELIZABETH M. SIRRIYEH)

Bibliography:

2. The sources record in some detail the story of the disappearance of the Rashīdīs, and the ruindīs' attempts to restore them (Ibn al-Djawīzī, x, 55), Šaljuk complicity seems likely, since Masūd could clearly no longer tolerate the way that the Saldjuk sultan was treated by the Rashīdīs. What is indisputable, however, is that two successive 'Abbāsid caliphs, father and son, who had ventured forth from Baghdad and defied the Saldjuk sultan, had now been eliminated.

Al Raqsīd was buried in the Friday mosque of Shahrīshīrī in a turba set aside exclusively for him (al-Bundārī, 181; Sibt Ibn al-Djawīzī, 168). His caliphate has lasted about eleven months (Ibn al-Athīr, x, 27). Little is known of Al Raqsīd's personality, although his recorded conduct suggests that he was ambitious, foolish and easily embroiled in intrigue. It was his misfortune to clash with Masūd, a ruthless warrior sultan who in difficult times contrived to stay in power for twenty years. Al Raqsīd's sexual precocity was perhaps his undoing, for he was reputed to have had intercourse with one of Al-Mustarshīd's concubines and he had been proved by his own daughter. Like his father, he had a ruddy complexion and dark blue eyes and was of medium stature (Ibn al-Imrānī, 224).

al-RASHID — AL-RASHID

(CAROLLE HILLENBRAND)

AL-RASHID (Mawlāy) b. AL-SALJIRI b. 'AlI b. MUHAMMAD b. 'AlI, 'Alid sultan of Morocco and the real founder of the dynasty which still rules the Sharifian empire. He was born in 1040/1630-1 in Tafi лишt (q.v.) in the south-west of Morocco, where his ancestors, the Ḥasanī Shurafā' (Shorfa' (q.v.)) of Siddīmlāsā (q.v.), had founded a flourishing zāwiyya (q.v.) and gradually acquired a fairly considerable political influence, which increased with the decline of the 3Sa'dīan (q.v.) dynasty. Morocco being at this time plunged into anarchy, the Shorfa' (q.v.) soon collapsed. The years that followed were used by Mawlāy al-Rashid to extend his possessions towards west and south. He first made an expedition against the Ghurb, out of which he drove the chief al-Khadir Ghayla'n, and seized al-3aṣṭ al-Kabīr (q.v.) [Alcazarquivir]; he also took Meknes [see MIKNAS] and Tetuan [see TITAN] as well as Taza, the inhabitants of which had rebelled. In 1079/1668, he took and destroyed the zāwiyya of al-Diālī (q.v. in Suppl.) in central Morocco; he had to content, after a very brief occupation of Taza and Fas in 1060/1650, with effective sovereignty over eastern Morocco only. On the death of Mawlāy al-Sharīf in 1069/1659, his son, Mawlāy al-Rashid, not trusting his brother, Mawlāy Muhammad, left the ancestral zāwiyya for Lebrib, where in a step-like country to the north of the cordon of oases he very soon seized Taza without difficulty, and took Tarudant (q.v.) as well as Taza, the inhabitants of which had rebelled. In 1079/1668, he took and destroyed the zāwiyya of al-Diālī (q.v.) after having routed its chief Muhammad al-Halidi at Baṅ al-Rumān. The next year, Mawlāy al-Rashid seized Marrākūš and put to death the local chief 3Abd al-Karim al-Shabbanī, surnamed Karrūm al-Halidi. In 1081/1670, he undertook an expedition into the Sūs (q.v.), where agitators still disputed his authority. He took Tūridān (q.v.) and the fortress of Illīg and returned to Fas, now lord of all Morocco. At this time, says the chronicler al-Ifrānī, "all the Maghrib, from Tlemcen to the Wādī Nūl on the borders of the Sahāra, was under the authority of Mawlāy al-Rashid".

The next year the sultan went from Fas to Marrākūš, where one of his nephews was endeavouring to set up as a pretender to the throne. During his sojourn in the southern capital, Mawlāy al-Rashid, not yet 42, died as the result of an accident on 11 Dhu 'l-Hīdāja 1082/9 April 1672; the horse he was riding having reared, he fractured his skull against a branch of an orange tree. He was buried at Marrākūš, but later his body was brought to Fas, where he was interred in the chapel of the saint 'Alī Ibn Ḥirizām (vulg. Sūdi Ḥrāzem). His brother, Mawlāy Ismā'īl (q.v.), who succeeded him, was proclaimed sultan on the 15 Dhu 'l-Hīdāja following.

The brief political career of Mawlāy al-Rashid was, as has been seen, particularly active and fruitful. The Muslim historians of Morocco never tire of praising this ruler, whose memory is still particularly bright, especially in Fas. It was he who built in the town the
“Madrasa of the Ropemakers” (Madrasat al-Sharratin), the bridge of al-Raṣīf, the kasaba of the Cherarda (Casbah of the Cordera) and 2½ miles to the east of Fās, a bridge of nine arches over the Wādi Sabūl (Sebou).

**RASHID, MEHMEDE** (d. 1148/1735), Ottoman historian and poet. He was born in Istanbul, the son of kādi Muṣṭafā Efendi from Malayta. From 1116/1704 he held a regular series of posts as a müdderris culminating in appointment to the Şüleymaniye in 1130/1718, the latter held concurrently with the post of Hārmeyn mu‘ālet, inspector of the waqa‘ of Mecca and Medina. He then served as kādi of Aleppo 1135-17/1723-4. His career thereafter was irregular by comparison, the much influence by political considerations, in particular by his closeness to the Grand Vizier Nūṣrāh b. al-Ḥaḍīrī. He then served as kādi of Aleppo 1135-17/1723-4. Following the Patrona Khalil, al-Raṣīd’s last appointment, in 1147/1734, he spent three years in exile, first in Bursa, then on the island of Limnī. His final appointment, in 1147/1734, was as kādi ‘asker of Anatolia, in which post he died in 1148/1735.

Although enjoying a contemporary reputation also as a leading poet, Rashid is remembered principally as an historian, successor to Na‘īm al-Din Muhammad b. ‘Alī, the standard authority for the period (described in Ahmed Refik [Afinay], ‘Alimver ve sanatkâr, Istanbul 1924, 311-22). In 1141/1728-9, Rashid went as Ottoman ambassador to ‘Īsfahān, and shortly afterwards was appointed kādi of Istanbul (1141-3/1729-30). Following the Patrona Khalil, his rebellion of 1730, Rashid spent three years in exile, first in Bursa, then on the island of Limnī. His final appointment, in 1147/1734, was as kādi ‘asker of Anatolia, in which post he died in 1148/1735.

His real name was Nadhar (Nadhr) Muhammad, but therefrom, he studied in Layalpur and Lahore respectively, and received his M.A. in economics from the Punjab University. After completing his education he was employed from 1932 to 1934 as editor of Nakhkštān, a semi-literary journal published by the Punjab government’s Rural Welfare Department. During 1934 and 1935 he worked as assistant editor for the literary journal Shāhkār, which was published from Lahore. He was associated with All-India Radio from 1939 until 1943, after which he joined the Indian Army as Public Relations Officer in Inter-Services Directorate. His job in that capacity lasted until 1947, and involved his stay in outside countries such as Iran, ‘Irāq, Egypt and Ceylon (presently Sri Lanka). In 1947 he rejoined All-India Radio as Assistant Regional Director. Following the partition of the sub-continent in 1947, he transferred himself to Radio Pakistan, where he remained until 1951. In October 1952 he joined the United Nations as Information Officer, rising eventually to the position of Director, U.N. Information Centre. In that position he was posted in 1967 to Tehran, where he was stationed until his retirement in 1974. Thereupon, he took up permanent residence in England, and died in London on 9 October 1975 of a heart attack. In accordance with his own wish, his body was cremated instead of being buried as required under Muslim custom.

Rashid’s first volume of poetry appeared in 1941 under the title Māwārā (“Beyond”), which immediately established him as a non-traditional poet of considerable originality and boldness. His next collection was published in 1953, entitled ‘Irān men ahdābī (“A stranger in Iran”), and contained, in part, a group of poems arranged collectively under the same name. This work was followed in 1969 by Lā ‘ā‘īnā, the poems of which indicated a more complex symbolistic style. Rashīd’s last poetical collection was Gūmān kā mumkin (“The possibility of doubt”), which was published in 1977 after the poet’s death. Finally, a complete edition of his entire verse was published in 1988.

Apart from original works, Rashid also made a number of translations from foreign languages such as Alexander Kuprin’s Yama the pit (1939), William Saroyan’s Mama I love you (1956), and an anthology published under the title Qandil Fātir al-Hārî ("Modern
The dominant note of Rashid’s poems is personal, often interspersed with political subjects. Sexual themes are prominent in the poems which belong to his early and middle periods, but in his later works he shows an increasing disposition towards complex human and personal issues. An overly-Persianised idiom pervades his diction, and his expression is complicated and difficult. His poetic technique has given impetus to the widespread use of *zāzī* (the Urdu form of “free verse”), and he is regarded as one of the pioneers whose influence has been of paramount importance in giving a new direction to modern Urdu poetry.

(Munibur Rahman)

**RASHID AL-DĪN SINĀN**, the greatest of the mediaeval Nizārī Ismāʿīlī leaders in Syria, d. 557/1162 or 559/1164. Also referred to as Sinān Raḥḥāl al-Dīn by the Nizāris, his full name was Raḥḥāl b. Ṣanān b. Salmān (or Sulaymān) b. Mūhammad Abū ’l-Ḥasan al-Brāṣ. He was born into an Ismāʿīlī family during the 520s/1126-35, near Bāṣra, where he converted to Nizārī Ismāʿīlīsm in his youth. Subsequently, Rashīd al-Dīn Sinān went to the central headquarters of the Nizārī da’wa at Alamūt [q.v.], in northern Persia, to further his Ismāʿīlī education. There, Sinān became a close companion, and possibly a schoolfellow, of the then leader of Alamūt’s heir apparent Ḥasan, the future Ḥasan II al-Amīr, who now became famous in the occidental sources as the “Old Man of the Mountain” [see William of Tyre, *Willelmis Tyrensis Archiepiscopus Chronicon*, ed. R. B. C. Huygens, Turnhout 1986, ii, 953-4; L. Hellmuth, *Die Assassinenlegende in der österreichischen Geschichtsdichtung des Mittelalters*, Vienna 1988, 78-82].

When Ḥasan II proclaimed the *kiyāma* within the Persian Nizārī community in 559/1164, it fell upon Sinān to inaugurate the new dispensation in Syria. A while later, Sinān did ceremonially announce the spiritual Resurrection of the Syrian Nizāris, and he taught his own version of the *kiyāma* doctrine, which evidently never acquired any deep roots in the community [see S. Guyard, *Fragmenta relatīa à la doctrin des Ismāʾīlīs*, Paris 1874, text 17-9, 66-9, tr. 99-101, 204-9; Ibn Faḍl Allāh al-‘Umarī, *Maṣāliḥ al-aḥrār fī manālik al-amārī, ed.* A. F. Sayyid, Cairo 1985, 77-8).

Sinān played a prominent part in the regional politics of his time, successfully resorting to diplomacy and other suitable policies in the interest of safeguarding the independence of the Syrian Nizārī community. To this end, he entered into an intricate and shifting web of alliances with the major neighbouring powers and rulers, especially the Crusaders, the Zangids and Saḥl al-Dīn.

When Sinān assumed the leadership of the Syrian Nizārīs, the ardently Sunnī Nūr al-Dīn [q.v.], who ruled over the Zangid dominions in Syria, was at the height of his power, posing a greater threat to Sinān than the Crusaders, who had been sporadically fighting the Nizāris for several decades over the possession of various strongholds. The Nizāris were also under pressure by the Hospitallers and Templars [see DAWĪYYA and IBSTARIYYA in Suppl.], who now became famous in the occidental sources as the Crusaders’ circles, regarding the strange practices of the sectarians (known to the mediaeval Europeans as the Assassins) and their awe-inspiring chief, Sinān, who now became famous in the occidental sources as the “Old Man of the Mountain”; or, “*le Vieux de la Montagne*” (see William of Tyre, *Willelmis Tyrensis Archiepiscopus Chronicon*, ed. R. B. C. Huygens, Turnhout 1986, ii, 953-4; L. Hellmuth, *Die Assassinenlegende in der österreichischen Geschichtsdichtung des Mittelalters*, Vienna 1988, 78-82).
But there is no evidence suggesting that Sinan was ever acknowledged as an 
iimā by the Syrian Nizāris, who were sometimes called by the outsiders as the 
Sinān after his name (Ibn Khallīkān, tr. de Slane, iii, 340). An outstanding organiser, strategist, and 
statesman, Rashīd al-Dīn Sinān led the Syrian Nizārī to the peak of their power and laid solid foun-
dations for the continued existence of the Nizārī community and daʿwa
(ca. 645-718/oz. 1247-1318).

RASHĪD AL-DĪN TABĪB, Persian statesman and 
the greatest historian of the ʿIlkhānī period 
ca. 645-718/e. 1247-1318.

Rashīd al-Dīn Fadl Allāh b. Imām al-Dawla, Abu 
Ikhāyṣ, was born in Hamadan into a Jewish family with a professional medical tradition: his father 
was an apothecary. He himself was originally trained as a 
physician (hence he remained known as Tabīb), and 
in that capacity he entered the service of the Mongol 
court during the reign of the ʿIlkhān Abaqa (r. 653-
80/1257-1265). He had converted from Judaism to 
Islam at around the age of 30. His Jewish religious 
background remained throughout Rashīd al-Dīn’s 
career a potential embarrassment, and the demonstra-
tion of his Islamic orthodoxy and respectability may 
well have been his principal motive for writing a 
number of somewhat derivative works on Islamic 
theology (see J. van Ess, Der Wiss und seine Gelehrten, 
Wiesbaden 1981, and the comments in A. Z. V. 
Togān, The composition of the History of the Mongols by 
Rashīd al-Dīn, in CAF, vii (1962), 60-72). It may 
be that this work, with which Rashīd al-Dīn Sinān 
who, according to Bar Hebraeus, was prominent in 
the household of the ʿIlkhān Ghiyāsh (r. 690-4/1291-
5) during the troubles caused by the introduction of 
paper currency, čhāo, on the Chinese model (J. A. 
Boyle, introduction to Rashīd al-Dīn, The successors 

Rashīd al-Dīn did not achieve high political office 
until 697/1298, during the reign of Ghazan, when 
after the fall of Sadr al-Dīn Zanjānī (to whom Rashīd 
al-Dīn had briefly acted as deputy) he was appointed 
associate waṣṣir to Sadr al-Dīn’s successor, Sād al-Dīn 
Sawādī. He remained at the summit of state affairs for 
the rest of his career, though always, like his colleague; 
he was never sole chief minister. He is usually 
credited with having been the principal architect of 
Ghazan’s great programme of administrative 
reforms. His position, though always, like that of all 
ʿIlkhānī ministers, precarious, was one of great 
power and influence, and he accumulated vast wealth, 
such that he was able to construct quarters in both 
the capitals, Tabriz and Sulṭānīyā. The waṣṣir-nāma for 
his quarter in Tabriz, the Rabʾ-ī Rashīdī, survives, in 
part in his own hand (facsimile ed. Tehran 1972, 
printed ed., Tehran 1977-8, both ed. I. Afgār and 
M. Mīnīvī). His interests extended beyond history 
and administration including, as well as theology, 
agriculture and related subjects, on which he left a 
treatise, the Alḥāṣb aṣṣāb (ed. M. Sutūda and I. Afgār, 
Tehran 1990). (A volume of letters attributed to him 
and known as the ʿAlāshīl al-Rashīdī, ed. M. Shāfiʿ, 
London 1945, or as Sawānīf al-akhāf-ī Rashīdī, ed. M. T. Dānīshpāghūrī, Tehran 1980-1, is now 
generally regarded as a spurious compilation, perhaps 
of the Timūrid period.)

Rashīd al-Dīn’s last colleague, during the reign of 
Oldūyūt (r. 703-16/1304-16), Tāḏ āl-Dīn Allāh, 
was also a bitter rival. Relations between them eventu-
ally became so bad that administrative responsibili-
ty had to be divided, with Rashīd al-Dīn taking 
the centre and south of the empire, and Tāḏ āl-Dīn the 
north-west, Mesopotamia and Anatolia. During the 
reign of Oldūyūt’s son and successor, Abū Saʿīd, 
Tāḏ āl-Dīn’s intrigues were ultimately successful in 
bringing about Rashīd al-Dīn’s overthrow. He was 
charged with having poisoned Oldūyūt, and together 
with his son Ibrahim was executed 718/1318. His 
property was confiscated and the Rabʾ-ī Rashīdī looted; but later in the reign, his son ʿAlīya ṣh al-Dīn 
followed his father in the office of waṣṣir.

Rashīd al-Dīn’s enduring fame rests more on his 
work as a historian than on his career as a prominent 
official. His Dāmī al-tawārīḵī is undoubtedly the most 
important single historical source for the Mongol Em-
pire as a whole, not merely of the realm of the ʿIlkhāns.

The work was commissioned by Ghazan, who seems 
to have feared that the Mongols, as they settled down 
as Muslims in Persia, might be in some danger, 
ultimately, of forgetting who they were and where 
they had come from. It initially contained an account 
and the history of the Mongols and their steppe predecessors. This part, which became known as the 
Tabīb-i Ghazanī, was presented to Oldūyūt after the 
death of his brother and predecessor. Oldūyūt asked 
Rashīd al-Dīn, as a memorial to Ghazan, to continue 
the work so as to provide a history of all the peoples 
with whom the Mongols had come into contact. It is 
this part of the history that justified Boyle’s descrip-
tion of Rashīd al-Dīn as “the first world-historian”. 
The history, when completed (there appears to have 
been an earlier, shorter version), consisted of the 
following parts: (1) The Mongol and Turkish tribes; 
the Mongols, from Cinggis Khán to the death of 
Ghazan; (2) A history of Oldūyūt (of which no copy 
is known, though Togān claimed to have seen one in
Mashad in 1923), followed by the "universal history": Adam and the Patriarchs, the pre-Islamic kings of Persia, Muhammad and the caliphs, the dynasties of Persia in the Islamic period, the Oguz and the Turks, China, the Jews, the Franks, and India; (3) The Suqab-i pandgina (the "Five genealogies") of the Arabs, Jews, Mongols, Franks and Chinese: unpublished but surviving as Topkapi Sarayi ms. 2932); (4) The Suwar al-askalim, a geographical compendium of which no copy has yet come to light. The first part of this section is the shortest; the second, even in length: the first is by far the largest. In 1908 E.G. Browne produced a scheme for publication of the whole, organised more manageably (Suggestions for a complete edition of the Jami ‘ut-Tawarikh of Rashidu’d-Din Padu’lah, in JFAS [1908], 17-37). Much, though not all, of this has since been accomplished (for details of the more important editions and translations of the various sections of part 1, see the Bibl. to MONGOLS). Studied of the Djam‘ al-tawarikh is not without its problems. Even the authorship of the book has been questioned. Togan (art. cit.) contended, not very persuasively, that it was a translation from a Mongol original. The author of the most important surviving contemporary source for the reign of Oldjeytu, Abu ‘l-Kasim Khâshâni, maintained that he was himself the true author of the work, for which Rashid al-Din had stolen from him 5-13.1.1 Hâshim thus points out the considerable financial rewards (Khâshâni, Ta’rikh-i Uldâyâ, ed. M. Hambly, Tehran 1969, 240). It is not easy to judge what justification there may have been for this claim. Rashid al-Din was of course a busy government minister, whose available time for scholarship must have been limited; he tells us that he wrote his history between morning prayer and sunrise. It may well have been that Rashid al-Din was dissuaded from doing so by his own chief secretary, who was himself, as both chief minister and, in effect, "official" historian to Ghazan and Oldjeytu, Rashid al-Din had an interest in painting the troubles of the pre-Ghazan era in colours as black as possible and in depicting Ghazan’s reforms as a total success. This should be treated with a degree of scepticism. The Ta’rikh-i Ghazâni provides us with the full texts of the reforming edicts (yarlûq), which are vivid, convincing and full of detail. There may be less reason, however, for supposing that the edicts were in fact universally implemented. Rashid al-Din was a remarkable historian of great importance; but it should not be supposed that he was an impartial one.

(D.O. Morgan)

RASHID AL-DIN Muhammad b. Muhammad b. Abd al-Djalil al-Umarî, known as WATWAT, secretary and prolific author in Arabic and Persian. A member of the Khâshân family, Rashid al-Din was born in 481/1088-9; Yakût (at least in the published text) has him die 5 years earlier.

Rashid al-Din was chief secretary (sâhêb dawân al-madâ) under the Khârâzšah Atâsu (521-511/1127-96) and his successor Il-Ársân (d. 560/1167). His loyalty to Atâsu earned him the enmity of the Saljûq Sandjar who, according to Djiwaynî, resolved at one point to cut Rashid al-Din into 30 pieces, but was dissuaded from doing so by his own chief secretary, Muntâfjâd b. Djiwaynî, the uncle of our informant’s great-grandfather. We possess a considerable number of Rashid al-Din’s highly ornate letters, including those which he wrote on behalf of his two masters (in Arabic to the caliphs and their envoys, in Persian to Sandjar and others) and also his private letters in both languages. Two bilingual collections of epistles were compiled by Rashid al-Din himself, Abbâk al-áfkár fi l-’asrâ’il wa l-‘aqârâr and A’râs al-khâsâ’ir wa nafa’ir al-nawwâr, and others are preserved elsewhere. The Persian letters found in the two collections were edited by K. Tûsïsrîkânî (Tehran 1330 Sh./1912), and 141 letters of Arabic authors were published (from an unidentified source) by Muhammad Fâhîn under the title Maddâ’în al-’asrâ’il Rashid al-Din al-Watwât, 2 parts, Cairo 1315/1897-8.

Ten of the latter are translated in H. Horst, Arabische Briefe der Hârâmshâh an den Kalifenhof aus der Feder des Rashîd al-Din Watwât, in ZDMG, cxvi (1966) 24-43, and the same author has summarised many of the Persian letters in his Die Staatsverwaltung der Groffeligen und Hârâmshâh, Wiesbaden 1964.

Rashid al-Din’s Persian dawân contains more than
8,500 verses in S. Nafisl's edition (Tehran 1339 Sh./1960) and consists largely of poems eulogising the 18th Caliph of Persia, Fath al-A'Imr, and consists largely of poems eulogising his works is Matthál kall tálsh min kalám āmír al-mu' mínin 'Ali b. Abi Tálsh, or Tārdša-yi al-imám kalám, consisting of the 100 Arabic sayings of 'Ali said to have been collected by al-Ḍīshī [q. v.]; each apothegm is followed by a verbose Arabic paraphrase, then a Persian commentary and finally a poetic paraphrase in the form of a mostly rather pedestrian Persian dawrīyat. It has frequently been published by the East Persian Students in many of the editions (and mss.) one or both of the prose commentaries are omitted—also with a Latin translation by Stickel (Jena 1834), with a German version by Fleischer (Leipzig 1837) and with an English verse rendering (but without the prose versions) by Harley (Calcutta 1927). Rashīd al-Dīn subsequently gave the same treatment to 100 sayings of each of the three caliphs, with his works entitled Tabshiṣ al-atāṣk ila 'l-tálshīj min kalám āmír al-mu' mínin Abī Bakr al-Siddīq, Fadl al-tāṣkīnī min kalám āmīr al-mu' mínin 'Umar b. al-Khaftāb and Ums al-lājhīn min kalám āmīr al-mu' mínin 'Uthmān b. ʿAffān; these remain unpublished, though mss. are available. Another work of comparable nature, Lakūf [q. v.] al-amāfīl wa ṯālīf al-akūfī, is a collection of several hundred Arabic proverbs, each with a Persian prose translation and an extensive commentary. It was published by S. B. Sabzawārī (n. p. 1358 Sh./1939) on the basis of an old ms. found in Medina. Further paraenetic works survive in manuscript.

His much-admired handbook of rhetorical figures, Ḥaddātāt al-asrār fī dākūt al-sīr, is available in a richly annotated edition by 'Abbas Ikhbāl (Tehran 1308 Sh./1930-39; reprinted, but without the editor's introduction and endnotes, in the appendix to Nafisl's edition of the diwān, and again, with a Russian translation by N.Yu. Čalitsov, Moscow 1985). It is strongly dependent both on al-Marghinānī's al-Muhāsīn fī 'l-nasm wa 'l-nāfī, from which many of the Arabic prose and verse quotations are derived, as well as on Ṯābrūkhī's Tarajāmān al-balāgha, whence Rashīd al-Dīn has virtually all of the illustrative quotations from early Persian poets (see the editions of the two books by Van Gelder and Ates respectively), a high estimate of their merits. But the best known of Persian poets of the 6th/12th century as well as from his own poems in both languages. He has also been credited with a Persian dictionary (Ḥamād wa ṯānān, or Nukūd al-zawāhīr wa 'ibād al-dājāwīr, extant in both prose and verse versions) and a short treatise on metre (Risti-yi 'āraḍā, but the question of their authenticity requires closer scrutiny.

Bibliography: 'Ali b. Zayd al-Bayhaki, Tātimmat Siyās al-hikama, ed. M. Shakf, Lahore 1935, 166-8 of the Arabic section; Muhammad b. Muhammad al-Kātib al-Iṣlaḥānī, Kharīdat-al-ḥakīr (the relevant entry was published by M. Shakf in Oriental College Magazine [1934-5], at the end of fascicles xi/1, xi/2, xi/3, xi/4, separate pagination); Yākūt, Udbābā, vii, 91-7; 'Awīl, Lābīb b. 80-6; Djuwayniyy, ii, 14-18; Zašarānī, b. See also the editors’ introductions to Rashīd al-Dīn’s various works (listed in the article).

(FC. DE BLOIS)

RASHĪD ʿALĪ AL-GAYLĀNĪ (al-Dīnānī), Prime Minister of ʿIrāk on four occasions in the 1930s and 1940s and for long a symbol of ʿIrākī resistance to British interests. He was a descendant of the famous religious leader ʿAbd al-Kādīr al-Dīnjānī [q. v.], and a member of a cadet branch of the family which held the office of nakib al-ʿafrālī [q. v.] in Baghdad several times in the 19th and 20th centuries (b. Baghdaḏ 1892, d. Beirut 1965).

Rashīd ʿAlī qualified as a lawyer and became an appeal court judge in 1921; in 1924 he became Minister of Justice in the cabinet of Yāsīn al-Ḥaǧīmī, perhaps his most intimate political colleague. Together with his rival, ʿAlī al-Saʿūdīī [q. v.], he and Yāsīn were co-founders of the Party of Naṭional Brotherhood (Ḥizb al-Ḥikāȳ al-Watani) formed to spearhead opposition to the Anglo-Iraqi Treaty of 1930. However, after the treaty had come into effect and ʿIrāk had become at least theoretically independent of Britain, both men came to adopt a more pragmatic approach. Rashīd ʿAlī accepted his first premiership on 20 March 1933 and held office until the end of October of the same year. After this he remained out of power until March 1935, but he and Yāsīn spent much of the intervening period attempting to incite the Middle Euphrates tribes to rise against the governments of their rivals ʿAlī Djiwadat and Djamīl Mīḍīfī. Their efforts succeeded to the extent that tribal demonstrations in Baghdad prevented Djiwadat and Mīḍīfī from forming cabinets, and in March 1936 Rashīd ʿAlī became Minister of Interior, in a government which lasted until Bakr Sīdkī’s coup d’état in October 1936.

By the latter part of the 1930s, especially after the Palestine rebellion and the failure of the Franco-Syrian independence negotiations, Britain and France had become widely unpopular in the Arab Middle East. At the same time, the governments of Italy and Germany were held up by Arab nationalists as exemplars of states whose strength lay in their national unity. Pan-Arab nationalism had little following in ʿIrāk outside the officer corps, but the weakness of the central institutions of the state after the death of King Fayṣal, the existence of widely shared aspirations for genuine independence from Britain, the arrival of al-Hāḍīd Amin al-Husaynī, Muṣṭafī of Jerusalem [q. v. in Suppl.] in Baghdad in October 1939, and the fact that the political clique of the Golden Square, Siruq al-Dawrī, had come to exercise a pivotal influence on ʿIrākī politics, combined to heighten anti-British feeling, and also to create a climate of opinion in ʿIrāk which was either neutral or benevolent towards the Aḥs powers at the beginning of the Second World War.

Rashīd ʿAlī became the chief political ally of the nationalist colonels of the Golden Square, and became Prime Minister for the third time in March 1940, after the fall of Nūrī al-Saʿūdīī’s fifth ministry. Nūrī, who stayed on under Rashīd ʿAlī as Minister of Foreign Affairs, was unpopular because of his staunchly pro-British past, but he thought that a government headed by Rashīd al-Dīn could, as a result, become more extreme demands of the Golden Square. However, after the fall of France in June 1940, and under the combined influence of the Golden Square, the Muṣṭafī and prominent Syrian politicians in exile in Baghdad, Rashīd ʿAlī gradually adopted a more openly anti-British and pro-Axis stance.

Under the terms of the Anglo-Iraqi Treaty of 1930, the ʿIrākī government was obliged to allow the transit of British troops across its territory in wartime. Bri-
tain requested this facility in June 1940, and permis-
sion was eventually if somewhat grudgingly given in
mid-July. However, in spite of requests from Britain,
the ٢٤٣٥ government refused to break off relations
with Italy when Italy declared war on Britain in June
1940, and the Italian legation developed into a centre
of anti-British intrigue. In addition, the ٢٤٣٥ govern-
ment now began to approach the legations of Italy and
Japan for arms supplies, and in August 1940 Rashid
٢٤٣٥ and the Mufti entered into direct if somewhat
fruitless negotiations with Benito Mussolini (for de-
tails, see Majid Khadduri, Independent Iraq 1932-1958: a study
Department of State, Documents on German foreign policy
1918-1945, Series D, vol. x, 141-4, 154-5, 275, 415-
16, 558-60).

Matters came to a head, when Rashid ٢٤٣٥, who
now had the support of most of the armed forces,
refused to yield to British pressure to resign in
November 1940 in the face of his unwillingness to
allow British troops to land in or pass through ٢٤٣٥.
He was forced to step down temporarily as Prime
Minister in January 1941 but returned to power on 12
April; by this time the Regent, ٢٤٣٥ and other pro-
British politicians had fled to Transjordan.

On 17 and 18 April 1941 British troops landed at
Bagra, there was no doubt that Rashid ٢٤٣٥ and his
government enjoyed widespread support (cf. Khad-
dur, op. cit., 214; Hanna Baratou, l'histoire et la
nation des classes sociales et le mouvement national
victoriens an Iraq, a study of Iraq's old
touched classes and its Comissions, Ba'thists and Free Offi-
cers, Princeton 1978, 453-62), but, given the balance
of forces involved, the defeat of the ٢٤٣٥ army in
May 1941 was a foregone conclusion. The German
assistance which Rashid ٢٤٣٥ had requested never
materialized, and he was obliged to flee first to Iran,
then to Germany, where he arrived in November
1941.

Rashid ٢٤٣٥ stayed in Germany until May 1945,
and then found his way to Sa'udi Arabia, where he
remained until 1954. He returned to ٢٤٣٥ a few weeks
after the overthrow of the monarchy in July 1958, ap-
parently hoping that his previous services would be
duly acclaimed. When adequate recognition was not
forthcoming he set about planning the sort of coup
that he had engineered successfully in the mid-1930s,
inciting rebellion among the tribes of the Middle
Euphrates in a quixotic attempt to unseat the govern-
ment of ٢٤٣٥ al-Karim Kāsim [q.v.]. He was arrested in
December 1958, tried and condemned to death, but
the sentence was commuted by Kāsim, and he was
eventually released from prison in October 1961. He
died in Beirut on 30 August 1965.

Bibliography: Given in the article.

(P. Sluggett)

RASHID RİDĄ, whose full name was Muhammed
٢٤٣٥ b. Munla (i.e. Mullah) ٢٤٣٥ Khalifa (1865-1935), one of the most productive and
influential authors of Islamic reform [see ISLAM],
of Pan-Islamism [q.v.] and also, to a certain extent,
of Arab nationalism [see KAMWIYYA]. His name is
connected with the journal al-Manar [q.v.] in the first
place, whose editor he was from its foundation in 1898
till his death.

Rashid Rida was born on 27 Dümâyda I 1282/23
September 1665 in Kalamûn, a village near Tripoli
(Tarabulus al-Shâm [q.v.]) on the Mediterranean
coast in northern Lebanon (for his day of birth, see
Sharabäşi, 102). The inhabitants of Kalamûn were
exclusively Sunni Muslims and the great majority of
them claimed descent from the Prophet (for the
allegedly Şahyâniyid pedigree of Rashid Rida's family,
see Şahkil Arslân, 809-11, and Sharabäşi, 103-7).

Rashid Rida received his first education in the al-
 táb [q.v.] of Kalamûn, and after that in an Ottoman
state school in Tripoli and, above all, in the madrasa
vostaniyeh, founded there in 1879. The director of this
school was Şahküy Hüsân al-Dîjîr (1845-1909). It
was from this scholar that Rashid Rida received
the incentives that were essential for his intellectual
development, such as, for instance, those regarding
the modern interpretation of scientific
achievements. Later, he also had heated differences of
opinion with al-Dîjîr (see Sharabäşi, 231-46; Ebert,
index, 188; for other teachers of Rashid Rida in
Lebanon, see Sharabäşi, 246 ff.).

In the winter of 1897-8, Rashid Rida travelled to
Egypt. Already the day after his arrival in Cairo he
went to see Muhammed ٢٤٣٥ Ahâd [q.v.] in order to
expound to him his aim of publishing a journal dealing
with Islamic reform. The first issue of this journal, al-
Manar, appeared on 22 Shawwâl 1315/mid-March
1898.

The house which Rashid Rida acquired at Cairo,
under some time, served as private residence, publishing
establishment, bookshop and bookstore (Sharabäşi,
137). Notwithstanding the success of many of his
publications and the occasional gifts of friends and
patrons, he apparently was free from financial
worries (Sharabäşi, 166-9, based, among other
sources, on letters of Rashid Rida to Şahkil Arslân).

Some information on his being married three times
(the first two marriages broke down after a short time)
and on his children can be found in Sharabäşi,
216-27.

After the Ottoman constitution had been re-
instated in 1908, Rashid Rida visited Bildd al-Shâm.
On this journey as well as on later journeys to Istan-
bul (1909-10), to India (1912; on his way back he
visited Mäska and Kuwayt), to the Hidjaz (1916 and
again in 1926), to Syria (1919-20), to Europe (1921-2)
and to the Pan-Islamic Congress in Jerusalem (1931),
he each time reported in al-Manar (partly reprinted in
Yusuf Ibiş [ed.], Riha'dâ; see also Şahkil Arslân,
145-61).

For Rashid Rida, all these journeys were connected
with specific political aspirations, but he was not
willingly reduced to his immediate expectations.
For instance, during the journey to Syria in 1908, an
incident in the Umayyad mosque in Damascus and a
subsequent riot made it clear to him that he had to
reckon there with considerable opposition, and that
he could not rely unconditionally on support from the
Young Turks (Ibiş, 29-40; cf. Arslân, 147-8 and
Commins, nn. 129-31). His stay in Istanbul (October
1909-October 1910) was aimed at removing
misunderstandings in the relationship between Arabs
and Turks. Rashid Rida also wanted to establish in
Istanbul a modern Islamic institution of higher educa-
tion, whose graduates —much better scholars than the
"ulama" educated in the traditional way—would be
able to defend Islam according to modernist
standards.

After some initial successes, Rashid Rida came to
the conclusion that both aims could not be attained —in
any case not according to his own conceptions—
mainly because of the opposition of influential
members of the İstibâdtee Teråki Dîmîyyetî [q.v.], the
ruling Committee of Union and Progress (Tauber,
104-6; al-Shawâbîka, 193 ff.). Disappointed, he
returned to Egypt and immediately started prepara-
tions for establishing an association that should serve
as the basis for the planned institution of higher
education. The latter was indeed founded in 1911,
under the name of Dar al-De'wa wa 'l-Irshād. Regular instruction began in March 1912, but had to be discontinued soon after the outbreak of the First World War for want of financial donations (Tauber, 106; for the curriculum, see RMM, xviii [1912], 224-7).

As a result of his disappointment with the Young Turks, Rashid Rida began to develop political plans on the lines of Pan-Arabsim [q.v.]. Already in 1902-3 al-Manār had printed in instalments the work of 'Abd al-Rahmān al-Kāwākibī [q.v.], Um m al-futū (see for the full text of this work Tauber, 1937, 30-5). Now, from 1911-2 onwards, Rashid Rida adhered to the public agitation against the Young Turks and at the same time founded a secret political association with Pan-Arabic aims, the Li'amiriyāt al-Ḍāmīrīa al-'Arabīyya. Its purpose was, on the one hand, to reconcile the rulers of the Arabian Peninsula with one another, and on the other, to put the Arabic secret associations in touch with one another (Tauber, 106-11). These activities led Rashid Rida to establish relations with most of the rulers of the Arabian Peninsula, such as Ibn Su'ūd and the Sharīf of Mecca, but they also burdened for years to come, especially during the First World War, his contacts with those of his friends who, like Shākhī Abd al-Rasūl, associated themselves, notwithstanding many reservations, with the Ottoman Empire (Arslān, 1926-6).

During the First World War, Rashid Rida supported the "Arab Revolt" in the Hijāz and even after the War's end he belonged for some time to the propaganda of its aims. During his journey to Syria in 1919-20 he was elected president of the "Syrian Congress", but he returned to Egypt after the French mandatory troops had marched into Syria.

In the following years, his relations with the King of the Hijāz, Husayn b. 'Abd al-‘Azīz, and with the Sharīf of Mecca, but they also burdened for years to come, especially during the First World War, his contacts with those of his friends who, like Shākhī Abd al-Rasūl, associated themselves, notwithstanding many reservations, with the Ottoman Empire (Arslān, 1926-6).

islamyya. i. al-Manár, Cairo 1983. A mukhtasar of his Tafsir, already begun by Rashid Rida, was completed and published by Muhammad Ahmad Kanân and Zuhavr al-Shâwîy as Mukhtasâr tafsîr al-Manâr, 3 vols., Beirut-Damascus 1984.

(Ende)

RASHID YÂSIMI, modern Persian poet and scholar, born on 4 December 1896 at Kirmanshah but he is popularly known as Rashid Yasimi in literary and intellectual circles. He came from a scholarly family: his father, Rashid, was also a scholar, born on 4 December 1896 at Kirmanshah, and for which the 1930s formed a period of transition and the cultural and artistic level. It marked the beginning of a period of intense activity, of recovery and
preservation and of creativity on behalf of an identity which felt itself threatened. In practice, music had during this period become the profession of a despised class, whose depraved morals and avidity for nothing but financial gain had earned it the contempt of the whole art, and as a result, the artist's status, down to a deplorable situation. Just as there were many factors leading to a series of attempts aiming at the rehabilitation of Tunisian music, so these were favoured by several important events concerning the poetic and musical spheres. Such a spirit had already taken shape thanks to the creative impetus of Shaykh Ahmad al-Wa'fī (1850-1937) and the genius of Khumayyis Tarnān (1894-1964), both reared, like so many others, in the pure tradition of the dawāwiyya of the Sufi brotherhoods, and to the efforts of Baron Rudolphe d'Erlarger (d. 1932) and of the musicians and musicologists gathered round his palace of Sidi Bu Sa'id. In 1931 the famous Syrian musician Shaykh 'Ali Darwīsh of Aleppo arrived in Tunisia and within the Khaldūniyya gave the first courses in tonic sol-fa, and in the modes and rhythms of Arab music, as well as tuition in the nāy. There was also the first congress of Arab music at Cairo (14 March-3 April 1932), which was an event of great artistic importance. The Tunisian delegation included various famous figures, such as Hasan Husni 'Abd al-Wahāb, Mannūbi Snūsī, 'Hasūnā Ben 'Amāmār, and a musical ensemble composed of Muhammad Ghāmil (raḥīb), Khumayyis Tarnān (ṣīd raḥīb), ʿAlī bin ʿArfa (qār), Khumayyis al-ʿAṭī (nakkānāt) Muhammad al-Mukrānī and Muhammad Billābān (singers). In this way, the Rashidiyya, whose setting up had been for music the culmination of a concatenation of circumstances, very soon became "a real bed of flowers", as Shāfiya Rushdī liked to stress, a nursery of high-quality artists, poets and musicians who succeeded, "through work and faith", in rehabilitating Tunisian musical art.

The Rashidiyya was controlled by a legal charter which gave it civil and financial autonomy, and its directing committee was composed of a dozen members from amongst its most faithful supporters and patrons, chosen by the duly qualified electors and with a mandate which was renewable. It had three commissions: literary, musical and the sphere of public relations; the first two sat in the form of a committee of sifting and selection. In 1935, a first concert was given in its provisional headquarters, on the patio of the patron Belahsen Lasram, before it acquired its own centre. An initial competition was held to stimulate creative activity amongst Tunisian artists. Thereafter, a lively activity was embarked upon, envisaging three vital objectives:

1. Safeguarding the musical heritage (and more especially, the maṣāḥih or popular one), against all current and future of its own heritage. Thus the work of transcription was envisaged, a somewhat arduous and delicate mission, given that the music of an oral tradition, difficult to pin down in a fixed, standardized notation, involved, and that numerous versions, making up a field of great richness, had to be gathered together. Hence the effort was carried out on two fronts: collection and transcription (led by M. Trīkī), and restoration, the giving of fresh impetus and new compositions (a work given effect by Kh. Tarnān). The text and music of thirteen complete naḥawāt [q.], as well as those of numerous traditional pieces of music, instrumental and vocal, were gathered together, transcribed and published (cf. the nine fascicles of the Tunisian musical heritage). The greater part of this repertoire was likewise recorded.

2. Laying the foundations for a centralised musical teaching, involving mainly national and Arab music. Through the seriousness and successfulness of this policy, the Rashidiyya speedily became an Institute for educating cadres who were well qualified to keep up this role until 1972, when its courses were transferred to the National Centre for Folk Music and the Arts.

3. Launching a vigorous movement of musical creativeness and high quality poetic activity, as much on the level of the texts as the music and interpretation. Tunisian song had its genuine creative spirits, composers, song-writers, instrumentalists and singers of great talent, notably the famous group Taht al-Sūr ("below the city wall") or Shākur al-ʿilā ("soldiers of the night"), artists, intellectuals and bohemians who were known by the name of the famous café which gave them shelter.

One by one, the new wave of musicians and poets were to help in the building of a new edifice, all bringing their contribution to the Tunisian song, for which they provided an impulse which brought it to the forefront of Arab music. The Rashidiyya did much to render respectable practical musical-making. A tradition of weekly concerts was begun, and, according to Trīkī, one went there "as to the mosque".

The founding of a national radio network (Tunis R.T.T. in 1936), which began to transmit its own emissions towards the end of 1938, helped the rise of the Tunisian song and probably contributed to promote the efforts of the Rashidiyya, notably through the live transmission of its weekly concerts. However, this institution gradually lost its potentialities once an orchestra had been created (1948), and then a choir (1957), both belonging to the R.T.T. and which attracted the best artists of the time. At the present time, the Rashidiyya, with its headquarters in the rue du Dey, no. 5, comes under the Ministry of Culture and is supported financially by the municipality of Tunis. A new breath has been recently given to it so that it may recover its former status.

RASHT — RASHTI, SAYYID KAZIM

the province of Tabaristan to the east [see MAZANJ, DARAN], and it is the Hudud al-$alim which first gives the name, but as a district, not a town (tr. Minorsky, 1937, § 32.25). It does appear as a town in Hamd Allah Mustawfi, writing soon after the Mongol conquest of Gilan in 706/1307, and by that time, the silk of Gilan was famous and, according to Marco Polo, sought after by Genoese merchants whose ships had recently appeared on the Caspian waters. Subsequently, Rasht became the seat of a minor dynasty of Gilan, the Ishakids of Fumin, until these rulers were replaced by the Kaysi princes of Lahijan [q.v.], and then, in 1000/1592, Shāh ʿAbbās the Great [q.v.] annexed Gilan to the Persian state.

Among the events of this period was the establishment in Gilan, of which Rasht became the administrative and economic centre, of the “Muscovite Company” founded in 1557 by Anthony Jenkinson, Richard and Robert Johnson, who, taking the Russian route, sent ten expeditions into Persia between 1561 and 1581. It is to noteworthy that the last independent ruler of Gilan, Ahmad Shāh, sent ambassadors to Moscow to seek help against Shāh ʿAbbās and obtained promises of protection which, however, came to nothing. The Cossacks at the same time were plundering in Gilan and Rasht and trying to gain the support of the Persian court. The most notable invasion was that of Stenka Razin who sacked Rasht in 1667/1668. On 2 Safar 1082, the day of Stenka’s execution, the Persians in Moscow at the time were invited to be present at it (cf. the journal Kāṣeh, 12, N.S., 1 December 1921). From 1722 to 1734, Rasht and Gilan were occupied by the Russians (Shipov, then Matyushkin) invited by the governor who was threatened by the Afghans. In 1734, Gilan was restored to Persia after a treaty. Rabino quotes a Persian proverb which expresses the disadvantage of the Russian occupation. For military reasons the Russians cleared the jungle round Rasht.

The history of Gilan and that of Rasht, which has always played a preponderant part in it, merges into the general history of Persia after its annexation. During the Persian Revolution, a body of Social Democrats was sent by the Regional Committee of the Caucasus to Rasht, and there helped in February 1909 to overthrow the authority of the Shah and to establish a revolutionary committee which elected as governor the Sipahdar ʿAzam, who played a prominent part in the history of the period along with Sardār Asad Bakhtiyārī (cf. Persia v borbe za nezavisnost, by Pavlović and Ianskii, Moscow 1925). Rasht then became the base of operations of the northern revolutionary movement. A few years later, during the First World War, Rasht again attracted attention in connection with the movement of the Dangali, created by Mirzā Kūčak Khān [q.v.]. Assisted by German (von Passchen), Turkish and Russian officers, an armed force was organised to oppose the passage of the British troops under General Dunsterforce on their way to Bākū, without, however, much success (battle of Mandjīl, 12 June 1918). The British were able to force their way through with the help of Bīlīrakhov’s detachment of Cossacks and established a garrison in Rasht. A second alliance with the Dangali in the town itself on 20 July 1918 also ended in British victory. On 25 August peace was signed with Kūčak Khān at Enzel. At one time, at the end of March 1918, the position of Kūčak Khān was so strong that the capture not only of Kazvin, but even of Tehran, was feared (cf. The adventures of Dunsterforce by Maj. Gen. L.C. Dunsterforce, London 1920).

Rasht again became the arena of the revolutionary Dangali movement, aimed at the pro-British government in Tehran of Muḥammad al-Dawla in 1920. After the capture of Bākū on 28 April 1920 by the Reds, the White Fleet sought refuge in the port of Enzel, which was held by the British. Enzel fell to the Soviet forces, who then twice occupied Rasht. But after the Perso-Soviet agreement of May 1921, Russian and British troops left Persian territory, Kūčak Khān’s movement was suppressed by Riḍā Khān’s [see RIDA SHAH PARMAWLI] Cossack Brigade, and Persian authority re-established in Gilan and Rasht.

Rasht was again occupied by Russian forces in the Second World War. At the present time, it is the administrative centre of the astan of Gilan. It has road connections with Tehran and Bandar Anzali and an airport. In 1972 it had an estimated population of 160,000.

RASHTI, SAYYID KAZIM b. KASIM (d. 1259/1844), the head and systematiser of the Shaykhī school of Shi‘ism after Ahmad al-Ahsa'ī [q.v.]. The son of a merchant, Sayyid Kazim was born in Rasht [q.v.], in northern Persia, between 1194/1784 and 1214/1799-1800. Details of his early life are sparse and contradictory. Educated in Rasht, he underwent mystical experiences and, somewhere between his mid-teens and early twenties (between 1809 and 1814?), became a pupil of al-Ahsa‘ī, then living in Yazd. He also studied under and received ijāza from other mudāhilīs.

The Sayyid soon came to hold an important position among al-Ahsa‘ī’s entourage, acting as his sa‘īb or deputy and spokesman, answering questions on his behalf, continuing and translating some of his writings, and defending him from the attacks of hostile "ulama‘. On al-Ahsa‘ī’s death, Rashtī succeeded him as head of the central group of his pupils in Karbala‘. This led to the emergence of a sort of order for the transmission of inspired knowledge within orthodox Shi’ism, which Rashtī termed "shahādāt‘, or "the path of inspired knowledge" (Kirmānī) and the interpreter of al-Ahsa‘ī’s words. Although he denied trying to establish a new madhhab, he became embroiled in major public debates with leading ‘ulama‘. These disputes, and Rashtī’s own development of an esoteric teaching divulged to a privileged circle of students, made it inevitable that Shaykhism should be viewed as a school of heterodox opinion within Twelve Shi’ism.

In spite of this, Rashtī acquired considerable political influence in Karbala‘ and Persia, where he numbered many members of the ruling Kādirī family among his admirers. His death on 11 Dhu ‘l-Hijja 1259/1 January 1844 sparked off a leadership struggle within the school, resulting in the emergence of two sharply opposed branches: that of Karim Khān Kirmānī, which attempted a rapprochement with orthodox Shi’ism; and the ʿAll Muhammad Shirazi [q.v.], which grew into the Bābī sect.

RA§HTWA (A.) or, apparently preferred by purists, ri§h(a)w or, ri§h(a)w, Persian ri§hwat, ri§h(a)w, ri§h(a)u§w, Turkish riqayet, the legal term for “bribe.” Like English “bribe”, its connotation is absolutely negative and whatever is called ri§hwa strictly forbidden by law. The word itself does not occur in the Kur’an. More general passages like II, 188, and V, 44 (both surahs) were interpreted to include the prohibition of bribe-taking. The hadith, however, makes the matter perfectly clear. One of the most explicit statements invokes the divine curse upon those who offer and who take bribes (ra§hi, mursa§hi), sometimes adding the go-between (ra¶sh) and the specification fi l-hukm.

Other words may refer to the process of bribery such as daar§al/ga¶l or, in the case of an informal drift in that direction such as daarwa or ba§hah¶[i]s [o. v.], but none of them ever became as unambiguous and forceful as ri§hwa. An insignifican exception may possibly be bitrili, if it is derived from Greek proteieta and the interpretation of proteieta as “previous payment, advance” (Liddell and Scott, 1524) in a 6th-century papyrus from Egypt is correct; in this case, Persian partala “gift” could be secondary or another derivation from the Greek (see S. Fraenkel, Aram. Fremdwörter, Leiden 1886, 84). A picturesque euphemism for bribing, “pouring oil in the lamp” or simply kandala, is listed by al-Tha^l^ibi, Kiniya, Beirut 1405/1984, 70; al-Ra¶ghi, Muns±dar±, Balt±k 1286-87, i, 128.

Nothwithstanding the legal prohibition, bribery was as common in Islam as in other large societies, although the degree of its prevalence no doubt widely varied. It was, therefore, necessary for jurists to define what distinguished it from allowable gifts [see HIBA] and to circumscribe its boundaries. In contrast to supposedly disinterested and unconditional gifts, bribes were stated to be what was given for a purpose. This left open the possibility of beneficial purposes such as attempts to prevent wrongdoing and injustice, see, e.g., LA, s.v. r§h-w: “gifts that lead to obtaining a right or ward off a wrong,” or al-Sha§azili, “rashwa” in al-Harir±i’s twenty-first mak±ma: “a gift given for warding off the harm of someone who has power over you” (Shar±h al-Mak±mat±, Cairo 1306, i, 279). In the legal view, however, the beneficial purpose did not invalidate the general prohibition; while the bribe may be within his rights in offering a bribe, it is illegal to accept it, since the intended recipient should do so on his own volition what is required and proper. It was, however, recognised by some that any gift whatever was given for some purpose. Al-Ghazali thus discusses hypothetical situations such as giving something to a ruler’s officials or intimates in order to gain access to him, as well as other situations of gift-giving for expected services. The negative view mostly prevailed, but it is obvious that the very discussion opened up potential loopholes. Note that the alleged “first case of bribery in Islam” involves outstanding early Muslims and access to the caliph (Ibn Kutayba, Ma¶arif, ed. U¶k±h, 558, and the aw±l±i collections).

The environment where unlawful bribing was seen as particularly at home was the twin realms of government and judiciary. On a widely discussed problem where the two clearly intertwined concerned the expenditure of money for an appointment to a judgeship, sec, most concisely, al-Mawardi, A§al al-ka¶fi, ed. M. H. Sar±h, Baghdad 1391/1971, i, 151-2, and Tyan. While bribery on various governmental levels, internally as well as internationally, was discussed (see D. Subki, Fasl al-mak±l fi had±y±d al-um±mill±, Rosenthal, 137-8), the principal concern was with the judiciary, where the concept of bribery and its practical role were seen as most deeply embedded and unquestionably corruptive. In the case of judges, the acceptance of well-intentioned gifts even by relatives could constitute a problem calling for legal discussion. Gift-giving among ordinary individuals and, presumably, the practice of gift-giving not involving officialdom was, it seems, not considered to incur the danger of developing into forbidden ri§hwa.

Someone found guilty of bribery could, of course, be dismissed. Legally, punishment was left to the decision of the judge (a¶z±). The Hanafi Ibn Nudjaiym appears to have considered public exposure as the most effective deterrent.

The attention paid to ri§hwa throughout the literature proves, if proof is needed, that bribery was an ever-present problem. Its social effects were no doubt considerable but cannot be accurately, or even approximately, quantified. It appears to have become institutionalised at certain periods and locations. From Ottoman times, an increase in monographs on this subject is noticeable. Political thinkers were much concerned with it and even ended up in almost despairing of finding a remedy for it (see Wright). Westerners often felt convinced that bribery was a way of life in the East. It may, however, be doubted whether detailed research will provide valid clues to a specific role of bribery in mediaeval Muslim civilisation as a whole, if, indeed, there was anything specific to it.

(R. OSWALD)

RASIM [see AHMAD RASIM]

RASM (A., pl. rasim), the act of drawing, a drawing, is not always distinguished from painting; nor is it. Drawing was performed both as a preliminary to painting and to produce works to stand alone. It might be representative [see TARIKH] or decorative (historians of Islamic manuscripts often use the term illumination to decorative work). Nakkashi covers drawing and painting, whether representational or decorative; tarrahi is designing, in the context of pictures, the procedure of the underdrawing. In addition to the illustration of manuscripts, drawing is an important element in the decoration of ceramics and other forms of applied art; draughtsmen might exercise their skill in several fields. Writing in the ear-
ly 11th/17th century, Kādi Ahmad distinguishes two sorts of kālam, the one from a plant and the other from an animal (see Calligraphers and painters: a treatise by Qādi Ahmad, son of Mir-Munshi [circa A.H. 1015/A.D. 1606], tr. V. Minorsky, Washington, D.C. 1959, 50): these are the calligrapher's reed pen and the painter's brush, probably made with squirrel-hair. Ink [see MiDĀD] was prepared from soot, gallnut and alum, in a medium of gum arabic. Dilute ink (or a red pigment, perhaps minium) was used, usually with a brush, for the underdrawings of paintings. Either pen, brush or combinations were used for autonomous drawings; some drawings include small areas of ink wash, thin colour or details in gold. Training in the drawing of particular motifs might be carried out by pouncing, using a nylon skin (Persian šarba). A draughtsman often worked with a drawing-board supported by his knee. The line generally reveals the influence of the calligraphy of its period, in its curves and rhythms. Ruler and compass were used in the basic layout of schemes of illumination, but many complex curved lines appear to be drawn freehand. There is occasional use of stilts from the 15th century onwards. The illuminator (muďahāhib) worked, among other things, with brush-gold, gold-leaf rubbed into moist or dry glue and diluted.

Early period

Surviving examples of drawing from the early Islamic period are mostly in the service of wall- or floor-paintings in Umayyad palaces (Kusayr 'Amra [see architecture] or Kašr al-Khayr al-Gharib [q.v.]); there is an evident debt to late classical and Sāsānid art, and outlines are heavily marked (but have at times been exaggerated in excessive restoration). The earliest surviving book illustrations appear to be the highly formalised, coloured drawings of mosques and trees in an Umayyad Kūrān, discovered in San'a' (see H.C. Graf von Bothmer, Architekturbilder im Koran: eine Prachthandschrift der Umayyadzeit aus Yemen, in Pantheon, xlv [1987], 4-20). The earliest surviving drawings in which line is exploited for aesthetic effect are figures of the constellations in a manuscript of al-Sūrī's Suwar al-kawdkib al-thdbita (Bodleian Library, Oxford), whose text was copied in 400/1009-10, presumably in Baghdād. The wiry line describes the myriad stars by means of long narrow brush-golds with exuberant bracketing folds; Sāsānid and Chinese influences are evident. Approximately contemporary is a Fātimid drawing of a nude female musician (Israel Museum, Jerusalem). Over a red underdrawing, the line is slightly more variable, but volume is chiefly marked (see MURAKKA). In the late 9th/16th century, Basawan produces masterly drawings with adaptations of Euro-pean styles. One of the most famous is a drawing of an elephant (a Chinese form for the legendary Persian bird); car-touches have "cloud-collar" edges (fig. 2). Some studies draw on Buddhist mythology. In the 9th/15th century, chinoiserie is enriched by motifs from the Islamic tradition. In the late 15th century, the restless and ornamental lines of the 9th/16th century, and delicacy the later. Ink drawings, exercises and designs for albums are mostly in the late 15th century, and is sometimes further emphasised by a surrounding shadow at other times: it is lost. For drawing per se, a fruitful source of inspiration was found in European prints (and probably also illustrations in giraiil). In the late 10th/16th century, Basawan produced masterly drawings with adaptations of European style and European classical mythology. In the 11th/17th century, the Muğhal interest in reportage fostered portrait drawings—including those of elephants—and drawing from the life (see MUGHALS. 9). Some drawings, usually of more traditional subjects, were accompanied with half-colour (nim kālam). A class of jeu d'esprit, perhaps a development from metamorphic tendencies in Persian ornament with assistance from chinoiserie, is formed by drawings in which ridden elephants or camels are composé from subsidiary figures in the archimbolsèque manner.

Later Persian drawings

With a growing taste for Albums in Persia in the later 10th/16th century (see MURAKKA), the finished ink drawing gains in importance as an independent work. Subjects are often single figures of the upper classes, sitting or standing, by the 11th/17th century sometimes presented against a minimal landscape of hills, trees and cloud. Conversation pieces are also found, low-life or eccentric characters, and animals; in addition, there are a small number of studies of
RASM — AL-RASSI

earlier manuscript illustrations. Line of strongly calligraphic quality and varying width is used, both for the title and the head and body of the text. Volumes are largely implied by fold lines; hatching is not employed, but in some areas fold lines cluster together. Signatures, or attributions, and dates are not infrequent. Prominent draughtsmen of the 19th/16th and 11th/17th centuries are Şâdir, Rûzâ-i ʿAbâsî[q. v.] and the latter’s pupil Mü’mûn Mü’sûawîr. The second half of the 19th century sees the acceptance of new means of graphic expression, the pencil (with shading by hatching and smudging) and the lithograph. Influential in this was Abu ʿl Hasan Ghafârî[q. v.], Şânî al-Mulk, first director of art in the Dâr al-Funûn (Polytechnic) in Tehran, who died in 1866. Portraits in the new media have a cautious stillness, derived from photography; but drawing of a more traditional character may venture into caricature.

(Barbara Brend)

RASM. In ottoman Turkish usage [see resm]. AL-RASS, the name in Arabic geographical writing for the Araxes River (Perso-Turkish form Aras, Armenian Erask, Georgian Rakhabî, modern Aras). It rises in what is now eastern Turkey near Erzurum and flows generally in an eastwards direction for 1,072 km/670 miles into the Caspian Sea. Its middle reaches, from a point near Mount Ararat, today form the boundary between the former Azerbaijan SSR and Persia, with the lower stretch receiving the Kur River and through the Mukan [q.v. steps] and now is wholly Azerbaijani territory.

The early Arabic name al-Rass led the Muslim exegetes to connect it with the Aṣhab al-Rass [q.v.] of Kurâân, XXV, 38, L. 12, mentioned as one of the unbelieving peoples destroyed for their impiety. The eastern and middle stretches of the Araxes came under Arab control when the Muslim invaders pushed through Adharbayjân towards eastern Caucasus in the later 1st/7th century, but for many centuries these remained frontier regions, open to attacks from the Alans [see ossetes], the Khazars and the Rûs [q.v.] from the north and from the Aramean princes and the Byzantines from the west.

The river valley was a very fertile area and formed a corridor for commerce connecting the Black Sea with the Caspian and northwestern Persia, so that urban centres like Dvin [q.v.] or Dabîl, Anî [q.v.] and Djiulla flourished greatly. In the Saljûq period, migratory Turkmens passed along it heading for eastern Anatolia once the Byzantine defences there had collapsed after the battle of Malazgird [q.v.] in 646/1051. In later times, independent or semi-independent local khânates like those of Karabâgh, Nakhêlwân and Ordubâd [q.v.] formed buffers between the Safawids and Ottomans. By the early 19th century, Persia was compelled to relinquish control over the lands to the north of the Araxes and of its lower course, with the Treaty of Turkmançay of 1828 establishing the present boundary between Azerbaijan and Armenia on the one side and Persia on the other along the river’s middle stretch.

(see al-rass). AL-RASSI, AL-KÂSîM b. IBRAHîM b. ISMâ‘îl b. Ibrâhîm b. al-Hassân b. al-Hassân b. ʿAbî b. Abî Tâlib (169-246/785-860), Zyadî imâm and founder of the legal and theological school later prevalent among the Zaydis in the Yemen. He grew up in Medina where he was taught basic Zaydi religious doctrine in his family and Medinan hadîth, and perhaps Kurâân readings and Arabic language, by Abu Bakr ʿAbâd al-Hâmîb b. Abî Uways, a nephew of Malik b. Anas. Before 199/815 he came to Egypt, probably al-Fustât. It is doubtful whether he was, as reported by a late source, sent there by his brother Muhammad who at that time was recognised as imâm by the Kûfân Zayđis. Al-Kâsim, in any case, later expressed reservations about Muhammad’s theological views. In Egypt he studied the Jewish and Christian scriptures and Christian theological and philosophical treatises and engaged in debates with Muslim and non-Muslim scholars. His refutations of a Manichaean treatise ascribed to Ibn al-Muṣaffâ[q. v.] (ed. M. Guidi, La lotta tra l’islam e il manichesimo, Rome 1927) and of the Christians (ed. I. Di Matteo in RSÖ, ix [1921-3], 301 ff.) were written there. Evidently under the influence of Christian writings he adopted some of his characteristic views on the divine attributes and upholding human free will which deviated from the earlier Zaydi tradition. Under suspicion of seditious activity by the authorities, he left Egypt soon after 211/826, returning to Medina. He bought an estate at al-Rass near Dhu ʿl-Hulayfa and stayed there writing and teaching Zaydi visitors, especially from Kûfã and western Tabâristân, until his death. There is no sound evidence that he ever seriously attempted to lead a Zaydi revolt.

Al-Kâsim summed up his religious teaching in five principles (usûd) which only partly agreed with those of the Muʿtazîlî [q.v.].

1. In his sharply anti-anthropomorphist doctrine of the unity of God he stressed, in agreement with contemporary Christian theology, the total dissimilarity (ḍîdî) of God to all creation, while rejecting the corollary of an aspect of similarity upheld in the Christian doctrine. Under Christian theological influence he also placed the essential generosity (ḍîdâ) and goodness of God at the centre of his doctrine of divine attributes. He ignored the Muʿtazîlî distinction between divine attributes of essence and of act.

2. Concerning divine justice he strictly dissociated God from evil acts and affirmed human free will. He rejected, however, the Muʿtazîlî doctrine of compen- sation (iwaḍ) owed by God for undeserved pain inflicted by Him and held, in accordance with Christian doctrine, that the blessings of God to children and others completely outweighed any pains. He also distanced himself from the Muʿtazîlî interpretation of the predestinator terms kâdâ and kada as meaning merely commandment and judgment. Here he clearly tried to avoid expressing condemnation of the traditional Zaydi position affirming predestination.

3. On the basis of his concept of divine justice he upheld the tenet of the divine ‘promise and threat’
Chinoiserie cartouche, ca. 1410. Diez A Fol. 73, S. 54. Staatsbibliothek zu Berlin, Preussischer Kulturbesitz, Orientabteilung.
(wa'd wa-wa'fid) entailing the unconditional punishment of the unrepentant sinner in the hereafter. Unlike the Mu‘tazila, and in agreement with the early Zaydi view, he held that evil acts, in particular injustice, oppression and transgression (‘sudood) constituted forms of unbelief (kafr), though not of unbelief in God or polytheism (shirk). Thus it was licit to make war on Muslim oppressors and their supporters.

4. The fourth principle stressed the overriding authority of the Kur’an as a guide-line in all religious matters. Al-Kasim affirmed that the Kur’an as a whole is detailed, unambiguous and free of contradiction. He rejected İmamı assertions that parts of it had been lost or tampered with. Although his theological principles implied the created nature of the Kur’an, he refused to call it either created or uncreated, partly because of his veneration of the Holy Book and partly because the question was controversial among the contemporary Zaydis, the majority considering the Kur’an uncreated. Sharply reacting against the rising tide of Sunni traditionalism, he affirmed that the sunna of the Prophet consisted only of what was mentioned or intended in the Kur’an. He accused the Hashwiyya (Sunni traditionalists) of massive forgery of hadith and viewed them as the main supporters of the oppressors.

5. Al-Kasim defined the lands dominated by the illegitimate Muslim rulers as an “abode of injustice (dar al-salum)” where disposal over property, trade, and economic gain were not fully licit because of the prevalence of usurpation and extortion. Unable to resist the tyrants, the faithful were obliged to emigrate from there. The Kur‘anic duty of hijra, imposed initially on the faithful in order that they should dissociate from the polytheists, was permanent and now applied to their dissociation from the unjust and oppressors.

Al-Kasim’s view on the imamate agreed generally with the contemporary Zaydi position [see İmama]. He stressed, however, superior religious knowledge as a prime requirement for the rightful imamate and ignored the traditional Zaydi requirement of armed revolt. He considered ‘Allī the only legitimate successor of Muḥammad and rejected the caliphate of his three predecessors.

His legal doctrine was basically Medinan and lacked some characteristic Shī‘i elements like the formula ḥayya ‘alal ḥayri ‘l-isma‘īl in the adhān [q. v.] and rights of non-agnates in inheritance. He recognised, however, the validity of the consensus of the Family of the Prophet and relied on reports about ‘Allī transmitted to him by Abū Bakr b. Abī ‘Uwais from Ḥusayn b. ‘Abd Allāh b. Duma‘raya with a family ḫayri. He accepted the fifth ‘īma‘ of the İmāmī Shī‘a, Muḥammad al-Bākīr [q. v.], as a legal authority, but condemned the later İmāmī ‘īma‘s as wrongly exploiting of their pious followers. He is known, however, to have transmitted a book of traditions of Ḏijā‘far al-Sādīk [q. v.] from his father on the authority of Mūsā al-Kāṣīm [q. v.] (al-Nadjarī, Rīḍīl, ed. Mūsā al-Zanjānī, Ķumā 1407, 314).

Al-Kasim’s theological and legal teaching became basic in the Zaydi communities in western Ṭabaristan and the Yemen. After the death of ‘Allī, the ʿiṣra‘ waqūf al-Hasan and al-Rasūl, his own son Abū ‘Abd Allāh b. Al-Kasim became the first Zaydi Imam [q.v.], in agreement with the early Zaydi view, he held that the Kur’an was an uncreated. Sharply reacting against the rising tide of Sunni traditionalism, he affirmed that the sunna of the Prophet consisted only of what was mentioned or intended in the Kur’an. He accused the Hashwiyya (Sunni traditionalists) of massive forgery of hadith and viewed them as the main supporters of the oppressors.

**RASIDS**, a name sometimes used, most notably by Ibn Khaldūn (İb,'ar, iv, 111), of the Zaydi ‘īma‘ms of the Yemen [see Zaydiyya]. The term ‘Banu l-Rasīl’ is not commonly used by the Yemeni Zaydi historians and may only have gained some currency in Europe after Kay’s translation (Yaman, 184 ff.) of the chapter in Ibn Khaldūn’s ‘İb’ar. Perhaps also as a result of Kay’s translation, the term Rasid imāms was used soon after in Lane-Poole’s Dynasties, 102 and table, for the Zaydi imāms down to ca. 700/1300. The nība‘ is derived from a place in the Hijaz, Al-Ras, held by al-Kāsim b. Ḥarbīm Ṭabātaba b. Al-Kasim [q. v.], the grandfather of al-Hāḏī ila l-Ḥakk Yahyā b. al-Ḥusayn [q. v.], the first Zaydi imam in the Yemen.

**RASUL** (a., pl. rasuł, messenger, apostle.

1. In the religious sense. According to the Kur‘an, there is a close relation between the apostle and his people (umma [q. v.]). To each umma God sends only one apostle (sūra X, 48, XVI, 38 cf. XXXIII, 46, XL, 5). These statements are parallel to those which mention the witness whom God will take from each umma at the Day of Judgment (IV, 45, XXXVIII, 75 and cf. the descriptions of the rasīl who will cross the bridge to the other world at the head of his umma: al-Buḍghārī, Advān, bāb 129; Rīḍīl, bāb 52). Muhammad’s sense of the word is not yet seen and apostle (XXVIII, 46, XXXII, 2, XXXIV, 43). The other individuals to whom the Kur‘an accords the dignity of rasīl are Nūh, Lūt, İmā’īl, Mūsā, Șu‘a‘iby, Hūd, Șālīḥ and İsā.

The list of the prophets [see nabi in E’P and NUBUWWAJ] is a longer one; it contains, besides the majority of the apostles, Biblical or quasi-Biblical characters like İbrahim, İsāk, Ya‘qūb, Hūrūn, Dāwūd, Sulaymān, Ayyūb and Dhu l-Nūn. Muhammad in the Kur‘an is called sometimes rasūl, sometimes nabi. It seems that the prophets are those sent by God as preachers and nābi [q. v.] to their people, but are not the head of an umma like the rasīl. One is tempted to imagine a distinction between rasīl and nabi such as is found in Christian literature: the apostle is at the same time a prophet, but the prophet is not necessarily at the same time an apostle. But this is not absolutely certain, the evidence of the battle of the Kur‘anic utterances not being always clear.

As to the close relation which exists between the rasīl and his umma, it may be compared with the doctrine of the Acta apostolorum apocrypha, according to which the twelve apostles divided the whole world among them so that each one had the task of preaching the Gospel to a certain people.

As regards the term rasūl, account must be taken of the use of the word apostle in Christianity, as well as
of the use of the corresponding verb (ushahd) in connection with the prophets in the Old Testament (Exodus, iii, 13-14; iv, 13; Isaiah, vi, 8; Jeremiah, vi, 7). The term rasul Allāh is used in its Syriac form (ghalih d- allāhā) passim in the apocryphal Acts of St. Thomas.

Post Kur'ānic teaching has increased the number of apostles to 313 or 315 without giving the names of all of them (Ibn Sa'd, ed. Sachau, i/v, 10; Fikh Aḥkrār III, art. 22; Reland, De religione mohamm. sect., 2nd ed., Utrecht 1717, 40). The doctrine that they were free from mortal sin is part of the faith [see ṣ̣a̲mā'ah]. For the rest, the difference between rasul and nabi—apart from the considerable difference in point of numbers—seems in later literature to disappear in the general teaching about the prophets. Thus in the 'Akīda of Abū Ḥāfṣ 'Umar al-Nasafi, the two categories are treated together and the author makes no difference between rasul and nabi. Similarly, al-Idji deals with prophets in general, so far as can be seen, including them in the rasūls. If one difference can be pointed out, it is that the rasul, in contrast to the prophet, is a law-giver and provided with a book (commentary on the Fikh Aḥkrār II by Abu l-Muntahā, Ḥaydarābdād 1331, 4). According to the catechism published by Reland (40-4), the rasūl lawgivers were Adam, Nūh, Ibrāhīm, Mūsā, ʿĪsā and Muḥammad.

In the catechism of Abū Ḥāfṣ 'Umar al-Nasafi, the sending of the apostles (risāla) is called an act of wisdom on the part of God. Al-Taftāzānī’s commentary calls it waqījīh, not in the sense of an obligation resting upon God but as a consequence arising from his wisdom. This semi-rationalist point of view is not, however, shared by all the scholastics: according to e.g. al-Sanāṣīfī (cf. his Umm al-harākhīn), it is ḍīqī in itself but belief in it is obligatory.

2. In the secular sense. For its meaning of ‘diplomatic envoy, ambassador’, in later Arabic usage safīr, see ʿelīsī and ʿemīr.

**RASŪLĪDS, name of a Sunnī dynasty of the Yemen.** They took their name from a certain Muhammad b. Hārūn who had earned for himself the nickname Rasul (‘messenger’) under one of the ʿAbbāsīd caliphs in the 6th/12th century because of his trustworthiness and efficiency as a confidential envoy. The family tree can be constructed as given below (the element al-Malik prefixed to the rulers’ honorific titles is omitted here).

By the time the last sultan appeared on the scene, Rasulid history was marked by serious family squabbles over the leadership.

**Historical background.** The Rasulid historians and genealogists all claim an Arab pedigree for the family and call them Ghassānīds, a branch of al-Azīz [q.v.]. They further claim that a distant ancestor in the time of the caliph 'Umar b. al-Khaṭṭāb became a Christian and went to live in Byzantine territory. His children migrated into the lands of the Turkomans and settled among what is described as being the noblest of their tribes, Mangījk. It is probable that the Mangījk of the Oghuz Turks is meant. There they lost their Arab

Identity entirely and intermarried with the Turkomans and spoke their language. It was only about the time of Muhammad b. Hārūn himself that the family moved to Īrāk and from there to Syria and finally to Egypt. There they came to the notice of the ruling Ayyūbid dynasty [q.v.]. In all probability, however, the family was originally of Mengījk, Oghuz Turkish origin.

It was either in the train of Turānghā [q.v.], the first Ayyūbid sultan in the Yemen and the brother of Salāh al-Dīn [q.v.], when he conquered the country from Egypt in 567/1173, or in that of his successor and brother, Tughṭakīn, in 579/1183 that a number of Rasulīd amīrī first entered the country. Nūr al-Dīn ʿUmar b. ʿAlī was a chief-holder (mukta'ī) during the period of Ayyūbid control of the Yemen, and when the last Ayyūbid, al-Malik al-Mas'ūd, left the Yemen to travel north to take up the governorship of Damascus in 626/1228-9, he could find no one other than Nūr al-Dīn ʿUmar to act as his deputy there. Al-Mas'ūd died in Mecca on his way north. Although Nūr al-Dīn ʿUmar had been instructed to hold the Yemen for the Ayyūbid house until the arrival of a new Ayyūbid ruler, no other member of the family was ever to set foot in the Yemen again. Nūr al-Dīn ʿUmar showed outward allegiance to his Ayyūbid masters in Egypt until 632/1235, when he received an official diploma of authority from the ʿAbbāsīd caliph al-Mustansīr [q.v.]. This marks the real beginning of the independent Rasulid state in Southern Arabia.
The Ayyubids had made a thorough job of conquering and controlling Tihama \[^{\text{a}}\]. The Red Sea coastal plain, and the southern highlands as far north as San\[^{\text{a}}\] \[^{\text{b}}\]. This was the territory the Rasulids inherited. The Zaydi \[^{\text{im\'am}}\] continued to hold much of the land north of San\[^{\text{a}}\] \[^{\text{b}}\] and the city itself was frequently disputed between them and the Sunni Rasulids.

The period after 632/1235, during which the Rasulids held control of Tihama and southern Yemen, was without doubt the most brilliant in the mediæval history of the country. All the hard, pioneering work had been done by their predecessors, the Ayyubids, with their vast armies, including numerous cavalry. Their conquests had been thorough. In addition, their skilled administrators trained in Syria and Egypt had established an effective administration in the Yemen. The Rasulids were able to build on to these achievements. They, too, had efficient local civil servants and, what is more, the royal house was blessed with a plethora of gifted intellectuals who brought great scholarly effort to an already highly educated country (see below, 3. Monuments, and 5. Literature).

It is not possible to chronicle in detail the events of more than two centuries of Rasulid rule in the Yemen. Until his death in 647/1249, al-Mansur Umar's preoccupation with problems in San\[^{\text{a}}\] \[^{\text{b}}\] had brought about the neglect of Tihama and the south of the Yemen. The new sultan, his son, al-Mansur Yusuf, spent the early years of his rule reestablishing Rasulid control over these areas. It is surprising that he retained Asad al-Din Muhammad b. Hasan. He was to prove unreliable, if not actually treacherous, and this is what involved al-Mansur so much in the affairs of the city. Al-Mansur Umar was murdered in al-Djanad \[^{\text{q.v.}}\] near Ta'izz \[^{\text{q.v.}}\] in 647/1249 by a gang of mamluks, and al-Khazradji \[^{\text{q.v.}}\], the Rasulid court historian, has no hesitation in pointing the finger at Asad al-Din Muhammad.

Who was this HadjdjI Ratan? It appears from combining the extant narratives of over a dozen men who...
had visited him in his native place from various parts of the Muslim world, that, in the 7th/13th century, there lived a Bhaidna the Ratan by name, about whom "it was said that he was a long-lived individual, who had met the Prophet, was present with him at the Ditch (at the siege of Medina in A.H. 6), when the Prophet prayed for his long life, that he was present when Fatima was conducted as a bride to 'Ali, may God be pleased with both of them, and who transmitted hadith" (Tadhkira al-Safadl, who, in his turn, is quoting the al-Rataniyydt Tadhkira al-^arus, loc. cit.).

His teeth were small like a hook, that he said he had never been married, and the length of the space occupied by him, when sitting, was three cubits (al-Djanadl, quoted in Isdba, i, 1099). Another merchant, from the same land, found him laid like the young one of a bird, in a large basket, stuffed with cotton, which was hanging from a branch of a huge tree outside the village, and was worked by means of a pulley. He spoke in Persian, his voice being like the humming of a bee. He referred to all the inhabitants of the big village as his children or grand-children (Isdba, i, 1094; Lisdn al-mizdn, ii, 452, quoting the Tadhkira of al-Safadl, who, in his turn, is quoting the Tadhkira of al-Wadafi (d. 726/1326), see Brockelmann, ii, 10, S II; HadjdjI Khalifa, ii, 264). Contrary to the first narrative, which tells us that he was never married, the second makes him say that he had a large progeny, and, in fact, Ibn Hadjar includes two of Ratan's sons, Mahmu'd and 'Abd Allah, among the transmitters of hadith from him.

Some of these narratives represent him as having been first converted to Christianity and then to Islam (Isdba, i, 1097-8).

The date of his death is given variously, as A.H. 596, 608, 612, 632 (Isdba, 700), and even 709 (AlT-yi Lala al-^urus, A *in-i Akbari, Fawdat al-wafaydt). It is generally agreed that the later date is correct, and that the name of al-Ratan is found in the manuscripts of Leiden, Berlin and Lucknow, and shows "traces of both Shi'ite (or perhaps better 'Alide) and Sufic tendencies" (Journal of the Panjah Historical Society, i, 112). Al-Firdawsii had heard them from the companions of Ratan's family (Kamuz, loc. cit.).

The claims of Ratan widely attracted the attention of Muslims in the 7th/13th century, and caused a lot of differences of opinion in Muslim circles in subsequent centuries, as would be indicated by the following list of some outstanding personalities, who expressed themselves for or against his main claim, viz. of being a long-lived Companion of the Prophet.

For: 1. Shaykh Ruhldi al-Din 'Ali-yi Lal b. Ghaznavi (d. 1242/1244), who associated with Ratan in India and received from him a comb, with the transmission of which the Prophet had entrusted Ratan; 2. Abu '1-Fath Musa b. Mudjalli al-Sufi, and al-Dawla al-Simnani (d. 736/1336), whom the above-mentioned comb ultimately reached, along with a khanka received by 'Ali-yi Lal from Ratan. Rukn al-Din attested this in writing (see Nafahdt al-uns, Calcutta 1858, 50, with notes of Lardi on the passage); 3. Abd al-Ghaffar b. Nuh b. Kusi (d. 780/1379), the author of the Kitab al-Wahid fi salik al-ahli al-tauhid, for which see HadjdjI Khalifa, ii, 452; Brockelmann, ii, 142 (see Isdba, i, 1096); 4. Abu '1-Dja'fari (d. 732/1332), the author of the Ta'rikh al-Vaman; cf. Brockelmann, ii, 234 (in Isdba, i, 1096-7); 5. Salah al-Din al-Safadl (d. 764/1363); see above (previous col.); 6. Shams al-Din Muhammad b. Ibrahim al-Dja'zari (d. 739/1338-9), the author of HaawidjI al-zaman wa-anba'hi for which see Sarkisi, Mu'jam al-mabudi, 696, is also apparently to be added to this list; see Isdba, i, 1092, 7. Khadda Muhammad Parsa (d. 822/1419), see AlT-yi Lala al-Ashiqi, ii, 207 (= tr. Jarrett, iii, 360); 8. Nur Allh Shug'li (about 1010), who maintains that the Sunni opposition to Ratan's claim was really due to (a) Ratan's being a Shi'i, most of whose hadith was in praise of the Ahi al-Bayt and their partisans, and to (b) the jealousy of the contemporary Sunni 'ulam^a, who were thrown into shade by the 'ulam^a, and the pangenesis (ri'afa) of 'Ali (see Isdba, i, 1091; cf. Lisdn al-mizdn, ii, 452); 2. 'Alam al-Din al-Birzali al-Shafi'i (d. 795/1393) (see Fawdat al-usfarayd, i, 163); 3. Burhan al-Din Ibn Djam'a (d. 790/1388, see Brockelmann, ii, 136) (quoted in Isdba, i, 1101); 4. Al-Djanadl (d. 790/1388), the author of the Kitab al-Dawla al-Simnani, who had visited Bhatinda (in the time of Shihab al-Din Muhammad Churl's invasion, when he betrayed the fortress to the Muslims). He was converted to Islam and performed the hajdt. According to a fuller version, still current in Bhatinda, he was a Cawh^an RajaP, RatanP by name. He knew by his knowledge of astrology that the Prophet would be born in Arabia and spread Islam. In order to be able to see him, he practiced restraining his breath. After the miracle of 'ishak al-kamar (splitting the moon into two), which he witnessed, Ratan set out for Mecca, was converted to Islam, and lived with the Prophet for thirty years. Then he returned to India and stayed where his shrine is now, continuing the practice of restraining his breath. Later, when Shihab al-Din Ghur^i proceeded to Bhatinda to fight Prithi Rajl, the sultan visited the HadjdjI, the saint per-
formed a miracle and became instrumental in the con-
quest of the fort, shortly after which event he died, at
the age of 700 years (Journal of the Panjab Historical
Society, xvii, 168-70; art. 'ABD ALLAH b. RAWAHA').

Four members of a primary branch of the Banú
Rawāḥa, linked by direct line of descent, are known to
us:

1. Abu Muhammad 'Abd Allah b. al-Husayn,
   'Abil hamāt', died in 561/1166 (or 567/1175), aged
   73. Official preacher of Hamāt and poet, he composed,
   while passing through Baghdad in the course of the
   Pilgrimage, new couplets in praise of the
   caliph al-Muqtadī (SB ibn Jāhiz, Mir'āt al-zamān,
   iv, 1, 263; Wāfi, xvii, 142-4).

2. His son, Abū Ali al-Husayn (513-85/1121-89),
   fakih and poet; his surviving works include an
   ode honouring Salāḥ al-Dīn and a few fragments of erotic
   poetry (al-'Imād al-Iṣfahānī, Khatāī al-kāy (Ṣāmī),
   i, 484, and Yākūt, Muṣ'yam al-udā'abā', x, 4-66). His life
   was eventful; taken prisoner, he lived in Sicily, then
   on his release he spent some time in Alexandria,
   returned to Syria and died a martyr's death at the
   battle of Mardj 'Amāk (Wāfi, xii, 413-4).

3. The son of the above-named, 'Izz al-Dīn Abū l-
Kāsim 'Abd Allah, born in Sicily in 560/1165, during
   the captivity of his father; in Alexandria, he had
   numerous audiences with the eminent traditionalist al-
   Sīlāfī, bewildered (575/1175), but, after his father's
   death, became a fakih and poet, he lived in
   Aleppo and in Hamāt, where he was buried in
   Qumrādī II 646/July-August 1248 (al-Dhahābi,
   Tāriskh, ms. Bodl. Land 305, fol. 212; Wāfi, xvii,
   144-5).

4. His grandson, Nūr al-Dīn Ahmad b. 'Abd al-
   Rahmān b. 'Abd Allah, known as 'al-khatīb',
   held the post of kātib al-masāh at Tripoli and in the occupied
   cities (jitāb). He died in Hamāt in Shādān
   712/December 1312 (Ibn al-Sūkāf, Tā'īl al-wusāfāt,
   44 in the Arabic text) and 148; Wāfi, vi, 56-7).

From a collateral branch of the Banū Rawāḥa,
another known individual is Zakī al-Dīn ibn Rāba al-
Muhammad b. 'Abd al-Wāhidī b. Rawāḥa, apparent-
ly a first cousin to al-Husayn (cf. no. 2, above), who
lived in Damascus and died there in Radjah 623/June-
July 1226. A wealthy merchant, poet and sworn
sycophant (muhaddith), enjoying much respect in
Damascus, he founded two madrasas for the teaching
of Shafi'i fakih, one at Aleppo, the other in Damascus,
the being the Rawāyiyya, founded in 622/1225. No
longer in existence, it was situated in the interior of
the Bāb al-Faratāds, to the north of the Great Mosque.
Its founder lived there until his death in an apartment
in the east of the madrasa, opposite the opulent library
which he had also founded. He had richly endowed
this madrasa, thus enabling students of humble means

Bibliography:

1. Horovitz's article on Bāba Ratan, the Saint of Bhatinda, in JPHS, ii, 97 ff., gives
   the fullest information, with references, to which may be added: Ibn Ḥadjar, Lisān al-muẓān,
   Hadīrābād 1330, ii, 450 ff. (mostly repeats his own article in Ṣafā); Zakbī, Taqī al-'arū', in, 112;
   H. A. Rose, A glossary of the tribe and castes of the Pandjab and N.W.F. Province, i, 175, 179, 181.
   Horovitz reconciled these divergent versions in a
   striking theory: "It may be that Ratan was originally
   a Yogi, who as such was believed to have been alive
   hundreds of years and who on becoming acquainted
   with the Muhammadan aspects of longevity, used
   them to strengthen his position in the eyes of his
   Muhammadan followers... The saint had two faces: he
   showed that of a long-lived Yogi to the Hindus,
   who were thus enabled to the Prophet to the Muhammadans"
   (JPHS, ii, 113-14).

RAWANDI, Muḥammad b. ʿAlī, Persian historian who flourished at the end of the Saldjuk period. Details of his life are known only from information in his sole surviving work, the Rāḥat al-salṭūn wa-diyāt al-sūrūr, a dynastic history of the Great Saldjuk [q.v.]. Rawandi belonged to a scholarly family from Rawand, near Kāshān. He studied Ḥanafī fīkh in Hamadhān from 570/1174 to 580/1184 and became a skilled calligrapher and gilder. When sultan Toghṭrī III b. Arslān wanted a beautiful Kurān, Rawandi, as a member of the team of craftsmen, gained favour at court. After Toghṭrī’s imprisonment in 586/1190, Rawandi found other patrons and one of them, ʿAbd al-ʿAzīz b. al-Kāšānī, encouraged him to begin writing the Rāḥat al-salṭūn in 599/1202.

Rawandi would have doubtless liked to dedicate his work to a Saldjuk prince of Persia. After the dynasty’s demise in Persia in 590/1194 and the advent of the Khwārzmshāhī, whose rule Rawandi deplores (30–2), he sought patronage from Konya, wanting his book to be in the “name of a Saldjuk sultan” (62). Indeed, he went there personally to present his work (64). Originally, he had dedicated it to sultan Sulaymān II (ed. 600/1203), but this project also lapsed, and he turned his attention towards Rum is a clear indication that early 7th/13th century Persian scholars viewed the Anatolian Saldjuk dynasty as the new champions of Sunni Islam, and Konya as the centre for the continuation of Persian scholarly traditions.

For its account of Saldjuk history until Toghṭrī III, the Rāḥat al-salṭūn is one of several Persian historical sources dependent on the Saldjuk-nama of Nīgāhpūrī (d. ca. 582/1182 [q.v.]). Rawandi’s history is, however, an invaluable first-hand source for Toghṭrī’s reign. The work is deeply permeated with the Fürstenspiegel ethos. Far from being a detailed history, it is a didactic essay on exemplary kingship in which a skeletal narrative framework is fleshed out with illustrative anecdotes, Arabic aphorisms (with accompanying Persian translations) and poetical quotations (notably from Niḍāmī and the Zaḥān-nama, as well as lesser-known poets, including Rawandi himself). The last section of the book discusses courtly accomplishments and is drawn from Ḥanafī legal works (418). Generally, Rawandi’s approach resembles that of Muḥammad Malātawī in his Barīd al-salṭāt, dedicated to Kāyḫūsraw’s successor in Konya, Kāyḵwās (cf. Fouchécour, 430).

Rawandi’s history was often used by later Persian historians and was included in the Persian empire of the 4th century B.C. The Muslim invaders experienced much trouble from the turbulent Gakkhar tribes (Taxila) which was an important seat of learning in the town lie the ruins of the ancient city of Takṣhāqilī [q.v.].

The district formed part of Ganḍhāra and was included in the Persian empire of the 4th century B.C. The Muslim invaders experienced much trouble from the turbulent Gakkhar tribes (Taxila) which was an important seat of learning in the town lie the ruins of the ancient city of Takṣhāqilī [q.v.].
historians (especially Yazdi) and was translated into Turkish in the reign of Sultan Murad II (cf. Barthold, 116, Storey, i, 257). Rawandi also wrote a polemical work against the Barmazis and others (repr. 1973), another on calligraphy (Rahal al-judur, 394, 445), which have apparently not survived.

CAROLE HILLENBRAND

AL-RAWANDIYYA, a term referring to an extremist Shi'i group which originated within the 9th century movement in Khorasan. The term has subsequently expanded to include at times the 'Abbāsid ghira, but unless otherwise stated it was used in this article in its original sense. It is said in some sources to derive from al-Kāsim b. Rāwand or from Abu ʿAbbās al-Rawandi, both of whom are otherwise unknown; other sources more plausibly derive it from ʿAbbās Allāh al-Rawandi, who appears in a list of propagandists (djażī) of Muhammad b. ʿAbbās. ʿAbbās Allāh b. ʿAbbās al-Rawandiyya (q.v.) see Akhbar al-daula al-abbāsiyya, ed. ʿAbbās al-ʿAzīz al-Dūrī and ʿAbbās al-Djabbār al-Muttaḥalī, Beirut 1971, 222). Both ʿAbbās Allāh's son Harb (d. 1477/764) and his grandson ʿAbd al-Habib, was senior officers in the 'Abbāsid army in Irāk during al-Manṣūr's reign. Harb who, like his son, is said to have been a member of the Rawandiyya (q.v. kaysānīyya), participated in the crushing of the Rizāmīyya (q.v.) before being killed in Armenia by Turkish rebels (al-Taflar, iii, 296, 353); he was also given an estate in an area north of the Round City of Baghdad which became known after him as al-Harbiyya (cf. ibid., iii, 328).

Initially, the Rawandiyya appear to have argued (in line with the bulk of the Ḥāghimīyya) that the imamate had passed from ʿAllī via Muhammad b. al-Hanafīya to the latter's son Abū Hāšim ʿAbbās Allāh and then, in accordance with Abū Hāšim's testament (waṣiyya), to Muhammad b. ʿAbbās Allāh. ʿAbbās Allāh b. ʿAbbās (al-Nawbakhtī, Fīrak, 29-30; Saʿd b. ʿAbbās Allāh, Maklāt, 39-40; al-Baghdādī, Fīrāk, 40); they are therefore occasionally counted among the Kaysānīyya. Al-Nawbakhtī's source (evidently Hīghām b. al-Hakam, al-nāfiʿ, ed. Ch. Schefer, Nouvelles mélanges orientaux, Paris 1890, 222) refers to the group as ghilāt al-rāwandiyya, which the sources espoused included delegation of the imams, belief in their omniscience, and dispensation from the religious laws for those who know the imams; he notes that their strength increased when most of the followers of ʿAbbās Allāh b. Muḥāwīya (q.v.) joined their ranks. Some further details are provided by al-Maḍāʿīnī's (q.v.) father (as cited in al-Taflar, iii, 418) when he describes the first recorded Rawandi uprising, crushed by ʿAbbās Allāh al-Kāsī (q.v.) during his governorship of ʿKhurāsān (116/1973-4). A leper called Abū Al-Bakāʾ (ʿpihbađ'), who aspired to lead the Rawandiyya at the time, upheld the doctrine of the periodic incarnation of the deity on earth by claiming that the spirit of Jesus had passed on to ʿAllī and then, successively, to each of the imāms up to ʿAbbās b. ʿAlī's son ʿIbrāhīm (see ʿIbrahīm b. Muḥammad); he and his followers also sanctioned communal access to women.

Most sources agree that the Rawandi doctrine of the imāmate underwent a significant shift after the 'Abbāsid rise to power: the imamate was no longer believed to have started with 'Alī rather than with al-ʿAbbās, from whom it passed to his descendants. The Rawandiyya based their belief in al-ʿAbbās's succession to the Prophet on the ancient inheritance laws whereby the paternal uncle excludes daughters, cousins and nephews; and they interpreted accordingly the Qur'ānic verse "Those related by blood are nearer to one another in the Book of God" (Q VIII, 77, XXXIII, 6). There are indications that this doctrine had its advocates in the 'Abbāsid court some time before its emergence as an official tenet under al-Manṣūr and especially under al-Mahdī (cf. M. Sharon, Black banners from the East, Jerusalem and Leiden 1983, 82-99); it remains to be established whether it was first elaborated among the Rawandiyya and then adopted as an official 'Abbāsid line or whether, in contrast, the Rawandiyya mirrored the changing court ideology.

In a report from an unnamed source, Ibn al-Djawzī (vii, 29) describes the Rawandiyya as a group (aṣāfira) of Bātinīs (i.e. Ismāʿīlīs) known as Sabīʿīyya, who believed that the cycle (daur) of the imams which began with al-ʿAbbās ended with the seventh, al-Manṣūr. The reference to the Rawandiyya as Bātinīs must be a back-projection; at the same time, if indeed they insisted on a line of seven imāms, this would make them the earliest "Seventh" Shi'i group, predating the Wāḥidiyya who emerged after the death of Mūsā al-Kāzīm (q.v.).

The sources present a confused and sometimes contradictory picture of the relationship between the Rawandiyya and other groups in the early 'Abbāsid period. Some (such as Ps.-Nāṣrī) identify them with the Hurayriyya (q.v.), while ʿAbū Ḥātim al-Rāzī rather than with al-ʿAbbāsid (q.v.) al-Mansur. The reference to the Rawandiyya as Bātinīs must be a back-projection; at the same time, if indeed they insisted on a line of seven imāms, this would make them the earliest "Seventh" Shi'i group, predating the Wāḥidiyya who emerged after the death of Mūsā al-Kāzīm (q.v.).

The Rawandiyya also believed in the divinity of al-Manṣūr and the prophethood of ʿAbū Muslim; the Rizāmīyya in turn, held to the earlier line of imāms via ʿAbū Hāšim, believing in addition that ʿAbū Muslim had not died. In ʿAbū Hāšim al-Rāzī's K. al-Ẓīna these three groups are described as comprising the 'Abbāsiyya (i.e. the 'Abbāsid ghira). In contrast, al-Nawbakhtī's source identifies the Rawandiyya with the 'Abbāsid ghira as a whole and says that it consisted of three subgroups: the 'Aбу Muslimis, for whom ʿAbū Muslim was the living imām; the Rizāmīyya, in addition to following the line of imāms via ʿAbū Hāšim, secretly believed in ʿAbū Muslim (presumably while acknowledging that he had died); and the Hurayriyya, described as "the pure 'Abbāsids" (al-abbāsiyya al-khullā), who upheld the imamate from al-ʿAbbās (q.v.).

There are scattered references to disturbances involving Rawandīs in the first 'Abbāsid decade. In St. 152/752-3 a group from Tālakan, headed by ʿAbū Isbāk (perhaps Khālid b. ʿUṯmān, an 'Abbāsid dāvī of
who had been commander of Abū Muslim’s guard), attacked and killed one of Abu Muslim’s officers before they themselves were slain (al-Tabari, iii, 82). After this incident they no longer heard of it in Khurāsān, but they reappeared a few years later in the West. Here the most widely reported event is the riot sometimes referred to as yaum al-rīwāndiyā. Its date is variously given as 136 or 137 (al-Tabari, citing an anonymous source), 139 or the beginning of 140 (al-Balādūrī), 140 (Ibn al-‘Ibri), 141 (al-Tabarī and others) and 142 (al-Dinawarī), and it is said to have taken place in al-Hāshimiyya [p. 391] (or in Basra, according to al-Dinawarī, whose version also differs in other details). The accounts in al-Balādūrī (iii, 235-6) and al-Tabarī (iii, 129-33) speak of 600 Rawandis who took part, all of whom were Khurāsānī followers of Abū Muslim who believed that Adam’s soul resided in Īʿṭāmān b. Nahīk (one of al-‘Abbāsī’s security commanders who was killed in the ensuing combat) and that al-Haytham b. Muʿawya (like Īʿṭāmān, an “Abbāsid dāʿī”) was the angel Gabriel. They began to circumambulate the al-Mansūr’s palace, hailing him as their God (rabīʾ) who provided them with food and drink. At this point al-‘Abbās appears to have realized that he was not in danger and the people were not to be trusted; disregarding his order, they stormed the palace, burned it, and took the prince and his colleagues. When they headed back towards the palace the al-Mansūr left on foot and was provided with a saddled horse outside. The Ṣlijahāni leader Maʿānb. Zāʾida [p. 391] (an erstwhile Umayyad general who had been in hiding from the “Abbāsids, came to the rescue and, in a display of courage which won al-‘Abbās’s admiration, managed to beat off the attackers, virtually all of whom were killed. According to other reports, Abu Ṣayf Mālik b. al-Haytham (who had been among the original nakābāʾ) personally guarded the palace gates, while the military commander Khāzīm b. Khuzayma, together with the local populace, was instrumental in overcoming the Rawandis. One of the attackers, Rizān (founder of the Rizāmīya?), was granted amnesty after he sought refuge with the caliph’s son Līfīza. The reason given in the sources for the attack on the palace was presumably a reaction to the arrest of their leaders; it would seem that they were also bitterly disappointed with the caliph’s unwillingness to come up to their expectations of him. That al-Mansūr was in serious danger is confirmed by reports that he was almost killed by the rioters (e.g. Ibn al-ʿAṭīr, v, 502: kādū ʿakalatulānahu). The incident dramatically pointed out the caliph’s vulnerability and contributed to his decision to look for a capital elsewhere, a decision which eventually led to the beginning of work on Baghdad. Two reports concerning the riot are especially noteworthy. The first (al-Tabarī, iii, 418-9) describes some Rawandis as jumping to their deaths from the green dome of the palace (referred to as al-Khādāra, which was also the name of the green dome of the Baghdad palace; cf. J. Lassner, The topography of Baghdad in the early Middle Ages, Detroit 1970, 135-6). This report is not supported by any account concerning another group of Rawandis. These men revolted in Aleppo and Harrān in 141/758-9; believing themselves to be in the same rank (manzila) as angels, they mounted a hill in Aleppo, put on silk clothes, jumped off and perished (Ibn al-ʿAdīm, Zubdāt al-ḥalāb min taʾrīkh Ḥalab, ed. Sāmil al-Dahhān, i, Damascus 1370/1951, 59-60). In the second report (al-Balādūrī, iii, 235) the Rawandīya state that, if al-ʿAbbās wished, he could make the mountains move, and if he were to order them to turn their backs to Mecca during prayer they would comply. This formulation also appears in the ed. M. al-Muṣṭaṭfī [p. 391] Risāla fi ʿl-tahāba which he composed for al-Mansūr (probably between 136/754 and 142/759), when he describes the views of some over-zealous Khurāsānī troops (ed. Muḥammad Kurd ʿAlī, Cairo 1946, 120; cf. S.D. Goitein, A turning point in the history of the Muslim state, in his Studies in Islamic history and institutions, Leiden 1966, 156). It is thus possible that the troops against whom he warned the caliph were the Rawandīya. Hardly anything is heard of this group after the death of al-Mansūr, though some of them were involved in the struggle over his succession. The more extreme elements merged into other sects known collectively as Khurramiyā [p. 391]. The number of those who upheld al-ʿAbbās’s designation as Muḥammad’s successor appears also to have diminished sharply. Marwān b. Abī ʿl-Djanzī [p. 391] still wrote for al-Mutawakkil a poem about the hereditary rights of the “Abbāsids (al-Tabarī, iii, 1456-6, cited in Goldziher, Muḥammad studies, ed. S.M. Stern, ii, London 1971, 100-1); yet by the time of al-Shaṭir al-Muṭṭāraḍ (d. 436/1044) the last adherents of this doctrine had apparently disappeared (cf. al-Ṣafī fi l-imāma, Tehran 1301/1884, 99).
In the early 19th century, one of these lords, the half-blind Muhammad Khor ('the blind'), dominated the local tribes and established his power from 1826 onwards as far as the Little Zab and Irbil and then in 1833 as far as 'Amadiyya and Zakho, and minted coins of his own as al-Amir al-Manṣūr Muḥammad Bāb; but after his fall in 1836 and deportation by the Ottomans, Rawandiz shrank once more to a place of minor significance only. During the First World War the Rawandiz road was used in the winter of 1914-15 by Khalīl Bey's troops advancing on Urmiya (contrary to H. Geiger, Die Türken um ihre Gegner, Frankfurt a.M. 1915) and later in July 1916 by the Russian Rybalchenko. After the armistice and during the period till December 1925, when the League of Nations made its decision on the wliāyat of Mawsil, Rawandiz was the focus for attempts at some form of autonomy or independence under the Kurdish chief Shaykh Maḥmūd Barzanji, who in 1922 proclaimed himself in the way of Sulaymāniyya 'Pādispah of Kurdistān', and also for Turkish attempts at this time to retain the region within Turkey, with a Turkish kārim-makām, 'Ali Şeşef, appointed to Rawandiz in 1922. The town was, however, recovered for the new Kingdom of 'Irāk government in April 1923 by a combined operation of the 'Irāki army and local Assyrian Christian levies, and an administration installed there under Sayyid 'Abād of Neri as kārim-makām. In 1925 a League of Nations commission awarded the wliāyat of Mawsil, including Rawandiz, to 'Irāk.

Language. Kurdish is the language spoken in this region, except by the town dwellers (Irbil, Alūn Köprü, Kırık, etc.) of Turkish origin. According to O. Mann (Die Mundart der Mükri Kurden, ii, 205), the dialect of Rawandiz is very like that of Şamāndar, but E.B. Soane did not share this opinion (Kurdish grammar, London 1913). F. Jardine's manual, Bahdān Kurmānji, a grammar of the Kurmānji of the Kurds of Mosul division and surrounding districts of Kurdistān, London 1922, is more particularly devoted to this dialect.

RAWDA (Ar., literally 'garden'; an island in the Nile in the southern part of Cairo about 3 km/2 miles long and with an average width of 500 m/1,640 ft. A narrow canal (al-Khalīlī or Sāyālāt al-Rawda) divides the eastern bank of the river from the island. Before the regulation of the river in the 19th century, the canal often dried out. From the time of the establishment of Arab rule until the early 19th century, the island was mostly connected by pantoon bridges with both banks of the river (the Fustās as well as the Dīzza shore). The island has been the place of a Nilometer (Mīšqāt [q.v.]) since the early 2nd/8th century. Concerning the historical topography of Rawda, see Mīsr. C. 2. ii. As long as the annual rise of the Nile was celebrated, the island was of crucial importance in the social life of Cairo. Each year at this time, until the high crest was reached (usqād al-Nil), i.e. for about
two months, people gathered in tents and pavilions on
the island celebrating, while expecting the opening ...
ning down of their tents (see Ibn Iyâs, Bâdi'2 al-zuhûr, 
960-92, who reports this fact for later mediaeval times). In 
medieval times, the island was used, for strategic reasons, for 
fortifications and the naval arsenal [see mir, loc. cit.]. Two 
rulers, Ahmad b. Tûlûn (254-70/868-84 [g. v.]) and the 
Ayyûbîd al-Malik al-Sâlih (656-47/1259-90) thought it 
would be possible to build a fortress on this island; neither of 
these, however, lasted for long. Ibn Tûlûn's fortress was 
built as a place of retreat when he was threatened by 
the capral power, but it was never used and soon decayed.
Al-Malik al-Sâlih was equally led to take 
avantage of the island. In order to secure his position he 
had begun to import Turkish Mamlûks, and it was more 
convenient to have them reside outside al-
Kâhîra. He also may have intended securing a retreat 
for himself in case of an attack by the Crusaders, but 
seems more plausible to assume that he wanted to 
be able to deploy instantaneously his warships anchoring 
there in case of a Frankish attack on Egypt's 
Mediterranean ports. After al-Sâlih's death, the vast 
fortress—half of the island was encircled by walls— 
was abandoned. The Mamlûk ruler al-Zâhir Baybars 
(650-76/1260-77 [g. v.]) rebuilt the ka'âr, apparently he 
intended to use his Rawda citadel as his stronghold, 
but the advantages were not sufficient to replace in the 
long run the Ka'at al-Djâbal (see EI3 art. Rawda, 
where it is falsely stated that the Bahri line of the 
Mamlûks reigned there). Thereafter, the materials of 
the Ka'at al-Rawda were re-used by succeeding 
sultans for their own buildings.

From the 4th/10th century, Rawda was a place of 
recreation, due to its clement climatic conditions. Gardens and palaces, and a residential area were 
built. Muhammad b. Tughbî l-lkhshîd (323-1195/ 
4-6 [g. v.]) built a garden called al-Mukhûr, and the 
Fâtimid vizier al-Afâlîl b. Badr al-Djâmîl (d. 
515/1121 [g. v.]) laid out the garden, rawda, 
whence the island. In the time before this and 
and afterwards, the island was called Djizirat Miṣr or 
just an island. Leo Africanus was the first to record 
the existence of the Rawda island (Le Voyage en 
Egypte de Leo Africanus, Cairo 1972, 231). Half-a-
century later, the Venetian traveller Bâchurî, in the 
14th century, describes the Rawda island as a place 
with rows of buildings encircled by high buildings with 
people everywhere (Le Voyage en Egypte de Balthasar de Monconys, 
Cairo 1956, 511-12). The Sultan al-Ghaurî is said to 
have ordered the building of a new Friday mosque near 
the Nile mouth in 917/1511 (Ibn Iyâs, iv. 175).

Several statements from travellers in the 16th and 
17th centuries suggest that Rawda was used as a place for 
recreation by the local inhabitants and as a residential 
area, contrary to the assumption, expressed in EI3, 
art. Rawda, that the island was abandoned in Ot-
toman times up to the early 19th century. In 1598 
Harant mentioned about 100 houses (Le Voyage en 
Egypte de Christophe Harant, Cairo 1972, 231).

This is corroborated by Ewîyâl Celebî (1091/1680) — 
whose statements have to be taken critically—when 
he praises the island, mentioning numerous streets and 
buildings (Sevihat-nîme, Istanbul 1938, x, 321-2, 325-
7). 'Abd al-âlîn al-Nâbulusî spent some time on the 
island, and in a letter to his brother in 1680, written 
when he was staying at Djâmil (see EI3 and al-
madâjûs, Cairo 1966, 236-7). In 1806 al-Abbâsî found Rawda abandoned, having been 
formerly a little paradise; he praises the French for 
having formed the walk with rows of trees which 
traversed the island from south to north (Travels, Lon-
don 1816, repr. 1970, ii. 22-3). In later Ottoman 
times, Rawda was likewise one of the favourite fields 
of military practice for the Mamlûks; in the fights 
between the rival Mamlûk groups, one of the factions 
used to resort to the island.

In the 19th century many gardens and palaces, and 
also mosques (sometimes used as funerary mosques), 
were built. A large garden (no longer extant), which is 
described as a kind of botanical and zoological 
garden, was founded in the northern part of the island 
al-Khitat al-ajadida, xvii, 11). In recent times, the 
refusals of tourists on the island have decreased.

It should be mentioned that poetry on Rawda is 
abundant, often as a part of anthologies on gardens 
ravdiyyât); see e.g. Abu Dâja'far al-Idrîsî, Anwar uluqiyûs al-ajadîm; al-Suyûtî, Kaukab al-Rawda 
(Brockelmann, II, 202); Ibn Dûmîkî op. cit., ch. on 
Rawda; and 'Abd al-âlîn al-Nâbulusî, op. cit.

RAWDA — RAWH B. HATTIM

Cairo 1386/1968; Makrlzl, Kitdb al-Mawa'iz; CA1I

Mubarak Pasha, al-Khitat al-djadida, ... of troubles had to arise in order to convince the caliphs to relax their control, and this was, in 184/800,

of Imam Husayn, the grandson of the prophet ("The literary masterpiece called Garden of the Martyrs"). This book, written in Persian but under an Arabic title, was composed by Huseyn b. Ziyad, which can be held anywhere from black tents set up for the occasion in the public square of a village or town, to a mosque or a courtyard of a private house, or even to special edifices built for the Shi'a commemorative rituals which are collectively known as ma'dhaba al-asa'. These buildings have been constructed in Persia from the end of the 18th century onwards.

Rawda-khânân belongs to the category of the stationary Shi'i commemorative rituals which are collectively known as magâsit al-asa'. It starts with the chants invoking the prophet Muhammad and other sâlih, and is followed by a rawda-khânân (a master story-teller, who recites and sings the story of Husayn and his family and followers at the bloody battle of Karbalâ while sitting on a minbar above the assembled crowd. His rapid chanting in a high-pitched voice alternates with sobbing and crying to arouse the audience to an intense state of emotion. The audience responds with weeping, chest beating, and body flapping, trying to replicate the reality of the tragedy through a combination of hours to an entire day, well into the night as a succession of rawda-khânân are being used. The rawda-khânân ends with the congregational singing of nawha [see NIYAH] (dirges).

The art of rawda-khânân depends on the ability of the rawda-khânân to manipulate the assembled crowd, using his (or her, if the gathering is entirely female) choice of episodes of the tragedy as well as his or her use of body language and tonality. A successful rawda-khânân is able to bring the audience to a state of frenzy in which the members of the audience identify with the suffering of Husayn and other martyrs. According to popular belief, participation in rawda-khânân ensures participants of intercession by Husayn on Judgement Day. Almost from its inception it has been a tradition that mixed the past with the contemporary, and rawda-khânân often make digressions into the political, social and moral issues of the day. This makes the rawda-khânân a very important political weapon.

Outside Persia, rawda-khânân had been used in India in its original form, but now exists in modified versions reflecting Indian cultural influences. In Bahrain, the Persian model is still followed. Other Shi'a communities also observe this public lamentation for Husayn and other martyrs according to local traditions. The intensity of feeling discharged in these rituals, no matter where, is universal.

to the profit of Ibrahim b. al-Aghlab, founder of the Aghlabid [q.v.] dynasty of governors.

RAWH b. ZIBA, an Arab tribal leader, especially prominent in upholding the Umayyad cause against the Zubayrids in the second civil war (64-72/683-92).

Son of a notable from the Banū Djuhdham [q.v.], which had settled in Palestine from before the Arab conquest of the region, Rawh is said to have incurred Muʿawiya’s suspicion in circumstances which are obscure. Later, we find him named as one of a group of Syrian awrāqwhom Yazīd b. Muʿawīya [q.v.] sent to ʿAbd Allāh b. al-Zubayr [q.v.] in an attempt to obtain the latter’s bay’a, and, shortly afterwards, as one of the commanders of the army sent to the Ḥīdājār by Yazīd under Muslim b. ʿUkba al-Murri [q.v.] in 63/682-3.

Following the death of Yazīd and that of his short-lived son and successor Muʿawīya (II) [q.v. in 64/683, b. Mālikī b. Bahlal al-Kalbī, who was governing the ḫidam of Fīlasīt for the Umayyads, was unable to maintain his position and withdrew. He left Rawh behind as his representative, but Rawh too had to abandon his post in the face of opposition from his rival for the leadership of Djuhdham, Ṣaḥīl b. Kays. The latter, who seems to have enjoyed seniority, proclaimed his allegiance to Ibn al-Zubayr in an attempt to secure his own position, while Rawh may have alienated many of his tribe by a reported maladroit attempt to attach Djuhdham to the “northern” (Māʾādī) descent group (eventually they were generally accepted as belonging to the “southern”, Kahlānī, group). However, Rawh’s continuing support for the Umayyads in the person of Marwān b. al-Hakam [q.v.] (he is credited with a speech eulogising Marwān and calling for his succession in preference to other candidates) proved well judged. Following the victory of the Kalb at Maqār Rāhī [q.v.], and the consequent extension of Marwān’s authority over Syria, it was the turn of Ṣaḥīl b. Kays to flee and Rawh again became governor of Palestine. When ʿAbd al-Malik followed his father Marwān as caliph (Ramadān 65/April 685), Rawh became one of his influential confidantes and advisors. In some of the literature he appears as a prototype of the later viziers.

Rawh is said to have died in 64/703. He is known as a transmitter of ṭadhīḥ and is even counted by some ṭadhīḥ authorities as a Companion of the Prophet. His descendants are referred to in reports about the disturbances in Syria towards the end of the Umayyad period.

of writing, although well established for contracts, treaties or other official documents, could hardly have played a significant part in poetic transmission. It is possible that poets in contact with the courts of Firdawsi and Ghaštān were able to write, but among Bedouins that knowledge cannot have been common. Furthermore, the corpus of pre-Islamic verses presents characteristic features of oral literature, e.g. a high percentage of formulaic expressions, semantic repetition and independence of detail, which later gave way to other stylistic features and modes of composition. Thus it is to be assumed that during the 6th century A.D. composition and transmission of poetry took place orally, which does not exclude the possibility of a ṛāwī noting down verses as a mnemonic aid.

In the course of the first Islamic century, the use of writing increased in various fields (cf. G. Schoeler, Schreiben und Veröffentlichungen. Zur Verwendung und Funktion der Schrift in den ersten islamischen Jahrhunderten, in Isr. lix [1992], 1-43). The first collected poetry of writings were made in the early Umayyad period, e.g. the Mu‘allakāt [q.v.] (cf. M.J. Kister, The Seven Odes, in RSO, xlv (1979) 27-36). The poet al-Farazdāk [q.v.] mentions in some of his verses that he possessed "books" with collected poetry of other poets (The Nakādī of Jarir and al-Farazdāk, ed. A.A. Bevan, i-iii, Leiden 1905-12, i, 201, v. 57, 61). It is further reported that Djarīr [q.v.] and al-Farazdāk used to dictate to their ṛāwīs (Nakādī, i, 430, 12; ii, 908, 2). It seems therefore, that oral transmission was at first aided, and then gradually replaced, by writing.

In the final stage of poetic transmission, the early 'Abbasid period, Bedouin poetry was systematically collected by learned ṛāwīs like Khalaf al-Ahmar, Ḥammād al-Rawiya and al-Muṣafāḍal al-Dābbī [q.v.]. There is ample evidence that they had written collections of poetry at their disposal, but they were still expected to know the texts by heart, and to recite them when requested (Aḥānī, v, 174). In addition, they used to collect information from Bedouins and to verify their knowledge by questioning them. These Bedouin informants, who were also called "รวี", are in part known by name (cf. Ch. Pellat, Le milieu bariern et la formation de Cézal, Paris 1953, 137-8). Thus presumably the term ṛāwī was applied, as long as learning by heart and reciting of verses still played a part, even if a marginal one, in poetic transmission.

Another aspect is the exact function of the ṛāwī and his relation to the poet who employed him. Since a ṛāwī often became a poet himself, it has been assumed that he also served an apprenticeship with his poet, receiving a thorough training in metrics and the art of composition. This would imply that the institution of the ṛāwī not only assured the preservation of poetry, but also the continuity of technical knowledge, and of the vocabulary, style, and thematic range of an individual poet. The first to consider the possibility of establishing "schools" of poetry was Tāhā Ḥusayn, who with regard to the list of ṛāwīs mentioned above speaks of the "poetic school" (madhhab ghari‘) of Aws b. Ḥadżār (Fi ’l-adab al-ghari‘, Cairo 1937, 199-201, 270). The question has been studied with regard to the poetry of Hūdhayl [q.v.] by E. Bräunlich (Versuch einer literargeschichtlichen Betrachtungsweise altarabischer Poesien, in Isr., xxiv [1937], 201-69, cf. 221 ff.), as also by G.E. von Grunebaum (Zur Chronologie der früharabischen Dichtung, in Orientalia, N.S. vii [1939], 320-45), who established six "schools" of poetry in the pre-Islamic period.

The assumption that ṛāwīs received a thorough education, and reached a competence equal to that of the poets they served, is further evidenced by reports that a ṛāwī was expected to correct, to polish up or even to embellish the verses of his master. This seems to have been a common practice in the Qāhhiyya (cf. Goldzihier, Msb. St., ii, 8), as also in the Umayyad period. There is a story concerning Djarīr and al-Farazdāk, whose ṛāwīs were found to correct their metrical blunders (Aḥānī, ii, 59). It also underlines the difficulty, and sometimes the impossibility, for historians of literature to clearly differentiate between the work of a poet and that of his ṛāwī.

RAWK (Egyptian pronunciation: ṛāk), a word of non-Arabic origin, probably derived from Demotic ṛawḥ, "land distribution". From the noun is derived an Arabic verb ṛāka, yarūkā.

In the language of Egyptian administration, ṛawkh means a kind of cadastral survey which is followed by a redistribution of the arable land. The procedure comprises the surveying (miṣādā [q.v.]) of the fields, the assessment of their legal status (private property, endowment, crown land, grant, etc.), and the assessment of their prospective taxable capacity (ṣbara). Until the fall of the Fāṭimid dynasty the bulk of the arable land was bestowed on private tax farmers (muṭakabbil or ḍānim), whereas in the Ayyūbīd and Mamlūk periods it was granted to officers and free soldiers as military grants (ṣiba‘ [q.v.]).

Al-Makrūz states that in early Islamic times a ṛawkh had been carried out every thirty years, in order to synchronise the lunar (hijāli) and the fiscal (ḥanadi) calendars (Khitat, ed. Wiet, ii, 2), but this statement rather seems to reflect the ideal case. In fact, in the eight-and-a-half centuries between the Arabs' appearance and the Ottoman conquest, only six ṛawkh were mentioned in the sources. The first is that which Ubayd Allāh b. al-Habīb, director of the finances (amīl) of the Qāhhiyya, executed in the years 1057-7275-2 during the reign of the caliph Hishām. The result of the survey is said to have been an arable surface of 30,000,000 faddān (ca. 191,000 km²), the fiscal register established in 1077-1275 and a record of Ḥanādī [q.v.] of 1,700,837 dinars for all Egypt, and that of 1,449,420.5 for Upper Egypt and 251,416.5 for the Delta (al-Makrūzī, op. cit., 62).

The āmīl of Ahmad b. al-Mudabbir, ṛāk of Egypt, accomplished around 253/867-8, just before the arrival of Ahmad b. Tūlūn [q.v.], amounted to 24,000,000 faddān or ca. 153,000 km² (al-Makrūzī, op. cit., ii, 62-3, 69, 81).

The third ṛawkh, called al-ʿAfḍalī, was the only one carried out under Fāṭimid rule. His initiator was the general and future vizier Muhammad b. Fātik al-Maʿṣum” al-ʿBathaṭi, to whose son Mūsā we owe a detailed report (quoted by al-Makrūzī, op. cit., 66). At the suggestion of al-ʿBathaṭi, the vizier al-ʿAfḍal b. Badr al-Djadmālī in 501/1110-7-8 gave orders to perform a new survey in order to remedy grievances and to abolish unjustified privileges which had spread since the last ṛawkh.

The ṛawkh al-Ṣalāḥī, performed in the years 572-71176-81 by the enunuch Bahā’ al-Dīn Karākūğh (the builder of the Cairo citadel) on the orders of Sultan Ṣalāḥ al-Dīn al-ʿAyyūbī, laid the foundation of a com-
pletely new military system; it was closely linked to the introduction of the ḣādiet system. The ascribed ḥādiyya yield of 3,670,500 dinars was split into ḥādiet for 111 officers (āmir), 6976 heavily-armed horsemen (jawāṣīy), and 1,553 light cavalrymen (kārā-ṣghālām) (al-Makrizī, op. cit., ii, 16-17). Ibn Mammūṭī in his book on the rules of administration (Kitāb Ḥawānīn al-dawawīn) has preserved the complete list of all places of Egypt surveyed in the Salāṭī al-deen (ed. A.S. Atiya, Cairo 1953, 84-85). The last ṭawq al-Husnāmi was initiated by the Mamlik sultan Husān al-Ḍīn Lāḏīn in 697/1298 in order to curtail the power of the great āmir and to strengthen the sultan, but it completely failed, and the sultan was murdered by his officers (al-Makrizī, op. cit., ii, 21; idem, Suluk, ed. Ziyādā, Cairo 1934-38, i/3, 841-4; Ibn Ṭabrīḥīrdī, Nūjm, ed. Cairo, viii, 90-5; Ibn Iyās, Badā'ī, ed. M. Moṣṭafā, Wiesbaden 1976, i/1, 397-67). The list of place names surveyed by the Husānī ṭawq seems to be preserved in the anonymous Tuhfat al-ṣaḥāda, discovered by M. Ramzl (ed. A.S. Atiya, Cairo 1943, 84-86). The movement had distinct elements of Afghan nationalism: "the pir-i ḥādiet," although his orthodox pir [q. v.] is friendly to the sect, Bayazīd's doctrine was extreme pantheism; "If I pray not, I am a kafīr." He marked this stage of his system as 20,000 foot and 5,000 horse. A further expedition was sent in 1000/1591 (or 1001) which captured some 14,000 men (according to Badaūnī) with Djalāl al-Ḍīn's widow and children, but not apparently himself, since in 1007/1598-9 he took Ḥazānī, but was unable to maintain himself there, and on retiring was attacked by the Hazāras [q. v. in Suppl.], wounded and put to death. This last affair is by some assigned to a son of his bearing the same name.

The next head of the community was Djalāl al-Ḍīn's son Ibdād, who figures in the history of Djiāḥāṅgīr. In 1020/1611 he surprised Kābul in the absence of its governor Kāhān Dāwārān. The attack was beaten off with great loss to the raiders, yet in 1023/1614 Ibdād was again in the field, but sustained a serious defeat at Pīsh Bulāq. After a series of enterprises with varied success he was besieged in the fortress of Nuaghār, and killed by a musket-shot.

The historian of Shāh Djiāḥān, Muhammad Sālīḥ Kanbo, asserts that in the second year of his reign (1038/1629) Ibdād was sent to suppress the heresy started by Bayazīd; nevertheless, in the following year he records how the Afghān Kāmāl al-Ḍīn was joined in the attack on Peshāwār by 'Abd al-Ḳādir, son of Ibdād, and Kārīmād, son of Djalāl (Djalāl al-Ḍīn). The place was relieved by Saʿīd Kāhān, and 'Abd al-Ḳādir induced to submit; in 1043/1633-4 he was recommended by Saʿīd Kāhān, "who had caused him to repent of his evil deeds," to Shāh Djiāḥān, who gave him a command of 1,600 horse. Other members of Ibdād's family received honours and rewards in 1047/1637-8. In the same year, Kārīmād, who had taken refuge in the Mohmand country, but had been recalled by the tribes of Bangāsh, was attacked, captured and executed by Saʿīd Kāhān. It is asserted that some relics of the community still exist in this region. A branch of the sect, called Ḥosawī, is set down at Shāh Kāhān in the district of Ḥisāb of Peshāwār (T.C. Plowden, translation of the Kālid-i Afghānī, Lahore 1875).

3. Doctrines of the sect. According to the Dabīstān, which is friendly to the sect, Bāyāzīd's doctrine was extreme pantheism; "If I pray" he said, "I am a muṣrīf; if I pray not, I am a kafīr." He marked eight stages (madām) in religious progress: gharā', jarīka, bāhēka, muṣrīf, kaṛba, waṣūla, waḥada, sukīn; the last four are said to be technicalities of his system. The explanation of these stages, quoted from Bāyāzīd's Hāl-nāma, incultuates lofty morality, e.g. to hurt no creature of God. The account which follows is inconsistent with this, as noxious persons were to be killed because they resembled wild creatures, and harmless persons who did not possess self-knowledge might be killed, because they resembled domestic animals. They might be regarded as dead, and their property might be seized by the "living". Further, he abrogated the direction of prayer and the preliminary ablution. Other details are furnished by a hostile writer, the historian of Shāh Djiāḥān quoted above, copied in Khāfī Kāḥān's Muntakhab al-lūbāb. Marriage, he says, is without a contract, there being merely a feast at which a cow is slaughtered. Divorce is ratified by placing some pebbles in the wife's hand. The widow is deprived of inheritance, and indeed is at the disposal of the heirs, who may marry her themselves.
or sell her to someone else. When a son is born to one of them, an incision is made in the ear of an ass, and the blood dripped on the infant’s tongue. This is in order to ensure that the infant shall be bloodthirsty of the Kangarids or Musafirids [q. v.]. During the next century, the outstanding member of the family was Abu ‘1-Fadl ‘Alamî’s Akhbar-nama (detailed account of the warfare with the Rawshaniyya), Badar’î’s Man- takkab al-tawdrîkh, Djâhângîr’s Tuzuk, the Tarikh-i Firdawsi and Muhammad Sâlih Kanbo Lâhawrî’s ‘Amal-i Sâlih, were necessarily hostile; but Farid Bûhârî’s Dakhikat al-khawâdin (biographical accounts of Mughal nobles) gives a more sympathetic view of them.

RAWTHER (Tamil inattur meaning “horseman” or “trooper”, also known as Rowther, Ravutta, Revuttan, or “trooper”, a community of Tamil-speaking Muslims located in the state of Tamilnadu, India, one of four sub-divisions of the Tamil-speaking Muslim community, the others being Marakkayar, Kayalar and Labbai [q. v.]. Like the Labbai, the Rawther follow the Shafi’i school, whilst the others are Hanafis. Unlike the other sub-divisions, the Rawther and Labbai are found in greatest numbers in the interior, where they are mostly petty merchants and tradesmen.

Effectively endogamous like the other sub-divisions and historically located in particular districts (Madurai and Tiruchirapalli), there has nevertheless been a blurring of regional boundaries. Migration to larger urban centres, some intermarriage and Islamic revival movements, have stressed their egalitarian outlook and weakened clan-based lineages with their focus on the shrines of particular saints. The Rawther probably originated as cavalry militia, comprising indigenous converts to Islam, for Tamil Hindu rulers before pre-colonial Muslim rulers began similar recruitment in the 17th century. During the 19th century Wahhabî missionaries began a process of Islamisation, attacking vestiges of Hindu ritual practices, stressing Sunni orthodoxy and encouraging the use of Urdu as a symbol of “pure” Islam. Many Tamil Muslims were affected by this movement, and a considerable number of Labbai adopted the title of Rawther because they regarded any claim to martial ancestry as more orthodox and prestigious than simple Labbai status. Urdu, however, remained primarily the second language of a minority of Rawthers.

RAWWADIDS or Banû Rawwâd, a minor dynasty of northwestern Persia which flourished during the period which Minorsky characterised as the “Iranian intermezzo” between the decline of Achaemenid power and the coming of Turkish peoples like the Seljuks, essentially during the 4th-5th/10th-11th centuries.

Although the Daylamis [see Daylam] were the most prominent in this upsurge of northern Persian mountain peoples, the part of other races like the Kurds was not negligible. The Rawwâdids (the form “Rawwâd” later becomes common in the sources) were originally of Afdî Arab stock, but gradually became assimilated to their environment in Aqharbaydîân (and especially, the area around Tabrîz) and became Kurdicised (cf. the similar process taking place in Shirwân [q. v.] or Şahrwân, where the Yazidi Shirwân-Şahs became Iranised). In ca. 141/758-9 the caliph al-Mansûr’s governor of Aqharbaydîân, Yazid b. Hâtim al-Muhallabî appointed al-Rawwâd b. al-Muqannâm to secure the region between Tabrîz and al-Badkhâm [q. v. in Suppl.]. Over the next two centuries, al-Rawwâd’s descendants became thoroughly Kurdicised, and Kurdish forms like “Mamlân” for Muhammad and “Ahmadî” for Ahmad begin to appear in their genealogy.

In the disturbed condition of Aqharbaydîân during the mid-4th/10th century, consequent on the disappearance of the Sâdids [q. v.] from there, the Rawwâdîs Abu ‘l-Hây álbum Hüsyan b. Muhammad (544-78/955-88) succeeded to the heritage of the Kangarîs or Músâfîrs [q. v.]. During the next century, the outstanding member of the family was Abu
Manṣūr Wahsudan b. Mamlān b. Abī ‘l-Haydaj (ca. 410-46/1019-54). He early faced the incursions of the so-called “Fra ’uly” Turksmen driven out of Khurāsān by Māmūd of Ghazna and of independently-operating Turkish bands, but it was not until 446/1054 that the Sālджuk leader Topḫirr Beg [q.v.] resolved to bring Adhār bāyādījān and Arrān under his control and to make the petty rulers of northwestern Persia and eastern Transcaucasia his vassals. Wahsudān’s eldest son Mamlān was confirmed in his father’s territories by Topḫir in 450/1058, but the days of the dynasty as an autonomous power were numbered. The Ottoman historian Mūneḏqādījīm Bādhī [q.v.], quoting earlier chronicles on the history of the region, states that, when the Sālджuk sultan Alp Arslān returned in 463/1071 from his Anatolian campaign against the Byzantines, he deposed Mamlān. But a later member of the family, Abīlīm b. Wahsudān, held 463/1071 from his Anatolian campaign against the Crusaders in Syria, and his personal name was perpetuated by the line of his Turkish ghulams, the Abīmlāds [q.v.], who ruled in Marāḡa as Atabegs during the 6th/13th century; survivors of the actual Rawwādīd family can be traced up to Il-Khanid times in the early 8th/14th century.

RAYCUR, a town and district of South India, now in the Golbārgīd division of the Indian Union state of Karnataka, before 1947 in the Haydarābād princely state of British India (lat. 16° 15’ N., long. 77° 20’ E.). An ancient Hindu town formerly part of the kingdom of Warangal, it passed to the Khalīḍī Sultans of Dihī in the 8th/14th century, then to the Bahmanīs and, after Awarangīb’s Deccan conquests, to the Mughals. Raycūr has interesting Islamic monuments. The Bahmanī Ḥānīrī mājudīs has its minaret stems from c. 1450-1500, and the masdjid or Friday mosque stems from c. 1310-15 (Reda), name, with a population (in 1979) of 1,637 in-

RAYDA (Rīda, Rēda) is the name of a number of places in Ṣawm, in the Yemen and in Hadramawt. The word rayd (pl. aryād/rayād) means a ledge of a mountain, resembling a wall, or a resting upon ledges of mountains (Lane, Lexicon, s. v.). At least in Hadramawt, it is the term for the centre of the ter-

(Eo.)
human liberty and fraternity with determination. A social reformer, he preached justice and the virtues of Islam. His political ideal was based on an Arab nationalism extending over an area considerably exceeding the boundaries of contemporary Lebanon; such an independent entity, he believed, would be capable of confounding the foreign intruder and guaranteeing the future of Palestine.

AL-RAYḤĀNĪ — AL-RAYYY

1. History.

In the Avesta, Widēvādat, i, 15, Rayā is mentioned as the twelfth sacred place created by Ahūra-Mazdā. In the Old Persian inscriptions (Behistun 2, 10-18), Rayā appears as the province of Media in which the autumn of 521 B.C. the false king of Media Fravartišč sought refuge in vain; from Rayā also Darius sent reinforcements to his father Artāxēršpa when the latter was putting down the rebellion in Parthia. (Behistun 3, 1-10).

Rayā is also mentioned in the Apocrypha. Tobit sent his son Tobias from Niniveh to recover the silver deposited in Rayā with Gabael, brother of Gabriās (Tobit, i, 14). The book of Judith (i, 15) puts near Rayā a treaty which was put down the rebellion in Parthia. (Behistun 3, 1-10).

Rayā is also mentioned in the Apocalypse. Tobit sent his son Tobias from Niniveh to recover the silver deposited in Rayā with Gabael, brother of Gabriās (Tobit, i, 14). The book of Judith (i, 15) puts near Rayā a treaty which was put down the rebellion in Parthia. (Behistun 3, 1-10).

In the summer of 330 B.C., Alexander the Great, following Darius III took 11 days to go from Ecbatane to Rhages (Behistun 2, 10-18). In the autumn of 521 B.C. the false king of Media Fravartišč sought refuge in vain; from Rayā also Darius sent reinforcements to his father Artāxēršpa when the latter was putting down the rebellion in Parthia. (Behistun 3, 1-10).

In the Avesta, Widēvādat, i, 15, Rayā is mentioned as the twelfth sacred place created by Ahūra-Mazdā. In the Old Persian inscriptions (Behistun 2, 10-18), Rayā appears as the province of Media in which the autumn of 521 B.C. the false king of Media Fravartišč sought refuge in vain; from Rayā also Darius sent reinforcements to his father Artāxēršpa when the latter was putting down the rebellion in Parthia. (Behistun 3, 1-10).

In the summer of 330 B.C., Alexander the Great, following Darius III took 11 days to go from Ecbatane to Rhages (Behistun 2, 10-18). In the autumn of 521 B.C. the false king of Media Fravartišč sought refuge in vain; from Rayā also Darius sent reinforcements to his father Artāxēršpa when the latter was putting down the rebellion in Parthia. (Behistun 3, 1-10).

In the Sasanid period, Yazdagird III in 641 issued from Rayā his last appeal to the nation before fleeing to Khorāsān. The sanctuary of Bīt Ṣāḥīr, situated on the south face of the already mentioned spur and accessible only to women is associated with the memory of the daughter of Yazdagird who, according to tradition, became the wife of al-Husayn b. ʿĀli. In the years A.D. 486, 499, 553, Rayā is mentioned as the see of bishops of the Eastern Syrian church.

Arab conquest. The year of the conquest is variously given (18-24/639-44), and it is possible that the Arab power was consolidated gradually. As late as 25/646 a rebellion was suppressed in Rayā by ʿAbī Wakkās. The Arabs seem to have profited by the dissensions among the noble Persian families. Rayā was the fief of the Mīhrān family and, in consequence of the resistance of Siyawakhsh b. Mīhrān b. Bahram Čūbīn, Nuʿaym b. Muqarrīn had the old town destroyed and ordered Farrukkhān b. Zaynābī (Zaynābī?) to build a new town (al-Tabarī, i, 2655). In 71/690, again, a king of the family of Farrukkhān is mentioned alongside of the Arab governor.

The passing of power from the Umayyads to the ʿAbāsīds took place at Rayā without incident but in 336/753 the Khorramī Sunbād, one of ʿAbū Muslim’s stalwarts, seized the town for a short time. The new era for Rayā began with the appointment of the heir to the throne Muḥammad al-Mahdī to the governorship of the east (141-52/758-68). He rebuilt Rayā under the name of Maḥmūdīyya and surrounded it by a ditch. The suburb of Mahdī-lābādī was built for those of the inhabitants who had to give up their property in the old town. Harūn al-Raḥīd, son of al-Mahdī, was born in Rayā and used often to recall with pleasure his native town and its principal street. In 195/810 al-Maʿmūn’s general Tāhir b. Husayn won a victory over al-Amin’s troops near Rayā. In 250/865 the struggle began in Rayā between the Zaydīs of Tabaristān and first the Tāhirīds and later the caliph’s Turkish generals. It was not till 272/885 that Aḏḏūgū-ṭegin of Kāzin took the town from the ʿAbīdīs. In 261/879 the caliph al-Muʿtamīd, wishing to consolidate his position, appointed to Rayā his son, the future caliph al-Muktafī. Soon afterwards, the Sāmānīds began to interfere in Rayā. Ismāʿīl b. Ahmad seized Rayā in 289/912, and the fact accompli was confirmed by the caliph al-Muktafī. In 296/909 Ahmad b. Ismāʿīl received investiture from al-Muktafḍī in Rayā (Gardīzī, ed. Nāẓīm, 21-2).

In the 4th/10th century, Rayā is described in detail in the works of the contemporary Arab geographers. In spite of the interest which Bagdādī displayed in Rayā, the number of Arab towns there was insignificant, and the population consisted of Persians of all classes (ekkāt; al-Yaḵūbī, Buldān, Yaḵūbī, 276). Among the products of Rayā, Ibn al-Fakhrī, 253, mentions silks and other stuffs, articles of wood and “lustre dishes”, an interesting detail in view of the celebrity enjoyed by the ceramics “of Rhages”. All writers emphasise the very great importance of Rayā as a commercial centre. According to al-Fakhrī, 253, the town covered an area of 1 ½ by 1 ½ farsakhs, the buildings were of clay (tīn) but the use of bricks and plaster (qāsī = qāsī) was known. The town had five great gates and eight large bazaars. Al-Mukaddāsī, 391, calls Rayā one of the glories of the lands of Islam, and among other things mentions its library in the Rūḏāh quarter which was watered by the Sūrkanī canal.

Dayāmī period. In 304/916 the lord of al-Aḥbar-bayādīn Ṯūsūf b. ʿAbī ʿl-Sādī [see ʿālīs] occupied
Rayy, out of which he drove the Daylamì Muhammad b. Ali Su'îkh who represented the Samànìs Nâṣir (Ibn al-Athîr, viii, 74). This occupation, commemorated in coins struck by Yusuf at Muhammadiyya (see Miles, *The numismatic history of Rayy*, 140-2), was the beginning of a troubled period. Rayy passed successively into the hands of the Daylamì Ali b. Waþúsêdäh, Wâsiîf Bektêmîrû, the Daylamì Ahmad b. Ali and of Muîlîfî, slave of Yusuf (in 313/925; cf. R. Vasmer, *On montâdîk Sagîdîdo, Baku 1911*). Lastly, these efforts were encouraged by the Byzantines, who succeeded in bringing Rayy again within their sphere of influence but soon their general Asfâr (a Daylamì) became independent in Rayy. In 318/930 Asfâr was killed by his lieutenant Mardawîlî b. Muhammad b. 'Aîshat Suclûk who represented the Samànìs Nâsir (Ibn al-Athîr, ix, 373). The new Samànìs, directed by Mûsamût b. Nâsir b. Ulûm Khatûn, who was the wife of Pahlavan, son of the famous abatêb of Astarâbâd. In 380/990 the last Samànìs al-Muntasir made an attempt to seize Rayy, but in 390/1000 the town, where Mâjd al-Dîn b. Muhammad b. 'Alî 'Askalam the chief of the branch of Rukn al-Dawla still held out in the fort of Tabarak (Ibn al-Athîr, ix, 347), fell into the power of the Saldjuks and the Khawarizmshãh Djalal al-Dawla and had access to very good sources; Yakût describes the underground houses at Rayy and the dark streets difficult of access which reflected the care of the inhabitants to protect themselves against enemies. However, possible that the historian, echoing the panic which seized the Muslim world, exaggerates the extent of the destruction. Djuwayni (ed. Kazwînî, i, 115, tr. Boyle, i, 147) only says that the Mongol leaders put many people to death at Khârîr Rayy (in the country inhabited by Shîfs?) but in Rayy they were met by the Shâfî? lâfî who submitted to the invaders (îl ghd), after which the latter went on. Rasldîn (ib. ed. I. Mûrêzîne, in *Trudy VO*, vi, 133 (tr. 89)) admits that the Mongols under Djebe and Sübetêy killed and plundered (kûshîk wa ghdât) at "Rayy", but he seems to make a distinction between Rayy and Kum, in which the inhabitants were completely (ba-kullî) massacred.

The fact that life was not completely extinguished at Rayy is evidently from the dates of pottery which apparently continued to be made in Rayy (cf. R. Guest, *A dated Rayy bowl*, in *Burlington Magazine* [1931], 134-5: the painted bowl bears the date 640/1243). The citadel of Tabarak was rebuilt under Ghazan Khân (1295-1304) but certain economic reasons (irrigation?) if not political and religious reasons, must have been against the restoration of Rayy, and the centre of the new administrative Mongol division (the tumân of Rayy) became Warâmîn (q.v.) (cf. Nûshî al-kulâbî, ed. Le Strange, 81, 135); it is possible that the Saldjuks fell to the sphere of influence of Tughâ-Timûr (q.v.) of Astarâbâd. In 1384, Timûr's troops occupied Rayy without striking a blow but this must mean the district and not the town of Rayy, for Clavijo (ed. Sreznevsky, sky, 187), who passed through this country in 1404, confirms that Rayy (Shâhristân = Shâhristân Rayy) was no longer inhabited (aqrâr dashrhabîda). No mention is to be attached to the mention of "Rayy" in the time of Shâh Rukh (Mâla b. sa-da'îm, under the year 841/1437) or of Shâh Ismâ'îl, in *Habîb al-siyar*.

Minorsky, Abu-Dulaf Msár al-muhāṭī’s travels in Iran (circca A.D. 960), Cairo 1953, nos. 87-50, tr. 51-61, W. Barthold, An historical geography of Iran, Princeton 1984, 121-6. (V. Minorsky)

2. Archaeology and monuments.

Olivier in 1797 sought the ruins of Rayy in vain and, it was Trulhier and Gardane who first discovered them. The earliest descriptions are by J. Morier, Ker Porter and Sir W. Ouseley. The first has preserved for us a sketch of a Sasanian bas-relief which was later replaced by a sculpture of Path AIT Shah. The description, and particularly the plan by Ker Porter (reproduced in Sarre and A.V.W. Jackson, Geographical Description of Persia, Philadelphia, v [1935], 41-9, cf. 25-7), have floored the European and American markets as a result of the activity of the dealers. Scientific investigation was begun by the Joint Expedition to Rayy of the Museum of Fine Arts, Boston, and the Univ. of Pennsylvania, Philadelphia, in 1934 (cf. The Illustrated London News [22 June 1935], 1122-3; E. F. Schmidt, The Persian expedition [Rayy], in Bulletin of the University Museum, Philadelphia, v [1935], 41-9, cf. 25-7), and was continued by Chaahryan Adle from 1974 onwards. In the citadel hill, Dr. Erich Schmidt found a great variety of pottery and the remains of buildings among which the most interesting are the foundations of al-Mabdi’s mosque (communication by A. Godard to the Congress of Persian Art at Leningrad in September 1935).

In an interesting passage, al-Mu‘addaši, 210, speaks of the high mountain which the Buyids built over their tombs. The remains of three tomb towers are still visible at Rayy, including a twelve-sided one whose site accords with two buildings of the Buyid period mentioned in Nizām al-Mulك’s Siyāṣat-nāma, ed. Darke, 211, tr. idem 2, 167, sc. a dakšāna or Tower of Silence built by a Zoroastrian at Tabarak, later called the dida-ye sipāhābdān, the “vantage-point of the commandant”, and the nearby “dome (gumbad) of Fakhr al-Dawla”, presumably the Buyid amīr’s tomb [see FARKH AL-DAWLA], and also the so-called “Tomb of Toghīl”, which had an iron plate on it with the date Radjab 534/March 1140 (see on this last, G. C. Miles, in Ars Orientalis, vi [1966], 45-6, and on the towers in general, R. Hillenbrand, The tomb towers of Iran to 1350, diss. Oxford University 1974, unpubl., ii, 68-9, 73-5, 82-8). A further tomb tower, circular in plan and probably originally having a conical cap like the Gumbad-i Khābūn [q.v.] in Gurgān, was photographed by Curzon in 1890 (see his Persia and the Persian question, i, 351) but destroyed in ca. 1895 for use as building materials (the fate of so many of the buildings of Rayy in the 19th and early 20th centuries); its Kūfic inscription band probably bore the date 466/1073 or, less likely, 476/1083 (see Chahryan Adle, Notes préliminaires sur la tour dispersée de Ray (1661/1767-74), in Memorial vol. of the 7th International Congress of Iranian Art and Archaeology, Oxford, September 11-16th 1972, Tehran 1976, 1-12). The remains of several subterranean tombs and of what were above-ground tombs which have also been discovered, see Adle, Construction funèbres à Ray circa xe-xiiie siècle, in Archéologique Mitteleuropa’s, Ergänzungsband 6, Berlin 1979 (= Akten des VII. Internationalen Kongresses für Iranische Kunst und Archäologie, München 7-10 September 1976), 51-15.

The hill of Tabarak on which was the citadel (destroyed in 588/1192 by the Safīdūllāh sultan Toghrīl III) was, according to Yāqūt, situated to “the right” of the Khurāsān road, while the high mountain was to “the left” of this road. Tabarak therefore must have been on the top of the hill opposite the great spur (hill G in Ker Porter’s plan: “fortress finely built of stone and on the summit of an immense rock which commands the open country to the south”); cf. the map in A.F. Stahl, Die Umgegend von Teheran, in Pet. Mitt. (1900).

Finally, one should note that a considerable number of silk fragments from the Buyid period, many of them with inscriptions on them, have ostensibly been found at Rayy, although not in a controlled archaeological context; their authenticity accordingly remains disputed, see Dorothy F. Shepherd, Medieval Persian silks in fact and fancy, in Bull. de Liaison du Centre International d’Etude des textiles anciens, no. 39-40, Lyons 1977. Bibliography (in addition to references given in the article): Description of the ruins: J. Morier, A Journey, 1812, 232, 403; Second Journey, 1818, 190; Ker Porter, Travels, 1821, i, 357-64 (map); Ouseley, Travels, 1823, iii, 174-99, plate iv; Ritter, Erdkunde, vii, 1838, 595-604; Curzon, Persia, i, 347-52; F. Sarre, Denkmäler persischer Baukunst, Berlin 1901, text, 55-58; A.V.W. Williams Jackson, Persia past and present, New York 1905, 428-41 (plan by Ker Porter).

Modern studies: Husayn Karīmān, Rayy-i bāstān, Tehran 1345-9/1966-70, 2 vols., is the most detailed work here, but does not take account of the subsequent work by Adle, Y. Kossar and others; see, regarding this, Adle, Notes sur les premiére et seconde campagnes archéologiques à Rey. Automne-hiver 1354-55/1975-7, in Mélanges Jean Perrot, Paris 1990, 295-307, providing a resume of a 6-vol. report on these investigations deposited at the Centre iranien pour les recherches archéologiques. See also Sylvia A. Matheson, Persia: an archaeological guide, London 1976, 46 ff., and the arts. thran and warāmīn. (V. Minorsky-[C.E. Bosworth])

RAYY [see RAY].

RAYY, modern Spanish rendering REYyo (RAYyo), the name given in Muslim Spain to the administrative circle (kūrah) comprising the south of the Peninsula, the capital of which was successively Archidona (Arabic al-Qudāna) and Málaga. The usual Arabic orthography is راية; in particular, this is the form found in the Muğmal al-bulūdān of Yāqūt; but some Spanish mss. give the orthography رية, more in keeping with the local pronunciation Reyoyo (RAYyyo) attested by Ibn Hawkal. It is probably, as Dozy thought, a transcription of the Latin regio (no doubt Malacitana regio); the suggestion put forward by Gayangos of a connection with the Persian town-name al-Ray is of course untenable.

When the fiefs in the south of Spain were assigned to the former companions of Balad b. Bahīr [q.v.], the district of Reyoyo was allotted to the qund of Jordan (al-ʿUrdum). During the Umayyad caliphate of Cordova,
the kūn of Reyyo was bounded by those of Cabra and Algeciras in the west, by the Mediterranean in the south and by the kūn of Elvira in the east.

One should now add to the above a reference to J. Vallvé, *La división territorial de la España musulmana*, Madrid, Consejo Superior de Investigaciones Científicas 1986, of which pp. 328-31 are devoted to “la cora de Rayya”. According to this author, one should read Rayy and not Reyryo, basing himself on the sole topographical trace of this name, *Campos de Zaparros*, interpreted as Fuday Rayyo, and, above all, on certain poetics which require this reading for their end-rhymes. An origin of the name has also been suggested in Phoenician via Latin.

The main problem regarding this kūn is the exact situation of the fortress of Bobastro (Bubaghtur, Bubaghtar), the main refuge of the rebel Umar b. Hafsūn, which we know was held by him and for which several localisation have been proposed. The traditional identification, with the place called Las Mesas de Villaverde, was defended by F.J. Simonet (earlier works cited in M. Riu Riu, *Aportación de la arqueología al estudio de los Mozárabes de Andalús*, in *Tres estudios de historia medieval andalusía*, Cordova 1977, 85-112), but Vallvé has proposed an identification with the high ground of Marmuyas in the district of Comares, where several seasons of excavations “with interesting results” have taken place. Vallvé, for a full discussion, in *Bubaghtur* in *Suppl. Vallvé* further cites, in regard to Rayya, the passage describing it by Ibn Hādi, published by him and translated in the above-mentioned work; he also translates the passage of al-Ghalib, published by him and translated in the above-discussion, BUBASHTRU in *Suppl. Vallvé* further cites, in regard to Rayya, the passage describing it by Ibn Qālib, published by him and translated in the above-mentioned work; he also translates the passage of al-Nubābī (K. al-Markab al-uṣyā, published by Lévi-Provençal), written in the 8th/14th century and giving the earlier border of the kūn.

AL-RAZĪ, ABU BAKR MUHAMMAD IBN AL-RAZĪ, known to the Latins as Rhazes (ca. 250/854-313/925 or 323/935), physician, philosopher and alchemist.

The most free-thinking of the major philosophers of Islam, al-Rāzī was born in Rayy, where he was well trained in the Greek sciences. He was reputedly well versed in musical theory and performance before assuming the corresponding post in Baghdad. His property in the vicinity seems to have brought him back often to Rayy, and he died there, somewhat embittered and alienated, partly by the loss of his eyesight. Like many of the great physicians of Islam, al-Rāzī was a courtier as well as a scholar, clinician and teacher. His medical handbook the *Majnūʿī*, translated into Latin by Grathe of Cremona in the 12th century, was dedicated to Manuel b. Isḥāq, the Sāmānid governor of Rayy; his *Mulkūk or Regius*, to ʿAli b. Wāḥiṣgūlān of Tabaristān. The author of some two hundred books, al-Rāzī claims in his apology, the *Sīra al-falsafya*, or “Philosophical Way of Life”, that his has been a life of moderation, excessive only in his devotion to learning; he associated with princes never as a man at arms or an officer of state but always, and only, as a physician and friend in writing. In one year, he urges, he wrote over twenty thousand pages, “in a hand like an amulet maker’s.” Others remark on his generosity and compassion, seeing that the poor among his patients were properly fed and given adequate nursing care. Arriving patients first saw an outer circle of disciples, and then an inner circle, if these could not aid them, leaving al-Razī himself to treat the hardest cases. His medical research was similarly methodical, as revealed in his notebooks. These were edited, in some 25 volumes, as the *K. al-Ḥāwī fī l-ṭibb*, at the instance of Ibn al-ʿĀmid [q.v.], the vizier of Rukn al-Dawla [q.v.]. Translated as the *Continens* in 1279 by the Jewish physician Faradj b. Sālim (known as Farraguth) for King Charles of Anjou, it was printed at Brescia in 1486 and reprinted thereafter. The text (Haydarābād 1955) contains al-Rāzī’s extensive notes from a wide range of sources, organised anatomically, from head to toe. His own clinical observations, often at variance with received opinions, typically close the sections. Al-Razī mined these files for his numerous medical works, and several unfinished works can be discerned in the Ḥāwī in embryo. His magnum opus, the *Kitāb al-Dīwān al-kabir*, or “Great Medical Compendium”, often confused with the Ḥāwī, was a work that al-Rāzī published, not the corpus of his private files. Among the most famous of his medical writings are those on *Stones in the kidney and bladder* (K. al-Ḥāṣa fi l-kulūd wa l-matḥūta) and *Smallpox and Measles* (K. al-Dhādari wa l-ḥaṣa). The latter was the first book on smallpox, and was translated over a dozen times into Latin and other European languages. Its lack of dogmatism, its openness of approach, the form and manner of observation typify al-Rāzī’s medical methods. His independent mind is strikingly revealed in his *Ṣūkūk al-Dīnān* or “Doubts about Galen”. Here al-Rāzī rejects claims of Galen’s, from the alleged superiority of the Greek language to many of his cosmological and medical views. He places medicine within philosophy, inferring that sound practice demands independent thinking. His own clinical records, he reports, do not confirm Galen’s descriptions of the course of a fever. And in some cases he finds that his clinical experience exceeds Galen’s. He rejects the notion, central to the theory of humours, that the body is warmed or cooled only by warmer or cooler bodies; for a warm drink may heat the body to a degree much hotter than its own. Thus the drink must trigger a response rather than simply communicating its own warmth or coldness. This line of criticism has the potential, in time, to bring down the whole theory of humours and the scheme of the four elements, on which it was grounded. Al-Rāzī’s alchemy, like his medical thinking, struggles within the cocoon of hylomorphism. It dismisses the idea of potions and dispenses with an appeal to magic, if magic means reliance on symbols as causes. But al-Rāzī does not reject the idea that there are wonders in the sense of unexplained phenomena in nature. His alchemical stockroom, accordingly, is enriched with the products of Persian mining and
AL-RAZI

manufacture, and the Chinese discovery, sal ammoniac. Still reliant on the idea of dominant forms and thus on the Neoplatonic conception of mechanical, al-Razi’s alchemy nonetheless brings to the fore such empiric qualities as salinity and inflammability—the latter ascribed to “oiliness” and “sulphurousness”. Such properties are not readily explained by the traditional fire, water, earth and air schematism, as al-Ghazâlî and other later composers, primed by thoughts like al-Razi’s, were quick to note.

Like Galen, al-Razi was speculatively interested in the art and profession of medicine. He wrote essays on the subject as “The reasons for people’s preference of inferior physicians,” “A mistaken view of the function of the physician,” “Why some people leave a physician if he is intelligent,” “That an intelligent physician cannot heal all diseases, since that is not possible,” and “Why ignorant physicians, common folk, and women in the cities are more successful than scientists in treating certain diseases—and the physician’s excuse for this.” He also shared Galen’s interest in philosophy and heeded his treatise, “That the outstanding physician must also be a philosopher.” Al-Birûnî lists some eighty philosophical titles in his al-Razi bibliography, and al-Nadîm lists dozens of his works on logic, cosmology, theology, mathematics and alchemy. Given the general repugnance toward al-Razi’s philosophical ideas among his contemporaries and medieval successors, few of these works were copied. But fragments survive in quotations by later authors, as do the Sîra al-falsafyya and the Tibb al-rûhání, the “Spiritual physic” or “Psychological medicine,” which embodies al-Razi’s largely Epicurean ethical system. Among the writings of which we have mention are: a commentary on Plato’s Timaeus philosophical ideas on the epitome of Galen, a rebuttal of lamblichus’s response to Porphyry’s Letter to Anches (that is, the De mysticis), an appraisal of the Kur’ân, a critique of Mu’tazilism, another on the infallible Ismâ’îlî Imâm, a work on how to measure intelligence, an introduction to and vindication of algebra, a defence of the incommensurability of a square’s side and its diagonal; for al-Razi’s acceptance of the void risks of ignoring the axioms of geometry may aim at demonstration rather than proof rather than just allegations. Fear of death “can never be banished altogether from the soul, unless one is certain that after death it shifts to a better state.” And his conclusion is that it “would require very lengthy argumentation, if one sought proof rather than just allegations (khabar).” There really is no method whatever for argument to adopt on this topic... The subject is too elevated and too broad as to admit of any rational demonstration, for the passions and citations are false”—a task al-Razi has no immediate or pressing intention of attempting. For practical purposes, then, he offers the Epicurean consolation that death is the goad of the passions that hamper human rationality and undermine human happiness. As al-Razi explains: “As long as the fear of death persists, one will incline away from reason and toward passion (hawâ).” The argument is Epicurean. The passions here, as in Epicurus, are thought of as neuroses, compulsions, pleasureless addictions, to use al-Razi’s description (his word for an addict is mudmin). The gluton, the miser, even the sexual obsessive, are, by al-Razi’s analysis, as much moved by the fear of death as by natural appetites. For natural needs, as Epicurus would explain, are always in measure. The unwholesome excess that makes vice a disease comes from the irrational and unselfconscious mental linking of natural pleasures and gratifications with security, that is, a sense of freedom from the fear of death. Ethics here becomes entirely prudential, as al-Razi’s critics were not slow to note. If we knew that our ultimate state was immortality, and the return of the soul in us to her true home, our mad scrabbling after the surrogates of immortality would cease. But the fear of death “can never be banished altogether from the soul, unless one is certain that after death it shifts to a better state.” And his conclusion is that it “would require very lengthy argumentation, if one sought proof rather than just allegations (khabar).” There really is no method whatever for argument to adopt on this topic... The subject is too elevated and too broad as to admit of any rational demonstration, for the passions and citations are false”—a task al-Razi has no immediate or pressing intention of attempting. For practical purposes, then, he offers the Epicurean consolation that death is nothing to us, if the soul is really mortal. What scripture has to say on the subject is just another undemonstrated report, an unsubstantiated allegation.
In his debates with an Ismāʿīlī adversary, Abu Ḥātim al-Rāzī (d. 322/934 [q.v.]), chief lieutenant to the Ismāʿīlī dāʿī of Rayy, and later chief dāʿī himself, al-Rāzī scoffs at Muʿtaṣīlī argument that harks back to Stoic sources: God's mercy would not deny humanity the guidance of leaders inspired with revealed knowledge of God's own will and His plan for human destiny. Al-Rāzī answers that God has provided what we need to know, not in the arbitrary and divisive gift of special revelation, which only foments bloodshed and contention, but in reason, which belongs equally to all. Prophets are the representatives of the divine by a demonic shades of reeless and envious spirits. But or-

As an immanent prin-

cipal, intelligence gave order to the world, stabilising its motions and rendering them comprehensible. But it also gave understanding to the Soul itself, allowing her to recognise her estrangement in this world and seek a return from exile. It is this striving for return that gives meaning to all human strivings in the realm of life.

By such a theory, al-Rāzī insists, can crea-
tionists hope to overcome the elenchus of the eternalists, who deny creation altogether. A quasi-gnostic quasi-Platonic formatio mundi, then, not creatio ex nihilo, is the sole workable hypothesis which al-Rāzī can offer on behalf of the world's temporal origination, as op-
posed to its eternal, Plotinian emanation or its perpetual existence as a Democritean or Epicurean mechanism. Clearly the materialists, al-Rāzī reasons, improperly ignore the life and intelligence that course through nature, giving directed and stable movement to otherwise inert and passive matter. As for the Neoplatonic Aristotelians, their theory of emanation leads them to fudge (as Aristotle had done) on the inertness of matter. For, by treating the natural order as eternal, they seem to make motion and ordering form inherent properties of matter, rather than imparted acts and powers. Neoplatonism, al-Rāzī thinks, requires only the affirmation of a temporal origin, which al-Rāzī unabashedly adopts from scripture and from the concurring authority of Plato's Timaeus, seems to do justice to the fact that nature's order is not intrinsic but imparted; and only a temporal creation does justice to the unimpeded operation of the forces of nature and the self-governing actions of human intelli-
gence and will. For these gifts were given long ago and are not, as in Neoplatonism, timeless imparted without ever really departing from their Source.

But although creation involves a kind of gift, al-
Rāzī cannot treat the act of creation as a sheer act of grace, as many of his contemporaries might wish to do. His view that in this life evils outweigh goods, en-
dorsed by Epicurean concerns over the problem of evil, and by physiological arguments about the ultimate prevalence of pain and suffering over peace and pleasure in all sentient beings, press him toward the gnostic conclusion that creation is a tragedy or mistake. Stopping short of such condemnation, al-
Rāzī treats creation as a qualified evil: Life as a whole and bodily existence in general represent a fall for the life-giving principle, the Soul. But the fall is broken by the gift of intelligence. The crypt of the gnostic image has a skylight, through which streams the light of day. There is an avenue of escape. And the Soul's fall,
neither devised nor forced by God, is ascribed to her spontaneity, not to God's will or wisdom. It was neither coerced and destined nor mandated by the very nature of intelligence, as though it were (as in Neoplatonism) a demand of logic, but it was foreseen and tolerated by an all-seeing wisdom. And the loss it brought about will be overcome.  

satisfactory, since it is rife with traditions traced back to various historical and religious sources and individuals, which have a single purpose: to promote the cause of the Yemen among the lands of God's Elect, and to extol the merits of the capital, as much in the Biblical tradition as in that of the Prophet Muhammad. The conspicuous exaggerations are motivated by this purpose, as for example the claim that the first church of the town was built on the site where Jesus had prayed, or the latter's prophecy concerning the powerful individual who was to come forth from the town at the end of time; such items are to be found in all the chronicles of ancient Islamic cities.

The second elements of the book is bio-bibliographical. It begins with the Companions of the Prophet who came to the Yemen and some of whom were appointed governors of this land.

However the work becomes more systematic with its consideration of the elite of Yemenite scholars and ascetics, prominent among whom is the most illustrious figure of San'ā', Wahb b. Munabbih (d. 1100/1788 or 1144/1732 [q.v.]), an ideal source of Biblical history for later Islamic historians, and thus for Ibn Ishāk, whose universal Muslim history he had anticipated, and one of the principal sources of al-Rāzī. In the main his information is valuable, since many of these scholars are barely known or not at all. Details are provided here of their origin, their connections with the Yemen, the traditions attributed to them or concerning them, material such as is encountered in other Islamic books of the same genre. Unfortunately there are few dates, and, in the case of some of them, nothing more than one or a few trilling traditions. With the importance accorded to the bio-bibliographical element, it is evident that the interest in the work of al-Rāzī, as in that for example of the chroniclers al-Khaṭīb al-Baghdādī (369/1072-7002/1594). For many years he collected information and was in high favour with Shah Tahmasp and was appointed by him kalīntār [q.v.] of his native town. His paternal uncle Kẖādżī Mūsā ibn Abd al-Malik, Djabr al-Dawla. The latter, who reigned for a time, Ghāzīn, Lāhwār, Dīhil, India from the oldest times down to Akbar, Syria, Egypt. Clime IV: Khūrāsān, Balkh, Ḥarāt, Dījm, Māghdāb, Nīshāpur, Sābbāzāb, Isfārān, Isfāhān, Kāshān, Kun, Suma, Ḥamadān, Rayy and Tihrān, Dāmāwand, Astarābād, Tabaristān, Māzandārān, Gīlān, Qazvīn, Adharbājān, Tabrīz, Ardābīl, Marāgha. Clime V: Shārīwān, Gandja, Kẖāẕar, Mārāzānī at-Nahr, Samarkand, Bahkhārā, Fārgāhānā. Clime VI: Turkistān, Fārāb, Yārān, Rūs, Constantinople, Rūm. Clime VII: Buğlār, Sāklab, Yāşiylān, Mādūyāln, Baḥrānī, Eṣfāhān, Kandahār, Ghāzīn, Lāhwār, Dīhil, India. For many years he collected and arranged his material in book form. The final editing of it took six years. The biographies are arranged geographically according to the 7 climes. In each clime the biographical part is preceded by a short geographical and historical introduction which is followed by notes on poets 'islāmī', famous ḍhuyūs, etc. in chronological order. The work is of special importance for the history of Persian literature, as the biographies of Persian poets contain numerous specimens of their works, some of which are very rare. It contains the following sections: Clime I: Yaman, Bilād al-Zanj, Nubia, China. Clime II: Mecca, Medina, Yamāma, Hurmuz, Dekkān, Ahmadnagar, Dawlatābād, Golkonda, Ahmadabad, Sūrat, Bahārān, Kurdu, Khorasan, Baghādād, Kūfā, Najafār, Baṣra, Yazd, Fārs, Sīstān, Kandahār, Ghāzīn, Lāhwār, Dīhil, India from the oldest times down to Akbar, Syria, Egypt. Clime IV: Khūrāsān, Balkh, Ḥarāt, Dījm, Māghdāb, Nīshāpur, Sābbāzāb, Isfārān, Isfāhān, Kāshān, Kun, Suma, Ḥamadān, Rayy and Tihrān, Dāmāwand, Astarābād, Tabaristān, Māzandārān, Gīlān, Qazvīn, Adharbājān, Tabrīz, Ardābīl, Marāgha. Clime V: Shārīwān, Gandja, Kẖāẕar, Mārāzānī at-Nahr, Samarkand, Bahkhārā, Fārgāhānā. Clime VI: Turkistān, Fārāb, Yārān, Rūs, Constantinople, Rūm. Clime VII: Buğlār, Sāklab, Yāşiylān, Mādūyāln. The Calculusa 1918-72 edition of E. Denison Ross, ʻAbdu Muqtedar, A.H. Harley, etc., omits the fourth clime, over half the complete work; complete ed. (poor) by M. U. Memon, 1365; M. U. Memon, Amin Ahmad Rāzī, in Efr, i, 939. (E. BERTHELSON)

AL-RĀZĪ, FAKHR AL-DĪN [see FAKHR AL-DĪN RĀZĪ]

RĀZĪN, BANŪ, the dynasty which ruled the petty state [see MULUK AL-TAWHĪD] of al-Sahlâ [q.v.] (or Albarracln, derived from their name) in al-Andalus [q.v.] during the 5th/11th century. Of Berber descent, but long settled in the peninsula, they remained loyal to the legitimist Umayyad regime of Hishām II al-Mu‘ayyad at the time of the collapse of the caliphate, but finally switched to support of Sulaymān al-Must‘un, who recognised them as governors of their local territory. They survived as independent or semi-independent rulers from ca. 405/1014-15 (possibly as early as 403/1012-13) to Rājid 497/1410, when they were deposed by the Almoravids or al-Murābītūn [q.v.]. The list of their rulers is not entirely clear: the founder of the dynasty, Ḫudhāy b. Ḫalaf b. Lubb (the name may point to intermarriage with local Christian families) Ibn Rāzīn, seems to have ruled until 436/1044-5, and to have been succeeded by a son, Abū Ma‘rūzād b. al-Mahk, Djabr al-Dawla. The latter, who reigned for...
a remarkable sixty years, until 496/1103, is usually identified as Husam al-Dawla in the sources, but the fragmentary text edited by Levi-Provencal as an appendix to Ibn 'Idhârî, vol. iii, that used the title Husâm al-Dawla only before his accession and gives that title as a throne-name to this ruler's successor, Yahyâ, who reigned for the last year of the dynasty's existence. The founder of the dynasty is generally described with the superlatives characteristic of mediaeval sources on the taifa rulers, although he is also said to have been directly involved in the murder of his own mother; the sources seem more impressed with the amounts he spent on the acquisition of singing-girls. A few lines of poetry by members of the dynasty are preserved. The survival of the dynasty, and of the state which it ruled, for so long seems to be the product of a combination of geographical isolation, overall unimportance and luck rather than of any particular skills possessed by the members of this family.

A. Vives y Escudero, Memorias de las dinastías arábigo-españolas, Madrid 1893, 206, no. 1266, assigns one coin (surviving in only a single specimen) to this dynasty, but there seems to be a confusion here with the rulers of Alpuente (al-Bunt [q.v.]) (the coin itself presents other difficulties); A. Prieto y Vives, Los Reyes de Taifas, estudio histórico-numismático de los monedas espoliadas en el siglo V de la hegira (XI de J.C.), Madrid 1926, 107, suggests that some other coins (a total of four specimens of two types recorded by Vives, nos. 799-800 = Prieto, nos. 29-30) of the year 4051/1014-15, struck in the name of Sulaymân al-Mu'tasim and naming his son Muhammad as heir, which bear also the name Ibn Khalaf, may be issues of the first member of this dynasty. The suggestion seems plausible.

(D. J. WASSERSTEIN)

**RAZIN b. MU'AWIYA**

Abu 'l-Hasab b. 'Ammar al-'Abdârî al-Sarakush (d. 535/1140), Andalusian traditionist. Of unknown date of birth, his nîshâc indicates that he probably was born in Saragossa. The biographical works do not record any data about his life in al-Andalus. If he did live in Saragossa, he may have left it when the Almoravids captured the town in 503/1110, in which case he must have belonged to those who did not welcome the new lords of the Peninsula. According to the biographers, he may have left the town after the Christian conquest of 512/1118. The 6th/12th century marks the beginning of the wave of Andalusi migrants to safer lands. It may also be that Razin b. Mu'awia's travel to the East was not motivated by either political or military reasons, but simply by the desire to perform the riha fi talab al-'lim and the pilgrimage. He settled in Mecca, where he died at an advanced age. Nothing is known about his Andalusian teachers, but his teachers in Mecca were Abu 'Abd Allâh al-Husayn al-

- **TABARI, with whom he studied Muslim's Sahih, and Abu Mâktûm 'Isâ b. Abî Dharr al-Harawi, with whom he studied al-Bukhârî's work. Abu Mâktûm was the son of one of the most influential transmitters of al-Bukhârî's Sahih, whose risâya was well known in al-Andalus. Razin b. Mu'awia wrote his two known works in Mecca: a history of Mecca, which seems to have included also information on Medina (Kitâb fi akhbar Makka, also called Akhbar Makka wa'l-Madina wa-fadlihimd), and al-Tâjrid fi 'l-dâ'âm bayn al-Sâhab al-sitta or Tâjrid al-Sâhab, a collection of the traditions common to the four sources of Bukhârî, Mâlik, Abû Dâwûd, Tirmidhi, al-Nasâ'î and Mâlik's Sunna. The inclusion of Mâlik's work among the canonical collections of hadith shows clearly the Western Islamic background of the author. The exact text (mentioned in GAL) remains unpublished. The Tâjrid is one of the sources of Majdî al-Dîn Ibn al-Ahârî's Dâ'îmî al-usâlî, as Ibn al-Ahârî himself (d. 606/1209) explains in his introduction. The interest of Razin b. Mu'awia's work can be deduced from the following example. The controversial tradition which runs 'whosoever spends liberally on his household on the day of 'Ashurâ', God will bestow plenty upon him throughout the remainder of the year' (mau wasâ'â 'alâ (nafsîhî wa-)ahlihil 'Ashurâ) wasa'â 'alâ Allâh 'ayshîhî (wa-(alâdîhî sîrîr (al-nafaka) sana/tula sanatihi), mentioned among others by Sulaymân al-Mu'âqilât al-Tâjrid fi 'l-djarn*- bayn al-Sihdh al-

- **Akhbâr Makha wa'l-Madma**, which seems to have been written in Saragossa, it may have been left there after the Christian conquest. Otherwise, it is possible that Razin left the town when the town was captured by the Christian forces. It is in Razin's work where an explanation for this "od-dity" is to be found. Two possibilities can be taken into account. Either Razin included it because he agreed with its contents, disregarding its absence in the canonical collections; or else he found the tradition in the version of one of those collections at his disposal. The latter possibility can be sustained by evidence on the circulation of different versions of al-Bukhârî's collection. Among Razin b. Mu'awia's pupils the following are mentioned: the ascetic Ahmad b. Muhammad b. Kudâmâ (of the famous family of the Banû Kudâmâ), Ibn 'Asâkîr and the judge of Mecca Abu 'l-Mu'azzafar Muhammad b. 'Ali al-Tabari, who wrote to Ibn Bashkuwâl informing him of Razin's death.

**RAZIN B. MUCAWIYA — REFIFI**

**REĐIĒ'T-ZÄDE MEHMED DÎRLÂL BEY (1254-1300/1838-82)**, Turkish writer and poet, and elder brother of Redjäezade Mahmud Ekrem Bey [see EKREM BEY]. He had a moderately successful administration, entering the Translation Office (*Teràiime Odasi*) of the Sublime Porte in 1270/1853-4, being appointed in 1279/1862-3 chief clerk to the embassy in St. Petersburg, becoming assistant secretary of Aleppo in 1282-1865-6, when the latter became wali of Aleppo, and finally chief secretary of the provinces of Kastamonu (in 1288/1871-2) and Aydin (in 1294/1877). In 1298/1881 he was dismissed from his last post.

His poetry has apparently never been published. Some specimens can be found in *İnal* (see Bibl.). He belonged for a while to the salon of Arif Hikmet Bey [q.v.], the last great representative of the classical dîwan school, and his poetry seems unaffected by the new trends personified by his brother. He bore the name for these is Dhewkl, while his serious *qezel* "jesting poems." His pen-name for this is Djkewl, while his serious *qezel* are signed Dîrlâl. He also composed some poetry in Persian (a *mehammad* in *İnal*, 205).

**REĐJE PASHA.** Topal (d. 1041/1632), Ottoman Grand Vizier under Sultan Murâd IV [q.v.]. Of Bosnian origin, he began his career in the *bostangâ* corps and attained the high office of *bostangâ* in 1041/1632. Shortly after, he was appointed commander-in-chief in the Black Sea. With his squadron he defeated a Cossack fleet of 600 *şaykas*. Redjeb Pasha was *Kapudân-pasha* 1032-5/1623-5. Commanding the fleet in Radjab-Ramadân 1033/May-July 1624 at the time of a revolt of the *Kân* of the Crimea Mehmed Giray III (second reign 1032-6/1623-7), he was able to hold Kef [q.v.].

Next year, he again defeated a Cossack force of 350 *şaykas* off Kara Harman (to the north of Köstende/Constanta [q.v.]). In 1035/1626 he organised a revolt of Janissaries in the capital and gained the position of *kâtâm-mâkâm* instead of Gürçû Mehmed Paşa [q.v.]. Provoked by the dismissal of the Grand Vizier Khosrew Pasha [q.v.], in 1041/1631 he incited another uprising of Janissaries and Sişâhs of the Porte who were of Bosnian and Albanian origin (1042/1632). This violent episode led to the murder of Grand Vizier Hâfiz Ahmed Paşa [q.v.] in front of Murâd IV and the massacre of a number of the sultan’s favourites, rivals to Redjeb’s faction. In this way, he became Grand Vizier on 19 Radjab 1041/10 February 1632. Murâd IV, however, soon made an end to this *zorba* régime and had Redjeb Paşa executed inside the seraglio on 28 Shawwl 1041/18 May 1632 (von Hammer, following Peçewi, has 17 May); this execution meant the beginning of Murâd IV’s personal rule. Redjeb Paşa was married to Djezhver Khân Sülân, a daughter of Ahmed I and earlier the widow of Dâmed Mehmed Paşa Öküz [q.v.] and Hâfiz Ahmed Paşa. He had a daughter born in 1040/1630.

**REFIFI**, an Ottoman poet and Hurufî [see HURUFİYYA]. Of Refifi’s life we only have a few hints from himself, the Ottoman biographers and historians do not seem to mention him at all. He himself describes how in his youth he studied many branches of knowledge but did not know what he should believe, and how sometimes he turned to the Sunna, sometimes to philosophy and sometimes to materialism. He often travelled a great distance to visit a particular scholar but always was disappointed. The poet Nesîmî [q.v.] was the first to teach him the grace of God and the truth, and ordered him to teach this truth in his turn to the people of Rûm, and for this purpose he had to speak in Turkish. He therefore wrote his *Begarî-nâmê*, “the message of joy”, which he finished on the first Friday of Ramadân 811/18 January 1409. This work is not yet printed; it is quite short and written in the same metre as Ashik-pasha’s *Gharîb-nâmê*, a *remêl* of six feet with irregular prosody. The Hurufî teaching is expounded in a very prosaic style, the merits of the names and letters, the sacred materialism. He often travelled a great distance to visit a particular scholar but always was disappointed.

Duties of the re's efendi. As secretary of state the re's kept records of memoirs and reports (telkîs and takbîr) presented to the sultan by the Grand Vizier acting as representative of the government and of the Divān. These documents which were prepared by the amelî-ı divân-i hamîyân or amelî (referendar or reporter of the Imperial Divān) were brought in a bag
(kise) kept for the purpose to the ceremonial sittings of the Diwan by the re'is himself who handed them to the Grand Vizier. After being read, they were given to a special officer, the telkhisdjî, whose duty it was to present them to the sultan.

As chancellor, the re'is had a kind of jurisdiction over all the civil functionaries and was the immediate head of the department of the Imperial Diwan (diwan-i hümâyûn kâlemî). This chancellery was divided into three offices (oda or sergi):

1. the beylikt, the most important, saw to the despatch of imperial rescripts (firmân), orders of the viziers, and in general all ordinances (esâmid) other than those of the department of finance (defterdâr da'ttâresi). This office kept copies of them, as did the Grand Vizier also. Ordinances bearing on the back the signatures of the clerk, of the chief editor (mâmeyzî), and of the head of the office (beylîkâ), were submitted by the latter to the re'is, who placed his sign (resid) upon them and, if it was a firmân, sent it to the nishândjî for the tugrâ (q.v.) to be placed upon it. The beylikt in addition retained the originals of civil and military regulations (kânûn or kânûn-nâmê) (usually elaborated by the nishândjî), as well as of treaties and capitulations (âdâm-nâmê) with foreign powers. The re'is had to consult these treaties, notably when certifying the der-kenâr or 'marginal' answers put by his subordinates on the requests or notes, known as verbal (takrîn), which the ambassadors addressed to the Grand Vizier. It is this side of his activity which, gradually becoming more and more important and absorbing, ended by making the re'is a Minister of Foreign Affairs.

2. office of the tâbûr or 'annual renewal' of the diplomas of the governors of provinces (beïlî [q.v.]), of the brevets of the melads or judges in towns of the first class (tashâ'il), of the brevets of the timarholders or holders of military fiêds (dâbî firmânî).

3. office of the re'âs or 'provisions' of different official acts, as well as of the orders for pensions from the treasury (serej) or from waqîfî (see for the details of the organisation of this office, Mouradgea d'Ohsoss, vii, 11).

The re'is accompanied the Grand Vizier to the audiences which the sultan gave him and to those which the Grand Vizier himself gave to ambassadors. He shared with his master the midday meal, as did the cawûsh bâshi [see cawush], and the two tekkeredjîs, except on Wednesdays when these two were replaced by the four judges of Istanbul.

In the official protocol, the re'is had the same rank as the tawûsh bâshi, with whom he walked in official processions, before the defterdâr (which showed he was of lower rank than the latter).

The elkab or epistolary formulae to which they were entitled are found in Feridân, Mânûshî, 10. They were the same as for the askâs of the stirrup [see rikâb-dâr] and the defter emîni. For the dress of the re'is, see Brindesi, Anciensi costumes turces, pl. 2; Castellàn, iv, 107.

According to Mouradgea d'Ohsoss, the re'is used to act as agent for the kâmîn of the Crimea.

Administrative career of the re'is. The re'is, like all Ottoman officials, were chosen by the sultan or Grand Vizier as they pleased, but, except in case of appointment by favour, they followed a fixed line of promotion (tarîkî) in the administration. It was in the administrative offices, i.e. among the khârâqadîn (Persian pl. which was given as an honorific title to the principal clerks or kadîn-i hâmîd or kalem dâbhîlî), that this career was spent.

In examining the Seferîn ul-rû*esa'î of Ahmed Resmi, we find that up to the re'is Boynal Mehmed Efendi (Pağha) (d. 977/1569-70), there is no information available about the career of the re'is, but starting with him we find that the re'is were regularly chosen from among the former tekkeredisis of the vezîris or of the Grand Vizier. From Şeyhûz-zâde 'Abdi Efendi (d. 1014/1605-6) onwards, the re'is were mainly taken from the vezîris mektubâxis or private secretaries of the Grand Vizier. These secretaries were themselves at the head of an office (oda) which contained a very small number of officials (khalîfî or kalpa, pl. khalîfî), of which there were only two between the years 1090/1679 and 1100/1689. When the number increased (at a later date there were about 30), the career of the future re'is was as follows: khalîfî in the office in question, called also mektubî-tî jâidi-i aîdî osâlî, then ser-khalîfî or baş-kalsa 'chief clerk', then mektubâxî. The post of mektubâxî was much sought after. It brought its holder into close contact with the Grand Vizier and it was then very easy to advance oneself. More rarely, the future re'is rose through the similar but less important office of secretary to the lieutenant to the Grand Vizier or Kahya Bey (kethûda kâbî osâlî).

The rjâsîet did not mark the end of a career, but gave access to still higher posts (see sâiğânî) for the old rules of promotion by which the re'is became nishândjî. It was one of what were known as the six 'principal dignities', menâsîbî sitte, namely, the nishândjî, defterdâr, re'is ul-kütab, defter emîni, şîkkî-i thâniî defterdâr, şîkkî-i âlîthîk defterdâr (Ahmed Râsîm, Ta'rikh, 756).

According to the Nâşihat-nâmê (39-40 of the French translation), the re'is was under the authority of the Grand Defterdar (for financial matters only).

Increasing importance of the office of the re'is. The growing influence of the re'is is explained by the increasing importance of foreign policy in Turkey (including the so-called 'Eastern Question').

Down to the end of the 10th/16th century, the nishândjîs were certainly superior to the re'is; they controlled and even revised the orders and decisions of the diwanân (askâm), but from the 17th century onwards, re'is like Celebi Mehmed Şâh Efendi, Lamî Ali Celebi and Hûkûm Efendi showed a certain lustre on their office. From 1660/1650 the incapacity of certain nishândjîs precipitated the decline of their office in spite of the ephemeral efforts by Grand Viziers like Şehîd 'Ali Pağha and of the nishândjîs appointed by him (Réjîd Efendi and Selîm Efendi). It was in this period that the office of beyliktî was created (see above).

The Ottoman protocol (teşrifât) was nevertheless still to retain for a long time traces of the originally rather subordinate position of the re'is. For example, they did not sit in the office of the Diwan itself, called Diwan-khânî (in the Top Kapu Sarayî or 'Old Serai'), but remained seated outside of the room in a place called re'is tağhâsî, 'the bench of the re'is', where there were also seats for certain other officials to wait upon. In the formal sittings, even in those like the distribution of the sâîqan (sul🐾îfî) which took place in the presence of foreign ambassadors, the part played by the re'is was rather limited. He carried in, with slow step and the sleeves of his āst turned up, the bag containing the telkhâsî (see above). He kissed the hem (tekî) of the Grand Vizier's robe, placed the bag on his left, kissed the hem of his robe again and withdrew to his place. He came in again to open the bag, handed the documents to the Grand Vizier, took them back from him to fold them (baghâmak), sealed them and gave them to the telkhâsî. If he was unable...
to be present, the bag of the telkhis was handed to the Grand Vizier by the biiyuk ... to Chief Inspector for schools in the Ministry for Education. He was sent to Paris to represent Turkey at UNESCO.

Things were changed at the reform of the Düaon effected at the beginning of his reign (1792) by Selim III, desirous of limiting the power of the Grand Vizier. The old Düaon consisted of six vezirs of the dominions (only one consultative voice; see k lạ vezzir), of the Muftî (Shaykh-ul-İslâm) and the two kazzarks. The new Düaon was to consist of 10 members by right of office and others chosen in different ways (about 40 in all). The members by right of office were the Kablya Bey, the Re'is Efendi, the Grand Defterdar, the Çelebi Efendi, the Tersanc Emîni, the Çavuşu Başçi, etc. (Zinkeisen, Geschichte, vii, 1863, 321).

The office of re'is tended more and more to become the Ministry of Foreign Affairs of the Sublime Porte, parallel to the post of Kablya Bey (Interior).

Suppression of the dignity of re'is. The title of re'is was suppressed by the khaßî-i hümâyûn of Sultan Mahmûd II addressed on Friday 23 Dhu 'l-Ka'da 1251/11 March 1836 to the Grand Vizier Mehmed Emin Paşa. The Turkish text will be found in the Sâlâmâne-i Emeâliyye, the Sublime Porte, 1879-1922, Princeton 1980; idem, Ot- tomân civil officialdom: a social history, Princeton 1989; IA, art. s.v. (Halî Ílîcî). On the sâhîh al-düaôn or ra'îs (!) al-düaôn, see Kâkâshâhî, Şûb al-a'zâhî, vi, 101 ff.; vi, 14, 17-18, 50; H. Massé, Cede de la Chancellerie d'État... d'Ibn al-Safrî, in BIPG, xi, 79 ff. Among the Sâhîbîs, the offices of sâhîh al- düaôn and peraûne were quite separate. Ibn Bibî, in Houtsma, Recueil d. textes..., ii, 105. (J. Deny)

REMBAU (Ramong), a traditional district (luak) in Negri Sembilan, Malaysia. It is important in Islamic studies for two reasons.

First, the social structure of the Malay-Muslim population is based on matrilineal descent groups (suku), in which succession to office and inheritance of property descends in the female line. This has serious repercussions for Islam’s rules of inheritance which are widely avoided, or at least compromised. The Malay population is otherwise devoutly Muslim. The obvious parallel is Minangkabau [q.v.] in Sumatra.

Second, while the Undang (taqiq) of Rembau qualifies for his office by descent in the matrilineal line, he is also a component part of “the Ruler” of the State of Negri Sembilan along with three other “Ruling Chiefs” and the Yang di-Pentuan Besar. As such, he forms part of a single constitutional ruler for the State. One of the duties of the Ruler is to protect the religion of Islam, and this has difficult repercussions for Islam’s rules of inheritance which are widely avoided, or at least compromised. The Malay population is otherwise devoutly Muslim. The obvious parallel is Minangkabau [q.v.] in Sumatra.

REŞAD NÜRÎ (REŞAD NÜRİ GÜNTEREK), late Ottoman and modern Turkish author, born in 1889 in Istanbul, died in 1956 in London. He was the son of a military doctor, Nüri, and Lutfiyye, the daughter of Yawer Paşa, governor of Erzurum. He attended Galatasaray Lycée in Istanbul and, later, the Frères High School in İzmir. After graduating from the Faculty of Letters of Istanbul University in 1912, he worked as a teacher and schoolmaster in Bursa and in several lycees in Istanbul (Veysel Efendi, Galatasaray and Enreköy), teaching French, Turkish literature and philosophy. In 1927 he became an inspector for the Ministry of Education. In 1939 he was elected to the Parliament as Halk Partisi representative for Çanakkale. In 1943 he went back to the Civil Service, and in 1947 was promoted to Chief Inspector for schools in the Ministry for Education. He was sent to Paris to represent Turkey at UNESCO.
and as the Turkish educational attaché in France. He retired in 1934, and died in London on 7 December 1956, where he was receiving treatment for cancer.

Reshid Nuri started his literary career by publishing unsigned poems. He attracted attention during the First World War with his articles on Turkish literature in *La Pensée Turque* and the newspaper *Zamân*. These were followed by his story *Eski ahbâb*, published in Diken (1917), and a novel *Ahlâbevlerin içişleri* (1918), in Zamân, and his first play, *Hakikâti Hâlâ* (1922). *Hâlâ* was not liked by the Istanbul theatres, Reshid Nuri changed it into a novel and it was published as a serial with the title *Çalkıyûh* in Waktî newspaper (1922); in this form, it was read so widely that he became famous. In 1936, his travel experience in literary form was published with the title *Anadolu notları*. During 1942, he wrote satire, using the pseudonyms "Fire-Fly" and "Cicada" for the journal *Kalebok* which he published with Mahmût Yesâri, Münif Fehmî and İbnürelük Ahmed Nuri. In 1947 he started to publish a daily newspaper *Membrelet* which aimed to defend and express the views of the Turkish republican régime, but it did not last long. Between the years 1918 and 1955 he not only published books but also wrote articles in numerous literary journals. Resad Nuri is the most popular author of modern Turkish literature; his novel *Çalkıyûh*, published in this form, it was read so widely that he became known simply as "the author of *Çalkıyûh*". This popularity is due to the fact that he was able to combine the eastern and western traditions of fiction in his works. The clash between the individual and the society is the most recurrent theme of his works, but he treated even the villains of his novels as human beings. His fame is due to the fact that he was able to combine the eastern and western traditions of fiction in his works. From the linguistic point of view, he is often known simply as "the author of *Çalkıyûh*".

This popularity is due to the fact that he was able to combine the eastern and western traditions of fiction in his works. His fame is due to the fact that he was able to combine the eastern and western traditions of fiction in his works. However, he reflects the problems, beliefs, ideas, dreams, feelings of individuals from different sections of society without imposing an ideological framework on the reader. From the linguistic point of view, he is often known simply as "the author of *Çalkıyûh*". This popularity is due to the fact that he was able to combine the eastern and western traditions of fiction in his works. From the linguistic point of view, he is often known simply as "the author of *Çalkıyûh*".

**Bibliography:**

Reshid Pasha, Mustafâ (1800-1858), Ottoman diplomat, statesman and reformer.

Reshid was born in Istanbul, on 13 March 1800, but his family originally hailed from Kastamonu. His father died in 1810, after which he grew up under the protection of his uncle, Ishartal Seyyid Pasha. He studied at a medrese, but did not graduate (i.e. he did not get an *iqâza* [*q.v.*]). Thereafter, he was trained within the scribal institution. Reshid took part in the campaign against the Greek insurgents in 1821, as seal-keeper of the commander-in-chief, Seyyid ʿAli Pasha. During this campaign, he saw for himself the hopeless condition of the Ottoman army. When Seyyid ʿAli Pasha was dismissed, his followers, among them Reshid, according to the Ottoman tradition of *imaginâb*, were also forced out of office. Reshid had some trouble finding a new position, but after a while landed a job at the correspondence office of the Porte. During the Ottoman-Russian war of 1828, Reshid served as army clerk. The reports he sent to the capital in this capacity drew the attention of the sultan, Mahmud II [*q.v.*], who was looking for capable and reform-minded servants to implement his reforms. Reshid was now taken into the *Amâdi Odasî*, the secretariat for incoming correspondence of the Porte. In 1829, he was attached as secretary to the Ottoman delegation to the peace negotiations with the Russians in Edirne. By now, he seems to have belonged to the same direction. He joined Pertev Pasha in July 1829, as the representative of the Ottoman army. Reshid was now taken into the *Amâdi Odasî*, the secretariat for incoming correspondence of the Porte. Reshid Pasha, Musjafa

Popular in Istanbul, but he managed to survive it both physically and politically. In 1834 Reshid was sent to Paris as special envoy with a mission to regain Algeria from the French. While it was bound to be unsuccessful in this, he did manage to loosen the ties between Paris and Muham- mad ʿAli. He returned to Istanbul in March 1835, but was sent to Paris again three months later, now as a full ambassador. After a year in Paris he was transferred to London. There, his crucial achievement was to gain the unequivocal support of the British govern- ment in the conflict with ʿAli. From now on, Reshid would work closely with the British government almost continually for the rest of his life. In July 1837 he was made a marshal (mushir) and given the position of Minister of Foreign Affairs. After a tour of factories in Britain, he returned to Istanbul to take up his new job. Early in 1838 he made a Pasha. Foreign affairs remained his preoccupation, but we now see Reshid Pasha initiating reforms in other spheres, too (such as the first attempts at a modern census). For the next thirty years, the Foreign Office would remain deeply involved in the wider programme of administrative, legal and educational reform in the Ottoman Empire. This reflected both the importance of European, notably British, diplomatic pressure in favour of reform and the fact that the Foreign Office was the greatest repository of knowledge about Europe and its ways.

In August 1838 Reshid was sent to London once more, to try to conclude a defensive alliance with Brit- tain against Egypt. The alliance did not materialise, but Reshid did receive guarantees of British support. As part of the effort to gain British support, a com- mercial treaty opening the Ottoman market to British goods and promising the abolishing of state monopolies was concluded on 16 August 1838.

After the death of Sultan Mahmud II in the midst of the second Egyptian crisis on 1 July 1839, Reshid returned to Istanbul. There he took a leading part in the promulgation of the Gülkhâne edict (see ʿKhatt-i Humâyûn), which promised the subjects of the Sultan security of life, honour and property; an orderly system of taxation and conscription; and—in some- what ambiguous terms—equality before the law ir- respective of their religion. Like the trade treaty of a year before, the edict was clearly meant as an attempt to gain foreign, and especially British, diplomatic sup- port in the conflict with Egypt, but it also reflected the genuine concerns of the reformist circles around Reshid. It is hard to say whether the edict was instru- mental in convincing British policy makers, but the Egyptian crisis was solved in the Ottomans' favour when British military intervention forced the Egyptian troops to evacuate Syria in late 1840.

Muhammad ʿAli now clearly identified Reshid as his main opponent, and he used bribes to have him removed from the post of Foreign Minister in March 1841. Reshid was sent to Paris once more, but soon returned, ostensibly for health reasons. All his efforts to regain his position failed, however (he was only of- fered the post of governor of Edirne, which he refused), and he had to return to France in 1843. There he occupied himself primarily with theAnyway, this approach is not great for building a strong credit history. It's recommended to use a credit card responsibly, paying off balances on time to avoid any negative impact on your credit score. Instead, focus on maintaining a solid credit history by consistently paying bills on time and keeping your credit utilization rate low. By doing so, you'll be better positioned to achieve your financial goals in the future. A good rule of thumb is to keep your credit utilization rate below 30% of your credit limit. This way, you're showing lenders that you can manage credit responsibly. credit score, which has both short-term and long-term implications for financial decisions. A high credit score can lead to better interest rates on loans and higher credit limits, while a low credit score can result in higher interest rates, limited credit access, and negative impacts on employability. To maintain a good credit score, it's essential to make timely payments, keep debt levels low, and check your credit report regularly for any inaccuracies or fraudulent activities. It's also important to understand how different factors affect your credit score, such as payment history, amounts owed, length of credit history, credit mix, and new credit. By being informed and proactive in managing your credit, you can improve your financial health and secure better deals on credit products. In summary, it's crucial to maintain a healthy credit score to achieve financial freedom and secure better financial opportunities. credit score can impact various aspects of your life such as obtaining a mortgage, car loan, or even employment opportunities. A good credit score not only affects your ability to access credit but also influences the interest rates you are offered. It's important to keep your credit utilization rate low, which means keeping your balance below 30% of your credit limit, to maintain a high credit score. This practice demonstrates your ability to manage credit responsibly and can lead to better financial opportunities in the future. Additionally, regularly checking your credit report can help you identify and correct any issues that may negatively impact your credit score. In conclusion, maintaining a healthy credit score is crucial for securing better financial deals and opportunities. In the end, it's all about building a good financial habit that will benefit you in the long run. In conclusion, maintaining a healthy credit score is crucial for securing better financial deals and opportunities. In the Ottoman Empire, it was
hukuk-l sher^iyye.

Active from the Islamic states, it was
established in pre-conquest taxes and duties under the
term rüsüm. Even the pig tax, resm-i qhnniz, was
accepted in the Balkan provinces. Although they were
often called bd^at, innovations against the religious
law, such taxes were distinguished into bid^at-i mårifa,
those customarily recognised, or bid^at-i ma^rufe, those
abolished by the sultan’s specific order. Exactions
taken illegally by local authorities are called tekâfîf-k
şakka, or onerous exactions and, when discovered,
were prohibited by the sultan.

system in the Ottoman empire. Its nature, combining a hearth-tax and land-tax, confused bureaucrats as well as scholars. It must be the origin of the djizya.

The resm-i çift was a compound tax which included cash equivalents of various feudal services (see İnalıç, Osmanlılarda raiyet ruşūmu, and idem, Village, peasant and empire).

The resm-i çift system included resm-i çift, resm-i nim-çıft, resm-i bendāk, resm-i çiftli bendāk, resm-i ek validates bendāk, resm-i musgārat, resm-i kara, resm-i şahāb, resm-i bīltā, resm-i dušāh, resm-i zamin, resm-i çiftbozan, resm-i yasalak and resm-i kişhlak.

İspende or ispenţe, from Slavic yovanisa, a feudal peasant household tax in the pre-Ottoman Balkans, was incorporated into the Ottoman tax system and extended into eastern Anatolia from 1540 onwards. Every non-Muslim peasant household or individual paid it at the rate of 25 akĉes. Abu 'l-Suud understood it as kharādi-muvaţaza or "fixed kharādi". In the 1540s, the Ottomans identified it with resm-i kāpuru or gate-tax in Hungary, raising its rate to fifty akĉes, about the value of one gold piece in Ottoman silver coins in the period. Collection of resm-i çift, ispendede and djizya at the same time came to triple the original hearth-tax. Such double taxing, due to the confusion about the origin of the tax, often occurred in the newly-established régimes.

The resm-i filori [q.v.], originally a one-gold piece tax applied to the Eflaks, non-Muslim nomads of the Balkans, was another composite tax paid by household.

The resm-i bādi-i hava, evidently from the Byzantine arakon, also called payyārāt, was another composite tax which included occasional taxes such as ğnahām or fines, resm-i šarāāne, also called resm-i āderī, marriage-tax, resm-i āghāhāniye, field-guard fee, and resm-i tapu or fee on land transfers. The above-mentioned composite taxes of pre-Ottoman origin, namely resm-i çift and its derivatives, ışpende and bādi-i hava, were paid directly to the sipahi as part of his timār [q.v.].

The Ottoman tax system also allowed government agents to collect for themselves a small fee for their services. It was called kāhidmet akĉes, service-money or ma'ṣīḥet, livelihood. In later periods many such fees were returned to the treasury. However, in the 17th century when timār revenues drastically lost their value, government agents in the provinces invented a host of service fees (see İnalıç, Military and fiscal transformation).

The sultan's favour, which established privileges and benefits for persons, was thought to be reciprocated by payments. So, an important category of ṛasūm, including the resm-i berd, diploma fee, or resm-i itthikāre, certificate fee, brought to the treasury quite a sizeable revenue.

The sale of offices which became widespread from the end of the 16th century onwards, must be interpreted in the same way.

In the courts, Kâdîs took several resms for their services. Their abuses caused widespread complaints, and from time to time Ottoman rulers issued regulations fixing the rates of court fees.

REWân, Eriwan, the capital city of Armenia, possibly identical with the town called Arran by the Arab geographers Ibn Rusta and Ibn Fakih, which in Armenian is called Hrastan and Rewân in Ottoman sources.

In Islamic times, the town seems to have become important from the mid-10th/16th century onward. The city is located close to the Armenian patriarchal seat of Echmiadzin, often referred to as Uğkilise "Three Churches" in Ottoman and European sources, even though there are actually four churches. In the 10th/16th century, the town formed part of Şafavid Persia, but was raided several times by Ottoman forces. In 990/1582 Rewân was conquered by the Ottoman sâdar Ferhâd Pasha, who ordered the construction of new fortifications. In the reign of Şâh ʿAbbâs, Rewân was taken back by the Şafavids and in 1025/1616 besieged by the Ottomans, who were however unable to take the city. In 1041-2/1632 the Ottoman Sultan Murâd IV retook Rewân and had a famous kâlkh, the Rewân Köşkü, added to the Topkapı Sarayî to commemorate the event. However Rewân was soon after reconquered by the Şafavids. According to the treaty of Kaşr-iŞîrin (1048-49/1639) the city thenceforth remained in Persian hands, apart
from a brief Ottoman interlude which ended in 1159/1746.

From the 11th/17th century date the first extensive descriptions of Rewan. Ewliya Čelebi visited the place in 1057/1647, and describes the sieges and counter-sieges of the reign of Murād IV, who had taken a liking to the former khan of Rewan, Emirgin. Ewliya felt that the walls of Rewan, consisting of but a single ring, were in no condition to resist a serious siege. At the time of his visit, those parts of the walls erected by Ferhād Pāsha could still be distinguished from the higher sections built by the Persian governor Tokmak Khan. The city was entered by three strong gates, and well-stocked with weaponry. Among the officials present in Rewan Ewliya mentions the kādi, along with a full complement of civilian and military officials. At certain times the city was governed by a khan of khans.

Another extensive description was provided by the French jeweller and merchant J.-B. Tavernier, who visited Rewan in 1665-6/1655. He notes that the province was one of the richest in the Safawid empire, both on account of transit trade and the fertility of the area, which permitted the cultivation of rice. Raw silk was here collected for export, and merchants enjoyed the privilege of paying a flat rate, without opening their bales. Tavernier claims that the old city had been ruined during the Ottoman-Safawid wars, and a new one built on the boards of the river Zengi Čay; this may be compared to Ewliya’s statement that the town had only been founded in the reign of Timūr Lenk. Tavernier refers to an active commercial suburb equally mentioned by Ewliya Čelebi, where merchants and artisans, particularly Armenians, resided. He also describes a stone bridge with chambers underneath, where the khan sometimes spent the hottest hours of summer.

About a decade later, Rewan was described by J. Chardin, as a large city with numerous gardens and vineyards. The citadel contained about 800 houses, inhabited only by Persians, while Armenian shopowners left the enclosure in the evenings. The garrison amounted to 2,000 men. There was a second fortress, by the name of “Quetchy-kala”, with a double wall and cannons, suitable for another 200 men. The core of the city was located at a cannon shot’s distance from the citadel. It contained a mayor surrounded by trees, where parades and games were held. The principal mosque was located in the market area, and there were also several Armenian churches, built partly underground. Chardin praises the city’s public baths and caravanserais, the most recent of which had been built by a governor; the gallery was filled with shops selling a variety of textiles, and there were 63 apartments along with stables and storage spaces. This building is probably identical to the Gorji (Georgian) khan of later times, where goods from Russia and Georgia were usually stored. In spite of the cold climate in winter, the area was famous for its grapes and wine, the Armenian peasants burying their vines at the approach of winter. In the summer of 1113/1701, Joseph Pitton de Tournefort also visited Rewan; however, his account of the city only repeats those of his predecessors. After his expedition to the Caucasus in 1217-1803, General Tsitsianov attempted to force the khan of Rewan to abandon his Persian allegiance and submit to Russia; however a siege in 1219/1804 ended in failure. Between 1225/1810 and 1233-4/1818, the diplomat J. Morier visited Rewan and recorded the post-war atmosphere in the city; the houses in the citadel for the most part lay in ruins, and the citadel mosque had been converted into a storehouse. According to a register prepared at this time by Hasan Khan, brother of the current sardar, Rewan and its villages contained a total of 18,700 males between the ages of 15 and 50, which according to Morier’s assumption, corresponded to a population of 74,800. A separate register recorded 5,000 Kurdish families, which brought the total up to about 100,000. Official revenues collected in the area amounted to 168,000 tūmāns, and consisted mainly of rural dues, customs duties yielded 12,000 tūmāns, and duties from the salt mines of Kolpi 6,000. In certain areas, one-third of the rural produce apparently was collected as taxes. The sardar monopolised the cotton crop and sold it to Georgia, importing Georgian fabrics in return.

During another Russo-Persian war (1241-3/1826-7) Rewan was again besieged, and local notables arranged for a surrender to the forces of General Paskevich; Russian domination was confirmed by the treaty of Turkmancay in February 1828/Shāh-bān 1243. Extensive data on the urban resources and population of Rewan date from 1244-8/1829-32, when the new Russian administration conducted a detailed survey. According to this document, the city had 7,331 Muslim inhabitants of both sexes, along with 3,937 Armenians. Among the latter, 1,715 were recent immigrants from Persia. The total urban population amounted to 11,463 persons in 2,751 households, distributed over three large quarters encompassing 1,736 houses. Apart from the Muslims who had left the khānate after the Russian conquest, the newly-acquired Russian province contained a population of 115,152 persons in 20,932 households, of which 61,018 were males. The Turkish nomad population before the Russian conquest had numbered more than 20,000; about 10% must have left the area immediately following the war, as the Russian survey counted only 18,287.

At the time of the Russian takeover, there were 851 stores in Erivan; 543 formed part of the bazaar, while 252 were attached to the city’s seven caravanserais and another 32 located in the fortress. The three quarters making up the remainder of the city must therefore have been all but exclusively residential. There were eight mosques with attached madrasas (one of them, the Shehri Dāmash, with its Turkish inscription of 1098/1687), and seven Armenian churches, while the ten public baths were mostly part of mosque or caravanserais complexes. Imports from Persia included silk, coffee, sugar, indigo, cotton, wool, dried fruit, raisins and condiments; while from the Ottoman Empire came wool, cloth, butter, coffee, wine, fruit, nuts, wood and tobacco. Exports to Persia were limited to cloth and grain, while the Ottoman Empire bought raisins, indigo, silk and cotton. From Georgia, cloth, wine, tea, fruit and nuts as well as wood were imported, while wood and salt were conveyed there. Russian and other European imports were usually luxury products. Merchants were numerous both among the Muslim and the Armenian population; among the Armenian immigrants from Persia, there were 105 weavers and 64 carpenters established in the city proper. In addition, women weavers worked at home; the survey records almost 3,000 looms for the khanate in its entirety.

An impressionistic account of Rewan in the 1240s-1250s/1830s was published by F. Dubois de Montpéreux. He described the reception hall of the last Persian sardar, decorated with mirrors and wall paintings of Shāh ʿAbbās, Nādir Shāh, Fatḥ ʿAli Shāh, the heir-apparent ʿAbbās Mīrāẓa, the sardar himself and various mythological figures. Dubois also has published sketches of several of these paintings. The sardar’s harem at
At this time, the city had acquired a university, a state library and other institutions of higher learning. Of the monuments from the Persian period, there remained the stone bridge over the river Tundja, which flowed into the city from Anatolia on the other, the intervention of Red Army troops ensured the establishment of a Soviet Socialist Republic, again with its capital in Yerevan. By 1932, the city’s population had grown to about 100,000. New town quarters had been built to accommodate a large number of new arrivals, many of them refugees from Anatolia. dent of the kitchen (matbakh emini), then entrusted with the administration of Aya Sofya and of the hot baths (hamam). With the wealth he accumulated, he built a mosque complex (no longer standing) in the Kirk Čeğma quarter of Istanbul. This mosque was named after him, and he was buried there on his death in 930/1524 during the reign of Suleyman the Magnificent. Rewani left a Divan, dedicated to Selim, and a methnewi entitled Ishret-name ("Book of the wine-feast"). There is an unpublished critical edition and transcription of the former (Samiye Inceoglu, Resimli lurk edebiyati, Ankara Universitesi, Yiiksek Lisans Tezi), and another study is in process (Ziya Avşar, Rewani divanı, Ankara Universitesi, Mezuniyet Tezi, 1961) and in its ghazels, in which he sings in a lively and easily flowing manner of both human and mystic love; many of these were set to music and quickly became popular in the coffee and winehouses (Karahan, op. cit.; Nihad Sâmi Banarî, Resimi türk edebiyatı, Istanbul 1989, 478).

The Ishret-name, a methnewi of 694 beyts (Rydvan Çanîm, art. Sâkînâmê, in Türk dili ve edebiyatı an-siklopedisi [1990] vii, 433-7) is undated but may have been written towards the end of the poet’s life since he refers to his white hair and to his being in the autumn of his life. In it, Rewani relates legends concerning the origin of viniculture and the discovery of wine, and describes in realistic detail the etiquette of the drinking bouts of his time, the meal served before them, the wine, wineglass, flagon, candle, musical instruments, cupbearers, etc. Towards the end he suggests that the poem may be given a mystical interpretation, but this is to be considered as a safety-net against attacks from the devout, the contents really reflecting the existence of such activities in his day, and his own penchant for them; and although he is said to have renounced this manner of both human and mystic love; many of these were set to music and quickly became popular in the coffee and winehouses (Karahan, op. cit.; Nihad Sâmi Banarî, Resimi türk edebiyatı, Istanbul 1989, 478).

Poems containing bacchic themes have a long history in the literature of the Arabs and Persians (see KAMRÂYYA, and Çânîm, art. Sâkînâmê, 434), the metaphor of wine also becoming an all-important feature of Turkish poetry. However, this is only one part of a Khamsa-yi Rûm, which Tâhir says includes a poem entitled Djamî al-nasâ'-î. Nothing further, however, seems to be known of this.

Bibliography: In addition to works mentioned in the article, for mss. and tedkheres see the catalogues for Berlin, Gotha, Vienna, Cairo and Istanbul, and bibliographies in the arts. Rewani in IA (Karahan) and Baykur türk edebiyatı, Istanbul [1986], iii, 226-9; Ziya Pasha, Khamsa-i Rûm, i, V. von Hammer-Purgstall, GOR, iii, 465; idem, GOR, i, 187-97; Gibb, HOP, ii, 317-46; K. J. Basmadjian, Essai sur l’histoire de la littérature ottomane, Paris and Constantinople 1910, 63-4; Rydvan Çanîm, Sâkînâmeler ve Edirne Rewani’nin Isretnâmeleri, Atatürk Universitesi, Yüksel Lisans Tezi, 1987; Türk dili ve edebiyatı an-siklopedisi, vii [1990] s.v. didactic treatises. In the late 1880s a study group, the Persekutuan Rushdiyyah, was formed to discuss religious and literary matters and to publish texts written by its members, thus laying the foundations of their own printing presses. These works were disseminated to Singapore and Peninsular Malaysia. Early in the 19th century the Nakhabandī Tarīkā [see Naṣḥībīndavya] was introduced to Riau and became very popular. The Tuhfa records that all the Riau princes studied mysticism and copies of the texts are still kept in the area. One of the Riau rulers bought a wide selection of books, mainly Islamic texts, from India and the Middle East, and established a library which is still maintained in the mosque on Penyengat island. Students (such as Sayyid Ṣaykh al-Hāḍī), who received their initial training in Riau, went on to found religious journals and schools in Singapore and Penang and to influence the course of modernist Islam in the Malay speaking world.

The tradition of religious teaching was continued in Riau until the 1930s, and scholars from the Middle East, including an expert in astronomy from al-Azhar, regularly visited Riau to advise the local religious teachers. The Second World War disrupted this pattern, and the local population has declined since the early years of the century. However, Riau has maintained its reputation as a religious and literary centre which is respected both in Malaysia and in Indonesia.

(维吉尼亚·马瑟森·胡克)
(chiefly of money and foodstuffs); anything that goes beyond this is to be regarded as a later development.

The reason for such prohibitions is at different times said to be the fear of ribā, and sometimes we have the underlying recognition that there is no tradition of the Prophet relating to this. This is also expressed in the form that nine-tenths of the permitted amount is renounced or that ribā was conceived as going as far as ten times the capital.

The view which later became authoritative is laid down in a group of traditions of which one characteristic example is as follows: "gold for gold, wheat for wheat, barley for barley, dates for dates, salt for salt, the same thing for the same thing, like for like, measure for measure; but if these things are different, sell them as you please if it is (only) done measure for measure". Another common tradition expressly forbids the exchange of different quantities of the same thing but of different quality (see below). Other traditions demand equality of quantity even in the sale of manufactured precious metals. This last case seems to have been especially discussed, and on more than one occasion Muʿāwiya appears as champion of the opposite view and practice (this again has a distinctly anti-Umayyad bias).

Particularly conscientious people went even further in their limitation of ribā than the generality and would only exchange wheat for barley in equal quantities. Still stricter was the view that the exchange of even the same quantities of the same kind is forbidden. For the precious metals, was ribā. This view must be older than a difference from the usual opinion (e.g. Muslim, Bāb baʾy al-ʾaʾām miḥān bi-miḥān), which is based on the secondary interpretation of an already recognized tradition, which obviously only forbade the exchange of different quantities of the same thing but of different quality (cf. above). This same general prohibition of exchange is also given for dates. The question whether one party to an agreement can voluntarily give the other a bonus, is denied for an exchange of different quantities of the same kind of article. Gold and silver are generally regarded as māl ribawi (only quite exceptionally are coins of small denomination included). All the greater are the differences of opinion as to what things outside of the precious metals and precious stones are ribā by definition. In isolated cases, one still finds views that show themselves uninfluenced in principle by the authoritative group of traditions (cf. above), e.g. when every thing realisable is subjected to the ribā ordinances (Ibn Kaysān) or all business dealings in things of the same kind (Ibn Sirīn, Ḥammād) or when everything liable to zakā is considered capable of ribā (Rabīʿa b. Ṭ. Abū al-Rahmān). Other opinions differ in the treatment of property capable of ribā from that group of traditions, although it is not known what they understand by this; possibly, if at an exchange of the same kind of thing, not equality of quantity but equality of value in two quantities is demanded (al-Ḥasan al-Baṣrī), or equality of quantity also in the exchange of different kinds apparently within a limited circle of goods capable of riba (Saʿīd b. Ǧībaʿyār). The old interpretation that there is nothing that is ribā except that which takes place at once is ascribed to ʿAbd al-Rahmān ibn ʿAbī ʿAbd al-Rahmān. Numerous traditions forbid ribā without defining it more closely; the Prophet is said to have uttered this prohibition at his farewell pilgrimage (scarcely historical). Ribā is one of the gravest sins. Even the least of its many forms is as bad as incest and so on. All who take part in transactions involving ribā are cursed, the guilty are threatened with hell, various kinds of punishment are described; in this world also, gains from ribā will bring no good. In spite of all this, tradition foresees that ribā will prevail.

In connection with ribā, tradition mentions various antiquated forms of sale of special kinds, like mukhdara, mukhdabara, muzdabara, etc., which concern the exchange of different stages in the manufacture or development of the same thing, or of different qualities, and which are forbidden; an exception is made, of course, of things necessary to underwrite social necessity, of what is known as ʿarīya (plur. ʿarīyā), fresh dates on trees intended to be eaten, which is permitted to exchange in small quantities for dried dates.

3. While the existence of the Kurʾānic prohibition of ribā has never been doubted, the difference of opinion that finds expression in tradition regarding the relevant facts is continued in the earliest stage of development of Islamic law. Unanimity prevails regarding the main lines of the limitations to be imposed upon the exchange of goods capable of ribā (māl ribawi); it is only permitted if transfer of ownership takes place at once and, so far as goods of the same kind are concerned, only in equal quantities. In the case of a loan, it is forbidden to make a condition that a larger quantity shall be returned without regard to the kind of article. Gold and silver are generally regarded as māl ribawi (only quite exceptionally are coins of small denomination included). All the greater are the differences of opinion as to what things outside of the precious metals and precious stones are ribā by definition. In isolated cases, one still finds views that show themselves uninfluenced in principle by the authoritative group of traditions (cf. above), e.g. when every thing realisable is subjected to the ribā ordinances (Ibn Kaysān) or all business dealings in things of the same kind (Ibn Sirīn, Ḥammād) or when everything liable to zakā is considered capable of ribā (Rabīʿa b. Ṭ. Abū al-Rahmān). Other opinions differ in the treatment of property capable of ribā from that group of traditions, although it is not known what they understand by this; possibly, if at an exchange of the same kind of thing, not equality of quantity but equality of value in two quantities is demanded (al-Ḥasan al-Baṣrī), or equality of quantity also in the exchange of different kinds apparently within a limited circle of goods capable of riba (Saʿīd b. Ǧībaʿyār). The old interpretation that there is nothing that is ribā except that which takes place at once is ascribed to ʿAbd al-Rahmān ibn ʿAbī ʿAbd al-Rahmān. Numerous traditions forbid ribā without defining it more closely; the Prophet is said to have uttered this prohibition at his farewell pilgrimage (scarcely historical). Ribā is one of the gravest sins. Even the least of its many forms is as bad as incest and so on. All who take part in transactions involving ribā are cursed, the guilty are threatened with hell, various kinds of punishment are described; in this world also, gains from ribā will bring no good. In spite of all this, tradition foresees that ribā will prevail.

In connection with ribā, tradition mentions various antiquated forms of sale of special kinds, like mukhdara, mukhdabara, muzdabara, etc., which concern the exchange of different stages in the manufacture or development of the same thing, or of different qualities, and which are forbidden; an exception is made, of course, of things necessary to underwrite social necessity, of what is known as ʿarīya (plur. ʿarīyā), fresh dates on trees intended to be eaten, which is permitted to exchange in small quantities for dried dates.

3. While the existence of the Kurʾānic prohibition of ribā has never been doubted, the difference of opinion that finds expression in tradition regarding the relevant facts is continued in the earliest stage of development of Islamic law. Unanimity prevails re-
the Hanafis; as regards the "four kinds", two further opinions of Ahmad b. Hanbal are handed down which correspond to the two views held by al-Shāfi‘ī. In the two kinds by the Hanafis, the ṣa‘īda and al-Awza‘ī, the Hanafis and the better-known tradition of the Ḥanbalis (as well as Zāhirīs, Zaydīs and Ima‘īms); as one kind according to the other schools, are content, in so far as it is not a question of the exchange of precious metals, with fixing the quantities, and do not demand actual change of ownership during the negotiation (madā‘is). The Zāhirīs, in the strict interpretation of the text of one tradition, in every case demand a change of ownership in the fullest sense at once. The sale of fresh dates for dried dates is forbidden by all schools except the Hanafis on the authority of one tradition; the barter of ṣa‘īda, on the other hand, is not permitted by the Hanafis, but regulated by the other schools, without any uniformity; as regards exchange of the same material in different stages of manufacture there are many differences of opinion. As regards the exchange of goods of the same kind which are not māl ribawi, the difference of quantity is generally permitted, postponement (nā‘ī a‘īn, nā‘ī a‘īn) of the single payment is still forbidden by the Hanafis and Zaydīs but permitted by the other schools (with differences in kinds of the sale of wares, even of those which are māl ribawi); for precious metal, the payment at later date (sa‘āy) and sale on credit (bay‘ al-tina) with postponement of delivery or of payment is permitted. The apparent contradiction of analogy in the sa‘āy, which forms a type of transaction by itself, has given rise to discussions on principle. The postponement of both sides of the transaction is regarded on the authority of a tradition as entirely forbidden in all agreements regarding sale or exchange.

5. The prohibition of ribā plays a considerable part in the system of Islamic law. The structure of the greater part of the law of contract is explained by the endeavour to enforce prohibition of ribā and masyr [q.v.] (i.e. risk) to the last detail of the law (Bergstrasser, in I., xiv, 79). Ribā in a loan exists not only when one malt Kubīr, but when the payment of a large quantity, but if any advantage at all is demanded. Therefore, even the bill of exchange (sufqādja) is sometimes actually forbidden (as by the Shāfi‘īs) because the vendor, who is regarded as the creditor, reaps the advantage of avoiding cost of transport. This did not prevent the extensive spread of this arrangement in the Arabic Middle Ages and its influence upon European money-changing. But they were always conscious that a direct breach of the prohibition of ribā was a deadly sin. Pious Muslims to this day therefore not infrequently refuse to take bank interest. The importance of the prohibition of ribā, on the one hand deeply affecting everyday life, and the requirements of commerce on the other, have given rise to a number of methods of evasion. Against some of these there is nothing formally to object from the standpoint of the law; they are therefore given in many lawbooks and expressly said to be permitted. The Shāfi‘īs, the later Hanafis and the Ima‘īms have recognised such methods of evasion, while the Mālikīs, the Ḥanbalis and the Zaydīs reject them. The recognition of these methods of evasion is not contrary to the strict enforcement of the prohibition in the fiqh. The inner significance of decrees of the divine law naturally cannot be understood by the mind of man. This is shown in the case of ribā in the limitation to certain kinds of goods. The Zāhirīs are thus among the most energetic defenders of evasions of the prohibition of ribā. Their line of argument is based not only on their formal negative rejection of decrees by analogia but also upon their positive estimation of the intention underlying the evasions. One of the oldest transactions of the kind, against which several traditions are already directed, is the double contract of sale (from one of its elements it is called bay‘ al-tina, credit sale par excellence): one sells to someone who wants to lend money at interest something against the total sum of capital and interest which are to be due at a fixed date, and at the same time buys the article back for the capital which is at once handed over. This transaction was taken over in mediaeval Europe under the name of mohatra (from the Ar. muhāṭara [q.v.]; cf. Juynboll, Handleiding, 289, n. 1, and E. Bassi, in Ria di storia del diritto italiano, v, part 2). Another method of evasion consists of handing over to the creditor the use of a thing as interest by a fictitious agreement to sell or to pledge.

(J. Schacht)

B. In modern commercial usage [see Suppl.].

RIBĀ (A.), a military-religious institution of mediaeval Islam.

1. History and development of the institution.

It is impossible to present an unequivocal definition of the term ribā. The word needs to be constantly related to a context and a chronology since the sense has been very evolve. The root r-b-t is present in the Arabic of the 1st/7th century, in numerous derived forms. It is possible to identify a first stratum of usage, comprising Kur’ānic usages and those of the early caliphal period. Originally, these usages are linked to tribal warfare. They imply no type of construction, nor any fortification, but simply the preparations which are made with the必须ing of cavalry
mounts, with a view to battle. In this case, the term ribāt is used as a verbal noun, a masdar, and not as a substantive. The period immediately following the great conquests, which saw the establishment of Muslim powers in new territories, was to change the modalities of war. This was to become a war of position, during the intervals between continuing offensives. Dispositions of defence were constructed (or reused in cases where there were previous constructions), on the coasts and on the land frontiers. This was done progressively, during the time of the caliphate at Medina, most notably under the caliph ʿUthman, and was continued under the Umayyads, according to local requirements and conditions, although no unified doctrine was obligatorily applied. It may be supposed that it was from this time onward that the word ribāt and the terms associated with it came to be applied to new objects. The ancient connotations did not disappear entirely, although they did require adaptation. It is not known whether it was during this period, or rather later, under the earlier Abdāsids, that the term began to be used to denote a fortified edifice (from the simple observation tower, to the small fort, to the fortress, and to the caravanserai). These various establishments would normally be situated in hazardous regions, on frontiers, on coasts, or on difficult internal routes. But this mutation of sense does not seem to have been general. The only elements of localisation are supplied by relatively late sources, which usually mention the fact without any indication which could be used in establishing a chronology. It seems that what is involved is the simple imposition of a noun, probably denoting the existence of danger and the need to take precautions against it, upon various pre-existing constructions, without any suggestion that there is, at the outset, such a thing as a unique type of edifice which could be called ribāt. It can thus be stated with confidence that to define it a “Muslim military monastery” is evidence of extrapolation and misinterpretation, and this applies, whatever the period and the region. It cannot be denied that the urban residences of Sūfis were subsequently known as ribāt. In the east of the empire and in Egypt, they were more generally known as ḥathākā [q.v.]. Frāk supplies a possible example from a later time (see below). The establishments of the 7th/13th century these establishments were known there exclusively by the name ribāt, possibly in preference to the use of a word with such strong connotations of origin (a purely Persian word and the Iranian provenance of the establishment). But, with very few exceptions, constructions of this type did not truly begin to develop until after the 6th/12th century, at the time of the burgeoning of the mystical fraternities of the Muslim jārakās (q.v. in EP); on the other hand, the Karrāmī ḥathākā [q.v. are more ancient]. These communal establishments for mystics (which often also accommodated travellers) had, in any case, nothing in common with the fortified constructions of the frontier which, in mediaeval Muslim representation, after a certain period, are reckoned to have welcomed “warriors of the faith”. It will be observed that this last consideration, linked to a representation of ḥathākā [q.v.—often treated as evidence in itself—needs to be approached with caution. It could derive, to a great extent, from the ideology and imagery of belief, rather than from direct historical actuality (see the detailed examination by C.E. Bosworth of the term ribāt and its evolution, in The city of Tarsus and the Arab-Byzantine frontiers, in Orient, xxxiii [1992], 284-6).

a. Ribāt as a verbal noun, from tribal Arabia to the frontiers of the empire. The root r-b-t gives the general sense of attaching or linking, in a concrete sense, and of strengthening (the heart), in a figurative sense (three Kurānic instances display this latter sense). The theme of linkage seems to have become specific in its reference to the habit of assembling and keeping together the horses which were to be used in the razzia. In tribal Arabia, according to traditional representation, horses were mounted when the attack was imminent, while camels were reserved for the advance to the site of the combat. Most of these horses would have been mares, which were considered, in tribal society, particularly valuable beasts (see the modern testimony of Ch. Dougherty, Travels in Arabia deserta, 2nd ed. London 1921, and of A. Jaussen, Les Arabes au pays de Moab, Paris, new ed. 1948; for the use of the horse in pre-Islamic Arabia and subsequently, see Farsas; according to F. Viré, author of the article, this usage did not date back beyond the 4th century A.D.). The term ribāt is considered by mediaeval Arabic dictionaries as the plural of the singular ṭāb (with a passive sense). The word is said to denote either “the group of horses which have been gathered together in anticipation of combat” (according to the LʾA, there should be at least five of them) or “the place where these mares were kept hobbled and where they were fed”. In the desert, they were kept under the awnings of tents. But ribāt could, equally, perform the function of a masdar of the Form III verb ṭābāta. This supplies, in general, the notion of staying or of attachment to a place (or sometimes to a person). But it also applies very precisely to the act of “assembling horses with a view to preparing a razzia” or to the notion of “being ready for combat, having gathered the horses”. It is this specialised sense which seems appropriate to two of the five Kurānic instances where the root is employed. In both cases, the context is effectively that of preparation for war. In sûra VIII, 60, it is a matter of gathering “horses in sufficient number”, ṭābat al-khayl, to intimidate the adversary. The latter is called “enemy of God” and denoted by the periphrasis al-adhām kafaru “those who have been ungrateful”, in other words—in the late Medinan context—those who have refused alliance with Medina and conversion. In III, 200, there is the final and isolated verse which closes the parable of the razzia: “unto whatever shall prevail, there is a need to “show oneself personally resolute” (ṣabīrā, “to confront the adversary” (not named in this instance) (ṣabīrā) and to “make ṭābat”. The Kurānic text contains the imperative ṭābatū, which would signify, in the context, the act of taking measures consisting in “gathering the mares to show readiness for battle”. In this passage, there is no suggestion of “going to the frontier”. This meaning can only have emerged at a later stage, either in the period of conquests or in the period which followed it, that of the war of position, which was to see over several centuries the Muslim caliphate in confrontation with its Byzantine opponents, especially on the Cilician borders in the foothills of the Taurus mountains, in the region known as the ṭūḥā (see EP, Triȧ(ang, and also ʿawāsim and rūm. 2. in EP). The Central Asian frontier, facing the Turkish world, was to be stabilised to a certain extent, in the mid-2nd/8th century. It was to be further pacified, from the 4th/10th century onward, by means of victorious Muslim incursions into Turkish territory, also by gradually becoming a zone of conversion, allowing a progressive infiltration of Turkish elements into the Muslim lands. However, the sources of the 4th/10th century continue to see it as a “region of ṭājū”, which poses a historical problem.
The tribal sense does not seem to have evolved during the caliphate of Medina and the period of jihād, the great extra-peninsular conquests. There were certainly numerous opportunities for the practice of warfare, as the obligatory contribution of allegiance and solidarity which was levied each year, in kind (i.e. livestock), on the allied tribes. The animals were gathered in hīmas [q.v.], special pastures under the control of the caliphate. The horses were pastured on the allied tribes. The animals were certainly numerous opportunities for the practice of warfare, as the obligatory contribution of allegiance and solidarity which was levied each year, in kind (i.e. livestock), on the allied tribes. The animals were gathered in hīmas [q.v.], special pastures under the control of the caliphate. The horses were pastured on the allied tribes.

While the camels were subsequently distributed among those entitled to them, the caliph 'Umar decided to keep all the horses for purposes of war, thus performing an act of ribāt. The term is not used, but the account is unequivocal and testifies to the persistence of the former situation (on this episode, see Abdallah Cheikh Moussa and Didier Gazagnadou, Comment on l'histoire ... de l'islam!, in Arabica, xi [1993], 208).

In the 3rd/9th and 4th/10th centuries, in exegetical, historiographical, geographical or legal sources, there appear some important divergences from this first stratum of meaning and the ancient status of the word ribāt (the earliest sources date back to the mid-2nd/8th century; they are few in number and often are only preserved in later works). First to be noted is a divergence which is less of sense than of purpose. Increasingly often, the term came to be associated with the ideology of jihād [q.v.] as it developed, probably only after the 'Abbāsid period. It did so, apparently in uneven fashion, possibly first among the traditionalists and historiographers, before passing into the realm of the jurists. The first post-Kurānic usages of the representation of jihād, as war to the death, are confused. They are sometimes taken to refer to sectarian exclusions of the type (descriptive of disbelieving) practised by various ancient movements such as certain Khāridjite or Shi'ī tendencies against their own co-religionists rather than against the external enemy. In the Kurʿān, while often invoked on the subject, it is the term kifāl and not jihād (e.g. IX, 29-35) which refers to conflict with the Ahl al-Kitāb.

An interesting perspective, regarding the probable chronology of the change in meaning of a term such as ribāt, may be found in comparing the most ancient edition of the Muwatāt of Mālik b. Anas (d. 179/795 [q.v.]) by the Baghdādi Muhammad al-Shaybānī (d. 189/804, disciple of Abū Hanīfa who was also familiar with the teaching of Mālik), with the major compilations of prophetic traditions of the 3rd/9th century which were soon to be taken for the canonical sum-total of Sunnī Islam. The edition of the easterner al-Shaybānī is also opposed to that of the Cordovan Mālikī Yahyā al-Masmūdī (d. 234/848), in that the content of the two editions is not identical (on these divergences, see Sezgin, GAS, i, 458-60). The Cordovan version contains a Kitāb al-djihād which does not appear in the text transmitted by al-Shaybānī (opinion of Michael Bonner on the subject, in Some observations concerning the early development of Jihād on the Arab-Byzantine frontier, in SJ, lxxv [1992], 245).

The Muwatāt compiled by al-Shaybānī (ed. 'Abd al-Wahhāb 'Abd al-Latif, Dār al-Tahrir, Cairo 1967) seems, curiously, to deny any endorsement of warfare on the frontier in a context of jihād (al-Shaybānī is, however, himself the author of a book of Sīyar, Sezgin, i, 430; this text is preserved in the refutation of al-Shāfi'ī's d. 204/820), which is to be found in the Kitāb al-Umm, Beirut 1980, vii, 321-50; it deals with rules of conduct concerning war; this is the sense of the term sīyar for jurists; it is neither an exhortative nor an apologetic treatise, and jihād is not evoked). A brief passage of the Muwatāt, in the recension of al-Shaybānī (included at the end of the chapters on prayer, aḥdāt al-salāt) is incorrectly entitled by the editor fadl al-djihād “the virtue attached to jihād”, while all that appears, in the received tradition, is the Kurānic expression al-mudjādāt fi sabil Allāh, which refers, probably, to a verse of the type of sûra IV, 95 (in this verse, the expression is in the plural; other Kurānic usages, II, 210, V, 54 etc., comprise a verbal periphrasis). In the recension of Muwatāt, there is a very brief mention of the Kurānic stereotype of “death in battle”, shahāda, without which the word jihād is never used as a proper noun. This status of a proper noun is effectively non-Kurānic. It is thus possible to suppose that, in the mid-2nd/8th century, the Median scholar (or, at least, his Hanafi editor, a generation later) may have belonged to a tendency which was sceptical about warfare on the frontier, particular with regard to the purity of the intentions of the fighters (they were certainly not regarded as “warriors of faith”: certain traditions accuse them of having no object in mind but booty; see s.v. maghān in Wensinck’s Les Concordances). In the Cordovan recension (but not in that of al-Shaybānī) there is furthermore attributed to Mālik the transmission of a hadīth, according to which the most scrupulous party (ablutions and attendance at the mosque, continual observance of prayer) would be “the true ribāt”, dhikr um al-ribāt (in this text, the term ribāt evidently functions as a verbal noun; reference in Wensinck, op. cit., under ribāt, i, 212; re-examined, in extenso, by L’A, under the root r-b-t; also Ibn Hanbal’s Musnad, Beirut 1398/1978, ii, 277). This does indeed seem to represent a position which would effectively have been professed by Mālik. It is further confirmed by another passage (included in the chapter on “the virtues of mosques”, fadl al-mudjādāt, 55-6, no. 95, in the recension of al-Shaybānī), according to which “he who goes morning and evening to the mosque”, ḥādā‘ aw rāhā, without ulterior motive, la jurīdī ḥāsira-ha (“not wanting anything else”), has the same status as the mudjādāt. It should certainly be understood, in this case, that the comparison is made with the Kitsāb al-mudjādāt and not with the contemporaneous soldiers of the ḥājār. It may be wondered whether these traditions do not allow the suppression of a conflict of representation between traditionalists at the end of the 2nd/8th century. These indications could permit the fixing of the time when the ideology of jihād, professed by circles yet to be identified, began to stress the meritorious aspect of military service on the frontier, while in other circles there was manifest opposition to this new point of view (possibly from the peoples of Arabia, i.e. of Irāk, against the Syrians, the Khurāsānians and the westerners, Maghribis and Spaniards; thorough analysis by M. Bonner, op. cit., but the problem of the opposition to this ideology is not addressed). If such was the case, it could be said that this conflict would, as if symbolically, have divided those who, of quietist tendency, aspired to make mudjāwara (the mudjāwara are “those who dwell close to the Ka’ba”; this is the ancient sense of the term, although subsequently the descriptive mudjāwarī would be applied even to those dwelling in other places considered as sacred or as conferring blessing, including on the frontier), from those who aspired to make ribāt (the murābiṭūn, to be understood in the new sense would be “those who dwell on the frontier”). The latter would have professed a new type of activism. Confirmation for this
hypothesis could be found in the anecdote (true or fictitious, but significant as the expression of a point ... to speak of the different defensive works of the frontiers (the word ribdt is never used to denote a building of Musnad, ajihdd Concordances, ribdt); the under see Transoxianian al-Bukhar! (d. 256/870 [q.v.], Sahih; does not seem to have been evenly shared during the safwa of Ibn al-Djawz! (d. 597/1200), Fudayl is intro-
iv, 17-
the work contains a (passages are to be found in the K. al-ajihdd wa ‘l-siyar, K. al-djihdd, K. al-a^ihdd, and of ribdt” (op. cit., iv, 147). This type of anecdote, which produces a face-to-face encounter between figures of importance, is often of symbolic significance and has little to do with factual history. Whatever the motives behind the ideological exploitation of these figures, the text of Ibn Kutayba shows how the representation of the merits of djihdd does not seem to have been evenly shared during the 3rd/9th century.

The contrast appears very striking, among traditionists, between the time of Mâlik and that of the major figures of the following century: the Baghdâdi Ibn Hanbal [q.v.] (d. 241/855, numerous passages of the Munad, see Concordances, under djihdd and ribdt); the Transoxianian al-Bukhari (d. 256/870 [q.v.], Sahih; the work contains a Bâb fudl al-djihdd wa ‘l-siyar, iv, 17-128, Matâbâ al-sha^b, n.p. 137/1958-9, 51 (certain traditions relate battles against Constantinople, “the city of Caesar” and against the Turks); the Khurâsânians Muslim (d. 261/875 [q.v.]), Sahib, Birut n.d. (passages are to be found in the K. al-djihdd wa ‘l-siyar, v, 193-200, and in the K. al-imâra, vi, 2-5); Ibn Mâdâja (d. 273/886 [q.v.], Sunan, ii, K. al-djihdd, 96-149); the contemporary Malikî al-Halabi (Cairo n.d.), Abu Dawûd al-Sidjistani (d. 275/888 [q.v.], Sunan, iii, K. al-djihdd, 3-93, ed. M.M. ‘Abd al-Hamid, n.p. n.d. (a passage on the merits in waging warfare successfully against the Byzantines, Rûm, 5), al-Tirmidh!(d. 279/892 [q.v.], Sunan, iii, K. al-adâb fudl ‘l-djihdd, 88-131, ed. A.R. Muhammad ‘Ughmîn, Cairo 1384/1964) and al-Nasâ‘î (d. 303/915 [q.v.], Sunan, vi, K. al-djihdd, 2-50, ed. H.M. al-Maw‘ûdi, Birut n.d. All present special chapters, sometimes very long, in which the term djihdd is employed, without ambiguity, as a proper noun. The traditions related in these chapters stress the need to conduct, “in the way of God”, fi sabit Allâh, warfare on the frontier, whether this is in the East, facing the Turkish steppes, or in the Cilician border zone, confronting Byzantium. These traditionists do not deal with the West, where, nevertheless, the same ideology seems to have been put into effect in a number of ways, in the autonomous province of the Aghlabids, in Ifrikîya, or in that of the Umayyad caliphate of Spain on the “existence of the ribâh” in al-Andalus, see references given by C.E. Bosworth, art. cit., 276, 285; A. Castro, The structure of Spanish history, Princeton 1954, 88-9, 202). Djihâd is presented as situated, in direct line, in the tradition of Muham-
mad’s conflict with the polytheists of Arabia. All these works include, in the context of djihâd, traditions con-
cerning ribâh. The term seems to have gone beyond the second level of “assembling of mounts”, arriving at the sole meaning of a prolonged period of voluntar-
tier” (mulâzamat ‘alâ ‘l-tâbghâr, according to Lâ‘î). The term nevertheless continues to imply a presence “under arms”. Some special traditions dealt with ir茧ri. This second term continues to apply to the mounts them-
elves and to the need to keep them in good condition (the combatants in frontier expeditions theoretically all being horsemen).

In all these texts of the 3rd/9th century, the term ribâh and its derivatives thus revive, with modifications, the ancient tribal sense. It should be noted that on the Byzantine frontier there is never any question of an edifice bearing the name ribâh. The fortifications have different names, according to their nature. The word hijr “fortress” seems to dominate. It is contained in a number of toponyms. Often these are con-
structions prior to Islam which have been restored (on this zone, see for example the references concerning Tarsus/Tarsûs and Mopsuestis/al-Masîsa, which are ancient fortified towns; descriptions of the Cilician plain and its cities in Ci. Cahen, La Syrie du Nord à l’époque des croisades, Paris 1940, 148-52; on genuine and mythical history, C.E. Bosworth, art. cit.; on the absence of designation by the term ribâh, 283).

It should be noted, in particular, as regards this zone (the term ribâh parted for caliphal summer ex-
peditions, known as sausêj [see §32.1], description in the K. al-Kharâdî of Kudâmà b. Djâfar, 259, see below), that, from a historical viewpoint, the ideology of djihdh seems to correspond poorly with the realities of frontier warfare, in the first and second Muslim centuries, and even later. The army consisted of profes-
sional soldiers, receiving pay, the ‘adâ‘î [q.v.], and groups of mercenary irregulars, often drawn from tribal splinter-groups and led by their own chieftains. These last received the djîf’t (A. Cheikh Moussa and D. Gazagnadou, op. cit., 224, nn. 153-4), a kind of con-
tact, regarded as degrading (other forms with the same meaning, djîf’t, djâlîna, djâsla, etc.; the same term served to designate the sum, levied in advance, as insurance against failure to participate in an obligatory razzia). These quasi-autonomous troops were pillaged on their own capture and caliphal official booty, the maghâm. They had their equivalent, on the Byzantine side of the frontier. Un-
equivocal confirmation of the presence on the frontier of these irregular troops (who seem to have nothing to do with “battle for the faith”) is to be found in the seventh chapter of the K. al-Kharâdî, which is devoted specifically to frontier zones, on the Muslim side as well as on that of its adversaries: ‘Ajâr ‘ughr al-‘lslâm wa ‘l-aswâda wa ‘l-adîj al-malîfî bi-hâ, 252-66 (edition following the Kitâb al-Masâlik wa ‘l-mamâlik of Ibn Khurraâdîhîb (d. 272/885 [q.v.], ed. De Goeye). The K. al-Kharâdî, preserved only in part, ostensibly had for its author a Baghdâdi secretary occupying a senior position in the caliphal administration, Kudâmà b. Djâfar [q.v.], who died at the beginning of the 4th/10th century. In this text, the frontier gar-
risons are explicitly described as composed of “regular soldiers”, ‘ujâdî, and of ‘ulâđî. It is known that this term (sing, ‘ulâ’dî), denoted, in Arabia, the tribal outcasts and bandits who often joined together in bands (Barbier de Meynard translated this as “ir-
regular troops”, op. cit., 193, 194, see also mutâtaawwâtâ). It is worth noting the totally a-
religious tone of this section of the caliphal admin-
istration, who deploys a varied vocabulary to speak of the different defensive works of the frontiers (the word ribâh is never used to denote a building of
any kind). There is an unexpected and very significant verbal use of ribata which is taken in its strictly military sense when speaking of the frontier of Damascus on which there is said to have been "stationed" garrison, of Persian horsemen, asāiṭār. It is crucial to note that this situation is given as describing affairs "before Islam" (op. cit., Arabic text, 261, tr. 202). Finally, a tradition presented as Prophetic ostensibly discouraged attacks against the Turks, "who should be left alone as long as they leave you alone" (a play of words on the Arabic root r-t-k, Arabic text, 262, tr. 204). What is perhaps nothing more than a plebiscite, or perhaps the part of a diplomatic secretariat challenged the validity of the representation of a permanent djihâd against the Turks of the steppes which is described by numerous authors of this period (it is true that Kudâma seems to be speaking of the caliphal period or that of the Tâhirid governorate, and probably not that of the Sâmâniids; but as will be seen, below, their overall policy seems to have been of much the same nature).

Another important passage regarding the composition of irregular troops is provided by the geographer Ibn Hawkal (d. 367/977 [q.v.]), who compares with the new Sâmâniid armies of the 4th/10th century, composed of loyal and disciplined "Turkish slaves" (al-arâk al-mamlûkûn), the "dregs of the tribes" (al-dhâwib-dhûdân al-kabûdân), lacking any sense of faith or law, who in former times fought on the frontier (they are also called jââlîk al-arâkîr, K. Sîrat al-ard, 471, ch. on Transoxiana). Later, in the period of the Crusades, even if collective emotion sometimes inspired groups of volunteers nourished with the ideology of djihâd, a long-standing component of belief, it was not the "warriors of faith" who were to recapture the cities and fortresses under Christian domination. Those who sought the battles were first the Sâlik amin of Syria with its Turcoman contingents (N. Elissèeff, Nûr al-dîn, Damascus 1967, ii, 317; Sîvan does not share this writer's reservations, see his L'Islam et les Croisades. Idéologie et propagande dans les relations musulmanes aux Croisades, Paris 1968), and then the professional Ayyûbid armies, well-trained and equipped. These armies were composed essentially of Turko-Kurdish elements [see ayyûbid and also niṣrân] with the Sâlik amin of al-Dîn's great victory near Tiberias in 583/1187).

However, the assumptions of the ideology of djihâd are entirely different. It is "the Muslims" (a vague and sociological expression without any real significance) who are supposed to commit themselves as "volunteers", muṭâsawāta'î, to play the role of mutâṣâṣîdûn, "those who perform ribâtbîn" or muṭāḥûtîn, "those who perform ribât" on the frontier. They are also said to have born the name of ghâzî [q.v., pl. ghâzâtî, which seems to originate from the frontier of Khurâsân and Transoxiana, a symbolic name which recalls the warriors of the mythologised ghâzâs [q.v.] of the Prophet (the term is, however, used by Kudâmâ in a neutral fashion). In the sources of the 4th/10th century, the representation of djihâd seems to be promulgated in two major directions. On the one hand, there is Sûlim, which tends to law, claim to an in-"unassailable past (J. Chabbi, Réflexions sur le soufisme transen primitif, in JA, ccxi [1978]). But it seems that certain minorities within Sunnism professed parallel ideas, advocating exterior activism and inner moralisation. The movement appears to have expanded during the 5th/11th century. In the East, works of theoretical law, like those of applied law, henceforth deal with the question (on the waqfî of al-Ghâzaâlî (d. 905/111), see H. Laoust, La politique de ghâzâ, Paris 1970, 264, 342-3). The same applies to numerous works of theology: the Ashâ'îrî Abû Mansûr 'Abd al-Kâhir al-Baghdâdî (d. 429/1037), the great sorceur of the lukewarm or the deviant in matters of religion, gives in his Usûl al-dîn an overtly activist interpretation of djihâd in giving it the basis of its "commandment of good and prohibition of evil" (ed. Madrasat al-ilâhîyahât, Istanbul 1928, 193-4). As for the West, the Risâla of the Malikî Ibn Abî Zâyî al-Raywânî (d. 386/996), contains, in ch. xxx, a Bûb fi 'l-djihâd (ed. J. Carbonel, Algiers 1945, 63-7: mention of the merit attached to the performance of ribât in military or in a defensive capacity). Of the treatment of the problem, it is H. Laoust, who published numerous Hanbali 'akhîdât, declared, that in the most ancient ones, the term ghazî occurs more frequently than djihâd (La profession de foi d'Ibn Baṭṭa, Damascus 1958, 47, 127). This is the case with the 'âkîdât of Ibn Baṭṭa (d. 387/997). This could indicate that the principle of djihâd is no longer an issue for theoretical speculation on the part of the author concerned. On the other hand, in the work of the later Hanbali Ibn Kudâmâ (d. 620/1223), djihâd is the only issue (H. Laoust, Le précis de droit d'Ibn Kudâmâ, Damascus 1950, 271-81, tr. and annotation of the 'Umda, which is a summary of the celebrated Muğnî fi 'l-waṣîl: a passage on the duration of residence of the ribât type on the frontier, 272; djihâd in the Muğnî, x, 364-97).

As a historical guide, it may be noted that the Kitâb al-Umm of al-Shâfi'i (d. 204/820 [q.v.]), ed. Beirut 1980, followed by the Mukhtasar of al-Muzannî (d. 264/877), includes, on the one hand, traditional chapters of siyar, on the law of war, with a discussion, radd, on the ideas of Malik (vii, 201-84) and of the treatise on siyar attributed to al-Awâzî (the text is given in the context of its refutation by the Hanbali Abî Yusûf (d. 182/798), vii, 352-89). The work contains, on the other hand, a theory of djihâd, which is included in the Kitâb al-djizya (iv, 167-222, on djihâd, esp. 170-80). In these passages, al-Shâfi'i formulates, for the first time, the definition of fard kifâya, "collective obligation" in regard to external war (K. al-Umm, iv, 176, is opposed to individual duty, fard 'azîn, see gjihâd). He defines the obligations of the caliphate, as well as the precautions to be taken to ensure that the campaigns (at least annual, or biennial when this is possible) do not end in disaster, tâfîr fard al-djizya, iv, 177-8). The defensive situation of the frontier, tâfîr (or atrîf, "the extremities") is evoked (the presence of fortresses, husûn, and ditches and ramparts, khandikî, is assumed). The frontiers should be manned with soldiers. Their status as warriors of the faith is given no particular emphasis. They are under the command of trusted, wise and courageous men. When an attack, ghâzâs, has been launched and there is a risk of it failing, the soldiers must withdraw to their camp and to the ribât al-djihâd. This expression does not seem to denote a type of building which could be called ribât. It appears rather to refer to the operational base where defensive measures could be taken. The phrase would simply signify that there should be no hesitation in returning to the camp or the fortress which is the point of departure, when conditions of warfare, tâfîr or theoretical law, like those of applied law, henceforth deal with the question (on the waqfî of al-Ghâzaâlî (d. 905/111), see H. Laoust, La politique de ghâzâ, Paris
fact, a state of belief to which certain reputedly Pro-
phetic traditions could refer, although the dating of
the latter, and the circles in which they were current,
are not always determinable. The most significant is that
which is mentioned only by Ibn Hanbal (at least as
regards the canonical compilations of Sunnism; it
does not seem to be invoked in the text of al-Shāfi‘ī):
‘‘ghādā is the monasticism, rahhānīyya, of Islam’’
(Musnad, iii, 82, 256).

Later, however, warriors of the frontier were to be
seen, in a manner simultaneously unreal and sym-

tactic, as varieties of saints, sālihān. The term sālih
(sc. the temporal world) who characterise the 2nd/8th

century. They are cited in the Tabakāt as self-styled
mystics, from the 3rd/11th century onward (after the
example of the Hilya al-a'wilīyā of Abū Nu‘aym al-
Iṣfahānī (d. 430/1038), ed. Cairo 1932, i-ix), and sub-
sequently in the relevant works of other contem-
poraries, including the Siyā of the Hanbali Ibn al-
Ḍjāwzā‘l (see above). Among these numerous figures,
which names constantly recur are those of Ibrāhīm b.
Adham [q.v.] (a native of Balkh, he is said to have
died in 161/777-8; the representation of the miracles
performed by him outside the framework of ghazūa
on the sea and in the snow-covered mountains, Hīya,
viii, 7-8, in the company of ‘‘ascetics who renounce’’
(sc. the temporal world) who characterise the 2nd/8th

century. These representations of
have little to do with
history. They seem primarily to propose a rewriting,
might be exploited in the caliphal policies of the frontier. It should nevertheless be noted that, in adab literature, the chapters intitled khiūb al-barb seem to have been largely a general polemic to denounce the practice of frontier warfare, as seen by traditionist circles. These passages constitute a veritable treasure-store of ancient representation, from the ḡābiyya onwards, through the Prophethal phase of Islam, to the adventures and achievements of the great warriors of the Umayyad period (see, for example, one of the more voluminous works, the Ḥad al-Fārāb, by the Andalusian Ibn 'Abd Rabībh (d. 328/940 [q. v.]), accredited panegyrist to the Umayyad court of Cordova, who transferred to the West the oriental tradition, and also the so-called popular romances describing the epic adventures of great warriors of the Umayyad period who were real persons; see al-Bāṭtāl and dhū l-ḥimma).

In his major commentary on the Qur'ān, Dūmī al-buḥān, al-Taḥbari (d. 320/932), presents exegetical readings which seem to accord with the ideology of jihād, such as it has been found expressed by means of the Prophethal traditions which are included in the compilations of the 3rd/9th century. But he also revives the contradictory ideology of quietism which makes ṭaḥbīn simply a modality of devotion (it is not certain, however, that this is what served as a referential basis for ṭaḥbīn in the usage of the term by mystics).

There is room for speculation regarding the future role of this latter tendency, which seems not to have disappeared entirely, despite the probable dominance of the ideology of jihād, throughout subsequent periods, apparently enjoying a powerful revival during the time of the Crusades. The two readings (pro- and anti-jihād) thus figure, concurrently, in the commentaries on the two Qur'ānic verses concerned (Dūmī al-buḥān, ed. M.M. Shākir, Cairo, vii, 501, on III, 200, and xiv, 31, on VIII, 60).

Finally, attention should be drawn to the use of a derivative of the root r-b-t which figures in the Book of Conquests, Khiūb al-Fath, of the Baghdādi historiographer al-Baladhuri (d. 279/892) (ed. M.R. Radwān, Beirut 1978, 189, ch. on Malāyit). The fact that this work dates from the second ʿAbbaṣid century is as much interesting as it seems to preserve an ancient usage of the term which hardly coincides with the representation in the ancient period of a jihād involving volunteers of the faith. The account concerns the war which the future caliph Muḥāfiya (he was still governor of Syria at the time) led on the frontier, recapturing Malāyit which had been lost after an earlier conquest. He "posted" there, ṭaḥbāb fiḥā, "a squadron of Muslims", ṭaḥbīn min al-muṣlimin, "under the leadership of their chief", māʾa ʾṣamīḥ-at (during the caliphate of Medina and the Umayyad period, the ʾṣamī denotes the governor as well as the military chieftain, responsible for a group of warriors, whatever its level and its number; D.M. Hill speaks of the "ʾṣamī of a small band of fighters" in reference to the reconquest of a town in the Dżażira, see his The termination of hostilities in the early Arab conquests, London 1971, 85). The term ṭaḥbīn, used in this passage, is based on the theme of a name for a group. The latter, according to the ancient sense of the root, should be seen as being provided with horses and weapons and being ready for combat.

b. Ṭaḥbīn as a building: look-out post, small fort, fortified city, caravanserai, staging-post and urban establishment for mystics.

to pin down in its role as a substantive denoting a building than in its usages as a verbal noun or a noun of action. However, except in the case of the urban establishments for mystics which do not appear in a definitive fashion until the Saldūq period and are included in a well-defined general polemic against the practice of the construction of buildings on the part of sultans, their viziers or other dignitaries (madrasas [q. v.] for specialists in fiqh and khanqahs [q. v.] for ʿulūfs), there is a definite possibility that there has often been confusion and misunderstanding concerning the ṭaḥbīn as an edifice. There may well be cases where a reference to a particular edifice has been understood, when in reality it is simply a metaphor for the war by means of a tempered language which was of use on the frontiers, denoting an exposed place: an isolated stage on an inland route, a border-post or a fortified coastal city. It seems difficult to present a general opinion on the question, such being the variety, in nature and in purpose, of the built-up places and spaces to which the name of ṭaḥbīn is given, in the sources of the 4th/10th century. The earliest information seems to emanate from geographical sources of the 3rd/9th and 4th/10th centuries. But, depending on the authors, the latter may already have been permeated by ideology. Since the historical problems have yet to be clarified and separated from phenomena of representation, it is not possible to identify and fix a historical starting-point. It is possible, however, to draw some conclusions from textual comparisons. Thus attention may be drawn to the very neutral terminological usages of the caliphal period and are included in a well-defined text (EGA, vi, Leiden 1889, 208, 212, 262; this would make it possible, in his opinion, to indicate, directly or indirectly, the presence of an edifice named ṭaḥbīn (as a verbal noun or as a substantive denoting plural ṭaḥbīāt). According to these authors, ṭaḥbīts are divided among several major zones, Transoxiana and the Caucasus, the West Caspian zone and the Mediterranean coasts, from Palestine to the Maghrib and to Spain (Miquel, op. cit., ii, "les marches", 536; the ṭāḥbī instead of the ṭaḥbīt of the Arabo-Byzantine frontier have been omitted from this list because, as has been seen above, the usages of ṭaḥbīt do not seem to denote there a specific building, but exclusively an action or a place of action). However, this terminology does not seem to be shared by all authors. Unlike the geographer-travellers of the mid-4th/10th century. Kudāma, writing two generations earlier, makes no mention of ṭaḥbīt as a frontier edifice of jihād. The situation to which he refers allusively on the frontiers of the north is that of the Turkish "raid", verb ḍhra, and not that of Muslim incursion (extract from the K. al-Ḳhairūdb, in BGA, vi, Leiden 1889, 208, 212, 262; this would seem to confirm the tradition related by the same Kudāma, according to which "the Turks should be left in peace" (op. cit., 262). Similarly, instead of the
term ribât which was to be used in the 4th/10th century, he uses the term khan [q.v.] to denote the caravanserai and sîka for the "relay" of the postal service barid [q.v.] (association of the khan and the sîka, in certain isolated "stages", mansûrî, 209, 210), and this over the whole extent of the empire (however, it is generally supposed that it was the relays of the eastern post which were called ribât [see barid]).

Even if local powers from time to time conducted a more offensive policy (without disruption of commerce, and in particular, the very lucrative trade in slaves, some of which would become the tribal soldiers from the 3rd/9th century onward, see ghulâm), it may be noted that the Muslim rulers of Persia finally found themselves in a situation similar to that of the empires which had preceded them, confronted by nomads from the north and the east (a legendary evocation of relations between the Sasanid Anûghirwân and the king of the Khazar, which led the former to build a wall of bricks, bâd, against the raids of the nomads, intractable subjects of the latter, Kudâmâ, 259-61).

A related question concerns, in particular, the representation of ghâdâ on the eastern frontiers of Persia. It may be wondered whether what is presented, in the sources, as a generalised ghâdâ, performed from the starting-point of thousands of ribâs, in fact reflects historical facts. Al-Mukaddasî speaks of a thousand ribâs at Paykand, on the border of Bukhâra (282). They are said to be "in ruins" or disused, khardâ, or "in active use", âmir, although the respective proportion is not given. The same author states the presence (without specifying whether active or otherwise) of 1,700 ribâs at IsfÎdâb, on the right bank of the Sûr Darya or Sayhûn (273; Ibn Hawkal also speaks of a thousand ribâs at Paykand, 489). These highly unusual figures are probably a reflection of hyperbole and mythic representation. In fact, the historical elements of the context (drawn from historiographical sources, as well as from certain passages of the geographers themselves), on the policy conducted by the local Muslim powers (the Tâhirid governors at first, later, the Sâmânid amirs), during the 3rd/9th and 4th/10th centuries, confronted by the Turkish peoples of the steppe (qâ’wuz, Karluk [q.v.], Arabî, Karakûdî), present a quite different picture. In both cases, it is a policy of defence (based on fortresses, hisn or kûhandiz (the Persian word), of towns incircled by walls, muhsaţana, or by ditches and ramparts khandâ, especially in Kh‘ûrazm, works of which many must have been pre-Islamic) and not of attack, which seems to have been practised once the conquests had reached the uncler, but traditional, frontier of the steppe. In response to raids by the Turkish nomads (who normally took the initiative), there appear to have been punitive Muslim expeditions, of which the best-known is that of the Sâmânid Isma‘îl I (279-95/892-907 [q.v.]) against one of the Turkish centres of population, that of the Karluk, the town of Talas, in 280/893. This must have established calm on the frontier for most of the 4th/10th century. From this period, which is precisely contemporary with the floods of Turkish-travellers, the warfare would have been over. This was achieved, furthermore, by the progressive conversion of the Turkish border tribes. Information on these conversions is also mentioned "ardent and decisive men", ridâgâ gisbâm, well-equipped with arms and with horses. It is impossible to tell whether this refers to volunteers. They are deployed, facing the sands, in three forts, bisn, "linked together", muttâsa, one of them being defended by a ditch and rampart, khandâ (al-Mukaddasî, 320).

The mode of expression is lyrical; it could refer to the reality of the previous century. On the other hand, Ibn Hawkal provides a significant extract on the converted tribes installed on the pasture-lands of Shâsh, the region of what is today Taškent (511; al-Mukaddasî is decidedly more discreet, 274). Furthermore, it was soon to be the Muslim irregulars of the frontier who were causing problems. In the article ghâzî, Cl. Cahen defines them as companies of "mercenaries" and not as volunteers for the faith (it may be recalled that Kudâmâ and Ibn Hawkal spoke of sa‘îlîk to denote these irregulars, see above).

For want of external action, they seem to have found a diversion in participating in various revolts, including one in Sâmânid Bukhâra, in 318/930 [see ghâzî]. Some reportedly sought in the mid-4th/10th century to leave for the West (Camb. hist. Iran, iv, The Sâmânids, ed. R.N. Frye, 155). Others were probably employed by Mâhmûd the Ghaznawîd in his expeditions to the Pandjâb at the beginning of the 5th/11th century. It could almost be said that, it is only when the mercenaries of the frontier have left the scene, that the warriors of faith make their entrance, in an idealised representation of the past, in this region just as in the Greater Asia's Mediterranean sector.

From these first elements it can be seen that it is no longer possible to subscribe, in a global manner, to the definition of G. Mârçais, who presents ribât (in his EI article s.v.) as "a type of establishment, both religious and military, which seems quite specifically Muslim" and which would have appeared "at an early stage". It is no longer possible to retain as "current" the interpretation of "fortified convent" (see above). Before drawing hasty conclusions, the most prudent course is, without doubt, to analyse the sources and to identify the points where usage seems to indicate the presence of edifices called ribât. This will not be sufficient to indicate whether it is the edifice itself which bears this name or it is the function assigned to it which accounts for the name. In the first case, there would effectively be a specific construction. In the second case, there would be a common name denoting various types of edifice, according to the function attributed to them. Thus the full range of evolutionary senses of the verbal noun would be encountered, from preparation for combat, to vigilance or to a protected halting-place (a use as verbal noun in the writings of al-Mukaddasî, 303, with reference to Badkhshân, in the mountains of the upper Oxus basin).

Furthermore, a careful reading of the texts reveals
that it is probably a mistake to attribute a military function to certain ribâts; sometimes the reference seems to be to a simple hospice for travellers, especially in the case of an edifice situated on the right bank of a river. A ribât named after a specifically-named individual and maintained by the incomes of a waqf or mortmain (see waqf, and Cahen, *RiBâT 501*

that it is probably a mistake to attribute a military function to certain ribâts; sometimes the reference seems to be to a simple hospice for travellers, especially in the case of an edifice situated on the right bank of a river. A ribât named after a specifically-named individual and maintained by the incomes of a waqf or mortmain (see waqf, and Cahen, *Reflections on the waqf ancient, in Les peuples musulmans dans l'histoire médiévale*, Damascus 1977, 287-306). This would be the case of the four ribâts of Isfâdâb, each situated at the gates of the town (and not in the vicinity of the great mosque, as suggested by the unclear text of al-Mukaddasi, 272-3; cf. Ibn Hawkal, 510, making possible a connection of Sâdâb with Thughr al-gharb, iv, 56), on an important route leading from the major regional metropolises. These hospice-ribâts seem to have been specifically for the accommodation of travellers who were natives of these cities (see the case of the ribât probably founded by Karâjûq, a Sâmânîd military dignitary, who is buried there and who converted into waqf the revenues of a market; another possible case, in the writings of al-Mukaddasi, is the ribât of Mûrîk (?), the founder of which was a Sâmânîd amîr; in this case, too, the establishment is in the environs of the town, 275). On the other hand, in the writings of Ibn Hawkal passages are found which indicate more clearly the purpose of the edifice: ribâts for travellers on internal routes maintained by the waqfs, manâzîl wa-ribââît manâzîl âl-dâbîl al-jâirîk (401). As for the ribât situated on the plain to the north of Ustâghugâna, facing the steppe which borders on the left bank of the Sayhun, the foundation of which is attributed to the celebrated Aflûnh [q.v.], the prince of this province who distinguished himself in far-flung campaigns (before ultimately being imprisoned as a rebel, in Sâmârâ, in 226/841), it seems to be of distinctly military purpose (Ibn Hawkal, 504-5; this case of the ribât of Mirki (?), the founder of which was a Sâmânîd amîr, is the exceptional mention of *mudâwirun* from Tirmidh (mentioned by Miquel, *op. cit.*, and Chabbi, *Remarques sur le développement historique des mouvements ascétiques et mystiques au Khurasân* in *St* [1977]). The facts of the sanctification of certain sites, called ribât by certain authors, should, in this writer's opinion, be often considered (at least on the eastern border; the situation in the West is less clear, see below, in regard to Irikiya), as phenomena added a posteriori, especially in the case of military posts which had lost their importance or fallen into disuse. It is clear that each passage needs to be examined in detail and compared with parallel sources, since each case seems to pose different questions, even when the same region is under discussion. In any case, the important question remains open: who is finally responsible for allocating the name ribât to certain edifices—the founders, the actual users, or later authors describing events?

ii. The central coastal zones and the western frontier

According to Kudama's formula, all the coasts from Syria to Egypt are *thughurs* (253; details of the coastal cities, 255; a brief paragraph is devoted, at the end of the chapter, to the *thughûr al-gharb* which begin with Irikiya, 265-6). The geographers of the 4th/10th century are less synthetic in approach. They do not omit to mention all the fortified towns of the coast (muhassana, *encircled by a wall, or muhassana*, kukâd, *a fortified town*), as well as the establishments connected with the postal service (the *kharâj*) which had been constituted as *wakf*). The verb *thughur* clearly denotes the effective construction of an edifice by this person; it is, however, not known whether it was originally intended as a *ribât*. Clearly less ambiguous are the passages in the works of geographers concerning the halting-places on internal routes called *ribât*. They are generally denoted by a composite expression, "the ribât of...", followed by a place or the name of a founder-edicifist, cited at the gate of a city, which had been constituted as *wakf*). The verb *thughur* here clearly indicates the purpose of the edifice: ribâts for travellers on internal routes maintained by the waqfs, *mandzîl wa-ribââît mandzîl âl-sâîbîl al-thâriq* (401). As for the ribât situated on the plain to the north of Ustâghugâna, facing the steppe which borders on the left bank of the Sayhun, the foundation of which is attributed to the celebrated Aflûnh [q.v.], the prince of this province who distinguished himself in far-flung campaigns (before ultimately being imprisoned as a rebel, in Sâmârâ, in 226/841), it seems to be of distinctly military purpose (Ibn Hawkal, 504-5; this case of the ribât of Mirki (?), the founder of which was a Sâmânîd amîr, is the exceptional mention of *mudâwirun* from Tirmidh (mentioned by Miquel, *op. cit.*, and Chabbi, *Remarques sur le développement historique des mouvements ascétiques et mystiques au Khurasân* in St [1977]). The facts of the sanctification of certain sites, called ribât by certain authors, should, in this writer's opinion, be often considered (at least on the eastern border; the situation in the West is less clear, see below, in regard to Irikiya), as phenomena added a posteriori, especially in the case of military posts which had lost their importance or fallen into disuse. It is clear that each passage needs to be examined in detail and compared with parallel sources, since each case seems to pose different questions, even when the same region is under discussion. In any case, the important question remains open: who is finally responsible for allocating the name ribât to certain edifices—the founders, the actual users, or later authors describing events?

Concerning the frontiers of the West, al-Mukaddasi confines himself to saying that Damascenes go to Beirut to perform *ribât*, *sc. yurâbîsân*, with the soldiers, when there is an appeal in case of danger (sinifâr *call to arms, general mobilisation*), 175; no site of the Near Eastern littoral is mentioned. Concerning the frontiers of the West, al-Mukaddasi confines himself to very vague formulae: the *Maghir* is in a state of permanent *qahâd* (215, the same applying to Cordova, 233). The coasts of Sicily are "noble *thughurs*" which contain "superb ribâts", *thughûr djâîla wa-ribââît djâîla* (or superb *"places of ribât"?*) (15); as for Ibn Hawkal, he goes into most detail when describing Irikiya and Sicily, see below. On the other hand, with regard to the Turkish zone, under the Samanids and then under the Ghaznavids. This role is also attributed to the Sufis with whom the Karrâmiya are often confused. It should be remembered, however, that Sufis did not appear in Persia until the mid-4th/10th century (see Chabbi, *op. cit.*, and Chabbi, *Remarques sur le développement historique des mouvements ascétiques et mystiques au Khurasân* in St [1977]). The facts of the sanctification of certain sites, called ribât by certain authors, should, in this writer's opinion, be often considered (at least on the eastern border; the situation in the West is less clear, see below, in regard to Irikiya), as phenomena added a posteriori, especially in the case of military posts which had lost their importance or fallen into disuse. It is clear that each passage needs to be examined in detail and compared with parallel sources, since each case seems to pose different questions, even when the same region is under discussion. In any case, the important question remains open: who is finally responsible for allocating the name ribât to certain edifices—the founders, the actual users, or later authors describing events?
which are not otherwise adduced. They presumably had a "season" of activity, mawsim, during which there was a influx of Muslim traders. The passage is fairly enigmatic (203). It is perhaps linked to maritime conditions, which rendered approach to the Egyptian coast extremely difficult for the greater part of the year. The ribāts dependent on Ramla are even more surprising (177; Miquel has partially translated the passage, in La géographie humaine, iv, 55). The points on the coast identified as ribāt represent the totality of maritime cities of the Palestinian coast or their ports. The city itself may be somewhat removed from the coast, as is the case of Qhaza in relation to Mimas in the south and of Azdūd and Yubnā in the central zone. The port of these two small cities is called mābāz (a word normally meaning "space between two armics", which could be applied to a maritime forward post in relation to the city by which it is controlled). The other ribāts are fortified cities situated directly on the seaboard, Ascalon or Askašān (between Mimas and Azdūd), Jaffa or Yaffa (considered to be the port of Ramla) and finally Arsāf, a fortified port situated further to the north (description of the defensive works of these cities, 174, with the exception of Azdūd and Yubnā, which are mentioned only in the above-mentioned passage, 177). Given this context, it is reasonable to assume that it is a question of places which ribāt was protected. Miquel prefers to edifices of a particular type. The latter are described, furthermore, by their customary names, whether it is a case of "fortresses", hīṣn, small forts with "observation towers", mahāris (sing. mahrās); these were apparently especially numerous in the zone of Ascalon. The town is described as kauthir al-mahāris, (174). The ribāt which, according to al-Mukaddasī, is practised in this zone is of a very particular type. It is not a question of coastal fort but of fudās [q.v. in Suppl., ]("the ransoming of prisoners" (the principal source on this subject is al-Mas'ūdi, Tanbih, 189-96, who deals with official "campaigns" of ransom conducted by caliphal representatives; there is no mention of ransoms effected on the Palestinian coast). Miquel has good reason for wondering whether, in fact, it was not rather a matter of exchange (ii, 471). According to the passage, the practice, al-Mas'ūdi of the Palestinian coast like the galleys and barques arriving from the Christian shores (their provenance is not specified) are sighted, the alarm is raised throughout the region. The inhabitants come to negotiate in the above-mentioned ports. Such activities are highly plausible, especially as it is unclear whether it is a question of places where a significant number of people reside ("al-'tayyām wa 'l-'asā'd, "according to days and periods", wa'rafa bi-Munastīr, ("place" which is known by the name of Munastīr). The second use appears in an expression which makes ribāt a functional epithet (kāfribāt, "a fortress having the function of ribāt"). The third use is a verbal noun: "there are at the edge of the sea two large fortresses", kāīsand tālmād, li 'l-ribāt wa 'l-'asā'da, "for ribāt and religious observances, and for things in Irfiyya, "which are maintained by the benefits of numerous waskāf situated in Irfiyya", wa 'l-'asā'dātā ta'ī-hā min kulli ard 'ād and by alms which come from everywhere"

There is no doubt that, at a later stage, when their military role had perhaps become less important, the fortresses of Monastir were considered as sanctified sites, favoured by the nobility as places of internment (see monastir; the acts of piety related by the sources are, however, perhaps interpreted a little too literally here). It could be considered that the text of Ibn Hawkāl tends to idealise the situation on the coast of Africa (as also the case of Saē in Morocco, confronting the Barghātā Berbers, considered at the time to be unconquered, 81-2), while he castigates the vice prevalent in the Sicilian places of ribāt (121; partial tr. A. Miquel, La geographic humaine, iv, 55). Historical studies. If mystical movements were able at a later stage partially to occupy this type of edifice, they seem absolutely unrepresentative of the situations which could have arisen in more ancient times.

In Andalusia, three marches confronted the Christian kingdoms, including the famous Galician march, thagrul al-djalālīka. The war which was waged against the local Christians, "of quarrelsome and obstinate temperament", was, according to Ibn Hawkāl (who is manifestly prejudiced), a war characterised by trickery and ambushes which have little to do with the rules of chivalry, farūqiyah. No mention of ribāt is to be found in his text (111, 114; but the province of Spain appears to be little known; only a few pages deal with it). In this respect, al-Mukaddasī is equally vague; on the difficulties of documentation regarding Muslim Spain in the early period, see al-andalus. (ii) "Outline of the historical geography of al-andalus"; (iii) "General survey of the history of al-andalus". It may, however, be wondered whether the lands of the
Muslim West genuinely link, to a greater extent than in the east, military action and guarding of the frontier to a sustained devotional practice (which is not to be confused with a mystical practice!) A critical study of the sources on this subject would unquestionably be a worthwhile project. The Sicilian counter-example which Ibn Hawkal gives, with a view to denouncing it, and which describes the undesirable elements of the frontier, is very significant in this respect. On the other hand, it is no doubt necessary to take account, in as continuity with ancient usages and not as a novelty, of the fact noted by G. Marçais [q.v. in RIBAT in E1], concerning the existence, in Spanish, of the word rebato to denote an action performed by a troop of horsemen in conformity with Muslim tactics. Encountered in this definition is the precise basic sense of the verbal noun of the early caliphal period. It does not go as far as the original ribāt, on the banks of the Senegal river, which has long been reckoned the point of departure of the Almoravid Berbers, at which fact which is not today held in doubt [see H.T. Norris, Al-Murabitun, IV. The Almoravid movement, which began in the Maghrib at the beginning of the 5th/11th century, passed into Spain during the final quarter of the same century (479/1086, victory of Yusuf b. Taḥsin at Zallāka, see P. Chalmeta, Al-Murabitun. IV. "The Almoravids in Spain") and dominates it politically, while unleashing war on the frontier, using both regular troops and mercenaries, exactly as in the East. In this context, there seems however to appear, as a specific case, the activity of certain splinter-groups of Mālikism from the Maghrib which preached an activist application of religious observance. This would be the case of the founder of the Dār al-murābiṭīn (mentioned by Norris, in art. cit., and located in the Moroccan Sous) which apparently professed a blend of piety and warfare. This movement could first have inspired the faith of the Saharan Almoravids, then that of the ideologies which followed them, and who were to be recruited into circles of jurists of the Mālik persuasion. It is nevertheless important not to continue to confuse these modalities of active observance, perfectly identified (which could, in certain aspects, be compared, in the East, to Ḥanbalī activism and, much later, to Wahhābism) with the use which the Spanish and Portuguese (by analogy with the Maghrib! usage defined by G. Marçais in his article, see P. Chalmeta, Al-Murabitun. IV. "The Almoravids in Spain") made of the institution of ribāt. On the contrary, the Almohad ribās of the 6th/12th century, mentioned by G. Marçais in his E1 article, seem, at first sight, to be of a far more classical nature, since their role is that of ribāṭ Tāzā (q.v. in E1), the base of operations for anti-Almoravid action. As for the ribāṭ al-fath (q.v.), it was the muscling point for men and materials awaiting transfer to Spain. Before becoming the site of the future city of Rabat, this area of coastal ribāt apparently served as a necropolis for the Morinids (after the example of certain ribās of Ifrikiya, for the local dynasties: see ribāt in E1). It should probably be born in mind that it would be impossible to continue to deal with the problem of ribāt, in general and without reference to the precise contexts in which the usage of this term have been forged and evolved. The phenomenon of the establishment of these ribāts as in continuity with ancient usages and not as a novelty, as it was noted that the phenomenon became established—at the earliest, but still in a very uneven manner—from the second half of the 5th/11th century, in the Saljuqs lands of Persia. Similar structures were apparently also in evidence among the Ghaznawids of northeastern Persia, as far as the approaches to the Pāndžāb. It subsequently spread very widely over the newly-conquered territories, arriving, from the 7th/15th century onward, in the Dihī Sultanate (q.v.), when this region was settled by Persian élites beeing from Mongol domination, henceforward established throughout Persia (K. A. Nizami, Some aspects of khānqah life in medieval India, in Sl, viii [1957], 51-69). In the same manner, the progress of these establishments seems to have followed, in the West, the advance of the Saljuqs and their successors, first in Zangid Syria and then in Ayyubid Egypt, as well as in Anatolia (q.v.) and Andalus (q.v.), the latter being the result of the Saljuqs advance, as well as the result of the development of the mystical brotherhoods, furūk (sing. furūk, q.v. in E1). The entire Muslim world was thus affected. Local particularities and significant disparities between these institutions are to be noted, however, resulting from the circumstances of foundation (whether or not the initiative was sponsored by a dynasty or a powerful individual, and the level and permanence of the wakf intended for their support). It should be noted, for example, that the genesis and evolution of mysticism in the Muslim West, Maghrib and Spain, seem to have been quite different from what took place in the East, partly as a result of the quasi-exclusive domination of the Mālik school of law, which was able to impose certain obstacles in matters of the spiritualisation and the practice of faith. In these regions, as was later to be the case in sub-Saharan Africa, the overwhelming mystic phenomenon was maraboutism (elements in E. Douét, Magie et religion dans l'Afrique du Nord, Algiers 1908, repr. Paris 1963; G. Drainé, Essai d'histoire religieuse du Maroc: conférences et soussais, Paris 1951; E.
Dermenghem, *Le culte des Saints dans l'Islam maghrébin*, Paris 1954). However, the Şûfi brotherhood movement was ultimately to be established in the West also. There it took on some quite specific traits (on the mystical brotherhoods in general, see J.S. Trimingham, *The Sûfi orders in Islam*, Oxford 1971, on the establishments and the phenomenon of *ziyâra*, “pious visiting [of a shrine or tomb]” see ch. vi, esp. 166-80). The thesis which continues to be propounded, in regard to the Muslim West, consists in saying, following E. Lévi-Provençal [see *ziyâra* in *ÉP*] that the an- cient local term of *tekke*, which also appears in towns, in the same places and during the same centuries, was the dominant usage in numerous regions, or *ribât*. There is sometimes concurrence of the two terms in the same zone (Syria and Egypt). In lists of establishments compiled in a later period and applying to Egypt as well as Syria (see below), the appellation *ziyâra* is also found referring to urban establishments which seem to be of the same nature as *ribâts* or *khankâhs*. It is not known in what circumstances this third term (which is supposed, a priori, to be of western origin) is applied in these central regions. As for designation by the word *ribât*, it is seldom an exclusive usage, except in Trâk, in the region of Baghdât (but only until the Mongol period). It is, in fact, this declining caliphal metropolis which seems to have imposed, for a time, the most important and probably the most ancient stratum of urban *ribâts* (cf. the present writer’s article on the pre-Mongol period of foundation of the Baghûtât *ribâts*, see below). Elsewhere, it is the appellation of *khankâh* which seems to have originally been prevalent, this applying to all the lands of the Muslim East or lands of the Levant, controlled, directly or indirectly, by powers of Sâlûdîk origin (Syria and Egypt). It is this, moreover, which seems to have impressed both travellers like Ibn Djubayr in the 6th/12th century and Ibn Baštûta in the 8th/14th century (see below). The names given to these establishments, most of them founded between the 6th/12th and the 7th/13th centuries, were not subsequently to change, though the foundations could be of very different nature, in terms of their dimensions, their importance, their financial means, even their users, whether or not under the control of successive powers. The most important foundations often accommodated the tomb of the founder, even if the latter had no connection with mysticism (see *kubba*, where the primary concern is with tombs in *madrasas*; see also the term *turba[turâbe]*). This was to be the case especially in Mamlûk Egypt (see *khankâh*). Lists of establishments are to be found in certain relatively late sources. For Egypt, they feature in the *Khitât* of Ibn al-Muâcallâh (d. 845/1442 [q.v.]; according to this author, the city of Cairo is said to have contained 23 *khankâhs*, 12 *ribâts* and 26 *ziyâras* [op. cit., Bulâk 1270/1853, repr. offset, Baghûtât n.d., ii, 414-36]. These establishments evidently do not all belong to the same period. The chronology here is defective, needing to be restored before any analysis is attempted. Thus it is possible that the *khankâhs* could be the most ancient, which would explain the astonishment of the Maghribi travellers who passed through Cairo, between the 6th/12th and 8th/14th centuries (if the lists supplied in the sources are to be believed, there had, however, been *ziyâras* since the 7th/13th century, in Syria and in Egypt). For Damascus, there is a list comparable to that of Cairo, but of even later date. It is owed to ’Abd al-Kâdir al-‘Nu’aymî (d. 927/1521, see Brockelmann, S II, 164) and feature in the *Tanbih al-tâbîn wa-irhdâl al-dârîn* (2 vols., Damascus 1948; al-‘Nu’aymî makes frequent references to Yusûl Ibn Shaddâd, d. 632/1235, for the more ancient establishments). The figures were reportedly as follows: 29 *khankâhs*, 26 *ziyâras* and 21 *ribâts* (to this list should be added an indeterminate number of *tekkes*, from the Ottoman period [see *dimmâshq*]). This Turkicised word denotes an establishment of the same type as those already mentioned, its Arabic form being *takîya*). Here, too, the chronology is defective, and the dates of foundation of the establishments are not given systematically. Historical exploitation of these lists has yet to be undertaken. In the Maghrib, it was to be the appellation *ziyâra* which was prevalent before the Ottomans. The latter were to build a certain number of *tekkes*, alongside older establishments, except in Morocco, which escaped their domination (given the conditions of local mysticism, the Maghrûbi *ziyâras* are not necessarily urban establishments, see Trimingham, *op. cit.*, index, 314). The observation of Ibn Djubayr (who was in the East at the end of the 6th/12th century, see below, *Rihla*, 330) suggests that while *khankâh* was probably unknown in the West, there were nevertheless usages of the term *ribât*, taken in the sense of a generic term. It should be noted that, in another *Rihla*, of two centuries later, Ibn Baštûta, the great traveller and a native of Tangier (q.v.; he is said to have died in 779/1377 or a little earlier), for his part uses *ziyâra* as a term of reference to denote all kinds of establishments, from institutions for mystical brotherhoods to simple wayside hostleries. This uniformity of nomenclature does not seem to correspond to reality. It could be the product of extrapolation, deriving from a typically Maghribi usage. In his accounts, often lively and spiced with anecdotes, this traveller-narrator would be unlikely to mention the terminology actually used in the regions of which he speaks. Furthermore he would not have expressed himself at least once, in reference to Cairo when he declares, “as for *ziyâras*, which are here called *khankâhs*”. The passage is included in a chapter devoted to the various establishments of Cairo (the mosque of ‘Amr, the *madrasas*, the *mârisîns* and the *ziyâras*, see his *Rihla*, Beirut 1967, 37). In pre-Ottoman Turkey, it is also *ziyâras* which are attributed by him to the Turkoman organisations of the *âbûs* (q.v.), who were to revive, in Anatolia, the most ancient tradition of the *futuhََات* (q.v.; see also Cl. Cahen, *Pre-ottoman Turkey*, London 1968, 196-200). The word *ribât* seems to be completely absent in the *Rihla* of Ibn Baštûta. There is a single isolated use of the term *ribâha*, apparently denoting an oratory regarded as a sacred site (placed under the mythic patronage of the prophet *Iyâs* and of *Qâdir*, see *Rihla*, 319-26).

Returning to the genesis of the process, it will be noted that the most distinguishing feature of these new kinds of establishment is that they are situated, in principle, in cities (except in the case of marabout edifices, many of which reflect the local configuration of places collectively recognised as “sacred” and not on a frontier or in an exposed place. Just like the *madrasas* or colleges of law [q.v.], which also appear in towns, in the same places and during the same
periods, the urban establishments for Sufis were to be almost exclusively financed by the system of waqfs (see above). These enabled them to continue in existence and to survive, without too much damage, some particularly turbulent political phases. These were sometimes private waqfs (especially as regards small and ancient foundations, for the use of a single master and his disciples). Later, in establishments of importance, these were to be public or semi-public foundations, initiated by persons belonging to the higher echelons of the state or of the court. There are cases, for example, of foundations created by princesses and sultans (the position in Baghdād from the 5th/11th century to the 7th/13th century is well-known through local chronicles such as the Muntazam of Ibn al-Djawzī [q. v.]; see J. Chabbi, La fonction du ribât à Bagdad du Ve siècle au début du VIIe siècle, in REI, xlii/1 [1974]).

But this phase of official foundations, which began in Persia with the first Sālūḏiks of the 5th/11th century, seems to have been preceded by a much more obscure period during which the transition was made from the very overt tradition of the diffusion of knowledge, *ʿilm* (religious knowledge, in this case), which was normally dispensed in the mosques, *maṣjid* [q. v.], or the great-mosques, *dār al-ʿilm* [see mašrūʿ], to instruction conveyed in the enclosed space of the new institutions. The latter did not, however, cause the disappearance of the former. It is, yet again, in Persia that the process seems to have begun, probably on the basis of previous local models. The invention of the Muslim khankāh (a word in Persian undifferentiated in gender which has evolved into a feminine in Arabic) is probably the most ancient. It may be attributed to the ascetic preachers of the movement of the Karrāmiyya, on the basis of a model which is possibly Manichaean. The earliest foundations seem to have been established, in north-eastern Persia, between Transoxiana and Khorāsān, during the Sāmānīd period, probably from the end of the 3rd/9th century onwards. Until around the middle of the following century, the khankāh seems to belong specifically to the movement represented by those whom al-Mukaddasī calls khankāhs, “man of the khankāh” (44; khawānsīr to Sufism. On the other hand, the association which he seems to establish, in several passages (412, 414, 415), between ribāḥ and Sufism has been interpreted as suggesting that “convents” are to be envisaged. But an anecdote which locates in Susiana and in which he is personally involved (he is mistaken for a Sūfī on account of the woolen gown which he wears), seems to show that this is not the case, 415; the Sūfīs have their circle, maṣṣāsī or “meeting place”, in the great mosque of Susa; they seem to have an inclination to travel, they are considered as bearers of sanctity and they receive donations; the ribāḥ which they frequent are not their own property, but the small forts on the nearby coast in the region of Abbādān which, at the time, must still have been in a reasonable state of repair). The equivalence between the two terms ribā and khankāh, which for Syria, and in the context of Sūfism, to be established two centuries later by the traveller-pilgrim Ibn Dujaybīr [q. v.], seems to be far removed from current opinions (his *Ribḥa* ed. Wright and De Goeje, Travels of Ibn Jubayr, GMS, V, 1907, tr. M. Gaudrelof-Denmonbynes, Ibn Jobair, Voyages, Paris 1949-65). This text is extremely valuable because it offers testimony de visu. The passages on the Sūfīs and their recognised establishments, all situated in urban surroundings, are exclusively concerned with the Syria of Salāḥ al-Dīn (Ibn Dujaybīr was residing there in 580/1184). It is the terminology of the khankāh which seems to be asserted here first, in a spectacular fashion (see Cānēn’s remarks on the utilisation of Persian terminology in Ayyūbīd Syria: L’immigration perse dans les origines de l’Islam aux Mongols, Communication, Rome 1970, rep. L’emigration persane des peuples musulmans dans l’histoire medievale, Damascus 1977, on khankāhs, 448; on the pre-Ayyūbīd period, see N. Elĭsēĕf, Nur ad-Dīn, un grand prince musulman de Syrie au temps des croisades (511-569H/1118-1174), Damascus 1967, index). The very expression used by Ibn Dujaybīr suggests that he knew elsewhere of the ribāḥ for Sūfīs ("the ribāḥ which are here called khankāhs", see below, tr. 330). The conditions of foundation, maintenance, as well as the magnificence of certain establishments, are the object of precise observations (the seminal passage with the exclamation, “the Sūfīs are the kings of this land!” (text 284, tr. 330-1; foundations by princesses, text 275, tr. 318; a case of double appellation, khankāh and ribāḥ, text 243, tr. 279-80).

It is for the moment impossible to detail the successive stages of evolution which led to the situation described, from the 6th/12th century onward, by concordant sources. Thus it is not known why it is the term ribāḥ, long associated—in the ambiguous conditions which have been described—with the history of the frontier, which comes to be established (in the Arabic version) as the designation of establishments *inter muros*, dedicated to the shelter of mystics. It could evidently be supposed that, by this means, the mystic establishment reverts to the old sense proposed by the contemporary traditionalists who held that religious ob-
servance constituted the true ribāt. But it may further be supposed that the word is linked to the symbolic representation of dhähā, which becomes the mystic suggestions, the original Muslims themselves. It is this interpretation which is proposed, in Irak towards the end of the 4th/Badis aliphate, at the beginning of the 7th/13th century, by a major connoisseur of Baghdaóżī establishments, the core author Abū Ḥāfīẓ ʿUmar al-Suhrawardi (d. 632/1234) in his compendium of Sufism, the Kitāb ʿAwarif al-maʿarifī (publ. as a supplement to the Ḥa-Thulūm al-dīn al-Qhāzālī, Maktabaʿ ʿAwarif al-maʿarifī, ch. 13-18, of which are devoted to what could be called “the rules of ribāt”; the rules of ribāt are said to have been defined in Per- sian by the Sufi Abū Saʿīd, at the beginning of the 5th/11th century). The proposed interpretation has the merit of coherence, but it supplies no historical justification. It has to be recognised that, for the mo- ment, no explanation is available which could be sup- ported by admissible historical evidence. Furthermore, there are certainly considerable differences, according to periods, regions, types of foundation, be- tween the establishments which are quite simply called ribāt, ḥānākāh, sāwā-i or, later, tekke. Ibn Ǧuḥayr says most astonished at finding in Syria establishments which resemble, according to him, palaces, ḵūsūr. This indicates that the entire history of the word, in its mystical sense, remains to be written. All that is certain is that, once launched, in very disputable conditions, the movement was to be ir- reversible. It was all the more so in that it was soon to be supported by the mystical brotherhoods. But it could be that an even greater contribution was made by the untiring activities of the founders. It may be supposed that, over and above the pious work with which they associated their name (such establishments usually bore the name of their founder), aristocratic persons soon came to regard the establishments which they had initiated and financed as a not inconsiderable perquisite of power, albeit symbolic.

With more precise regard to ribāt, and as a way of concluding the account of the adventures of this word, it may be noted that it is the final evolution of the term which tends to cover, with its sense, all the ancient and intermediate stages of its itinerary, through the succuha, the ribāt against society itself. It is doubly interesting as a result of this that there is regularly encountered, in translation, a misinterpretation which could be described as functional, that which, in defiance of all the ancient usages, makes of ribāt a “military con- vent”—one thing which it never was.

2. Architecture.

Ribāt architecture developed from notions of preparedness and defensibility and from models in conquered lands that could be appropriated for these purposes. Early ribāts varied in size and complexity from isolated watchtowers to fortresses with cells for the muḥāsibān, a mosque, storehouses, stables, and towers. Examples of the former cannot be identified with any certainty, and only two verified examples of the latter survive in Tunisia. The first, heavily renovated and remodeled, is in Monastir [q.v.]. The second, situated on the south bank at the mouth of the Wādī Abū Raḵrāt (Wed Bou Regreg) opposite the town of Saʿīd [see SAS]. After the establishment of the French Protectorate, it became the administrative capital of the Sharīfīy empire, the usual residence of the sultan of Morocco and the headquarters of the makūzīn [see MARIZAN] and of the French authorities. The choice of Rabat as the administrative centre of Mor- rocco brought to this town considerable develop- ment in place of its earlier somnolence.

When Morocco regained its independence (1956), Rabat became the official capital of the land, and the seat of political (Royal Palace, Parliament), ad- ministrative (government ministers, services of the state) and military power. All the diplomatic repre- sentatives were concentrated there. But the economic and commercial capital remained Casablanca (head- quarters of large businesses, banks, export and import agencies, etc.).

Morocco is thus the only North African state which has two capitals with specialised functions, 56 miles/90 km from each other, a fact which avoids, to some extent, too great a concentra- tion of powers and functions in one dominating metropolis.

The foundation of Ribāt al-Faḥ was the work of the Almohads [see AL-MUWAḤHĪDŪN]. The site of the “Two Banks” (al-I ṭawāqīn) of the estuary of the Bou
Regreg had previously been the scene of Roman and pre-Roman settlements: the Punic, later Roman Sala was built on the left bank of the river higher up at the site of the royal Marinid necropolis of Chella (Siha [q.v.]). The Muslim town of Salá on the right bank, from the beginning of the 4th/10th century, in order to protect it against the inroads of the Barghawatá [q.v.] heretics at the time when it was the capital of a little Ifránid kingdom, had fortified on the other side of the Bou Regreg a ribád [q.v.], which was permanently manned by devout volunteers, who in this way desired to carry out a vow of dhikár [q.v.]; the geographer Ibn Hawkal is authority for its existence at this date (ed. de Goeje, 56). But we know very little of the part played by this ribád in the course of the sanguinary wars later fought between the Barghawatá and the Almoravids [see al-Muraribîýn]. It is not even possible to point out its exact situation. It was perhaps the same fortified spot that is mentioned in the middle of the 6th/12th century under the name of Kašr Bani Targh by the geographer al-Fażārî.

The final and complete subjugation of the Barghawatá meant that a different part was to be played by the ribád on the estuary of the Bou Regreg. In 545/1150, the founder of the dynasty of the Muʿminind Almohads, ‘Abd al-Muʿmin, chose the fort and its vicinity as the place of mobilisation for the troops intended to carry the holy war into Spain. A similar ribád was also established there and he provided for a supply of fresh water by bringing a conduit from a neighbouring source, ‘Ayn Ghabûl. The permanent establishments, mosque, royal residence—formed a little town which received the name of Al-Mahdyîya [q.v.] as a souvenir of the Mahdî Ibn Tûmar [q.v.]. On several occasions, very large bodies of men were concentrated around the ribád, and it was there that ‘Abd al-Muʿmin died on the eve of his departure for Spain in 558/1163.

The development of the camp went on under ‘Abd al-Muʿmin’s successor, Abū Yaʿkūb Yûsûf (558–80/1163–84), but it was the following prince of the Muʿminind Almohads, ‘Abd al-Muʿmin, chose the fort and its vicinity as the place of mobilisation for the troops intended to carry the holy war into Spain. a long period of decline for Salé which found expression not only in the gradual diminution of its trade but also in a very marked hatred of each town for the other. At the beginning of the 20th century, Rabat, like Salé, had completely lost its old importance. They were both occupied by French troops on 19 July 1911.

After the installation of the Protectorate, the demographical and spatial growth of Rabat was intensified. The population in 1912 was estimated at 24,283 (comprising 23,000 Moroccans and 1,283 Europeans), adjacent to Salé with 17,000 inhabitants, and Morocco in 1952, after independence, the census population of 156,209 inhabitants for Rabat (114,709 Moroccans and 41,500 Europeans). In 1982, the date of the latest official census, valid until the present time, Rabat had a total of 256,100. But one should take into account not only the residents of the capital city but also those of Salé, closely linked with Rabat (316,700 inhabitants) and ca. 150,000 in the surrounding suburbs. Hence the whole agglomeration of Rabat-Salé has more than a million people, forming the second largest urban grouping of Morocco, after Casablanca, and spreading its buildings over more than 130 km².

The “bipartite urban settlement” which as grown out of the “Republic of the Two Banks” has thus become strongly symmetrical, from all points of view. Together with its suburbs it forms three-fifths of the population of the agglomeration, the essential part of the tertiary sector jobs and even the industrial ones. The industrial concerns, estimated at 8,000 in 1986, make the capital the sixth of the industrial centres of Morocco, which hardly allows one to visualise it as a residential and official city. Rabat provides numerous jobs, distributes the resources to a multitude of officials but also to modest households existing in the shadow of the property classes (informal employment). As for Salé, it provides housing for employees and workers and appears as a “dormitory town” narrowly dependent on its powerful neighbour.

The urban structure of the two cities also differs. It is true that the two madinas have always faced the mouth of the Bou Regreg and contain the historical remains of the two cities (gate of Bab el-Alou and the ancient mellah and Kasba of the Udaya at Rabat; and the gate of Bab Sabta, and the Marinid Great Mosque and Medersa at Salé). But the Rabat madina has been less densely packed than the Salé one, and its role in the agglomeration is secondary. On the other hand, the Salé madina is overpopulated but in other respects is more attractive to the population on the right bank of the river.

The extensions extra murs, in effect the 20th century quarters, are of a very different nature on each side of the river. In Rabat, these are large, well-spaced blocks, with wide roads and numerous green spaces, which have brought about, since the beginning of the “colonial city”—where the town planners Prost and Ecochard distinguished themselves—a relatively harmonious city (quarters of the Centre, the Residence, Tour Hassan, Orangers and Aghdal). The sites laid out after independence (Amal Fath, university campus, enlargement of the quarter of the luxurious villas of Souissi and the spacious plots of Ryad) have perpetuated this tendency, even if some poverty belts have grown up in the southern suburbs. The expanse of these suburbs, which are either “spontaneous” or have been remodelled by the state, is incontestably more limited than on the Salé bank of the river.

In Salé, beyond the madina, there is a rabbit’s warren of “refuge quarters” which have gradually grown up, biting into the old market gardens and throwing into relief the lower-class and dependent nature of this city, which is neither a rival nor a twin of Rabat but which has become simply an annex of the capital city.

Strangely enough, although Rabat is the undisputed national capital, it is not a regional centre. Its hinterland is limited to the Zaer country to the south, an important region for stock-rearing, and to a string of bathing resorts along the Atlantic coast. Contrariwise, the economic hinterland of Salé is much more extensive and clearly dominated by the city of Salé itself, and comprises the regions of the Sehoul and the Zemmour. Thus Salé has retained an active role within the adjoining rural world, which is characteristic of traditional Islamic towns, whereas Rabat seems to have turned its back on the countryside, as befits a relatively new and probably still to some extent artificial town.

caravan route, two stages from Sarakhs. It consists of four four-iwán courtyards, each containing a mosque. The larger inner court is surrounded by extensive suites of rooms; the outer court served mainly for stabling.

On the pishtaq [q.v.] at the rear of the inner court is an inscription with a date in which the units ended in 8. The iwán behind it has a stucco inscription dated 549/1154-5 in the name of the Saldjuk sultan Sandjar [q.v.], crediting the work to his wife Turkán Khátun. At this date, Sandjar was being held captive by the Ghurids: A. Godard (Khorasan; in Alhéfi-I Iran, iv [1949], 7-68) suggested that Turkán Khátun's work involved mostly decorative repairs, and that on stylistic grounds 508/1144-5 was the date of the original foundation.

Although the building was restored in the 1970s, leading to the find of a cache of 11-14th century metalware and pottery, a lacquer box and a Šafavid firmân under one of the floors (M. Y. Kiani, Robat-e Sharaf; Tehran 1981), there has been no systematic study of the building to confirm Godard's sometimes problematic hypotheses regarding attribution of the work to the original building period or to restoration. For instance, the stucco revetment of the squinch of the mosque, ascribed by Godard to 1154-5, is almost identical to that of the Šarut Gunbad in Turkmenistan dated 491/1098 (S. Blair, The monumental inscriptions from early Islamic Iran and Transoxiana, Leiden 1992, 180).

The stucco is extraordinarily varied, ranging from the multi-layered arabesques of the soffit of the axial iwán to archaic work (best published in A. Hutt, Iran I, London 1977, Pl. 65) suggesting the involvement of the same team responsible for the stucco of the tomb of Sandjar at Marv. The range of brick decoration and vaulting techniques, as yet inadequately published, is equally impressive.

This sumptuousness, together with the royal restoration inscription, make it likely, as J. M. Rogers has pointed out (in J. Sourdel-Thomine and B. Spuler (eds.), Histoire des dynasties des rois de Perse, Paris 1970, 298-299), that the building was as much a palace as a caravanseray. A monumental gateway with the fragmentary remains of a royal inscription at nearby Du Barar (W. M. Clevenger, Some minor monuments in Khorasan, in Iran, vi [1968], 58) may have been the gateway to the caravanseray/palace or a surrounding bay."
movement. (2) Ca. 1013-1019/1604-10. After the move to the new capital, Isfahan, in 1006-7/1598 and the addition of the honorific 'Abbasī to his name, ca. 1011-12/1603, Rida rebelled, ceasing to portray courtly figures. His staccato style of draughtsmanship fits the subject-matter of the period—lone, anguished men in the wilderness. (3) Ca. 1019-44/1610-35.

Resuming court employment, Rida introduced a ponderous figural style, a palette of half-tones, and multi-figure compositions to his oeuvre. The single-page subjects include portraits of shahs, courtiers, Persians, and soldiers; the multi-figure compositions are amongst the most important contributions to Persian miniatures. In 1013/1604, the Safavid ruler Shah Ismā'īl, son of Fath-Allah, was put to death by the partisans of Karlm Khan, the grandfather of Rida Kulī, chief of Khudjandl, who gave the name of the shah to his son, Abbas Mirza. Abbas Mirza's education to him. In 1018/1609, Shah Ismā'īl was recalled after a serious illness to help his partisans in his efforts in poetry were published under pseudonym of Hidayat. In 1022/1613, he returned to Pars where he received his education; he then entered the service of the state under the Qajars (cf. Relation de l'ambassade au Kharezm, tr. Schefer, 203).

His lyrical poetry of the notables of Carda Kilata (district of Damghan), aimables que j'aie rencontres dans aucune partie du monde” (Gobineau). A descendant of the poet Kamāl Khudjandl [q.v.], the grandfather of Rida Kulī, chief of the notables of Carda Kilata (district of Damghan), was put to death by the partisans of Karim Khān Zand against whom he supported the Kajars (cf. Relation de l'ambassade au Kharezm, tr. Schefer, 203). His father became one of the dignitaries of the court of the Kajars; in 1215/1800, while on a pilgrimage to Mecca, he heard of the birth of a son in Tehran to whom he gave the name of the imām. Becoming an orphan in 1802, Rida Kulī spent his early years in Fārs; he was brought back from Fārs to Tehran, lived some time with relatives at Māzandarān, then returned to Fārs where he received his education; he then entered the service of the state under the patronage of the governor-general of Fārs. His earliest efforts in poetry were published under the pseudonym of Hidayat. In 1829, on the occasion of Fāth 'Ali Shāh's stay in Shīrāz, he composed a panegyric and other poems which gained him the royal favour; but a serious illness prevented him from leaving Shīrāz. In 1838 Muhammad Shāh showed such esteem for him that he entrusted his son 'Abbās Mīrzā's education to him. The political troubles that followed the Shāh's death in 1848 sent Rida Kulī into retirement. In 1851 Nāṣir al-Dīn Shāh recalled him and sent him on an embassy to Khāji. He was next appointed to the Ministry of Education, became Director of the Royal College (dar al-funūn), then fifteen years later, tutor (lāli-hākī) to the crown prince Muhammad al-Dīn, whom he followed to Tabriz, where he spent several years. He returned to Tehran where he died in 1288/1871.

His very numerous works include e.g. some treatises on theology and letters (for which mention only the Mīstāf al-kunūz, a commentary on difficult verses in Khākānī, and the Niṣābd-nāma-yi salātīn-i ʿadīm-niṣāād, on early Persian dynasties: analysed in JRAS [1886], 198). His lyrical poetry (Duvarī) totals about 30,000 lines. Of his six mathnawīs (enumerated by himself, Mathnawī al-fusahā, ii, 382) only the epic entitled Bekhtā-nāme (or Gussīānī-i rām, lit. Tabriz, 1270/1853) is published: it celebrates the tragic loves of the hero and the Persian poets of Arab origin Rabiʿa Kızdārī Balkhi, known as Zayn al-ʿArab. His other works which have been published are mainly of a documentary nature and therefore of very important.

The Fībrīs al-tawārīkh ("RePERTory of chronicles"), chronology, lit. in part at Tabriz) was presented to Nāṣir al-Dīn Shāh before the author's departure to Khārazm (1851); the Adjamal al-tawārīkh (lit. Tabriz 1283) is a short précis of the history of Persia composed for the crown prince Muhammad al-Dīn; the Raudat al-safā-yi Nāṣirī, continuation of the Raudat al-safā of Mir Ḵān al-ʿArabī (lith. Tehran 1278-9, 3 vols. fol., also Tehran 1338-9/1959-60, 10 vols.), is a work of considerable size, based on eastern sources (of which several are still unpublished) and on official documents, most of which are reproduced in full; in addition to the record of political events the work contains much geographical, literary and artistic information.

The Roudād al-ʿArifin ("Gardens of the initiated"), biographies of mystical poets, with an excellent introduction on Sūfism, was prepared for Muhammad Shāh (lith. 1305. Tehran, printed Tehran 1336-40/1957-61, 2 vols. in 6). It is closely connected with the Madjmaʿ al-fusahā ("Assembly of eloquent individuals"), of first importance for the history of Persian poetry (lith. Tehran 1294, 2 vols. fol.; this last work, the author's best, contains after a general introduction on the history of Persian poetry, biographies and select pieces from all the poets (the poet laureates form the first section); at the end is an autobiography and an anthology of the poems of Hīdāyat (ii, 581-678; autobiography and a number of the verses reproduced by the author of the Fatār-nāma-yi Nāṣirī, ii, 125). The researches necessary for these last two works showed Hīdāyat the inadequacy of the dictionaries at his disposal; he intended to remedy this by his Fardun-i angūman-ārd-yi Nāṣirī (lith. Tehran 1288) which, preceded by a remarkable introduction, gives the different meanings of each Persian word, with quotations from the classical poets. The work entitled Madārīg al-balāgha (lith. 1331) is a glossary of rhetorical and poetical terms with many examples taken from different poets. Lastly, we owe to Hīdāyat the first editions of the Duvarī of Manūcīhī (lith. Tehran 1297), of the Khāzīn-nāma (ibid. 1275) and of the Naftārīn-nāma (lith. Tehran 1302) of the Shāhīn-nāma, which is the continuation of the Khārazmīan empire of Muhammad Zaydārī (publ. posthumously, Tehran 1308). Its autobiographical character gives the attractive "Narrative of a Journey to Khārazm" (Fatār-nāma-yi Khārazm, ed. and tr. Schefer, in PEOV, Parī 1879) a special place among his works; he undertook this journey in 1851 as ambassador sent to settle the differences between the courts of Tehran and Khīwā. This journal is a valuable document for the history of the Khānates and has been utilised by later Persian historians (notably Muhammad Ḥasan Ḵān [q.v.]); besides valuable historical, archaeological and geographical matter, the book, which is written in a simple and natural style, is a contribution to the study of the manners and customs of the period (notably, conditions of travel); we find in it pretty pictures of native life and charming landscapes. Several of Hīdāyat's biographies of mystical poets have taken a prominent part in literature, politics and administration.

**RİDA NÜR, Rıza NüR (1879-8 September 1942)**, Turkish medical doctor, politician, diplomat, born of a prominent family which contributed significantly to the cultural and political life of Turkey in the late Ottoman and early Republic periods. For the present article, we will focus on his political career and contributions to modern Turkey.

Rıza Nür’s father was a career officer in the Ottoman army, rising to the rank of major general. His family was known for its loyalty to the Ottoman Empire, and Rıza Nür’s youth was marked by a deep sense of national identity.

In 1908, at the age of 19, he entered the Faculty of Medicine at the University of Istanbul, where he studied under prominent physicians of the time. His academic excellence was recognized, and he was awarded a scholarship to pursue further studies in Europe. In 1913, he returned to Turkey to join the Ottoman military.

During World War I, Rıza Nür served with distinction in various campaigns, including the Gallipoli Campaign and the Battle of Mudros. His contributions were significant, and he rose through the ranks to become a major general.

In 1920, after the collapse of the Ottoman Empire, Rıza Nür joined the Republican movement. He was appointed as Minister of Education in 1920, a position he held until 1922.

After the death of Mustafa Kemal Atatürk, the founder of the Republic, Rıza Nür continued to serve as a supporter of the new government. He was a key figure in the consolidation of the new republic and its international recognition.

Rıza Nür’s career falls into two distinct phases: his first forty-five years as a commoner, and the fifteen years of his rule as Shâh. As with other founders of dynasties, Rıza Shâh’s origins are comparatively obscure. His official date of birth is 13 March 1878, and he was born in the village of Alasht in the Sâvâd Kûh of Mâzandârân. His father, ‘Abbas ‘Ali Khân, who was an officer in the Kâdîrjân army, died in the same year. His mother, from an emigrant family from Erivan, then took him to Tehran where, around 1893, he joined the Şâh’s Cossack Brigade. This unit, established by Nâşir al-Dîn Shâh in 1879 and officered by Russians, was at that time the most effective unit in the Iranian army. Rıda enlisted as a common soldier, but was soon promoted successively to corporal, sergeant, and sergeant-major, and in 1911, having seen active service in the turbulent period which followed the constitutional movement of 1905-6, was commissioned as a second lieutenant, and a year later, promoted to lieutenant. After further experience campaigning against recalcitrant tribes, in 1915 he was promoted to the rank of major. He was regarded as a model officer, with a reputation for both bravery and conscientiousness. He also seems to have become politically engaged about this time, as the result of neutral Iran’s occupation by British, Russian, and Ottoman forces during the course of the First World War.

In 1916, he became a lieutenant-colonel, and a year later was appointed commander of the Cossack regiments. It seems that Rıda Khân felt increasingly bitter that the force in which he served, although regarded as the “crack” unit of the Iranian army, was an instrument of Russian influence in Persia. The outbreak of the Russian Revolution in 1917 shattered Iran's peace, and the Cossacks, like other units of the Persian army, were engaged in fighting against the Cossacks and the British in northern Iran. Rıda Khân, who had been promoted to the rank of general in December 1918, was forced to take command of a much reduced force, which, despite militarily inconclusive results, he bombarded Enzeli, and the Dangal movement under Kûtak Khân [q.v.] in Gilân forced a response from the feeble central government, resulting in Rıda Khân’s participation in the fighting in Gilân, in which, despite militarily inconclusive results, he returned to Tehran with an enhanced reputation for courage and resourcefulness.

Promoted to the rank of full general, he was now appointed to command one of the Cossack regiments. It seems that Rıda Khân felt increasingly bitter that the force in which he served, although regarded as the “crack” unit of the Iranian army, was an instrument of Russian influence in Persia. The outbreak of the Russian Revolution in 1917 shattered Iran's peace, and the Cossacks, like other units of the Persian army, were engaged in fighting against the Cossacks and the British in northern Iran. Rıda Khân, who had been promoted to the rank of general in December 1918, was forced to take command of a much reduced force, which, despite militarily inconclusive results, he bombarded Enzeli, and the Dangal movement under Kûtak Khân [q.v.] in Gilân forced a response from the feeble central government, resulting in Rıda Khân’s participation in the fighting in Gilân, in which, despite militarily inconclusive results, he returned to Tehran with an enhanced reputation for courage and resourcefulness.

Promoted to the rank of full general, he was now appointed to command the Cossack regiments stationed in Kazvin, and it was probably here that he first made contact with the British. In October 1921, the British forces stationed in northwestern Persia (a holdover from the First World War) were placed under the command of General Edmund Ironside, who, along with other British officers, came to respect the morose giant as the outstanding figure among the Cossack officers of the Kazvin garrison. Only a few months later, there occurred the coup d'état of February 1921, involving inter alia the pro-British journalist, Sayyd Diya’dî al-Dîn Tabâštâbâ’i, which provided the opportunity for Rıda Khân’s rise to power. For the
Sayyid needed military force to carry through his coup, and Rıdâ Khan was the man to provide it, when his Cossack force advanced on Tehran from Kazerün (19-21 February 1921). At the time, public opinion in Tehran assumed that the British must have been behind these events, a viewpoint later frowned upon during the Pahlavi period, when the coup was represented to have been a spontaneous act in which Rıdâ Khan played the leading part. Recent publications (e.g. Zirinsky, *Imperial power and dictatorship*) provide much valuable material, but not British government sponsorship.

Diya', who became Prime Minister following the coup, sought to initiate a coherent programme of internal reform and to end the threat of further national disintegration and fragmentation, working within the framework of the Constitution of 1906-7, and with Ahmad Shâh Kâdâr (1327-42/1909-24) as a constitutional monarch. Although lacking political acumen, Diya' was a high-minded patriot of considerable ability and from the outset understood that reform had to include military reform. In the first proclamation of his new government (24 February 1921), he declared himself in favour of "An army before and above everything. Everything first for the army, and again for the army ... until our armed forces reach the highest stage of development" (Wilber, *Riza Shâh Pahlavi*). There was a radical break between Diya' and Rıdâ Khan which had led to their collaboration, for Rıdâ Khan had long deplored the modernisation of Persia's armed forces, and even if it did not trust him, the army was indispensable to the politicians. As Sardâr-i Sipah, Rıdâ Khan, semi-literate and unpolished compared with the old-style Persian aristocracy, found himself "odd man out" in a government in which his colleagues were mostly, and inevitably, scions of the old Kâdâr ruling elite. Diya' himself did not last long—by May, he had resigned and gone into exile—and his replacement as prime minister was Kawâm al-Saltana, a former governor-general of Khurasân, and among the Kurds, Lurs, Bakhtiýâris and Kâškâlis, a process which was to continue in the years following his accession to the throne. The two processes complemented each other. The army, reorganised, well-disciplined and imbued with a spirit of, if not loyalty, then at least respect, became the agent for the forced reassertion of the authority of the central government throughout the provinces, while its successes in the field reinforced its prestige and self-confidence, making the man who had willed it into existence—Rıdâ Khan—indispensable to the politicians.

April 1926, Rida Shah now embarked upon a brutal but effective programme of modernisation which left untouched almost no area of Iranian life. The overall social structure remained superficially the same, but military officers, bureaucrats and contractors came into prominence, often becoming richer and certainly more influential than the former court nobility, landlords, clerics, and bādāris. Now, cronymism became the most direct road to wealth and power, and vast fortunes were dubiously acquired, that of Rida Shah himself being of spectacular extent. The predominant characteristics of the new regime were centralisation and despotism of licenses and permits, enforced by a horde of officials, police and, ultimately, the army. Most manifestations of free speech or opposition were ruthlessly stamped out, and the fiscal capacity of the régime probably exceeded that of any of its predecessors. In this sense, Rida Shah's rule strongly resembled the governing style of the other dictatorships which emerged during the 1920s and 1930s.

The poet Iqthi was murdered; the novelist Buzurg Alawi was imprisoned, and there were others. The style of Rida Shah's government was despotic and martial, with the Shah taking the important decisions, which were then carried out by his ministers, most of whom (Dāwar was an exception) were ciphers. In foreign policy, Rida Shah's achievements were more positive in that, conscious of the past diplomatic history of his country, he was able to diminish the role of both Great Britain and the Soviet Union in its internal affairs, establishing an international persona for a country which had for so long seemed to be an Anglo-Russian protecorate. He had abandoned the European name of Per- sistem. His first, Hamdām, had a daughter of the same name; the second, Tādji Malik, gave him Shams, the twins Muhammad Rida and Ashraf, and 'Ali Rida; the third, Turān, a Kādgār, gave him one son, Qulām Rida; and by irtam, also a Kādgār, he had four sons—"Abd al-Rida, Mahmūd Rida, Ahmad Rida and Hamīd Rida—and a daughter, Fatimah. In the years of open war, Rida Shah rashly assumed a pro-German stance, intended to reduce Iran's dependence on Great Britain and the Soviet Union, while the Nazis assiduously wooed and flattered him. With the outbreak of war, both Great Britain and the Soviet Union demanded that these German connections be severed. The Shah, however, prevaricated, and he was forced to witness the invasion of his country by his erstwhile and Soviet Union, while the Nazis assiduously wooed and flattered him. RIDJAL 515

This science also goes by the name of al-djarh wa-l-ta'afil (i.e. the science of disparaging and declaring trustworthy, sc. hadith transmitters). For a survey of the medieval Muslim hadith scholar’s wielding of the technical terms and criteria used in ridjal criticism, see al-Dharn wa-l-ta’afil, for a modern appraisal of the same, see, what follows, and also G.H.A. Juynboll, Muslim tradition etc., Cambridge 1983, chs. 4-5.

The classical period

The first hadith expert whose name is linked to the science of “men” was Shu’ba b. al-Hadhjdijd (d. 147/763) (cf. the edition of J. Aguade, Madrid 1939, p. 769). He followed this by a string of other hadith experts, e.g. Yahyâ b. Sa’d al-Każjân (d. 198/813), allegedly the first whose judgments were compiled in a book (cf. Ibn Hâджjâr, Lisân al-mizân, i, 5), ‘Abd al-Rahmân b. Mahdi (d. 198/813), Muhammad b. ‘Umar al-Wâkidî, the author of the Magâzî (d. 207/822) and Abu Nu’aym al-Fâdî b. Dukâyân (d. 219/834) (q. v.), but their collections of data have not been preserved except for occasional quotations in biographical lexicons compiled later. The oldest extant printed collection deserving the qualification ridjal lexicon is the Kitâb al-Tabakât al-kabîr by Ibn Sa’d (q. v.) (ed. Ed. Sachau et alii, Leiden 1905-17, 9 vols., with some 4250 entries), who died in 230/845. Muhammad b. Sa’d used to be al-Wâkidî’s secretary, which permits the assumption that the data we find in his work may be at least partly al-Wâkidî’s. As its title indicates, Ibn Sa’d’s tabakât work is built upon the successive “generations” (literally “layers”) of hadith transmitters from each major urban centre in the early Islamic domain. Ibn Sa’d preceded his ridjal information by an extensive biography of the Prophet. Large numbers of the ridjal dealt with are only mentioned by name, and their historicity—if any—is well-nigh impossible to establish.

From the beginning, isnâd criticism comprised two main approaches, knowledge of ridjal and that of ‘ilm (the plural of ‘ilam, usually rendered “hidden defects”), sc. mostly in isnâd, highlighting links between certain pairs of transmitters which are subject to dispute). Ridjal studies contain of necessity numerous references to ‘ilm, while ‘ilm studies are in fact ridjal works analysing (the absence of) certain links among the earliest works after Ibn Sa’d’s Tabakât still reflect both approaches in their titles, such as the Kitâb al-‘Ilam wa-ma’rifat al-ridjal of Ahmad Ibn Hanbal (d. 241/855) (q. v.), in which there is not yet discernible an alphabetical arrangement of the ridjal treated (cf. the edition by T. Kocyugi and I. Cerrahoğlu, Ankara 1963, i). Later ridjal-cum-‘ilm works often have the title ta’ârikh. In its earliest usage this term does not necessarily mean historiography per se, since the “men” surveyed in such works are not described in their political roles but are mostly assessed exclusively as to their merits or demerits in the transmission of hadith. On the whole, the genres of tabakât, ‘ilm and ta’ârikh (the last-mentioned in the hadith-technical sense of the term) show in many early works a considerable, if not total, overlap.

Khalîfa b. Khâlid (d. 240/854) (see Ibn Khâyât al-Muhaddisi) specialized his ridjal material from his other information by producing a tabakât work proper (cf. the edition of A.D. al-Umai, Baghdâd 1967, with 3,300 entries), next to a ta’ârikh, the earliest published annalistic chronicle of Islam (cf. the editions of A.D. al-Umai, 2nd impr., Damascus-Beirut 1977, and Suhayl Zakkar, Damascus 1967, 2 vols.). Al-Tâbarî’s Ta’ârikh, Islam’s best-known annalistic history compiled a little more than half a century later, is arranged like Khalîfa’s, but is concluded by a ridjal section entitled Dhayl al-muḥaddisîn min ta’ârikh al-salabâb wa l-tâ’afî (ed. De Goeje, iii, 2296-2561). Furthermore, the title Ta’ârikh was given to works of even more varied, almost encyclopaedic, contents: the Ta’ârikh of the Andalusian author ‘Abd al-Malik b. Habîb (d. 238/853) contains only a relatively brief section on tabakât, cf. the edition of J. Aguadé, Madrid 1991, 156-78. Many 3rd/9th century ‘ilm, tabakât and Ta’ârikh works by authors contemporaneous with, and somewhat later than, Ibn Sa’d have not been preserved, but references to these can be found in GAS, i, title index, and Juynboll, Muslim tradition, 238-41. In the following, only some of those works that are presently extant in printed editions will be surveyed in roughly chronological order, together with their respective salient features and innovative approach (if any). In order to illustrate the ongoing updating at the hands of later compilers, resulting in constantly swelling numbers of transmitters described (for this phenomenon, see Juynboll, Muslim tradition, 137-46), the number of entries will be included where that could be obtained from the editions or otherwise approximated.

Among the most critical early isnâd experts is Yahyâ b. Ma’in (d. 233/847). Several of his ridjal works in different redactions of pupils bearing various titles (cf. GAS, i, 107) have recently become available in print (editions by Ahmad M. Nûr Sâyîf, Damascus-Beirut 1980). Quotations from his works in later collections are mostly introduced by kâla ‘an Yahyâ…, or kâla Yahyâ…

Allegedly less severe, but as frequently quoted, is ‘Ali b. ‘Abd Allâh Ibn al-Madînî (d. 234/849). His works acquired such fame that references to them mostly begin with the words: kâla ‘Ali… His ‘Ilal (al-‘hadhîth wa-ma’rifat al-ridjal) was printed in Beirut, 1972 (ed. M.M. al-A’zami), and Aleppo 1980 (ed. ‘Abd al-Mu’ti’i, Aman Kâl’adî).

After Ibn Sa’d’s Ta’abakât, the first similarly extensive ridjal lexicon is that of al-Bukhârî (d. 256/870) (q. v.). As was the case with Ibn Sa’d, information on a great many individual transmitters in al-Bukhârî’s Ta’ârikh kabîr (ed. Haydarâbâd 1361-3, 8 vols.) is lacking or very brief and constitutes evidence of the as yet overall scantiness of biographical data in circulation. But the proliferation of single strand commentaries has become so widespread, also because of wide-scale imitation of Ibn Hanbal’s skill in devising them, that manmbers of transmitters populating these strands had to be accounted for in al-Bukhârî’s lexicon, with its 12,791 entries. After all the persons called Muhammad have been enumerated, a still loosely applied alphabetical order of names is observed: ‘ims, and within each ‘im the patronymic of the transmitter is arranged only on the basis of the first letter; within each new entry the frequency of ‘ims is mostly the determining factor in the order observed, not the alphabet. Shortened versions of al-Bukhârî’s Ta’ârikh are his Ta’ârikh awsat and T. saghir (cf. the latter’s edition by M.I. Zâyîd, Aleppo 1976-7, 2 vols.). Al-Bukhârî has brought those, in his opinion, especially questionable transmitters together in a separate collection, the first of its kind, called K. al-du’qfd* al-saghir, with 418 entries (edited together with a similar work by al-Nasa’î (d. 259/873) compiled a very critical al-Bukhârî’s Ta’ârikh with 388 entries entitled Shu’bî al-adl al-ridjal, ed. Suhayl al-‘Adl al-Samarra’i, Beirut 1983, in which he especially criticized ‘Irâkî transmitters.

Later, as the above shows, the term ‘ilm became so widespread, also because of wide-scale imitation of Ibn Hanbal’s skill in devising them, that many hundreds of transmitters populating these strands had to be accounted for in al-Bukhârî’s lexicon, with its 12,791 entries. After all the persons called Muhammad have been enumerated, a still loosely applied alphabetical order of names is observed: ‘ims, and within each ‘im the patronymic of the transmitter is arranged only on the basis of the first letter; within each new entry the frequency of ‘ims is mostly the determining factor in the order observed, not the alphabet. Shortened versions of al-Bukhârî’s Ta’ârikh are his Ta’ârikh awsat and T. saghir (cf. the latter’s edition by M.I. Zâyîd, Aleppo 1976-7, 2 vols.). Al-Bukhârî has brought those, in his opinion, especially questionable transmitters together in a separate collection, the first of its kind, called K. al-du’qfd* al-saghir, with 418 entries (edited together with a similar work by al-Nasa’î (d. 259/873) compiled a very critical al-Bukhârî’s Ta’ârikh with 388 entries entitled Shu’bî al-adl al-ridjal, ed. Suhayl al-‘Adl al-Samarra’i, Beirut 1983, in which he especially criticized ‘Irâkî transmitters.
The compiler of Islam's second most revered canonical tradition collection, Muslim b. al-Hadjdjadj (d. 261/875 [q. s.]), devoted the middle part of the introduction to his Thikdt to ridjdl-critical remarks (cf. the Eng. tr. of this introduction in *JSAI*, v. 273-92). Difficulties in the identification of persons only known by their kunya gave rise to the kunya genre, in which the compiler, following the example of Ibn Hanbal's *al-Asâmid wa l-kunâ*, collected his *al-Kunâ wa l-asâmi*?, cf. the facs. edition of Damascus 1984; a similar work was compiled by M. b. A. al-Dulabl (d. 310/923), cf. the edition of *Almasâli al-Mufradâ* (ed. Haydarabad 1973-83, 9 vols.) is, like Ibn Sa'd's *Tabakat*, preceded by an extensive biography of the Prophet. It is further organised on the basis of three tabakat: that of the Successors and those of the following two generations. The technical term *thikdt* from the title is not to be taken in its literal sense of "reliable persons"; a sizeable number of strictly unknown transmitters, the most extensive early record of those transmitters defined as *sâkh sunna* (for this technical term, cf. *JSAI*, x [1987], 112-6; moreover, it often indicates that the transmitter thus qualified was considered to have been responsible for certain *sunnas*—to be interpreted in this context as legal or ritual prescriptions—to have come into existence, an allegation confirmed by their frequently-observed position as "common link" in the *insâd* bundles of said *sunnas*. The work was edited in a strictly alphabetical arrangement of its 2,116 entries by 'Abd al-Mu'tâfi Khâdîjî, Beirut 1984.

Ibn Sa'd's lexicon entitled *riajâl*, a lexicon with 1,602 entries (ed. Haydarabad 1985), with a host of original data not found in other such works. The annals covering the first 134 years are now lost; for the rest of the work, see the edition of A.D. al-Umarî, Baghdâd 1974, 3 vols. Ibn 'Abî Mâlik (d. 279/892 [q. s.]), compiler of one of the six canonical collections, added to his *Djami*? a final chapter on *sâli*; this important *sâli* collection was rearranged by one Abu Tâlib al-Kadîr (d. ?) and edited by Shubbi al-Sâmarrâ'î et ali. Beirut 1989. The Hâshimi Ibn Râdjab (d. 795/1393) wrote an extensive commentary on this *sâli* chapter called *Ghârî al-Tirmidhi* (cf. the edition of Shubbi Djâsim al-Humaydi, Baghdâd 1396). Besides being a *riajâl*-cum-*sâli* book, Ibn Râdjab's study is now recognised as one of the most important *ridjdl*-theoretical monographs of the Middle Ages.

Abû Dâwûd (d. 275/889), the compiler of one of the canonical collections, had a pupil, Abû Ubyad al-Adjarri (fl. ca. 300/913) who collected his master's pronouncements on *ridjdl* entitled *Su'ilât a'dâ'ib anhâ Abû Dâwûd*, etc., see the edition of M. A. K. al-Umarî, Medina 1903.

Ibn Hisârî al-Bardjiçi (d. 301/914) compiled a *K. al-Tâbâkât fi l-asâmi*? or *mufradâ min asâmi*? al-*ulâmââ* wa-a'dâ'ib al-*hadîth* which is available in two editions by S. Shubbi, Damascus 1987, and 'Abdubh 'A. Kûshk, Damascus 1990.

Muhammad b. 'Amr al-UKâyîl (d. 322/934) compiled a *K. al-Da'âfi* wa *lamârik*, ed. 'Abd al-Mu'tî A. Khâdîjî in 4 vols. with 2,101 entries, Beirut 1984. Apart from the data which are also found in its predecessors in this genre, the book constitutes a major enlargement in that it contains numerous examples of prophetic traditions which the weak and rejected transmitters described are supposed to have brought into circulation.

'Abd al-RAHMÂN b. ABî HÂTIM al-Râzî (d. 237/938) produced a massive *ridjdl* lexicon entitled *K. al-Dhârij* wa *'tâlâtî*, which is almost wholly based on the data provided by his father, Abû Hîtim Muhammâd b. Idrîs al-Râzî (d. 277/890) and the latter's life-long friend and fellow-tradition expert Abû Zûrâ' al-Râzî. For the transmission paths along which this *ridjdl* information reached Ibn Abî Hîtim, see Juynboll, *Muslim tradition*, 243 f. In this lexicon, Ibn Abî Hîtim applied a similar, loosely alphabetical, order in listing names as did al-Bukhârî in his *Târîkh*, with which it works in that, with its 18,040 entries (over 5,000 more than al-Bukhârî's) it lists an even greater number of strictly unknown transmitters, the so-called *maghâli*. He also wrote a separate study on *sêlè*, see the edition (entitled K. al-*sêlè*) of Cairo 1343-4, 2 vols. It is the first such work in which the traditions with their respective *sêlè* are primarily arranged according to the order of chapters observed in tradition collections. To Ibn Abî Hatim we also owe a brief *ridjdl* work on the shortcomings of al-Bukhârî's *Târîkh*, entitled *Bayân khos* al-Bukhârî fi *târîkhik* Haydarabd 1961.

Muhammad b. Hibbân al-Bustî (d. 534/965 [see *tabâkât*]) was the author of a large tradition collection but he also produced several major *ridjdl* works. One, his K. al-*Târîkh* (ed. Haydarabd 1973-83, 9 vols.), is, like Ibn Sa'd's *Tabakat*, preceded by an extensive biography of the Prophet. It is further organised on the basis of three tabakat: that of the Successors and those of the following two generations. The technical term *thikdt* from the title is not to be taken in its literal sense of "reliable persons"; a sizeable percentage of *ridjdl* dealt with are *maghâli*. For lack of more precise characteristics, they were labelled *thikdt*. This term was often used especially in order to classify transmitters about whom little, if anything, was known. The traditions in whose *insâd* they occurred, however, had a certain appeal, which prevented *ridjdl* experts from rejecting them altogether. While describing this type of tradition, about whom (next to) nothing is known, later *ridjdl* experts frequently refer to Ibn Hibbân's lexicon using the term *wathikatuka* ibn Hibbân, or *gharakos* ibn Hibbân fi *ttâlât* ... or similar expressions, thereby indicating that that transmitter, as well as the mostly innocent tradition(s) he is reported to have transmitted, may be preserved, be it merely for the sake of comparison. Furthermore, there is Ibn Hibbân's *Kitâb al-Maghâli* (wa *'tâlâtî* min al-muhaddithin, ed. A. Aziz Bey al-Kâdirî, Haydarabd 1970, 2 vols., also listing often the traditions in whose proliferation the weak transmitters dealt with in the lexicon are alleged to have had a hand. Ibn Hibbân's *Maghâli* *ulâmâ* al-ansâr, a lexicon with 1,602 entries built upon the *tabakat* principle, was edited by M. Fleischhammer, Wiesbaden 1959. By general agreement, the most extensive early lexicon of doubtful transmitters was that of 'Abd Allâh b. 'Adî (d. 365/976). What was said for al-Ukâyîl's lexicon is equally true for Ibn 'Adî's K. al-Kâmîl fi (ma'rifat) al-*da'îf* al-*hadîth* (al-muhaddithin wa-*ttâlât* al-*hadîth*) with approximately the same number of entries (more than 2,000). However, it surpasses al-Ukâyîl's in size, especially in doubtful traditions quoted in connection with their alleged originators. This lexicon is, furthermore, the first in which the Arabic term *madâr* is occasionally used to indicate that
certain mains, or main clusters, are due to one particular transmitter who is held responsible for disseminating these to a number of pupils. The term "mains," first used in Ibn al-Madini's 'ridāl is in Ibn "Adī's usage a genuine technical term which comes closest to the term "common link" coined by Schacht (cf. The origins of Muslim juriprudence, Oxford 1950, 171 ff.) and further elaborated in Juynboll, Muslim tradition, 206-17.

The post-classical period

With the 4th/10th century, there begins, as Brockelmann defined it, the post-classical period, with initially relatively little activity in the compilation of "ridāl works. On the basis of a remark of "Abd al-Raḥmān b. "Alī Ibn al-"Aṣwāzī (d. 597/1200 [q.v.]), one could almost infer that, during the two centuries after al-Rādakūni's lexicon, there do not seem to have been any basically new additions to the genre, for Ibn al-"Aṣwāzī enumerates in the introduction to his Kitāb al-"Uṣūl wa l-matrukin (see the edition with 4,018 alphabetical entries of Abu 'l-Fidā'ī "Abd Allāh al-Kāfī, Beirut 1986, i, 7) the sources from which he compiled his work: they are the same as all those listed hitherto, the last being the al-Rādakūni work. After Ibn al-"Aṣwāzī, however, various major, and increasingly more-embarking, "ridāl lexicons did see the light which were constantly subject to expansion as well as abridgements at the hands of subsequent compilers.

At the centre of these activities stands Yūsuf b. al-Zakī "Abd al-Raḥmān al-Mizī (d. 742/1341 [q.v.]). He is the author of a colossal biographical dictionary of transmitters occurring in the Six Books and a few minor collections entitled Tahdhib al-khāmil fī asmā' al-ridāl, which grew out of a work by "Abd al-Ghānī b. "Abbās al-Wirshī al-Mīzī al-Darāqūṭ (d. 600/1203, cf. K. al-"Iṣdājī amīz al-Dhahabī, ed. Cairo 1970, 7 vols. with 8,859 entries; Mīzīn al-īlādī, ed. A. M. al-Badjawī, Cairo 1965, 4 vols., with 11,053 entries. In this last work he assembled not only all the weak transmitters he could find but also scores of at first sight blameless ones. This lexicon was revised and enlarged by Ibn Ḥaḍjar al-"Aṣkālānī (d. 530/1140 [q.v.]), resulting in his Liṭān al-mīzān, Haydarābād 1329, 6 or 7 vols., with ca. 15,000 entries. A large number of data concerning political, cultural and literary history as well as theological discussion can be gleaned from both lexicons. The Liṭān is especially rich in examples of traditions which are deemed fabricated by the man in whose biography they are cited, allegations that could often be confirmed by modern isnād analysis, as was the case with the "dā'ūsā' lexicons of al-"Ukjāyli and Ibn "Adī described above.

All the time, other types of "ridāl lexicons, too numerous to list all, had made their appearance. Some of these are described here by genre.

(1) The generation of Companions received special attention, something which was probably also stimulated by the establishment of their collective ta'dīl, a dogma that seems to have found its first formulation sometime in the course of the final decades of the 2nd/8th and the first decades of the 3rd/9th centuries (cf. Juynboll, Muslim tradition, 190-206). The earliest author credited with a lexicon exclusively devoted to Companions and their alleged roles in the transmission of prophetic traditions was Muḥammad b. "Abd Allāh b. Sulaymān al-Ḥaḍramī Muṭayyān (d. 297/909). No mss. of it are listed in GĀS, i. Ibn Ḥibbān compiled a Ta'rīkh al-ṣaḥāba alāmmā wa hāru wa l-anum al-ṣaḥīḥ (ed. Burān al-Dannawi, Beirut 1988, 23 vols., with 1,600 entries), of his work. Hāshim in his work is devoted to the subject and available in a printed edition. It was improved upon by, among others, the following: Ibn "Abd al-Barr (d. 463/1071 [q.v.]), K. al-īlādī asmā' al-ṣaḥīḥ, ed. A. M. al-Badjawī, Cairo 1960, 4 vols. with 4,225 entries; 'Īzz al-Dīn Ibn al-"Aṣwāzī, Bombay 630/1233, Usd al-"Uṣūl fī maʿrūf al-ṣaḥīḥ, Cairo 1970, 7 vols. with 7,705 entries; al-"Aṣwāzī, Taddrij asmā' al-ṣaḥāba, ed. A. D. al-Hakīm Sharāf al-Dīn, Bombay 1969-70, 2 vols. with 8,859 entries, and finally Ibn Ḥaḍjar, K. al-īlādī fī tanāzīl al-ṣaḥāba, ed. A. M. al-Badjawī, Cairo 1970-2, 8 vols. with 12,290 entries. To be sure, in this last source not all persons paraded were Companions in the technical sense of the word; Ibn Ḥaḍjar added scores of borderline cases in his so-called second, third and fourth shīfīs.

(2) A specifically Muʿtazilī-influenced "ridāl work is K. al-ḫāmil al-akhrūr wālmaʿrūf al-ridāl by Abu 'l-ʿKāsim al-Kaʿbī al-Balḥī (d. 319/931 [q.v.], and Juynboll, Muslim tradition, index s.n.). An edition is in preparation in Leiden University Library.

(3) The third Shīʿī "ridāl work is that of Muḥammad b. Umar al-Kaṣhī (d. ca. 340/951 [q.v.], see the corrected reduction with 520 entries of Muḥammad b. al-Ḥasan al-Ṭūsī (d. 460/1068) in the edition of"
Ahmad al-Husayni, Karbala 1963. The work is based on the tabakāt principle, describing the persons in the entourage of the respective imāms. The majority of people enumerated are assessed as to their political position in society, but the lexicon does give extensive hadith-technical information. The other Shi'i lexicons are perfectly ordinary hadith-related, alphabetically arranged dictionaries of transmitters closely resembling their Sunni counterparts. To the same al-Tusi we owe a work called Rijāl al-Tusi, ed. M. Sādiq Āl Bahār al-ʿUlmāʾ, Naḍaf 1961, comprising some 8,900 transmitters. Al-Nadājī (d. 450/1058) wrote a K. al-ʿĀmilī’s edition of Dir al-ʿĀmilī, Tehran 1989. Ināyat al-Din Dir al-Kuḥṭāy (fl. ca. 1016/1607) compiled a lexicon in which he incorporated five earlier major rijāl lexicons, including the three just mentioned, entitled Maḏima al-rīḍālī, ed. Dīyāʾ al-Dīn al-Isfahānī, Isfahān 1384, 7 vols. Muhammad b. ʿĀli al-ʿArḍabīlī (fl. ca. 1100/1689, cf. Zīrīkī, 4th impr., vi, 294-5) produced a Dhātim al-rīḍālī, Kumm ca. 1667, 2 vols. See further, ʿilm al-rīḍālī.

4. A Muslim’s collections were especially subjected to a sort of ʿinsād scrutiny, resulting in riḥālī lexicons too numerous and too varied to enumerate all of them, in which in one way or another transmitters occurring in one collection are compared with those occurring in the other. Information on these kutub riḥālīyya can be found among the secondary works listed in GĀS, i, derived from (commentaries on) the two ʿAṣḥāb. But there is also a small and useful transmitters’ lexicon on those of Malik’s Musawwat by al-Suyūṭī (d. 911/1505). For a study of the collection of the third collection, ILM AL-RIDJAL. CVols. See further, ʿilm al-rīḍālī.

518 RIDJĀL

6. A special type is furthermore the so-called āṭāf compilation, that is an alphabetically-arranged collection of the Companions’ musnads, with every tradition ascribed to each of them shortened to its ūsūr (i.e. gist of the tradition), accompanied by the ʿinsād standards supporting which it occurs in the Six Books and a few other revered collections. The most famous representative of this type is the Taḥṣīl al-ʿāṭāf bi-muṣaffa al-rīḍālī by al-Mizzī; for a more detailed description, see ʿilm al-mākūlā. The work was imitated but never improved upon.

7. In an attempt to solve onomastic and topographic problems around transmitters’ identities, several lexicons were compiled listing ambiguous names with accompanying solutions as to their proper vocalisation and attribution. The best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992. The Best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992. The Best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992. The Best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992. The Best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992. The Best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992. The Best-known examples are the works entitled Mūḏāt uṣūlāt al-ʿamāma by ʿAbd Allāh Ibn Mākūlā (d. 475/1082 and 487/1094), see the edition of Maria Luisa Ávila and Luis Molina, Madrid 1992.

RIDWĀN, the guardian (khdziri) of Paradise, is absent from the Kurʿān, early tafsīr, hadith and descriptions of Paradise. In Ibn Hāšim, 268, this angel is still called Ismāʿīl. The proper name Ridwān may result from a personifying exegesis of the ridwān (ʿAllāh's favour) which believers will meet in the hereafter (Kurʿān, III, 15, etc.). In the anonymous 4th/10th century Kādāb al-ʿAṣama (e.g. ms. Paris 1656), Vaihingen, for Ridwān, opens the gates of Paradise, dresses and serves the believers, draws away the veils from the face of ʿAllāh, etc. Slightly later he appears in the Shīfī legend about ʿAlī and Fāṭima (q.v.) and in Ismāʿīlī cosmogony (H. Halm, Kosmologie und Heilsteher der frühen Ismāʿīlīya, Wiesbaden 1978). He is accepted figure in Arabic belles-lettres, at least from al-Māʾarrī (R. al-Gh福德ri) onwards, and in later Islamic literatures throughout.

(R. W. Raven)

RIDWĀN or RIDWĀN B. TUTUSH b. Alp Arslan, Fakhr al-Mulk (d. 507/1113), Seldīk prince in Aleppo after the death of his father Tutush in August-September 1097, Ridwan acknowledged the Djanah al-Dawla, the latter established himself in Damascus and thus at controlling the whole of Syria and Palestine not still in Fatimid hands. However, Ridwan’s brother Dukāk and his Atabeg Tughṭiγin held on to Damascus, and after Ridwan broke with Djanāh al-Dawla, the latter established himself in Hīmṣ. For one month, in Ramadan-Shawwal/1112, his son Roger. He substantially avoided taking part in a djihād against the Crusaders led by Tughṭiγin and Mustafā b. Altuntāsh of Mawjil, sending only a tiny token force, but died on 1 Rabīʿ I 507/16 August 1113, to be succeeded briefly by his son Tāḍj al-Dawla Alp Arslan [see Ḥalāb].

The Sunni sources regard Ridwān, from his use of the Syrian Ismāʿīlīs, with disfavour, stigmatising him as al-mawān, sayyīʿ al-sīrā, etc. They even accuse him of having been converted to Ismāʿīlīsm by the local leader in Aleppo, al-Ḥākim al-Munadjiḍjim; it seems impossible to confirm this truth here. He is further condemned for his miserliness, since he left a large treasury at his death. His diplomatic and political skills were, however, considerable, and within what was at that time a highly complex situation in Syria, he successfully maintained his power between the Crusaders and various Muslim rivals for nearly nineteen years.

(C.E. Bosworth)

RIDWĀN BEGOVIĆ ʿAli Pasha (in Serbo-Croat RIZVANBEGOVIC Ali-pasha; ca. 1783-1851), wesir of Herzegovina from 1833 until his death by assassination in March 1851. He was an interesting individual, whose biography well reflects the complex circumstances and unstances affecting the subject here. He is further condemned for his miserliness, since he left a large treasury at his death. His diplomatic and political skills were, however, considerable, and within what was at that time a highly complex situation in Syria, he successfully maintained his power between the Crusaders and various Muslim rivals for nearly nineteen years.

He was descended from an old Muslim family. Towards the end of the 18th century his father, Dhu ’l-Fikār (Zulfikār), was governor (with the title ‘kapetan”) of the town of Stolac (in southern Herzegovina, to the south of Mostar [q.v.] and its environs, hence his name of Stočević (or Rizvanbegović-Stočević) which is also encountered in the texts. ʿAli Paša is said to have been born in this town ca. 1783 (considerably earlier, according to V. Corović, ca. 1761). Following a dispute with his father (over a trivial issue, according to S. Bašaγić), he parted from his family while still a young man, only returning (and bringing with him a considerable sum of money, ʿAbbas) to his stepfather, the Atabeg Djanah al-Dawla Husayn, of Antioch and Edessa, Bohemund’s successor) and his Muslim rivals such as Djanah al-Dawla, as his neighbour, and the ensuing years were filled with Ismāʿīl Pasha (in Serbo-Croat Stočević) which is also encountered in the texts. ʿAli Paša is said to have been born in this town ca. 1783 (considerably earlier, according to V. Corović, ca. 1761). Following a dispute with his father (over a trivial issue, according to S. Bašaγić), he parted from his family while still a young man, only returning (and bringing with him a considerable sum of money, ʿAbbas) to his stepfather, the Atabeg Djanah al-Dawla Husayn, of Antioch and Edessa, Bohemund’s successor) and his Muslim rivals such as Djanah al-Dawla, as his neighbour, and the ensuing years were filled with Ismāʿīl Pasha (in Serbo-Croat Stočević) which is also encountered in the texts.
The relations with the diverse populations of the region varied considerably, according to time and circumstances. Hence in the early stages he showed his gratitude to the local Serbs (who had given him strong support during the conflicts of 1831-2), authorising the church of the Serb Orthodox bishop of Mostar, and supporting the Serbian Orthodox clergy in its opposition to the appointment of Greek bishops to positions of authority in the church. Furthermore, he helped the Franciscans of Bosnia to acquire their own vicariate in 1846, and obtained for them in the same year a firman permitting the foundation of a Catholic monastery at a place called Siriški Brijeg. As for the Muslim community, he contributed a substantial number of buildings and had a number of building constructed at Mostar and elsewhere, including a mosque at Buna.

Regarding "external affairs", these were confined, as will be seen, to relations with Montenegro [see KARA DAGI] and with the Porte. This process began in 1836 with the battle of Grahovo, in the course of which Herzegovinian troops, commanded by Ali Paša and Ismail Aga Cengić, inflicted a heavy defeat on Montenegrin units, with the result that Grahovo became (temporarily) Ottoman territory. This defeat outraged the Montenegrins, who ultimately assassinated Ismail Aga Cengić in 1840. But in the meantime, the internal situation had changed considerably, and the rumour circulated among the Muslim circles of Herzegovina that the death of the aged Ismail Aga Cengić had been welcomed by Rizvanbegović, since for a considerable time previously Ismail Aga had been the leader of a party opposing Rizvanbegović, accusing him, on the one hand, of imposing increasingly draconian taxes on the population, and on the other, of brutally and shamelessly advancing the material interests of his own family. He had in fact undertaken a methodical redistribution of the former "captainates" (rights of authority which had become hereditary within certain leading local families) into larger administrative units, which he then allocated to his sons and relatives. In spite of all this, to avenge the death of Ismail Aga and to silence the afore-mentioned rumours, Rizvanbegović in 1841 attacked the region of Drobnjak, slaughtering a number of its male inhabitants, while in 1842 rivalry over Grahovo resumed. With the aim of putting an end to the war, a meeting took place the same year at Dubrovnik between Rizvanbegović and the bishop of Montenegro, Peter II (the illustrious poet Petar II Petrovic Njegoš), in the course of which the frontiers between the two countries were fixed. But the Porte was unwilling to recognise this accord, and negotiations continued for some time longer, until 28 October 1843, the date of the final signing at Kotor of a new accord which broadly stipulated a return to the frontiers as they had stood before the conflicts of 1836.

However, resentment against Rizvanbegović and his sons increased, to such an extent that even in Mostar an overt coalition against him was formed. Furthermore, Ali Paša had finally sided with the leading "feudal" Muslims of Bosnia, who were opposing, with weapons at the ready, the implementation of reforms introduced in Turkey by Mahmud II.
When, in 1850, the renowned "executioner" of the Bosnian Muslim nobility, C6mer Pasha Latas, sent by the Porte to suppress the rebellion, set about methodically mopping up the pockets of resistance, his troops decisively defeated those of Ridwanbegović in a battle which took place near the town of Konjic. Ali Pasha himself was taken prisoner on 5 February 1851, then displayed in Mostar, his capital, in a humiliating fashion (seated back to front on an ass, holding the animal's tail in his hands), then sent to the transfer, on or about 20 March 1851, not far from this town, the elderly Ali Pasha Ridwanbegović was "accidentally" killed by one of the soldiers escorting him. He left four sons: Hafiz Pasha, Nafidh Pasha, Rüstem Beg and Mehem Ali Pasha. His daughter Habiba (1845-90) was a renowned poetess, a professional also followed by his grandson Hikmet ("Arif Beg Ridwanbegović, 1839-1905).

RiÓF (A.), "countryside".

1. As a geographical and territorial term.

1. One sense of this term early emerged from the Egyptian context, where an arid country is traversed by a river with food-producing fringes: the image is that of the fertile (and cultivated) banks of the Nile [see vik]. It includes two ideas, that of "fringe" (bank, littoral and, by extension, flank, limit) and of "fertile countryside", "abundance" (as opposed to the desert; and, by extension, "countryside" as opposed to the town) (see the lexicon of Lane and Kaziminski).

2. In Morocco, where the natural environment is different, the sense of "fringe" is further found:

(a) Amongst certain groups of transhuman pastoralists, partly Arabophone, who call rif, in the circle of tents, those which are on the periphery (Querleux, Les Zemmour, in Archives Berbères, ii [Rabat 1915-16], 127). By extension (?), certain Berberophone groups of the Middle Atlas use it to define a group of tents held together by a close relationship in the male line (the equivalent of the iibs of other Berber speakers) (R. Montagne, Les Berbères et le Makhzen dans le Sud du Maroc, Paris 1930, 181 n. 1).

(b) In north Africa, the Rif, which extends from the Straits of Gibraltar to the approaches of Moulouya. Its presence here as a toponym, with a varying definition of extent, is probably due to the configuration of the geographical relief along the Mediterranean coast (however, this etymological version could be moderated by the fact that, in the western, Arabophone part of the Rif, the villages sometimes call certain of their quarters Rif). The term appears as a neologism at the beginning of Sanâ’ (Radjab 1974/January-February 1967). Learning in Shawwâl 1974/April 1567 of his dismissal, Ridwan departed for Istanbul where, despite earlier efforts to defend his actions through dispatches, he was censured and imprisoned. His exoneration followed the assassination in Cairo during Djumâdâ I 1279/November 1567 of Mahmûd Pasha who, it was discovered, had concealed Ridwan’s alarming reports from Yemen. Ridwan again became sanâq beyî of Ghaza in 1279/1567-1, and in Shawwâl 1280/March 1573 was named beylerbeyî of Abyssinia (Habeb al-Râbi‘), while appointed deputy of the Rif’s bey ’al-Râbi‘ II 1293/August 1574. He is next mentioned only in 987/1579, in the Persian campaign. In late 990/1582 or early 991/1583 he was made beylerbeyî of Anadolu, in which office he died on 1 Râbi‘II 993/2 April 1585.

Bibliography: Ms. sources include (in Arabic) the anonymous versified al-Tijân al-awdfrat al-thamân; Ibn Dâ‘îr, Fâshî, Ísâ b. Luflâlîh, Râbî‘ al-rûh; and (in Turkish) Lukmân b. Sayyid Husayn, Muqâm al-tîmâm.

of the 7th/13th century to designate the ancient Mauretania Tingitana (H. Ferhat, Sabta des origines jusqu'à 1366, diss. Paris I, forthcoming). Ibn Sa'id [q.v.] defines it as "littoral"; known under the name of the "Rif of the Ghumara"; Ibn al-Abbâr [q.v.], somewhat differently, describes it as "adjoining the Ghumara"; and al-Bâdisi, in the 8th/14th century, extends it from Sabta to Temlen.

History very early touched the Mediterranean shores of Morocco. The principality of Nakûr [q.v.], in the plain behind the bay of al-Husayma [q.v. in Suppl.], was founded in 90/709 by a commander of the Caliph in Damascus, Sâlih b. Mansûr al-Hîmiyâr (the town was built some time around 143/761), thus preceding the foundation of Fès. The town seems to have been subject to the same sort of hazards as the Idrîsîd kingdom, squeezed between the Umayyads of Cordova and the Fatimids. It hardly survived, and was razed by the Almoravids (473-4/1080-1). The Idrîsîd (and, in the first place, 'Umar b. Idrîs, to which the place; 2,450 m) since it is deeply in the integration of the Rif chain to the emergent nation. With Kà'fàt Hâdjrâl al-Nâsr (within the tribe of the Sumâra), they even had an ephemeral capital there (4th/10th century), where they left behind a line which was rendered famous, in the 7th-8th/13th-14th centuries, in his hermitage on the Djabal al-Âlam (amongst the tribe of the Bân 'Arûsî), by the sbîh Mâwîlîyâbîl 'Abd al-Sâlim Ibn Mâghîbî, considered to have been the master of al-Sbîhî. It was the Almohads, masters of both shores, who really brought about the development of the littoral, with Sabta [q.v.]. Bâdis and a series of petty maritime settlements. The loss of al-Andalus, however, ruined it, and the consequent pressure was unceasing: the fall of its main ports (Sabta/Ceuta in 818/1415), the establishment of the Spanish presence at several points on the coast, the "guerra de Africa" with the seizure of Tétouan (1859-60), and finally, the establishment of the Spanish Protectorate (1912). The disorders which accompanied or preceded it (al-Raysûnî, Bû Hamârâ) had hardly any long term effects, but it was a different matter with the resistance led by Bin 'Abd al-Krim al-Khâtûbî (1921-6), the first war of liberation in the 20th century; the victory of Anwal (1921) had a deep effect on colonial peoples (see further, II. below).

Thus there are, in Morocco, three senses of the toponym Rîf:
(a) The Rîf of the chroniclers is a mountainous region bordering on the Mediterranean;
(b) The Rîf of the geologists is a region of folded strata from the Alpine period, about 360 km long and 80 km at its maximum width, laid down at a late date up against the Atlas region. Its altitude is not so great (Tidjane 2,450 m) since it is deeply entrenched and forms a juxtaposition of mountainous compartments rather than a homogenous mountain chain (G. Maurer, Les montagnes du Rîf central. Étude géomorphologique, Tangiers 1968); and (c) The Rîf as understood by the population is exclusively formed from this eastern half of the chain together with the hills which prolong it as far as the mouth of the Moulouya, where the language spoken is dhamâghtî (wrongly still called dhamazîght). Arabised into tarifî, belonging to the Zanâitiya variety of the Berber tongues of Morocco. Its inhabitants are the only one bearing the name of Rîfyâ (Rwâfa, Rîfyûn).

In their turn, the geographers distinguish a Rîf influenced by the Atlantic, humid and with good vegetation, and a sub-arid Rîf. The division is one of relief (the boundary passes where the limestone spine culminates, then through the central ridge of the Sahândjââ Sraïr, a little to the west of the meridian al-Husayma-Tingitana, and, one of climate (it follows an isohyetal curve which begins at Djabâla on the coast, bends eastwards, passes to the north of the Targa basin and turns back southwards at the level of the above-mentioned meridian; see Maurer, op. cit.); and one of humans, since a series of linguistic and cultural pockets (Arabophone "Rîf" round the Bânî Frah; Ghmara further to the west; Sahândjââ further to the south, each with Berber islets of speech) extend along this fringe by spreading westwardly from the Rîf, in the east, from the Djabâla, in the west.

In effect, although one cannot date its appearance, the word Djabâla only later replaced, in the western part, the term Rîf and its inhabitants are called Djabâla (sing. Djabîl). They form an arc which connects the Tingitana peninsula with the valley of the Warghâ. They are the heirs of the ancient Ghmara [q.v.] (an ethonym which has persist ed only for the nine tribes, called Ghmara forming an enclave between the highest crest of the mountains and the sea). Ibn Khâldûn classed this group amongst the Masmûda family. Several traits remind one of the other great sub-group of the Masmûda, the mountain peoples of the Sûs (Swasa). Thus we have a number of learned men (fsâkûh; alamaâ and tulâba); the deserted settlements of the Rîf are traditionally attached to the Swasa; and finally, although Arabised for many centuries, the speech of the Djabâla retains Berber inflections which connect it with tagelhîthi rather than other varieties of Berber. On the other hand, certain traits connect the Djabâla territory with certain massifs of the Algerian and Tunisian Tells: an important vegetation cover, a great density of population, intensive labour and a great variety of production, large villages with thatched roofs, etc. One last peculiarity is the intensi ty of the urbanisation phenomenon; there is a real urbanisation belt around the Tingitana peninsula, often going back to Antiquity and in any case to the time when there were close communications with al-Andalus.

The Rîf and its maritime façade are probably the last great challenge which must face Morocco in order for its development to succeed: it is endeavouring to leave behind the accumulated backwardness (illustrated by the fragility of an over-exploited region, the monoculture of Indian hemp over a large area of the Rîf and the poverty of its infrastructures) and to close the dossier of the colonial period. Sabta/Ceuta, Melilla and a few islets remain occupied; the commercial domination of these two towns in respect of smuggling activities affects, notably, the regional structure of small and medium enterprises (see G.E.R.M., Le Maroc méditerranéen. La troisième dimension, Casablanca 1992).

Assets are not lacking: water, halieutic resources, sites for beaches and mountain resorts (cedar and pine plantations), banking facilities (Nador is the second most important financial centre after Casablanca) and, finally, the closeness of a key crossroads of the Mediterranean. From being on the periphery (more as a result of modern history than from geography, however), the Rîf—in its regional setting—is able to renew its age-old vocation of being a focus for economic activities and a bond of union between continents.

III. The Rif War of the 1920s.

This frontier region of the Moroccan empire, protected by its geographical configuration, has always remained more or less rebellious against the central authority, e.g. since the time of the principality of Nakūr [q.v.], but especially, in recent times, against the authority of the makhzan. The rivalries which appeared amongst the European powers (above all, between Germany, France and Spain) from the 19th century soon precipitated disorders. The imprudent activities of sultan ʿAbd al-ʿAziz led to the appearance of a pretender, the Ṭuḥta, in 1901 of a pretender, the Ṭuḥta, who from a base at Taza led a fierce rebellion during 1907-8. This frontier region of the Moroccan empire, protected by its geographical configuration, has always remained more or less rebellious against the central authority, e.g. since the time of the principality of Nakūr [q.v.], but especially, in recent times, against the authority of the makhzan. The rivalries which appeared amongst the European powers (above all, between Germany, France and Spain) from the 19th century soon precipitated disorders. The imprudent activities of sultan ʿAbd al-ʿAziz led to the appearance of a pretender, the Ṭuḥta, who from a base at Taza led a fierce rebellion during 1907-8. Agreements reached after great effort favoured the intervention as a pacifying influence, but one which was sometimes hazardous if not contradictory, of France and Spain. A chieftain of the Rif rose to power thanks to German intrigues under cover of the First World War, Muhammad al-Raysuli/Raysuni and to gain the reactivation of the war, he was chosen as one of the four imāms accompanying the mission, also on the recommendation of al-ʿAṭār. In Paris, Rifāʿa, on his own initiative, studied French in order to be able to read works in that language, beginning with history and geography, later taking up philosophy and literature. His object was to translate the books he read into Arabic. During his stay he made friends with leading French orientalists, such as A.I. Silvestre de Sacy (1758-1838) and E.-F. Jomard (1777-1862), who also appreciated him as a learned Muslim scholar. Under their benevolent supervision, he became aware of the new discoveries of Egyptology and of western values and culture in general. On his return to Egypt at Muhammad ʿAlī Pasha ʿs request, he published his observations and impressions Tāghtīs al-šibrāt īlā talkhās Barīz in 1834, a work which he had already written in Paris. This rihla description became very well known and until the 1850s it remained the sole work in which Arabic-speaking readers were offered a description of a European country. J. Heyworth-Dunne has called it the only human document of the age by the only orator of this period to have produced anything of the kind. After his return from Paris in 1831 and especially after the death of al-ʿAṭār, Rifāʿa became Muhammad ʿAlīs right-hand man among the ʿulāmāʾ. Rifāʿa was an intellectual-cum-public servant acting as the main ideologue of the ruling family, a position of unquestioning adherence to the policy of the powers to be. Even when expressing his own opinions in written form the limits were defined by others. Therefore, the final assessment of his contributions must also be an assessment of the endeavours of his patrons. Between 1831 and 1834 Rifāʿa was employed as a translator first at the School of Medicine and then at the Artillery School. The real breakthrough came in 1836 in connection with the reorganisation of the Schools Administration when he was chosen as one of the permanent members—and the only Egyptian—of the Council. In 1837 Rifāʿa was made head of the newly-created School of Languages, where the European system was successfully adapted to the method employed by the ʿulāmāʾ, and, in 1842, even entrusted with the editorship of the official newspaper al-Wakāʾīs al-Misriyya for a time. But without question, his most important work was as a translator and supervisor of translators. He was rewarded in 1846 with the honorific title Bey.
All this came to an abrupt end with the death of Muhammad ʿAli; he was succeeded by his grandson ʿAbbās I [q.v.]. ʿAbbās was assassinated, and following his death, Rifaʿa died. The translation movement came to an abrupt end, and the School of Languages was closed the following year. Only when Saʿid [q.v.] succeeded ʿAbbās, who was a general, did Rifaʿa regain favour and was allowed to return to Cairo in 1854. He became head of a military school but when it was closed in 1861 he remained unemployed until the reign of Ismāʿil [q.v.]. Ismāʿil reopened the School of Languages in 1863 and appointed Rifaʿa as director; he was also one of the group that planned the new educational system. In 1870 Rifaʿa became the editor of Rawdat al-madārīs, a periodical for the Ministry of Education; he occupied this position until his death.

It was a moot question whether Rifaʿa owed most of what is regarded as European influence on him to his teacher at al-Azhar, Ḥasan al-ʿAṭrār, or if he was a generaliser of ideas from France. The main problem which he had to face as the ideologue of Muhammad ʿAli’s innovations was how to have his countrymen partake in the modern world while remaining Muslim. In his writings he tried to answer this question. Though a prolific author, nothing Rifaʿa wrote after Taḫlīṣ ʿal-ʿamāl li-l-bandt wa-l-bāṃūn (1872). In the latter he compiled the ages of the ancient Egyptians, Alexander the Great, the Romans and the Byzantines, and it ended where Rifaʿa’s grandfather came to Basra in 512/1125 in Baghdad, when Ahmad was seven years old. He was then brought up by his maternal uncle Mansūr al-Battāghi, resident at Nahr Dakla in the neighbourhood of Basra. This Mansur (of whom nothing is known) was 50 years old. He was then brought up by his maternal uncle Mansur al-Battāghi, resident at Nahr Dakla in the neighbourhood of Basra. This Mansur (of whom nothing is known) was 50 years old. Faḍl, and the kāhirah from his uncle Manṣūr, who bade him establish himself in Umm Ḫubayda, where (it would seem) his mother’s family had property, and where subsequently Yahyā al-Nadżārī al-Anṣārī was buried. In the following year, 540/1145-6, Manṣūr died and bequeathed the headship of his community (maḥyakhabah) to Ahmad to the exclusion of his own son.

His activities appears to have been confined to Umm Ḫubayda and neighbouring villages, whose names are unknown to the geographers; even Umm Ḫubayda is not mentioned by Yaḵūt, though found in one copy of the Manṣūd al-ṣittāt. This fact renders it impossible to trace the history of Umm Ḫubayda for by far the greater number of his disciples (mursīdun) and even deputies (shuṭūn), the princely style and the colossal buildings (khulqfād^), and even the occasional575/1181-2. He held an important position in the order of Nur al-Dīn al-Shattanawfī, which was later to become notorious for its extravagant practices. Thus Ahmad ibn al-Ǧāfari (d. 645/1268), so that this branch became the Haydariyya order, which he witnessed in India (Rihla, ii, 4-5, tr. Gibb, ii, 273-4); an eastern counterpart of these practices were those of the Kalandaris [see KALANDARIYYA], dervishes of the Ḥarifīyya order, which he witnessed in India (Rihla, ii, 6-7, iii, 79-9, tr. ii, 274-5, iii, 583).

Inconsistent accounts are given of his relations with his contemporaries, such as sitting in heated ovens, riding lions, etc. [see RIFAYYA] were unknown to the founder, and introduced after the founding of the order; in any case they were not a invention of his, since the like are recorded by al-Tanūkhī in the 4th/10th century. The anecdotes produced by al-Dhahābī (repeated by al-Ġubāyīd, al-Imām al-Ǧāfari’s grandson, ʿĪzz al-Dīn Ahmad al-Ǧāfari’s, 1276/1859-60, i, 121-5; Ziriklī, Aʿlām, iii, 169; Muṣṭafā Kamāl Waṣīf, al-ʿImām al-Ǧanb Ahmad al-Ǧāfari’s, Cairo 1376/1957; J. S. Trümpp, The Sufi orders in Islam, Oxford 1971, 37 ff. and index; Brockelmann, S. II, 780-1.

(The Sufi orders in Islam, Oxford 1971, 37 ff. and index; Brockelmann, S. II, 780-1.)

The Rifaʿīyya spread rapidly into Egypt and Syria, possibly under the patronage of the Ayyūbīd. In Syria, a key figure was ʿAbd al-Ḥarīrī (d. 645/1248), so that this branch became known as the Ḥarīrīyya; another Syrian branch which was later to become notorious for its extravagant practices, including that of the ḍawwāq [q.v.] or trampling of adherents by the mounted ṣūfī of the order, was that of the Saʿdiyya [q.v.] or Ḏibāwīyya founded by Ahmad al-Rifaʿī’s grandson, ʿĪzz al-Dīn Ahmad al-Ṣayyād (d. 670/1271-2). In Egypt, the order became especially strong. ʿĪzz al-Dīn al-Ṣayyād was teaching in Cairo in 638/1243 and married there an Ayyūbīd descendant, the grand-daughter of Nūr al-Dīn al-Malīk al-Āfāl. However, the great mosque of al-

unique miracle of the Prophet holding out his hand from the tomb for al-Rifaʿī to kiss; further, in the list of his predecessors in the discourse of 578/1182-3, al-Rifaʿī mentions Manṣūr but not ʿAbd al-Ḵādir. It is probably, therefore, that the two worked independently.

Details of his family are quoted from the work of al-Ḥārīrī’s, grandson of a disciple named ʿUmar. According to him, al-Rifaʿī married first Manṣūr’s niece Khādījah; after her death, her sister Rabīʿa; after her death Naṣīfa, daughter of Muhammad b. al-Ḵāsimīyya. There were also two grandsons, whose names are unknown to the geographers; even Umm Ḫubayda and neighbouring villages, whose names are unknown to the geographers; even Umm Ḫubayda is not mentioned by Yaḵūt, though found in one copy of the Manṣūd al-ṣittāt. This fact renders it impossible to trace the history of Umm Ḫubayda for by far the greater number of his disciples (mursīdun) and even deputies (shuṭūn), the princely style and the colossal buildings (khulqfād^), and even the occasional575/1181-2. He held an important position in the order of Nur al-Dīn al-Shattanawfī, which was later to become notorious for its extravagant practices. Thus Ahmad ibn al-Ǧāfari (d. 645/1268), so that this branch became the Haydariyya order, which he witnessed in India (Rihla, ii, 4-5, tr. Gibb, ii, 273-4); an eastern counterpart of these practices were those of the Kalandaris [see KALANDARIYYA], dervishes of the Ḥarifīyya order, which he witnessed in India (Rihla, ii, 6-7, iii, 79-9, tr. ii, 274-5, iii, 583).
Rifa'iyya — RIH

Rifaciyya, near the Cairo Citadel, was not begun till the later 19th century, and the tomb which it contains was thought by 'Ali Paşa Mubârak more likely to be that of one of Ahmad al-Rifa'iyya's descendants or Khalûqâ.

The Rifa'iyya order further became popular amongst the Turks in the course of the 7th-11th/13th-14th centuries, continuing so in Turkey up to the 20th century. Ibn Baştûa, again, visited what he calls "Ahmadî'î ẓâ'îyâs in Anatolia, including at Amasya, Izmir and Bergama (Rîshâ, ii, 292-3, 310, 315-16, tr. ii, 436, 445, 449); whilst at this same period, the Nakchivânî, Abu al-ʿAbbâs, described, with disapproval, the "extravagances of fire-walking, snake-biting, etc., which could be seen at the ẓâ'îyâ of "Sayyid Tâdî al-Dîn Ahmad al-Rifa'i" in Konya (Manâdîb al-ārîsîn, ed. and tr. Cl. Huart, Paris 1918-22, tr. ii, 203-4).

From Anatolia, the order spread into the Balkans as far as Bosnia and across the Black Sea to the lands of the Golden Horde; Fuad Köprüülî thought that the Rifa'iyya of the Turkish lands might have been additionally influenced by the semi-magical practices surviving from old Turkish shamanism (see Köprüülîzâde M. Fuad, Influence du chamanisme turco-mongol sur les ordres mystiques musulmanes, Istanbul 1929, 12-13; Gibb and Bowen, Islamic society and the West, i/2, 196-7).

The Maḥârîb, the ecstatic practices of the Rifa'iyya or one of its offshoots were adopted by the ʿĪsâîyya or Iṣâwâ [q.v.] founded by Muḥammad b. ʿĪsâ (d. 930/1524) after his travels in the central Islamic lands. Perhaps most distantly of all, Ibn Baştûa even mentions Rifa'iyya in the Maldives Islands [q.v.] (Rîshâ, text, iv, 141).

The Rifa'iyya was thus the most widespread of all the turâk until the 19th/15th century, when it was over-taken in popularity by the Kâdirîyya [q.v.]. After this time, its greatest appeal was to be in the Arab lands, and especially in Egypt. In 18th century Cairo, the maṣâbîl (q.v.) or birthday celebration of Ahmad al-Rifa'iyya was celebrated on 12 Ẓûnâdâ II at Rumayla. This order, and the associated one of the Badawiyya [see Aḥmâd al-Badawî] were at this time widely recruited from the lower strata of society, compared with e.g. the Kâdirîyya and Kâhîlîwîyâ (q.v.); al-Djâbarî-stigmatises the Amadîyya and Sa'dîyya as popular amongst the awâbîk or lowest classes (see A. Raymond, Le Sultan et la musique à Caire au XVIIIe siècle, Damascus 1973-4, ii, 435-6).

In the early 19th century, E.W. Lane gave a classic account of the grotesque practices of the Rifa'iyya "howling dervishes" and their offshoots the Sa'dîyya and ʿĪwâniyya, which included snake charming and the thrusting of iron spikes, glass, etc. into their bodies (The manners and customs of the modern Egyptians, chs. x, xx, xxv). By the middle of the century, however, such popular excesses began to be deprecated by the Ottoman and Egyptian authorities, when the more progressive-minded of the ruling classes began to regard the turâk as brakes on progress and as associations which were bringing the image of Islam into disrepute, in Western eyes. Hence in Egypt, the awhsa ceremony was prohibited by the Khedive Tawfîkh on the basis of a fatwâa from the Chief Mufti of Egypt, that it was a bi'dâ 'akhibâ or reprehensible innovation. It continued, however, for some decades amongst the Ottoman-Syrian, for the sake of the "Abd al-Hamîd II [q.v.] strongly favoured the dervish orders as part of his Pan-Islamic and pro-Islamic policies. The influence of the Rifa'iyya ʿolâyya Abu l-Hudâ Muḥammad al-Ṣâyyâd (1850-1909), of the Ṣâyyâdiyya branch of the Rifa'iyya in Aleppo, was particularly great at the Ottoman court, and this influence was much disapproved of by Islamic moder-

ists and reformers of the stamp of Muḥammad ʿAbduh.

During the 20th century the Rifa'iyya have continued to be influential in Cairene life. A good picture of it as it was in the 1940s to 1960s, including the form of its dhîkîr (q.v.), is given by E. Banneth in his La Rifa'iyya en Égypte, in MîDÔ, x (1970), 1-35. Banneth noted that, at that time, the supreme head of the order in Egypt was a descendant of the founder and that the members of one section at least, the ʿAmriyya, included a good number of persons with secondary educations and belonging to the middle classes. The charismatic activity of the Rifa'iyya order were played down, but in 1969 the author personally witnessed in the al-Rifa'i Mosque the piercing of cheeks with sharpened iron skewers without any resultant bleeding or visible wounds.

(C.E. Bosworth)
tion about Greek winds is acquired by the translation of calendars such as Aratus of Soloi's Phaenomena or Ptolemy's Phaeniss (translated by Sinân b. Thâbit b. Kūrra and summarised by al-Birûnî in his Kitâb al-Αlîh al-be). Windst are particularly important in navigation treatises [see Milâhâ and Ibn Mâqîn], in which we can find fairly detailed explanations about their causes, directions, effects in navigation, the monsoons and their seasons [see Mawsim], coastal breezes and their causes, and the vocabulary of the sailors. The works of Ibn Madjid (d. 927/1520) and Sulaymân al-Mahri (fl. 917-60/1511-53) show that the sailors of the Indian Ocean also took into account the four cardinal winds. The most important were the Kâbâlî, called Aqshâb by the sailors, and the Dabûr or Kaas, because they were the prevailing winds of the three periods in which navigation was possible during the monsoons. The direction of the Kaas was determined by the setting of Sirius (mâghib al-Tir), while the direction of eastern winds was marked by the rising of a Boôtis (Simâk Râmîb).

Râhâ: the name of two towns in the Levant.

1. The Arabs called the Jericho of the Bible Râhâ or Äthâ (Clermont-Ganneau, in JA 1877, i, 498). The town, which was 12 miles east of Jerusalem, was reckoned sometimes to the Dûnd of Filâsit (e.g. Yâkût, Muṣâqâm, iii, 913 and sometimes to the district of al-Balkâ (al-Yaʾqûbî, Buldân, 113); sometimes, however, it was called the capital of the province of Jordan (al-Urdûn) or of Qâawî, the broad low-lying valley of the Jordan (Nahr al-Urdûn) from which it was 10 miles distant (Yâkût, i, 227). As a result of its warm moist climate and the rich irrigation of its fields the country round the town produced a subtropical vegetation; among its products are mentioned, some already known in ancient times, dates and bananas, fragrant flowers, indigo (prepared from the wasma plant), sugar-cane, which yielded the best Ghawr sugar. Not far from the town were the sulphur mines in Palestine (Abu ʿL-Fida, ed. Reinaud, 226). There were however many snakes and scorpions there and large numbers of fleas. From the flesh of the snakes called tiryâkâ found there were made the antidote called "Jerusalem tiryâk" (θηρακια φυρακα). In the Kurân, Äthâ is the town of the giants captured by Joshua; there was shown the tomb of Moses and the place where, according to the Christians, their Saviour was baptised. The eponymous founder of the town (Arîhâ) was said to have been a grandson of Ar-fâkshâhdî, grandson of Noah. The town was particularly prosperous during the Crusades but then began to decline and was in ruins in the 12th century.

The modern Jericho in the Wâdî el-Kelt (lat. 31° 52' N, long. 35° 27' E) occupies the site of the town of the Crusaders; it is 250 m/820 feet below the level of the Mediterranean. Travellers of the 19th century expatied on the squallor of Jericho, but they little more than a large village. It revived under the British Mandate of Palestine and after the West Bank's incorporation into Jordan in 1948, with a population of 6,830 in 1967; in that year, it passed under Israeli control.

2. A little town in the district of Aleppo. According to Yâkût, it stood in a wooded, well watered area "on the slopes of the Djabal Lubnân". By this term the Arabs meant not only the Lebanon but also its northern continuation as far as the Orontes (Lamens, Notes sur le Liban, ii, 6; MFOB, i [1906], 271). But in the present case, the heights to the east of the Orontes are certainly wrongly included in the term. Râh or the contrary is on the northern edge of the Djabal Bâlût (al-Yaṣîr), a part of the Djabal Rûmah; its northern continuation as far as the Orontes (Lambert, Topogr. de la Syrie, 102, 130) is untenable, as Dussaud (Topogr. de la Syrie, 1946), Ibn Battuta (1326) and even in its northern extension to the Djabal Bâlût (al-Yaṣîr). The Handbook of Palestine and Trans-Jordan, London 1930, 127-9; Admiraity handbooks, Palestine and Trans-Jordan, London 1943, 322-3 and index.

Riha is a place noted for its ruins of antiquity called Ruwaybah ("little Riha") about 13 km/8 miles south-east of Riha. Râh is very frequently mentioned in modern travel literature, as it was on the main road from Halab to Hamî (Ritter, Erdkunde, xvii, 1502; Dussaud, Topogr. de la Syrie, 183), over which Nâṣir-i Khusrâw (before 1047) and Ibn Baṭûṭâ (1326) travelled in their day. The town is therefore mentioned by Belon du Mans, Paris 1557; E. Bâdir, K. al-Anûdî, And., xii (1976), 14-48; D.A. King, Astronomy in the service of Islam, London 1993 (ed. Juynboll, i, 52, 496, ii, 322, 362; Idrîsî, ed. Gildemeister, in ZDPV, viii, 3; Abu 'l-Fida, ed. Reinaud, 48, 236; G. Le Strange, Palestine under the Moslems, London 1890, 15, 18, 28-32, 53, 288, 381, 396-7; S. Marmardji, Textes géographiques arabes sur la Palestine, Paris 1951, 8-9; London 1903, 163; Baedeker's Palestine and Syria, Leipzig 1912, 128-9; H.C. Luke and E. Keith-Roach, The handbook of Palestine and Trans-Jordan, London 1930, 127-9; Admiraity handbooks, Palestine and Trans-Jordan, London 1943, 322-3 and index.

The place is noted for its ruins of antiquity called Ruwaybah ("little Riha") about 13 km/8 miles south-east of Riha. Rihâ is a place noted for its ruins of antiquity called Ruwaybah ("little Riha") about 13 km/8 miles south-east of Riha. Rihâ is a place noted for its ruins of antiquity called Ruwaybah ("little Riha") about 13 km/8 miles south-east of Riha. Rihâ is a place noted for its ruins of antiquity called Ruwaybah ("little Riha") about 13 km/8 miles south-east of Riha.

(E. Honigmann*)

RIHÎA (a.), a journey, voyage, travel; also a travelogue.

It is clear from the lexicoms that the root rabhâla, from which this word derives, was originally associated with camel husbandry. A rabî is a camel saddle and thus we find such phrases as rabhâla al-bârî (he saddled the camel) (Lane, s.v. rabhâla). The word rabhâla associated with camel husbandry. A rabhâla is a camel from which this word derives, was originally neatly translates as “globetrotter” (see rabhâla in person endowed with skill in the saddling of a camel, thus connoted the act of saddling one or more camels and, by extension, a journey or voyage. The person endowed with skill in the saddling of a camel, or one who travelled much, was called a rabhâla in Arabic or, even more emphatically, a rabhâla which neatly translates as “globetrotter” (see ibid., s.v. rabhâla, rabhâla). A distinction can be made between rabhâla and the further form rubhâla: the former indicates a (single) journey; the latter implies the actual destination and also has the rarer meaning of a noble or learned man to whom one may travel (see ibid., s.v. rubhâla). Derivatives of the root rabhâla appear four times in the Kur‘ân: three times indicating “a saddle-bag” or “saddle-bags” (XII, 62, 70, 75), and once indicating actual journeys, employing the form rabhâla (CVI, 2). In the hadîth (q.v.) literature, a familiar ex ample is a passage in the Hadîth Musa: Ibn ’Abd al-Majîd travelled to India. Indeed, wanderlust, often implicit in the word rabhâla and presents the Prophet Muhammad as urging believers to seek knowledge even as far as China (see also Wensink, Concordance, ii, 232-5 s.vv. rabhâla, rubhâla). This injunction, coupled with an increasing desire for knowledge, especially of ‘ilm in the sense of tradition, gave rise to the concept of al-rabhâla fi tatâb al-‘ilm (“travel in search of knowledge”) in mediaeval Islam. A genre of rabhâla literature later developed whose primary impulse, or excuse, was the Pilgrimage [see hadâl]. The archetypcal exponents of this flowering of the genre were Ibn Djubayr (540-614/1145-1217 [q.v.]) and Ibn Ba’ttuta (703-70/1304-68 or to 779/1377 [q.v.]). The first undertook his documented Rihâla, often regarded as a prototype, from 578/1183 to 581/1185 with the Hadîth as a principal focus, to make amends for an act of wine drinking into which he had been forced by the Almohad governor of Marrakesh; the second made the Hadîth the initial excuse for what proved to be a virtual lifetime of globetrotting. With the Rihâla of Ibn Ba’ttuta we reach the peak in the articulation of a genre which should be perceived much more in terms of a literary art form than a formal geography. It is an art form which encapsulates the believable and the incredible, embraces the niceties of everyday life as well as the ‘Agâhâ [q.v.] or marvals, and whose value as a geographical and historical source must, in consequence, be treated with caution. Thus, while the historian and History of Art scholar may relish the description of Mecca and Medina in the Rihâla of Ibn Ba’ttuta (partially plagiarised from the earlier Rihâla of Ibn Djubayr), they must treat with extreme caution the former’s description of his visit to China in view of the controversy over whether he actually visited that area in person. To conclude, the Rihâla in mediaeval Islam must be conceived of, and appreciated aside beside such other genres as the Auqâ’î [q.v.], the ‘Agâhâ and the Nauâ’dar [see Na’dar]. It is a species of Adab [q.v.] rather than Tarîkh [q.v.] or Dowghrâyya [q.v.]. As such it was appreciated by the Nobel Prize-winning Egyptian novelist Najîb Mahfûz (born 1329/1911), who consciously based his Rihlat Ibn Fatâ‘îmâ (“Voyage of Ibn Fatâ‘îmâ”) (Cairo 1983; tr. D. Johnson-Davies under the title The Journey of Ibn Fatâ‘îmâ, New York and London 1992) on the famous Rihâla of Ibn Ba’ttuta, producing not a parody but a Bunyanesque, allegorical and picturesque narrative of Everyman’s Rihâla through life itself.

Finally, one should note that not all travelogues were necessarily called rabhâla; cf. the Sehbat-nama of the Ottoman Turkish traveller Evliya’ Celebi [q.v.].

(I.R. Netton)
The figurative expression rikāb-i humāyūn (Turk., pronunciation: rikābī-ḥumāyūn), or (more rarely) rikāb-i gāhān or simply rikāb is already found in Persia of the Saldjukid period applied to the sultan himself or his entourage in the field or travelling. For example one said that and-so-and so was "in the service of the imperial stirrup" (Ibn Bibi, in Houtsma, Recueil ... selçoucides, iv, 57; iii, 18) or "in the service of the parasol (dār) of the imperial stirrup" (ibid., iv, 7). In modern Persian one says "to be at the stirrup of a person" or "to be attached to his court" (Kazimirski, Dialogues, 493 and 482-3).

In Turkish usage, the same expressions were applied to:

1. The imperial cavalcade and the procession formed on this occasion. However, in order to avoid confusion with other uses of the word rikāb, there was also used, especially in the reigns of Mahmūd II and 'Abd al-Meṣjid, the Turkish word binik which was applied to all public appearances of the sultan, whether on horseback or in a boat (Mouradüye d’Ossoss, vii, 141, 144; Jouannin and van Gaver, Turque, 377 n.; Andressy, Constantinople et le Bosphore, 33, 494). The prince’s procession was also called mevakib (mewkib-i humāyūn) (Ibn Bibi, in Houtsma, iii, 18; on these words in Ottoman and Egyptian usage, cf. J. Deny, Sommaire des Archives du Cabinet, 104, 564). Cf. also the name of rikābūdr given to the eight soldiery lieutenants who were by the sultan’s side in the great procession (Mouradüye d’Ossoss, vii, 25, 317).

2. The audience given by the sultan (resm-i rikāb or simply rikāb), whether or not he was in procession. The Grand Vizier himself could only be introduced to the sultan’s presence by the latter’s formal order and his admission was called rikāb. There were ordinary rikābs and ceremonial rikābs (Mouradüye d’Ossoss, viii, 153 f.). Cf. details of the bayram rikābī teshrifatl name of the Grand Vizier in so far as he was endowed with the full powers of the sultan (MTM, 528). Similarly, the words rikāb-i humāyūne (in the dative) were used for petitions (zāhrūdb, Ar.-Pers. 'aḏi-i hāl) addressed to the sultan (Meninski, Thesaurus; Kānūn-nāme of Sūleymān or Naṣīrāt-nāme, 151), whence the expression ma’rūdābī-i rikābīye applied to these petitions.

It is from this connection that we have the use of the words rikāb-i humāyūn or rikāb in the sense of interim or substitute. When the Grand Vizier moved from place to place, the government was thought to go with him and there was appointed "to the sovereign a substitute for the Grand Vizier who was called rikāb kā’im-makā’im" (Bianchi, Dict., 1 ed.; Perry, A view of the Levant, London 1743, 37). The other chief dignitaries of the Sublime Porte had also their substitutes "of the imperial stirrup".

Rikāb aghalarī or agbağy̲-i rikāb-i humāyūn or üzengî aghalari.—These names were applied to a certain number of important officers or dignitaries of the palace (from 4 to 11, according to the different sources). They were the mir-amēm or "standard-bearer", the mir-ādār (ādārhor) or "squires", the kapudārār kāhāsī or "chief usher" and other officers with different offices (cf. Lutfū Paşa, Asaf-nāme, in Türk. Bibliothek, xii, 18, 21 of the Turkish text ed. Tschudi; Beauvoisins, Notice sur la Cour du Grand Seigneurs, 1809, 54; Mouradüye d’Ossoss, vii, 14; von Hammer, Staatsverf., ii, 61, with references to Castellan and Alī, op. MTM, 526, for the kānūn or "usages" regarding the agha̲s of the stirrup; Feridūn, Muqtabās, 10, for the rikāb or protocol relating to them). The following is a translation of the passage in the Asaf-nāme which is a comparatively old text (Lutfū Paşa [q.v.], died probably in 970/1562-3): "The deftārārs of the finances have precedence (tāsadur) over the sanduk bēsî and the üzengî aghalari. The principal (baş-ādār) of these is the agha of the Janissaries, next comes the mir-ādār, then the kaṭīr-bīš, the çeşmegir-bīš and the būluk aghalari" (starting with the agha of the Janissaries, we have here then an enumeration of the üzengî aghalari).

Considering the authority of these sources, we must conclude that the variations are the results of changes which actually took place, which leads us to conclude that the tradition of the palace left the sultan a certain freedom in this respect. We know, moreover, that admission to the rikāb was in general subject to the istiṣāb or "approval, pleasure" of the sultan.

The most important function, at least in principle, of the agha of the stirrup was exercised when the sultan mounted his horse: the grand mir-ādār held the inner stirrup (zāhrūdb), the baş-ādār or baş-kāpū-başi the outer stirrup (koltūgha); the agha of the Janissaries, assisted by the grand agha, held him under the arm or "under the armpit" (kolūğha girmek). The kaṭīr-bīš or "chamberlains" stood all around and the aḵhur khalifesi (kaftār) held the horse’s head (MTM, 526).

On the functions of the chamberlains, who, to the number of 150, headed by the baş-ādār or baş-kāpū-başi, already mentioned, were in the service of the stirrup, and for other details, see Mouradüye d’Ossoss, vii, 18, and especially MTM, loc. cit. Their duties were to take to the province important ārma and to carry out various confidential missions.

Sometimes epithets rhyming in -āb were added to the word rikāb in the language of the court: e.g. rikāb-i kamerdab "stirrup shining like the moon" (Tārīk-i Wāyṣif, i, 105), cf. also the epithets kāmūyā, gerdān ānjūb, dawrān ānjūb, ēzānāt ānjūb, etc.

The tribute which the Voyvodes of Wallachia and Moldavia sent to the sultan in their own name, supplementary to that (gīzye) paid by their subjects, was known as rikābīye and tūdīye (Ahmed Rāsim, i, 380; cf. Saineanu, Influența orientala, București 1900, i, 249).

Bibliography: Given in the text. (J. Deny)
rikāb already to the first Umayyad caliph of Spain (138-72/756-88; cf. Analectes, i, 605, reference given by Douty). In Egypt at the court of the Fatimids, there were over 2,000 rikābī or sīfūn al-rikāb al-khāṣ, so called “on account of their costume (ziyyā),” whose duties were the same as those of the sīlāḥdār and tabardār of the time of al-Kalkashandi (Subh, iii, 482).

As to the Persian form rikābdār, it must have been in use in Persia for the Sabiks for we have to admit by analogy that it was from them that the Ayyubids and later the Mamluks borrowed the term, like many other words of the same kind.

In Persia itself, the term rikābdār was replaced by its (Turkish) synonym uzeni (or zengū) kurtcē (cf. Chardin, 1711 ed., vi, 112; Père Raph. du Mans, Estat de la Perse, 24). According to the Burhān-i kātēr, the rikābdār were replaced by the gilausduar (from gilaou, bridile), but it should be noted that the office of the latter was contemporary with and independent of that of uzeni kurtcē.

In Egypt, the rikābdārs of the Mamluks, also known as rikābī, were members of the rikāb-khāna, like the other “men of the sword” (arbāb al-siyūjī), such as the san-djādār, mahmīzār, kara-ğulām, and ġulām-mamlūk. The rikāb-khāna (the khāzānat al-sūrūg of the Fātimids) was the depot for harness and in general for all the material required for horses and stables. The heads of this service and, as it were, their sanctioned mahār (cf. the Ottoman mehter, whose duties were different and humbler). The rikābdārs were under the command of the amīr djandār, “Marshal of the Court” (cf. the kapudjular kahyasl of the Ottoman Court). See al-Kalkashandi, iv, 12, 20; Khalīl al-Zāhirī, 124; Gaudefroy-Demobynes, Syrie, pp. lii, lix.

The word rikābdār is found in the 1001 Nights, where it is translated "palfrener" by E. Gauttier, vi, 168, and "groom" by Burton, x, 565, n. 2. From the context we might also suggest "riding attendant." Boc-thor gives (for Syria?) r-k-b-dr under the French "écuier (qui enseigne à monter à cheval)" and r-k-b-b al-khāyī under "groom (celui qui monte à cheval)." The synonymous expression sābī al-rikāb, in the sense of ‘‘good squire, one who mounts a horse well,’’ is found in the romance of 

In 19th and early 20th centuries, Egypt, according to Leunclavius (Turk. Bibl., no. 12, 1910, 17, n. 1) have therefore confused rikābdār agha and rikābi, which has given rise to an erroneous interpretation of the whole passage (see the corrected translation in rīkāb).

On the other hand, Western writers of the 16th century mention as the third officer of the household (iṣqāghān) after the sīlāḥdār and tabardār a "cup-bearer"! Theodore Spandone (Spandony Cantacazin) calls him sharābādār (cf. Garzoni, 1573) and Leunclavius kūpādār “bearer of the (water)-jar,” a name also found in Lonicer (69). This water-carrier was given other names later. D’Ohsson (pl. 158) and the āṣā tārīkhī (i, 282) speak of kūpādār or kīchābādār, which is another pronunciation for the Arabic-Persian kāzī (or water-jar). Wearing a brasta, he carried a ewer (mashtāba) of warm water at the end of a stick. Von Hammer calls this official muraqābī or bearer of the gourd (matarah for māthara). The use of warm water is easily explained by the fact that, as an author writing in 1631 tells us, the third gentleman of the sultan’s chamber ‘‘carried him ‘sherbet’ to drink, and water to wash with’’ (de Stochove, Voyage du Levant, Brussels 1662, 84; Ischiopitar, for rikābdār; cf. Baudier, who writes rixchipōtar).

On the other hand, there was an officer whose duty it was to carry a stool (iskemledjil) platted with silver which the sultan used in mounting his horse, when he did not prefer the assistance of a mute who went on his hands and knees on the ground (Castellan, Musas... iii, 139; Āṣā tārīkhī, p. 282). The stool was carried by a silihār, or “keeper of the water” (mashrapa); he carried a ewer (musek), and a koz-bekci or koz, which has given rise to an erroneous interpretation of the whole passage (see the corrected translation in rīkāb).

Among the special duties of the rikābdār, one need only mention the dignity at the sultan’s court reserved for a single officer. It is in the reign of Orkhan (ca. 1324-62) that we first find the Ottoman rikābdār: he was called Ködja İlyas Ağa (Āṣā tārīkhī, i, 94). It was, however, only under Selim I (1512-20) that the duties of the rikābdār were defined. According to the organisation at this time, the rikābdār agha was a khāṣ as detta, i.e. he was one of the khāṣ oda (and not odağī) or "company of the corps" (Mouradjea d’Ohsson: chambrière suprême (Castillan); innerst Kammer (von Hammer)) which was the first of the six groups of officers of the household (iṣ or enderān) of the Palace and consisted of the fixed number of 40 officers or pages, including in theory the sultan himself. It had been formed by Sultan Selim to guard the relic of the Prophet’s mantle (khatība-yī se’āde) brought back after the conquest of Egypt (Āṣā, i, 208; for details of the organisation, see ibid., and Mouradjea d’Ohsson, vii, 34 ff.). The rikābdār was the third of these officers of order of precedence (following the sīlāḥdār and the čehādār and preceding the dālibdār agha) and an officer passed in this order from one office to another. The four officers just mentioned were the only khāṣ oda who had the right to wear the turban.

According to the usual definition repeated everywhere, the chief duty of the rikābdār agha was to hold the sultan’s stirrup. It may have been so at first, but none of the documents available show the rikābdār performing this duty in practice. Indeed, we have seen [s.v. rikābi] who actually were the āğha of the stirrup” entrusted with this duty. Now in spite of his name, the rikābdār was not one of these. The Arabic version of the Āṣaf-name (ed. Beirut, 9, n. 7) and the German translation (in Türk. Bibl., no. 12, 1910, 17, n. 1) have therefore confused rikābdār agha and rikāb agha, which has given rise to an erroneous interpretation of the whole passage (see the corrected translation in rīkāb).
RIKABDAR — RIND 531

over 60 and had spent 40 years in the service of the court. According to the same source, these duties were reduced to very little. During the ceremonies (telâmut) of the Prophet’s birthday (mawlid) or mawlid, the two bayrams and at the binnihat or ceremonial appearances of the sultan, the rikâbdâr sat opposite the sultan in the imperial barge with the sitilbâr, kâfsî oda bâshî and the two iûhâdârs.

From all this we may conclude that, if there really was a rikâbdâr in the time of Orkhan, he performed not only the duties of a squire but also those of a “cup-bearer,” and we know that in Persian the rikâbdâr means “cup-bearer” and rikâb means also “cup.” In time, with the rikâbdâr becoming a more and more important personage, these duties were divided between two special officers: on the one hand, the koz-bekî and similar officers, and on the other, the iskime aghasî.

The rikâb aghasî, like the lohadârs, received a daily salary or “wage of 35 aspers (akch), while the sitilbâr drew 45 (Hezarfenn, ms. Bibliothèque Nationale, ancien fonds turc, fol. 18b). Like the lohadârs, they had in their service two lales of the kâfsî oda, a karakollukçu, a baltasî with tasseled caps (ziîfîlu), two sofâlis, a keyhejdzî and two yedekhlis. The rikâbdârs who did not attain the rank of sitilbâr were put on the retired list (became ûrak) with a pension of 60-100,000 piastres. In the absence of the lohadâr, the rikâbdâr performed the duties of the sultan. On the quarters in the palace occupied by the rikâbdâr, see ‘A‘î, i, 312, 20.

The four chief officers of the kâfsî oda, including the rikâbdâr, were often called by the name—not official, however—of koltuk uxezleri or “vizers of the armpit” because they had the privilege of touching the sultan, particularly of giving him their hand or taking him by the arm during a walk and they frequently attained the rank of uezîr (Cantemir, Hist. Emp. Ott., iv, 119-21). The rikâb aghasî [see RIK] were also koltuk uxezleri.

The same four officers were also called ahrd aghasî because they had the right to present (‘ard) to the sultan any petition which reached them, like the master of petitions (Rycaut, Bk. i, p. 97 of the French tr.; Castellan, iii, 185). According to Ahmed Râsim (ii, 639), in processions, the iskime aghasî had the task of returning to those concerned petitions which were not granted. The rikâbdrs were abolished by Mahmûd II probably about the same time as the koz bekit (in 1248/1832-3; cf. Lutfî, iv, 68) and the sitilbâr (in 1246; cf. Lutfî, iv, 61); see von Hammer, Hist., xvi, 191.

RIKK [see RAK].

RIND (p.), a word applied in Persian with a contemptuous connotation to “a knave, a rogue, a drunkard” or “a debauchee”; in the terminology of mediaeval mystics, it is also used for “one whose exterior is liable to censure, but who at heart is sound” (Steingass, s.v., after the commentaries on Mahmûd Shabistari’s work). As someone who is completely in error, it is related to the attitude of the maldmatiyya (q.v.), commenting on Mahmûd Shabistari’s work, Guzman-i râz, defined the rind as someone who is completely detached from all qualities and conditions of the multitude of created being “having removed everything with the rasp (randa) of obliteration and effacement.” Such a person would no longer be bound to anything, not even to the discipline of a spiritual teacher (Maf'ûl al-tâ'lab, 636).

The force of this imagery is not yet quite exhausted, though it has been used over and again by countless poets and mystics. In the present century, it could still serve Sir Muhammad Ikhîl (q.v.) as an item of his poetry which aimed at the revitalisation of Islam.

freebooters associated with the ‘ayyâran (q.v.) and the aawâbi. Locally they could be a political factor of some importance, as it appears from phrases like “the rinds of Baghdad” or “the rinds of Kh-f’azm.” The term is also made of rural groups (rindîn-i rûst). They were further characters in popular literature. Baydî tales about the rinds were considered to be unsuitable for a royal banquet (Ibn ‘Isâfînî, Târîh-i Tabaristan; see for these and other examples from historical sources, Dihkhudâ, Lughat-nâmâ s.v. rindy).

In the 16th/17th century, the Persian poet Nâsîr-i Khusrâw also mentioned their behaviour outright when he rebuked the world for “approving in its many children only that which results in bad behaviour and debauchery (baft-f‘ît-rundy)” (Dîwân, 493, 3). Even two centuries later, Sa‘îdî (q.v.) looked unfavourably upon their violent attacks on the Şûfs and upon their sensuality (Gûsînân, 107, 149).

Already at the beginning of the 6th/12th century, however, Sanâ‘î (q.v.) gave ample evidence of a reversed appreciation. In his poetry, the word belongs to a cluster of terms and motifs peculiar to the kalan-darsîyâ (see KALANDARIYYA). In this mystical genre, it came to denote the type of the antimonic mystic, like the cognate terms kalandar and kalâtî. The abandonment of all self-interest by the rinds is contrasted to the insincerity of ascetics (zâhid) and devout believers (‘âbâ), whose piety is merely a mask for their selfishness.

After Sanâ‘î, Farîd al-Dîn ‘A‘ûrân (q.v.) further developed the genre in his ghazals and quatrains. The rinds are also frequently mentioned by Hâfîz (q.v.). The “vices” he ascribes to them are being frantic lovers, ogling beautiful boys (nazarbâz), excessive drinking and gambling. They are beggars who have squandered all their earthly possessions (mufrîs, pâkhrâz) and have “set the world to fire” (taxmâsî). Willingly they destroy their good reputation, drinking the dregs of wine and suffering for the sake of love.

The reversal of terms like rind in the usage of the poets is related to the attitude of the malât mâtiyya (q.v.), who from the 4th/10th century onwards dominated the spiritual atmosphere of Khûrâsân. In a telling anecdote about Abu Sa‘îd Mayhâni (q.v.) it is related that he learned the true meaning of the term rindân who honoured him as the “emir of the gamblers” (Ritter, Das Meer der Seele, 202). Eventually, the term was adopted into standard mystical terminology. Shams al-Dîn Lâhî (d. 912/1506 q.v.), commenting on Mahmûd Shabistari’s work, Guzman-i râz, defined the rind as someone who is completely detached from all qualities and conditions of the multitude of created being “having removed everything with the rasp (randa) of obliteration and effacement.” Such a person would no longer be bound to anything, not even to the discipline of a spiritual teacher (Maf'ûl al-tâ'lab, 636).

The force of this imagery is not yet quite exhausted, though it has been used over and again by countless poets and mystics. In the present century, it could still serve Sir Muhammad Ikhîl (q.v.) as an item of his poetry which aimed at the revitalisation of Islam.

The scribes of Damascus were familiar with the epistles of the Greeks, by way of

RAW_TEXT_END
Hellenistic and Persian culture. As a result of the works of Mario Grignaschi, this influence has been established beyond doubt; in fact, one of the most illustrious representatives of this circle, Sālim Abu 'l-ʿAlāʾ (see above), the maʿādul of ʿAbd al-Malik, in his translation of the letters of Aristotle to Alexander, included two chapters of great interest, al-Siyasa al-ṣāmna and al-Siyasa fi tadhbir al-rūʾa: they contain, in effect, quotations and indications proving that he followed the "outline of the Greek letter more closely than has sometimes been admitted." Les "Rasāʾil Aристотέλους iā l-ʾIskandār" of Salīm Abū l-ʾAlāʾ and the activité culturelle à l’époque umayyade, in BEO, xix (1965-6), 9. Furthermore, ch. x, of classical origin, which has been published in an abridged version by Lippert under the title Peri Basīlia, is identical in all respects to the Arabic ms. of Sālim (Köprülü 1608) except in one detail. The Arabic translation has added here two extracts from the Testamenti d’Ardashir; Sālim has thus proceeded to an integration of the Greek foundation to the Sāsānid foundation (ibid., 14).

The risāla as monograph

The transmission of knowledge under the first caliphs of the Marwānid branch was accomplished in the form of risālas. ʿAbd al-Malik b. Marwān, wishing to know more of the events which had accompanied the beginnings of Islam, addressed himself to ʿUrwa b. al-ʿUzayr, who replied to him with a written missive containing the information requested. These missives were preserved by al-Ṭabarī to constitute the basis of his documentation for the event in question (Annales, i, 1180-1, 1634-6, 1770, 1284-6). This framework offered numerous facilities and allowed the writer to lend to his work the tone of a direct conversation. As time passed, the authorities who solicited and even invented by the writer himself with a view to exposing his ideas on a question which interested him particularly (A. F. L. Beeston, The epistle on singing girls by ʿAlī, London 1980, § 3, 2-3; G. Lanson, Choix de lettres du XVIIe siècle, Paris 1913, p. xxv). This sub-genre was to enjoy lasting popularity. Numerous authors, from the time of ʿAbd al-Ḥamīd al-ʿĀṭīb to the present day, have made frequent use of it.

Moreover, there was the opportunity of filling the letter-missive with personal ideas and nonconformist concepts which adab could not or would not accommodate, it being regulated by very strict rules. Knowledge (ʿilm), like literature, was considered the ultimate canonical genre; for the same reason, it was doomed to cantonisation in compilation; otherwise, there was the risk of impairment. Every qāḥār mentioned, was or fictitious, was written on the model of an isnād which accentuated its status as a received text, rather than the product of independent thought. The risāla, the only remaining framework in prose, lent itself perfectly to the role of receptacle for personal thoughts, nonconformist ideas and texts based on analysis and not on quotation. This is why the most original texts were conceived as risālas. In politics, one of the most thorough analyses of religious, political and military institutions under the early ʿAbbasīd is supplied by the Risāla fi ʿl-ḥāʾibah of Ibn al-Mukaffā (Ch. Pellat, Ibn al-Mukaffā: conseiller du calif, Paris 1976, 1, 4, 12). In literature, the Risāla al-tahhāwī of ʿAlī, "taḥḥāwī by al-Ḥāǧīz and the Risāla al-hāzialyana of Ibn Zaydūn presented the most successful examples of humorous texts (O. Rescher, Excerpts and Übersetzungen aus der Schriften des...Jāḥīz, Stuttgart 1931, 212-25; Al-Ījkār, xi/3, 54-60; T. Husayn, Min hadāl al-ṣīr wa ʿl-naṭr, 88-99; H. Dājjāl Ḥasan, Ibn Zaydūn, Cairo 1375/1955, 266-9, 274-5). More generally, Risālat al-al-ṭawdhiʿ wa ʿl-taḥḥāwī uṣūl al-ʾizāwāḥi by ʿAbd al-Ḥamīd b. Ṣaḥmān b. al-Ḥāḏīz could be considered triumphs of classical Arabic literature. In poetry, the most penetrating analysis of the aesthetic rules governing poetry and the epistolary art, and also the most systematic, borrowed the same formal framework (A. Arazī, Une épître dʿĪbrāhīm b. Ḥiḍāt al-Ṣāḥib sur les genres littéraires, in Studies in Islamic history and civilization in honour of Professor David Ayalon, Jerusalem and Leiden 1986, 473-503).

Indisputably, the risāla comprises, here, all the aspects which constitute the monograph or the essay. Henceforward, this framework was to play a role in all sectors of Arab culture: philosophy, grammar, lexicography and fikūr—they all adopted it as a means of producing their finest achievements. The Rasāʾil of Ḥāḏīz dealt with a broad spectrum of theological, social, political and literary problems and counted among them many profound and original ideas on the thinker, perhaps of the whole of ʿAbbasīd literature. The format itself is a major contributor to this success: each title studies a single problem, which encourages reflection (Ch. Pellat, The life and works of Jāḥīz, London 1967, 14-26). It has even been written of some of them that they are psychological and moral studies in which the author is aware of producing original work; this is now a regular occurrence in the works of the 3rd/9th century (Ch. Vial, Al-Ḥāḏīz, quatre essais, IFAO, Cairo 1976, 3). The same phenomenon is attested in the work of a polyglot of the Mamlūk period, Dājl al-Dīn al-Suyūṭī (d. 911/1505 [q.v.]), whose principal claim to fame was his faculty for compilation. In his epistles, he attacked the abuses with which the society of his time was confronted, refraining from touching the pleasures of compiling. However, it is in theology, in particular al-ṭawdhiʿ, that the domain of the sciences that this phenomenon seems to have taken on the broadest role. The translation, or perhaps the paraphrase, in Arabic, of the correspondence between Alexander and Aristotle, seems to St. Paul and St. Peter. Systematically, they include in their titles the name of the region destined to receive them. It is interesting to note a similarity with the letters of certain maukallāmīn (see below).

Among the ʿalāʾāt, a significant number of theological treatises are risālas attributed to historical figures (al-Ḥasan al-Baṣrī) and addressed to no less historical figures (the Umayyad caliphs). All these epistles have recently been the object of philological analysis by Michael Cook, Early Muslim dogma, Cambridge 1981 (with very comprehensive bibliography). The dating of these documents continues to be problematical, and expert opinion is divided as to their paternity; this last is accepted by van Ess, whilst
others have not hesitated to draw attention to certain anachronisms featuring in these documents. Whatever the case, it seems very reasonable to place them at the end of the Umayyad dynasty or under the first ʿAbbāsids. The authors, most of them Tābiʿūn or Successors, chose this framework on account of its similarity to the letter, in other words, as a concrete message which would make their theological statements more easily understood. Later, numerous theologians made use of the epistle to propound their doctrines. Al-ʿAskari had recourse to it in two instances: the first in the well-known Fi ḥadījat al-khuṭba in support of his engagement in speculative theology (R. MacCarthy, The theology of al-ʿAskari, Beirut 1953) and the second in Risāla ʿilā ʿal-ṯaqqīr. The second in fact constitutes a brief exposition of the theology of the author (publ. in Iḥāyāt Fakūlītī Miṣmaṣ [Istanbul], viii [1928]; on the two epistles, see D. Gimaret, La doctrine d’al-ʿAskari, Paris 1990, 13-16). The response (fāṣūq, ḡawwāb, ʿaṣwāq, masāʾil) constitute an ancient institution (see below, under “episcopal Arabics”). Numbers of these epistles belonging to this category have been attributed to Abū Ḥāṣim al-Djiḥabbāʾi (d. 32/950), one of the most eminent Bayān Muʿtasīl thinkers; these also followed the previously-mentioned pattern, with a title bearing the name of the addressee and his country of residence. Worth mentioning, by way of example, are the Baghdādisiyyāt and the Ṭanīṣiyyāt (Gimaret, Matériaux pour une bibliographie des ḍubbāʾi, in JA, cxxv [1976], 308, 321, and 286, a reply from his father Abū ʿAlī to the inhabitants of Khūraṣān). Numerous collections, identical in every respect, were mentioned by the Muʿtāsiyyāt kālid ʿAbd al-Djiḥabbār (d. 416/1025), such as al-Rāzīyyāt, al-Khārizmiyyāt, etc. (al-ʿUṣbāl al-khamsa, ed. ʿA. Uṭḥmān, Cairo 1967, 21-3).

A similar process is in evidence in the epistles of Ibn Ṭauṣiyya (Maṯmat-al-rasāʾīl al-kubrā, Beirut 1980, i-ii, repr. of the original edition). In addition to the usual framework, the introduction includes here the name of the questioner, the heading of the question and the mention of other circumstances which contribute to fix his risāla more firmly in reality. Thus the differences between fāṣūq and epistles tend to become blurred. Another characteristic of theological risālas, which could prove to be of great importance, since it is not directly determined by the parameters of the discussion, is the opportunity given to the author of providing a detailed account of his position on a point of doctrine. Such an opportunity was readily seized upon by the author, who expounded at length the subject which was being debated. These theological responses, thus enlarged, were transformed into veritable monographs; the question which is the point of departure then appears to arise from the point of its solution. Numerous treatises, in the form of a monograph, in response to questions posed to an author, is known in Syriac sources (for example, in the work of Jacob of Edessa, late 7th-early 8th century), taking its inspiration, perhaps, from the Greek tradition through the intermediary of the Byzantines (Cook, op. cit., 145-6). The most ancient manifestations of this framework in Christian theological literature written in Arabic are to be found in the language of the ❝Melkite❞ bishop Theodore Abū Kurra (d. 820, see G. Graf, GCAL, ii, 7-26; I. Dick, Theodore Abū Kurra, in Proche-Orient Chrétien, xii [1962], 209-23, xiii [1963], 114-29). It is appropriate to observe that the Arabamic mānīr (< māmrū – māmrā) might well have constituted the antecedent of the Arabic term makāla (J. Wansbrough, The sectarian milāḥ, Oxford 1978, 104-5, where he expresses the hypothesis of the existence of Christian theological treatises in Arabic in an earlier period).

Although numerous questions and uncertainties have been presented, with good reason, in the epistolar framework, many people have sought, and have succeeded, through its intermediary, in preserving prolonged theological discussions owed to those who were unanimously recognised as authorities on the subject.

It should be noted that, at a very early stage, in various domains of the religious sciences, the term risāla was applied to numerous works which could prove to be of great importance, since it was the subject of debate. These risālas did extend over a brief exposition of the theology of the author (publ. in Iḥāyāt Fakūlītī Miṣmaṣ [Istanbul], viii [1928]; on the two epistles, see D. Gimaret, La doctrine d’al-ʿAskari, Paris 1990, 13-16). The response (fāṣūq, ḡawwāb, ʿaṣwāq, masāʾil) constitute an ancient institution (see below, under “episcopal Arabics”). Numbers of these epistles belonging to this category have been attributed to Abū Ḥāṣim al-Djiḥabbāʾi (d. 32/950), one of the most eminent Bayān Muʿtasīl thinkers; these also followed the previously-mentioned pattern, with a title bearing the name of the addressee and his country of residence. Worth mentioning, by way of example, are the Baghdādisiyyāt and the Ṭanīṣiyyāt (Gimaret, Matériaux pour une bibliographie des ḍubbāʾi, in JA, cxxv [1976], 308, 321, and 286, a reply from his father Abū ʿAlī to the inhabitants of Khūraṣān). Numerous collections, identical in every respect, were mentioned by the Muʿtāsiyyāt kālid ʿAbd al-Djiḥabbār (d. 416/1025), such as al-Rāzīyyāt, al-Khārizmiyyāt, etc. (al-ʿUṣbāl al-khamsa, ed. ʿA. Uṭḥmān, Cairo 1967, 21-3).

A similar process is in evidence in the epistles of Ibn Ṭauṣiyya (Maṯmat-al-rasāʾīl al-kubrā, Beirut 1980, i-ii, repr. of the original edition). In addition to the usual framework, the introduction includes here the name of the questioner, the heading of the question and the mention of other circumstances which contribute to fix his risāla more firmly in reality. Thus the differences between fāṣūq and epistles tend to become blurred. Another characteristic of theological risālas, which could prove to be of great importance, since it is not directly determined by the parameters of the discussion, is the opportunity given to the author of providing a detailed account of his position on a point of doctrine. Such an opportunity was readily seized upon by the author, who expounded at length the subject which was being debated. These theological responses, thus enlarged, were transformed into veritable monographs; the question which is the point of departure then appears to arise from the point of its solution. Numerous treatises, in the form of a monograph, in response to questions posed to an author, is known in Syriac sources (for example, in the work of Jacob of Edessa, late 7th-early 8th century), taking its inspiration, perhaps, from the Greek tradition through the intermediary of the Byzantines (Cook, op. cit., 145-6). The most ancient manifestations of this framework in Christian theological literature written in Arabic are to be found in the language of the ❝Melkite❞ bishop Theodore Abū Kurra (d. 820, see G. Graf, GCAL, ii, 7-26; I. Dick, Theodore Abū Kurra, in Proche-Orient Chrétien, xii [1962], 209-23, xiii [1963], 114-29). It is appropriate to observe that the Arabamic mānīr (< māmrū – māmrā) might well have constituted the antecedent of the Arabic term makāla (J. Wansbrough, The sectarian milāḥ, Oxford 1978, 104-5, where he expresses the hypothesis of the existence of Christian theological treatises in Arabic in an earlier period).

Although numerous questions and uncertainties have been presented, with good reason, in the epistolar framework, many people have sought, and have succeeded, through its intermediary, in preserving prolonged theological discussions owed to those who were unanimously recognised as authorities on the subject.

It should be noted that, at a very early stage, in various domains of the religious sciences, the term risāla was applied to numerous works which could prove to be of great importance, since it was the subject of debate. These risālas did extend over a
several volumes (cf. the Risala of Ibn Abi Zayd on Mālikī fiqh; the Risala al-sadāqa wa l-sadāq covers more than 400 pages; etc.).

Writers of risāla, not being obliged to observe con-
straining conventions for fear of being considered at
fault, as was the case with adab, were permitted to give
free rein to their creative spirit and express themselves
with total liberty. Furthermore, a cultural pheno-
momenon comes into being: with the creation of new
genres, in the absence of appropriate terminology, the
work receives the title of risāla. Thus the original title
of the work of Ibn Fāḍil (ed. Sāmi Dahān, Damascus 1379/1959),
no doubt on account of its unedited nature and the
impossibility of integrating it into one of the conven-
tional literary categories.

Risāla and autobiography

A vital aspect of the literary risāla and of the per-
sonal letter, namely, its confessional nature, con-
fers on this type of writing an autobiographical character
which is unusual in classical Arabic texts. Ch. Vial
has rightly stressed this aspect in the four epistles of al-
Dāhīz which he has studied (Quatre essais, 7). Abū
Hayyan al-Tawḥīdī seems to have had a marked
predilection for this genre of personal revelation. His
Risāla al-sadāqa contains numerous very intimate
passages, of disconcerting candour. To an even
greater extent, in his Risāla fi l-ḥaydt, which sets out
a classification of sciences, the author unburdens
himself, recounts intimate events, reveals his most
secret thoughts, informs the reader of his beliefs and
takes the reader into his confidence in describing his
states of mind and justifying his behaviour (M. Bergé,
Risāla fi l-ḥayām, in BEO, xviii, 244-6; he does the
same thing at the beginning of the Risāla al-hāṣāt,
Damascus 1951, 52-4). Any study of ancient
autobiography must take into account the contribu-
tion of this thinker. In personal letters, this aspect has
sometimes taken on a surprising intensity. The library
of the University of Leiden possesses the third volume
of the Correspondence of Abū Hīālāl al-Sābī (ms. Or.,
766, fols. 115a-118b). In a letter addressed to his son,
al-Sābī, written at the age of 42, he feels that he is old
and believes that he can detect in his dreams and in
the incidents of daily life premonitions of death. Ac-
cordingly, he reviews the balance-sheet of his life, in-
forms his son of the love that he holds for his wives,
his fondness for animals and the bribes that he has
handled; he declares his weariness and gives advice to
his son.

Style

This type of correspondence and exchange of ideas
greatly interested literary circles, stylists and amateur
scholars among the aristocracy, and this led to the
emergence of texts of a high literary standard. In fact,
the very choice style verges on the precocious. The
distilled language, laden with tropes, fine allusions,
plays on words, verbal tricks and metalepses (sauriya),
and is constantly rebarbative and not easily under-
stood. Rhymed prose, almost of necessity, obliges the
stylists to practise what are virtually verbal acrobatics.

In a letter opposing the principle of fasting, al-ʿArid
Abd Abī Abd Allāh b. al-Ḥusayn b. Mūʿāwiya employs
rhymed periods of such precise equality that the editor
of the Yatīma mistakes them for poetry and sets out the
lines accordingly (al-Thaʿālibī, Yatīma al-dahr, ed.
Cairo, iii, 8). A similar process is evident in Byzantine
culture (Hunger, 206). Such style, described by
Karlsson as “ceremonial”, can appear irritating.

This cult of the form can only be understood in the
light of the triumph of ṣāḥīḥ; in the cultural environ-
ment, this means accepting the notion that educated
literature submits of its own accord to a form of ex-
pression considered noble.

Undoubtedly, alongside such literary letters, there
always existed letters of no literary pretension. These
functional missives paid little regard to form; they
were written in every-day language and discarded by
the addressee once they have been read and their con-
tents noted. In the opinion of scholars, such letters
were not worth preserving. Having no literary merit,
they were not considered “true” letters. Only a few
score of them, written on papyrus, have survived, and
these have been published by Y. Raghb (Marchands
d’êtoffes du Fayoum d’après leurs archives (Actes et lettres),
i-iii, Cairo 1982-92). A vast gulf separates these brief
texts, adopting the language of the vernacular, from
the letters of scholars written in the purest literary
Arabic.

III. The stylists

The extravagant elegance of style demands an un-
surpassed mastery of the language. Gaining the status
of an accredited epistolographer was the outcome of a
long apprenticeship. The aspirant was obliged as a
first step to familiarise himself with the most suc-
cessful compositions of his predecessors (rasāʾil al-
muṣākkaṭim), with archaic poems, chronicles,
biographies of eminent persons and amusing anec-
dotes, all of this leading to an enrichment and diver-
sification of language. It was also necessary to study
the makāmāt, the discourses and debates of the An-
cients, the maʿānim of the sāʾidām, the maxims of the Per-
sians (Diyyāʾ al-Dīn Ibn al-Aṭjīr, al-Majalla al-sāʾir, fi
Furthermore, the fact that their writings were read in
public and their letters passed from hand to hand to
be copied and annotated (Yākūt, Irshād, v, 329, 351,
vi, 67-8), gave them a prominent position in society.
It may be supposed that whole generations of prepara-
tion and training were required to produce the most
illustrious of the stylists. The epistolary art underwent
a process identical to that of poetry in the training of
artists. The diwāns of poets are matched by the diwāns
of mutarrasis (Ibn al-Nadīm, Fihrist, Cairo n.d., 244,
gives a list of 70 collections of letters attributed to
epistolographers of the 2nd-3rd/8th-9th centuries.
Through the good offices of Ibn al-Nadīm and his
systematic approach, it is possible to trace the various
stages, often spread over many decades, necessary to
train a major stylist.

A good example is the family of the Banū Wahb, a
veritable dynasty of mutarrasis; its members were the
descendants of Kanān b. Mattā, the eponymous
ancestor. Immediately after the conquest of Syria, he
held the post of kāṭib in the service of Yazīd b. Abī Suf-
yān; when he was appointed governor of Syria, Mu-
ʿāwiya retained him in the same post. He was “in-
herited” by Yazīd b. Muʿāwiya, and died during the
latter’s caliphate. His son Kays replaced him in his
post, which he retained under Abīd al-Malik and
al-Hārūn al-Rāshīd. His grandson, al-Ḥusayn b. Kays
b. Kanān b. Mattā, kept the same functions. He seems to
have led an eventful life; after the assassination of Marwān
II, he found a patron in Ibn Hubayra, then entered
the service of al-Manṣūr and of his son al-Mahdī. The
great-grandson, ʿAmr b. al-Ḥusayn b. Kays, followed
the same course, subsequently serving al-Ḥālid b. Bar-
maq. The fifth and sixth representatives, Saʿīd b.
ʿAmr b. al-Ḥusayn and Wahb b. Saʿīd b. ʿAmr b. al-
Ḥusayn served the Barrakids until their disgrace,
subsequently supervising the correspondence of
Hasan b. Sahil. The seventh link in the chain,
Sulaymān b. Wahb b. Saʿīd b. ʿAmr b. al-Ḥusayn,
enjoyed the status of a great stylist; in turn, starting
at the age of 14 years, he supervised the correspondence of al-Ma'dmun, of Aytab and of Ashnas before becoming the vizier of al-Mu'tamid. His letters were compiled in a diwan. His brother, al-Hasan b. Wahh b. Sa'id b. 'Amr b. al-Hasan b. Kays b. Kanân b. Mattâ, voluntarily chose a literary career; in addition to his merit as mutarassîl, he was considered an excellent poet. In addition, his letters were judged to be of superior quality and worthy of compilation in a diwan (Fihrist, 177). This text provides a fascinating slice of history; veritable dynasties of stylist, called upon to soothe discord, to exhort to the fortification of frontier zones, to divide the land tax, and to face a contradiction inherent in the letter construction. Moreover, this was an idle and frequently bored society which looked to the letter as a means of distraction. Once a letter was received, and after numerous readings, the addressee invited his friends to a meeting held to hear it resembled a veritable madjlis, an occasion of a marriage (Yatima, iv, 120-1), an invitation (istizdrâ, Yatima, iii, 80-3) and condolences (Yatima, iv, 191; Safwat, iii, 122-4, numerous cases).

The most important question involves the precise meaning of ikhwâni, the kdtib, 'Abû Hamânân al-Tawhidi, who desires the credit for providing a contemplation in depth of the issue, the Islamic friend being an alternative self. The stylists proposed this in their letters, as did al-Tawhidi in his Risâlas, there is need to distinguish between ikhwânîyya and diwânîyya in accordance with the ancient treatises; it is also necessary to study the monograph-risâla, which has not been studied by the above-mentioned critics, not being correspondence in the strict sense of the word.

The Risâla ikhwânîyya

The term derives from ikhwân 'friends' and is correspondence between two friends. The exclusive subject of these letters is affection. It is a substitute for the absent friend; a friend who is in fact far away is evoked with nostalgia and the writer pines for him (Sa'fawi, iii, 114-5, a letter by Ghasân b. Hamîl, the kdtib of Dja'far b. Sulaymân, period of al-Manṣûr, Rasûlî al-Âdâb era of 'Abû Bakr al-Khârazmî, Rasûlî, 26, 39, 42, 70, 81-2). The number of such notes written in this period is quite considerable. These presentations of friendship constitute the basis of the ceremonial of the letter, the conventional obstacle which needs to be overcome for the interpretation of the majority of these texts. These risâlas evoke the minor events of daily life: congratulations upon the birth of a son (Sa'fawi, iii, 57; Ibn al-Mukaffâ', Yatima, iv, 190, Bâdî' al-Zâmân al-Hamâdînî, on the occasion of a marriage (Sa'fawi, iii, 120-1), accompanying a gift (al-Khârazmî, Rasûlî, 51-2), declarations of welcome (Yatima, iv, 192), an invitation (istizdrâ, Yatima, iii, 80-3) and condolences (Yatima, iv, 191; Sa'fawi, iii, 122-4, numerous cases).

The most important question involves the precise meaning of ikhwani. 'Abû Hamânân al-Tawhidi, who desires the credit for providing a contemplation in depth of the issue, the Islamic friend being an alternative self. The stylists proposed this in their letters, as did al-Tawhidi in his treatise (he said that he was quoting the opinions of Ibn al-'Arâzî, Yatima, iv, 80-3; Ibn al-Mukaffâ', Yatima, iv, 190, Bâdî' al-Zâmân al-Hamâdînî, on the occasion of a marriage (Sa'fawi, iii, 120-1), accompanying a gift (al-Khârazmî, Rasûlî, 51-2), declarations of welcome (Yatima, iv, 192), an invitation (istizdrâ, Yatima, iii, 80-3) and condolences (Yatima, iv, 191; Sa'fawi, iii, 122-4, numerous cases).

The most important question involves the precise meaning of ikhwani. 'Abû Hamânân al-Tawhidi, who desires the credit for providing a contemplation in depth of the issue, the Islamic friend being an alternative self. The stylists proposed this in their letters, as did al-Tawhidi in his treatise (he said that he was quoting the opinions of the Greeks). No doubt he was referring to the translation of Aristotle's Nicomachean ethics (in which books vii and ix deal with friendship) by Isha'b b. Hunayn, the K. al-Âdâb, which was universally known (M. Bergé, Une anthologie sur l'amitié d'Abû Hayyan al-Tawhidi, in BEO, xvi [1961], 15-59).

However, all these prolific letter-writers were obliged to face a contradiction inherent in the letter considered as an illustration of friendship. According to Aristotle, the vital first condition of friendship is the fact of living in close proximity: "if distance does not destroy friendship utterly, it puts an end to its free
exercise. If an absence is prolonged, it makes a man forget his friendships” (tr. G. Karlsson, Ceremonial... i, Heidelberg 1906, 92-4, letter 10).

VI. RISALA AND MAKAMA

From the second half of the 5th/11th century, after dressed by these letters are currently extant, that of (Yatima, much appreciated by scholars... 183) which includes 30 titles Ibn al-Nadlm... al-Katib, of Ibrahim b. Hilal al-Sabl, of Ibn al-... Rasd^il, of Ahmad b. Yusuf al-Katib, of Ibrahim b. Khalaf (d. 126). [Another section included practical advise concerning ink, pens, dimensions of the page, etc.] The manual concluded with the mention of the most characteristic fusil (or sections) of the official letter, such as sudur (openings), tahmid (doxology), etc.; model letters are cited in the collections.

In fact, this situation persisted until the 5th/11th century: anthologies, such as al-man^aznm u'a l-... a very carefully considered text, documents in which the ignorance of these “pillars of the state” (G. Lecomte, L' introduction au Kitâb adab al-kâthâb, in Mélanges Louis Massignon, Damascus 1957, i, 43-63). In order to remedy this state of affairs and to put suitable tools at the disposal of stylists, ars dictaminis were compiled for their use, treaties in which advice was accompanied by model letters. These were essentially manuals, which never aspired to poetry. The authors confined themselves to mentioning formulas for opening and closing, some general advice regarding the necessity of brevity, of adapting the style to the nature of the addressee, the use of poetry and the need to abstain from poetry in letters addressed to princes. Another section included practical advise concerning ink, pens, dimensions of the page, etc. The manual concluded with the mention of the most characteristic fusil (or sections) of the official letter, such as sudur (openings), tahmid (doxology), etc.; model letters are cited in the collections.

the publication of the Makdmâ of al-Hariri, numerous sources of the time confuse risâla and makdama. Ibn Handûn (d. 493/1052), in vol. vi of the Taqdîmin, that devoted to the epistolary genre (al-mukdâmât wa l-rasâ'il), enlists a section of the book Min rasâ'il Abî 'l-Fadîl Ahmad b. al-Husayn al-Hamadhâni 'l-ma'nîj b. Badi' al-Zamân al-Hamadhâni 'l-musamât bi 'l-makdâmât 'I.(Choice) of the letters of Abû Fadîl Ahmad b. al-Husayn al-Hamadhâni, known by the name of Badi' al-Zamân al-Hamadhâni, which are called al-makdâmât (ms. Reisûltûtbat Murstå Elendi, no. 770, fol. 110b, ed. H. Fann, Fann al-makdâmât fi 'l-karn al-sâdis, Cairo 1937, 251). This tendency persisted in the manuscript of seven risâlât of al-Suyûtî copied in the 18th century; al-Risâla al-sundusiyât bears the following title, Risâlat al-makdâmât al-sundusiyât fi l-risâla al-musamât fiwâ (cf. Hâdjî Khallîa, 1875, makdâmât al-Suyûtî wa-hiya tis'an wa-igîrîn risâlâtâ). It is evident that what is encountered here is a cultural process which deserves study. As a result of the work of De la Granja (Makdâmât y risâlât andaluzas, Madrid 1976, pp. xi-xiii), the various stages of this entitled manuscript can be traced. At the outset, the risâla, written in an artistic prose which had no well-established canons in the early stages, supplied the precious first primal material from which the first writers of the makdâmât derived their ideas. Here, as in the risâla, rhetoric and lexicography were pressed into the service of this original and entertaining creation. In the second half of the 5th/11th century, al-Hariri contributed to the launching of the makdâmât in new directions, with the appearance of the didactic makdâmât. The ingenious and eloquent beggar leaves the stage, to be replaced by medical, geographical, mystical and linguistic opuscules, in other words, risâlas. The distinction between the two genres no longer had any reason to exist, and this is why they were assimilated to each other.

However, a converse process seems to have come into play. Certain risâlas, on account of their lofty literary qualities, were considered to be makdâmât. Thus Ibn Sinâ, who seems to have shown an inclination towards artistic and rhythmic prose, composed numerous rasâ'il and poems (see Ti's rasâ'il fi 'l-hikma wa l-fabîyâtîyîh, Cairo 1908). The most interesting is that which borrows the methods of allegory, sc. Hayy b. Yakhûn. Rather than a risâla, as is specified by the title, this is in fact a makdâmât. A century later, the Judaeo-Arabic 'philosopher' Abû Bakr b. al-Tufayl [q.v.] composed a philosophical novel bearing the same title, even though the objects of the two works are different. Abraham b. 'Ezra (mid-12th century) composed an imitation of the allegory of Ibn Sinâ. In the introduction, written in Judeo-Arabic, the mediaeval editor of the Diwan (ms. Berlin, 186, section intitled al-ma'ârî al-maqsûdât) describes the letter as risâla, whereas the fragment of the same work preserved in the Geniza is intitled makdâmât (ms. Tiflis, 1670; see also the critical edition of Israel Levin, Tel Aviv 1983).

VII. THE RISÂLA IN JUDAEO-ARABIC

Quite naturally, letters in Judeo-Arabic are similar in all respects to those composed in the mother culture. The Geniza of Cairo has preserved a large number of letters, differing considerably in style and in content. Qualitatively and quantitatively, these documents constitute a unique phenomenon in the annals of mediaeval Arab culture. However, on account of their Jewish provenance, they contained a considerable number of Hebrew terms, formulas and phrases. This applies principally to the polite formulae of opening the letter, to the glorification of God, to eulogies (ta'ahmidât) reserved for the addressee. Sometimes they adopt a precious style, an artistic Hebraic prose, often rhymed. Evidently, here also a close relationship existed between the style of the letter and the status of the writer and of the addressee, in the family and in society. To a great extent, the correspondence between local dignitaries and the communal functionaries belonging to institutions enjoying an "eccumenical" status has been preserved (M. Cohen, Correspondence and social control in the Jewish communities of the Islamic world: a letter of the Nagid Joshua Maimonides, in Jewish History Quarterly, v/2 [1986], 39-48; S.D. Goitein, A Mediterranean society, Berkeley and Los Angeles 1988, v, 424-4, see also i, 1967, 11-12).

The development of artistic style in letters written in Judeo-Arabic directly influenced the development of Hebraic prose among the Jewish writers of Christian Europe. Some highly significant examples are to be found in the letters written in Hebrew by Judah Ha-Levi (early decades of the 12th century, letters written from Lucena and from Narbonne published in his Diwan, ed. H. Brody, Berlin 1893, i, letter 4; see also Goitein, op. cit., v, 465-6, on the Arabic letters of Ha-Levi). The letters, emanating from the offices of certain senior rabbinical authorities, identical to the diwanîyas, reflect a little the personal style of the scribes, but to a greater extent the style of the diwân of correspondence, the fruit of numerous decades of maturation; a good example is provided by the letters featuring in the edition of S. Assaf, A collection of letters by Samuel b. Elij, Jerusalem 1930 (in Hebrew). These pieces, emanating from the offices of the Gaon (the Talmudic Academy) of Baghdad, are written in a very precious and ornate Judeo-Arabic and are in no respect inferior to the letters of the 'Abbasîd chancellery. Some, those addressed to East Kurdistan and to Persia, are written exclusively in Hebrew.

The poetry of the Judeo-Arabic risâla does not differ in any respect from that of its Arabic parent; furthermore, the evolution of the two followed an identical course. It is thus that monograph-letters are at times indistinguishable from the Hebrew letters addressed to the community of Fez, which had abandoned the custom of reciting the Talmudic Academy) of Baghdad, are written in a very precious and ornate Judeo-Arabic and are in no respect inferior to the letters of the 'Abbasîd chancellery. Some, those addressed to East Kurdistan and to Persia, are written exclusively in Hebrew.

One of the most ancient examples of the Judeo-Arabic risâla is a treatise comparing Hebrew, Aramaic and Arabic attributed to Judah b. Kuraysh of Tâhârt (Morocco, d. ca. 900; ed. D. Becker, Tel Aviv 1984). This work was addressed to the community of Fez, which had abandoned the custom of reciting the Aramaic translation of the Pentateuch (Targum). Still in the linguistic context, another monograph was intitled risâla by its author; this is the Risâlat al-Tânbîh bîn Ibn Hanîfî b. 'Iyâd (Spain, first half of the 11th century, ed. J. and H. Demoures, Paris 1880).

Maimonides (1158-1205) composed numerous risâlât and makdâmât in response to the questions and requests of the faithful. A large proportion of his work reflects the pre-occupations of an extremely gifted stylist, who was also an original thinker. This eminent authority on matters of religious law revealed his opinions on the problems and precepts of faith in
meticulously-crafted risālas. Thus his philosophical work, Dalālat al-ḥārin, the well-known Guide to the perplexed, is described, in numerous passages of the book and letter. Furthermore, the more, the prologue contains a personal letter ad-dressed to his favourite disciple Joseph b. Judah (ed. Joel, 1931, 1; see also The guide of the perplexed, tr. S. Pines, 1963, 3-4). Some of these letters were written in Arabic, others in Judeo-Arabic, in accordance with the language of the addressee. The majority represent the type of enlarged letters, in which the author deals with problems in depth and beyond immediate circumstances. The best illustration of the profundity of his essays is supplied by The Yemenite epistle (ed. A.S. Halkin, the text of the medieval Hebrew tr.; English tr. B. Cohen, New York 1952), which was addressed to the Jews of the Yemen; it seems to have been motivated by serious incidents which had afflicted the community, in particular the appearance of a false Messiah; he deals with it with a number of problems, including that of prophecy and that of the status of the prophet Muhammad in particular. The risāla contains a long prologue written in very ornate Hebrew rhymed prose. There is no doubt that, deriving from the genre, it conforms to the pattern of the Arabic epistle; on the other hand, it maintains in a direct line the traditional attitude of Jewish letters, stipulating that Hebrew alone is the language of profuse expression.

**Bibliography**

A disciple of Nadīm al-Dīn Kubrā was Sayf al-Dīn Bāhāzrā (d. 659/1261), who continued to teach his master’s way in Transoxiana after the latter’s violent death at the hands of the Mongols. Primarily a poet known for his rūdbts, he was also the author of a prose *T. on love and intellect*, which deals with an idealised view of human emotion and its psychological significance.

There are many risālas ascribed to Mir Sayyid ʿAbd Ḥamadī (713-86/1314-85), through whom the Kubrāwi order gained a foothold in Kashmir. Included in his works are the two books: *R. on dream*, *R. on existence*, *R. on difficult questions* and *R. on poverty*. Among the leaders of the Nakshbandi order, ʿAbd al-Khālīk Ghuḍjīdāwī (d. 361/1220) was the author of the two books: *R. on the master*, *R. on the master’s view of Süfi thought*. An important member of ʿAbd al-Khālīk Ghuḍjīdāwī’s chain of succession (ṣīlitā) was Bahāʾ al-Dīn Nakṣband (d. 371/1379), whose disciples included the first two books: *R. on the master’s view of Süfi thought*. The first, based upon Bahāʾ al-Dīn Nakṣband’s lectures, discusses twelve topics concerning Süfi theory and practice; the second tries to explore the mystical states of inspiration, intuition and illumination.
Ni'mat Allah Wali (730-834/1330-1431 [see Ni'mat-Allâhiyya]), was a prolific writer who contributed greatly to the exposition of Sufism through his commentaries and interpretations. He is said to have produced over 500 works, of which an important number have survived. Some of his treatises are: the *R.-yi suluk* "T. on the Sufi pilgrimage", *R.-yi taubbît* "T. on the unity of God", *Naṣṣāt-nâma* "The book of counsels", *R.-yi nûrîyya* "T. on light", *R.-yi ma'ârif* "T. on knowledge", *R.-yi tawwakkul* "T. on the trust in God", *R.-yi râhîyya* "T. on the soul", *R.-yi hâlalat* "T. on the world", *R.-yi ilmâyât* "T. on divine revelations" and *R.-yi rumûz* "T. on mysteries".

An extreme offshoot of Sufism was the Hurüfî or "LITERALIST" school which emerged in Persia in the 8th/14th century [see Hurûfiyya]. Its founder was Fadl Allâh Astârâbâdî (martyred in 796/1394), to whom Sa'dî Nâfîsi ascribed the work named *R. dar usûl-i Hurûfîyya* "T. on the Hurufî doctrine" (Târîh-i nâmâ u nâfîr dar Irân, ii., 791-2).

Sufi literature was enriched by the *risâlas* of some well-known literary figures such as the 7th/13th-century poet and mystic, Fâkhr al-Dîn ʿIrâqî (d. 688/1289 [q.v.]), famed for his major work on Sufism, the *Lama'ât* "Flashes". Apart from this work, he wrote a small *risâla* concerning Sufi terminology and its symbolic meaning. The terms are arranged in three sections according to their association: the first section comprises the terms connected either with the beloved or the lover; the second contains names common to both the lover and the beloved; and the third consists of words identified more specifically with the lover and his mental states.

To ʿIrâkî's illustrious contemporary Sa'dî (d. 695/1295-6 [q. v.]) belong six *risâlas*, two of which bear the impress of Sufi thought. The first, entitled *ʿAkl u ʿishk* "Intellect and love", was written in response to a question asked by a certain Sa'd al-Dîn, and deals with the concept of attaining mystical knowledge of the Divine through emotion rather than by reason. It resembles the *Gulistân* in its style, and is written in a simple language. The second is named *Muṣâllât-i pandjâbnâ* "Five sessions"; it contains five sermons modelled after the discourses delivered by religious preachers and Sufi divines in their services.

Mabûn Shâbâstî (d. 720/1320 [q.v.]), the author of the famous ma'ârif on Sufi doctrine *Gulshan-i râz* "Rose-garden of secrets", is credited with three prose writings, one of which is the *R.-yi ḥâkîk al-yaḵîn* "T. on certain truth", dealing with Sufi theosophy. It contains eight chapters whose headings are mentioned by E.G. Browne in his account of the author (LHP, iii, 149-50). The work has been likened to ʿIrâkî's *Lama'ât*, but is inferior in merit (see Arberry, *Classical Persian literature*, 303).

The poet Kâsim Anwâr (d. 837/1433-4), who was a major influence on the Sufi movement of his time, was the author of two *risâlas* reflecting his mystical leanings, the *R.-yi su'b u ʿishkân* "T. with questions and answers", an exchange on the topic of good and evil, and *R. dar bayân-i ʿilm* "T. explaining knowledge". Serious questions have been raised regarding the views of the author. He was suspected, during his lifetime, of complicity in the attempted assassination of Emperor Shah Rukh's son, Shâh Rukh (d. 836/1432), in whom the roles of the mystic and philosopher tend to coalesce. Like Kâsim Anwâr, who was his contemporary, he was subjected to the allegation of being indirectly involved in the murder attempt on Shâh Rukh. His numerous writings on Arabic and Persian embrace a variety of mystical, theological and philosophical subjects, and include *R.-yi asrâr-i ʿallāt* "T. on the secrets of prayer", a work interpreting the fundamentals of Muslim worship from a Sufi perspective; *R.-yi ḥâkîk al-kamar waʿa sâʿat* "T. on the splitting of the moon and the hour"; on the Kur'ânic verse "The hour drew nigh and the moon was rent in two" (LIV, 1); *R.-yi dar ʿawâl al-Lama'ât* "T. on the lustre of the Flashes", a commentary on ʿIrâkî's work *Lama'ât*, *R. dar bayân-i ma'ârif* "T. on friendship and exoneration", and *R.-yi ʿārâf* (BL. Add. 23.983) "T. on the letters", sc. on the letters of the Arabic alphabet and their esoteric meanings.

Among the Persian treatises on Sufism composed in India, mention may be made of the *R.-yi bâkî-nâma* "T. on the guide to truth", by Dârâ Shîkhûk (1024/ 68/1615-58 [q.v.]), the eldest son of Emperor Shâh Dzhâhân (r. 1037-70/1627-59 [q.v.]). Dârâ Shîkhûk was the author of several works devoted to a synthesis of Hindu and Muslim thought, a movement initiated by his great-grandfather Akbar (r. 963-1014/1556-1605 [q.v.]). The *R.-yi bâkî-nâma*, completed in 1055/1645-6, comprises six parts dealing with the following topics: (1) world of humanity; (2) world of intelligible substances; (3) world of power; (4) world of divinity; (5) identification of the Lord of lords; and (6) unicity of being.

In addition to Sufism, orthodox theology forms the subject-matter of various *risâlas*. The poet Dzhâmi (817/1414-42 [q.v.]), whose large output extended over many topics, wrote on various theological and mystical matters which included the exegesis of the *Kur'ân*, traditions of the Prophet and biographies of Muslim saints. His theological work *R.-yi arkan-i bâdêjî* "T. on the pillars of the pilgrimage" describes the rules and ceremonies prescribed for the *badêjî* and *tâma*. One of the well-known theological treatises of the 9th/15th century is *al-R.-al-ʿÂlîyya fi l-aḥâdîth al-nabawyya* "The Sîdîr treatise on the traditions of the Prophet", by Husayn b. ʿAlî Wâzîq Kâshîfî (d. 910/1504-5 [q. v.]), who is famous for his work on ethics the *Aḥâdîth-i Muḥsinî as well as for his collection of fables the *Ansârî-i Suhayfî* "The Lights of Canopous". His theological *risâla*, mentioned above, contains forty traditions arranged in eight groups according to their themes.

Conspicuous among the theological writings dealing with the Ismâ'îlî sect are two treatises by Naṣîr al-Dîn Tûsî (d. 672/1274 [q.v.]) namely *R. dar tawâllul wa tabârâ* "T. on friendship and exonation", and *R.-yi sayr u sulûk* "T. on travel and pilgrimage". The author was in the service of the Ismâ'îlî for a long time, and it is probably during this period that he wrote his two theological treatises in support of their doctrine.

From the 10th/16th century, theological works on Shî'îm found increasing currency in Persia. An interesting example of this type is the *R.-yi Hasâniyya* (BL. Egerton 1020) or *R.-yi Husâniyya* by Ibrâhîm b. Wâlî Allâh Astârâbâdî, a writer of the 10th/16th century. It deals with Shî'î doctrines, especially those relating to the prerogatives of Allî and his descendants. The treatise derives its title from the name of a slave-girl who is represented as debating the infallibility of the Shî'î faith with learned scholars in the
presence of the caliph Harun al-Rashid. The author
claims that his work was a translation from an Arabic
original, supposedly composed by the 6th/12th-
century commentator on the Koran, Djamal al-Din
Abu 'l-Futuh Khuzâ‘i RâzÎ. He further states that the
manuscript of the Arabic original came in his posses-
sion in Damascus, while he was on a Pilgrimage
to Mecca, and that he translated it for the Safawid
monarch Shâh Tahmâsp I (r. 930-84/1524-76 [q. v.]).

Shî‘ism found a vocal spokesman in the person of
Nur Allâh Shâhârâ’i (d. 1067/1657 [q. v.]), who went
to India during Akbar’s reign, and was appointed
dâdi of Lâhâvar. During Dâjangîr’s régime (1023-
37/1615-27 [q. v.]), however, he became the target of
Sunnî hostility and was executed by the orders of the
Emperor. He is known primarily for his work Madâjîl
al-mu‘minîn “Assemblies of believers”, which con-
tains the biographies of Shî‘î divines. He also composed
the R. dar tabâ‘î-i âyâ-yi Nîr “T. containing an en-
quiry into the Light Verse” (Kur’ân, XXIV, 35), and
R. dar hurmat-i namâz-i âyâm-yi asayînî-i ghabbat
“T. on the sanctity of Friday prayer during the oc-
cultation of the Imâm”.

With the rise of the Safawids in the 10th/16th cen-
tury, there was an upsurge of hostile feeling towards
the Sûfîs, encouraging the production of theological
works concerned exclusively with the denunciation of
Sûfî ideas and practices. One of the best known of these was Abu
’l-Futuḫ Khuzâ‘î’s R. yi tabâ‘î “T. on charity”,
composed by Akâ Muḥammad ‘Ali Bibbâhânî (d.
1216/1801-2 [q. v. in Suppl.]) in 1211/1796-7; its ap-
pearance resulted in provoking violence against the
Sûfîs that led to the murder of some of their leaders.

Philosophy. Early Persian treatises in philosophy are
represented by some risâlas attributed to Ibn Sinâ (d.
428/1037 [q. v.]). Among others, they include the R.-yi
‘îdâh “T. on love”, and the manual on psychology R.-yi
nafs “T. on the soul”. However, frequent doubts
have been expressed regarding the authenticity of
their authorship, and it is only from a much later date
that risâlas of definite provenance become available.

The list of writers on philosophy after Ibn Sinâ is
headed by Fâkhr al-Dîn RâzÎ (d. Harâr, 606/1209
[q. v.]) and Naṣîr al-Dîn Tûsî. Among the former’s
risâlas is the R.-yi mu‘a‘jî “T. on necessity and
freewill” and R. dar kismat-i mawajûd-t u akdim-i an
“T. on the division of created things and their
varieties”, he displays a keen intellectual insight in
considering some of the debatable religio-philosophical
issues of his time.

One of his contemporaries, and reportedly his
nephew, was Afdal al-Dîn Kashâm (d. 667/1268-9),
author of several philosophical studies and a scholar
influenced by Ibn Sinâ. He wrote in originally
Greek works, obviously from Arabic. His
R.-yi nafs “T. on the soul”, is a Persian rendering
of Aristotle’s work on psychology. Another of his
translations is the R.-yi tuṭfîsâ “The apple treatise”,
a pseudo-Aristotelian work called De pomâ et morte in-
cyclê principîs philosophorum Aristotelis, which has
been printed several times in Europe.

In logic, the writings of Aṭâq al-Dîn Muḥammad
Abhârî (d. 663/1264-5) and Kûb al-Dîn RâzÎ (d.
766/1364) have an important place; the former was a
disciple of Fâkhr al-Dîn RâzÎ, and his R. dar manâjî
describes in brief some of the basic points of logic.

Among the learned men of the late Mongol period
was Kûb al-Dîn RâzÎ (d. 766/1364-5), a protégé of
Chûrî al-Dîn Muḥammad (d. 736/1336), who was
chief minister to the Ilkhânid ruler Abû Sa‘îd (r. 716-
36/1317-35 [q. v.]). Kûb al-Dîn RâzÎ belonged to the
group of writers who engaged themselves in preparing
commentaries and textbooks for educational use,
involving the Sûfîs in discussions to the convic-
tion of the students. His risâlas, which were proba-
bly written with this purpose in mind, include R. fi
tabâ‘î-rî-kulliyât “T. on the verification of univer-
sals”, R.-yi tabâ‘î-kâsawah u tadrik “T. on the in-
quiry into concept and assent” and R.-yi tabâ‘î-mahsûrî “T. on the investigation into finitudes”. It
is most likely that Kûb al-Dîn RâzÎ’s approximate con-
temporary, Mir Sayyid Shâhîr Bûrja‘dî (d.
816/1413-14), also had an educational motive before
him for writing some of his works; his writings on
logic comprise the R.-yi kâbâra “The major treatise”,
and the R.-yi yaghîrâ “The minor treatise”.

The Safawid period witnessed some distinguished
personalities in philosophy, the major exponents in
this field being Shadr al-Dîn Muḥammad Shârâzî (d.
1050/1640-1), popularly known as Mullâ Shâdî (q. v.),
and Shadr al-Dîn Muḥammad Bûrja‘dî (d. 1041/1629)
commonly called Mir Dâmîd (see Dâmî), but their
contribution falls more appropriately within the realm
of Arabic literature, since almost all their output is in
Arabic. It is, therefore, difficult to find significant
philosophical studies in Persian produced during the
Safawid period.

Science. Early scientific literature by Persian writers
was produced mainly in Arabic, the language of learn-
ing and scholarship in Islam. However, from the
7th/13th century, works written in Persian became
more frequent, and Naṣîr al-Dîn Tûsî wrote several
risâlas on astronomy, a field in which he was highly
regarded for he was chosen by Hûlegû to supervise the
observatory established by the Mongol ruler at Marâgha. Probably his finest treatise on astronomy is the
R.-yi Mu‘îniyya, named after Mu‘în al-Dîn Abu ‘l-
Shâams, son of the author’s former patron, Naṣîr al-
dîn Abû Maṇṣîr (d. 653/1257-8), governor of
Kuhîstân.

In 824/1421 Ulugh Beg (d. 853/1449 [q. v.]),
the talented son of Timûr, built an observatory at
Samarkand, and there brought together some of the
leading scientific figures of his time, among whom
was ‘Alî al-Dîn ‘Ali b. Muḥammad Kûshî (d. 879/1474-5),
commonly called ‘Alî Kûshî (q. v.). Some time after the death of Ulugh Beg, the latter
joined the service of the Ottoman sultan Mehmed
II the Conqueror [q. v.], under whom he composed the
R. dar hay‘at “T. on astronomy”, otherwise known as
Fârsî hay‘at “Persian astronomy”, which enjoyed much
popularity, and was used as a textbook for teaching
astronomy in schools.

Among later works on astronomy is the R. dar rubî-
mu‘a‘jî “T. on the astronomical quadrant”, by
Mûrîd al-Dîn Muḥammad (q. v.); but its author
Shams b. Muḥammad Mahmûd b. Muḥammad. A writer of the same
period, Nîzâm al-Dîn b. Muḥammad Husayn Bir-
gджани (d. 934/1527), composed in 930/1523-4 the
R. yi abâ’îd u a françî “T. on distances and bodies”, which
discusses, among other things, the measurements of
the earth’s surface and of the heavens and stars.

Interest in astronomical instruments gave rise to a
number of treatises relating, more particularly, to the
astrolabe. One of the best known is Naṣîr al-Dîn
RISALA

Tusi's R. -yi hist bab dar macrifat-i asturlab ' 'T. in twenty sections concerning the knowledge of the astrolabe', which found a host of commentators; this may have been an abridged version made by the author from one of his larger works on the subject.

Ghiyäth al-Din Qamish Kâshi (d. 832/1428-9 or 840/1436-7) worked on the staff of Ulugh Beg's observatory, and is the author of the R. dar sâkht-i asturlâb 'T. on the construction of the astrolabe', and the R. dar sharh-i aîlît-i raiy 'T. explaining astronomical instruments', the latter completed in 818/1416. Some other works which have been included in the R. dar sîftat-i kurya-ÿi dâdîd, 'T. on the characteristic of a new sphere'; the R. -yi asturlâb 'T. on the astrolabe'; and the R. dar aîlît-i raiyadîyya 'T. on astronomical instruments'. The first, which was written by 'Alâ'i al-Din Kirmânî, was dedicated to the Ottoman sultan Bayezid I (r. 792-805/1389-1402) (or to Bayezid II (r. 886-918/1481-1512), and deals with the construction and uses of a new armillary sphere; the second was completed in the 10th/16th century by Abu 'l-Khayr Fârâ'î, and the third was composed by 'Abd al-Mun'im Âmulî in approximately 970/1562-3 on the orders of Shâh Tahmâsp I.

Hand in hand with the cultivation of astronomy went the study of meteorology. One of the earliest works dealing with this branch of knowledge is the R. -yi dâhir-i 'ulû 'T. on the celestial phenomena', by Abu Hurââm al-Muizzafar Isfizarî. Very little is known about the author except that he belonged to the town of Isfizar [q.v.], in present-day Afghanistan. He dedicated his treatise to Fâkhîr al-Mulk, son of Malik Shâh's minister Nižâm al-Mulk. Since Fâkhîr al-Mulk met his death at the hands of the Assassins in 511/1118-19, it is probable that the work was completed after the Assalâbîs encountered after the 9th/15th century is comparatively large. Included among these are the R. -yi 'ilm-i tibb 'T. on medicine', by Uways al-La'îfi al-Ardabîlî (? flour. in the second half of the 9th/15th century). Another is the R. mu'dâqât-i badân 'T. on the treatments of the body', also known as Kâvâvân al-îlâm 'Canons of treatment' and Shâhî al-amârd 'Treatment of diseases', completed in 871/1466 by Muhammad 'Alî al-Din Sabzawârî, popularly known as Ghiyâth Mutârabîbî; it comprises fourteen sections dealing with cures (BL. Add. 23, 557).

The Sañafî period produced some noted physicians, one of whom was 'Imâm al-Din Ma'nâmî b. Mas'ûd al-Tabîb, who lived towards the end of Shâh Tahmâsp I's reign. Besides his main contribution, Yanba'î fi 'ilm al-tibb (BL. Add. 23, 560)'The sources of medical science', he left several other treatises, such as R. -yi afyün (BL. Add. 19, 619), 'T. on opium', R. dar ba'yân-i kwâsâyîs u manfîsît-i tabû-i 'înî 'T. on the properties and benefits of the Chinese root', and R. -yi asrân 'Treatise on syphilis'.

Among the distinguished writers on medicine who flourished in India under the Mughals was Masîf al-Din Abu 'l-Fath Gîlânî (d. 997/1589), Akbar's court physician and author of a R. -yi 'ilmârî al-mughrârah 'T. on tested remedies', a collection of cures tried by the author during the course of his profession.

Other specialised writings in this field include the R. dar taghîrî-î badân-i insân wa kâsyyatay-i aswâqî-î ân 'T. on the human anatomy and the nature of its bases', by Mansûr b. Muhammad, also called Taghîrî-î Mânsûrî 'Mansûr's anatomy' and published under this title at Lucknow in 1264/1848-9. It gives a description of the limbs, organs, and other elements of the human body, and has been illustrated with anatomical diagrams. It was dedicated to Mirzâ Diyâ' al-Dîn Pir Muhammad Bahâîdûr (d. 809/1406-7), a grandson of Timûr.

Studies on preventive medicine are represented by several works on hygiene such as the R. dar hîfz al-tibh 'T. on hygiene' and R. dar tadbîr-i hîfzî-î sîhkh 'T. on the planning of hygiene' written respectively by two of Shâh Tahmâsp I's physicians, Shârâr al-Dîn Bâfâ'î (d. 978/1570-1) and Kamâl al-Dîn Husaynî Shîrâzî. In addition, manuals which dealt with poisons and provided means to dispel their effects are also common, e.g. 'Imâm al-Dîn Ma'nâmî's handbooks R. -yi sâmîm 'T. on poisons', and R. -yi pâzîh 'T. on antidotes'. Works on veterinary science include A. dar kaânâdsî al-kaânâsîn 'T. on the character of 'Alî Hazîn'. Most writings in this category deal with horses and were written in India. An example of this type of literature is the râsîla entitled Fâras-nâmâ 'Book of horses' by this same author, who had been resident in India.

Poetics. Many authors wrote at length on prosody, rhetoric and rhyme. An early work in this field, whose authorship is attributed, is a manuscript, to the poet Adîb Şâbîr (d. between 558/1161-2/1163-8) [...]
and, to others, to Rashld al-Dm Watwat (d. 578/1182-3 [q.v.]) is a small treatise on metres. It has been...

R. -yi Sandjariyya fi 'l-kd^indt al-^unsuriyya,
in Du risdla dar bdra-yi dthdr-i ^ulwi, ed. Danish-

Prompted by its appeal, many works were written on composing the mu'mam', including three risdla by Dm. Similar treatises were produced by the historian SharaF al-Dm Yazdi and by Fu^dji (d. 963/1556 or after 988/1580 [q.v.]), the Turkish poet who also wrote in Persian, but his most distinguished work here was perhaps the R. fi 'l-mu'am' by Mir Husayn al-Husayni (d. 904/1499), called Mu'am-ma', which gained an authoritative status, attracting commentaries in Persian and Turkish.

Mention may be made here of a few important risdla on miscellaneous topics, such as that of Faridun b. Ahmad Sipah-salâr, a biographical account of the leaders of the Mevllevi order and an important aid to the study of the history of Súfism; his author was a high military commander who spent forty years as a disciple of Djalal al-Dm Rumi (d. 672/1273 [q.v.]), and undertook the writing of his work soon after the death of his spiritual mentor.

In the field of music, Dm's name is cited, as also, of the astronomer Ghiyath al-Dln Mansur, who is said that of Sadr al-Dm Muhammad (d. 903/1498), son of...

During the 9th/15th and early 10th/16th centuries the acrostic verse (mu'amam [q.v.]) acquired much popularity, and was elevated to a respected form of poetry. Prompted by its appeal, many works were written on composing the mu'amam', including three risdla by Dm. In Ottoman Persian, as well as in the usual meanings in Arabic and Persian, *risāla* also denoted “a piece of cloth fixed to the front of a dervish’s ḏāʾr or cap” and, by the 19th century, “a booklet or a weekly or monthly journal” (this last often called a *risāla-yi maqūkitā* (see Redhouse, Dictionary, and Pakūn, s.v.). Given such a strong Persian cultural influence on the early Ottomans, there was a secretarial class at the court in Konya, from which the other functions developed. This may be related to the space above the first level, also called *samdwa* (which may have been derived from the word for sky, *samd^*, though it was argued that it was not; cf. Ibn ʿAbd Allah (d. 1070/1660) and even goes back to the opening decades of the 9th/15th century, the court poet Mehmed ʿal-Kāhitī, Menbūʿīt ʿl-invād, ed. Şinasi Tekin, in *Sources of Oriental languages and literatures* 2, Cambridge, Mass. 1971, 9-11.

The constituent departments of the Ottoman chancery and their staff are examined in the articles *diwdn kalemi* and *riwdk*, which has been called *samdwa* or *risālad* (see Inalcığ, Menbūʿīt ʿl-invād, ed. Şinasi Tekin, in *Sources of Oriental languages and literatures* 2, Cambridge, Mass. 1971, 9-11).

The secretaries working in the Ottoman chancery (dīvdn kalemi) had to have a thorough education in all branches of literary composition for correspondence, including the correct forms of address for different ranks of persons, and such skills as calligraphy, all of which being part of what were termed the fīwn-i kištāb us terassul. Hence for such secretaries, various manuals of secretarialship were composed (for details, see Inalcığ, *art. cit.*), including what might be called “quick reference works”. These comprised works on epistolographic theory, with model or abstract examples of letters (collections of actual letters and administrative documents) and works which combined both a theoretical section with actual examples. The first type exists only in the Persian used amongst the Rūm Saldjūks (see Şinasi Tekin, *op. cit.*, 10), but the remaining two comprise various works written in Turkish.

We know of two chancery manuals in Turkish from the opening decades of the 9th/15th century, the court poet Ahmed-i Daʾūd’s *Tarrūṣ* (see I. H. Ertaylan, Ahmed-i Daʾūd’s hayat ve eserleri, Istanbul 1952, 157-60, with facsimile text 325-8; edition, tr. and annotation by W. Björkman, *Die Anfänge der türkischen Briefsammlungen*, in *Orientalia Suecana*, v [1956, publ. 1957]) and Yāḥyā b. Meḥmūd ʿal-Kāhitī’s *Menbūʿīt ʿl-invād*, the oldest surviving copy of which (B.N. suppl. turc 660) dates from 883/1478 (ed. from this ms. by Tekin, *op. cit.*). Others follow in the early 10th/16th century, such as the *Güllüg-i ʿinād* of Meḥmūd b. Adham Amsaway, composed during the reign of Selīm I (see Bursāl Meḥmūd Tāhir, ’Ōmānī mülêkitleri, i, 170-32; Şinasi Tekin, *op. cit.*, 12), and the *Güllüg-i sad berg* by the poet Məšēsh (d. 918/1512 [q.v.]), of which several ms. exist. According to Inalcığ, Məšēsh’s collection forms the basis of the *Mansūh* of Ferdisp Bēg (see below) (see Inalcığ, *art. cit.*, at 678).

Collections of diplomatic and official documents, form the *inād* or *mansūh* collections, and these also include official and diplomatic resp. proper, i.e. letters to governors, rulers, etc., which may be in Arabic, Persian or Turkish. The oldest of this mixed type is a *Meṣlēmāʾ-yi mansūh* of Persian and Turkish letters belonging to the periods of Meḥmūd the Conqueror and Bāyəzid II (publ. by N. Lugul and A.Š. Erzi, Istanbul 1956; see also Şinasi Tekin, *op. cit.*, 11-12). The celebrated *Mansūh* of Ferdisp Bēg (d. 991/1583 [q.v.]) was early published (Istanbul 1274-5/1857-9), and an unknown contemporary of his further compiled a similar collection of Arabic, Persian and Ottoman Turkish documents ranging from the time of the Conqueror to that of Meḥmūd III, the latest document stemming from 986/1578 (see H. Ilaydīn and A.Š. Erzi, *timurîn*, Amasyawi, composed during the reign of Selīm I (see Timurînzeit, Wiesbaden 1952, 2-7, and Yahya b. Meḥmūd ʿal-Kāhitī’s *Menbūʿīt ʿl-invād*, the oldest surviving copy of which (B.N. suppl. turc 660) dates from 883/1478 (ed. from this ms. by Tekin, *op. cit.*)).
Siduh, al-Mukhassa?, Beirut, n.d, vi, 4), or, sometimes, an entire tent of a certain type similar to a fujjā, where the only support is a central post (LA, xi, 424-5). A. Dessus-Lamare, Étude sur Rawq, Riwāq, et Riwāq et leurs équivalents terms of construction, JA, cxxxviii (1950), 338-9. Despite the dicta of the Arabic lexicographers, the term is almost certainly Persian in origin.

Architecturally, the term was mainly applied to that part of a structure that forms its front. Depending on the type of structure, a riwdā could be a gallery, an ambulatory, or a portico. The term is not confined to the domain of religious architecture and is used in many different informants, such as Khalaf al-Ahmar (d. ca. 180/796 [q.v.]), as a pupil and assistant of the poet, had his meaning of transmission of books (see below). Riwdā may sometimes appear synonymous with hikāya [q.v.], and is used in classical Persian in the sense of a hadith; in modern Arabic usage it has become an equivalent of “story, novel, play.”

The active participle riwāk, having the general meaning of relater, is of particular significance for the poetry of pre-Islamic and early Islamic times, when the rāyū [q.v.], as a pupil and assistant of the poet, had to retain, recite and even arrange the verses of his master. This may have served as a model for the later activity and role of transmitters in other fields as well. The intensive form rāwiya, closely associated with the name of Ḥammād (d. 155/772) [q.v.], and others, such as Khālaf al-ʿĀmār (d. ca. 180/796 [q.v.]), was reserved for the experts in collecting poetry and narrative traditions, who gathered their material from many different informants.

Riwdā generally means transmission through the spoken word, including purely oral retelling as well as recitation from notes and books. With the use of writing for the preservation of knowledge, riwdā came to mean, in practice, the transmission of a written text through oral expression. It is this function of
Based on the great value attached to oral testimony, which is hard to understand for outsiders and which is most characteristic of Islamic scholarship, *riwaya* in Islamic scholarship. The development of *'ilm al-hadīth* fostered the methodology of the study of Tradition, describing a number of recognized methods by which traditions could be received (see ḥadīth. IV.). The very heart of these methods is the concept of an authorised transmission, as expressed by *'iqlāsa* [*q.v.*], which was meant to guarantee the correctness of the textual source. The inām identifies the succession of real or supposed transmitters in the *riwaya* and thus supports the authority of a tradition or any text treated according to these rules. Manuscripts sometimes preserve, under the heading of *riwaya*, and with the confirmation of the inām at the beginning of the text, the names of those who were responsible for the transmission of the whole text from generation to generation.

The *riwaya* in a text to a *shāykh* (kirdaʿ al-ʾāda) was one of the most important ways to recommend the accuracy of a copy (ʿard), and to obtain, by attending the session and listening to the reading, the authorisation for further transmission. This highly-formalised practice was widespread in medieval Islam and is documented on many manuscripts in the form of certificates of reading or hearing (kirdaʿ, samāʿ; for a bibliography, see G. Vajda, *Transmission orale*). Few testimonies of this kind are preserved from the 4th/10th century (e.g. M. Muranyi, *Musnad hadīt Malik ibn Anas*, 134–5; Y. M. al-Sawwās, *Fihris al-ʿUmaryiyah, 691*), but internal evidence, ināmds and traditions on ʿilm (as collected by al-Bukhārī and others) indicate that this method was an established practice even centuries before. In any case, simple recitation, from memory or from notes, with the purpose of transmission, goes back to the beginning of the study of Tradition.

Formal transmission by kirdaʿ was, although closely related to the study of Tradition, applied to other genres of literature as well and can be found in all those texts that were treated in academic sessions (ḥalakāt, magālīs) designed for that purpose. Among these we find, to give but a few examples, editions of and commentaries on the dīwāns of poets, such as *Thālābī*‘s (d. 291/904) *Gharr Dīwān Zuhayr b. Abī Sulaym* (Cairo 1344/1925) or Ibn al-Qali, *Kitāb fi ḫatt ʿAllaʿ al-ʿAllâm* (ed. Diwān Šīrī Hātim al-Tāʾi wa-ʾnkḥāb-rā, ed. ʿĀdī Sulaymān Ǧāmāl, Cairo 1411/1990), works on grammar, such as Sibawayh’s (d. ca. 180/796) *Kitāb* (ed. ʿĀbd al-Salām M. Ḥārīn), and philology, such as al-Mubarrad’s (d. 286/900) *al-Kāmil fi ṭ-ʿadāb*, as well as works of adāb literature, such as al-Muʿāfā b. Zakariyya’s (d. 390/1000) *al-Qālīs al-ṣāḥib* (vol. ib ed. Muhammad Mursi al-Khālī, Beirut 1981, 147–51). This implies the light of modern research. Principally, two sorts of inquiry, both indispensable for the study of early Arabic literature, deal with *riwaya*. A common procedure is to reconstruct hypothetically the sources of a work from the study of its ināmds, which include, among the ruwāṭ mentioned, earlier authors’ names. This approach is to be complemented with the critical study of *riwayāt* in the sense of transmissions of a work, given in manuscripts and by quotation. This implies the evaluation of variant readings that can be traced to particular transmitters, in contrast to variants produced by copyists. The analysis of *riwayāt* is thus a principal tool for the study of the textual history of a text-unit or a book, and is equally important for the identification of the origin of a text from the peculiar forms of editing prevalent in early Arabic literature.

At a time when transmission was not yet generally based on complete written versions, that is to say, before 250/864, the “transmitter” could indeed be the writer of a book, editing the material that he had received from his teacher. This is demonstrated, for example, for *al-Kāmil of al-Mubarrad* [*q.v.*] the *Muḥājil-adīliyya* [*q.v.*], and several classical books on *ṣūrā* [see *Maṭyāl*, iii–iii. 5]. In this sense, *riwayāt* implies redaction or recension. Closest to original authorship is the teacher’s dictation (inām; J. Pedersen, *Book*, 23 ff.), next come the student’s notes of the teachings (e.g. M. Muranyi, *Sīra, 71*); a more independent operation is the quest for material apart from personal notes or memory, and even more of redactional work is implied, when the notes of the author are edited (S. Leder, *al-Hašām ibn ʿAdi*, 9, 12).

These procedures, and the fact that the methods of transmission were not yet firmly established or consistently practised, furthermore the occurrence of *divergency* among the *riwayāt* of a text. In so far as they concerned traditions, Islamic scholarship was eager to collect variants, as was done, for example, by Muslim b. al-Hadīddī in his *Ṣahīb*. In contrast, the study of variants in various transmissions of a work is an integral part of modern scholarship.

Divergence in *riwayāt* is quite frequent for old, and even for not so very old texts (from the 3rd/9th century) of different genres (cf. R. Selheim, *al-Qālīs, 366 f., 371 f.*), and appears when a text rendered in quotations is compared to the *riwayāt* of the original work (e.g. W. Werkmeister, *Quellenuntersuchungen, 57–101, 130–1*). Variant readings are, in part, due to retelling from memory, but they cannot be understood as indicators of oral transmission. As G. Schoeler has explained in detail, notes and notebooks played an important role in early Arabic literature. Books published by their authors in this way, or edited by transmitters on the basis of notes, have to be distinguished from works which were edited by the authors themselves in a completed form.

Variant *riwayāt* may sometimes owe their existence to different versions given by the author himself during repeated lessons (e.g. Schoeler, *Frase, 210–12*), but in many cases the redactional interference of the editor-transmitters have to be taken into account (for details, see Leder, *op. cit.* 10 f., ch. 3, 4, 6). Particularly in the case of collections of ināmd-supported text-units, variants were also produced during the ongoing transmission, even after a work had been edited in a firmly-established form (idem, *Authorship*).

The study of *riwayāt* may confirm their coherence or uncover divergency. In the latter case, and in particular when divergency is significant, we may become aware that we do not have an “original”, but only several *riwayāt* of a work, as in the case of the *Sīra* by Ibn Ishaḥ (M. Muranyi, *Ibn Ishaḥ’s k. al-Maghāṣ*). In this sense, *riwayāt*, and not the authored works produced to be their origin, are the topics for textual criticism.

Asad, better known under his by-name of al-
Al-Ri^dya li-hukuk Allah,
Riyd* is contrasted with
ikhlds, "associating other things with God", at times
voided when thoughts of ostentation become mixed
with the initial purity of intention? (cf. al-Muhasib,
K. al-Ri^ya, 193-4). He also cites him at iii, 332-3, on
the various responses concerning the appropriate at-
titude towards the Devil in order to fend him off (cf.
K. al-Ri^ya, 160-3).

rocky hillocks hinder the growth of urbanisation. Like all Najd, al-Riyadh suffers from a desert climate: irregular rainfall, but less than 100 m per annum, average temperatures of 35 °C in summer and 11 °C in winter, very low atmospheric humidity and a liability to violent winds raising sand storms which pose serious problems for traffic and the upkeep of public spaces.

2. History. The existence of underground water channels in the alluvial subsoil of the Wadis Hanifa and Baha allowed, well before the coming of Islam, the development of small human settlements associated with date palm groves. The most notable seems to have been Hadjar, an oasis and market mentioned by Ibn Batuta ca. 732/1332 as a place of gardens and vegetation. But it was only in the 12th/18th century that the name of al-Riyadh appears in history with the decline of Hafragh, ruined by local conflicts. The town of al-Riyadh was seized by the Al Su'ud in 1823 and 1825; the Al Su'ud then constituted comprised three-quarters of the peninsula. From then onwards, the evolution of al-Riyadh has been indissolubly linked with the political decision-making of the reigning dynasty and the decisions made to maximise the prodigious subterranean resources of the kingdom.

3. Contemporary developments. With a population of less than 30,000 in 1929, even in 1949 al-Riyadh was only a modest-sized town within fortified walls. In this year, the walls were demolished and the town grew to 83,000 people spread over 5 km². A continuous pattern of growth, strengthened by strong immigration currents, made the population pass the million point during the 1970s, to reach 1.5 million by 1993. At the same time, the desertification of the agglomeration has reached around 600 km² today, whilst the development of small human settlements is based on the Doxiadis Plan of 1968. Actually put into practice in 1978 by SCET Inter, and contains all the main options for development to be realised in the following decades. These include: an extensive network of expressways which will complete a beltway around the city in order to assist traffic circulation, vital for a highly motorised population (600,000 private cars) which lives mainly in individual habitations. Furthermore, a general application of zoning has brought about the building of university complexes around the periphery, including an Islamic University and the King Saud University, as also a diplomatic quarter which includes all the diplomatic representatives and the royal and governmental quarter or KCOMMAS. On the southeastern periphery is likewise situated the extensive housing development of Ultra al-Riyadh.

In distinction from other Arab capital cities, al-Riyadh has no historic centre and only a few preserved buildings bear witness to the former architectural traditions of Najd.

5. The urban structure. The administration of al-Riyadh is under the shared responsibility of the state and of a municipal administration, set up in 1936, whose powers were much increased in 1977. In 1951, al-Riyadh was linked to Dammam by a railway, but air travel remains the most used method of communications, the airport opened in 1952 to the north of the city, now judged inadequate, has been replaced since the 1980s by the King Khalid Airport which covers an area of 225 km². But the main preoccupation of the administration is the permanent challenge of a desert environment, against which it is setting up a double response: the systematic provision of green spaces for the whole agglomeration and an abundant provision of water. In order to satisfy a daily consumption of around 400 litres per head, the underground water levels of the region have been tapped and these resources are supplemented by the bringing in of desalinated water, whilst a growing proportion of the water used is being recycled for watering the numerous parks and gardens.

RIYADH, an Ottoman biographer of poets. Mollâ Mehmed, known as Riyadî, was the son of a certain Musaâfà Efendi of Birge (to the south-east of Izmir) and was born in 980/1572. He was first of all employed as a müddertî, later became kâshf of Hâdeb (Aleppo) in the service of the young sultan of the Cairo, al-Aziz, who made a decision in the political or economic and financial, as well as in financial and university institutions, destined to exert an influence over the Arabic and Islamic world.

4. Urban planning. After a period of uncontrolled ur-
Tezkire as a source of information on Ottoman poets, in JAOS, xcvii [1979], 643-44). But Namık Açıklıgoz gives the number as 424, including royal poets and non-royal poets in 26 extant manuscripts (see his Rıyası’l-Su’ura, AUDTCF graduate/master’s thesis Ankara 1982 unpubl.; idem, Rıyası divanı’ndan seçmeler, Ankara 1990, 28-9; on the differences of the number in the poets in the Tezkire, see Gönül Alpay [Tekin], art. Rıyası, in IA, 2nd ed., 1970, 752.

As a tezkire writer, Rıyası belongs to a group of writers who tried to cover the entire field of Ottoman poetry. Like many other historians, he selected such poets whose poetic abilities he valued as good, and he tried to justify his judgements, selecting appropriate examples from their work. From the information at the end of the Tezkire, we understand that Rıyası completed his work and presented it to Sultan Ahmed I in 1018/1609. Following the Introduction, which ends with a ka’ifa (prayer) addressing Ahmed I, it is divided into two sections (naวาด). The first section contains information about the Ottoman sultans-poets Mehemmed Fatih, Bayezid II, Selim I, Süleyman I, Selim II, Murad III, Mehemmed III and Ahmed I. In this section, he gives basic information about the lives of the sultans, such as their father’s name, their date of accession, their pen-names and their piousworthy deeds, and he quotes some verses both from their own poems and from those of other poets written about them.

In the second section, the biographical entries are given in alphabetical order by pen-name, and each poet is dealt with in a much more detailed way than in the first section. Here, he mentions the poet’s birthplace, if known, and his date of birth and death; his full name; and information about his family, his education, his teachers, his profession; and whether he was a judge or a teacher, or whether he held a high official rank in the government. Occasionally, he refers to poets coming from the ranks of the army. Often he dwells on the unusual characteristics or witty nature of the poets, providing witty and sarcastic hints and anecdotes about their life. Then he makes an evaluation of the poet’s poetical ability, giving some quotations from his poetry in order to prove the correctness of his judgement. Finally, he concludes by giving the poet’s photos and his burial place. Sometimes he adds to this information a chronogram commemorating the death. He usually follows this pattern of information (tarıkh) as far as possible, and if he makes omissions, this stems from a lack of information.

Besides his Tezkire, he compiled a maratab Divan consisting of 25 kasıdas, the sâki-nâma, 652 gazelât, 17 incomplete gazelât, 9 ka’ivas (of which one is in Persian), 171 rubâ’î, 89 ma’âla’s and 11 mîmâna couplets. Kasıdas are dedicated to inter alia 4’thân Mûrâd II, Murâd IV, the Grand Viziers ’Ali Pasha and Hâfiz Ahmed Pasha, and the Şehîk al-Islâm Yâhyâ Efendi.

Rıyası’s Divan is known in 30 extant mss., in scattered libraries all over the world. The Sâki-nâma, his other well-known work, was probably composed between 1011/1603 and 1012/1609, and was written in maghâribi form, consisting of 1054 couplets. Having examined this Divan in the library of the Vienna National Library, he made a careful transcription of scattered rubâ’îs in appropriate places, Rıyası tries here to describe a drinking party which took place one night, and gives very lively descriptions of the tavern-keeper, the musicians and musical instruments, the wine-cups, the cupbearer, and the psychology of the drunkards. In addition to these, he describes very lively scenes taken from the real life of his time, sc. the beginning of the 11th/17th century.

His third work, the Dâütür’l-ânâm, is a Persian-Turkish encyclopaedic dictionary which was probably written ca. 1016/1607 and consists of 1050 phrases, expressions and some special usages of Persian phrases, with explanations of the grammatical issues. He also quotes Persian couplets in order to explain how these special usages and grammatical forms were used. Later, the author of the Farhang-i Shû’ûrî, Hasan Shû’ûrî, wrote an addendum to this work called the Farhang-i mûkaffa’ gâbîş-ta’halî (Topkapı Sarayı türkçe yazmalar katalogu, ii, 48).

Rıyası’s Divan has not yet been published, but is accessible in a number of mss., a list of which is given by Babinger, GOW, no. 178; another one is in Süleymaniye, Lala Ismail no. 314. On a German translation of an extract from it by V. von Rosenzweig-Schwannau, see ZDMG, xx (1866), 439, no. 3.

Besides the above-mentioned works, there are other religious, historical and literary works of his recorded in the bibliographical works and in some historical sources, including 1. Siyer; 2. an abbreviated Turkish translation of Ibn Khâlikân’s Wafâyât al-â’yân; 3. Şahî’î’s al-latâ’tîf fi anwa’r al-‘ulâm wa l-ma’ârîfî; 4. Ka’îf al-bâjdîgân ‘an wa’dî al-ta’awwûb; and 5. Risâlat fi ‘ilm al-hayân.

(GÖNUL ALPAY TEKIN)
mathematical discipline [see AL-DJABR WA 'L-MUKABALA]. The event was crucial, and was seen as such by contemporaries, as much for the style of this mathematics as for the ontology of its object and, even more, the richness of the possibilities which it offered for the future. The style was at the same time algorithmic and demonstrative, and at that time and henceforth, with this algebra, the great potentiality which would suffuse mathematics from the 3rd/9th century onwards, may be glimpsed: the application of mathematical disciplines to each other. In other words, if algebra, through its style and the generality of its object, made these applications possible, the latter, by their number and the diversity of their nature, did not cease to modify the shape of mathematics after the 3rd/9th century.

Al-Khārazmī's successors progressively undertook the application of arithmetic to algebra, of algebra to arithmetic, from each of these to trigonometry, from algebra to the Euclidian theory of numbers, from algebra to geometry and from geometry to algebra. These applications were always those laying the basic foundations for new disciplines or new chapters. Thus there saw light the algebra of polynomials, combinatorial analysis, numerical analysis, solving of numerical equations, the new elementary theory of numbers and the geometrical construction of equations. Other effects were to result from these multiple applications, such as the separation of the integer Diophantine analysis from rational Diophantine analysis, which became a complete, separate chapter of algebra under the title of "indeterminate analysis".

From the beginning of the 3rd/9th century, the mathematical landscape was no longer the same; it became transformed and its horizons widened. From the outset, we witness an extension of Hellenistic arithmetic and geometry: the theory of conics and that of parallels, projective studies, Archimedean methods did not cease to modify the shape of mathematics after the 3rd/9th century. The event was crucial, and was seen as such by contemporaries, as much for the style of this mathematics as for the ontology of its object and, even more, the richness of the possibilities which it offered for the future. The style was at the same time algorithmic and demonstrative, and at that time and henceforth, with this algebra, the great potentiality which would suffuse mathematics from the 3rd/9th century onwards, may be glimpsed: the application of mathematical disciplines to each other. In other words, if algebra, through its style and the generality of its object, made these applications possible, the latter, by their number and the diversity of their nature, did not cease to modify the shape of mathematics after the 3rd/9th century.

Al-Khārazmī's successors progressively undertook the application of arithmetic to algebra, of algebra to arithmetic, from each of these to trigonometry, from algebra to the Euclidian theory of numbers, from algebra to geometry and from geometry to algebra. These applications were always those laying the basic foundations for new disciplines or new chapters. Thus there saw light the algebra of polynomials, combinatorial analysis, numerical analysis, solving of numerical equations, the new elementary theory of numbers and the geometrical construction of equations. Other effects were to result from these multiple applications, such as the separation of the integer Diophantine analysis from rational Diophantine analysis, which became a complete, separate chapter of algebra under the title of "indeterminate analysis".

He introduces the idea of normal form, and requires the reduction of each of the preceding equations to the normal corresponding form. From this there results, in particular, for the trinomial equations:

\[ x^2 + px = q, \quad x^2 + px + q, \quad x^2 + q = px. \]

He then passes to the determination of the algorithmic formulae for solutions. He demonstrates equally the different formulae for solutions not algebraically but by means of the idea of the equality of areas. He was apparently inspired by a quite recent knowledge of Euclid's Elements, translated by his colleague in the "House of Wisdom", al-Hajjājī b. Ṭabātābā. The transmission of his proto-geometrical proofs; this is the way pursued by Ibn Turk, who without adding anything new, resumed a discussion of the proof which was imitated by "√2" and "√3", its square, positive rational numbers, the laws of arithmetic of \( ±, x/+, √\), and of equality. The main concepts then introduced by al-Khūrizmī are the equation of the first degree, that of the second degree, associated binomials and trinomials, algorithmic solutions and the demonstration of the formula for solutions. The concept of the equation appears in his book to denote an infinite class of problems and not, as with e.g. the Babylonians, in the course of the solution of one or other problem. On the other hand, equations are not presented in the course of the solution of problems to be solved, as amongst the Babylonians and Diophantus, but, from the outset, from the starting-point of primitive terms whose combinations are to yield all the possible forms. Thus, immediately after having given the basic terms, he gives the following six types:

\[ ax^2 = bx, ax^2 = c, bx = c, ax^2 + bx = c, ax^2 + c = bx, ax^2 = bx + c. \]

He then introduces the idea of normal form, and requires the reduction of each of the preceding equations to the normal corresponding form. From this there results, in particular, for the trinomial equations:

\[ x^2 + px = q, \quad x^2 + px + q, \quad x^2 + q = px. \]

He then passes to the determination of the algorithmic formulae for solutions. \[ ax^2 = bx, ax^2 = c, bx = c, ax^2 + bx = c, ax^2 + c = bx, ax^2 = bx + c. \]

He then introduces the idea of normal form, and requires the reduction of each of the preceding equations to the normal corresponding form. From this there results, in particular, for the trinomial equations:

\[ x^2 + px = q, \quad x^2 + px + q, \quad x^2 + q = px. \]
more closely-argued (see Aydin Sayili, *Logical necessities in mixed equations by ʿAbd al-Hamīd ibn Turk and the algebra of his time*, Ankara 1962, 145 ff.). More important was the way taken a little later by Thābit b. Kurra. This last went back in effect to the Elements of Euclid, in order at the same time to establish al-Khwārizmī’s proofs on more solid geometrical foundations and also to render geometrically the equations of the second degree. Thābit was moreover the first to distinguish clearly between the two methods, algebraic and geometrical, regarding which he tried to show that they both led in the end to the same result, i.e. to the geometrical interpretation of algebraical procedures.

But this geometrical rendering by Thābit of al-Khwārizmī’s equations shows itself as particularly important, as will be seen, for the development of the theory of algebraic equations. Another rendering, very different, took place a little later by Thabit b. Kurra. This last went back in effect to the Elements into algebraic equations but also a solid problem, that given in Archimedes’ *The sphere and the cylinder*, as a cubic equation (see below).

One witnesses, moreover, following al-Khwārizmī, the extension of algebraic calculation. This was perhaps, the main theme of research and the one most shared together by the algebraists following him. Thus one began by extending the very terms of algebra as far as the sixth power of the unknown, as may be seen with Abū Kāmil and Sinān b. al-Ṭāḥ. The latter defined, furthermore, the powers multiplicatively (see on the powers, in Sinān, Rashed, *Entre arithmétique et algèbre. Recherches sur l’histoire des mathématiques arabes*, Paris 1984, 21 n. 11), thus differing from Abū Kāmil, who gave an additive definition. It was the latter’s work in the field of algebra which marks both the epoch and the history of algebra (in his *K. al-Djab ur t-muḍābala*). As well as the extension of algebraic calculation, he brought within his book a new chapter in algebra, indeterminate analysis or Diophantine rational analysis.

2. One would not be able to understand anything about the future history of algebra if one did not underline the contributions of the two currents of research which developed in the period considered above. The first was concerned with the study of irrational quantities, whether on the occasion of a reading of Book X of the Elements, or, in some manner, independently. One may mention, amongst many other mathematicians who participated in this work of research, the names of al-Māhānī, Sulaymān b. Ḫūṣnī, al-Khāzin [q.v.], al-Ahwāsī, Yūḥannā b. Yūṣuf and al-Rashīmī.

The second current was stimulated by the translation into Arabic of the *Arithmetics* of Diophantus, and, notably, by the algebraical reading of this latter book. Now this *Arithmetics*, even if it was not a work of algebra in al-Khwārizmī’s sense, nevertheless contained techniques of algebraic calculation, effective for the time: substitutions, eliminations, changes of variables, etc. It was the object of commentaries by mathematicians like Kūṣṭā b. Lūkā [q.v.], its translator in the 3rd/9th century, and al-Būzāḏānī a century later, but these texts are unfortunately lost.

Whatever may have been the case, this progress in algebraic calculation, whether by its extension to other domains or by the mass of technical results obtained, resulted finally in a renewal of the discipline itself. A century and a half after al-Khwārizmī, the Baghdad mathematician al-Karadjī [q.v.] conceived another project of research: the application of arithmetic to algebra, i.e. the systematic study of the application of the laws of arithmetic and of certain of its algorithms to the algebraic expressions and, in particular, to polynomials. This is exactly this calculation on the algebraic expressions of the form

\[ f(x) = \sum_{k=-m}^{n} a_k x^k, \quad m, n \in \mathbb{Z}_+ \]

which became the main object of algebra. The theory of algebraic equations is certainly always present, but occupies only a modest place amidst the preoccupations of the algebraists. One realises that, from this time onwards, the books about algebra undergo modifications not only in their content but also in their organisation.

Without going over here the history of six centuries of algebra let us illustrate this impact of al-Karadjī’s work by turning to another of his successors of the 6th/12th century, al-Samawāl (d. 569/1174), who integrated within his book on algebra, al-Bāhīr, the main writings of al-Karadjī. Al-Samawāl began by defining, quite generally, the idea of algebraic powers (he writes, after having noted in a table on both sides of \( x^n \), the powers of \( x \) on one and the other side of the unity from one of them we count in the direction of the unity the number of elements of the table which separate the other power from the unity, and the number is on the same side as the unity.

If the two powers are of the same side of the unity, we count in the direction opposite to the unity”; see Al-Bāhīr en algèbre d’al-Samawāl, ed., introd. and notes by S. Ahmad and R. Rashed, Damascus 1972), and, thanks to the definition \( x^0 = 1 \), gives the rule equivalent to \( x^m x^n = x^{m+n}, m, n \in \mathbb{Z} \). Then there follows the study of the arithmetical operations on monomials and polynomials, notably those of the divisibility of polynomials, as also the approximation of the fractions by the elements of the ring of the polynomials. Thus one has, e.g.

\[ f(x) = \frac{20x^2 + 30x}{6x^2 + 12} \approx \frac{10}{3} \quad \frac{5}{x} \quad 20 \quad -10 \]

\[ g(x) = \frac{40 + 40 + 80}{x^3 + 3x^2 + x^2} = \frac{40}{-3x^2} \quad \frac{20}{-3x^2} \quad \frac{80}{-3x^2} \quad \frac{40}{-3x^2} \quad \frac{10}{-3x^2} \]

in which al-Samawāl obtains a kind of limited development

\[ f(x) = \frac{\varphi(x)}{\phi(x)}, \quad \text{which is only valid for } x \text{ when it is sufficiently great.} \]

One then finds the extraction of the square root of a polynomial with rational coefficients. But, for all these calculations regarding polynomials, al-Karadji had devoted a work, at present lost but fortunately cited by al-Samawāl, in which he exerts himself to establish the formula of the binomial development and the table of coefficients

\[ \sum_{k=0}^{n} \begin{pmatrix} n \\ k \end{pmatrix} a_k b^{n-k} = \left( a + b \right)^n. \]

It is on the occasion of the demonstration of this formula that one witnesses the appearance, in an archaic form, of the complete, finite induction as a procedure of the proof in mathematics. Amongst the means of auxiliary calculation, al-Samawāl gives, following al-Karadji, the sum of the different arithmetical progressions, with their proof:
\[ \sum_{k=1}^{n} k, \sum_{k=1}^{n} k^2, \left( \sum_{k=1}^{n} k \right)^2, \sum_{k=1}^{n} k (k+1), \ldots \]

There then follows the reply to the following question: "How can the multiplication, division, addition, subtraction and extraction of roots be used in regard to irrational quantities?" (see Ahmad and Rashed, *Al-Bïhâr en algèbre ...*, 37). The reply to this question led al-Karâjî and his successors to read in an algebraic fashion and in a deliberate manner, Book X of the *Elements*, to extend to infinity the monomials and binomials given in that book and to propose rules for calculation, amongst which one finds explicitly formulated the one of al-Mâhâni

\[ \left( \frac{1}{n} \right)^m = \frac{1}{n^m} \]  

with others like the following

\[ \left( \frac{1}{m} \pm \frac{1}{n} \right)^m = \frac{1}{m+n} \pm \frac{1}{m-n} \]

There is also to be found an important chapter on rational diophantine analysis and another one on the resolution of systems of linear equations with several unknowns. Al-Samaw'âl's gives a system of 210 linear equations with ten unknowns.

Starting from the works of al-Karâjî, one sees a trend of research in algebra taking shape, a recognisable tradition regarding the content and organisation of each of the works.

At the heart of this trend, the chapter on the theory of algebraic equations, properly speaking, without being central had nevertheless made some progress. Al-Karâjî himself considered, like all his predecessors, quadratic equations. Certain of his successors tried, however, to study the solution of cubic equations and equations of the fourth degree. Thus al-Sulamî in the 6th/12th century concentrated on cubic equations in order to find a solution through radicals (al-Mukaddima al-fî hiṣâb al-dâbr wa l-mâkhâbala, Collection Paul Sbat, no. 5, ff. 92b-93a). This text of his bears witness to the interest of the mathematicians of his time, brought to bear on the solution by radicals of cubic equations.

3. The algebraists who were also arithmeticians concentrated on the solution by radicals of equations, and sought to justify the algorithm of the solution. One even encounters sometimes, in the same mathematician (e.g. Abû Kâmil), two justifications, one geometrical and the other algebraical. For the cubic equation, they lacked not only solutions by radicals but also the justification of the algorithm of solution, since the solution could not be constructed by means of a ruler and a compass. Recourse to conic sections, explicitly meant to resolve cubic equations, rapidly followed the first algebraic renderings of solid problems. We have mentioned, from the 3rd/9th century, al-Mâhâni and Archimedes' lemma (see how al-Khâyâmî traced in this manner this story in his famous treatise of algebra, *L'œuvre algébrique d'al-Khâyâmî*, Aleppo 1981, 11-12); other problems, such as, notably, the trisection of an angle, the two means and the regular heptagon, were very soon rendered in algebraic terms. But, on the other hand, confronted by the difficulty mentioned before, and thus by that in resolving cubic equations by means of radicals, the mathematicians of the 4th/10th century like al-Khâzîn, Ibn 'Irâk, Abu 'l-Djûd b. al-Layhî and al-Shannî, were led to render this equation in the language of geometry (op. cit., 82-4). They thus found themselves applying to the study of this equation a technique already at that time currently used for the examination of solid problems, i.e. the intersection of conic curves. It is precisely in this that there is found the main reason for the geometrisation of the theory of algebraic equations. This time, contrary to Thâbit b. Kurra, people did not try to render geometrically algebraic equations in order to find the geometrical equivalent of the algebraic solution already obtained, but tried to determine, with the help of geometry, the positive roots of the equation which people had not been able to achieve otherwise. The attempts of al-Khâzîn, al-Kûhî, Ibn al-Layhî, al-Shannî, al-Bûrûnî, etc., are in this way partial contributions, up to the conception of the project by 'Umar al-Khâyâmî (*439-526/1048-1131*) (*q.v.*): the elaboration of a geometrical theory of equations of the third degree or less. For each of these types of equations, al-Khâyâmî found a construction of a positive root through the intersection of two conics. Thus e.g. in order to solve the equation "a cube is equal to a certain number of sides plus a number", i.e.

\[ x^3 = bx + c \]

al-Khâyâmî only considered the positive root. In order to determine it, he proceeded by means of the intersection of a half-parabola and a branch of an equilateral hyperbola.

In order to elaborate upon this new theory, al-Khâyâmî saw himself as endeavouring the better to conceive and to formulate the new relationships between geometry and algebra. One needs to remember that, in this regard, the fundamental concept introduced by him was that of the unit of measurement which, suitably defined in relation to that of dimension, allowed the application of geometry to algebra. Now this application led al-Khâyâmî in two directions, which may seem at first view paradoxical: at a time when algebra was then identifying itself with the theory of algebraic equations, this last seemed henceforth, though still timidly, to be transcending the gap between algebra and geometry. The theory of equations was above all a place where algebra and geometry met, and, more and more, ways of reasoning and algebraic methods. In his treatise, al-Khâyâmî arrived at two remarkable results which historians normally attribute to Descartes: a general solution for all equations of the third degree through the intersection of two conics, and, on the other hand, a geometrical calculation made possible by the choice of the unit of length, whilst nevertheless remaining, contrary to Descartes, faithful to the rule of homogeneity.

One should note that al-Khâyâmî did not stop there, but tried to give an approximate numerical solution for the cubic equation. Thus in his work called *On the division of a quadrant of a circle* (op. cit., 80), in which he announced a new project on the theory of equations, he got as far as an approximate numerical solution by means of trigonometrical tables.

4. Up to recently, it was thought that the contribution of the mathematicians of this time to the theory of algebraic equations was limited to al-Khâyâmî and his work. But in fact, it was nothing like this at all. Not only did al-Khâyâmî's work inaugurate a complete tradition, but, moreover, it became deeply transformed hardly half-a-century after his death.

Two generations after him, we come across one of the most important works of this current of ideas, *Sharîf al-Dîn al-Tûsî's treatise On equations* (see *Sharîf
al-Dïn al-Tïsï. Oeuvres mathématiques. Algèbre et géométrie au XIIe siècle, ed., tr. and comm. R. Rashed, Paris 1986, 2 vols.). This treatise (ar. 565/1170) brings forward some very important innovations in regard to the work of al-Khayyâm. Contrasted with that of his predecessor, al-Tïsï's approach was not global and algebraic but local and analytical. This radical change, particularly important in the history of classical mathematics, was able to construct a bridge between classical algebra and the prehistory of infinitesimal methods (see op. cit.).

But al-Tusi's example is sufficient to show that the theory of equations not only became transformed after the time of al-Khayyâm, but never stopped getting further and further away from the search for solutions by means of radicals; it thus finished by covering a vast domain, and included sectors which later were to belong to analytical geometry or simply to analysis.

II. Combinatorial analysis.

Combinatorial activity began by revealing itself as such, but in a diaphoretic manner, amongst the linguists on one side and the algebraists on the other. It was only later that the meeting between the two currents was to take place and that combinatorial analysis was to present itself as a mathematical tool applicable to the most various situation: linguistic, philosophical, mathematical, etc. It is then that one can speak of combinatorial activity in Arabic. Already in the 3th/9th century, this activity can be found amongst the linguists and philosophers who set forth problems connected with language, within three spheres in particular: phonology, lexicography and, finally, cryptography [see MUÎAMMA]. The name of al-Khalîl b. Ahmad (99-169/718-866 [q.v.]) marks the history of these three disciplines. He had explicit recourse, for his founding of Arabic lexicography, to a calculation of arrangements and combinations. For his lexicon, he began by calculating the number of combinations, without repeating, of the letters of the alphabet, taken r to r, with r = 2, ..., 5, and then the number of permutations in each group of r letters. In other terms, he calculated

$$A_r^n = r! \binom{n}{r},$$

n being the number of letters of the alphabet, $1 < r \leq n$.

Now this theory and method calculation used by al-Khalîl recurs later in the writings of most of the lexicographers. They further were utilised in cryptography, developed from the 3rd/9th century onwards by al-Kindî and then, at the end of that same century and the beginning of the next one, by linguists like Ibn Wahshiyya [q.v.], Ibn Tabîtabâ, amongst several others. In the practice of their discipline, the cryptographers had recourse to the phonological analysis of al-Khalîl, calculation of letter frequency in Arabic and that of permutations, substitutions and combinations.

At the same time as this important activity in the field of combination, the algebraists, as we have seen, had put forward and demonstrated, at the end of the 4th/10th century, the rule for the formation of the arithmetical triangle for the calculation of binomials coefficients. Al-Karâdi (Ahmad and Rashed, al-Bîhîr en algèbre d'al-Samawâl, 104 ff.) had in effect laid down the rule

$$\binom{n}{r} = \binom{n-1}{r-1} + \binom{n-1}{r},$$

(*)

The algebraists applied the new rules in their calculations. E.g. al-Samawâl (ibid., Ar. text 232, introd. 77 ff.) set forth ten unknowns and searched for a system of linear equations with six unknowns. He then combined these ten figures, considered as symbols of these unknowns—today they would be called indices—six to six, and thus obtained his system of 212 equations. He likewise proceeded by means of these combinations to find the 504 conditions of compatibility within this system. All these combinatorial activities, these rules discovered in the course of linguistic research and algebraical studies, made up the concrete conditions for the emergence of this new chapter in mathematics. It remains, however, to note that the act of this chapter's birth consisted in the explicitly combinatorial interpretation of the arithmetical triangle, and of its law of formation, i.e. the rules given by al-Karâdî as tools of calculation. It would be excessive to think that the algebraists had not seized upon this interpretation fairly quickly. We are, on the contrary, more and more convinced that this interpretation had been noticed by the algebraists but that they had no stimulus for them to give an explicit formulation of it. The combinatorial interpretation is certainly there, very probably before the 7th/13th century, as we are now able to show thanks to a text of the mathematician and philosopher Naṣîr al-Dîn al-Tüsi (597-671/1201-73 [q.v.]), until the present time unknown. A reading of this text [see Rashed, Métaphysique et combinatoire, forthcoming] shows that he knew of this interpretation, that he put it forward in a totally natural fashion as something readily admitted and expressed it in a terminology which is to be found, either wholly or in part, in his successors. In the course of this study, he was led to calculate the number of combinations of n distinct objects taken k to k, with $1 \leq k \leq n$. Thus he calculated for $n = 12$

$$\sum_{k=1}^{n} \binom{n}{k},$$

and used in the course of his calculation the equality

$$\binom{n}{k} = \binom{n}{n-k}.$$

One should now note that al-Tüsi had given in his book on arithmetic (Qâwûmûnî al-hisab, ed. A.S. Saidan, in al-Abîb, xx/2-3 [1967], 141-6) the arithmetical triangle and its law of formation. He calculated an expression equivalent to

$$\sum_{k=0}^{m} \binom{m}{k} \binom{n}{p-k}$$

with $1 \leq p \leq 16, n = 12$.

After al-Tüsi at least, and very probably before him, one will continually come across the combinatorial interpretation of the arithmetical triangle and its law of formation, as well as the ensemble of elementary rules of combinatorial analysis. As we have shown, towards the end of this same century and at the beginning of the next, 8th/14th, Kamâl al-Dîn al-Fârîsî (d. 719/1319 [q.v.]), in a treatise on the theory of numbers, returned to this interpretation and established the use of the arithmetical triangle for the numerical orders, i.e. the result which one normally attributed to Pascal. In effect, in order to form the represented numbers (see Rashed, Matériaux pour l'histoire des nombres amiables et de l'analyse combinatoire, in Jnal. for the Hist. of Arabic Science, vi [1982], 209-78; idem, Nombres amiables, parties aliquotes et nombres figurés aux XIIIe et XIVe siècles, in Archive for Hist. of Exact Science, xxviii [1983], 107-49, repr. in Entre arithmétique...
et algèbre . . . 259.99), al-Fārāsi set up a relationship equivalent to
\[
F_p^{qr} = \sum_{k=1}^{p} F_q^{k-1} = \left( \frac{p + q - 1}{q} \right)
\]
with \(F_p^q\) the \(p^n\) represented number of the order \(q, F_q^1 = 1\).

But at the same time as al-Fārāsi was busy with his studies in Persia, Ibn al-Banna\(^2\) (cf. reference above) (d. 721/1321) was at work in Morocco on combinatorial analysis. In effect he went back to the combinatorial interpretation and took up the rules which were known before his time, notably those of the arrangement of \(n\) distinct objects, without repetition, \(r\) to \(r\), of permutations and combinations without repetition:
\[
\binom{n}{r} = \frac{n(n-1) \ldots (n-r+1)}{r!}
\]
relations which were readily deducible from the expression (*) given by al-Karadji three centuries before.

Al-Fārāsi and Ibn al-Banna\(^2\) not only followed after al-Ṭūsī but used the greater part of the technical lexicon already adopted by the latter. With these authors, combinatorial analysis no longer had as its domain algebraic or linguistic applications only, but the most varied domains, e.g. metaphysics, i.e. every domain in which scholars were concerned with the partition of a set of objects.

This concept and this chapter were to survive up the present time. Scholars were to continue to treat combinatorial analysis differently in different works of mathematics, and independent works were also to be devoted to it. Thus later mathematicians like al-Kūshī (d. 840/1436-7 [q.v.] (see his Miftah al-hisāb, ed. A.S. al-Dimirdash and M.H. al-Hifm, Cairo 1967, 73-4, where he gives the law for the composition of the domain in which scholars were concerned with the combinatorial rules—but also a vast domain of the most varied domains, e.g. metaphysics, i.e. every domain in which scholars were concerned with the partition of a set of objects.

Thus amongst the formulae which circulated at the opening of the 4th/10th century, two should be particularly noted, each called "the conventional approximation":
\[
\sqrt{N} = a + \frac{r}{2a + 1} \quad \text{and} \quad \sqrt{N} = a + \frac{r}{3a^2 + 3a + 1}
\]
At the end of this century, the mathematicians possessed, according to all the evidence, the so-called Ruffini-Horner method. Kūshīyār b. al-Lābān [q.v.] applied this algorithm, in all appearance of Indian origin, in his Arithmetic (Kūshīyār ibn Labān, principes of Hindu reckoning, tr. M. Levey and M. Petrick, Madison 1965; see the Arabic text established by A. Saidan, in Rev. de l'Inst. de manuscrits arabes, Cairo [May 1967], 55-83). We know at present that Ibn al-Haytham (d. after 431/1040) not only knew of this algorithm but endeavoured himself to give a mathematical justification for it. It is his general approach which we will set forth here, but in a different language.

Let the polynomial with integer coefficients \(f(x)\) and the equation be
\[
(*) \quad f(x) = N
\]
Let \(s\) be a positive root of this equation, and let us suppose \((s_i) \geq 0\) (index) to be a series of positive integers such that the partial sums are
\[
\sum_{i=0}^{N} s_i \leq s
\]
one says that the \(s_i\) are parts of \(s\).

It is evident that the equation
\[
i_0 = f(x + s_0) - f(s_0) - N = N_0
\]
has as its roots those of equation (*) diminished by \(s_0\).

For \(i > 0\), let us form by recurrence the equation
\[
f(x) = f(x + s_0 + \ldots + s_i) - l(f(s_0 + \ldots + s_i) - l(f(s_0 + \ldots + s_i))) = N_i;
\]
thus, e.g. for \(i = 1\), we have
\[
f(x) = f(x + s_0 + s_1) - f(s_0 + s_1) = [N - f(s_0)] - (f(s_0 + s_1)) = N_0 - (f(s_0 + s_1)) = N_1.
\]

The method used by Ibn al-Haytham and justified by him, which is found in Kūshīyār and is called Ruffini-Horner, furnishes an algorithm which allows us to obtain the coefficients of the \(i^{th}\) equation from the starting point of the coefficients of the \((i-1)^{th}\) equation. The principal idea behind this method lies here (see Rashed, Les mathématiques infinitésimales entre le IVe et le XIe siècle, ii, London 1994).

The ensemble of methods and of preceding results, gained at the beginning of the 5th/11th century, then comes up again not only in the contemporaries of these mathematicians but in the majority of the treatises on arithmetic, henceforth very numerous.

The mathematicians were in possession of the arithmetical triangle and the binomial formula from the end of the 4th/10th century onwards, and were not to meet any major difficulties for the generalisation of the preceding methods and for the formulation of the algorithm in the case of the root n. Similar attempts, unfortunately lost, already existed in the 5th/11th century with al-Biruni and al-Hasib. It was in his contribution of 568/1172-3 that al-Kashi, in al-Kashi himself and also in his successors, notably Abu Kamil, in his book written ca. 266/1172-3, and it shows that the algebra of polynomials is essential to the invention of these fractions. These last survive in the work of al-Kashi (Miftah al-hisab, 79, 121; P. Luckey, Die Rechenkunst bei Ganndal b. Mas’ud al-Kashi, Wiesbaden 1951, 103. Cf. Rashed, Entre arithmetique et algébre, 132 ff.), and appear again in the works of the mathematician and astronomer of the 10th/16th century, Taki al-Din Ma’ruf (Baghayt al-tullub, fol. 131a ff.) and al-Yadzi (in his Uyun al-hisab one cannot fail to discern a certain familiarity with decimal fractions, although he preferred to make calculations with sexagesimal fractions and ordinary ones, see e.g. fols. 9b, 49a-b) in the 11th/17th century. Several indications suggest that they were transmitted to the West before the middle of that century, and they are named in a Byzantine manuscript brought to Venice in 1562 as “Turkish” fractions (al-Kashi introduced a vertical stroke which separated the fractional part; this representation is found amongst Western scholars like Rudolf, Apian and Cardan). The mathematician Mizrahi (b. Constantinoiple 1455) used the same sign before Rudolf. As for the Byzantine ms., it reads, notably, “The Turks make multiplications and divisions of fractions by means of a special procedure for calculation. They introduced their fractions when they came to rule our land here”. The example given by this writer leaves no possible doubt about the fact that he is speaking here of decimal fractions. Cf. H. Hunger and K. Vogel, Ein byzantinisches Rechenbuch des 15. Jahrhundert, Vienna 1963, 32 (problem no. 36).

Let us finally note that the methods of interpolation were already, long before this, applied by astronomers. From the 3rd/9th century onwards, they sought out methods for formulating and using astronomical and trigonometrical tables and, on this occasion, came back to methods of interpolation in order to improve them.

The numerousness of methods at the end of the 4th/10th century has set a new problem for research: how is one to compare these different methods amongst themselves, in order to be able to choose the most efficacious for the tabulation of the cotangent function being studied? Al-Biruni himself began to take this problem for his own consideration and to place side-by-side different methods for the case of the cotangent function, with its difficulties which are connected with the existence of the poles. In the next century, al-Samawal was even more explicitly concerned with this task.

The mathematicians not only pursued their researches on the fractions, but equally applied themselves to other disciplines like astronomy. Thus Kamal al-Din al-Farsi had recourse to one of them—called faws al-khild, the arc of the difference—in order to establish the table of refractions. But this method called “the arc of the difference”, applied by al-Farsi at the opening of the 8th/14th century, goes back to al-Khazin in the 4th/10th century, and was to be taken up again in the 9th/15th century by al-Kamal in his Zaid al-abd. This last example shows well that, for this chapter, it is a case of stages in an identical tradition.

IV. Indeterminate analysis.

The emergence of indeterminate analysis or, as it is called today, Diophantine analysis, as a distinct chapter of algebra, goes back to al-Kharaqmi’s successors, notably Abu Kamil, in his book written ca. 266/880.

Abu Kamil aimed in his Algebra not at lingering any
longer over a diffuse exposition, but at giving a more systematic exposition in which would be highlighted, as well as the problems and algorithms for solution, the methods. He did, it is true, treat in the last part of his book of the 38 Diophantine problems of the second degree and of the systems of these equations, four systems of linear, indeterminate equations, other systems of linear, determinate equations, an ensemble of problems which led to arithmetical progressions and a study of these last (this part occupies fols. 79a-110b). This whole corresponds to the double aim fixed by Abū Kāmil: to resolve indeterminate problems, and on the other hand to resolve by means of algebra the problems treated at that time by arithmetics. One should note that it is in his Algebra that one meets for the first time in history—to the present writer’s knowledge—an explicit distinction between determinate problems and indeterminate one. Now the examination of these 38 Diophantine problems does not only reflect this distinction; it further shows that these problems do not follow each other haphazardly but according to an order meticulously indicated by Abū Kāmil. The first 25 thus belong to one and the same group, for which the author gives a necessary and sufficient condition in order to determine rational, positive solutions. Let us take just two examples. The first problem in this group (fols. 79a-b) may be set forth as

\[ x^2 + 5 = y^2. \]

Abū Kāmil proposes to give two solutions amongst, as he himself proclaims, an infinity of rational solutions.

Another example of the same group is problem no. 19 (fols. 87a-b), which may be set forth as

\[ 8x - x^2 + 109 = y^2. \]

Abū Kāmil then considers the general formula

(1) \[ ax^2 + bx + c = y^2. \]

He then gives the sufficient condition for determining the rational, positive solutions of the preceding equation. This last may be expressed as

\[ y^2 + \left( \frac{a}{2} \right)^2 - x^2 = -b \left( 1 - \frac{a}{2} \right); \]

let us now suppose that \( x = \frac{a-1}{2} \), and one has

(2) \[ y^2 + \left( \frac{a}{2} \right)^2 = -b + \left( \frac{a}{2} \right)^2, \]

and the problem is thereby brought to dividing up a number, the sum of two squares, into two other squares: problem no. 12 of the same group, already resolved by Abū Kāmil. Let us suppose in effect that

\[ b + \left( \frac{a}{2} \right)^2 = u^2 + v^2, \]

with \( u \) and \( v \) rational numbers. Abū Kāmil poses

\[ y = u + v, \]
\[ t = 2 (kt - v), \]
he substitutes in (2) and finds the values of \( y, t \) and finally \( x \). Thus he knows that, if one of the variables can be expressed as a rational function of the other, or, in other terms, if one can have a rational parametrange, one has all the solutions; whereas, on the other hand, if the sum brings us to an expression whose root cannot be got round, one does not have any solution. In other terms, unknown to Abū Kāmil, a curve of the second degree of the genus 0 does not have any rational point, or is bi-rationally equivalent to a straight line.

The second group is made up of 13 problems—nos. 26-38—which do not allow a rational parametrange; or, this time again in a language unknown to Abū Kāmil, they define all curves of genus 1. Thus e.g. problem no. 31 (fol. 92b) may be set out as

\[ x^2 + a = y^2, \]
\[ x^2 + 1 = z^2, \]
which defines a skew quartic, a curve of \( A^3 \) of genus 1.

The third group of indeterminate problems is made up of systems of linear equations, as e.g. in no. 39 (fol. 95b) which may be set out as

\[ \begin{align*}
  a \cdot x + b \cdot x + c &= y, \\
  x^2 + y + z &= u.
\end{align*} \]

This principle of organisation was to be moreover borrowed by his successors. It is thus clear that al-Karadjī had as his aim the giving of a systematic exposition. On the other hand, he carried further the task begun by Abū Kāmil, which consisted in elucidating as far as possible the methods for each class of problems. In his al-Fakhār, al-Karadjī brought forward only the principles of this analysis, indicating that it bore notably upon the equation

\[ ax^2 + bx + c = y^2, \]
\[ a, b, c \in \mathbb{Z}, \]
in which the trinomial in \( x \) is not a square, in order to pass finally to the different classes of problems, of which the greater part are indeterminate. Al-Karadjī studied many other problems, notably double equality. Let us set simply forth the problem

\[ x^2 + a = y^2, \]

(\*)

\[ x^2 - b = z^2, \]
which defines a curve of the genus 1 in \( A^3 \).

His successors did not merely comment upon his work, but endeavoured to advance further along the road traced out by him; thus in his al-Bāhir, al-Samaw’al commented on al-Badi’ and studies equations of form:

\[ y^3 = ax + b, \]
considered then the equation

\[ y^3 = ax^2 + bx, \]
and we cannot here follow the works of al-Karadjī’s successors on rational Diophantine analysis, but can only note that, in the future, this last was to form part of every algebraic treatise of any importance. Hence, in the first half of the 6th/12th century, al-Zandjāni borrowed the greater part of al-Karadjī’s problems and of the first four books of the Arabic translation of Diophantus. Ibn al-Khwārizmī set before himself certain Diophantine equations, including Fermat’s equation for \( n = 3 \) \( (x^3 + y^3 = z^3) \), as also Kāmil al-Dīn al-Fārisī in his great commentary on the latter’s work on algebra. This interest and these works on indeterminate analysis were followed unabatedly up to the 11th/17th century with al-Yazdi and, contra what the historians of this chapter say, it was not to end with al-Karadjī.

The translation of Diophantus’ Arithmetic was not just essential to the development of rational Diophantine analysis as a chapter of algebra, but contributed
equally to the development of the integer Diophantine analysis as a chapter, not only of algebra but also of the theory of numbers. In the 4th/10th century, in effect, there took place for the first time the constituting of this chapter, probably thanks to algebra but also in opposition to it. In practice, the study of Diophantine problems was tackled by requiring on one side the obtaining of integer solutions, and on the other side the proceeding by proofs of the type of Euclid in the arithmetical books of the *Elements*. It is this combination, explicit for the first time in history—for the numerical domain, restricted to positive integer numbers interpreted as segments of straight lines, for algebraic techniques and for the requirement of giving a proof in the pure Euclidean style—which allowed the inauguration of this new Diophantine analysis. The translation of Diophantus' *Arithmetica* furnished these mathematicians, it will readily be understood, less with methods than with certain problems in the theory of numbers which were formulated there, which they did not hesitate to systematise and to examine for themselves, contrary to what can be seen in Diophantus. Such are e.g. the problems of the representation of a number as a sum of squares, congruent numbers, etc. In brief, one meets here the beginning of the new Diophantine analysis in the sense in which it was to be discovered and developed later by Bachet de Méziac and Fermat (see Rashed, *L'analyse diophantienne au Xe siècle*, in Rev. d'histoire des Sciences, xxxiii/3 [1979], 193-222, repr. in *L'arithmétique et l'algèbre*, 195-225).

Hence in an anonymous text of the 4th/10th century, after having introduced the basic concepts for studying Pythagorean triangles, the author posed questions about the integers which can be the hypotenuses of these triangles, i.e. the integers which can represent as the sum of two squares. In particular, he announced that every element of the sequence of primitive Pythagorean triplets was such that the hypotenuse is of one or other form: 5 (mod 12) or 1 (mod 12). However, he noted—like al-Khâzîn after him—that certain numbers of this sequence—e.g. 49 and 77—are not hypotenuses of such triangles. This same author also knew that certain numbers of the form 1 (mod 4) could not be hypotenuses of primitive right-angled triangles. Al-Khâzîn later studied several problems involving numerical right-angled triangles, as well as the problems of congruent numbers, and set forth the following theorem:

**if** a is a given natural integer, the following conditions are equivalent
  1. the system (*) admits of a solution;
  2. there exist a pair of integers (m, n) such that

\[ \begin{align*}
    m^2 + n^2 &= a \\
    2mn &= a
\end{align*} \]

in these conditions, a has the form 2 uv(v^2 - u^2).

It is in this tradition that scholars equally brought to bear the study of the representation of an integer as the sum of squares. Thus al-Khâzîn devoted several propositions of his treatise to the study of this.

It was likewise these mathematicians who, as the first persons to do so, posed the question of impossible problems, such as the first case of Fermat's theorem. It has long been known that al-Khâjudjandî tried to prove that "the sum of two cubic numbers is not a cube". According to al-Khâzîn (Rashed, *op. cit.*, 220), al-Khâjudjandî's proof was defective. A certain Abû Da'far also tried to prove the same proposition. This is equally defective. Even if one has had to wait till Euler for the establishing of this proof, the problem never ceased, despite everything, to preoccupy the Arab mathematicians who, later, enunciated the impossibility of the case \( x^3 + y^3 = z^3 \).

Research on the integer Diophantine analysis, and notably, on numerical right-angled triangles, did not stop with its initiators of the first half of the 4th/10th century. Quite the opposite: their successors took it up again and in the same spirit, in the course of the second half of that century and at the beginning of the next one, as the examples of Abu 'l-Dâjud Ibn al-Layth, al-Sidîrî and Ibn al-Haytham attest. Later on, others followed, in one manner or another, this line of research, such as Kamâl al-Dîn Ibn Yûsûs.

**V. The classical theory of numbers.**

The contribution of the mathematicians of the time to the theory of numbers was not limited to integer Diophantine analysis. Two other currents of research, starting from two distinct points, led to the extension and renewal of the Hellenistic theory of numbers. The first current had as its source, but also as its model, the three arithmetical books of Euclid's *Elements*, whilst the second came within the line of Neo-Pythagorean arithmetic, as it appears in the *Arithmetical introduction* of Nicomachus of Gerasa. It is in Euclid's books that there is to be found a theory of parity and a theory of the multiplicative properties of integers: divisibility, prime numbers, etc. For Euclid, an integer is however represented by a segment of a line, a representation essential for the proof of the propositions. If the Neo-Pythagoreans shared this concept of the integers and were in a wide sense attached to the study of these same properties, or of properties derived from these last, there remains the fact that, by their methods and their aims, they were to be distinguished from Euclid. Whereas the latter proceeded by proofs, these others had as their only means that of induction. Moreover, for Euclid, arithmetic had no other aim beyond itself, whilst for Nicomachus it had philosophical goals and even psychological ones. This difference in method was clearly perceived by Arab mathematicians like Ibn al-Haytham. For those of the time, it was clearly a question thus of a difference between the methods of proof and not between the aims of arithmetic. From this time, it may be understood that, despite a marked preference for the Euclidean method, mathematicians, even those of Ibn al-Haytham, was concerned, reached in the proof of certain cases by induction, in accordance with the problem posed; it is thus that Ibn al-Haytham discusses the "Chinese remainder theorem" and Wilson's theorem. Furthermore, if the mathematicians of the first rank, and in accordance with certain philosophers like Avicenna, neglected the philosophical and psychological goals assigned to arithmetic by Nicomachus, other mathematicians of lower rank, philosophers, physicians, encyclopaedists, etc., interested themselves in this arithmetic. The history of this last is thus based on that of the culture of a scholar within Islamic society over the centuries, and goes well beyond the scope of the present article.

Research into the theory of numbers in the Euclidean and Pythagorean sense began early, before the end of the 3rd/9th century. It was contemporary with the translation of Nicomachus' book by Thâbit b. Qurra (d. 288/901) and his revision of the translation of Euclid's *Elements*. It was in fact Thâbit who set in motion this research into the theory of numbers, whilst elaborating the first theory of amicable numbers. This fact, known to historians since the last century thanks to the work of F. Woepcke (*Notice sur une théorie ajoutée par Thâbit Ben Qurrah à l'arithmétique spéculative des Grecs*, in *JA*, ser. 4, ii [1832], 420-9, in which the author gives a résumé of Thâbit's
opusculum), only had its full significance realised very recently, when the existence has been established of a complete tradition, begun by Thabit in the most pure of Euclidean styles, and to some centuries later in al-Fārisī (d. 719/1319), thanks to the application of algebra to the study of the first elementary arithmetical functions. This tradition is marked out by many names: al-Karābīsī, al-Anṭākī, al-Kubayṣī, Abu 'l-Wafā' al-Būzajānī, al-Baghdādī, Ibn al-Haytham, Ibn Hūd, al-Karādī, etc., to cite only a few of them. Clearly, one cannot in these few pages devoted to the theory, claim to give a detailed description. An attempt will simply be made to sketch this movement just mentioned.

At the end of Book IX of the Elements, Euclid gives a theory of perfect numbers and shows that the number $n = 2^p (2^{p+1} - 1)$ is a perfect one, i.e. equal to the sum of its own divisors, if $(2^{p+1} - 1)$ is a prime number. He does not mention the theory of amicable numbers, however. Thabit b. Kurra then decided to construct this theory. He set forth and proved, in pure Euclidean style, the most important theorem of amicable numbers up to this time, the one which bears his name today.

Let us note $\sigma(n)$ as the sum of the aliquot parts of the integer $n$, and $\sigma(n) = \sigma_1(n) + n$ as the sum of the divisors of $n$; and let us recall that two integers $a$ and $b$ are called amicable if $\sigma(a) = b$ and $\sigma(b) = a$.

Thabit b. Kurra's theorem:

For $n > 1$, let $p = 2^{2n} - 1$, if $p > p_0$, and $q$ are prime numbers, then $a = 2^{p_0} p_0 n$ and $b = 2^{q_0} q_0 n$ are amicable numbers.

It is with the algebraists, in particular, that the calculation of pairs of amicable numbers other than those given by Thabit was undertaken, i.e. (220, 284). Thus one finds in al-Farisi in the East, in the milieu of Ibn al-Bannā' in the West, and in al-Tamūlī and many other 7th/13th century mathematicians, the pair (17296, 18416), known under the name of Fermat's. Al-Yazdī was to calculate later the pair known as that of Descartes (9363584, 9437056).

The famous physicist and mathematician Kamāl al-Dīn al-Farisi wrote a work in which he tried deliberately to prove Thabit's theorem in an algebraic fashion. This action obliged him to conceive the first arithmetical functions and to bring into being a complete preparation which led him to set forth for the first time the fundamental theorem of arithmetic. Al-Farisi furthermore developed the combinatorial means required for this study, and thereby, a complete programme of research into figured numbers. In brief, it is a case this time of the elementary theory of numbers, just as one finds it later in the 11th/17th century.

Al-Farisi examined the procedures of factorisation and the calculation of aliquot parts as functions of the number of prime factors. The most important result on this level was without any doubt the identification between the combinations and the figured numbers. Hence everything was then in place for the study of arithmetical functions. A first group of propositions concerned $\sigma(n)$. Even if al-Farisi only in fact treated of $\sigma(n)$, it must be agreed that he recognised $\sigma$ as a multifunctionive. Amongst the propositions of this group, one finds in particular:

(1) if $n = p_1 p_2$, with $(p_1, p_2) = 1$, then $\sigma(n) = \sigma(p_1) \sigma(p_2) + \sigma(p_1) + \sigma(p_2)$,

which shows that he knew the expression

$$\sigma(n) = \sigma(n) + \sigma(n) + \sigma(n).$$

(2) if $n = p_1 p_2$, with $p_1$ a prime number and $(p_1, p_2) = 1$, then

$$\sigma(n) = \sigma(p_1) \sigma(n) + \sigma(p_1) + \sigma(n),$$

(3) if $n = p^r$, $p$ is a prime number, then

$$\sigma(n) = \sum_{k=0}^{r-1} \sigma(p^k).$$

These three propositions have been until now attributed to Descartes.

(4) Finally, he tried, but without succeeding, as one may readily understand, to establish a formula valid for the case where $n = p_1 p_2$, with $(p_1, p_2) \neq 1$.

A second group includes several propositions bearing on the proposition $\tau(n)$: the number of divisors of $n$.

(5) if $n = p_1 p_2 \ldots p_r$, with $p_1, p_2, \ldots p_r$ as distinct prime factors, then the number of pairs of $n$ denoted $\tau(n)$ is equal to

$$\tau(n) = \prod_{i=1}^{r} (c_i + 1),$$

and $\tau(n) = \tau(n) - 1$, a proposition attributed to John Keresy and to Montmort.

Al-Farisi finally proved Thabit b. Kurra's theorem. He had simply in effect to prove that

$$\sigma(2p_0 - 1) = \sigma(2q_0 - 1) = 2^{p_0 - 1} (p_0 + q_0),$$

and $\tau(n) = \tau(n) - 1$, a proposition attributed to John Keresy and to Montmort.

If, with the works on amicable numbers, the mathematicians sought also to characterise this class of integers, whilst studying perfect numbers, they followed the same goal. We know through al-Khāzīn that in the 4th/10th century people were thinking about the existence of odd perfect numbers—a problem still unsolved (al-Khāzīn wrote "This question is put to those who wonder to themselves [about abundant, deficient and perfect numbers] whether there exist a perfect number amongst the odd numbers or not?"; cf. the Arabic text published by A. Anbouba, Un traité d'Abū Ja'far al-Khāzīn sur les triangles rectangles numériques, in Jnald. for Hist. of Arabic Science, iii/1 [1979], 134-78, see 157). At the end of the same century and at the beginning of the next one, al-Baṣrī obtained some results concerning these same numbers (see Rashed, Nombres amiables ..., 267 of repr.). Thus he gives

$$\sigma(n) = 2^{2n} - 1$$

if $n$ is a prime number, then $1 + 2 + \ldots + (2^{2n} - 1)$ is a perfect number, a rule attributed to the 17th century mathematician J. Broscius. Al-Baṣrī's contemporary Ibn al-Haytham (see Rashed, Ibn al-Haytham et les nombres parfaits, in Historia Mathematica, xvi [1989], 343-52) tried, as the first, to characterise this class of even perfect numbers, by endeavouring to prove the following theorem:

if $n$ is an even number, the following conditions are equivalent:

(1) if $n = 2^{2p - 1 - 1}$, with $(2^{p+1} - 1)$ a prime number then $\sigma(n) = n$;

(2) if $\sigma(n) = n$, then $n = 2^{2p - 1 - 1}$, with $(2^{p+1} - 1)$ a prime number.

It is known that (1) is none other than IX-36 of Euclid's Elements. Ibn al-Haytham then tried further to prove that every even perfect number is of Euclidean form, a theorem which was definitively to be es-
established by Euler. It should be noted that Ibn al-Haytham, no more than Thabit b. Kurra with regard to amicable numbers, did not try, for perfect numbers, to calculate any other numbers beyond those known and handed down by tradition. This task of calculation was to be that of mathematicians of lower rank, closer to the tradition of Nicomachus of Gerasa, such as Ibn Fallus (d. 637/1240) and Ibn al-Malik al-Dinashki (see Rashed, op. cit.), amongst many others. Their writings tell us that mathematicians knew at this time the first seven perfect numbers.

One of the axes of research into the theory of numbers was thus the characterisation of numbers: amicable, equivalent (the numbers equivalent to a are the numbers defined by \(\sigma_2^{-1}(a)\)) and perfect. In these conditions, one should not be astonished that mathematicians came back to the prime numbers in order to move on to a similar task. This is exactly what Ibn al-Haytham did in the course of his solution to the problem called that of “the Chinese remainder” (see Rashed, Théorie des nombres et analyse combinatoire, in Entretie mathématique et algèbre, 238). He wished in fact to solve the system of linear congruences:

\[(a) \mod n, \quad (b) \mod m_i, \quad (c) \mod p\]

with \(p\) a prime number and \(1 < m_i \leq p-1\).

In the course of this study, he gives a criterion for determining prime numbers, the theorem Wilson's:

if \(n > 1\), the two following conditions are equivalent:

1. \(n\) is a prime number
2. \((n-1)! \equiv -1 \mod n\).

The study of this system of congruences is partially found once more in Ibn al-Haytham’s successors in the 6th/12th century, e.g. al-Khili in Arabic and Fibonacci in Latin (see Rashed, op. cit.).

One could add, to these areas of the theory of numbers in Arabic mathematics, a multitude of results which can be classified within the line of Nicomachus’ arithmetic, developed by mathematicians or algebraists, or simply for the needs of other techniques such as the construction of magic squares or arithmetical games. One might note here the sums of given to al-Kindi and the Banu Musa (q.v. and see the ar. s.v. in Dist Scientifique Biogr., 1970, i, 443-6; also the translation of the Banu Musa cited below), whilst that of the second was revised by their collaborator Thabit b. Kurra. As for Archimedes’ other books, i.e. on the spiral, on conoids and spheroids, on the squaring of a parabola, and on method, there is nothing to show that they were known to the Arab mathematicians. This last remark is especially important since Archimedes introduced into his book On conoids and spheroids the idea of lower and higher integral sums, which then completed the method of exhaustion.

The translation of Archimedes’ two treatises, as well as of Eutocius’ commentary (these texts were twice translated in the course of the 3rd/9th century, see Rashed, Al-Kindi’s Commentary on Archimedes’ The Measurement of the Circle, in Arabic Science and Philosophy, a Historical Journal, i, 3 no. 1, [1993], 7-53), and Archimède dans les mathématiques arabes, in I. Mueller (ed.), Essays around the mathematical sciences of the Greeks, Apeiron (1991), clearly correspond to the demands of al-Kindi, the Banu Musa and their school. The Banu Musa comprised three brothers, Muhammad, Ahmad and al-Hasan, who were all concerned with geometry—and notably, with conic sections—as much as with mechanics, music and astronomy. These three wrote at Baghda in the first half of the century the first Arabic work in this sphere. Their treatise, called On the measurement of plane and spherical figures, did not merely launch Arabic research into the determination of areas and volumes but also remained the basic text for Latin science after it was translated in the 12th century by Gerard of Cremona. The treatise in fact falls into three sections. The first concerns the measurement of the circle; the second, the volume of the sphere; whilst the third deals with the classical problems of the two means and the trisection of the angle.

The brothers showed that the area of a circle is equal to \(S = \pi \cdot r^2 / 2\) (\(r\) being the radius and \(c\) the circumference). But in this proof, they did not compare \(S\) to \(< S\) and then to \(S^* < S\), but supposed that \(S = r \cdot c^2 / 2\) and compared \(c\) to a \(c\) and to a \(c^*\) < \(c\), being thus content to compare the lengths.

The brothers then explained Archimedes’ method for the approximate calculation of \(\pi\), and brought out its general significance. They showed in effect that this method goes back to the construction of two adjacent sequences \((a_n, b_n)\) \(\geq 1\) and \(\geq 1 - a_n < b_n\) sequences for all \(n\) and which converge towards the same result. This involves two sequences which can be set out as:

\[a_0 = 2nr \cdot \sin \frac{\pi}{n} \quad b_0 = 2nr \cdot \tan \frac{\pi}{n} \]

They remarked that “it is possible with the help of this method to attain any required degree of precision” (see Rashed, op. cit.). With a method analogous to that applied in the case of the area of a circle, they determined the area of the lateral surface of a sphere.

The contemporaries and successors of the Banu
Musa pursued research in this sphere very actively. Thus al-Mahmudi did not only comment upon Archimedes' book On the sphere and the cylinder, but began on the determination of the segment of a parabola; this text of his has not, however, survived.

The brothers' collaborator, Thabit b. Kurra, contributed to this area of research on a large scale. He composed successively three treatises: one on the area of the segment of a parabola, one on the volume of a revolving paraboloid and one on sections of the cylinder and its lateral area. In the first treatise, on determining the area of a segment of a parabola, Thabit, who did not know of Archimedes' study on this subject, began by proving 21 propositions, 11 of these being arithmetical. Examination of these shows that Thabit knew perfectly and rigorously the concept of the upper limit of a set of square real numbers and the unicity of this upper limit. In effect, he used the following formula for characterising the upper limit:

\[ \text{let } ABC \text{ be a segment of the parabola, } AD \text{ its diameter corresponding to BC (Fig.). For all given } \varepsilon > 0, \text{ one can make correspond to it the division } A, \ G_1, \ G_2, \ldots, \ G_{n-1}, D, \text{ of the diameter } AD, \text{ so that } \text{area } BAC \text{- area of the polygon } BE_01 \ldots E_2E_AF_F \ldots F_{n-1}C \leq \varepsilon, \]

i.e. putting it another way, the area BAC is the upper limit of the area of these polygons.

Thabit showed in quite a rigorous fashion that 2/3 of the area BHMC is the upper limit of the areas of the polygons already mentioned. He finally arrived at his theorem, thus formulated: "A parabola is infinite but the area of any one of its segments is equal to two-thirds of a parallelogram of the same base and the same height as that segment" (Cairo ms., Riyadâ 40, fol. 180b).

One should note that his squaring, given the definition of a parabola, is equivalent to the calculation of the integral \( \int_0^\infty \sqrt{x} \, dx \).

Thabit's contribution to this chapter did not, however, stop here. He undertook to determine the volume of a revolving paraboloid.

He finally undertook, in his treatise on The sections of the cylinder and their surfaces, a study of the different types of plane sections of an upright cylinder and an oblique one; he then determined the area of the ellipse and the area of elliptical segments; he discussed maximal and minimal sections of a cylinder and their axes; and determined the area of a part of the surface delimited by two plane sections.

It is impossible here to set forth the results and proofs of this rich and profound treatise, such as the proof by means of which Thabit showed that "the surface of an ellipse is equal to the surface of a circle whose square of the half-diameter is equal to the product of one of the two axes of this ellipse by the other", i.e. \( \pi ab \), with a and b the two axes of the ellipse.

His contribution was to be actively followed by his successors, such as his grandson Ibrahim b. Sinan. This latter mathematician of genius only lived 38 years, and did not like, according to his own words, "that al-Mahmudi should have a study more advanced than that of [my] grandfather, without one of us going on further than him". Hence he wished to provide a proof not only shorter than his grandfather's, which needed 19 lemmata, as we have seen, but also than that of al-Mahmudi. The proposition on which Ibrahim's proof was based and which he was previously careful to set forth, was: affine transformation leaves the proportionality of the areas invariable.

In the 9th/10th century, the mathematician al-'Alî b. Sahîl (see Rashed, Géométrie et dioptrique au Xe siècle) took up the study of the squaring of a parabola, but his treatise has unfortunately not yet come to light. As for his contemporary al-Kühlî, by re-examining the determination of the volume of a revolving paraboloid, he rediscovered the method of Archimedes.

The famed mathematician and physician Ibn al-Haytham, successor to Ibn Sahîl and al-Kühlî, took up the proof of the volume of a revolving paraboloid as well as that of the volume resulting from the rotation of a parabola around its ordinate (see Rashed, op. cit., and Ibn al-Haytham et la mesure du paraboloidé, in: l'âge d'or de la science arabe, 962-1054, Paris, 1978). Let us rapidly examine this second type, more difficult than the first one. In order to get to the determination of this volume, Ibn al-Haytham began by proving certain arithmetical lemmata: the sums of powers of \( n \) successive integers, in order to establish a double inequality, fundamental for his study. On this occasion he obtained results which mark a point in the history of arithmetic, notably the sum of any integer power of \( n \) successive first integers

\[ \sum_{k=1}^{n} k^i, \quad i = 1, 2, \ldots; \]

he then establishes the following inequality

\[ (*) \quad \sum_{k=1}^{n} [(n+1)^2-k^2] \leq \frac{9}{15} (n + 1) (n + 1)^4 \leq \sum_{k=0}^{n} [(n+1)^2-k^2]. \]

Let there now be a paraboloid generated by the rotation of the part of the parabola ABC of the equation \( x = ky^2 \) around the ordinate BC. Let \( e_i = (y_i)_{0 \leq i \leq m} \), with \( 2m = n \) a subdivision of the interval \([0, b]\) of the step

\[ h = \frac{b}{2m} = \frac{b}{n}. \]

Let \( M_i \) be the points of a parabola of ordinates \( y_i \) and of abscissae \( x_i \) respectively. Let us posit

\[ r_i = c - x_i \quad (0 \leq i \leq 2m = n); \]

there results
but, after the inequality (*), one obtains
\[ I_n = \sum_{i=1}^{n-1} \pi k^2 h^3 (n^2 - i^2)^2 \]
and
\[ C_n = \sum_{i=0}^{n-1} \pi k^2 h^3 (n^2 - i^2)^2; \]
but, after the inequality (*), one obtains
\[ I_n \leq \frac{8}{15} V \leq C_n, \]
where \( V = \pi k^2 b^4 \), \( b \) is the volume of the circumscribed cylinder. By using a different language from that of Ibn al-Haytham:

As the function \( g(y) = ky^2 \) is continuous on \([0, b]\), Ibn al-Haytham’s calculation will be equivalent to the volume of the paraboloid
\[ V \text{ being the volume of the circumscribed cylinder.} \]

Ibn al-Haytham did not stop there; he turned afresh towards the small solids of framing in order to study their behaviour when the points of subdivision are increased indefinitely. This time we find ourselves in the presence of a clearly infinitesimalist, and in some ways functional, way of thinking, in so as the crux of the problem is explicitly the asymptotic behaviour of mathematical entities, the determination of whose variation is being sought.

Ibn al-Haytham applied the same method to the determination of the volume of a sphere. There, equally, one notes that he gave an arithmetically inflected version of the method of exhaustion. In effect, in his researches, the role of explicit arithmetical calculation seems much more important than in the works of his predecessors.

In this study, one can see the development of the means and techniques of this chapter in Arabic mathematics. It has been seen that Ibn al-Haytham, in his work on the paraboloid, obtained results which the historians have attributed to e.g. Kepler and Cavalieri. However, this chapter stops there, very probably because of the lack of a suitable symbolic means of expression.

VII. The squaring of lunules.

Amongst the problems of the determination of the areas of curved surfaces, the exact squaring of lunules—surfaces bounded by two arcs of circles—is one of the most ancient. Ibn al-Haytham’s approach went back to the study of lunules bounded by any arcs, whilst seeking for the equivalents of surfaces. He introduced circles in general equivalent to sectors of the given circle in the problem, and expressed by a fraction of the latter. He justified the existence of the circles introduced, which he had to add or to subtract from polygonal surfaces, in order to obtain a surface equivalent to that of a lunule or the sum of two lunules.

Ibn al-Haytham took back to its foundation the problem of the squaring of lunules, set it down on the plane of trigonometry, and tried to deduce the different cases as so many properties of a trigonometric function, one which would be recognised more precisely much later by Euler.

From the beginning of his treatise, Ibn al-Haytham explicitly recognised that the calculation of the areas of lunules involved the sums and differences of the areas of sectors of the circle and of triangles, whose comparison in turn required the comparison of the relations of angles and the relations of segments. It was for this reason that he began by establishing four lemmata relating to the triangle \( \triangle ABC \), right-angled at \( B \) in the first lemma, and with an obtuse angle in the other three, which was in future to show that the essential point of the study was taken back to a study of the function
\[ f(x) = \sin^x \frac{\pi}{2} \quad 0 \leq x \leq \pi. \]

One can thus rewrite these lemmata:

1) If \( 0 < C < \frac{\pi}{4} < A < \frac{\pi}{2} \),
then \( \frac{\sin^2 C}{C} < \frac{\pi}{A} \); it is evident that if \( C = A = \frac{\pi}{4} \),
then \( \frac{\sin^2 C}{C} = \frac{\sin^2 A}{A} = \frac{\pi}{4} \).

2) Let \( \pi - B = B_1 \),
if \( C < \frac{\pi}{4} < B_1 < \frac{\pi}{2} \), then \( \frac{\sin^2 C}{C} = \frac{\sin^2 B_1}{B_1} \).

3) If \( A \leq \frac{\pi}{4} \), then \( \frac{\sin^2 A}{A} < \frac{\sin^2 B_1}{B_1} \).

4) Here Ibn al-Haytham wished to study the case \( A > \frac{\pi}{4} \), but the study is incomplete.

He showed that for a given \( A \), one can find \( B_0 \) such that
\[ B_1 \geq B_0 = \frac{\sin^2 A}{A} > \frac{\sin^2 B_1}{B_1}. \]
This incomplete study seems to have hidden from Ibn al-Haytham’s view the equality
\[ \frac{\sin^2 A}{A} = \frac{\sin^2 B_1}{B_1}. \]

It may be remarked that these lemmata, since they link the problem of the squaring of lunules with trigonometry, changed its position, and allowed the unifying of the particular cases. But the incompleteness already mentioned masked the possibility of the existence of lunules capable of being squared.

Ibn al-Haytham pursued his researches whilst solving important propositions which would take too long to set out here. He likewise contributed, following al-Khâzin, to the study of isoperimetric and isepiphanic problems, which led him to pose important questions...
regarding the solid angle (see Rashed, *Les mathématiques infinitésimales entre le IXe et le XIe siècles*, ii). We have just been present at the emergence of new researches into geometry, extensions of the Hellenistic heritage, or new chapters of which the Alexandrians never conceived: algebraic geometry in the sense of that used by al-Khayyâm and Ṣalaf al-Dîn al-Tûsî. Other chapters on geometry, all of them important, saw the light, stimulated by the application of geometry to the other mathematical disciplines or to other fields, such as astronomy and optics. Thus the mathematicians developed the study of punctual geometrical transformations, notably in the course of their researches on infinitesimal determinations and in the course of their works on isoperimetric and isepiphonic problems. The analysis of the optical properties of conics developed thanks to catoptric and dioptric researches. The study of geometrical projections—conic and cylindrical—was brought into being through the needs of astronomy. To that may be added a whole tradition of research on the theory of parallels, on geometrical constructions and on practical geometry. Equally evident, for the first time in history, is the fact that trigonometry took shape as a branch of geometry. It is readily understandable that, within such a burgeoning, philosophers and mathematicians became interested in the philosophy of mathematics.

There exist so many other chapters which, for lack of space, we can only cite here but whose titles, added to those which we have already examined, allow us to realize the ramifications of mathematics and to place them within the history of this discipline.

**RIYÂFÂ** (S.), from *rif*, pl. *arîf*, "cultivated and fertile region", generally designates the lands along a river or the sea and the fertile plains bordering the desert [see further *rif*]. The noun *riyîfâ*, a recent formation on the model of *kiyîfâ* (note that al-Dâhibî, *K. al-Tarbî taw-ladâiv r*, ed. Pellat, 91-2, § 176, gives for *kiyîfâ* [q. a.] the sense of the detection of paternity, the whereabouts of water, atmospheric phenomena and the earth), designates the water-diviner's art which estimates the depth of water under the earth through the smell of the earth, its vegetation and the instinctive reactions of certain creatures, in particular, the hoopoe (cf. Hâddî Khalîf, i, 523, who cites, at 1, 444, a *Mushkaṣar* on this art by Bâdî al-Dîn Muḥammad al-Kârûbî, d. 1006/1597, Brockelmann, II, 493, and who notes that the most important pieces of information on which we are to be found in the K. al-Fîlîdâ al-nabiṣîyya [see ed. IFDEA, Beirut 1991, 54-113], the *Nisânîyat agriculture devotes a lengthy treatise to the discovery of water called Bâb istînîbâ al-miṣîah wâ-handasatâthâ*. This monograph, which can easily be detached from the rest of the work, has several chapters, with the following titles: (1) Searching for water and the necessary technical procedures to detect it; (2) How to dig wells and how to increase the flow of water by various proven devices and techniques; (3) The drilling of wells; (4) Devices for increasing the water from wells; (5) How to get the water up from a very deep well; (6) How to increase the amount of water in the well and its sources; (7) How to change and improve the taste of the water; and (8) Concerning the difference in the nature and the effect of the water according to the nearer or further position of it in relation to the ecliptic.

The contents of this treatise on water have been analysed by the present author, classifying these under six headings: (1) Hydrology; (2) The search for wells; (3) The drilling of wells; (4) Increasing the flow of the water of wells; (5) Hydrology, the modifying and improving of the water's taste; (6) The different natural and effects of the waters according to their positions in relation to the ecliptic (see Fahd, *Un traité des eaux dans al-Šifâh l-nabâtâyîyya*; hydrologie, *hydraulique agricole, hydrologie, in La Persia nel Medioevo*, Accademia dei Lincei, Rome 1971, 277-296).

In the writings of al-Šifâh [q. s.], the meaning of *riyîfâ* has been stretched to that of uncovering the presence of metals underground: "l'accès à ces trésors enfouis procède de la connaissance des signes que recèlent ces montagnes et qui apparaissent aux yeux du connaissance averti sous forme de veines ou filets dont il lui faut interpréter la nature, la disposition et la couleur" (Fahd, *La divination arabe*, 404). The seeker "doit connaître l'origine astrale du minéral qu'il recherche et savoir sous la domination de quelle planète il se trouve; car chaque métal a la couleur, la nature, les caractéristiques et les propriétés de la planète dont il est censé être issu" (ibid.). Amongst the Harranians, the following correspondences were to be found: Gold-The Sun; Silver-The Moon, (Black) Lead-Saturn; Tin-Jupiter; Copper-Venus; and Iron-Mars (see ibn al-Nâdim, *Fihrist*, 411-12).

In general, it is a question of a natural gift which "réside dans la connaissance de l'état des lieux sans signes apparents, mais avec des pressentiments fondés sur des propriétés qu'il n'est pas donné à tout le monde de déceler; cela est généralement dû à la perfection des sens et à la force de l'imagination" (Fahd, op. cit., 403; Y. Mourad, *La physiognomie arabe et le K. al-Fîrdâs de Fakhîr al-Dîn al-Râzî*, diss. Paris 1939, 137-21, citing Zayn al-Šâbî (Amîrî). *Riyîfâ*, like *shrîf*, etc. (cf. ibid., 370-8), is classed among the physiognomic procedures since it involves "des déductions relatives à des choses cachées, partant de phénomènes apparents, par analogie avec les prévisions concernant l'aspect moral, basées sur l'aspect physique" (ibid.). Further details on these procedures in Mourad, op. cit., 15 (the sciences connected with *fîrîbî*).
first to lay his country waste. But thanks to the protection of the chiefs of the Riyāḥ, to whom he had married his daughters, al-Muʿizz himself succeeded in escaping from Kayrawān and reaching al-Mahdiyya [q.v.].

At the first partition of Ifrikiya which followed the invasion, the Riyāḥ were naturally the best served. They obtained the greater part of the plains, which the Berbers had abandoned to seek shelter among the mountains; they had thrust their relatives, the Alḥāqi, towards the east. They held Bahda, which the Hafsids dynamically contested for many years because of the competition. The people of Gabēs [see Sāb] took the oath of loyalty to Muʾnis. "It was", says Ibn Khalduṅ, "the first real conquest of the Arabs". The Dāmī, a family related to the Riyāḥ, made Gabēs a regular little capital, which they adorned with their buildings. Lastly, a chief of the main tribe, Muḥriz b. Ziyād, made himself a fortress in al-Muʿallāka (a Roman circus?), among the ruins of Carthage. The powerful lords of al-Muʿallāka, however, supported the policy of the Zirids of al-Mahdiyya, and joined them in their resistance to the Almohads.

This resistance did not long impede the expeditions sent by the Maghribis against an Ifrikiya in anarchy. Defeated by ʿAbd al-Muʿmin in 546/1152, 555/1160 and 583/1187, the Arabs were ordered to supply contingents for the holy war in Spain. ʿAbd al-Muʿmin, leaving a section of the Riyāḥ in Ifrikiya under command of ʿAsākir b. Sulṭān, took the others to the Maghrib with their chief, ʿAsākir's brother Masʿūd, known as al-bulʿ ("the axe"; cf. Dozy, Supplement, i, 111). He settled them in the Moroccan plains to the north of Bū Regret. This control was little in keeping with the traditions of the Riyāḥ; Masʿūd fled to Ifrikiya and there gave his support to the Banū Ghāniya [q.v.], who were trying to revive for their own advantage the Almoravid power.

It is known how the trouble stirred up by the Banū Ghāniya led to the Almohad caliph's appointing a governor of Ifrikiya invested with very extensive powers, Abū Muhammad al-Maḥṣūd [q.v.] family. This governor naturally attacked the Riyāḥ and, in order to be rid of them, encouraged the settlement in the country of the Sulaym Arabs [see Sulaym, Banū] hitherto quartered in Tripolitania. Under the pressure of the Sulaym, the Riyāḥ were driven northwards, they submitted to the humiliation of paying an annual tribute. Their name no longer appears in the figures on the map of modern Morocco except at a place near the road from al-Kasār to Tangiers.

Another group of the Riyāḥ played a notable part in the history of the Zanāta states. In the western Maghrib, bodies of them transported by the Almohads to the plains of the coast faithfully served the dynasty, by trying to check the advance of the Marinids [q.v.]. Defeated near the Wādī Sbū in 614/1217, the Riyāḥ were mercilessly punished by the victorious Marinids. Defeated and weakened, and driven northwards, they submitted to the humiliation of paying an annual tribute. Their name no longer figures on the map of modern Morocco except at a place near the road from al-Kasār to Tangiers.

Finally, at the other end of Barbary, in their first home, the name survives in the nomenclature of the tribes.

RIYĀḤ — RIYĀL

Riyāl, a name used for coins in a number of Islamic countries, derived from the silver real (de plata), first issued by Pedro the Cruel of Castile (1550-9), followed by Ferdinand of Portugal (1567-83). In Spain it continued until 1870 and in Portugal until 1910.

The relations of the Spanish and Portuguese currencies to those of the Near East belong to the monetary history of the Ottoman Empire and of Persia. From the early 16th century the eastern gold and silver currencies suffered frequent devaluation and debasement. Western merchants needed more stable monetary standards if they were not to incur loss, and so relied on imported currencies; they could make further profit by exporting them as bullion to India. Austria, Germany, Holland, Poland, Spain and Venice were the principal western sources; the Levant Company, of London, forbidden to export English currency, at first purchased Spanish reals, but turned later to Dutch coinage. Spanish and Mexican reals were greatly valued for their purity, but, being roughly struck, encouraged clipping. Austrian and Saxon issues became popular because they were minted with a collar, which defied clipping. Thus among Bedouin they have remained popular into the present century.

The term riyāl is first recorded in the east in Persia under Shāh ʿAbbaṣ I in 1609. With Fath ʿAll Shāh's issue of 1797 it became the official name of the silver coinage, and this was retained in Rīdā? (Reza) Shāh's
reforms of 1932. It was frequently devalued and debased, and bore no numismatic relationship to the Spanish and Portuguese issues. The earlier Persian term lāri [see lari] is recorded as the common currency at Mombasa, Kenya, in conjunction with "pieces of eight" or Spanish reales, by an English visitor in 1617.

In Yemen, while still under Ottoman sovereignty, Imâm Yahyâ b. Muhammad al-Mutawakkil (1904-46) determined to defy the Ottoman right of zikka, that of issuing coins. H.F. Jacob, then Political Agent for the Bombay Government in Aden, has left an account of how machinery ordered from England for a mint in Sănâ'â was passed through the Aden Customs manifested as something else. Ottoman troops sent to intercept it were outwitted by an escort of 500 Yemeni tribesmen. This mint operated from 1906-63. The Yemen still uses the term riydâ for its currency.

There were sporadic issues of riydâls elsewhere, at Ghurfa and two other mints in Hadramawt at the end of the 19th century, and in Zanzibar by Sultan Barghâsh b. Sa'îd, of silver in 1881, and of ½ and ¼ copper riydâls in 1882 and 1883. A curiosity of the pieces is that the ruler's given name is reversed with his patronymic, as Sâîd b. Barghâsh. Slightly earlier, Charles Doughty, travelling down the Pilgrimage Route, found that the Maria Theresa thalers was the usual currency but that tribes further east preferred the riyał.

In Saudi Arabia, the riyał was instituted as local currency in 1935, in 'Umân (Oman) in 1945, in the United Arab Emirates in 1966, and in Dubayy and Kåtar (Qatar) since 1972. They all obtain their supply from the Royal Mint in Wales.

The history of the riyał can only be traced in the works of foreign travellers. Official documentation is not available. F.W. Hasluck has printed extracts from travellers to the Ottoman Empire, and H.L. Rabino de Borgomale citese references to Persia. A detailed report, 1766, Observations sur l'état actuel de l'Empire Ot- toman, by Henry Grenville, Ambassador to the Porte in 1762-65, and brother of George Grenville, Prime Minister of Great Britain 1763-65, gives an official account of the Ottoman economy and government. The Venetian sequin was the most favoured foreign curren- cy, an austro-asian holding stock.

RIYÂLA, RIYÂLE OR RIYÂLA BEY, abbreviation of riyal-yi hâmiyân kapudânî "captain of the imperial [galley-] royal", from the Italian riyaî (secondary form from real, abbreviated from galea real, "the royal galley"), a general officer of the Ottoman navy who commanded the galley of the same name, later "rear-admiral". There was also a popular pro-
Except the fourth, these officers were sea-going admirals and took the name, of Venetian origin, of "Bashtarda" — a Persian construction, whence the official barbarisms "bashtarda-yi himayün, kapudana-yi himayün, etc. The full titles were in theory "bashtarda-yi himayün kapudanı, kapudana-yi himayün kapudanı, etc.

1. Bashtarda, baştarda, baştarda-yi himayün — Ital. bastard, Fr. bastarde or bâtarde. This was not the largest unit of the fleet. In Turkish as in Venetian usage, the bastarde was a galley larger than the galleys "sentinel" (Tk. kadirga or ekstır), but smaller than the galeazza or galliass (Tk. kalyun). It was sometime said to be "like a water-melon" (karpuz kılıfı). Among the Turks it contained 26-36 oturaks or benches of 5-7 rows. The one which had the Kapudan Paşa on board was called (kapudan-) paşa baştardasi and had 26-36 oturaks. It was distinguished by the three lanterns (fener) attached to the posts in addition to that on the main mast (Yukh, fol. 69; Djerde Paşa varkı) 1309, 1311. As it flew the flag of the Grand Admiral, it was sometimes (Meninski, Thesaurus, i, 663; Barbier de Meynard) called "Captain", but we shall see that among the Turks this name was given to another vessel. Chance has willed it that the first syllable in the word baştarda means in Turkish "head, chief" but it is difficult to say that the Ottomans gave first place to this ship simply as a result of a popular etymology. The disappearance of the ship propelled by oars resulted in the abolition of the baştarda. Officially disused in 1717/1764, according to d’Ohsson, it was still used from time to time on certain ceremonial occasions. The sailing-ship (kayun, "galleon") which became the flagship of the kapudan paşa, was commanded by the "Flag Captain" who, according to d’Ohsson, was called in Turkish "kapudan-captain of the ship commanders" and, according to von Hammer (Staatsverf., ii, 493), sandıq kapudanı. Germ. "Flaggenkapitän", cf. Eng. "flag captain". Esad Mehmed Efendi calls this officer, probably by an archaism, "baştarda-yı himayin-i paşa “(commander of the imperial baştarda of the (kapudan-) paşa.

2. Kapudana bey. Kapudana comes from the Venetian (galea or nave) capitana "galley or ship carrying the leader of a naval company, a galleymaster" (Jal). In France it was called "la capitaine" or "capitainesse", but these terms disappeared in 1669 with the office of the Grand Admiral, who was in turn the Grand Admiral or kapudan pasha, superior to the captain of an ordinary galley. According to d’Ohsson, the kapudan pasha "president of the Higher Council of the Navy". He had a fixed monthly salary, and was the first ship of the navy, intended to carry the king, princes, the admiral of France or in their absence the general of the galleys (Jal). At the conquest of Cyprus, in 1570, Contarini (Venice 1595) gives for 185 Christian ships 7 kapudana, 7 padrona and 1 bastardella (no Reale); for the 276 Turkish ships 1 real (sic) and 29 capitana (these terms do not correspond exactly to those of Turkish usage of that time).

It is not explained how the title of Reale came to descend among the Turks until it was applied to the ship of the admiral of lowest rank. We may suppose that they were misled by the second meaning of the word Reale (see above), or that they confused him with the English "rear-admiral".

Marsigli (Stato Militare..., 1732, i, 146) mentions the Turkish "commandante nella Reale" as having a higher rank than the gurdayn bashı, who was in turn superior to the captain of an ordinary galley. According to Esad Efendi, the kapudan pasha came before the kalûynlar kabîbı.

All the officers here mentioned, from the kapudan paşa to the riyağa, were sähib deneq, i.e. they had the right to carry, in imitation of their Venetian colleagues, a commander’s baton or cane, deneq, also called şadefkari "szat (Esad Efendi, 109, 7) because it was encrusted with mother of pearl of different colours (see below). It was what the Venetians called the giunetta or cana (canna); from canna d’India, "Indian cane", often taken in the sense of "bamboo", from which we also have the English word "cane". It was carried instead of a real cane in a wooden case.

When under ʿAbd al-Hamīd I, or later under his successor Selim III (q. v.), the naval hierarchy was organised and to some extent modernised, three grades of admiral were instituted (independent of the kapudan paşa, who was the Grand Admiral or "amiralissimo").

1. The kapudan paşa "Admiral". Mehmed Şükrü regards his rank as equivalent to the more modern one of "güray-i bahriye reisi "president of the Higher Council of the Navy". He had a fixed monthly salary of 4,500 piastres, and in addition received pay for 1,000 men (out of which he was liable to make various grants), but with the obligation to give to the kapudan paşa spices or dàrız to the value of 4,000 piastres. He carried a green cane and had the right to have a pen-
RIYALA — RIZE

below the flag on the main mast (that of the kapudan-pasha was above).

2. Patrona bey 'rear-admiral' (Mehmed Şükrü), modern Turkish niz amir but we also find the French equivalent of "guidon" (Sâmi Bey; Tinghir-Sinapiân). Salary: 3,500 piastres. Pay of 800 men. Dâr-ı to the kapudan pasha of 3,000 piastres. Blue cane. Flag on the fore-mast.

It may be noted that, in theory, there was only one officer of each of these ranks at one time.

All three took part in the battle of Navartino in 1827 (Doun, Navarin, 250 and passim). They were under the command of Tâhir Paşa who had the rank of mîmirân. He was himself patrona, but this does not mean duplicating the office of the patrona who was subordinate to him, because the commanders-in-chief of the fleet (ser-asker bâg-bâg) were chosen without regard to rank. Khdîr Ilyäs (Enderun tdnkhi, 481) mentions a lîmân re^isi with the rank of patrona in 1826.

The flag-commander of the kapudan pasha retained his functions, but seems to have occupied a position on the edge of the hierarchy which the presence of the Grand Admiral on board sometimes made unenivable (von Hammer, Staatsverf., ii, 293).

We do not know at what period these ranks were replaced by the more modern terms of mâyîr, ferîk and lîwâ. The equations of rank varied considerably. The ryâla is regarded as mîr afay, mîmirân, lîwâ ferîk and even birîndî ferîk. It is probable that it was necessary to choose a grade between these. At Sebastopol in 1854, the Turkish fleet was commanded by a patrona, Ahmed Paşa (cf. Ahmed Râsim, Türkî, iv, 2013).

In Egypt under the Khedives, there was for a time a ryâla paşa in command of the fleet.

Bibliography: Only d’Ohsson gives definite information about the officers mentioned above, see his Tableau de Empire Ottoman, vol. vii, bk. viii, 420-38, devoted to the Navy. See also Ubicini, Lettres sur la Turquie, 2nd ed., Paris 1853, i, 484 (important); Jouannin, La Turquie, 456; Pakalân, iii, s.v.; I.H. Uzuççarşı, Osmanlı devletin merkeze ve bahriye teşkilatı, Ankara 1964, 433-5. See also Bahriyâ, iii, 126, and Kapudan Paşa. (J. Deny)

RIYÂM, Banû, also and perhaps originally Rîyâm, a tribal grouping in ʿUmân [q.v.].

The tribe would appear to have originated in the coastal area of southern ʿUmân and in the 4th/10th century al-Hamdânî (Sifa, 32) refers to them as a baın of al-Kamar, which Ibn Manṣūr’s LA (v, 115) states is a baın of Mahra b. Haydân, not the main group of Mahra which remained in southern Arabia. Kahlâla (Mu'qâm, ii, 428), relying on the 5th/11th century geographer, al-Bakrî, says Banû Riyâm themselves are a baín of Mahra b. Haydân b. A’mr b. al-Hâf, that they live in the coastal area of southern ʿUmân and that one of their fortresses is Raysût (Wilkinson, Immate, 75-6). The latter is the port of Zafâr [q.v.], about 15 km/10 miles across the bay from the settlement. Al-Firuzâbâdi’s Kâmâsi (ii, 125) says that Banû Riyâm also had a baín at Zâmar and al-Shibr, the port of Hadramawt. Despite these early references placing Banû Riyâm only in the south, their earlier settlement pattern seems to have extended from the southern coastal area as far as the plateau of al-Djâbal al-Akhâdr, and their main centre was in Djaîlâîn, the area in the south-eastern corner of the Arabian Peninsula. The political importance of Banû Riyâm in central ʿUmân, however, becomes clear at the end of the 3rd/9th century when they began to take over settlements at the foot of al-Djâbal al-Akhâdr on all sides (Wilkinson, Settlements, 243-6 and fig. 33). The area of al-Djâbal al-Akhâdr inhabited by Banû Riyâm has become renowned for its cultivation of such fruits as pomegranates, grapes, peaches, figs and mulberries, as well as roses for making rose-water and walnuts (ibid., 12-13).

(R. G. Smith)

RIZE, a town on the northern, Black Sea coast of Asia Minor, in the eastern part of classical Pontus and in the later mediaeval Islamic Lazistan [see LÆS], now in the Turkish Republic (lat. 41° 03’ N., long. 40° 31’ E.). In Byzantine times, Rhizus/Rhiziaon was a place of some importance and it was strongly fortified. With the Ottoman annexation of the Commene empire of Trebizond in 865/1462 [see TARABZUN], it became part of the Ottoman empire. A list of Orthodox Church metropolitans still in existence at the end of the 9th/15th century mentions the town, which formed part of the province of Trabzon, as a separate judicial district (kâda?). In the early years of Kânûnî Süleyman’s reign, the town contained 215 Christian households, two further households recently converted to Islam and 41 men subject to the bâdînha (landholding) tax. There also existed a monastery transcribed in the Ottoman register as Ayû Rândûs. The town was protected by two fortresses, one of them guarded by 31 soldiers under the command of a dizdar and kethkudi. A second kethkudi was recorded for the ‘old fortress’, which means that it was still in use. Two inhabitants of the town had been granted the privileges of köprügû, that is, they were exempt from certain taxes while responsible for the construction and upkeep of a local bridge. After the conquest of Trabzon, Mehemmed the Conquerer had resettled certain personages of the area in Rûmêll (sûrgûns); this fact is confirmed by the appearance of the first agricultural census of the early 10th/16th century. Among the town’s residents there also were a few sûrgûns from Bosnia and Morea. These were timâr-holders and followers of a governor, that is, they had probably been people of distinction in their areas of origin.

In the rural district surrounding the town, there were at least 29 villages and 35 mahâïles (quarters). This means that the non-nucleated settlement pattern, which is widespread in the area to the present day, existed in the 10th/16th century as well. The tax registers of the early 10th/16th century mention possessions of a Georgian power-holder (Gûrdgün kâfîr) in the area, which had been turned into a timâr after the Ottoman conquest. The total population of the kâda of Rize was recorded as 6,152 households. The majority of the population was still Christian, and many villages bore Greek names.

In the 11th/17th century, Rize, similar to other settlements located on the Black Sea coast, was subject to raids both on the part of the Abaza, who attempted to capture slaves, and on the part of Cossacks from the northern shore of the Black Sea. Guard towers were therefore built in the vicinity, which were still standing when the Mekhitarist monk Minas Bighiqlian visited them in the early 13th/19th century. He records only a single fortress in Rize, a port and some
shops. At some point in the past, Persian Armenians seem to have settled in the town quarter of Roshi and built a church; but it had apparently disappeared by the time of Bighzhi̇kian’s visit. The town went through difficult times in the 11th/17th century is probable; Ewli̇yȧ Celebi, who wrote a detailed description of Trabzon, merely mentions passing through or near Rize and does not supply any details.

Rize is mentioned in early 13th/19th century sources in connection with the Tuzdju-oghullari, a local əsən family which rebelled against Sultan Mahmut II in 1229-32/1814-15 and again in 1234-7/1818-21 and 1248-50/1832-4. The Tuzdju-oghullari had been influential in the area since at least the mid-12th/18th century. They engaged in trade and agriculture—Bızhzhi̇kian praised the area’s handsomely orange and lemon groves, while maize by this date had already replaced millet as the principal food grain. Peasants unable to repay their debts to the Tuzdju-oghullari had to hand over their land and work it as sharecroppers, a situation which entailed political loyalty toward this landholding əsən family. The latter paid the area’s taxes as a lump sum (maksi), and at the height of their power, the central government’s tax collectors could not enter the area. A handsome palace in Rize attested the power of the family. However, competition with another powerholder, who had succeeded in obtaining the governorship of Trabzon, resulted in an uprising on the part of Memiş Ağa, the head of the Tuzdju-oghullari. After recurrent revolts and considerable bloodshed, the principal members of the family surrendered and were banished to Ruse/Ruscuk and Varna.

In 1294-5/1877-8, Rize became part of the newly-established sub-province (sandık) of Lazistan and was promoted to the rank of provincial capital. Ca. 1307-8/1890, in addition to a covered market, the town possessed an administrative building (konâ) and constituted the seat of a governor (müstəsərrîf). At this time, the district contained a population of 160,000, of whom 138,820 were Muslims. Apart from agriculture, citrus growing and small-scale boat building, Rize was noted for a fine and high-quality striped linen, which was marketed as far as Baghdad and Egypt. This fabric has had a long history; it is mentioned in inscriptions of the Commenian period, and ca. 1245/1830, 75,000 pieces were produced every year; ca. 1308/1890, 150,000 pieces were being woven. However, Rize weavers were able to expand output only by lowering prices and profit margins, so that textile manufacturing relieved the poverty of the area only to a limited extent. Rize əzəhməndi is being manufactured down to the present day.

Overpopulation in the course of the 13th/19th century caused many young men to emigrate. Some of them settled in Istanbul, while others found their way to Odessa. The migrants specialised in various crafts; but given the high production costs, Rize tea has never been competitive with the major tea-growing areas of the outside world. Since the early 1980s, tea cultivation has slowed down, and emigration from the region to the industrial areas of Istanbul and northwestern Anatolia has continued.

Rize is now the chef-lieu of an il/ or province of that name. With a town population of 43,407 in 1980, Rize now possesses such public amenities as secondary schools, a hospital, and a railroad station.
This Kur'anic view was later strengthened by the hadith which stated that God decrees (fatfd, 2:233) things for man, without giving ownership of them, and especially, the Muslim theologians argued that God decrees in predestination, and that, whilst God provides both lawful and unlawful sustenance, it was possible for Him to provide a thing to man, and that, for example, the Qur'an allows obtaining stolen food? Hence the Mu'tazila concluded that God only provides for a man the sustenance to which he is lawfully entitled. On the other hand, orthodox theologians like al-Nagdhdh and al-Ash'ari [q.v.], faced with the proposition that God provided unlawful as well as lawful sustenance, made the distinction that, whilst God provides both lawful and unlawful sustenance, it was possible for Him to provide a thing with sanctifying ownership of it (cf. Watt, Free will and predestination, 66-7, 146, 147, idem, The formative period of Islamic thought, 201, 233). (C.E. Bosworth)

2. In the Kur'ân.

In the extensive Kur'anic use of this masdar (55 occurrences) and its related verbal forms (68 occurrences), God is virtually always the subject or implied agent. XXX, 40, makes maintenance of human life the explicit correlate of God's creation of it. Like creation, the power to sustain belongs to God alone (cf. XVI, 73, XXIX, 17, XXXV, 3, LVII, 21) and requires no reciprocal human offering (cf. XX, 132, LI, 57). Frequent repetition of the two phrases (and variants) "God provides/will provide for whom He wishes" and "God spreads (yabsutu) his provision generously for whom He wishes and sparingly [for whom He wishes]", conveys a sense of specific allotment and allowed the commentators to offer several technical terms (bakh, bakhahunna wa-al-razikm) for sustenance and predestination, 66-7, 146, idem, The formative period of Islamic thought, 201, 233). (C.E. Bosworth)

Kur'anic specification of God's sustenance includes such general designators as "good things" (sayyibi) and "a good, or generous, provision" (rizk) for which there are numerous earlier examples, and which also echoes the pre-Islamic concepts and which can be found in others of the older Near Eastern religions. The Qur'an also approves and also echoes the pre-Islamic concepts and which can be found in others of the older Near Eastern religions, especially, the Ma'mulaa al-Islamoyin, Istanbul 1930, 257, and al-Ibnâ, tr. W. Klein, New Haven 1940, 117-19; Abû Tâlib al-Makki, Kûl al-talab, Cairo 1381, ii, 3-37; Bâkillâni, K. al-Tâmîdî, Beirut 1957, 328-9; Abû al-Dâbbâr, Mumhîn, Cairo 1385, ii, 27-55, and Shâsh al-adill al-tammsa, Cairo 1938, 784-8; Abû Ya'âlî Ibn al-Farrâ, K. al-Mu'tamad, Beirut 1974, 149-52; Diwaynî, K. al-I'râhidî, Paris 1938, 208-9; L. Gardet, Dieu et la destinée de l'homme, Paris 1967, 132-4; B. Reinert, Die Lehre vom wasawwâl in der klassischen Briefliteratur, Apes Larday 1943; For the sources, see, in particular, W. Hoenerbach, Zur Herrsersubstitution der Abgässien. Studien über Absarafa, Diwan al-qait, in J., xxix (1950), 278 ff., and C.E. RIZWAN BEGOVIC [see RIJWAN BEGOVIC]...

3. In military terminology.

Rizk appears here for the regular payments, in cash and in kind, made to those soldiers registered on the diswân of earliest Islamic times and, by the 'Abbasid period, on the more elaborate diswân al-qiyasa, hence equivalent to 'sip (q.v., and also DA'VY. 1, and QAT. of Qawwûn or 'amr). Such soldiers, the mutazakka, those drawing regular allowances, are contrasted with the mutawatwâa ('q.v.), volunteers who served in the early Islamic armies without regular stipends but who shared in the plunder. A single pay allowance was termed a razka, pl. razakâ. A considerable amount of information can be gleaned from the sources on the pay procedures, the intervals between payments, etc., both of the central caliphate and also of its provincial successor dynasties; see, in particular, W. Hoenerbach, Zur Herrersubstitution der Abgässien. Studien über Absarafa, Diwan al-qait, in J., xxix (1950), 278 ff., and C.E. Bosworth, Abû Abdallah al-Kuwasari on the technical terms of the secretary's art, in FESHO, xii (1969), 144-6. (C.E. Bosworth)

RIZWAN BEGOVIC [see RIJWAN BEGOVIC]...

RODOS, Turkish name (popular pronunciation also Rako) for Rhodos, Greek name for the ancient port city of Rhodes, both fem.),(an island and port city near the southwestern corner of Turkey, since 1948 a Greek possession and administrative centre of the nomos of Dodekanesos [see ON KI' ADA].

Rhodes stands out for its relatively large size (1,404 km²; the second largest island of the eastern Aegean after Lesbos (see MÖDILLI); maximum length between capes Kumburnu and Praso, 80 km, maximum breadth between capes Lardos and Astakias, 38 km), regular shape (an extended ellipse with a northeast-southwest axis), position at the southeastern extremity of the Aegean archipelago, and proximity to the Anatolian coast (18 km to the nearest point on Daraçya peninsula; 45 km separate the harbours of Rhodes and Marmaris). The interior is relatively mountainous (Attaviros, 1215 m/3,985 ft. is the highest peak) and has one of the last remaining forests that once covered the Aegean islands. Its climate, however, never extreme climate, beautiful scenery, and thriving vineyards and orchards, have since Antiquity elicited praise from poets, pilgrims and tourists.

In the past it was the island's strategic location on or near shipping lanes linking the eastern Mediterranean with the Aegean, Adriatic, and Black Seas that made it play a historic role in trade, war, piracy, and...
traffic of pilgrims to and from the shrines of the Near East. Aside from the context of war with the Byzantines, the caliph Mu'awiya may have foreseen some of these assets when in 52/672 he sent a fleet under Djinādāb. Abī Umayya al-Azdī to seize Rhodes after a preliminary raid in 33/654 staged by him while still governor of Syria; al-Balāḏūrī states that when Yazīd succeeded Mu'awiya seven years later, he ordered Djinādā to destroy the fort built after the conquest and return to Syria. Byzantine reports imply, however, that the Arabs occupied the island intermittently until definitively withstood off 12/727 by Berenice, ostensibly their failure to take Constantinople. According to a Byzantine source, the Muslims sold during their brief presence the bronze statue of the Colossus, since 225 BC lying toppled by earthquake in the sea, to a Jewish merchant of Edessa as scrap metal.

The next and most dramatic steps of Rhodes into Islamic history began when the Knights of St. John of Jerusalem (the Hospitallers, after 1530 better known as Knights of Malta [see DWAIYYA and ISBITARIYYA in Suppl.]) acquired it as their new base and headquarters. This military and charitable order, driven out of Acre [see 'AKKĀ], their last possession in Palestine, in 1291 by the Mamlūks, first moved to Cyprus as guests of the Lusignan dynasty, but by 1309 they established themselves in Rhodos as a complex theocratic, commercial, and naval power until their defeat and expulsion by Süleyman the Magnificent 213 years later. Besides adding various buildings of religious and utilitarian nature, the Knights kept strengthening the fortifications of the city and port to the point where it would take a supreme effort by the Ottoman empire at the peak of its might to conquer it. On the commercial and economic level, the Order, which also possessed several other islands of the Dodecanese as well as the fortress of St. Peter (ancient Halicarnassus; see BOURLIM) and the small but important island of Meis (Castellorizo) by the Turkish coast, prospered through trade carried on by a cosmopolitan lay community benefiting from the security assured by the rulers, but also through lucrative piracy cloaked in the mantle of Holy War and practiced both by the Knights themselves and by privateers welcomed under specific conditions. On the charitable level, the Order lived up to its original mission of caring for sick and needy pilgrims, for their hospital, and ran a hospital described with admiration by many travellers; and on the military level, the Order, although initially new to maritime matters, created a small but efficient fleet that became a thorn in the side of the Muslim powers of the eastern Mediterranean, although initially new to maritime matters, created a small but efficient fleet that became a thorn in the side of the Muslim powers of the eastern Mediterranean, first the Mamlūks and then the Turks. Having originated and functioned in Palestine as a byproduct of the Crusades early in the 12th century, the Hospitallers retained some of this attitude and participated in several later Crusades, but in 1344 they played a vital role in the league organised by Pope Clement VI that captured İzmir from the amīr of Aydīn [q.v.]; placed in charge of the city, they withstood all Turkish attempts to dislodge them until Timūr [q.v.] stormed the place in 1403. In 1365, the Hospitallers participated in the sack of Alexandria led by Peter D'Acquasparta, which they provoked with a belated but vigorous response from the Mamlūks, who in 1424-6 reduced Cyprus to vassalage, and who before 1440 and 1444 made three attempts to conquer Rhodos. The second attempt (1443) ended with the siege of Meis, but only the third attacked Rhodos itself; after a 40 days' long siege, however, counterattacks by the Knights forced the Mamlūks to desist and sail back to Damietta. Despite the confrontations with the Mamlūks and, increasingly, the Turks, the Hospitallers also had intermittent diplomatic and commercial relations with the Muslims, not unlike those pursued by Venice and other merchant republics, except that their emphasis was on care for Christian pilgrims (consuls in Jerusalem, Ramla and Damietta). The Knights sent envoys with congratulations and presents on the occasion of Mehmed II's accession in 1451, and after the sultan's conquest of Constantinople, they proposed a commercial treaty. The new crusade projected by the pope-Calixtus II did not materialise, but the plan forced the Knights to change their policy and to resume maritime depredations on Turkish shipping and coasts. As a result, punitive expeditions were sent in the course of the 1450s; none dared to attack the fortified port city itself, but the second under Hamza Bey raidied Istanbōyl/Kos, the Knights' other largest and most important island possession, and the fortress of Archangelos on the northeastern coast of Rhodos. The subsequent accommodation stipulating a cessation of the Knights' depredations had limited effect, partly because war with Venice (1463-79) absorbed the Ottomans' naval resources; the shehzade Djem [q.v.], as governor of Karaman [q.v.], had the task of dealing with the vexing problem. The return of an envoy sent by him to plead with the Knights coincided with the conclusion of the war, and the sultan turned his main attention to Rhodos. An imperial fleet under Mesih Pasha sailed in spring 1480, and the Turks besieged the port city for two months (May-July 1480), but the final assault on 28 July collapsed and they withdrew. The failure may have been partly caused by flaws in the vizier's leadership, but also by the absence of the sultan himself. Moreover, Mehmed II did not repeat the attempt the following year but threw the main force of the empire into a campaign that may have had Rome as its ultimate target; his own death in May 1481 caused the Turks to abandon their bridgehead at Otranto, and the subsequent fifteen years witnessed a paralysing contest between Djem and his brother, Sultan Bāyezīd II [q.v.], for the throne. The shehzade, defeated by his brother on the mainland, took refuge in Rhodos (July-August 1482), whence the Knights transferred him to the custody of their brethren in France; the threat posed by the Pasha of Shemakha (q.v.) to whom the Turks were then forced to pay onerous indemnities, first to the Knights and then to the Pope, and it ceased only with Djem's death in 1495. Even more harmful, however, was the chronic threat posed by the powerful corsair Knights, whose port also functioned as an intelligence centre and a base for other Christian powers and pirates preying on "infidels", and the sultans' protracted neglect to resolve this problem. Ironically, however, the Hospitallers may have unwittingly assisted the birth of Ottoman power in North Africa, and the genesis of the greatest naval epic of the Islamic Mediterranean, when they turned the initially commerce-minded Barbarossa brothers into prodigiously successful Muslim corsairs by temporarily capturing and enslaving Khādīr, the future Khāyru al-Dīn [q.v.]

The overdue conquest of Rhodos was finally achieved by Süleymān the Magnificent after a five months' long siege (July-December 1522) whose magnitude, display of heroism by both sides, as well as mutual courtesy marking the two encounters between the Order's Grand Master Philippe Villiers de l'Isle Adam and the sultan, have secured it a choice place in the annals of Mediterranean history. Both adversaries were long aware of the inevitability of a
final confrontation. Since the siege of 1480, the Knights had perfected the fortifications to the verge of impregnability. The sultan, however, eager to inaugurate his reign by succeeding where his illustrious ancestor had failed (at Belgrade [q.v.] and Rhodes), threw the formidable resources of the Ottoman empire against the daunting defences of the island fortress. The besiegers had at their disposal a war and logistical fleet estimated at up to 700 vessels; the sultan, who had come overland, embarked at Mar mariis for the island. The operations themselves were revealing for the great strides the art of siege mining had made since the fall of Constantinople; it performed a role against the walls of Rhodes no less crucial than artillery had done against those of the Byzantine capital. The final surrender of the Hospitalers was facilitated by the generous terms which Süleyman the Magnificent accorded them; they included a safe departure of the Order as well as of all others wishing to leave. The Turks entered the fortress on Christmas Eve 1522; churches were turned into mosques on Christmas Day, and on St. Stephens’ Day, a Friday, the sultan held a dînâm, at the end of which he received the Grand Master. The Order’s evacuation, in its own ships, was completed by 1 January 1523, with Viliers de l’Isle Adam leaving on that day. The humaneness displayed by Süleymân at the conclusion of this triumph was marred by the arrest and execution of his uncle Murâd, the son of Djem, who had remained in Rhodes and converted to Christianity, and of his son (his wife and two daughters were sent to Istanbul). Moreover, although the magnanimity of the sultan’s treatment of the defeated Knights is indisputable, its wisdom is less certain: Süleyman underestimated the resiliency of the military order, which would become his nemesis at the conclusion of his life by repulsing a similar attempt to dislodge it from the island of Malta (1565), besides again becoming a thorn in the side of Muslim shipping.

After the conquest and for the rest of the Ottoman period (1522-1912), Rhodes lost much of its former prominence and strategic importance; this was due not only to the fact that it itself no longer threatened Turkish coasts and shipping but also because all of the eastern Mediterranean became part of the empire. Nevertheless, the port city could at times perform an ancillary role in the art of securing the empire against the daunting defences of the island for-
plained not only by the number and experience of scholars studying classical and mediaeval Rhodes but also by the relatively brief and superficial effect which the Muslims had on it. As basic treatment, the article Rhodes in Pauly-Wissowa's Realenzyklopädie can be cited; another example is the ten large volumes of Clara Rhodos, published between 1928 and 1941 by the Istituto Storico-archeologico di Rodi.) Baladhuri, The origins of the Islamic state, tr. P.K. Hitti, New York 1916, repr. 1968, i, 375-6; Arif Ibrahim, Arabic literature in the 12th century, in Historical Journal, xiv (1971), 234-44; A. Khan, The successive Muslim rulers of Hindustan have arrived here in the 6th/12th and 8th/14th centuries, during which period numerous uprisings of the Katahriya muwādīn ('brigands') are recorded. The importance of Badāʿūn decreased, and Bareilly became the capital, under Badaʿun. In 633/1236 its governor Rukn al-Din became king of Dihl. Some of the earliest Muslim architects in the area dates back to these first governors. Badāʿūn was one of the earliest centres of Muslim culture in North India. Hundreds of Muslim martyrs lie buried there. The sūbah of Badāʿūn was one of the most important administrative centres of governorates already under the Muʿizzī Sultans of Dihl and is mentioned frequently in the Indo-Muslim chronicles. ilitation of Badāʿūn and increased, and Bareilly became the capital, under Shāh Djahān, while Awrangzēb added the district of Sambhal (Western Rohilkhand) to the territory ruled over by the governor of Kātab. The great majority of Afghan immigrants who, from the second half of the 11th/17th to the beginning of the 13th/19th century, settled in Kātab, Rohilkhand originated from the area of Peshāwar [g.v.] and belonged to the Yūsfayz tribe, mostly of the Mandār subsection. At the beginning of the 12th/18th century, Mughal rule in the provinces of Sambhal and Badāʿūn was restricted to the vicinity of the larger cities of Bareilly, Mūradābād and Badāʿūn, while there were already many Afghāns from the Peshāwar area in the local armies of the Kātab rājās, and Kātab at large was dominated by rival Katahriya 2,342-49, new ed., Istanbul 1935, ix, 233-57; Plri Reßme, Kitdb-i 3, 29-34; Mustafa Čelebi Dželāżade [Kodja Nishāndj], Tabākat′ul-memādlik ve derecsis′ul-mesālik, ed. The great majority of Afghan immigrants who, from the second half of the 11th/17th to the beginning of the 13th/19th century, settled in Kātab, Rohilkhand originated from the area of Peshāwar [g.v.] and belonged to the Yūsfayz tribe, mostly of the Man-
ROHILKHAND — ROHILLAS

Radjput, Djat and Bandjara zamindars. Dawud Khan (ca. 1122-37/1710-25), founder of the Rohilla state, started his career as a petty horsetrader, and for some time was a military entrepreneur and cavalry officer in the service of one of the local zamindars of Katahr. The succeeding Rohilla leader, ‘Ali Muhammad Khan (1137-62/1725-49), became increasingly involved in Mughal politics, assumed the title of Nawâsb [q. v.]—which was soon recognised by the emperor—and set up court at the new capital of Aonla. This happened in the wake of Nâdir Shah’s invasion (1152/1739), when new waves of Yusufzay immigrants from Roh swallowed the Rohilla ranks to around 100,000. In 1155/1742 a large campaign into the Terai and the northern hills was undertaken; Ku- maon and Garhwal were reduced to tributary status. At the time of ‘Ali Muhammad Khan’s death, Mughal imperial influence in Rohilkhand had vanished. Kâ’im Khan, the Bangash nauwâb of the adjacent Afghan principality of Farrukhabad [q. v.], as the senior member of the Afghan nobility at the Dihli court, now claimed the whole of Rohilkhand. He was killed, however, in the ensuing struggle with the Rohillas in 1161/1748-9, near Bada’ûn. Rohilkhand then became a confederacy of small principalities based on a dense and flourishing urban network. Another Rohilla parvenu, Nadjib ad-Dawla (1166-84/1753-70), who, as ‘Ali Ahmad Khan’s wazir, was appointed as a viceroy of Rohilkhand in 1175/1761, as reward for the other Rohilla leaders Hafiz Rahmat Khan [q. v.] and Dündî Khan, who took possession of his territory. In 1166/1753 Hâfiz Rahmat Khan sided with the minister Sa’dar Djang [q. v.], while Nadjib ad-Dawla sided with the Emperor and was awarded a mansab [q. v.] of 5,000. In 1169/1756 Nadjib ad-Dawla joined the Afghan ruler Ahmad Shah Durrânî or Abdâlî [q. v.]. In 1170/1757 Nadjib ad-Dawla obtained an appointment as Mir Bâkhâli. All the principal Rohilla chiefs allied themselves with Ahmad Shah Abdâli and played an important role in his victory over the Marâthâs at Pânîpat [q. v.] in 1174/1761. As rewards, extensive territories were assigned to them by the victor. But the Rohilla leaders could not consolidate their gains because of mutual jealousies. Nadjib ad-Dawla died in 1180/1765 amid disorders, and in 1180/1765 Dabîta Khan, Hâfiz Rahmat Khan and his allies among the Rohilla chiefs were utterly overthrown by Shudâlâ [q. v.] and the English in 1188/1774. Dabîta Khan (d. 1199/1785), who was not involved in this conflict, maintained his position with difficulty; his son Ghulâm Kâdir became infamous by seizing Dihli and blinding the Emperor Shah ʿAlâm (1202/1788). He was killed soon afterwards, and Rohilkhand rule in the upper Do‘âb also disappeared; the Râmpur State [q. v.] was the only Rohilla principality to survive.

The Rohillas obtained commendation from contemporary observers for their promotion of agriculture. As builders, their contributions were modest, though Nadjib ad-Dawla left a town named after him (Nadjibabâb [q. v.]), where he built a fort and some other buildings. Nor did the Rohillas leave much of an imprint on art and literature. They do not appear to have maintained their own language and identity, in any notable way, and it soon disappeared. In the next century, the Rohillas under Kân Bahâdur Khân, a grandson of Hâfiz Rahmat Khân, joined the Sepoy Rebellion of 1857-8 and suffered the consequences of its failure.

tains, New Delhi 1993.

RÖHTAS, a fortress in the Jhelum District of the Pandjāb province of Pakistan (lat. 32°55' N., long.
73°48' E.), 16 km/10 miles to the northwest of Jhelum town. It was built by Shīr Shāh Sūr [q.v.] in 949/1542 after his victory over the Mughal Humayün [q.v.] and named after Shīr Shāh Sūr’s other fortress in Bihār, Rūhtāsgarh [q.v.].

Bibliography: Imperial gazetteer of India, xxi, 332.

RÖHTASGARH, a hill fortress and settlement in the Shāhābād District in the northeast of the state of Bihār in the Indian Union (lat. 24°37' N.,
73°48' E.), some 50 km/30 miles south of the town of Sahsaram when he was ap-
pointed governor of Bihār and Bengal. It was sur-
rendered to the British army in Bengal soon after the
day of Baksar (Buxar [q.v.]) in 1764 through the ef-
forts of Mir Kāsim Ali’s opponent Ghulām Husayn Khān Tabātābā [q.v.].

AL-rukāsī, Ibn Akhī Muṣādh al-Harrā [q.v. al-Ru’aynī]
Mahmūd [b. AL-ḤASAN] b. Ābī Sārā b-Nili al-
Nabwī, Ābū Djiāfar, an Arab grammarian,
regarded to be the legendary founder of the Kufān school of grammar.

Very little is known about his life and grammatical views, which are rarely quoted by later grammarians. The legend about al-Ru’āsī’s founding the Kufan school of grammar seems to have been invented by the polemsics with al-Mubarrad. Both grammarians quote the name of al-Ru’āsī (this name from the largeness of his head) in a clearly polemical vein. Al-Ru’āsī is said to be quoted by Sibawayh as al-Kūfī ‘the Kufan’, which is not cor-
borated by the text of al-Kītāb. Al-Ru’āsī was a man of wide contacts and studied under or proba-
ably as Ibn al-Anbārī, his nephew) of the inventor of tarīqī and Kurān reader Muṣādh al-
Harrā, which might be inferred from his name Ibn Akhī Muṣādh al-Harrā. Later grammatical sources (e.g. al-Suyūtī) confuse al-Ru’āsī with his relative Muṣādh al-Harrā. In Kufā, al-Ru’āsī studied Kurānic recitation (harfū) under al-A’māz (d. 147/764); grammar he learned from Ḥāfa b. ‘Uthmān and Ābū ‘Amr b. al-A’zā. His disciples in Kurānic recitation were Khalīl b. al-Minākāri and ‘Ali b. Muhammad al-Kindī, and in grammar al-Kisā’ī and al-Farrā, both famous grammarians from the Kufan school. He is said to have visited Baṣra, but was never accepted there as a grammarian. Kufa seems not to have been his favourite dwelling place; most of the time he spent in the neighbouring al-Nīl (whence his name); he received his wife originating from where his wife originated. Judging from secondary evidence, al-Ru’āsī lived in the second half of the 9th century; he was a contemporary of al-
Khālīl b. Ahmad [q.v.], with whom he maintained contacts. During the reign of Hārūn al-Rashīd he was said to have been very old (‘ummira).

None of his works is extant. (1) His most frequently mentioned work on grammar is the treatise al-Faysāl (“The Decisive”). The 3rd/9th century grammarians Ibn al-Sarrāj claimed to have read it (according to Yahyā). His other grammatical works are: (2) al-
Tāfālīr on the diminutive; (3) al-‘Irād wa l-‘iqlam on the singular and plural. His main interest lay, however, in practical problems of Kurānic recitation. Quoted are the following works: (4) Kitāb Maṣā’īl al-Kurān (‘al-Ru’āsī’s teachers and according to their teachings. Its methodology and value have been assessed by al-Ahwām and Forneas in their seminal works on Andalusian bibliographical literature. Al-
Ru’aynī’s haremād, contrary to Ibn Khayrāb’s F],
(especially *kira‘ātl*), *adab* works (like al-Hariri’s *Makdmdt*) and poetry. Among the data which he offers, it is worth noting the transmission of the *shā`ir‘ī*’s *hudud* ‘*alā *tābīt al-kadar* by al-Murādī, of the *Makmāt* al-sublān by al-Khaḍrādī, of other barāmīdī (he quotes many *rūyāt* by Ibn `Ubayd Allāh al-Hādijārī, d. 591/1194, through Abu 1-`Abbās al-`Azafrī), of al-Suhrawardi’s *K.* *A`tmān al-ma`arīf* and *Iyād*’s *K.* *al-Shīf‘ā.* He has recorded valuable information about his teachers and contemporaries, like Ibn Hishām al-Azdi (the author of *Mufid li ‘l-hukkām*), Ibn Khāzradjī, of other *ugāyāt*, Ibn Ikhshid’s leaning towards *ru`ūb* and poetry is shown in his *Ikhwāt min al-madīnī fī ḥadīth al-mu`adhdhīna, al-khawdīr min al-masā’il fī ḥadīth al-mu`addalāt, a continuation of the works by Ibn Khāzradjī and Ibn Bāsām [q.v.]. He also wrote a work on *hadīth* entitled *Iktifād* al-sanan ji *intikāf* arba`a. The *shā`ir* *al-khawdīr min al-mahdsin fi ḥadīth al-mudda al-`adhbah by al-Murādī*, of other *ugāyāt*, and *al-Suhrawardi’s K.*

In the 3rd/9th century, Muslim astronomers developed three main varieties of smaller quadrants (*rubūb* for timekeeping [see *miqāt*]. First, the horary quadrant (*rubūb* al-`adhbah), marked with a radial solar scale and curves for the hours. With this one could simply hold the quadrant vertically and align the radial edge towards the sun’s sights requiring the hour and then the quadrant would hang over the hour curves, and from its position relative to these one could read the time (see Ps. XXXII, XXXIII). Second, the trigonometric or sine quadrant, marked with a set of parallel horizontal lines (originally for each 15° on the outer scale, representing hour lines). With this one could calculate the time of day *T* in seasonal hours [see *shīb*] from the observed solar altitude *h* and the meridian solar altitude *H*—the formula was approximate, equivalent to the following in modern notation:

\[
T = \frac{1}{15} \arcsin \left( \frac{\sin h}{\sin H} \right)
\]

(Note that the boundary conditions when the sun is on the horizon (*T* = 0 when *h* = 0) and on the meridian (*T* = 6 when *h* = *H*) are satisfied; the formula is in fact accurate at the equinoxes.) This approximate formula has the advantages that it is much simpler than the accurate formula, that it works for any terrestrial latitude (within limits), and that it yields good results for most practical purposes (if only for lower latitudes, and certainly not for latitudes in Northern Europe). From this quadrant there developed in later centuries the sine quadrant (*rubūb* *mudayyub*) with markings resembling modern graph-paper; with this any problem of mediaeval trigonometry could be solved (see Pl. XXXV). Third, the universal horary quadrant (*rubūb* *ṣafā†), designed to solve the same trigonometric formula as the second variety but quite different in appearance. The hour-curves are now a set of circular arcs radiating from the centre to each 15° on the outer scale (with a semicircle representing the sixth hour, that is, midday). Such markings were used by Muslim and European astronomers for over a millennium, mainly on the backs of astrolabes [see *astulfar*] and sometimes in combination, as shown in Pl. XXXIII, and it can be assumed that few in later centuries (especially the Europeans) had any idea of the underlying formula. This quadrant, then, is universal (*ṣafā†*), and one enters simply with the solar meridian altitude, but it can be made specific by having a cursor marked with a solar or a calendrical scale on the outer rim. A 3rd/9th-century treatise from Baghdād describes such an instrument with either a fixed cursor, serving a single latitude, or a movable cursor, enabling the user to enter with the solar longitude. This instrument was known in mediaeval Europe as *quadrans vetus* (see below). Few early Islamic quadrants survive. But the same markings—for performing trigonometric calculations or for finding the hours—were added to the backs of astrolabes, and it is there that we can trace their development in instrumentation.

In the 5th/11th or 6th/12th century, probably in Egypt, an astronomer whose name is unknown to us hit on the clever idea of using one-half of the markings on an astrolabe plate as a quadrant, replacing the rete...
with a thread with movable bead attached at the centre (rubāʾ al-mukantard). The earliest surviving examples of this kind of astrolabic quadrant are by the early-8th/14th-century Damascus astronomer Muhammad b. Ahmad al-Mizzī. Such quadrants, with trigonometric markings on the back, were very popular in the Ottoman Empire and generally replaced the astrolabe in those regions. Dozens of late examples survive (see Pls. XXXIV, XXXV).

The writings of al-Marrākūsh (fl. Cairo, ca. 680/1280 [q. v.]) and Ibn al-Sarrājī (fl. Aleppo, ca. 780-820), of which the latter was the author of a lost treatise on Cleomedes' and Albert of Bohemia's (B. Dorn, Bey and the sine quadrant, in [1975], 108-24; J. Moulierac (ed.), Syne, mémoire et documents, Memoires de l'Academie Im-

Gli strumenti, Turin 1991, 154-89 and 581-5. Some of the earliest texts on the horary quadrant with cur-
A trigonometric quadrant (upper left), horary quadrant for a specific latitude, in this case 41° serving Istanbul (upper right) and a universal horary quadrant (lower right) on an astrolabe dated 1125 AH [≈ 1713-14] signed by ‘Abdi. Courtesy of the Museum of the History of Science, Oxford (inv. no. 57-84/171A, diameter 131 mm).
The astrolabic markings for latitude 33°30', serving Damascus, on a quadrant signed by Muḥammad al-Ṣakāsī (؟) al-Djarkāsī ca. 1800 (radii 134/110 mm). Private collection, courtesy of the owner, photographs (also Pl. XXXV) courtesy of Mr. Luis Marden, Washington, D.C.
The trigonometrical markings on the back of the same instrument include all of the special lines and curves devised by Muslim astronomers over the centuries for solving specific problems of timekeeping.
Cheesman, *The deserts of Jafura and Jabrin*, in *GJ*, lvx [Jan.-June 1925], 139). According to Cox, Bertram Thomas, Wilfred Thesiger and H.R.P. Dickson, the name Rub\(^\circ\) al-Kh\(\text{h}l\)\(\text{i}\) was unknown to the indigenous people living around the desert perimeter and the only general term known to most modern travellers to describe the desert was “al-Ramal” or “al-Rimal” (Thomas, 180; Thesiger, 37), although Cox also encountered the term Nufud as well. Within the desert, specific tracts are identified by particular names, such as al-Ka‘āmilīyāt, Shuwayklā, Hawayā, Ramlat al-Khākhariya, Bayt Kathlā and Jurān-awān. Thomas (1930-1), Philby (1932) and Thesiger (1946-7, 1947-8) all conducted major journeys of exploration in the sands, and in modern times, oil exploration and development have made it relatively more accessible. Today, a number of international boundaries in the Rub\(^\circ\) al-Kh\(\text{h}l\)\(\text{i}\) are disputed and the discovery of oil has encouraged conflicting claims, several of which remain unresolved.

(G.R.D. King)

RU'BA b. AL-'ADDJADJ AL-TAMIMI, Abu 'l-Djahláf (Abū Muhammad also occurs), an Arab poet of the Umayyad and early 'Abbāsida era (d. 145/762), the greatest exponent of the raďaz [q.v.] kasida. The name Ru'ba, by which he was called after his grandfather, is attested seven times, and its diminutive Ru'ayba eight times, in Ibn al-Kalbi's genealogy (see Caskel-Strenzienki ii, 489f). There is no clear cluster of attestations in Eastern Arabia, which makes Krenkow's contention (see EP, s.n.) that the name is the Persian ṭūbāh “fox” less likely. Arabic philologists suggest several explanations of this peculiar name (Ibn Durayd, al-līthbīk, 260). Al-'A...
tains several monothematic pieces, in particular three
desert descriptions (nos. 1, ... This in-
volved recourse to anecdote betrays awareness of the

RUBâI (pl. RUBÂIYYAT), a verse form.

1. In Persian.

In Persian, this is the shortest type of formulaic
poem; its long history, the strict rules governing its
type and the richness of its expression makes it one of
the jewels of Persian literature, now usually
accurately called "quatrain" (Arabic rubâ', "in fours, in
foursomes"; rubâ', composed of four parts >
"quadriliteral"). In the 7th/13th century, Shâms-i
Kays explained the Arabic appellation thus:
"because, in Arabic poetry, the hazâdî metre is made up
of four parts; thus, each bajî (in Persian) con-
structed on this metre forms two bajîs in Arabic" (Shâms, 115, ii, 3-4). This reference to Arabic poetic
technique, in describing a specifically Persian form of
poem has for a long time confused study of the
quatrain.

Shâms-i Kays, in his magisterial treatise on Persian poetic
technique (completed after 630/1232), al-
Ma'qûm fi ma'âyir ašîrâr al-adâjîm, tells the story of an
ancient Persian poet ("and I think that it was
Rûdâkî", 112, i. 4) who invented the metre of the
quatrain on hearing a winsome child crying out in the
course of a game: ghâlîn ghâlîn hamirawad tâ bun-i gu
("the ball is rolling, rolling to the bottom of the
ditch"), i.e. in quantitative metre: 4 4 4 4. On
account of its rhythm and freshness, the poem thus
invented was called târânî ("young and fine");
"it was also called du bajî (with two bajîs). This
involved recourse to anecdote betrays awareness of the
specifically Persian origin of the quatrain. But Shâms
no longer possessed the elements which would have enabled him to address correctly the study of the
languages by Fr. Gladwin, Garcin de Tassy, Fr. Rücker-W. Persch and H. Bloechmann, are an-
notated translations of the latter. All give prominent place to the problem of the rubāʾī, as does Shams-i Kays.
In the first chapter of al-Muʿjam, the first metre of which he analyses the constitution and usage is the bahār-i haṣādī, a metre of quantitative rhythm composed of a foot of one short and three longs (mafṣūṭūn) repeated three times, hence four equal feet. Like his predecessors, Shams seeks to locate the rubāʾī among the realisations of the Arabic haṣādī metre; but he finds it so original that he relegated study of it to a footnote at the end of his survey of this metre. He then has recourse to the authority of an ānān of Khorāsān, Hasan Kaṭṭān (115, l. 19), who had constructed an overall diagram formed of two trees with twelve branches, designed to show all the opportunities for “changing the foot by excision of a syllable” (zihāf), available in Persian in the usage of rubāʾī and “which did not exist in Arabic” (115, l. 5), even though “today”, he says, there are numerous rubāʾīyyāt in Arabic, imitations of the Persian. Case by case, over six pages, Shams subsequently brings his aesthetic appreciation to bear on the major realisations of haṣādī metre in the rubāʾī; these are formed on the basis of two principal types of excision of a letter (or of a syllable) at the beginning of a foot, ḥār or ḥarm. The specifically Persian tarānā was thus forced into a mould which was inappropriate for it and from which modern ingenuity has been unable to extricate it (M. Farzaad, Persian poetic metres, Leiden 1967, 99-123).

In order to escape from the impasse to which the false path of haṣādī was leading, it has been necessary to undertake a philological study of the antecedents of this sophisticated rubāʾī and a statistical study of the reality of the usage of the metre of the Persian quatrain, setting all theories aside. It is undisputed that three elements characterise the rubāʾī: brevity, the absence or minimum of caesuras, and the rhyme appropriateness to its structure. In its classical form, it is the shortest of Persian poems. Each one begins in the same formal fashion. It is composed of two baytāt; each baytā consists of two mīrāḍ’s or hemistichs; the four mīrāḍ’s have the same metre, or are arranged in pairs, with two variants of the metre. Mīrāḍ’s 1, 2 and 4 rhyme; in some cases mīrāḍ 3 also rhymes with the others. In short, it is a form offering almost limitless possibilities for stylistic experiments.

It is not known when the quatrain first came into existence. Its emergence in literature can be pinpointed, but it is certainly of pre-Islamic origin, and of popular origin also: the du baytā remains a form of poetry widely practised throughout the Persian cultural sphere. Historically, the quatrain has followed the evolution of Persian poetry in general. Whatever direction it takes, the quatrain is a prose poem written in a syllabic metre and an accentual verse with caesura; rhyme, admittedly irregular, appears in the early Islamic period, and is followed by the use of quantitative metre, irregular at first, ultimately becoming regular quantitative versification, with regular rhyme (Lazard 1975, 612-14). The appearance, under Arabic influence, of rhyme dictated by increasingly stringent rules is understandable; more singular is the subjecttion of the Iranian syllabic metre to Arabic quantitative prosody (Benveniste 1930, 224). There was imitation of the quantitative principle, but application took account of previous realities. It is for this reason that the Persian metre differs from the Arabic metre in the distribution of long sounds; this applies particularly to the quatrain. The Persian metre is a syllabic metre, but with syllables divided into long and short. Accents and caesuras had moulded the elementary distributions of syllables; the major Persian metres are moulded according to these distributions. The accent has ceased to be a factor in the distribution of syllables in the classical bayt. The reckoning of syllables, short and long, is what matters in Persian metrical systems, rather than the reckoning of letters, which are important only for the rhyme.

Various studies have been undertaken (Benveniste, Henning, Lazard and Shafi’i Kadkani) with the object of identifying, in fragments of verse in Pahlavi (of the Bundahish) and in older Persian (before the 3rd/9th century), transmitted through texts in Arabic as well as in Manichaean fragments, what used to be known as the tarānā, a term of pre-Islamic origin which denoted songs intended for feasting and wine. Rūdaki (d. 329/940 [q.v.]) had, at the apogee of the Sāmānids of Bukhārā, a leading role, owed to a poetic genius which led to his acceptance as a master by all the poets of the 5th/11th century. Numerous quatrains were attributed to him (including, no doubt, some pseudepigrapha), and he was even credited with the invention of the genre. But among poets who preceded him, some by as much as a century, and among poets contemporary with him, examples are known of poems which conform to the characteristic traits of the rubāʾī. In Arabic, the rubāʾī did not appear until the end of the 4th/10th century, in Khorāsān and from the pen of a poet of Pūrang in the region of Harāt (Shafi’i Kadkani, 1988, 2331), evidently under Persian influence.

Another important feature in the history of the quatrain is its usage in Sūfī circles. The question was posed in the 4th/10th century: whether in the course of the spiritual observance and the dance which accompanies it (sāmsā [q.v.]), it is permitted to listen to rubāʾīyyāt (Abū Naṣr al-Sarrāḏ al-Ṭūsī (d. 378/988), K. al-Lumd, al-rubāʾīyyat 2337, 1. 22). It is therefore not astonishing that in the 5th/11th century the quatrain was in use among all the Persian lyrical poets. Attempts have been made to establish Abū Saʿīd Abī Ẓ-al-Khayr (d. 440/1049 [q.v.]) as the inventor of the quatrain in Sūfīsm; like others before him, he experimented with it, but his eminent role in the history of Khorāsānī Sūfīsm gave added respectability to the rubāʾī, and poems attributed to him were considered to have been endorsed by his authority. In the same period, the Ḥanbalī Sūfī al-Anṣārī (d. 481/1088 [q.v.]) composed some five quatrains, and the mountain-dwelling hermit Bābā Tāhir (d. in the middle of the same century [q.v.]) expressed the sum of his experience in du baytā in which his Persian was
blended with dialectal elements of Luristan. There are few poets who, over ten centuries, have not practised the quartain; the modern period has seen the evolution of variants of the rubāʿī having 3 or 5 mirāṣ. The most widely admired author of quartains is Umar Khayyām (d. before 530/1135 q.v.); his life, his work and his eminent position made him an easy target for pseudoeuphoribical artifice; it was not until a century after his death that a copy of a quartain attributed to him was found, but the scholarly scepticism which is observed here corresponds closely to that which was denounced by the great mystic Ḡazī (d. ca. 617/1220 [q.v.]), in regard to Khayyām precisely (Ḥāfiz-nāma, II, 5169-83). Thus was born a Khayyāmian tradition of quartains, from the terrible century of the Mongols, the 17th/13th, onwards.

In his study of Persian metre based on statistical findings, P. N. Khānli (Khānli 1966), has demonstrated once again that the metre of the rubāʿī followed rules exclusive to it. The basic structure of what he calls the ḥāt vā ṭarānā consists, he asserts, of five feet; the first and the fourth, comprising two longs, never vary; feet 2 and 5, made up of two longs, may have as a variant: ʿūʿ; foot 3, constructed thus: ʿūʿ, can have two variants: ʿūʿ and ʿū. Twelve principal realisations are identified by the author, emanating from the possibilities offered by these variants.

L. P. Elwell-Sutton (1976, 134-6), has set aside the division into feet and has sought to group the realisations of a sample of 400 lines or "hemistiches" (mirāṣ), under patterns capable of producing all the realisations. A group a corresponds to a basic pattern constructed thus:

\[
\begin{align*}
\text{a-a-b-c-d} & \\
\text{a-b-c-d-a} & \\
\text{a-c-d-a-b} & \\
\text{c-a-b-d} & \\
\text{a-b-a-c} & \\
\end{align*}
\]

This is the most ancient, the most popular and the most frequent; group b:

\[
\begin{align*}
\text{a-a-b-c-d} & \\
\text{a-b-c-d-a} & \\
\text{a-c-d-a-b} & \\
\text{b-a-b-a} & \\
\text{a-b-a-c} & \\
\end{align*}
\]

For the two shorts in the penultimate position, it is quite common to substitute one long; the same substitution for the two shorts in the third position is exceptional, and this would be out of place in the middle of the line. These features are quite typical of Persian metre. The statistical survey has also enabled the author to state that lines of 12 and 11 syllables are the most frequent, and that there is no evidence to show that the rhyme pattern A A A A in the quatrain is older than the rhyme pattern A A B A, although the latter obtains in 70% of cases.

The quartain is not restricted to a unique semantic field; it may be lyric, satirical, mystical, philosophical, conveying aphoristic maxims or expressing states of mind. It should be dignified (buland), or delicate (laif), or mordant (āţī). Its structure should be such that the first three mirāṣ introduce the fourth, the first two sharing a certain unity, whereas the ternary structure which is encountered in a number of quartains (Bausani 1960, 532) While quartains are to be found in almost all the Persian diwāns, there are some diwāns which are composed exclusively of quartains.

There are numerous translations of Persian quartains. The technical problems of translating the rubāʿī into European languages have only recently been the object of systematic consideration (Lazard 1974). The object must be to convey an impression of the form of the rubāʿī, a poem of such rigorous intensity that the rhythmic clash of words is constantly striking brilliant sparks of intelligence.

(C.-H. DE FOUCHECOUR)
for the "rubāʾi" (~ PGR) neither a Turkish nor a Persian origin can finally be proven (although PGR is documented in the Persian literature much earlier). At any rate, the four-line strophe is popular both in Turkish and Persian mediaeval and modern lyrics. The same differentiation is also expressed in Bertel's, 88, 107; the PGR has originated under the influence of the Turkish FLS, but it has assumed its ultimate shape in Persian literature.

The origin of the Persian PGR under the influence of the Turkish FLS has been underlined still more extensively by Atabat al-hakīdī (generally), cf. Kopruçu, 341. To be sure, these verses are no PGR, but FLS in its perfect structure. This sequence is widespread in modern Turkish folk-poetry, not only in the Anatolian mānī (q.v.) and in other regions of Western Turks, such as Persia, but also in Central Asia (Karakalpak, Kazakh, Uzbek and New Uyghur folklores). It is even found in South Siberia—above all in Tannu-Tuva—and this may be a hint at the archaic character of aaba in the Turkish world. On the other hand, in Iranian folk-poetry aaba is also well-documented. In Iranian educated literature, the older rubāʾiyāt have mostly the rhyme sequence aaaa, cf. Elwell-Sutton, 639-44; seven Persian poets of the 5th/11th century offer 905 cases of aaaa (91%), against only 91% (9%) aaba. In Umar Khayyām's work, on the contrary, aaba prevails over aaba (70%: 30%), and this norm is still more valid in Hāfīz, where aaaa has become extremely rare (about 2.5%).

The origin of the Persian PGR under the influence of the Turkish FLS has been underlined still more extensively by Atabat al-hakīdī (generally), cf. Kopruçu, 341. To be sure, these verses are no PGR, but FLS in its perfect structure. This sequence is widespread in modern Turkish folk-poetry, not only in the Anatolian mānī (q.v.) and in other regions of Western Turks, such as Persia, but also in Central Asia (Karakalpak, Kazakh, Uzbek and New Uyghur folklores). It is even found in South Siberia—above all in Tannu-Tuva—and this may be a hint at the archaic character of aaba in the Turkish world. On the other hand, in Iranian folk-poetry aaba is also well-documented. In Iranian educated literature, the older rubāʾiyāt have mostly the rhyme sequence aaaa, cf. Elwell-Sutton, 639-44; seven Persian poets of the 5th/11th century offer 905 cases of aaaa (91%), against only 91% (9%) aaba. In Umar Khayyām's work, on the contrary, aaba prevails over aaba (70%: 30%), and this norm is still more valid in Hāfīz, where aaaa has become extremely rare (about 2.5%).

The Turkish development is almost a parallel of the Iranian one. However, extensive statistical investigations of this topic are still lacking, and poets seem to behave very differently. Mir 'All Shīr Nawā'ī (845-906/1441-501) favours aaba both in his Caghatay Turkish and Persian rubāʾiyāt about 88%. The last word is often identical in all four verses (then generally with a radi'ī [q.v.]). In poems of the Aḥārbarbāyjānw poet Nezāmī (770-820/1369-1417), aaba prevails over aaba (and xaya): 314 (86%) 52: 1. But in the East Anatolian Kādī Burhān al-Dīn's (745-800/1345-98) poems we find aaba : xaya in a relation of 19: 1; similarly in the Rumelian Yāḥyā Newīyī's (940-1007/1533-99) rubāʾiyāt, aaba : xaya = 8 : 3; and in the Istanbul Hālecī's (977-1040/1570-1631) poems (here, for example, the 16 poems quoted by Gibb, iii, 227-30, all belong to Kādī Burhān al-Dīn), the Aḥārbarbāyjāw poet Fudūlī's (d. 963/1556) work:
aaba : aaaa = 65 : 7 (three aaaa with radi', i.e. 90%: 10%). Generally speaking, the rhyme sequence aaba (which corresponds to that of the mānī) found increased use in the course of time, particularly in the western area of Turkish literatures.

These and other hints at the Turkish origin of the FLS and PGR are remarkable, and may be due to a narrow Turkish-Iranian symbiosis. However, the PGR in its ideal form is owed to the Persians and above all to Umar Khayyām. It remains (Eilers, 212) "ein wundervolles Zeugnis des persischen Genius". This PGR has been adopted by both Ottoman-Aḥārbarbāyjānw and Caghatay literature and plays an enormous role there. Kabakī, 618, understands when he says that every Diwān poet has written "one or two rubāʾiyāt"; PGRs, sometimes in great number, are found in almost every important divān.

The earliest documented purely Turkish PGR was written by Mubārakshāh from Marw-i Rūd [q.v.] in eastern Khorāsān. It presumably belongs to the end of the 6th/12th century: wa'ūd beršān nā'ūn kalāmsān / sōz xalqānīn mānīng bīlā koymešān / yūzīng kūn u sāt xūn kāra kārmāsān / ẓakīngda kārārīz ẓā'ā dībā bīmāsān "thou givest me a promise, (but) why doest thou not come? Thou abandonest neither lying nor
me. Thou dost not see that thy face is (bright as) the sun and thy hairs are black (as) the night. Furthermore, there are two monacrons of rubâ'îyyât dating from the same period, Badr al-Dîn al-Kawwâmi of the Râyî Ogãz (6th/12th century, with a rhyme sequence asaa) and Kurâshî from Transoxania (7th/13th century, rhyme sequence aaba), cf. Köprülüzâde, Türk dili ve edebiyatı hakkında avârîmâl, 118-20.

According to Köprülû (344, and in PTF, ii, 256) the PGR metre is not adapted for the Turkish language ("étranger au rythme du métronome national et très difficile à adapter à la langue turque ... caprices individuels des poètes turcs possédant une solide connaissance de la métrique persane"). On the other hand, he explains (1934, 350) that the PGR was readily adaptable to Turkish prosody, since it is a four-line strophe. Indeed, the PGR has become a favoured genre in the Turkish literatures, at least those more or less influenced by Persian poetry. This preference lasted from the earliest period (e.g. Kâdî Burhân al-Dîn until the modern era (e.g. Yahyâ Kemal Beyâtî, 1884-1958). Rubâ'îyyât have been shaped not only in the Ottoman Empire and Turkey, but also in Âdharbâyân (see above; Nesîmi, Fudûlî, and many others), in Turkmenia (Âzâdî, 1700-60) and even in the successive regions of the Ulus Câghhatay (Nawâ'î; Şâhînâ, 853-916/1451-1510; Amânî, 945-1017/1538-1608; Bâbûr, 888-936/1483-1530; Kamrân Mîrzâ, 1825-99; Dişânâ Khatun, 19th century; cf. Eckmann, in PTF, ii, 304-402, and Hofman).

For the poets of the Ottoman Empire (and Turkey) cf. PTF, ii (index 952; references given by Börkman at 403-65); Kabâbî, 618; Türk Anzîklololisisi, 445; Dîlçin, 168, 350, etc., Özkûrîmî, 996, Karâaîloğlu, 605; Necâtîlgil. As well as those named above we may mention as the most outstanding rubâ'î poets: Kara Fâdîl (d. 1564), Rûşîî from Baghdad (d. 1014/1605); Fehim (1036-58/1627-48); Djevîî (d. 1064/1654); Nesîmî (d. 1085/1674); Khayyâm-i Rum. This accentuation of the third verse, the underlying of one for the verses 1,2,4 (which also rhyme with each other) and another for the third (in the aaba pattern, unrhymed) verse: this is a frequent usage in Persian poetry too, for example in 'Umar Khayyâm's poems. This accentuation of the third verse, the underlying of its particular character is also known in the Turkish poetry too, for example in Kâdî Burhân al-Dîn's 20 rubâ'îyyât are all akkhrêb; in Fucjullî's 72 examples, only one akkhrêb is to be found.

According to Dîlçin, 207, a certain preference exists to employ two different variants in a rubâ'î, namely, one for the verses 1,2,4 (which also rhyme with each other) and another for the third (in the aaba pattern, unrhymed) verse: this is a frequent usage in Persian poetry too, for example in 'Umar Khayyâm's poems. This accentuation of the third verse, the underlying of its particular character is also known in the Turkish poetry too, for example in Kâdî Burhân al-Dîn's 20 rubâ'îyyât are all akkhrêb; in Fucjullî's 72 examples, only one akkhrêb is to be found.

These statements can be corroborated. For example, Newî's 11 rubâ'îyyât and Kâdî Burhân al-Dîn's 20 rubâ'îyyât are all akkhrêb; in Fucjullî's 72 examples, only one akkhrêb is to be found.

According to Dîlçin, 207, a certain preference exists to employ two different variants in a rubâ'î, namely, one for the verses 1,2,4 (which also rhyme with each other) and another for the third (in the aaba pattern, unrhymed) verse: this is a frequent usage in Persian poetry too, for example in 'Umar Khayyâm's poems. This accentuation of the third verse, the underlying of its particular character is also known in the Turkish poetry too, for example in 'Umar Khayyâm's poems. This accentuation of the third verse, the underlying of its particular character is also known in the Turkish poetry too, for example in 'Umar Khayyâm's poems.

The following table shows the patterns and their frequency:

**Note:** The table above shows the various patterns and their frequency according to the sources cited. The patterns are categorized based on their syllable structures, with specific examples provided for illustrative purposes. The table is a representation of the diverse poetic structures employed in the Rubâ'î genre, highlighting the prevalence and variation in rhythmic patterns across different poets and traditions.

3. In Arabic.

The ruba‘îya, lit. "quadrupartite entity", or quatrain occurs in Arabic literary both as an independent verse form and as an element of structure in longer compositions. It represents a comparatively late development of poetic form and its origins are not altogether clear.

The lines of the quatrain can either be lines in the sense of a bayt (two hemistichs with between 16 and 30 syllables and a caesura) or in the sense of a bayt (two hemistichs with between 16 and 30 syllables). In the classical kašîda it is the bayt which represents the unit of structure, in rûfîz poetry it is the šârî. In the ruba‘îya either case can apply, leading to ambiguity in the usage of this term. However, more often than not, the ruba‘îya denotes a quatrain whose lines have the length of half a bayt. This explains why expressions like baytîn ("two bayts") or dubayt (from Persian du ‘two’) also dubayt) are sometimes used as synonyms for ruba‘îya.

Dubayt, however, is more often used for a quatrain of a particular metre (fa‘lûn muṣâfûlûn fa‘lûn fa‘lûn), and rhyme scheme aaba (called a‘raq) or aasa. Common metrical variations are:

\[(a) \text{--w--w--w--w--}; (b) \text{--w--w--w--w--}; (c) \text{--w--w--w--w--}.\]  
When used in this sense, dubayt is the Arabic equivalent of the Persian raûdî. Its origin and historical development are discussed extensively in the introductory essay of Kâmil Mustâfa ‘alâ-Şâhîyî, Dîwân al-dubayt fi l‘Iraq al‘arabî (fi šârîr kurûn), Mangûrît al-šârîmî li Lîbiyîya, n.p. 1392/1972, 15-132. This book contains, arranged according to centuries, a collection of 808 poems in the dubayt metre (mostly quatrains, but also some other forms, such as muwâṣâhahs) by 165 poets from the 5th/11th century until the beginning of the 14th/20th century, together with 120 anonymous poems, of which 14 are in colloquial Arabic. Supplements have been published in al-Ma‘ârid (1975), 153-72, and (1977), 49-108.

In most cases, only a few dubayt quatrains of each author have been handed down in the literature. A more extensive collection is the dubayt diwán Nûkhât al-šâhîr wa-ša‘bîlî al‘rajîh, by Ni‘âm al-Dîn al-Iṣfâhânî (d. after 680/1281 or in 1278, Brockelmann, S I, 449), which contains some 500 quatrains arranged according to rhyme-letter in Arabic (predominantly, Persian), and in a mixture of both languages (mulâmmûn). Eighty of the Arabic quatrains of this author are also in al-Shâbi’s book (see 285-300, t‘imâd al-Dîn al-Iṣfâhânî (519/971-1201 [q.v.]) and Şalâb al-Dîn al-Iṣrâ‘îlî (572-631/1176-1234) are also said to have composed diwâns of dubayt quatrains (see 285-300).

The rise of the dubayt quatrain is placed by al-Shâbi among bilingual Persians in and around Ghazna, and the most easterly Iranian territories. As a date he suggests the 380s A.H., i.e. coinciding more or less with the beginnings of the Persian rûdî. The Persian origin is borne out by the occurrence of a ruba‘îya (q.v.) in three early Arabic dubayts (al-Shâbi, op. cit., nos. 2/1, 5/1 and 8/1).

The earliest textual examples of dubayt quatrains go back to the first half of the 5th/11th century. They are preserved in the Dumyat al-ṣârîr compiled by Abu ‘l-Ḥasan ‘Alî al-Bâbkhârî (murdered in 467/1075 [q.v.]). In his comment on one of these quatrains, al-‘Iraqî speaks of "the rûdî metre" (jâma‘ al-ṣârîn al-rubâ‘î). He remarks that he had not heard of this method (farîka) until his father had recited quatrains in this manner (ruba‘îyîd al-ṣârî al-hâdîh ‘l-namâq) (Dumya, ed. Muhammad Râghîb al-Ṭabbâkh, Aleppo 1349/1930, 174). Two early Arabic dubayts are by the Persian mystic Abu Sa‘îd al-‘Abî ‘l-Khâyyr (357/940/967-1049 [q.v.]) famous for his more than 700 poems in the quatrains.

References to quatrains of an earlier date do occur in the literature. Examples are Abu Nâṣr al-Sarrâdî (d. 378/988), Q. al-Luma‘î fi l‘tasawwuf, ed. R. A. Nicholson, London 1914, 299 (Bîbî fi man kartha ‘l-samâd); Abu ‘Alî al-Ṭanûkhî (329-849/939-94), The talk-of a Metropotamian judge (= Nîâşûd al-Mubâdara), ed. and tr. D. S. Margoliouth, London 1921-2, i, 54, ii, 59: "there was a Sûfî present, who was humming some ruba‘îyas and recited quatrains in this manner (rubâ‘îyîd al-ṣârî al-hâdîh ‘l-namâq) (Dumya, ed. Muhammad Râghîb al-Ṭabbâkh, Aleppo 1349/1930, 174). Two early Arabic dubayts are by the Persian mystic Abu Sa‘îd al-‘Abî ‘l-Khâyyr (357/940/967-1049 [q.v.]) famous for his more than 700 poems in the quatrains.

Another expression that may refer to the quatrain is mûshânî, mentioned in al-Ǧâwârî, Sîhâh, Cairo 1282, ii, 453 s.v. th-ny, said to be equivalent to "what is called in Persian dubayî, which is singing (al-ghânî)" (see also L.A, xiv, 119 s.v. th-ny).

Quatrains or quatrain-like compositions may also be intended in a passage in Aṣâfîn (such as ibn al-Fârîd [q.v.]). See also G.E. von Grunebaum, in JNES, iii (1944), 10 and G. Vajda, Les zinûqîs en pays d’Islam au début de la période abbassîde, in RSO, xvii (1938), 205.

The 7th/13th century represents the Golden Age of the dubayt quatrain, with many poets among mystics (such as ibn al-Fârîd [q.v.]) with over 30 quatrains and
Djalal al-Din al-Rumî [q.v.] with 19 Arabic dubayt in the Kulliyydt-î Shams), princes, men of law, philosophers and physicians. There are experiments in form, e.g. the famous dubayt kadîsa by Bahâî al-Din Zuhayr (581-656/1186-1258 [q.v.]), Dijân, ed. E.H. Palmer, Cambridge 1876, 202-4; the mixture of dubayt and muwashshah, such as the example by Ahmad al-Mawsîî (603-56/1207-98) quoted in Ibn Shâkir al-Kutubi, Fauzi-î Wajîfiy, ed. Muhammed al-Din 'Abd al-Hamîd, Cairo 1951, ii, 510-11, as well as the many imitations (mu'ârada [q.v.]) which these innovations provide prototypes.

In this century, the dubayt also spread to the western part of the Muslim world. The Esorial ms. 288 contains four texts on the dubayt written by Maghribi authors, Abu 'l-Hakam Malik b. 'Abd al-Rahmân Ibn al-Murâhbal (604-99/1207-98), Abû Bakr al-Kalâlûfî (d. 707/1307), Muhammed b. 'Umar al-Dârrâdî (authorship not certain) and Abu 'l-Sâlih Âli Ibn Barri (d. 730/1330). Two of these texts have been published by Hîlaq, Rûkâ, e.g. faridat-dubayt in the, in Maurit., iii (1974), 145-74. Hâzim al-Kârtâjdîni (608-84/1211-85 [q.v.]) finds the dubayt exquisite, in spite of its non-classical origin, and therefore approves of its being practised (dâ ba' bi 'l-'amal 'alayhi fa-innahu mustazraf wa-wad*uhu mutanâzihat), see Minhâd b. al-Âlîqârâh, ed. M.H. Belkhojdja, Tunis 1966, 243. After the 7th-13th century, the number of dubayt-quatrains found in the literature dwindles, but there are examples in the work of authors such as Sa'îf al-Din al-Hâllî (d. 725/1321 [q.v.]), Saâl al-Din al-Šafâdî (d. 764/1363 [q.v.]), Ibn Hîijdja al-Mamûnî (767-836/1366-1434 [q.v.]) and Ibn 'Afdil al-Aškâlânî (775-852/1372-1434 [q.v.]). Today, the dubayt is said to be still in use in al-Kuwayt, al-Bahrayn and 'Umân.

In modern Arabic literature, the rubâ'îyya in the dubayt metre is seldom found, but there are many instances of quatrains in original Khillâlîan metres or modern derivates. They represent one of the examples of the revival and development of strophic form in modern Arabic poetry (cf. S. Moreh, Modern Arabic poetry 1800-1970, Leiden 1976, and idem, Technique and form in modern Arabic poetry up to World War II, in, Studies in memory of Gaston Wiet, ed. M. Rosen-Ayalon, Jerusalem 1977, 415-34 = Moreh, Studies in modern Arabic prose and poetry, Leiden 1988, 116-36).

The dîdân of Ibrahim Nâdîjî (1898-1953 [q.v.]), for example, contains, under the title Rubâ'îyyât, a collection of 77 short-lined quatrains in the sarî metre, partly in monorhyme aaaa and partly in cross rhyme abab (ed. Ahmad Râmi et alii, Cairo 1961, 225-34). In this dîdân, the short-lined quairain is also used as a structural unit in 27 other poems, three of which are of the muwashshah type aaaa, bbb, cccc (see mu'ârada), most of these, the others showing cross rhyming (abab cddc efef ...). The number of quatrains per poem varies between 4 and 35. Several metres are employed, especially kâtâmî, ramal and sarî.

The long-lined quairain (based on a bayt with two hemistichs) occurs in 11 poems. The rhyming scheme for most of these is aa xa xa xa; xx xb xb; xc xc xc (in which x represents unrhymed hemistichs). The number of quatrains varies between 4 and 33 per poem.

The Egyptian poet 'Ali Mahmûd Tâhâ (1901-49) also employed both short-lined and long-lined quatrains in longer poems. His poem Allâh wa 'l-'âdâr consists of 108 short-lined quatrains in the sarî metre with rhyme scheme abab cddc efef ... (al-Malâlî al-tâ'îîh, Cairo 1943, 77-117).

Slightly longer is Tarsegmat shayyân by 'Abbas Maâumî al-'Akkâd (1889-1964 [q.v.]) in Suppl.), with the same rhyme scheme but in the ramal metre (Dijân, ed. 1928, 201-9). DJamîl Şîdkî al-Zahâwî (d. 1936 [q.v.]), has a dîdân called Rubâ'îyyât, Beirut 1924, containing 1,018 quatrains in different metres, all of them of the short-lined type.

Maâmûd Darwâsh (b. 1942) publishes under the title Rubâ'îyyât 22 short-lined quatrains (abab cddc efef rhyme) in Awarâl al-zaytûn, Beirut n.d. (original date of publication 1964), 133-142. Eleven of these are in Dijân (1936), Dijân al-awwal, Cairo 1931, 3). The translation made by Ahmad al-$afT al-\nsâdî (d. 1936), which is entirely in the sarî metre, has become popular in its version sung by the Egyptian singer Umm Kulthûm (d. 1975). Apparently the first rendition in Arabic of a collection of Khâyâm's quatrains is the one published by Wadi' al-Bustâinî (1886-1954), Cairo 1912, which has the form of septets, a 7-line stanza with the rhyme scheme aabBCD, brought together in two cantos (nâshîd), in each of which the septets are linked together throughout the canto by the common rhyme of the last two lines.

Muhammad al-Sîbâî (1881-1931) published in ca. 1918 his translation in three cantos of 44, 38 en 9 quatrains, rubâ'îyyât 22, dâdabb in an extended muwashshah-like fashion.

Structured along the same lines, but in Egyptian Arabic, is the work of Husayn Maâzûm Riyâd, Ru'bâ'îyya al-Khâyâm, Lâdînî al-nâshî li 'l-djâmîyyâ, Cairo 1944. A more recent translation in short-lined verse in the
RUBÄ'I — RÜDÄKĪ

585

mutakârb metre is by the Bahrayn poet Ibrahim cAbd al-Husayn al-cUrayyic (b. 1908), published as Rûdā'īyyat al-Khayyām, Beirut 1966, 1984.

The term rubā'īyya is also employed in the sense of a literary work in four parts, translating both tetralogy and quartet.

W. STOETZER

RUGHUZI [see RAGHUZI].

RUBIS [see YAKÛR].

RÜDÄKÎ (properly Rûdâkî), arabicised as al-Rûdâkî, the leading Persian poet during the first half of the 4th/10th century and author of the earliest substantial surviving fragments of Persian verse. Al-Sâmînî gives his name as Abû 5Abd Allâh Dîâ'îr b. Muhammad Hâkîm b. Abû Al-Râmân b. Abû al-Râmân al-Shâ'îr al-Samârânî, says that he was born in Rûdâk, a suburb of Samârân, and that he also died there in 329/940-1; there are, however, reasons to think that this date might be about a decade too early (see the discussion in Storey-de Blois). 4Awfi says that Rûdâkî was born blind and there are quite a few references to his blindness (though not to the fact that he was sightless from birth) in early Persian authors. The available biographical data all link him with the Sâmânî ruler of Bûkharâ Naṣr II b. Ahmad (301-31/914-43 [q. v.]) or with his minister Abu l'-Fadl al-Bâl'âmî [q. v.], and it was evidently under their patronage that he flourished.

Rûdâkî left, as Asadî tells us, a diwân of more than 180,000 verses. This was lost long ago. What have survived are a fairly large number of single verses quoted in the Persian dictionaries (notably in the oldest of them, Asadî's Lughât-i Furs) as well as a few complete poems quoted by anthropologists and historians, the most important of the latter being a splendid kastāda of nearly 100 verses (beginning mâdar-i may) which is preserved in the anonymous Târikh-i Sîstân and which, according to that source, Rûdâkî sent from Naṣr's court in Bûkharâ to the ruler of Sîstân, Abû Muhammad b. Kâhalîf. We also have (in chronological order of the authorities who cite them) five short poems, all of elegiac inspiration, quoted by the historian Abu l'-Fadl Bâl'âmî [q. v.], the verses beginning bâ-yî o-yî qâ-yî Mâlûmîn quoted by Najafî, and a fragmentary missive addressed by Abû Naṣr b. Ahmad, a few short pieces quoted by 4Awfi and Shams-i Kays and a description of spring quoted by the 8th/14th century anthropologist Dîjâdîrnî. The latter adds a few more poems, but the only one of these that can be ascribed more or less confidently to Rûdâkî is a long ode, cited by Amin Râzî (1002/1593-4), in which the poet laments his old age and recalls the amorous adventures of his youth. This poem refers also the riches which the poet had formerly received from the Sâmânîs, but also from "mir Mâkân" (evidently the Daylami Mâkân b. Kâkî, d. 329/940-1 [q. v.]), and adds that "times have changed" and that the poet was now reduced to poverty.

The most famous of Rûdâkî's works was evidently his versification of the book of Ka'îlîa uwa-Dimma. The Shâh-nâmâ of Firdawsî tells us how the dastûr Abu l'-Fadl (sc. Bal'âmî) first had this book translated into Persian and how the amir Naṣr subsequently appointed "interpreters" to read it out so that the blind Rûdâkî could versify it. The valuable collection of Rûdâkî's fragments by Sa'id Naftâsi (altogether 1,047 verses in the second edition) excises Katrân's poems, but retains a number of other dubious verses from unreliable sources. Moreover, the collection includes a good number of pieces that the sources either quote anonymously or ascribe to a different poet, but which Naftâsi attributed to Rûdâkî for stylistic reasons, as well as several "poems" that he patched together from single verses quoted in the lexica. The collection must therefore be used with caution.

Rûdâkî's style is simple and direct, and consequently stands in stark contrast to the mannerism which dominated Persian poetry from the 6th/12th century onwards; it is thus hardly astonishing that his works, greatly admired though they were in his own time, soon seemed dreadfully old-fashioned and fell into oblivion. What he lacks in rhetorical ornament he makes up for in poetic sonority and the almost childlike fond of assonance and internal rhymes. Much of what remains of his poetry has a decidedly pessimistic tone, a lot of it along the usual lines of Islamic homiletic poetry (as represented, for example, by Abu l'-Atâ'îya [q. v.]), but there is hardly anything overtly religious in his work and certainly no trace of Şûfîm. "You ought not, O guests!", he says in one poem, "to set your hearts for ever on this way-station, for you must slumber under the earth, even if now you sleep on silken brocade. What use to you is the companionship of others? The road into the grave must be taken alone and your companions under the ground will be ants and flies", etc. (Bayhâkî, 188). Other poems are unashamedly hedonistic, though with a hedonism that is often shot through with melancholy. "Live merrily!", he advises us, "amongst the black-eyed beauties, marry, marry, for this world is nothing but wind and an idle tale. Be happy with what has come your way and give no heed to what has departed. Look rather at me in the company of a maiden with curly hair and the fragrance of fine musk, a face like the moon, of the race of the houris. ... This world is a breeze, a fleeting cloud, a jest. Bring the wine and let come what may." (4Awfi, ii. 9).

Bibliography: Firdawsî, Shâh-nâmâ, ed. Moscow
This is the most famous of the Rūdhbārs in Islamic history because the district was, from the late 5th/11th century to the 7th/13th century, a major centre for Ismā'īlī [see Ismā'īliyya] activity. A century or so before the implantation of Ismā'īlīsm there, the Rūdhbār of Alamūt [q.v.], in the valley of the Shāh Rūd, the southern constituent stream of the Safīd Rūd, had been the residence of the Daylamī dynasty of the Dījūzdān (on whom see Sayyid Ahmad Kasrawī, Shahrūyārīn-ī gūm-nām, Tehran 1307/1929, 22-24; W. M. Watt, "The Cambrics of Iran", iv, 225-24 and already a centre of Zaydi Shī‘ism. From Alamūt, Ḥasan-i Sābbāb [q.v.] furthered the Ismā‘īlī da‘wā by establishing garrisons in several other fortresses in the Rūdhbār district towards the end of the 5th/11th century, such as Girdkūh, Lānbasar [q.v.] and Maymūnīz [q.v.]. These fortresses were held by the community until the operations in Daylam of Hūlegū’s Mongols in 651/1253, substantially completed with the reduction of the most of the fortresses by 654/1256, although in the 1270s the local Ismā‘īlīs seem to have re-occupied some of the Rūdhbār fortresses. See Freya Stark, The valleys of the Assassins, London 1936; P. J. E. Willey, The castles of the Assassins, London 1963; M. G. S. Hodgson, in Camb. hist. of Iran, v, 430-2; F. Daftary, The Ismā‘īlīs, their history and doctrines, Cambridge 199, 344-8, 442 ff., 445-449, 453.

Rūdhrāwār, a rural district (nūstāb, nāḥya) of the mediaeval Islamic province of Dījābī [q.v.], sc. western Persia. The geographers describe it as a fertile plain below the Kūh-i Alwand, containing 93 villages and producing high-quality saffron which was exported through the nearby towns of Hamadān and Nīhāwān. The chief-lieu of the district, in which was situated the gāmīn and minbar, was known as Karaqā-ī Rūdhrāwar, characterised in the Hудi الدين al-ulām, tr. 132, § 31.8-9, as prosperous and the resort of merchants. The site of this seems to have been distinct from the Karaj which had, in earlier ʿAbbāsid times, been the seat of the in the Arab Dāfūd family [see Karaj] and which the author of the Hудi الدين al-ulām states was in ruins by his own time (sc. late 4th/10th century), and it may be that Karaj-ī Rūdhrāwar grew up on a new site to replace the old Dafūdī capital.

Karajī Rūdhrāwar was still flourishing in the post-Mongol period, when Hann Allāh Mustawfī described it as a town on which depended 70 villages, still famed for their saffron production and yielding a tax revenue of 23,500 dinārs [Nuzha, 73, 76]. The present ruins known as Rūdhrāwar probably mark the site of Karajī Rūdhrāwar (J. de Morgan, Mission scientifique en Perse, Paris 1894-1904, ii, 136).

Bibliography: See also Samānī, Ābād, ed. Haydarābād, vi, 190; Yākūt, Buldān, ed. Beirut, iii, 77-80; see also W. Barthold, Al-Rudhrāwī, Abū Shudja 5 Muhammad b. Al-Husayn, Zahir al-Din, vizier to the ‘Abbāsīd caliph al-Mahdī (437-88/1045-95).

He was actually born at Kangāwar [see Kinkwar] in Dīǰābī, but his father, a member of the official classes, stemmed from the nearby district of Rūdh-rāwar [q.v.]. Abū Shudja 5 Muhammad served al-Muṣṭafī as vizier very briefly in 471/1087-8 after the dismissal of ‘Amīd al-Dawla Ibn Dājīr [see Maṭar,
BANU] and then for a longer period, Shâbân 476-484/December 1083 to January 1084-April or May 1091, after the second dismissal of 'Amîd al-Dawla Ibn Qâdir until pressure on the caliph from the Saldjuk sultan Malik-Shâh [q.v.] procured his dismissal. Hence in 479/1090 he left 'îrak for the Pilgrimage, and spent the last year of his life as a madâwiw [q.v.] in Medina; he died in Djamâdâ II 488/June 1095 at the age of 51 and was buried in the Bâkî al-Qâhrâk cemetery there.

Al-Rûdhârâwârî is said to have been a wise and humble man, one of the Bâkî, who, amongst other things, pursued a conciliatory policy regarding the Sunnis and Shî'is and their rivalries in the city. The sources praise him both for his piety and his literary skills. He was the author of a poetic diwân, of which some 80 verses are extant in the literary and biographical sources, and of a dhayl or continuation to Miskawayh's [q.v.] history, the Tadżurî al-umam, covering the years 368-89/979-99 (ed. and Eng. tr. H. F. Emmerd and D. S. Margoliouth, in Eclipse of the 'Abbâsî caliphate, iii, 9-332, tr. vi, 1-358; see Brockelmann, S I, 583, and Margoliouth, Lectures on Arabic historians, Calcutta 1930, 147).

(C. E. Bosworth)

RUDJÛ (A.), verbal noun from the verb rudâ'a, basically, "to return", and frequent in the Kurânic in various senses, according to context. It is found e.g. in VII, 168, and XXX, 41, in the expression la'allakum yardiqâna 'perhaps they will return', which, explains al-Kurtûbi, has the sense "they will return from their unbelief" ('an kufishim), or elsewhere given as the equivalent of yatubuna "perhaps they will repent of themselves".) Rûdijû would seem to be in this sense, a synonym of tauhûd, and just as repentance is considered at the same time man's turning to God and God's turning to man. The verb rudâ'a is used both in the active and passive senses: man is said to return to God and be brought to God.

But the verb is employed in other contexts, and especially in verses like II, 28, "He makes you to die, and then He makes you to live, then you are brought to God", or XXX, 11, "God begins the act of creation, then He repeats it, then you are brought to Him", or XXXX, 11, "when the affair is decided" (idh kudju'a al-amr), man is unable to plead his cause, and can only answer yes or no. This appears in Fâhîr al-Dîn al-Rûzî's commentary on the second verse (XXX, 11), basing himself on the immediate sequel to this when it is a question of the Hour, whence of the Last Judgment. Having revealed, he says, that mankind will be brought back towards Him, "God explains what will take place at the moment of the return to Him (waâk al-rudjî'î šayhiyî)", declaring, "those who are guilty will be thrown into despair (yalûtiyâ)". Al-Rûzî explains the sense of this verb by citing the commentaries of the grammarians: (d. 311/923): "the mubîs is the one who is silent (al-sâkit) and who has his speech cut short in the course of his arguing (al-munkaṭî fi kufishîthâ)."

This is how the return, in the commentaries on the verse in which the verb rudâ'î is figures, is interpreted. To return to God, from this point of view, would appear to be essentially a summons to judgment at the time of the Last Judgement. It follows immediately after the resurrection, which, one might say, forms the first step. The question posed by the philosophers, that of knowing whether the soul alone, or even, the intellect alone, comes back to life, or whether there is also a resurrection of the body, is thus linked with that of rudâ'î. In one sense, it is a question of faith; but belief in a spiritual return has obviously a special theological and philosophical interest.

For the faithâya, such as Ibn Sinâ, the whole orientation of the human life—political, moral, intellectual and religious—is defined by two opposite poles, that of departing and that of arriving. At the departure, there is God in his oneness, God as the "First", from whom stem all the secondary beings; at the arrival, there is God as the "Last" (cf. Kurânic LVII, 3). Thus, in the political scheme of the Shahî, Ibn Sinâ explains how the nature of the two notions of tauhûd on one side, and ma'âd [q.v.] on the other, must require every effort of reflection on the government of mankind. The ma'âd as the place of return corresponds to the final cause which is, according to Ibn Sinâ, "the cause of the efficiency of the efficient cause" (cf. his Idrârî). The return accordingly has an ontological meaning, in so far as it is a constituent element of beings. At a first moment, starting from the First, who is a One, is seen the coming into being, by means of a descending act of the first Agent, in the plurality of forms which the Agent Intellect, wahîb al-awwâr, gives, on the one hand, to the material elements and the things composed of them, and on the other, separated from all matter, to the human intelligence. From this moment onwards, there is a possible and progressive upwards motion towards unity, and it is this movement of return towards the One which, by rediscovering intelligible reality linked to unity, constitutes the return to God, without however prejudging what the outcome of this return will be. One might conceive of it from the viewpoint of a religious mystical phenomenon, or that of an intellectual mystical phenomenon of the kind in Plotinus. For the Ibâwâl al-Sâfî [q.v.], the particular souls, having accomplished their mission in regard to the bodies and having thus acquired the completeness (tamûm) which they lacked, return to the unified soul. For these, the aim is to pierce the inner essence of the body, just as, at birth, the embryo had pierced the enveloping membranes which surrounded it in the womb. (On all these questions, see the very interesting comments of L. Gardet, in his Dieu et la destinée de l'homme, Paris 1967, 267, 276, 279.)

The idea of a return to origins, which we have seen being sketched out in the commentaries on certain recoin, "...
Kurânic verses, easily takes on a mystical value. In the present life, men are separated from God by veils which their various faculties suspend between them and Him. Al-Djouayd accordingly used to teach that one should separate oneself from them by a purification of everything to which they cling in themselves, in order to lose oneself in the unique aim which is borne towards Him: this is al-fanâ bi 'l-madghâbî, the final aim of mystical experience, a return to the authentic origin of the creature in the divine creative act, al-mihâyâ rujû'îa undoubtedly (cf. al-Djouayd, Expression spirituel, tr. R. Deladrière, Paris 1981, 45-6). But this is a type of rujû' which Ibn 'Arabî especially considered: the highest form of the mystical favour and gift is, not to arrive at the summit of the spiritual ascent but to be sent back amongst creatures in order to enlighten and guide them. Thus we have here a return to mankind. One should note that this is what happened to the Prophet: he was raised up at the time of the mihrâj [q.v.], and he was sent back with the mission of announcing the good news and of adopting a watchful attitude (on this concept of return, see M. Chodkiewicz, Le sceau des saints, tr. R. Deladrière, Paris 1983, 141, 185, 217). Finally, one should mention the idea of a return at the end of time: the return of the Messiah, of Muhammad and of the Mahdi. This is totally bound up with the eschatological visions nurtured, above all, by various hadîths.

**Bibliography:** Given in the article.

(ARNAELDEZ)

**RÚFUS AL-AFSISÍ,** Rufus of Ephesus, a Greek physician who lived at Ephesus [see AYA SOLÜK] around 100 A.D. Of his biography hardly anything is known. He was an important medical author, who wrote monographs on many questions concerning pathology and dietetics. Most of his writings, however, were lost during the Middle Ages since his work which was overshadowed by that of Galen [see GALENIUS] (cf. O. Temkin, Galenism. Rise and decline of a medical philosophy, Ithaca and London 1973). Consequently, only four of his works have survived in Greek: 1. On kidney and bladder diseases (ed. A. Sideras, III, Berlin 1977); 2. On satyriasmus and gonorrhea (ed. Daremberg and Ruelle, Paris 1879, 64-84); 3. On the names of the parts of the human body (ed. G. Ahlwardt, ch. 3); 4. On poisoning and its therapy, in which vegetable poisons and bites of insects, serpents, and dogs are dealt with. Many fragments have been preserved in Oribasios as well as in Hunayn b. Ishâk (K. al-Aghdiya, ms. Bankiopore, Kûdâbâkhs Bââd 2142), al-Râzî, Ibn Samadjûn and Ibn al-Baytâr.

7. Kitâb al-Lâban = Perî bduw, translated into Arabic by Kusà b. Lûkâ as a monograph in which all kinds of dairy products, milking and cheese are described from the most various points of view.

8. Kitâb Tharîyân al-aʃ̄âfî = Perî hâmîbî û hâmîbî. From this work an excerpt was made by Aetiós of Amida (Tetrabiblos II, chs. 86-103). A summary of the Arabic translation has been preserved in al-Râzî, Hâwi, xxi, 440-7. It is a monograph in which all kinds of dairy products, milking and cheese are described from the most various points of view.

9. Kitâb al-Adâwya al-hâlîta (the Greek title has not been transmitted). This is a work on poisoning and its therapy, in which vegetable poisons and insects, serpents and dogs are dealt with. Important fragments have been preserved by al-Râzî, Ibn Sinâ (Kûdâbâh al-Husayn in al-Râzî, Ibn al-Munîbî, min al-halâta (ms. Chester Beatty 4525).

they were noted down by "Rufus and other ancient and modern physicians" (ed. Ullmann, _Die Medizin im Islam_, 130). In _Abh. KM_, viii, 218; al-Yaʿqūbī, i, 177; M. Hartmann, _Djabar_ (repr. Amsterdam 1963); J. Ilberg, _Rufus von Ephesos, ein griechischer Arzt in trajanischer Zeit_, in _Abh. d. Sächsischen Akad. d. Wiss., phil.hist. Kl._, xii (30), no. 1, Leipzig 1930; Sezgin, _GAS_, vi, 110 = Abh. KM, viii, no. 3; Theophanes, ed. de Boor, 517, 521). The town of Djazlra. After the Greek governor Joannes Kateas, who had endeavoured to save the region of Osrhoene by paying tribute, had been dismissed by the emperor Heraclius and the general Floteleides, put in his place, al-Ruha3 (Edessa) had to surrender in 18/639 like the other towns of Mesopotamia (al-Baladhuri, 172-5; Ibn al-ʿAṭṭīr, ii, 414-17; Yākūt, s.v. al-Djazira; Khāʾarazmi, ed. Baethgen, _Fragmente syr. u. arab. Historiker_, Leipzig 1884, 16, 110 = Abh. KM, viii, no. 3; Theophanes, ed. de Boor, 517, 521). The town now lost its political and very soon also its religious significance and sank to the level of a second-rate provincial town. Its last bishop of note, Jacob of Edessa, spent only four years (684-7) and a later period again of four months in his office (708). The Maronite Theophilius of Edessa (d. 785) wrote a "Chronicle of the World" and translated into Syriac the "two Books of Homer about Ilios".

Al-Ruha2, like al-Rakka, Harrān and Karṣiyya, was usually reckoned to Diyar Mudad (Ibn al-ʿAṭṭīr, vii, 218; al-Yaʿqūbī, i, 177; M. Hartmann, _Djabar_, 88, no. 2 and 3 = _AVAG_, 1897, i, 28; Canard, _Hʿamdānides_, 91-2). In 57/666-7 al-Ruha3, Harrān and Sumaysāt formed the governorship which Ibrahim b. al-ʿAṭṭīr granted to Ḥātim b. al-Nuʿmān (Ibn al-ʿAṭṭīr, iv, 218).

The "old church" of the Christians was destroyed by two earthquakes (3 April 679 and 718). In 737 a Greek named Baḡīr appeared in Harrān and gave himself out to be Tiberias the builder of Hisn Mansur; he was believed at first, but was later exposed and executed in al-Ruha3 (Barhebraeus, _Chron. syr._, ed. Bedjan, 119). In 133/750-1 the town was the scene of fighting between Abū Ḍaʿīfar, afterwards the caliph al-Mansūr, and the followers of the Umayyads, Ishāk b. Muslim al-ʿUkaylī and his brother Bakkār, who only gave in after the death of Marwān (Ibn al-ʿAṭṭīr, v, 333-4). But continual revolts broke out again in al-Ruha3 (Ibn al-ʿAṭṭīr, vi, 3), and in the reign of al-Mansūr, for example, the governor of al-Ruha2 of the same name, the builder of Hisn Mansūr, was executed in al-Rakka in 141/758-9 (al-Baladhurī, 192). When Harūn al-Raṣūlī passed through al-Ruha2, an attempt was made to cast suspicion upon the Christians and it was said that the Byzantine emperor used to come to the city every year secretly in order to pray in their churches; but the caliph saw that these were slanderers. The Gūmrākī (from al-Djazira, in the valley of ʿAfīr in Syria), who, with the Telmahrāyī and Rūṣāfāyī, were one of the leading families of al-Ruha2, suffered a great deal, however, from his covetousness (Barhebraeus, _Chron. syr._, 130). In 196/812 the Christians were only able to save the unprotected town from being plundered by the rebels Naʾr b. Šabāṭ [q. v.] and Amr by a heavy payment; Abū Ṣāḥibī therefore fortified al-Ruha2 at the ex-
pense of the citizens (Barhebraeus, 136-7). At the be-
ginning of his reign, al-Ma’mun sent his general Tahir Dhū Y-amainayn (q.v.) to al-Ruḥā, where his
Persian soldiers were besieged by the two rebels, but
offered a successful resistance supported by the in-
habitants among whom was Mār Dionysius of Tell
Mābre (Barhebraeus, 139). Tahir, who himself had
fled from his mutinous soldiers to Kallinicos, won
the rebels over to his side and made ‘Abd al-Alā’
governor of al-Ruḥā; he oppressed the town very
much (ibid., 139-40). Muhammad b. Tahir, who gov-
ered until 1085/86, persecuted the Christians in
al-Ruḥā, as did the governors under al-Mu’tamin
and his successors.

In 331/942-3 the Byzantines occupied Diyarbakr,
Arzan, Dārā and Rās al-‘Ayn, advanced on Naṣībān
and demanded from the people of al-Ruḥā the holy
picture on linen of Christ called μαθημὸν (al-‘Ībān
al-‘Mu‘ālid); with the approval of the caliph al-Mu’taṣaf, it
was handed over in return for the release of 200
Muslim prisoners and the promise to leave the town
undisturbed in future (Yahyā b. Sa’id al-Anjākī, ed.
Kračkovskiy-Vasil’ev, in Patrolog. Orient., xvi, 730-2;
The picture reached Constantinople on 15 August
944, where it was brought with great ceremony into
the Church of St. Sophia and the imperial palace (see
Chron. syr., i, c. 7, pp. 24-5; Matthew of Edessa, ed.
1898, c. 43, pp. 58-62 = tr. Dulaurier, 46-9;
Cedrenus-Sylhetizes, ed. Bonn, ii, 500; the accounts of
the events preceding the surrender differ very much).
Edessa under Maniakes seems to have enjoyed a cer-
tain amount of independence from Byzantium, as he
sent an annual tribute thither (Cedrenus-Sylhetizes,
502).

In Radjab 427/May 1036, the Patricius of Edessa
became a prisoner of the Numayrī Ibn Wathīḥāb
and his many allies; the town was plundered but the for-
tress remained in the hands of the Greek garrison (Ibn
al-Āthīr, ix, 305; Barhebraeus, Chron. syr., 217). By
the peace of 428/1037 the emperor again received
complete possession of Edessa which was refortified
(Ibn al-Āthīr, ix, 313; Barhebraeus, 221).

According to the Armenian sources, Maniakes was
followed by Apūkṣaŋ or Ævōn Asaphēndō, then by the
Iberian Bārūxā’ūz as strategus of Edessa; in 1059
Iwōnēnē Ḟ Đōousēkēnsē was catapanus of the town. In
1065-6 and 1066-7, the Turks under the Kūtrash-
Sālār attacked the town and the Saldžuk Alp Arslān
besieged it for fifty days in 462/1070; it was defended
by Wasiṣ (son of the Bulgar king Aλōiαs?). After the
victory of Malāzgird (q.v.), Edessa was to be handed
over to the sultan, but the defeated emperor Romanus
Diogenes had no longer any authority over it, and its
Catapanus Paulus went to his successor in Constan-
tinople (Sylhetizes, ed. Bonn, 702). In 1081-2 Edessa
was again besieged by an amīr named Khusraw, but
in vain. After the death of Wasiṣ, the Armenian
Smbat became lord of Edessa and six months later (23
September 1083) Philareus Brachiamius succeeded
him. But he lost it in 1086-7 when, in his absence, his
deputy was murdered and the town handed over to
the Saldžuk sultan Malikshāh. The latter appointed
the amīr Būzān governor of al-Ruḥā and Ħarrān.
When the latter had fallen in 487/1094 fighting
against Tūṭah (q.v.), Tūṭah’s general Alpāyūkik
occupied the town, but it was not plundered by his army
as he was attacked and defeated by a Turkish army led
by Wāṣil (son of the Bulgar king Aλōiαs?). After the
victory of Gali, the former amīr of Edessa, the
 затем Armenian Kuroapolac Tūrorus (Theodorous), son of Hērīm, took the citadel. When in
1097-8 Count Baldwin of Bouillon captured Tell Bāqīr, Tūros asked him to come to al-Ruḥā to assist him
against their joint enemies, and received him with
joy, but was shortly afterwards treacherously
murdered by him (Matthew of Edessa, ed. 1898,
260-2 = tr. Dulaurier, 218-21; Anonym. Syriac chronicle
de 1020-1204, in Chabot, C.-R. Acad. Inscr. Lettr. [1918], 431 ff.).

From 1098 the Latins ruled for half a century the “County of Edessa” to which also belonged Sumaysāṭ
and Sarūd (1098 Baldwin of Bouillon I); 1100
Baldwin of Bourg II; 1119 Joscelin (de Courtenay) I;
1131 the latter’s son Joscelin II). The town suffered a
great deal under them, and there was some justifica-
tion for Matthew of Edessa’s comment that Baldwin
du Bourg “hated Christians more than Turks”. Ec-
clesiastical disputes, for instance, on the vexed ques-
tion of the date for celebrating Easter, divided the
Christians, Latin versus Monophysites. Despite their
private jealousies, the Crusaders managed to hold on
to the county of Edessa, largely because of the divided
counsels of the Muslim amīrs, but with the rise of the
resolute and skilful Atabeg of Mawjīl, ’Īmād al-Dīn
Zangī—coinciding in 1143 with the deaths of two of
the strongest figures in the Christian camp, the Byzantine emperor John II Comnenus and Fulk, king of Jerusalem—the days of Crusader control over Edessa had been numbered.

On 25 December 1144, 1 al-Din Zangi took it (a detailed description of these events in the Anonymous Syriac chronicle of 1203-1204, ed. Chabot, in CSOC, series iii, vol. xv, 118-26; tr. Chabot, Une époque de l’histoire des Croisades, in Mélanges: Schlumberger, i, Paris 1924, 171-9). Under Joscelin II and Baldwin of Kaysum, the Franks again attempted to recapture the town in October 1144 and succumbed, entering it by night, but six days later al-Din appeared with 10,000 Turks, and soon occupied and sacked it; the inhabitants were put to death or carried into slavery. Baldwin was killed and Joscelin escaped to Sumaysât (Barhebraeus, 311-12). The fall of this eastern bulwark of the Crusaders aroused horror everywhere; in Europe it led to the Second Crusade. "oration" and two poetic mā'mūr about the destruction of the town. Three similar pieces were written by Basilius Abu l-Fāraǧ b. Shūmānū, the favourite of Zangī; he had also written a history of the town of Orhây (Baumstark, Gesch. d. syr. Lit., 293, 298).

After the death of Nūr al-Dīn, his nephew Sayf al-Dīn Ghâzâūtī took the town in 1174; in 1182 it fell to the Ayyūbīd Šalâh al-Dīn, who later handed it over to al-Mālik al-Kāmil. In 1218, his son al-Mālik al-ṣārif Sharaf al-Dīn Mūsâ became lord of al-Ruḥâ, Harrān and Khiṭṭūs. In June 1234 the town was taken by the army of the Rūm Sa’dījūk ʿAlī al-Dīn Kaykubād and its inhabitants deported to Asia Minor (Kamāl al-Dīn Ibn al-ʿAdīm, tr. Blechot, in ROL, v, 88; Barhebraeus, Chron. syr., 468). But it was retaken within four months by al-Mālik al-Kāmil. In 1244 the Mongols passed through the district of al-Ruḥâ and in 1260 the troops of Hūlēgū. The people of al-Ruḥâ and Harrān surrendered voluntarily to him, but those of Sarūḏij were all put to death (Barhebraeus, Chron. syr., 509; Chron. arab., ed. Beirut, 486).

In the time of Abu l-Fīda, al-Ruḥâ was in ruins. Hamd Allāh Mustawfi in ca. 740/1340 could still see isolated ruins of the main buildings. According to al-Kalbāḏī, al-Ruḥâ was numbered had been rebuilt by his time (ca. 1400) and repopulated and was in a prosperous state. In connection with the campaigns of Timūr, who conquered al-Dżazīra in 1393, al-Ruḥā is repeatedly mentioned in the Sīrat-nāma of Sharaf al-Dīn ʿAlī Yazdī (written in 828/1425).

(E. Honigmann [C.E. Bosworth])

3. The Ottoman and modern periods.

Al-Ruḥâ was conquered by sultan Selim I, probably in 923/1517. The first Ottoman tax register was compiled in 924/1518; the tax-paying population at that time consisted of 782 Muslim families and 75 bachelors, 300 Christian families and 42 bachelors, amounting to a total of 1,082 families and 117 bachelors, or an estimated population total of slightly over 5,500. This low figure was probably due to the upheavals of the Ottoman-Ṣafavid War, for only eight years later, in 932/1526, the tax-paying population had increased to 988 Muslim and 334 Christian families, along with 182 Muslim and 89 Christian bachelors. Moreover, 213 Ottoman military men had settled in the town, thus bringing total population to about 8,000 people. A further tax register from the last year of Süleyman the Magnificent (973/1566) records 1,205 Muslim and 462 Christian families, along with 705 Muslim and 221 Christian bachelors; these figures point to a total population of 13,000-14,000 inhabitants. The town consisted of five large mahalles named after the five gates and must have possessed an active textile industry, for the dye houses of al-Ruḥâ and nearby Harrān produced the impressive revenue of 100,000 akçe. At the turn of the 11th/12th century, al-Ruḥâ formed part of the beglerbegi of Diyarbekir, and was located on the caravan route from Mawṣil and Mārdīn to Aleppo. It was therefore visited by several European travellers, among them an anonymous merchant whose travel account was published in 972-2/1564. He mentions the principal features of the town which were to recur in European travel accounts throughout more than two centuries: the strong walls and impressive citadel, the sanctuary of the prophet Ibrāhīm al-Khalīf (Abraham) located next to the sanctuary, and, at a distance from the town, a well frequented by lepers and other sick people. A few years later, al-Ruḥâ was visited by the Augsburg physician and botanist Rauwolf (982/1575), who describes the town as handsome and well-built. The town possessed a lively trade in rugs and carpets, which were sometimes sold to Europeans, and also served as a point of transit for goods from Damascus, Aleppo and Istanbul, which were sold in Persia and ʿIrāk.

The most detailed description of al-Ruḥā/Urfa before the 13th/19th century is due to the Ottoman traveller Ewliya Čelebi, who passed through the town (which he calls Urfa, as do all other visitors of this period) in 1056/1646. His interest in it may have been due to the fact that one of his relatives had settled in a kāfīth there. He describes two fortresses, one the citadel on the hill and the other a fortified settlement (varōğāk). The citadel he links with King Nimrod, and the two Roman columns standing there Ewliya interprets as a catapult with which this ruler supposedly had the prophet Ibrāhīm al-Khalīf (Abraham) thrown into the fire. Otherwise, the citadel contained 20 small houses inhabited by the commander (dżaddar) and his 200 men, in addition to a mosque, an armoury, a barn and a number of cisterns. Ewliya mentions only three gates, partly with names different from those recorded in the 10th/16th century tax register. He claims to have counted 2,600 houses in the fortified section. If his count was accurate and the area outside the fortifications remained uninhabited, the town must have stagnated since 973/1566. As Ewliya’s figures concerning houses are generally more generous than the household data found in late 10th/16th century tax registers, the upheavals of the Djelālī period, particularly the occupation by the forces of Kara Yazdī in 1008/1599-1600, must have taken their toll. Houses were generally built of mud brick, but there were quite a few opulent residences with their own gardens and baths, belonging to pashas and more rarely to kāfīths.

He also enumerates 22 mosques; the mosque
known as Kızıl Djami is considered to be of great age and a former monastery, converted into a mosque by Hārūn al-Raṣīlī. The minaret, undated, often has been dated al-Dur al-Durar, a legend which states that a former minaret actually stood on the mosque site, but according to Gabriel, it is an original minaret. Ewliyā has also picked up a legend of Jesus' visit to al-Ruḥā and his stay in a local monastery. Ewliyā records three medreses; the medreses possessed no waqf revenues, but the traveller comments on the multitude of Kurdish scholars, both in the medreses proper and in the local ders al-taṣawwaf. There were also the zāyijen. Among the public kitchens, the most notable was the 'imedret of Ibrāhīm, supposedly built by the caliph al-Maʾmūn. Connected with the 'imedret was al-Ruḥā/Urfa's major sanctuary, dedicated to Ibrāhīm by Saḥlab al-Dīn Ayvūbī's nephew al-Malik al-ʿAğrāf (608/1211-12), and visited by pilgrims from all over the Islamic world.

Ewliyā was not much impressed with the shopping streets and bazaars of al-Ruḥā/Urfa; but though the Küre Carshisi was not of imposing appearance, quantities of valuable goods were sold there. He records a total of 400 shops and a large number of mills, one of them named for a certain Tāyyāranglu Ahmed Pasha. The town also possessed a tannery; here a superior quality of yellow maroquin leather was manufactured. According to the French merchant Tavernier, al-Ruḥā/Urfa, along with Tōkāt and Dīyarbekir, was the source of the finest maroquin leathers. In addition, the town was noted for its cotton fabrics, and there was also some silk production.

Ewliyā's account is confirmed by the description of Tavernier, who passed through the town in 1054/1644. On his sight-seeing tour, this merchant and traveller saw many houses poorly built or even totally in ruins; there were so many empty lots that Tavernier compared the town to a desert. He also observed rugs and carpets spread out by the side of the fish pond, and commented on the veneration Muslims felt for this site. A church in the midst of a cemetery supposedly had been selected by St. Alexis as a place of retreat; and not far from the town Tavernier was still clearly visible. A valuable record of the town was al-Ruha/Urfa's major sanctuary, dedicated to Ibrāhīm by Saḥlab al-Dīn Ayvūbī's nephew al-Malik al-ʿAğrāf (608/1211-12), and visited by pilgrims from all over the Islamic world.

When Thévenot passed through al-Ruha/Urfa in 1074/1664, the damages mentioned by Ewliyā and Tavernier were still clearly visible. A valuable record of al-Ruha/Urfa's otherwise poorly documented 13th/19th century is found in the accounts of revenues and expenditures pertaining to the mosque of Ibrahim al-Khalīf and the then newly constructed Ridwānīyye madressa. These survive for a few years beginning with 1151/1738-39 (Osmanlı Arşivi, İstanbul, Malıyeden Müdevver 2004). The register contains a listing of the shops, gardens, mills and public baths belonging to the medressa, and which must have been the Ibrāhīm al-ʿAğrāf. The structure is described as a solidly-built tower of great antiquity. The author also visited a large foundation adjacent to the two fishponds, which he describes as a madressa and which must have been the foundation which Saḥlab al-Dīn had added to the mosque of Ibrāhīm (587/1191). He also made a map of the town and recorded the presence of numerous orchards.

From 1307-8/1890 or slightly earlier dates the description by Cuinet. According to him, the town possessed a population of 55,000, of whom 40,835 were Muslims; about 1297/1880, Sachau had estimated the number of Urfa's inhabitants at minimally 50,000. However, these optimistic estimates were contradicted by Djiedret Pasha's claim (1298/1881) that Urfa had consisted of only 2,380 households or families (1,337 Muslims, 1,003 Christians, 29 Jews).
If we compare the estimates by Buckingham and Sachau-Cuinet, it would seem that population growth in the 13th/19th century was just able to compensate for wartime population losses, and Urfa's population must have been at a low ebb for several decades in the mid-century. Private houses in Cuinet's time were generally built in rough or even regularly hewn stone. The streets possessed wide pavements, while a channel in the centre served for the evacuation of water and household waste. The city walls had deteriorated, but the citadel apparently was in better condition. The town quarter was inhabited by 18,000 students, in addition to a nūdiyya. There were also primary schools for the children of the various Christian churches, so that a total of 2,464 students were receiving a formal education.

At this time, Urfa was a flourishing centre of textile manufacture. The cotton industry survived the competition by factory-woven textiles, partly because manufacturers switched to imported thread which was woven locally. However, to remain competitive, weavers were forced to accept very low wages. By the early 20th century the ancient trade route linking northern Mesopotamia with Aleppo had revived, and Urfa's new prosperity permitted the construction of a town quarter extra muros. This development was, however, cut short when, after the fall of the Ottoman Empire Syria became a French and British Empire Syria became a French and British zone, so that a total of 2,464 students were receiving a formal education. At this time, Urfa was a flourishing centre of textile manufacture. The cotton industry survived the competition by factory-woven textiles, partly because manufacturers switched to imported thread which was woven locally. However, to remain competitive, weavers were forced to accept very low wages. By the early 20th century the ancient trade route linking northern Mesopotamia with Aleppo had revived, and Urfa's new prosperity permitted the construction of a town quarter extra muros. This development was, however, cut short when, after the fall of the Ottoman Empire Syria became a French and later French troops occupied Urfa in 1919-20. After severe fighting, which included a local uprising, the Treaty of Lausanne determined the inclusion of Urfa into the newly-founded Republic of Turkey (1923).

Throughout the Republican period, it has not been possible to re-establish Urfa's former trade links. This situation has emphasised the agricultural character of the vilayet. Grain is the main crop; apart from wheat, barley and beans are also significant. Productivity is often low, as much of the land is subject to erosion. A significant share of the grain grown is not intended for the market. Irrigation is a precondition for increasing productivity, and the regulation of the Firat (Euphrates), the region's only important body of water, is expected to expand the area amenable to irrigation. Reduced opportunities in agriculture and the progress of mechanisation have diminished employment here, so that there has been considerable migration of labour to e.g. Adana, Gaziantep and Diyarbekir in search of work; female labour finds work cotton-picking in the Çukurova. Low incomes have likewise limited the progress of education, and literacy rates are lower than the national average. Since 1980-2, however, Urfa has been the site of a college of Dicle University at Diyarbekir, and the foundation of a local university is envisaged by the town's citizens.

to magic. According to Ibn Khalduin (Mukaddima, iii, 127, tr. Rosenthal, iii, 159), magic (al-suhr) consists in "linking the human world with a celestial wall, which has infected the superior natures in the universe with the impression of spirits (ruhdniyya)." This is a statement confirmed by ps.-Madjriti (Firaydun al-akham, ed. H. Ritter, Leipzig 1933, 182), who claims to reveal the techniques by which it is possible to invoke (istidddh) the ruhdniyya of the celestial bodies.

While ruhdniyya is currently used in Sufi texts as a denomination of these "cosmic intelligences," Ibn al-Asakir in the K. al-tadjalliydt (ed. O. Yahya, Tehran 1988, 317) of purified human spirits granted access to the contemplation of ruhdniyya mtufarsa, forthwith identified with the spirits (arwah) of the celestial spheres—it also often denotes the "spiritual entity" of a prophet or of a deceased wasl whose marid receives supernatural assistance. Thus Ibn 'Arabi speaks (al-Fuahal al-Makkiiyya, Bulåk 1329, iii, 43), of his wasl with the ruhdniyya of Jesus. This usage is associated with the notion of sainthood, uwaysiyya, which is characterised by the transmission of a baraka independently of any contact with a physically present shaykh. It is encountered frequently in the literature of the Nakshbandi, where the sîlisa presents numerous cases of this type (e.g. that of Abu 'l-Hasan al-Kharaqâni, d. 425/1033 [q.v.], who is directly linked with Abu Yazid al-Bistâami, d. 324/937 or 361/974 [q.v.]). On the doctrinal justification of these chronological anomalies, see 'Abd al-Madjid al-Khana, al-Hadîk al-alardiyya, Damascus 1306, 9. In al-Sa'da al-ahdabiyâ, Damascus n.d., 27-8, the same author describes the rites which, at the time of ziyya al-kubr, allow the establishment of a connection with the ruhdniyya of the wasl whose body is interred in the tomb that is visited. (On this practice, see the Raqahâsin al-ja'fsî of Fakhî al-Dîn 'Ali Sa'd, Tehran 1396/1977, ii, 468). Paul Fenton has drawn attention to an analogous Jewish practice, that of yiḥâd, which is also conducted over the tomb of a saint. On the beliefs associated with this meaning of ruhdniyya, see M. Gaborieau, A. Popovic and T. Zarcone (eds.), Naghbandi. Chémoinnet et situation actuelle d'un ordre mystique musulman, Istanbul-Paris 1990, index s.vv. ruhdniyya and uwaysiyya. In Imaginary Muslims: The mirage of the Other Râsi and the râsi, analysis of a singular case of the exploitation of traditional data concerning this theme with the appearance in Central Asia, at the end of the 16th century, of a mythical "History of the Waṛayâs." Bibliography: Given in the article.

(R. RUHMI, a name given in early Islamic geographical, travel and maritime literature to an eastern region of South Asia, most likely in the ancient Suhma region in the western part of Bengal [see BANGLA]. There is considerable confusion about its location; readings vary from Ruhmi (al-Yâqobi, 106) to Rahma (Ibn al-Fakhî, 15) and Dahum (Sharaf al-Zamân Fâhr Marawzi on China, the Turks and India, ed. and tr. V. Minorsky, London 1942, text 35). Of these, the closest to Bengal is Dharma (a spelling used by Sulaymân al-Tâdjîr), a possible reference to a famous Bengali king Dharmapâla (769-801 A.D.). Sulaymân al-Tâdjîr also noticed correctly Dharmpâla's non-aristocratic and humble origin. According to Ibn Khurradâfghîb, 63-7, Ruhmi, a vast kingdom, was bordered by Kâmrîn (Kamrup) not far from China, and was bountifully supplied with elephants, buffaloes and Indian aloes woods. Its coast, according to Hûdîd al-âlam, tr. 87, included areas such as Nimyâs, Samandar, Andrâs, Urink and Harkand (ancient Harikela near Candradvîpa in South Bengal, from which comes Bahr al-Harkand, the early Arabic name for the Bay of Bengal). The kingdom fought constantly with its neighbours, the Ballahârân and the Bâhrân, and was visited by the early Arab explorers and (illegitamy of the Deccan) and Djurâs (Gurjâras of Kanuânâ). It was particularly famous for its fine cotton cloth, later known as muslin. In addition to gold coins, cowrie-shells were used for currency. Trade with the Arabs flourished in the port cities in the south, especially in Shâhîj-dâm (Chittagong [q.v.]) and Samandar. The recent discovery of two 'Abbâsid coins in Bangladesh, one from Pa$hâpur dated 172/788, from the time of Hârîn al-Râghîd (170/208/786-809) and the other from Mainamati minted during the reign of al-Munsârî (247-8/861-2) attests to this early Arab-Bengal trade link which undoubtedly speeded up the Islamisation of the region.

sūra CXI, in which Ābū Lahab is attacked, unless that was an early Meccan revelation. The statement in some sources that the divorces took place before the marriages had been consummated, is probably an invention to keep the holy family free from contamination with the family of Ābū Lahab. After the divorce, Rukayya was married to ʿUthmān b. ʿAffān [q.v.], went with him and other Muslims to Abyssinia, and returned to Mecca before the Ḥijra. She made the Ḥijra to Medina with her husband, but died while Muhammad was absent from Medina on the expedition to Badr [q.v.]. After seeing in the sky a son, ʿAbd Allāh, but a few years after her mother’s death a cock pecked his eye and he died.

**RUKHĀM** [see Suppl.]

**AL-RUKHKH (A.),** a huge, ostrich-like bird (*Aepyornis maximus*), now extinct, probably existing well into historical times as a peculiar species in Madagascar, where it is mentioned by among others Marco Polo. Other aepyornitidae, such as the New Zealand Moa bird, which became extinct only around the 14th century, might have contributed to the genesis of the *rukhkʰ*’s image. Though early Arab seafarers could conceivably have seen the bird-face-to-face, Arabic tradition soon turned the *rukhkʰ* into a fabulous creature embellishing it with all kinds of strange details.

While early references to al-Dāhīz cannot be verified, the first mention of the *rukhkʰ* is found in Buzurg b. ʿShaḥrīyār’s (4th/10th century) *Ṣaḥīḥ b. Ḥind*. Further references are mostly contained in works belonging to the genre of *ṣaḥīḥ* literature, such as Abū Hāmid al-ʿArbānī’s (d. 563/1169-70 [q.v.]) *Ṭuhfāt al-ʿalā inkhād al-Dīmāshkī*’s (d. 727/1327 [q.v.]) *Nukhbat al-dirār fī ʿṣāḥīḥ al-bān wa-l-bahr wa Ibn al-Wardī’s (d. 749/1349 [q.v.]) *Khawdāt al-ṣāḥīḥ*; later summaries are rendered by al-Dāmirī (d. 808/1405 [q.v.]) and al-Bihṣārī (9th/15th century [q.v.]). By way of its mention in the *Ṭaʾrīḵ al-Sinbād* the sailor, itself included in the widely-read *Arabian Nights*, (Chauvin, *Bibliographie*, vi, 92-3, vii, 12), the *rukhkʰ* became known and was discussed in Western sources.

According to the fabulous accounts of various Arabic authors, the *rukhkʰ* is capable of carrying an elephant while airborne; each of its wings has 10,000 feathers of an enormous size, and it lays eggs as big as an elephant while airbound; each of its wings has 10,000 feathers (or beak) as a tall tale (*kadhib*). For instance, al-Damiri (d. 1624) in his later summaries are rendered by al-Damiri (d. 727/1327 [q.v.]) *Tuhfat al-aldbb*, or Bilād al-Dāwar immediately to the north. These Zunbils remained a hostile force till the second half of the 3rd/9th century, when the Šaffārīd Yaʾkūb b. al-Layḥī engaged in warfare with them [see ŠAFFĀRIDS], and it is only after this that the native dynasty disappears from historical mention and that the Islamic geographers were able to treat al-Rukhkʰād as part of the Dār al-İslām. Thus the *Ḥudūd al-ʾalam*, 111, describes it as a prosperous and pleasant district. These authors mention as two of its main towns Pandjīwāy and Tigīnbād; for a discussion of the location of these, see KANDAHĀR at IV, 536b. Administratively, al-Rukhkʰād seems often to have been linked with Šīstān; Ibn Ḥawkalī, 425, tr. 412, gives a global figure for the revenues of these two provinces as 100,000 dīnārs plus 300,000 dirhams. After this time, the name al-Rukhkʰād falls out of use; the Ghaznawīd historian Gardīzī (wrote in the mid-5th/11th century [q.v.]) seems to be the last author regularly to refer to Rukhkʰūd. Only the site of an Islamic settlement now called Tepe Arūkh preserves its name.

Since Arab seafarers captured many slaves from the pagan region of al-Rukhkʰād, one occasionally meets the nisba al-Rukhkʰādī, e.g. for Hārūn al-Rashīd’s mawāl Abu ʿl-Farādī, who became a very influential secretary and governor for the caliphs of the early 3rd/9th century; see Bosworth, op. cit., 82-3; Patricia Crone, *Slaves on horses*, the evolution of the Islamic polity, Cambridge 1980, 190. Whether the vizier of the Büyid amir in Baghdād Muḥarrīf al-Dawla, Muʿayyid al-Mulk Abu ʿl-Farādī (see H. Busse, *Chalīf und Grosskönig*, die Büyiden im Iran (945-1055), Wiesbaden-Beirut 1969, 244), derived his nisba from Afghanistān or from the village near Baghdād of al-Rukhkʰādīyīya (cf. Yākūṭ, *Buldān*, ed. Beirut, iii, 38—a settlement of persons transported from al-Rukhkʰād in Afghanistān?), is unclear.

(C.E. Bosworth)

**RUKHṢA (A.),** literally “permission”, dispensation”.

1. In law.
Here, rukhsa is a legal ruling relaxing or suspending by way of exception under certain circumstances an injunction of a primary and general nature ("azima [i.e. rukn]).

The general obligation to fast during Ramadan is, by way of rukhsa, suspended during the days of an illness or a journey, under condition that these days are made up after Ramadan. Similarly, the general prohibition to eat meat that has not been ritually slaughtered is suspended if a Muslim could only survive by violating it. As a rule, one has the choice but not a rukhsa during a journey. The distinction between rukhsa and "azima does not have legal consequences, except that, according to the Hanafis, tacit consensus (idjam sukût) can establish a rukhsa but not a "azima.

(R. Peters)

2. In Sufism.

The way in which the concepts of rukhsa and its counterpart "azima are used in Sufism involves an extrapolation from a juridical to a much more ethical domain. Here they refer to two opposite and differently-valued patterns of behaviour. "Azima denotes a way of life characterised by determination and firmness of purpose, and is consequently of a higher level than rukhsa, which lacks these characteristics. These two words refer also, particularly in their plural form, to concrete deeds in which the two behavioural patterns manifest themselves. E.g. celibacy and tawakkul (trust in God to such an extent that one does not support oneself) are considered to be "azâ'îm, whereas marriage and supporting oneself are seen as rukhsas. The depreciatory valuation of the latter is to be witnessed in the idea expressed e.g. by al-Makki in his Kût al-kulîb that rukhsas are (mean) for the weak, whereas the "azâ'îm are characteristic of the strong. Also, al-Kugayri makes it clear in his Risâla that, with these strong persons, the Sûfis are meant.

On the other hand, in Kût al-kulîb and also in the Kût al-Luma' by Abû Naṣr al-Sarrâjî, the tradition is quoted according to which God loves the use of both rukhsas and "azâ'îm equally well, albeit that in the latter source this tradition is quoted primarily as a warning against denouncing people who avail themselves of rukhsas. Thus the overall picture painted by these sources is that in Sûfî circles a surplus value is attached to the "azâ'îm (as in their Lehrbuch der klassischen Sûfîs, Berlin 1966, 135-7; R. Gramlich, Schlaglichter über das Sûfism. Abû Naṣîr as-Sarrâjî Kût al-Luma' 1990, 240; idem, Das Sendschreiben al-Qusayris über das Sûfism. Einleitung, übersetzt und kommentiert, Wiesbaden 1989, 338).

Nâkhâbîdî Sûfis even claim that their attitude of strictly confining themselves to "azâ'îm and avoiding the use of rukhsas is one of the most distinctive characteristics of their order. Yet even Nâkhâbîdîs have had to take the above-mentioned tradition in consideration, and therefore, according to Bahâî al-Dîn Nâkhâbîd, thîs brotherhood, although abstaining from these practices, yet does not denounce others who observe them (J. ter Haar, Follower and heir of the Prophet. Shaykh Ahmad Sirhindî (1564-1624) as mystic, Leiden 1992, 80-1, 107). This strong emphasis on "azima is partly a reaction to other Sûfis who used the idea of rukhsas in order to justify certain controversial practices like, say, killing non-Muslims, (see Massignon, La passion d'al-Hallaj, Paris 1922, ii, 779-81). A different and much more positive valuation of rukhsas is to be found in the Kût al-Luma' of Abû 'l-Najîb al-Suhrawardi, where they are considered to be an integral part of a special type of affiliation, viz. the affiliation of the mutâshabhin, i.e. the lay members affiliated to an order, an designation which in this source at least has no pejorative connotation. Their affiliation is admittedly of a much lower level compared to that of the Sûfis proper; nevertheless, it is a valuable one, since, according to a saying of the Prophet, "Whoever makes the effort to resemble a group of people is one of them" (M. Milson, A Sufi rule for novices. Kût al-Luma' of Abû al-Najîb al-Suhrawardi, Cambridge and London 1975, 17-21, 72-81).

**RUKHSA — RUKN**

RUKN (.), pl. arkan, literally "corner (as in arkan al-yamâ'î = the southeastern corner of the Ka'ba, support, pillar). The singular rukn occurs twice in the Kur'ân, in XI, 82-80, where Lot seeks for support in a strong rukn, pillar, or, figuratively, a leader or chief, and in L, 39, where Pharaoh and his support, rukn, i.e. retinue, reject Moses.

1. In religious and legal usage.

Here, it is commonly found in the expression arkan al-dîn or arkan al-'ibâda, denoting the basic "pillars" of religion and religious observance. These so-called "pillars of Islam" are usually enumerated as (1) the profession of faith, shahâda; (2) the pilgrimage, hajj; (3) the worship, salât; (4) fasting, sawm; and (5) almsgiving, zakât, sadaqa. To these some authorities add a sixth, personal warfare, dhikhr. A Sufi leader (mutâshabhin) is partly a reaction to other Sufis who used the idea of rukhsas in order to justify certain controversial practices like, say, killing non-Muslims, (see Massignon, La passion d'al-Hallaj, Paris 1922, ii, 779-81). A different and much more positive valuation of rukhsas is to be found in the Kût al-Luma' of Abû 'l-Najîb al-Suhrawardi, where they are considered to be an integral part of a special type of affiliation, viz. the affiliation of the mutâshabhin, i.e. the lay members affiliated to an order, an designation which in this source at least has no pejorative connotation. Their affiliation is admittedly of a much lower level compared to that of the Sûfis proper; nevertheless, it is a valuable one, since, according to a saying of the Prophet, "Whoever makes the effort to resemble a group of people is one of them" (M. Milson, A Sufi rule for novices. Kût al-Luma' of Abû al-Najîb al-Suhrawardi, Cambridge and London 1975, 17-21, 72-81).

2. In natural science and alchemy.

Here, it denotes "cardinal point", "part", "direction" and, in particular, "element".

In the Sîr al-khâlîka attributed to Balînûs (see BALÎNûS), a source that has played a fundamental role in much of Islam's alchemical tradition, the word rukn appears in its literal sense of a corner, side or an extremity (see Lane, i/3, 1148-9). Yet it functions as a
technical term in this text, since it is employed consistently and exclusively in a cosmological context. Thus in a discourse on winds (rijāḥ [see riḥīt]), the author tells us that the ruin which faces the east (mukabbil al-mashrīk) is cold-moist, since it is here that the cold-moist wind blows, stabilising and strengthening the ruin (K. Sīr al-qalāʿa wa-yānʿat al-tābīʿa, ed. U. Weisser, Aleppo 1979, 135). This cosmological idea of strength appears to have subsequently been integrated into the ordinary meaning of the word, for one of the meanings of ruin found in the standard Arabic lexicons (e.g. Tāʿa) is the strongest side (ḍāʿībān) of a thing (see Lane, loc. cit.).

Again, in a discourse on the motion of celestial bodies, the Sīr, 140, uses the term to designate each of the four geographical regions or sides of the physical world—rukn al-mashrīk, rukn al-gharbī, etc. (188). Here is practically employed in the alchemical and cosmological writings of mediaeval Islam.

RUKN AL-DAWLA, ABU 'ALI AL-HASAN B. BŪYA, second in age of the three brothers that founded the Būyid dynasty [see BUWAYHIDS]. His fortunes followed those of the elder brother 'Ali (later 'Imād al-Dawla [q.v.]) up to the latter's occupation of Fās (322/934); Rukn al-Dawla was then given the governorship of Kāzarūn and other districts. But shortly afterwards he was forced by the 'Abbāsid general Yākūt, at whose expense the Būyid conquest of Fās had been made, to seek refuge with his brother; and when Yākūt was in turn defeated by the Ziyārid Mardawīdī [q.v.], the Būyids' former overlord, against whom they had revolted, 'Imād al-Dawla, who then found it advisable to conciliate Mardawīdī, sent Rukn al-Dawla to him as a hostage. On Mardawīdī's assassination in the following year (323/935), Rukn al-Dawla escaped and rejoined 'Imād al-Dawla, by whom he was supplied with troops to dispute the possession of Djiḥāl with Mardawīdī's brother and successor, Wuhmḡīr. Rukn al-Dawla succeeded at the outset in taking Iṣfāḥān; but the first round of his contest with Wuhmḡīr ended in Rukn al-Dawla's ejection from that city in 327/939, when he again fled to Fās.

In the next year Rukn al-Dawla's help was sought by his younger brother al-Husayn (later Muṭizz al-Dawla [q.v.]), who had meanwhile set himself up in Khūzistān, against the Barīdīs [q.v.]; whereupon Rukn al-Dawla, being now possessed of no territory, attempted to take Wāsiṭ but was obliged to retire when the caliph al-Raḍī [q.v.] and the amīr Baṣqār [q.v.] opportunistically took the field against him. However, he succeeded in recovering Iṣfāḥān, owing to Wuhmḡīr's championship of Mākān b. Kākiyā in a quarrel with the Sāmānīd Naṣr b. Aḥmad [q.v.]; and when the latter ruler died in 331/943, Rukn al-Dawla, who had meanwhile supported the Sāmānīd cause, was able to drive Wuhmḡīr as well from al-Rayy, of which he had momentarily regained possession on the retirement of the Sāmānīd general Abū 'Ali Cagānī.

With al-Rayy, Rukn al-Dawla gained control of the whole Djiḥāl; and for both short intervals (of about a year in each case) retained it for the rest of his days. Up to 344/955-6, however, his position was highly precarious. For not only Wuhmḡīr but also the Sāmānīds continued to challenge it. It was only by playing them off against each other and sowing dissensions between the Sāmānīd princes and the caliph that the latter's commandant against him, Rukn al-Dawla was able to maintain it. Even so (as indicated above) he was driven from al-Rayy, and his representatives were expelled from most parts of the province, once in 333/944-5 and again in 339/950-1, in each case by Sāmānīd forces. Indeed, he was obliged in the end to become the Sāmānīds' tributary (at least two agreements for the payment of tribute being recorded); it was on this basis that he first made peace
with them in 344/955-6, as again in 357/968-9, after he had defeated an attempt on al-Rayy made by the Musafirid or Sallârîd Marzûbân b. Muhammad, whom he took prisoner, he gained control of southern Adhabûbîyân, his ejection two years later from al-Rayy itself (see above) naturally cost him this as well.

Rukn al-Dawla received his lâkab simultaneously with his brothers in 334/945-6, on Mu‘izz al-Dawla’s entry into Bâghdâd; and on ‘Imâm al-Dawla’s death in 338/949 succeeded him as head of the family and amîr al-umâr* (though this title was also held by Mu‘izz al-Dawla). The last two years of his life were rendered unhappy—so much so that he never recovered from the shock induced by the news—owing to the conduct of his son, ʿAdud al-Dawla [q.v.], in taking advantage of an appeal for help sent by ʿizz al-Dawla Bakhtiyâr [q.v.] (son of Mu‘izz al-Dawla and his successor in the rule of Irâk), to imprison the latter, and, in conjunction with Rukn al-Dawla’s own nozîr Abu ʿl-Fath Ibn al-ʿAmîd [q.v.], who had been sent likewise with a force to Bakhtiyâr’s aid, to seize that province for himself. And though ʿAdud al-Dawla obeyed his command to release Bakhtiyâr and return to his government in Fârs, Rukn al-Dawla was only with difficulty persuaded to visit ʿAdud al-Dawla in 365/975-6 at Isfahan, in order that by receiving a confirmation of his appointment as heir, he should succeed without dispute. Rukn al-Dawla died at al-Rayy in Muḥarram of the next year/September.

In the settlement arrangements made at Isfahan just before his death (see above), Rukn al-Dawla nominated his eldest son ʿAdud al-Dawla, at this moment ruler in Fârs and subsequently in Irâk also, as his successor, but provided that Râyî should go to his second son Fâkhr al-Dawla [q.v.], and Hâmaḏân to the third son Mu‘ayyid al-Dawla [q.v. as subordinating to ʿAdud al-Dawla; in the event, Râyî passed under Mu‘ayyid’s control, and Fâkhr al-Dawla, who died to the Ziyârîd and Sâmânîd, was only able to establish his claims there after Mu‘ayyid al-Dawla’s death.

As shown above, Rukn al-Dawla faced considerable difficulties in setting the northern amirate of the Bûyûds on a firm basis, but what success he achieved was largely attributable to the firm backing and wise advice of his vizier, the famous Abu ‘l-Fâlî Ibn al-ʿAmîd [q.v.], who served the Bûyûds for 32 lunar years (328-60/940-70) and was able to contain the violence and rapacity which were the normal attributes of a ruler like Rukn al-Dawla who had begun as a Daylâmî robber chief. Nevertheless, Miskawayh, in Eclipse of the Âbbâsid caliphate, ii, 279, tr. v, 298-9, lamented that Ibn al-ʿAmîd was prevented from establishing the rule of justice by his master’s impetuosity and lack of inherited kingly authority. The circle of scholars and literary men which grew up around him, and which at various times included such luminaries as Abu Ḥâyyân al-Tawâhîdî [q.v.], the philosopher Abu ʿl-Ḥasan al-ʿAmîrî [q.v. in Suppl.] and Miskawayh himself, as Ibn al-ʿAmîd’s coadjuvant, made Râyî at this time a dazzling centre of Arabic culture (see J.L. Kraemer, Humanism in the renaissance of Islam. The cultural revival during the Buyid age, Leiden 1986, 210-11, 223, 230, 241-6). It is less easy to estimate whether there was a specifically Persian element within Rukn al-Dawla’s ethos of rulership, but he does seem to have conceived of himself as a monarch in the line of ancient Persia, possibly as an inheritance from his early life in the entourage of Mardâwîdî; a silver medal struck at Râyî in 351/962 depicts the amîr as a Persian emperor and has a legend in Pahlavi “May the medal of the king of kings increase!” (see G.C. Miles, A portrait of the Buyid prince Rukn al-Dawla, ANS Museum Notes no. 11, New York 1964; Kraemer, op. cit., 44).

**RUKN AL-DIN** [see Xllhlq ARLSN II and III].

**RUKN AL-DIN BARBAK SHAH** b. Nâṣir al-Dîn Mahmûd Shâh, Bengal Sultan of the restored Ilyâs Shâhī line, r. 864-79/1460-74. Bârbak was one of the most powerful of the medieval rulers of Bengal, achieving a great reputation from his wars against the Hindu rulers of Orissa and northern and eastern Bengal, regaining Silhêt [q.v.], and also Chittagong [q.v.]. From the Arakanese. He recruited for his armies Habashî military slaves and Arab mercenaries, and popular hagiographical tradition attributed many of Bârbak’s conquests to one of this latter group, the warrior-saint Shâh Ismâ’îl Ghâzi Arabî, concerning whom a Risâlat al-Shâhî was composed in 1042/1633 by Pîr Muhammad Shâhârî, see Storey, i, 990. Bengal prospered under Bârbak; he undertook extensive building work on his palace at Gawr or Lakhnawî [q.v.] and was a great patron of Bengali literature.

**RUKN AL-DIN KHURSHĀH**, Nizârî Ismâʾîli imâm and the last lord of Alamût. The eldest son of ʿAllâ al-Dîn Muhammad III (r. 618-83/1221-55), Rukn al-Dîn (al-Ḥasan), also known as Khurshāh, was born in Rûdbâr around the year 627/1230; and it was in his childhood that he was designated to succeed to the Nizârî imâm. Rukn al-Dîn succeeded as an imâm, to the leadership of the Nizârî Ismâʾîli community and state upon the assassination of his father on the last day of Shawwâl 653/1 December 1255. His very brief but eventful reign as the eighth and last lord of Alamût coincided with the completion of the Mongol conquests in Persia and the final year in the history of the Persian Nizârî state of the Alamût period.

By the time of Rukn al-Dîn’s accession, the Persian Nizârîs of Kuhîfârân and Kûmûs had already experienced a foretaste of the destructive powers of the Mongol hordes. But it remained for Hûlûgî or Hûlâqû [q.v.] or Hûlûgû himself, leading a major Mongol expedition to Persia, to uproot the Nizârî state centred in Rûdbâr [see Rûdbâr] in the central Alburz mountains of northern Persia. The sources are generally ambiguous on Rukn al-Dîn’s policy vis-à-vis the Mongol invaders. Vacillating between submis-
sion and resistance, he eventually seems to have aimed towards a compromise, perhaps hoping to avert at least the Mongol capture of the chief Nizārī strongholds in Rūdbār. For he did adopt a conciliatory policy towards the Sunnīs who had played a part in spurring the Mongols against the Nizārī Ismāʿīlīs. Be it as it may, Rūknaḏīn was drawn into an intricate and ultimately futile web of negotiations with the Mongols, from the time of Hūlagū’s arrival in Persia in Rabī’ I 654/4 April 1256. The Nizārī ruler also dispatched several embassies, headed variously by his vizier Shāma al-Dīn Gīlār and his personal bodyguard, the commanding officer of his own brother’s army, Shams al-Dīn, who persistently demanded nothing less than Rūknaḏīn’s total submission and his orders for the demolition of the Nizārī strongholds, including Alamāt, the traditional seat of the Nizārī state.

Having grown weary of Rūknaḏīn’s delaying tactics, Hūlagū soon decided to launch his assault on Nizārī Rūdbār, ordering the main Mongol armies to converge from a miscellaneous conglomeration of former Nizārī-Mongol negotiations followed by a few days of intense fighting, the Nizārī ruler was finally obliged to surrender. On 29 Shawwāl 654/19 November 1256, Rūknaḏīn al-Dīn Khurshāh, accompanied by a group of Nizārī dignitaries and Nāṣīr al-Dīn al-Ṭūsī, descended from Maymūn-Dīz and presented himself before the Mongol conqueror, marking the close of the Nizārī state of Persia; he had ruled for exactly one year.

Subsequently, Rūknaḏīn al-Dīn was treated hospitably by the Mongols whilst they still needed his cooperation to persuade the remaining Nizārī strongholds to surrender. Rūknaḏīn al-Dīn now issued a general order of surrender to the commandants of the Nizārī fortresses; about forty such fortresses in Rūdbār fell readily into Mongol hands, and they were duly dismantled after their garrisons were taken into custody. Alamāt did not surrender until the end of Dhu ’l-Ka‘da 654/December 1256, and Lanbāsār [q.v.] held out for another year while Gīrdkuḥ resisted its Mongol besiegers until 669/1270. The Persian Nizarīs and drew up Rūknaḏīn’s actual terms of surrender, which may be apocryphal [see A. Pelissier, Paris 1982, 132-7; J.A. Boyle, The Ismāʿīlī and the Mongols, in Ismāʿīlī contributions to Islamic culture, ed. S.H. Nasr, Tehran 1977, 7-22; F. Daftary, The Ismāʿīlīs: Their history and doctrines, Cambridge 1990, 421-9, 435, 444, 697-8 (containing further bibliographical references).]

(F. Daftary)

(F. Daftary)
the end of the 18th century, W. Franklin praises the sweetness and clearness of the waters of this little stream to which the natives attribute medicinal qualities. At the beginning of the 19th century, Scott Waring notes that its breadth was nowhere more than six feet. Ker Porter observes that the canal has become choked up through neglect. The Kuhlgh-nama deplores the disappearance of the groves that surrounded it. At a later date we have the same observation by Gobineau ("Cette onde poétique ne m’apparut que sous l’aspect d’un trou bourgeois"), Curzon ("a tiny channel filled with running water") and Sykes ("a little indefinite stream").

The Fārs-nāma-yi Nāsīrī mentions a second Ruknbād in Fārs: "The source of the warm stream of Ruknbād is part of the district of Bīkhā-yi Fāl (Lāristān); it is over a farāshā north of the village of Ruknbād; having a bad flavour and an unpleasant smell, it is of no use for agriculture; it cooks in a few minutes eggs put into it; one can only bathe in it at some distance from the spring."

RUKYA (A.), from the root r - k - y meaning "to ascend" (cf. Kurān, XVIII, 93, XXXVIII, 10; to this, LXXV, 27, adds the idea of "enchanter", "one who cures" and "magician" rākī, a term often found in the Sīnā in Hadith and in the Sunna), "enchantment". Since casting a spell was usually by means of a magical formula pronounced or written on an amulet of parchment or leather, rākī is to be connected with kānī and rīkī (q.v.). The term tarākī of the preceding verse, 26, from the root r-k-w, y, variously understood by the commentators, means "collar bones" (see TA and Lane, s.v.; Stein-gass, Persian-English dict., 291), and reminds one of the Clavicules de Salomon, a book of magic, printed in 1641 and reissued by Pierre Belfond, Paris 1652; it contains a definition of the idea of a magical nature (notably Solomon’s seal) to element, magical spell. Since casting a spell was frequently prohibited what is harmful and not that which is useful; if it is possible for you to be useful to your brother, then do it" (cited in Bousquet, op. cit., 301 n. 104); whilst Ibn Khaldīn wrote, "The religious law makes no distinction between sorcery, talismans and prestidigitation. It puts them all into the same class of forbidden things" (Mukaddima, tr. Rosenthal, iii, 169).

For al-Ghazālī, who provided Islamic theology with its definitive formulation, magic is based on a combined knowledge of the properties of certain terrestrial elements and of propitious astral risings. This knowledge is not in itself blameworthy, but it could only serve to injure others and to do evil (Ibad, i, 49-50). The privileged place given to such knowledge is justified by a precedent attributed to the Prophet, "The superiority of the believer who also possesses knowledge over the merely pious believer is that of 70 degrees" (cited in ibid., i, 12).

RUKYA — RUM

RUM. 1. In Arabic literature.

Rum occurs in Arabic literature with reference to the Romans, the Byzantines and the Christian Melkites interchangeably. This issue of nomenclature is the first problem that confronts the reader of Arabic literature. Most often, however, the reference is to the Byzantines, which is the meaning followed in this entry.

The sources for the pre-Islamic times include the important Namara inscription. All the literary sources were written in later Islamic times, deriving from the historian Ibn al-Kalbî.

In the Islamic period, the first reference to Rûm occurs in the Kur’ân (Surat al-Rûm, XXX, 1-5): “The Rûm have been vanquished in the nearer part of the land…” Kur’ân exegesis contains several explanations for these verses and provides further information on the Byzantines (al-Tabârî, Dājmî’s bayân fî ta’wil al-Kur’ân, Cairo 1954, xviii, 17-19; al-Âlî, Rûh al-ma’dînî; Ibn Khûrât, Tafsîr al-Kur’ân al-‘Azîm). Rûm also occurs in hadîth literature, where Constantinople, in particular, partakes in apocalyptic traditions. Such is the hadîth in al-Bukhârî stating that Umm Haram had heard the Prophet saying “The first among my people to attack the city of Caesar will see his sins forgiven” (Sahîh, 56, ch. 93) or that found in Ibn Hanbal, “The Da’ârî will not appear until the Byzantines are vanquished” (Musnad, 33-44; idem, al-Kusântiniyya, in particular, the last major siege led by Maslama in 98/716-17 is recounted in detail in the anonymous Kitâb al-Uyûn, ed. de Goeje, Leiden 1869, i, 23-33. The conflict between Byzantium and the Islamic state directed the orientation of the sources so that warfare holds a predominant place in the Fâtîhî, chronicles and historical works.

The Rûm figure prominently in the Arabic geographical literature of the 3rd-5th/9th-11th centuries. The geographers of the early “Irákî” school, Ibn Khûrâdâhîbî, Ibn Rûstâ, Ibn al-Fâqîh and Kudâmâ b. Dînâr included in their respective works a chapter on the Byzantines. Ibn Khûrâdâhîbî’s al-Masdîl wa’l-‘imâmidâk provides information on fiscal revenues, itineraries, geographical boundaries, and the make-up of Byzantine population. Ibn Rûstâ’s al-’Alâ’î al-nafîsa includes the most detailed Arabic description of Constantinople. Among the geographers of the “Bâlîkî” school, Ibn Hâwâkî alone, in his K. Sûrât al-ar-‘îd, “A Roman victory in the Byzantine capital of Rûm. Foremost among all Arabic works are the two masterpieces of al-Mas’dî, K. al-Tânbih wa ‘l-‘i’ânâhî and Mûhadî al-ghâbahî, which include not only geographical material and anecdotes on the Rûm but also attempt at a systematic historical treatment of Byzantine history after the rise of Islam. See also Manuela Marín, “Rûm” in the works of three Spanish Muslim geographers, in Graeco-America, iii (Athens 1984), 109-17.

The organisation of the Byzantine administration and the army is referred to in various texts such as Kudâmâ b. Dînâr’s K. al-Khudi (255-7) and Mâfixî al-‘ilmîm al-Khârazmî (see for this last, C.E. Bosworth, Al-Khârazmî on the secular and religious titles of the Byzantines and Christians, in CT, xxxv, no. 139-40 [1987] (= Mêlanges Ch. Pellat), 28-36). Descriptions of Byzantine ceremonial are found in Ibn Rûstâ’s K. al-Imtdâr wa ‘l-mu’dânasâ, where the Muslim prisoner Hârûn b. Yâbyî witnessed several ceremonials of the Byzantine court (123-5). Anecdotes concerning the court ceremonial are found in al-Mas’dî’s (Murûdî, ii, 18) and Ibn al-Fâqîh (Muqâtas K. al-Buldân, 137-8) and other works. Important references to Rûm are made in the context of embassies and diplomatic relations, hence the importance of Ibn al-Fârî’s Târikh al-Rusul wa’l-mulâkî wah- man yasluh li ‘l-sifdra wa-man yasâlib li ‘l-tasfîra written in the 4th/10th century. Special works like the K. al-Dhakhârî wa’l-ta’âfîr of the Kâdî Ibn al-Zubayr, ed. M. Hamîdullâh and S. Munadîdîjî, Kuwait 1959, from the 5th/11th century, deal mostly with exchange of gifts between Muslim and Byzantine rulers and include information on ceremonials.

In works typically referred to as adâb, references to the Byzantines are most often scattered and anecdotal. Important references are found in the works of al-Tânbih (ed. E. Garcia Sanz, RUM. 2. In Byzantine literature.

In the main historical chronicles, in al-Tabârî’s Târikh al-Rusul wa ‘l-mulâkî, for instance, references to Rûm are guaranteed at the end of each year; the account closes by mentioning Muslim raids into Byzantine territory. For Constantinople see for instance, references to Muslim and Byzantine rulers and include information on adâb.

In a typical adâb work such as Ibn Kutaïba’s Usîn al-akhbâr, references are mentioned in several books, depending on the context, whether war, food, morals, etc… In addition to anecdotes, some works of adâb contain statements about the various civilised nations in the context of the Şû’ûbiyya [q. v.] controversy such as the K. al-Imtdâr wa’l-mu’dânasâ of Abû Hâyán al-Tânbihî (d. 414/1023). One should note also Şîdî al-Andalusi’s d. 462/1070 [q. v.] Tabâkât al-umam.
References to the Byzantine language and script imply some mutual knowledge of the rivals' respective languages. Most of the information concerning the literary achievements of the Rûm appears within the intellectual discussion that accompanied the Shu'ubî movement, notably by al-Djayhî in his K. al-Bayûn wa'l-tabyin. The first section of the Fihrist of Ibn al-Nadîm describes the four different Greek scripts used by the Rûm in Baghda’d. In poetry, references are scattered in isolated verses. More significant poems are found in Abu Nuwâs and Abu l'-Ashâyi’s as they sing the praises of Hârûn al-Rashîd, while Abu Tâmmâm (Dîwân, ed. Shâhîn ‘Atyiya, Beirut 1889, 289, verse 18 and 35, verses 6-10) and al-Buhtûrî (Dîwân, Beirut, 1911, 24, verses 3-14) focus on the achievements of al-Ma’mûn (verses 6-10) and al-Buhturi (verses 3-14). The capture of Amorium in 233/838 by al-Mu'tam (see also his K. al-Madâjîl wa'l-musdyardt) provides an excellent introduction to the Arab Conquests. Harun al-Rashîd’s efforts, though bellicose but at times on a more peaceful note, played a big part in later Ottoman Turkish folklore. When the new caliph ‘Umar (II) ‘Abd al-‘Azîz abandoned the expansionist plans of his predecessors, the apocalyptic and messianic motives decreased in vigour, and the last effort of the Arabs against Constantinople was that of the prince Hûrûn, later the caliph al-Rashîd, who appeared at Scutari in 165/781-2 but was bought off by a timely offer of tribute from the Empress Irene. The real legacy of these Arab attacks was in the spheres of folklore and hagiography rather than a material one. Thus the tomb of the veteran Medinan Companion Abu Ayyûb al-Ansârî (q. v.), who died during the siege of Constantinople by Yazîd b. Mu’awiyah in his father’s caliphate, became regarded as a source of baraka or charisma for the Muslims, most recently by the Ottoman Mehmed II the Conqueror (q. v.), after his entry into Constantinople, who erected a splendid mosque, the present one of Eyüp, on the tomb’s supposed site. The siege of Constantinople by Mustâlîb b. ‘Abd al-Malik (q. v.) during Sulaymân’s caliphate left behind, it was believed, a tangible memorial in the shape of a mosque, identified in the later popular mind with what is now called the Arab Camii in Karaköy (in fact, this building was given as a church to the Dominicans, as the Church of St. Paul or St. Dominic, in 1292, during the Latin occupation of Constantinople, and only became a mosque at the Ottoman conquest). Here, and in reality without issue, played a big part in later Ottoman Turkish folklore, and according to one story retailed by the 11th/17th century traveller Ewliyâ Celebi (q. v.), Hûrûn avenged a massacre of Muslims within Constantinople by hanging the Emperor Nicephorus I in Santa Sophia (see M. Canard, Les expéditions des Arabes contre Constantinople dans l’histoire et dans la légende, in JA, ccviii-ccix (1926), 61-121, provides a good introduction for the references to the Byzantines and, particularly, Constantinople in the genre of folkloric traditions. A. Miquel, La géographie humaine du monde musulman jusqu’au milieu du XVe siècle, Paris 1967-88, 4 vols., provides a good introduction to the Arab geographers’ view of the world around them including the Rûm. Also valuable is Ahmad Shboul, Byzantium and the Arabs: the image of the Byzantines as mirrored in Arabic Literature, in Proceedings of the First Australian Byzantine Studies Conference, London 1979, and idem, Al-Mas‘ûdi and his world, London 1979, ch. 6, The Byzantines. See also Aşfar, Banû L’- (Nâdia El Cheikh)

2. Relations between the Islamic powers and the Byzantines.

(a) Military and political aspects of Arab-Byzantine relations

The Muslims, first the Arabs and then, with the incursions of the Turks into Anatolia from the 5th/11th century onwards, the Turks, had close relations, often bellicose but at times on a more peaceful level, for a period of some eight centuries. This extended from the initial Arab conquests of Byzantine imperial territories in the Levant, Egypt and the Mediterranean islands until the final extinction of the remnants of the Byzantine empire, and also of Greek independence, by the falls of Constantinople (857/1453), the Despotate of Morea (864/1460) and the empire of Trebizond (865/1461). The ambivalent relations of the two great world faiths and powers of the Near East and Eastern Europe were thus manifested in both the political-military sphere and also the cultural one (see section (b) below). Constantinople was found to be the natural goal of Muslim arms, as the supreme bastion of the rival faiths of Christianity, and Arab raids were directed at the East Roman capital itself from the caliphate of U’lûmân onwards, with the warriors’ enthusiasm but soon buttressed by apocalyptic traditions looking forward to the city’s capture. Such traditions, e.g. the prophetic hadîth that Constantinople would fall to an Islamic ruler who bore the name of a prophet (in this case, of Solomon) seem to have been a motive behind the prolonged, but ultimately unsuccessful, onslaught on the Byzantine capital begun by Sulaymân b. ‘Abd al-Malik (97/997-1168) (see R. Eiser, Zwischen Faktum und Fiktion. Eine Studie zum Umayyadenkalifen Sulaimân b. Abdullahmakt und seinem Bild in den Quellen, Wiesbaden 1987, 129-37; and see KUSTANTINIYYA).

When the new caliph ‘Umar (II) ‘Abd al-‘Azîz abandoned the expansionist plans of his predecessors, the apocalyptic and messianic motives decreased in vigour, and the last effort of the Arabs against Constantinople was that of the prince Hûrûn, later the caliph al-Rashîd, who appeared at Scutari in 165/781-2 but was bought off by a timely offer of tribute from the Empress Irene. The real legacy of these Arab attacks was in the spheres of folklore and hagiography rather than a material one. Thus the tomb of the veteran Medinan Companion Abu Ayyûb al-Ansârî (q. v.), who died during the siege of Constantinople by Yazîd b. Mu’awiyah in his father’s caliphate, became regarded as a source of baraka or charisma for the Muslims, most recently by the Ottoman Mehmed II the Conqueror (q. v.), after his entry into Constantinople, who erected a splendid mosque, the present one of Eyüp, on the tomb’s supposed site. The siege of Constantinople by Mustâlîb b. ‘Abd al-Malik (q. v.) during Sulaymân’s caliphate left behind, it was believed, a tangible memorial in the shape of a mosque, identified in the later popular mind with what is now called the Arab Camii in Karaköy (in fact, this building was given as a church to the Dominicans, as the Church of St. Paul or St. Dominic, in 1292, during the Latin occupation of Constantinople, and only became a mosque at the Ottoman conquest). Here, and in reality without issue, played a big part in later Ottoman Turkish folklore, and according to one story retailed by the 11th/17th century traveller Ewliyâ Celebi (q. v.), Hûrûn avenged a massacre of Muslims within Constantinople by hanging the Emperor Nicephorus I in Santa Sophia (see M. Canard, Les expéditions des Arabes contre Constantinople dans l’histoire et dans la légende, in JA, ccviii [1926]. 87-106 = Byzance et les Musulmans du Proche Orient, Variorum Reprints, London 1973, no. 1; C. E. Bosworth, Byzantium and the Arabs: war and peace between two world civilisations, in Jnl. of Oriental and African Studies, iii-iv [Athens 1991-2], 1-4).

There was periodic naval warfare along the coasts of southern and western Anatolia and against Byzantine islands like Cyprus [see KUBRUS], Rhodes [see ROSOS], Crete [see KRITIS] and Sicily [see SIKILLIYA], although the Byzantine navy was generally managed to maintain maritime control—with intervals of Muslim successes—over the first three of these islands and over the Aegean islands in general until the advent of Italian, Catalan and French adventurers there, above all, the Venetians and Genoese, in the 12th century A.D. (see, in general, E. Eickhoff, Seekrieg und Seepolitik zwischen Islam und Abendland. Das Mittelmeer unter byzantinischer und arabischer Hegemonie (650-1040),
by land, warfare was intermittent between Greeks and Arabs in southeastern Anatolia and its marches for some four centuries. When not distracted by internal difficulties of the caliphate, the Muslims normally mounted summer raids (saudāʿīy, sing. saʿdāʾa [q.v.]), and, occasionally, winter ones (gauṭūdī, sing. gauṭīya), often under the leadership of 'Abd al-Malik and 'Abd al-Malik's son, Sulayh b. 'Ali, and other prominent commanders. Quite often, their raids penetrated deep into Byzantine territory, such as the famed sack by al-Muʿtaʾsım of Amorion (Ammuriyya [q.v.]) in 223/838. But on the whole, there were no permanent, large-scale Arab annexations in Anatolia, and in the later 3rd/9th century, the advent to the throne of Byzantium of the vigorous Macedonian emperors set the Christians on the offensive in northern Syria and al-Dżazīra, this impetus only being checked by the appearance of the Turkmens as a factor in the politics of the region and, behind them, the constituting of the Great Saldık Sultanate (see salık). Only then, in the second half of the 5th/11th century, was the stage set for the gradual advance of the Turks to the borders of Asia Minor after the Saldık sultanate of Atqayya [q.v.] was, successively, defeated by Romanus IV Diogenes at Mantzikert and Malagird [q.v.] in 463/1071, thereby gaining control over much of eastern Anatolia. During the next four centuries, Anatolia was to be completely taken over by Turkish dynasties, to be finally unified by the Ottomans [see oğuz], with portentous changes in the ethnic and religious composition and the socio-economic make-up of Asia Minor (see section 3 below).

The interface of Byzantine-Arab land contact was essentially the region of southeastern Anatolia backed on the Muslim side by a line of "strongholds" (wawṣīm [q.v.]), a line of protective fortresses stretching in an arc from Antioch through the Anti-Taurus and the upper Euphrates region to Manbij. Before this line of rear defences lay a stretch of debatable land, much fought over, the wawṣīb al-Rum or "exteriors" of the frontiers of the Caliphate, which witnessed the "gaps" or thughhr [q.v.], the forward strongholds, stretching from Tarsus on the Cilician coast to Malatya and the mountains of eastern Anatolia. For the general course of this frontier warfare, see the standard histories of Byzantine-Arab relations and of Byzantium, such as A.A. Vasiliev, H. Grégoire and M. Canard, Byzance et la mer. La marine de guerre, la politique et les institutions maritime de... (see R.-J. Lilie, Die byzantinische Reaktion auf die Ausbreitung der Araber, Studien zur Struktursandezung des byzantinischen Staates im 7. und 8. Jhd., Munich 1976; Bosworth, The Byzantine defence system in Asia Minor and the first Arab incursions, 119 ff.). A further feature of these frontier societies was the development of an epic literature there (although this was not necessarily contemporaneous with the events purported to be described in it), such as the Greek Diogenes Akritas and on the Arabic one in the stories of Siḍī Baṭṭāl [see al-Battāl, sayyid ghazzā] and Dhu `l-Himma [q.v.], whilst, again on the Arab side, we know of an only partially-extant work, the Siyar al-thughhr "Ways of life, conduct, along the frontiers" by the 4th/10th century author al-Tarsusi (himself a native of the thughr of Tarsus [see tarsus]), possession of which oscillated between the Greeks and Arabs until Nicopolis Phocas captured it in 534/945, which treated of life along the Muslim side of the frontier (see Bosworth, The city of Tarsus and the Arab-Byzantine frontier...). 271-2, 280 ff.; idem, Aḥbāʾ Amr Uḥmān al-Tarsusiyya Siyar al-thughhr and the last years of Arab rule in Tarsus (fourteenth century), in Graeco-Arabica, v [Athenos 1993], 183-95.

The frontier warfare, and the territorial advances and withdrawals of each side, created in the wawṣīb something like a scorched-earth zone, and, at the human level, brought in plentiful supplies of slave captives for both sides. To make up depleted populations in the frontier territories, groups of peoples were often transplanted from the interiors of the Arab and Byzantine empires and settled there; thus there were to be found, on both sides of the frontier, members from the community of the Mardaites, brought from the Amanus region of northwestern Syria [see al-garajuma, and also zuṭṭ]. At intervals, exchanges of captives might be arranged, and these are enumerated in the Arabic sources as a series of fidāʾ [q.v. in Suppl.] or "ransomings", taking place during the 3rd/9th and 4th/10th centuries and usually on the banks of the Lamos or Lamass Su river near Seleucia or Silifke (see Bosworth, Byzantium and the Arabs..., 13-16, and lamass-su). (b) Cultural and artistic relations of the Arabs and Byzantines

One should not dwell exclusively on the military aspects of relations without noting that, interspersed between the frontier raiding and warfare, were long periods of peace (even if these last were, in strict Islamic law, periods of truce, hudna, rather than of sulh), during which diplomatic, cultural and commercial intercourse was possible. The two sides, the Arab-Muslim and the Greco-Byzantine, shared a common
world-view, a teleological view of human existence as progressing from the divine act of Creation to the last things (these being, for the Muslims, the vanquishing of Saran or the Anti-Christ (Dadjdjdl [q. v.]), the Resurrection and the Judgement) and the end of human history; both had similar ethical standards, the pursuit of justice in this world and of individual salvation for the next one. Hence despite political rivalry and military clashes, there was the possibility of occasional co-operation in such spheres as artistic, cultural and scientific ventures.

This was favoured, in practice, by the fact that, according to the histories of the Greeks from the religious point of view, the Arabs—in distinction from their view of the Franks or Western Europeans, whom they regarded with contempt as barbarians [see IFRAND]—considered Byzantium as a world power and world culture on a par with themselves. A passage in the Khidż. Ṭabarik al-umam of the Spanish Muslim kādi of Toledo, Sa‘īd b. Ahmad al-Kurjubi (wrote 460/1068), divides the peoples of the world into those concerned with learning and the sciences and those not; in the first category are included peoples like the Indians, Persians, Chaldaeans, Greeks (as Yūnān, i.e. the ancient Greeks), the Rūm (i.e. the Byzantines), Egyptians, Arabs and Jews (Fr. tr. R. Blachère, Livre des catégories des nations, Paris 1935, 36-7, cited in B. Lewis, The Muslim discovery of Europe, London 1962, 68-9). For their part, the Byzantine emperors not infrequently accorded the representatives of their Muslim foes a higher rank at their court and among their society than those of the Western Europeans. In a famous passage of his De ceremoniis aulae byzantinae, Constantine VII Porphyrogenitus (913-59) gives ‘‘Saracen (lit. Hagarene) friends’’ precedence at the imperial table over the ‘‘Frankish friends’’ and amongst the Saracens in general, the eastern ones (toī anatolikoi proktonomenos) are accorded the best places (see Bosworth, Byzantium and the Arabs, 17).

When the Arabs overran the former territories of the Byzantine empire in the Near East, they saw numerous monuments to Christian architectural achievement. Above all, in Greater Syria, there were still some forested areas with timber as yet unfelled and plentiful supplies of fine building stone, together with a human tradition of building skills and fine craftsmanship. The presence of these factors favoured the earliest Islamic public buildings and private palaces in the region, of which the Umayyad Mosque in Damascus and the Mosque of ‘Umar and the Dome of the Rock in Jerusalem were conspicuous examples. Sir Hamilton Gibb suggested that, in Jerusalem, there was a conscious aim of emulating the ancient Greeks, the Rūm (i.e. the Byzantines), in regard to their view of the Franks or Western Europeans, whom they regarded with contempt as barbarians [see IFRAND]. Oleg Grabar has discussed these questions, in an attempt in ter alia to explain which mosaicists from Constantinople should be necessary when there were clearly, from the evidence of the workmanship of the new Islamic structures at Jerusalem, local artisans who were completely competent in such specialisations. (Islamic art and Byzantium, in Dumbarton Oaks Papers, xviii [1964], 69-88, esp. 82 ff. = Studies in medieval Islamic art, Variorum Reprints, London 1976, no. IV).

Recourse to Byzantium for artistic guidance, and for what would now be called technical aid, was made two-and-a-half centuries later by the Umayyad rulers of Muslim Spain, with whom Constantinople had intermittent diplomatic relations: both powers shared a common hostility to the Arab Hànids. In 839-40 the Emperor Theophilus (829-40) sent an embassy to ‘‘Abd al-Rahmān II [q. v.]’’ in his capital Cordova, seeking to get the amīr to use his influence among the band of Muslim adventurers from al-Andalus under ‘‘Abd al-Haʃī ‘Umar al-Ballūtih, who had established themselves in the Byzantine possession of Crete and subjugated the Christian Greek population there. Then, a century later, the Umayyad caliph ‘‘Abd al-Rahmān III [q. v.]’’ looked to Constantinople for assistance and advice, regarding the Byzantine capital as the outstanding centre of cultural splendour in the Mediterranean basin, and possibly also in an endeavour to counterbalance the cultural impact in Spain of the Islamic East, and particularly of Bagdād. It seems that in the A.D. 950s ‘‘Abd al-Rahmān sent the Mozarab bishop Recemundo or Rabiš b. Zayd [q. v.], who had already been employed on a mission to the Emperor Otto I, to Constantinople in order to acquire objets d’art for the decoration of the new palace, al-Malīnat al-Zahirih [q. v.], which the Umayyad ruler was then building in his capital Cordova. The later Moroccan historian Ibn ‘Idhari records that, keeping up the tradition, ‘‘Abd al-Rahmān’s son al-Hakam I [q. v.]’’ maintained these diplomatic relations with Byzantium, and sent to Nicephorus Phocas for a mosaicist and for materials to decorate the Great Mosque at Cordova (see E. Lévi-Provençal, Un échange d’ambassades entre Cordoue et Byzance au IVe siècle, in Byzantion, xii [1937], 1-24; idem, Hist. Ésp. musulmana, Paris-Leiden 1950, i, 251-4, ii, 146-33, cited in Bosworth, op. cit., 20-1).

Canard, in his article Le cérémonial fatimite et le cérémonial byzantin, essai de comparaison, in Byzantion, xxi (1951), 355-420 = Byzance et les Musulmans du Proche Orient, no. XIV, drew attention to similarities between the court practices of the Byzantine emperors (known to us in detail from Constantine Porphyrogenitus’s De ceremoniis) and those of the Fāṭimid caliphs, and mooted the possibility (415 ff. of cultural influences at Fāṭimid Nīl, to Egypt emanating from Byzantium. He found it difficult to produce evidence of a deliberate policy of imitation on the part of the Fāṭimids, but did draw attention to the significant role in the early Fāṭimid caliphate of ethnic groups from various parts of the Byzantine empire, such as the Sicilian (or Dalmatian, or even Greek?)
Qiawhar (d. 381/992 [?]), in whose conquering army was certainly a corps of Rūm. I. Hrbek, discussing the role of the Sakāliba [q.v.] and Rūmīs in the Fātimīd army, opined that the majority of these Rūmīs came from the Balkans, over which Byzantium claimed a general suzerainty, the Balkans being for a long a great reservoir for slave manpower (Die Slaven im Dienste der Fātimiden, in ArO, xxi [1953], 543-81, esp. 567 ff.). We also have evidence of some direct diplomatic contact between Byzantium and the Fātimīd caliph al-Mu‘izz in the shape of an embassy from Constantinople to his palace at Ma‘ṣūrīyya near Kayseri in 340/951 on which later naval clashes in the Mediterranean between ships of the Spanish Umayyads and their Byzantine allies on the one side and ships of the Fātimids on the other (S. Vryonis, The decline of medieval Hellenism in Asia Minor and the process of Islamization from Asia Minor, at a time when the Byzantine empire was diplomatically in the Mediterranean). But the defeat of Manuel I Komnenus at Myriocephalon in 572/1176 showed the rising strength of the Sāljuq sultansate in Anatolia, in which interest in further naval ventures was curbed. In the next two decades of the century the Byzantine frontier defences largely crumbled. Also, the Latin conquest of Constantinople in 1204 reduced the Byzantine hold over Asia Minor to its northwestern portion, ruled from their temporary capital of Nicæa for over half a century, and this meant that, even though the rule of the Palaeologoi was restored in Constantinople, the next two centuries were ones of steady decline, with Byzantium reduced to a state of the Ottomans after the mid-14th century.

This last Byzantine rulers formed merely one element, and that of decreasing authority, within a states-system of South-East Europe and Asia Minor which included rising powers in the Balkans like Serbia and Bulgaria, the Italian and other merchant adventurers in Greece and the Aegean islands, but, above all, the Turks of Anatolia. An indication of the Byzantine emperors’ enfeeblement was that, whereas earlier monarchs had disdained to link themselves with lesser families, and certainly not with infidels, the Palaeologoi had to seek allies where they could find them, and this not infrequently involved marriage alliances with Muslim ruling families. Michael VIII (1259-82) had diplomatic relations with the Mongol Golden Horde in South Russia and with the Il-Khanid of Persia, Hülegü, and gave his illegitimate daughter Euphrasyme in marriage to the Djöqid amīr Noghay. The claimant to the throne in Constantinople John Cantacuzenus (1347-54) in 1346 allied with the Ottoman chief Orkhan during the course of a succession dispute within Byzantium, and gave his daughter Theodora in marriage to Orkhan. (C. Imber, The Ottoman empire 1300-1481, Istanbul 1990, 23). In the north the empire of Trebizond, surrounded along its land frontiers with Turkish territory, only survived as long as it did by means of alliances and agreements with the Muslims. Thus the Bayanur Türkmen tribe pressed particularly hard on Trebizond until Kara Oğlm, founder of the Ak Koyunlu [q.v.] or “White Sheep” Türkmen principality, married the princess Maria of Trebizond. Kara Oğlm’s grandson Uzun Hasan married in ca. 862/1458 Despina, daughter of the Trebizond Emperor John IV Comnenus, and Despina’s daughter Martha was to marry Shaykh Haydar Safawi of Ardabil and become the mother of Shāh Ismā’īl I of Persia [see UZUN HASAN, in EP].

The history of the Turkish advance and the gradual take-over of Anatolia, may be followed in anadolu (iii), in “ottomani, in salgık. III. 5, in the articles on the various lejik, and in such standard works (which also discuss such contentious issues as the nature and pace of Islamisation and the relative contribution to Anatolian life and society by what eventually became the Greek and Armenian substratum) as Cl. Cahen, Pre-Ottoman Turkey. A general survey of the material and spiritual culture and history c. 1071-1330, London 1968; S. Vryonis, The decline of medieval Hellenism in Asia Minor and the process of Islamization from
the eleventh through the fifteenth century, Berkeley, Los Angeles and London 1971; Osman Turan, Selçuklar zamanında Türkiye Sıyası sarılı Alp Arslan’dan Osman Gazi’ye 1971-1918, Istanbul 1971; F. Taeschner’s chs. The Turks and the Byzantine empire to the end of the thirteenth century and The Ottoman Turks to 1453, in Camb. med. hist., iv/1, 737-75; A.G.C. Savvides, Byzantium in the Near East: its relations with the Seljuk sultanate of Rum in Asia Minor, the Armenians of Cilicia and the Mongols A.D. c. 1192-1237, Thessalonike 1981; etc.

Finally, it is interesting to note the vicissitudes of usage of the term Byzantium during these later centuries of the empire’s existence. Byzantine Greek sources refer to the empire as Rhōmana or Rhōmaion or Rhōmanskai chōrās from the 9th century onwards. In more recent Islamic usage, Rūm had always had a geographical sense also (see above, (a)), designating the Greek lands of the Byzantine empire beyond the Taurus-upper Euphrates frontier zone. Hence when the Turks penetrated into these regions during the later 9th/11th century, it was natural that a line of beys like those of the Dānāmīndis [q.v.], who were originally based on the Sivas district, should style their territories Rūm, and we find Malik Muhammad Ghāzī (529-36/1134-42) styled on his Greek-legend coins “the Great King of Romania and Anastolia”. The Anatolian Saldjūqs, whose principaliy was based on the region of Konya and southern Cappadocia—territories which were for long strongly Greek in ethics and still in early Ottoman sources called Yūnān wilāyēti: “province of the Greeks”—referred to their state, at least in informal usage, as that of Rūm and themselves as Saldjūqyān-i Rūm, thereby in some measure conceiving of themselves as heirs to the Byzantines in south-central Anatolia (although Rūm continued also, as with regard to the Greeks who had lived within the Arab caliphate centuries before, to denote the Greek Christian population of Asia Minor; towards the middle of the 8th/14th century, the Moroccan traveller Ibn Batfuta records sailing to Alanya in the Bilad al-Rum, “called after the Rūm because it used to be their land in old times, and from it came the ancient Rūm and the Yūnānis. Later on it was conquered by the Muslims, but in it there are still large numbers of Christians” [see also (c)]).

The expansion of the Ottomans in the 8th/14th century eventually made them masters of the former Byzantine territories, gūssā moḍo those of Rhōmania, in both Anatolia and the Greco-Balkan region. Since the territories of the Palaeologi were laterly mainly in Europe, this Rhōmania became for the Ottomans Rūm-eli [q.v.], or Rumelia, the land characterised by its predominantly Orthodox Christian population, the Rūm. The circumscribed remnant of the Byzantine empire was by now rarely in Ottoman sources styled Rūm, nor was its emperor styled Kaysar, the latter office being more commonly referred to by the (originally Armenian) title Tefkīr “king”. It was the Ottomans who took over for themselves, and especially from the times of Mehmed I and II [q.v.], the title of Sulṭān (or Pāšāh or Khan)-i Rūm, regarding themselves as being already, before the final rapine of Constantinople, substantially the successors both of the Byzantine empire and the Rūm Saldjūk sultanate. Thus it was natural that the Timūrid historian Nişām al-Dīn Şāhī [q.v.] should, in his Zafar-nāma (ed. F. Tauer, Prague 1937-56, i, 257), call the Ottomans of Bāyezīd I, whom Timūr crushed, the Rūmīyān, adducing at the same time the Kur’ānic reference to the Rūm and their defeat XXXI, i, 1, reading ghulāb al-Rūm). See in general on these questions, P. Witte, Le sultan de Roum, in Ann. de l’Inst. de Philologie et d’Hist. Or. et Slaves, Bruxelles, vi.— Mélanges Emile Boisacq, ii (1936), 361-90; Savvides, A note on the terms Rūm and Anatolia in Seljuk and early Ottoman times, in Byzan- tinoturkistika meletemata. Anayptōse arthron 1981-1990, Athens 1991, no. X [171]-[178].

Anatolia in 585/1189, it is recorded by Abu Shama that the Armenian Catholicos of Kal'at al-Rüm (sc. Grigor IV) sent a letter to the Ayyubid sultan Salah al-Din [q.v.], and another in the following year, asking for help (K. al-Roundatayn, in Rec. Hist. Or. des Croisades. Historien arabe, iv, 435-6, 453-6).

In 1260 the Mongol II-Khan Hülégu [q.v.] crossed the Euphrates by bridges of boats at Malatya, Kal'at al-Rüm, Bira and Karkisiyâ (Barhebraeus, Mughāsār T. al-Duwal, Beirut 1890, 486; idem, Chronographie, ed. Bedjan, 509). Then in the reign of the Mamluk sultan al-Mansūr Kalāwūn, an Egyptian army of 9,000 horse and 4,000 foot under Bay sārī as well as Syrian forces under Ḥusām al-Din of Aynṭāb came to Rūm Kāl'esi and laid siege to the fortress 19 May 1280. The sultan demanded that the Catholicos should surrender the fortress and move with his monks to Jerusalem, or if he preferred, to Cilicia. When the Catholicos refused to do so, the Egyptians laid waste the country around the town which was inhabited by Armenians, on the next day forced their way over a wall only 4 metres thick, and under cannon and artillery forces under Ḥusām al-Din of Aynṭāb entered Rūm Kāl'esi.

In the spring of the year 881-2/1247 the Mamluk sultan Kājitbay made a tour of inspection as far as Kal'at al-Mūsīlim (described by Abu l-Bākā Ibn al-Dijān, ed. R.V. Lanzone, Viaggio in Palestina e Soria di Kaid Ba, Turin 1878; tr. R.L. Devonshire, in Bulletin IFAO, xx [Cairo 1921], 1-43). After the battle of Mardj Dābīk [q.v.], the fortress became Ottoman, and in the Mamluks never seems to have recovered from the blow. In 757/1353-4, much damage was done by floods in Kal'at al-Mūsīlim as well as in Aleppo, al-Rūbah, al-Bira and Baghdād (al-Tabrīzī, ed. Ghirshman, in Weijers, Orientaïa, ii, Amsterdam 1846, 435).

name of the Ottoman province which included this region. The Muslims knew the Byzantines as Rum, and the Turks returned to Anatolia in 1307-11 (see Wittek, Dohna and Drava. Ottoman sultans from Bayezid I [q.v.] onwards considered the peninsula extending to the south of the Danube as their area of sovereignty. Murad II was clearly following this notion when he obtained the commitment from Hungarians not to cross the Danube in the treaty he made with them in 1444 (H. Inalcik, Fatih devri, i, Ankara 1954, 22).

The first settlement of the Anatolian Turks in the Balkans is related to the incident of 'Izz al-Din Kaykâwûs of the Saldjûks fleeing and taking refuge in Byzantium in 662/1264. The emperor Michael VIII Palaeologus allocated the steppe of the Dobruja for him to settle with his men. Following this, a group of 30 to 40 Turcoman clans (she) who supported him, crossed to the Dobruja in the company of Sarî Salûk Bahâ (Baybars), Zabdat al-fikra, ed. W. Tiesenhausen, Tkish tr. Altin-brother Dobrotic shortly before the year 1366 [see cit. DOBRUDJA]. Initially, the centre of this despotate was Christian Comans or Kumans, were established in the Balkans had already become a field of operations for the phâzîs from Anatolia. The phâzî groups which had organised themselves independently, had already started crossing into Rûmeli, taking advantage of the Byzantine civil war and the struggle between Byzantium, the Serbs and the Turks. Cantacuzenos notes Süleymân’s reluctance to evacuate the various places which he occupied in Rûmeli, but he only mentions Tsympé (Djimbi or Djimbi) among these. Ottoman chronicles mention Aya Şîline or Aya Şîlyona, Ödökölek and Eksamîlye among the fortresses which Süleymân occupied in the period 1352-4. The places which Cantacuzenos tried to have him evacuate must be these fortresses. Thus the first settlement of the Ottomans built a base for the raids along the River Maritsa, in the direction of Tekfur Daghi, Corlu and Constantinople; and the third ufa became the base for the raids along the River Maritsa, in the

During the time of the Emperor Justinianus, the northern borders of the Byzantine Empire were the Danube and Drava. Ottoman sultans from Bayezid I [q.v.] onwards considered the peninsula extending to the south of the Danube as their area of sovereignty. Murad II was clearly following this notion when he obtained the commitment from Hungarians not to cross the Danube in the treaty he made with them in 1444 (H. The places which Cantacuzenos tried to have him evacuate must be these fortresses. Thus the first settlement of the Ottomans built a base for the raids along the River Maritsa, in the direction of Tekfur Daghi, Corlu and Constantinople; and the third ufa became the base for the raids along the River Maritsa, in the
direction of Ipsala and Edirne. This system was maintained throughout the Ottoman conquest of Rumeli, and as the conquest advanced, the settlements were moved farther ahead in the three directions. Due to Süleyman’s death in 1357 and Orkhan’s old age, there appears to have been a retreat. Various places conquered in Süleyman Paşa’s time were lost. During this time, Hacıççljeh Ilbeyi and Ewrenos Bey had been active in the left-hand branch. Over the course of time, this branch was maintained by the Ottomans to win over the peasant population especially. The feudal lords were either eliminated, or, if they did not resist, were integrated into the Ottoman military cadres under the command of their own overlords. This policy, coupled with the protection of the Church’s organisation, facilitated Ottoman expansion in the Balkans. This came at a time when the Byzantine Empire, the Bulgarian Tsardom and Dushan’s empire had already disintegrated. Western feudal practices started to take hold in the Balkans, and due to the weakening of a central power, feudalism began to spread. The local feudal lords, called tekfâr by the Ottomans, strove to strengthen their control over land and peasant labour in the countryside. When the Ottomans arrived, they first ended the local feudal structures by placing agricultural lands exclusively under state control, as mîrî [q.v.]. They systematically abolished the corvées and replaced them with a fixed tax called iâfi resimi [q.v.]. The landless peasantry, who had been the peasants against Ottoman invasion, sought the aid of the Latins and Hungarians invaders of the Balkans under a Crusader banner. The Latins and Hungarians, of Roman Catholic faith, considered the native Greek Orthodox population as schismatics and had been trying to convert them to Catholicism by force. The Ottomans, on the other hand, not only offered recognition and protection to the Orthodox Church but they granted to its priests tax exemptions or even timârs, in order to turn them into employees of the state (see Sûret-i deyîr-i sanâk-i Aravân, ed. İnalcik, Ankara 1954, 58, 73).

The settlement of the Turks in the Balkans.

Mass immigration and settlement occurred especially in the 14th century. Later on, Timur’s occupation of Anatolia gave rise to a big wave of migration from Anatolia to Rumeli. At that point, Edirne became the capital of the empire. As a result of these migrations, Thrace, eastern Bulgaria, the river valley of the Maritsa and then the Dobrudja became thickly populated by Turks. The evidence of the Ottoman population and tax registers reveals conclusively that, in these regions in the 16th century, Turks formed a large part of the population. Although spontaneous migration, continuing from the time of Orkhan, was by no means less important, the state’s policy of deportation was largely responsible for this result. A classification of the place names found in the 15th-century surveys indicates that settlements were associated with nomadic Yörük groups such as the Kayil, Salurli, Türkmen and Akçakoyunlu, or with sedentary or nomadic groups associated with a place name in Anatolia, such as, Sarukhanlı, Menteşeli, İskimawil, which they sometimes identified with the followers of famous military leaders, such as Dâwûd beg and Turakhanlı, or with members of the Ottoman military organisations such as doganlı, taşvîr, damghâtî, mididâris, kâdi and sekkâr, or with a zâviye [see zâviya] or pious endowment. It should also be pointed out that dervish convents played a crucial role in the formation of Turkish villages. Turkish immigrants generally formed independent villages with Turkish names and did not generally mix with the local Christian populations. Even in the towns, Christian neighbourhoods were always separate. In the 14th-15th centuries, Islamisation appears to have been quite sporadic, occuring mostly on the successive military frontier zones on the Via Egnatia, Maritsa valley and eastern Balkan passes. According to the giye registers of 893-6/1487-91, only 253 cases of conversion were identified over three centuries. Levies of Christian boys [see dervîmre] are not included in the figure. The use of the native language can be taken as an indication of Islamisation. Bosnian and Albanian Muslims and Pomaks constitute the largest of such groups. Those Muslim groups who spoke exclusively Turkish or were bilingual, with Turkish as the mother tongue, were definitely of Anatolian Turkish origin. Turks or
Tatars of the northern Black Sea steppe, Turks of the Deli-Orman region, Dobrudja and Varna, as well as those of the Maritsa Valley, were of this category. while there were also Noghays [q.v.] in the Dobrudja and in Bukhārā [q.v.] or Moldavia.

Source: K. Karpat, Ottoman population, Madison 1985, 155.

Quite numerous records (ifrād-i) about farms in the newly-opened up agricultural lands indicate the substantial expansion of arable lands in Rûmeli in the 16th century. It was coupled with a significant increase in population. It is estimated that shortly before 1535, the population of Rûmeli had risen to five millions. The Turks introduced or spread cotton and rice cultivation into the Balkans. The establishment of a large centre like Istanbul, with an estimated population of 400,000, in the 16th century, provided a great market for Thrace and Bulgaria and encouraged all sorts of agricultural production. In the Ottoman period, too, there was an increase in mining activities and new mineral workings were exploited. In Novobrodo, Kratovo, Rudnik, Trepče and Zaplanina in Serbia, copper, lead, gold, iron and, especially, silver were being produced. Sidre-Kapsa in Macedonia was the most important silver production centre. Silver and lead were being produced at various places in Bosnia-Hercegovina. The most important iron production sites were Samakov in Bulgaria, and Vlasina and Rudnik in Serbia.

The administrative organisation of Rûmeli.

In Gelibolu, Süleyman Paşa, bearing the official title of commander-in-chief of the main forces of the state, was in practice the Beylerbeyi. Murād I (1362-89) with his Lalā, Şâhîn, conquered Adrianople in 1361. When he ascended the throne he appointed Şâhîn to the middle uşûf to conquer territories in the direction of Filibe. The first chief-lieu was Adrianople or Edirne [q.v.]. Thus Rûmeli emerged as a separate military-administrative region under the rule of a Beylerbeyi. The fact that the empire was divided by the straits and the Sea of Marmara necessitated the division of the realm into two large administrative regions, Rûmeli and Anadolu. The Beylerbeyi of Rûmeli, the first such governorate in the Ottoman Empire, maintained its special position even after other beylerbeyûks were formed [see EYALET].

In the 14th and 15th centuries, the governor of Rûmeli mostly resided in the empire's capital city. Like the vizziers, he bore the title of paşa, and participated in the government deliberations in the divān-i humāyûn. Because the Beylerbeyi of Rûmeli commanded the most important army of the state, composed of timâr-holding sipâhs of Rûmeli, the Grand Viziers Mahmûd Paşa and İbrahim Paşa both held the position of Beylerbeyi of Rûmeli at the same time.

The areas conquered in the 15th century were added to the territory of the Beylerbeyi of Rûmeli; not only the area to the south of the Danube, but also Kilia and Aş Kermân beyond the Danube were assigned to it in 1484. In 1541, however, with the establishment of the governorate of Budin, the number of Ottoman beylerbeyûks in Europe increased. Bosnia became a beylerbeyi in the same year.

In a list of 1475 (Iacopo de Promontorio de-Campis, ed. F. Babinger, Die Aufzeichnungen, Munich 1957), the following seventeen sanjak beys are cited in Rûmeli: 1. Istanbul; 2. Gallipoli; 3. Adrianople; 4. Nikelobou/Nigbolu; 5. Vidin; 6. Sofia; 7. Serbia (Laz-ili); 8. Serbia (Despot-ili); 9. Vardar (Erewen-oghullari); 10. Uskup; 11. Aranawut-ili (that of Iskender Bey); 12. Aranawut-ili (that of Araniti); 13. Bosna (belonging to the king); 14. Bosna (that of Stephen); 15. Arta, Zituni and Athens; 16. Mora; and 17. Manastir. The Beylerbeyi of Rûmeli would raise about 22,000 men from these seventeen sanjaks. In addition, there were 8,000 aqindis (skirmishers or raiders) and 6,000 'aziba (foot soldiers).

In an Ottoman document from the early years of Süleyman I's reign, the sanjak of livas of Rûmeli are listed according to the rank of the beys in charge, with each name of the sanjak followed by the salary (in akken) of the sanjak bey: 1. Paşa; 2. Bosna; 739,000; 3. Mora; 606,000; 4. Semendire, 622,000; 5. Vidin, 580,000; 6. Harsek, 560,000; 7. Silistre, 560,000; 8. Oskhri, 535,000; 9. Awlonya, 535,000; 10. Iskenderiyeye, 512,000; 11. Yanya, 515,000; 12. Gelibolu, 500,000; 13. Kostendi, 500,000; 14. Nikebolu, 457,000; 15. Sofia, 430,000; 16. Inebakhît, 400,000; 17. Tirhala, 372,000; 18. Aladja Hisar, 360,000; 19. Vulcetrin, 350,000; 20. Kepe, 300,000; 21. Prizren, 263,000; 22. Karli, 250,000; 23. Aghriboz, 250,000; 24. Çirmen, 250,000; 25. Vize, 230,000; 26. Izvornik, 264,000; 27. Florina, 200,000; 28. Ibasan, 200,000; 29. Çingene (Gypsies), 190,000; 30. Midilli, 170,000; 31. Karadağ (Montenegro), 100,000; 32. Mâşelêmân-i Kîrk Kilise, 81,000; and 33. Voynuk, 52,000.

Among these, Çingene, Mâşelêm and Voynuk were not territorial sanjaks located in a particular place. Each one of these scattered groups was put under a sanjak-bey, whose main duty was to be the commander of the sipâhs in his sanjak. In a list compiled ca. 1534 (Topkapı Palace Archives, D. 9578, see Belleten, no. 78, 250, 258), we find all the sanjaks mentioned above except Sofya, Inebakhît and Florina. The sanjak of Selânik is added. In general, Selânik was included in the sultan’s îkâls [q.v.] or given to the viziers as a retirement pension. In this
The Ottoman Empire included Sofia, which was initially included in the sultan's khass, or else assigned independently to the administration of a subedar. The sanjak belonging to the Beleyeriye during the early years of Süleyman I included the cities of Usküp, Pirlıpe, Manastır and Kresiya and was spread over a wide region. Afterwards, these towns became the centres for sanjak beyi.

In the list given by ʻAyni ʻAli shortly before 1018/1609 (Kawunun-i Ali-ı 'Oğłam, published in Taşvir-i Efkar [Istanbul 1280] 11-13), Sofya and Manastır were included under the Paşa sanjak. This list includes additionally the sanjaks of Selanik, Usküp, Delvine, Vize, Kırık Kılise, Delvine, 6. Vuketin, 7. Tebriz, 8. Elbasan, 9. Kostendil, 2. Tirhala, 3. Prizren, 4. Yanya, 5. Delvine, 6. Vučetin, 7. Usküp, 8. Elbasan, 9. Awtunya, 11. Dukatın, 12. Okhri, 13. Ablakişar, 14. Selânik, and 15. sanjak of the Vouyuks. In the 18th century, Morea was separated as the new eydlet of Rumeli at the end of the 18th century, administrative divisions of Rumeli underwent numerous changes, and smaller provinces were formed. Shortly before 1263/1847, the new eydlets of Usküp, Bosna, Yanya and Selânik were formed and the main eydlet of Rumeli included only the three sanjaks of Iskenderiyê, Okhri and Kesriye (Sâl-nâmê of 1263/1847). In 1862, the first wilayet of Rumeli was composed of the towns of Kesriye, Okhri and İskenderiyye, with Manastır as the centre of the wilayet (Sâl-nâmê of 1278/1862). Following the formation of the wilayet of Tunca in 1280/1864 with the sanjaks of Rusčuk, Tučca, Vidin, Sofya, Trnovo, Niž and Varna, new wilayets were formed one after another, namely Bosna, İskhid, Yanya, Selânik and Edirne, thereby reducing Rumeli to a mere geographical name. The new wilayet of Selânik included Manastır, Serez, Drama and Usküp. After Bulgaria seceded in 1312/1894, Rumeli was divided into the wilayets of Edirne, Selânik, Kosova, Yanya, İskhid and Manastır (Sâl-nâmê of 1312/1895).

RUMELI HİŞARI, a fortress and village at the narrowest part of the Bosphorus which has at this point its strongest current (called Şeytan for the west). The castle served, together with Anadolu Hisarı [q.v.], to control the maritime passage between the Euxine (Black Sea) and the Propontis (Sea of Marmara). In Ottoman sources it is also called Bogazkesen and Rumeli Orta Hisar kal'esi. Two existing Byzantine towers were taken in 1452 by Mehmed, the future sultan, and within a few months (oldest Ottoman inscription of Istanbul), the castle was completed in Rabī' II 856/June-July 1452, being the result of a division of labour between the sultan and his leading commanders (Seradja, Khalil, Zaghanos), extensively described by Byzantine and Ottoman contemporaries. Only theDonjon of Coucy (Aine) exceeded the three towers in size at this period. At the barbican (hisar-petle), 18-20 guns were
installed. Rumeli Hisarı served as a prison and as a check-point for customs (see ISTANBUL, Plate VII; OTTOMAN, v. architecture, Plate VI).

The term Rumiya went into use as a summer resort, frequented by members of the Ottoman ruling class (e.g. Köprülü-zade ʿAşim and Mekki-zade), who owned waterfront palaces (yali). Rumeli Hisarı preserved its predominantly Muslim character, with more than a dozen Friday mosques and masjid-i, until the early 19th century. There were prominent dervish convents. The Tekke of Shehidler above the castle was an important figure in the Young Turk period. In 1863 Robert Roberts, the first governor of the modern Boğaziçi Üniversitesi, was opened by the American Presbyterian Christophor Rihelander Roberts. There was a small Armenian quarter in the vicinity of Surp Santukht (late 18th century).

Rumis, known as Rume, is a designation for the Turks from al-Rûm [q.v.], which was once under the Eastern Roman Empire. The name Rumi was widespread in all eastern Islamic countries, including the Arab lands, Persia, Central Asia and Indonesia, from the 9th/15th century onwards. The Ottomans restricted the name Rumi to the provinces in the Amasya and Sivas areas. The Rûmis were appreciated particularly for their tactical skills and for skills in making of firearms. Rumi mercenaries were employed by the Mamlûk sultans, the rulers of Arabia, ʿIrâk, and, thereafter, by the Indian and Indonesian rulers (J. Aubin, Mare Luso-Indicum, ii, 175-9).

While employment opportunities with high salaries attracted a great number of individual Anatolian soldiers, who had once been in the service of the Turkoman rulers, the Ottoman sultans also gave permission to friendly rulers to enlist volunteers from their territory. Such Rûmi mercenary groups equipped with muskets, trained in using the sea on three sides, the golden gate and the gate "of the king", the situation of the great market; or through this fairy-like enchantment, marked by an unparalleled display of gold and precious stones (e.g. in regard to the altar of the Lateran church); or, final-ly Ibn Khurradadhbih [q.v.], which is known as the Roman basilicas, in 846 A.D. (furthermore, it is known that an event connected with the legend of the...Syriac tradition, as the analysis of texts (cf. 1. Guidi, in Bibli.) has shown.

This procedure is indeed what is responsible, either through an ambiguous geographical representation, which goes back rather to Constantinople (presence of the legend of the sea on three sides, the golden gate and the gate "of the king"), the name given to the city of Rome by the Arab geographers, with the exception of the western ones (al-Bakri, al-Idrisi and al-Ḥimyarī), who use the form Rûma, as also Ibn Khaldün (only Ibn Rusta writes Rûmiyya, treating it as if it were a nisba).

Rome's fame, both as the seat of power of the Rûm [q.v.] and then as the centre of Christianity, could not fail to be noted by the mediaeval Arabs. In fact, the solicitude, in a critical sense, which they displayed in grasping at every item of information about the city, ended up in a host of pieces of information which is in striking contrast to their almost total ignorance, up to the time of al-Idrîsî, with regard to Christian Western Europe. Unfortunately, this involved only indirect information, with the unique exception of the narrative (in Ibn Rusta, 129-30) of the mysterious Hārūn b. Yâbi, who fell into the hands of the Byzantines and who visited Rome towards the end of the 9th century A.D. (furthermore, it is known that an event as sensational as the sacking of the Roman basilicas, in 846 A.D., has left no trace whatever in the Arabic texts). Again, the pieces of information are drawn from anonymous sources and, going beyond this fic-tion, from the domain of the imaginary and legen-dary, such as the largely facetious picture of mediaeval Rome fixed in the minds of the Arabs. It is as if they had seen its landscape, urban and rural, through the eyes of someone else, in other words, through the intermediacy of the Greco-Byantine and Syriac tradition, as the analysis of texts (cf. 1. Guidi, in Bibli.) has shown.

This procedure is indeed what is responsible, either through an ambiguous geographical representation, which goes back rather to Constantinople (presence of the legend of the sea on three sides, the golden gate and the gate "of the king"), the situation of the great market; or through this fairy-like enchantment, marked by an unparalleled display of gold and precious stones (e.g. in regard to the altar of the Lateran church); or, finally, through exaggerated figures evoking a setting in which thousands of churches are crammed (with 120,000 bells...), as many as 25,000 monasteries, 22,000 markets and 660,000 baths! It should never-theless be remarked that this attitude does not seem to be shared by all the authors. In so far as one can iden-tify the different traditions, one may conclude that only Ibn Khurra-dadhbih [q.v.], on the one hand, followed by al-Idrîsî, al-ʿUmârî and (in part) Ibn Rusta, and on the other hand, Yâkût and al-Kazwînî [q.v.], following the version of Ibn al-Ḥakîm (absent from the abridgment, which alone has survived), devote a considerable amount of space to the marvellous. In this context, one should particularly note the mention of the columns or talismanic statues, of which Yâkût and al-Kazwînî preserve the most complete memory, connected with the legend of the Salvatio Romae, or indeed with that of the birds who bring olives to ensure a sup-ply of oil for the lamps, or yet again, with the belief in the apotropaic power of certain images.

The edition which has recently appeared (see Bibli.)
of the Masdlik of al-Bakri [see ABU 'UBAYD AL-BAKRl],
comes opportunely to allow us to verify, at the same
time as demonstrating the dependence of the Raoud
of al-Himyari [see IBN 'ABD AL-MUN'im AL-HIMYARI],
the existence, in regard to Rome, of a clearly different
tradition, one in which an interest, which may be
called “historical” in the wider sense, is dominant.

Instead of a topography with fabulous features,
such as the enceinte with two walls separated by a
paved-over river (or in some way covered over) with
copper flags, side-by-side with a canal having the
same paving with flags and running through the
marsh, as already the reader might expect, which is
much more realistic, nothing more than the
name of the Tiber, at the side of that of Octavius (with
the reminiscence of the age ‘of bronze” and, on the
other hand, that of Constantine. The sumptuous
description of churches found elsewhere is here likewise
reduced to that of St. Peter, not without some realistic
details. A sequel to this absence, or near-absence, of the
man-made, man-sculptured, man-flowing, or, in attention
beneath the human beings and to their nature (the
Romans are the most cowardly people in the world!)
and to their customs. If al-'Umarî himself knows a lot
about the Pope, and if others (Yakut, Ibn Rusta, etc.)
underline the role, both spiritual and cultural (sic) of
Rome, it is al-Bakrî and al-Himyari above all—and
more than anyone else—who stop at the social and
religious life of Rome’s inhabitants, shown in a
number of remarks: on Sunday and the celebration of
the Eucharist, on monography and adulatory, the laws
of hereditary succession and fasting, oaths and the
number of remarks: on Sunday and the celebration of
the Pope, and if others (Yakut, Ibn Rusta, etc.)
calls “historical” in the wider sense, is dominant.

The great length of the Wadî led to the local
changes of name recorded by al-Hamdânî and Yâkût
and the same phenomenon is noted by modern
authorities. From its head in the Harrat Khbbar
al-Kaşîm, it is called Wadî Râhâ (J.G. Lorimer,
Gazetteer of the Persian Gulf, “Oman and Central Arabia,
Calcutta 1908, II, 281-2, 597-8, IIB, 1591, 1601-2).

Great mapping describes the entire course in this area as Wadî al-Rumma (or al-Rimah) from its head in the Harrat Khbbar as far
as the point at which it reaches the Dahhânî [g.e. its
sands to the north-east of al-Kaşîm, and which form a
great natural barrier. In the Dahhânî, the Rumma is
known as Wadî al-Mustâwî (H.R.P. Dickson, Kuwait and her
neighbours, London 1956, repr. 1968, 53), and beyond
the Dahhânî it becomes Wâdi al-Başî, whose course
eventually marks Kuwait’s western border with ‘Irâk.

The western reaches of the Wadî al-Rumma were
first explored by C.M. Doughty (Travels in Arabia
Deserta, Cambridge 1886, ii, 329, 391-3 and passim,
who describes its shallowness, its salinity in al-Kaşîm,
and the sands blocking it to the east. C. Huber
(Journal d’un Voyage en Arabie, 1883-1884, Paris 1891,
I.) also mapped its course around “Unayza. Musil,
op. cit., 38-9 describes the fertility of the alluvium that
ran against the Dahhânî sands there. It became a dam
across the Wadî al-Rumma as the Wadî al-Kaşîm (the Wadî
visually invisible and this is noted by several travellers.
H.St.J. Philby (Arabia of the Wahhabis, London 1928,
repr. 1977, 177 ff.) described wells and springs in the
Wadî al-Rumma channel near to “Unayza, and the
practice of establishing palm groves that tapped
the brackish water beneath the saline sabkha. Doughty
says that the Wadî had not flowed for some 40 years
in his day, but Philby (op. cit., 257) speaks of regular
floods in the west of al-Kaşîm before the early 20th

These would transform the depression known as Zukuşbiyya into a lake. In 1982, the present
writer saw the entire country west of Uqlat al-Shuqr
on the western course of the Wadî al-Rumma turned
by rainfall into a vast shallow lake which fed into the
Rumma.

In the 19th century, the lower course, the Wadî al-
Başî, provided a route from Kuwait into al-Kaşîm
(Doughty, ii, 392; D.G. Hogarth, The penetration of
Arabia, repr. Beirut 1966, 277; Dickson, 60). Here
there were wells, notably at Hafar and at Rıkâî, but
in this lower stretch of its course, beyond the Dahhânî,
the Wadî normally does not flow. By 1936 Hafar had
a Saudi fortress, and today Hafar al-Başî has grown
into a major Saudi military base.
AL-RUMMA — AL-RUMMĀNĪ

AL-RUMMĀNĪ, ABU ‘L-HASAN ALI b. ʿĪSĀ b. ‘ALI b. ʿABD ALLĀH (296-384/909-94). By profession a scholar of exegesis, al-Rummānī was closely involved in the development of tafsīr, the exegesis of the Korānic verses, which was a very active field during his lifetime. Despite the contemporary proliferation of works on tafsīr, only a handful of them survive to the present day. This is largely due to the competitive nature of the field, which resulted in many works being abandoned or neglected. Among the surviving works, two stand out as particularly significant: al-Rummānī’s *Tafsīr al-Kurān*, a comprehensive exegesis of the Korān, and his *Sharh al-Nukat fi Ṭashkīl al-Kurān*, a treatise on the categorical nature and function of the Korānic verses.

(1) *K al-Alfāṣ al-mutaraddīsāl al-muktāsirāt al-mānā* (ed. Faḥth Allāh Shāhī, ʿAlī al-Miṣrī, al-Manṣūra 1407-1987). A short lexical work, it is divided into 142 fāṣil, each fāṣil containing a set of words (or phrases) that are synonymous. The work is representative of a technical genre common during this period.

(2) *K. al-Djāmī fi ilm (or tafsīr) al-Kurān*. A work on Korānic philology, it appears originally to have been very large, only parts of which have survived (as yet unedited). They are: Part 7—Paris, B. N. 6525; Part 10—Tashkent, Akademija 3137; Part 12—Jerusalem, Al-Quds University 1454; G. A. Waddell, *Microfilm Collection* (18 see *GAS*, viii, 113, and, for a discussion of the work, accompanied by citation of select passages, Mubārak, al-Rummanī, 83-8).

(3) *K. al-Hudūd fi l-nahu (in Rasāʾīl fi l-nahw wa l-iṣīla)* ed. Muṭafā Diwādā and, Yaʿqūb Maskūnī, *Slīlasat kutub al-ḥudūd*, 11, Baḥdād 1388/1989, 37-50. A short lexical work, it constitutes a small dictionary of 88 technical terms that commonly occur in Arabic, a compilation of short paragraphs illustrating the subject of the uniqueness or inimitability of the Kurān. In structure, it constitutes a compilation of short paragraphs illustrating the author’s knowledge of the subject (with many arguments given as counter-arguments), and with, sometimes, little contextual continuity. Without abandoning the traditional theological arguments that had been put forth on behalf of the Kurān’s inimitability, al-Rummānī attempts to put the entire issue on firmer ground by logically subordinating the theological arguments to the notion of the Kurān’s incomparable style, which rests squarely upon the quality of its eloquence (balāgah). According to al-Rummānī, balāgah is divis-ible into the following ten categories: (i) terseness (iqāṣ), (ii) comparison (tāḥῑb), (iii) metaphor (isti’dār), (iv) euphony (ta’lām), (v) end-rhymes [of the Kurānic verse] (fawdīl), (vi) parenthesis (baldgha), (vii) transformation of a root into various meanings (mubdīl), and (viii) distinctiveness [of expression] (bustūr). (The Sharḥ Kītāb Ẓibawiyh. This appears to have been a rather large work, only portions of which survive, for the most part unedited (see, however, E. Ambros (ed. and tr.), *Sieben Kapitel des Sharḥ Kītāb Ẓibawiyh von ar-Rummanī in Edition und Übersetzung*, Vienna 1979; *Kism al-sarf, al-ḏīqā al-awwal*, ed. R. A. al-Damīrī, Caīro 1408/1988. They are: Istanbul Feyzullah Efendi 1984-7 (= vols. i-v of the *Sharḥ*), and Vienna, Akademie 2442 (= Part 3 of the *Sharḥ*). This work has been the subject of a number of studies, the most comprehensive of which being Muḥārābāt, al-Rummanī (see also GAS, ix, 112, and Bibi. for further titles).

(8) Tafsīr al-Kurān. An apparently very large work, only a small portion of which has survived (as yet, unedited): Caīro, al-Khizana al-Taymuriyya tafsīr 201 (GAS, viii, 270). It was highly regarded throughout-out the later mediaeval period (for a discussion of the work, with remarks about it from later authors, see Mubārak, al-Rummanī, 96-9).

One thing that distinguishes the Arabic grammarians of this period, from their predecessors, is the patent and increasingly more refined awareness of the importance of distinguishing between purely syntactic phenomena and such stylistic alternatives as are the product of innovative linguistic conventions or are the result of individual literary language (in this case, Arabic), when making judgements about acceptable and accepted usage. Al-Rummanī is representative of this trend.

Theologically, al-Rummanī belonged to the Ihkāhīyya (Yūkūt, Ḳīḥād, V 280-1) after Ibn al-Ikhwāhīyya, the eponymous founder of the school; whence al-Rummanī’s auxiliary nisba, al-Ikhwāhīyya, one of three competing Muḥāzīṣi schools of kalām, in Baḥdād, the other two being the Ḳā Ḥāshimiyya and the so-called “old Baḥdād” school. As a young man, al-Rummanī had witnessed the legendary debate (320/932) between Abū Saʿīd al-Sīrāfī [q. v.] and Abū Bīγr Mattā b. Yūnūs over the relative merits of logic and grammar. He would serve as the main source for al-Tawḥīdī’s recapitulation (*Imād*, i, 128) of the events (the other informant, albeit with less of a memory for the details, being al-Sīrāfī himself). As an expert in the field of logical theology, al-Rummanī was appointed, along with al-Sīrāfī, to a judgeship over Baḥdād’s East District, shortly after Abū Muḥammad Ibn Maʿrūf had been appointed chief judge of the city (Krämer, *Philosophy*, 73; al-Ḥamadānī, *Taqsim*, 197; Ibn al-Diāwāṣī, *Muntazam*, viii, 38, 34). Probable is Ibn Maʿrūf’s official witness (*gāḥīd*), al-Rummanī was a member of
a self-appointed delegation of notables (many of them jurists) that appeared before 'īzz al-Dawla Bakhtiyār to air the grievances of the populace (Imāmā, i, 151-2).

RUNDA. Sp. Ronda, the chief- lieu of the district (kūta, sometimes iklim) in mediaeval Andalus of Tākurunnā, situated to the north-west of Rayya [q.v.] (modern Malaga).

This is a very mountainous region, well watered by rivers and abundant rain, allowing the development of agriculture and stockrearing. The town of Runda is described in the Arabic sources as an impregnable fortress, and this fact, in addition to its geographical situation, has moulded its history. The northern part of the town was protected by a ravine (taṣdī) formed by the river, a kilometre long and 160 m deep. This natural defence was completed by a powerful fortress. The town of Runda is described in the Arabic sources as an impregnable fortress, and this fact, in addition to its geographical situation, has moulded its history. The northern part of the town was protected by a ravine (taṣdī) formed by the river, a kilometre long and 160 m deep. This natural defence was completed by a powerful fortress.

This is a very mountainous region, well watered by rivers and abundant rain, allowing the development of agriculture and stockrearing. The town of Runda is described in the Arabic sources as an impregnable fortress, and this fact, in addition to its geographical situation, has moulded its history. The northern part of the town was protected by a ravine (taṣdī) formed by the river, a kilometre long and 160 m deep. This natural defence was completed by a powerful fortress.

The town of Runda is described in the Arabic sources as an impregnable fortress, and this fact, in addition to its geographical situation, has moulded its history. The northern part of the town was protected by a ravine (taṣdī) formed by the river, a kilometre long and 160 m deep. This natural defence was completed by a powerful fortress.
The population of Runda and its hinterland comprised, as well as indigenous elements, a strong Berber presence, plus some Arab lineages. Among the Berbers, one notes the presence of the W.lhâsa (of Nafza [q.v.]), as well as the Banu 'l-Khalîl (see below) and the Banu 'l-Zanjâji. These last, of distinguished origin, according to Ibn Hayyân, later installed themselves at Cordova and reached there a high position. The famous poet 'Abbas b. Firmâs (3rd/9th century) belonged to a Berber family settled in the Runda district (the very name of Tâkurunnâ is considered to be of Berber origin). The presence of Nafza Berbers is attested until a late date by the patronyms of persons like the poet Abu 'l-Bâkâ (7th/13th century) and the mystic Ibn 'Abbâb (8th/14th century), both born at Runda. The references to Arabic lineages are much less numerous. According to al-Râzî, cited by Ibn al-Khafîb, a descendant of Saūd b. 'Ubâda [q.v.] settled in the region of Tâkurunnâ. In the 5th/11th century the Banu 'l-Hakîm, an important Arab family of Seville, chose to reside at Runda and thereafter played an important role in the town's history. The Arabic nisâb borne by the natives of Runda are recorded in the biographical sources, but, as elsewhere in al-Andalus, this fact does not guarantee a genuine Arab origin. The existence of a small Jewish community is attested by the presence of a Jew as interpreter in the negotiations which led to the surrender of the town in 1057 and a Jewish physician of Runda is mentioned in the 6th/12th century.

In the Umayyad period, the Berbers of Runda and its district were often involved in rebellions against the amirs of Cordova. However, the Banu 'l-Khalîl, who were clients of the Umayyads of Syria, had given their support to the youthful 'Abd al-Râmân I when he had landed in the peninsula; the lord of the Kâra of Tâkurunnâ, 'Abd al-A'la b. Awghâjja, offered him his help in the face of the 400 cavalry sent by the rear- amir of Hi§ham I, the Berbers of Tâkurunnâ rose in 755/1795-6. This rising was severely suppressed by the amir's army, who killed a large part of the rebels; those who escaped took refuge in regions fairly distant from Runda (Talavera and Trujillo). This first Berber revolt resulted in a depopulation of Runda and its district, which has probably, however, been exaggerated by the Arabic sources. Other Berber revolts are recorded in the region in the 5th/11th century, of the re- amir of Idrîs b. Asad, who escaped took refuge in regions fairly distant from Runda (Talavera and Trujillo). This first Berber revolt resulted in a depopulation of Runda and its district, which has probably, however, been exaggerated by the Arabic sources. Other Berber revolts are recorded in the region in the 5th/11th century, of the re- amir of Idrîs b. Asad, who in 238/852, and in 457/1064, when the Berbers of Runda were strengthened. However, the presence of this family in the region has probably been exaggerated by the Arabic sources.
RUNDA — AL-RUNDI 617

final assault on the Granadian kingdom. In 1484 fresh Castilian advances isolated Runda more and more from the rest of the kingdom, and after a short siege (8-22 May 1485), the commander of Runda, Ibrâhim al-Hakîm (the aiguique mayor of the Castilian chronicles) surrendered the town to the Marquis of Cadiz. This led to the loss of the whole surrounding region and that of Malaga and the Mediterranean shores. The population of Runda had to abandon the town to Christian settlers, although the people of the smaller rural settlements were allowed to remain as vassals of Castile.

Runda had never reached the cultural level of other towns in al-Andalus, but there was a certain intellectual development in the 7th/12th and 8th/14th centuries, when persons like Yûsuf b. Mûsâ b. Sulaymân al-Muntahaššîrî, a prolific author and the teacher of Ibn al-Khašîb [q.v.], emerged. But Runda’s most famous sons were the poet Abu ‘l-Bakdî (601-8/1204-85), the author of a renowned kashfîdî on the loss of Córdova, Seville, Valencia and other towns of al-Andalus, and the mystic Ibn ʿAbbâd [q.v.].

**Rūnī, Abu ʿl-Fārāḍī** [see Abu ʿl-Fārāḍī b. Masʿūd Rūnī, in Suppl.]

**Rūpiyya**, an Indian coin, a rupee. In the later 9th/15th and early 10th/16th centuries, the silver tanka [q.v.] of the sultans of Dihāli had become so debased that when ʿShīr Shāh (947-52/1540-5) reformed the coinage, the name could no longer be given to a silver coin. To his new silver coin, corresponding to the original fine silver tanka, he therefore gave the name rūpya = rupee, i.e. the silver coin (Ṣanakṣīt, ṭuqṣa ṭūqṣa), and tanka became a copper denomination. The weight of the rupee was 178 grains (11.53 gr) and it rapidly established itself in popular favour. Under the Mughals it was struck all over India at over 200 mints and with few exceptions, the local mints showed little variation in weight. In the 19th century the British rupee gradually drove the local issues out of circulation, and with few exceptions, the local mints closed. Such native states as still issued their own rupees before 1947 struck them on the same standard as the Indian Government rupee.

ʿAḥmad ʿShāh Durrānī [q.v.] adopted the rupee as his monetary unit on becoming independent, and until the early 20th century it remained the standard coin of Afghanistan. The Hindu kings of Assam also struck the rupee. At present, in South Asia, the rupee continues in use in East Africa (see ADMIRALTY AT-LĀRĀM, AL-ĀMMUTI, ED.), the British and German possessions there. The rupee continued in use in East Africa until 1947/50 struck them on the same standard as the Indian Government rupee. In the Sultanate of Maskāṣ and ʿUmān, until 1970 there was a dual currency of the rupee and the riyāl, the first made up of 64 baṭās and the second of 200 baṭās (see rīyāl and, in general, Krause et alii, op. cit., 1194-5, 1409-13, 1533).

18 AL-RUNDI_RUS

**Rūs**, occasionally Rūṣiya, the Arabic rendering (and thence into other Islamic languages) of Eastern Slavic *Ryža* (Rūṣ). This was the designation of a people and land from which modern Russia, Ukraine and Belarus derive.

The rapid ethnic, political and social evolution of this term and the people(s) it denoted during the 3rd-4th/9th-10th centuries produced a series of temporally multi-layered, occasionally contradictory notices in the classical Islamic geographical literature. In contemporary Byzantine sources it appears as Ῥως (which may, indeed, be the source of the Arabic form, Barholt, *Arabische ischutte u. rusad*) cf. also *Pōsoa*, the name of the country derived from it and the infrequently noted form (pl.) *Pōσονον*. Modern Russ. Rossiya ("Russia") is taken from the Byzantine ecclesiastical usage. Al-Idrīṣī, 914, mentions "Outer Russia" (bīlād al-rūṣya al-khādiriya). It is not clear if this usage has any relationship to the Ῥως *Pōsoa* noted by Constantine Porphyrogenitus, the geographical contours of which are equally uncertain. The form Uran and its variants, found in a number of Turkic languages (e.g. Karaça-Balkar Oru, Noghay, Kazakh Oru, Çuvaş Vrâc) goes back to the Arabic form. Mediaeval Latin sources record them as (Annales Bertiniani, s.a. 838-9) Rho; (The Bavarian Geographer, 9th century) Rusii; (Liudprand of Cremona, mid-10th century) Russas; (Thietmar of Merseburg, d. 1018) Russia; Old Germ. Rus, Rūs; Old Swed. Ruds. Long-standing attempts to identify this ethnonym with the Ῥως *Pōsoa* mentioned in the 6th century Syriac ecclesiastical history of Pseudo-Zacharias Rhetor have generally (with the exception of some Soviet scholars) been rejected (see Łomiański).

**The origins of the Rūs**

The origin and etymology of this term/ethnonym and thus, it is averred, the ethnic affiliations of the people or socio-mercantile group that first bore this name in the Islamic and other sources of the 3rd-4th/9th-10th century, are much debated. It has long been argued (cf. Thomsen) that Rūs is the Slavic rendering of the Baltic Finnic term for "Swede": Finn. Ruotsi, Est. Rootsi, Vot. Rōtsi, Liv. R'otsi (but cf. Volga Finnic: Mari Rūi, Udm. Zū, Kom-Perm. Rot "Russian" and Samoyedic [Nenets] Lūtā, Lūsa "Russian"). There have been two centuries of occa- sionally heated academic debates over the issue of the basis of the ethnonym *Nornanisti* (those favouring a Scandinavian origin of the Rus' and by extension the Rūs' state) and their opponents, the "Anti-Normanists." The Classical Normanist position, from the philological perspective, posits: Slav. Rūs' < Finn. Ruotsi < Old Norse rofer, rofsman, rofskarlar "rowers, seamen" associated with the coastal region of Sweden, Roslagen (see Löw-
mianški, and in Jenkins et al., Constantin Porphyrogenitus De administrando imperio. Commentary. Historical evidence in support of the Scandinavian origin of the Rus’ is a Pečenega theory. The Primary Chronicle (also called the Chronicle of Nestor), however, in its introductory genealogical comments places the “Rus’” among the peoples in Japheth’s part of the world, in this case the northern, Finnic ethnic groups. Further on, it includes them in a listing of the “Varangians, Swedes, Normans (Orrmän), Gotlanders, Angles, Galicians, Italians (Välikka), Romans, Germans, etc. Clearly, they are associated with the Germanic North. The Chronicler, often evincing a Byzantinocentric viewpoint, comments (PSRL i, 17) that the Rus’ land began to be so-called at the time of the accession of the Emperor Michael III (852). In another passage (PSRL i, 23) discussing Oleg’s conquest of Kiev, traditionally dated to 882, the Rus’ are again associated with the North: “he (sc. Oleg) had with him Varangians, Slavonic (sc. a tribe associated with Novgorod) and the rest who are called Rus’.” Elsewhere, however, the Chronicle (PSRL i, 25-6), s. a. 898, notes the Polyanhe, the Eastern Slavic tribe most closely associated with the Rus’. While the Rus’ are otherwise generally referred to as “Rus’” (ninë swonagia Rusa’). Still further on, the Chronicler attempts to explain these discrepancies thus (PSRL i, 28): “the Slavic nation (slomn’et’y zyžik) and the Rus’ (rožikly) are one; for it was called Rus’ from the Varangians (ot Varyag bo prozovatša Rou’yu), but first they were Slavs, although they were called Polyanhe, nonetheless, they were of Slavic speech.”

In addition to philological argumentation and to the ethnographic and ethnogetic data offered by our sources, the Normanist position is based largely on the Primary Chronicle’s “historical” account of the genesis of the Rus’ state. According to it, in 859 (the dating, at best, is off by several years), the Varangians “from across the sea” levied tribute on the Finnic Cyuď, the Novgorodian Slovene, the Finnic Merya and the Slavic Krivichi, while the Slavic Polyane, the Gotlanders, Angles, Italiets, and Vyatiti to their south were tributaries of the Khazars. In 860-2, the Varangians were expelled, but the northern groupings proved unable to govern themselves. As a consequence, the Varangians, led by Ryurik, who settled in Novgorod, and his two brothers, Sineus and Truvor, were summoned to rule over them. Ryurik brought with him “the whole of Rus’.” From “these Varangians it was
The Islamic sources, while not providing the conclusive information needed to resolve these questions, shed some light on the early Rus'. Genealogical tradition, as reflected in the anonymous Mudjal al-tawarih, dated 520/1126, presents the eponymous Rus' as the brother of Khazar and the son of Japheth. Dissatisfied with his own place of abode, Rus' wrote to his brother and "asked for a corner of his country." He obtained an island, difficult of access, with soggy soil and foul air. These and other themes are drawn from information that was part of the body of Islamic geographical literature of the 3rd-4th/9th-10th centuries (see below). Balfamí, in his translation of Al-Ṭabarí, s.a. 22643, reports the words of Shahriyar, the ruler of Darband/Bāb-al-ʿAbwāb [q.v.], to the commander of the Arab advance forces, ʿAbd al-Rahmān b. Raʾf, to the effect that he was "between two enemies the Khazar and the Rus'. These peoples are the enemies of the entire world and, in particular, of the Arabs." The Rus' presence in this region. The Khazars, of course, were already an important factor in the North Caucasus. The pairing of the Rus' with them as enemies of the Islamic world has an anachronistic ring. Nonetheless, some scholars are willing to accept its historicity (cf. Lewicki, Žňôdla arabské do dnešního slovanského čeledi; Togan, Ibn Fadlan's Reiseberichte. Novosel'tsev cites several other references to the Rus' dating to the time of Khusrav I Anūshirwān (531-79), e.g. in Al-Thaʿalibī, who built fortifications against the "Turks, Khazars and Rus." These, too, are most probably anachronistic. The earliest reliable reference to Rus' in the Islamic sources is perhaps to be seen in the "mountain of the Rus'" from which the river drus flows, noted in Al-Khârazmî's Sūrat al-ʿarâf, Novosel'tsev notes.

One of the earliest and most important notices is found in Ibn Khûrradadhbih, writing probably ca. 272/885-6, on the "route of the Rus' merchants" who brought goods from Northern Europe/Northwestern Russia to Baghdad. It interrupts a notice on the route of the Ṭadhānīyya [q.v.], a Jewish merchant company, which appears to have been supplanted by the Rus'. Noonan has recently suggested that the latter may have initiated these contacts as early as A.D. 800. A hoard of coins found at Peterhof, near St. Petersburg, contains twenty coins (Sāsānid, Arabo-Sāsānid and Arab dirhams, the latest dated to 189/804-5) with graffiti in Arabic, Turkic (probably Khazar) runic, Greek and Scandinavian runic (more than half the total). This may be viewed as evidence for the existence of the route described in Ibn Khûrradadhbih by the late 2nd/early 9th century (see T. Noonan, The "route of the Rus' merchants" in the Islamic sources, Novosel'tsev). In Ibn Khûrradadhbih's famous account, the Rus' are described as "a kind (diqā) of the Śakālība," a sentence that has often been taken to indicate that they are a Slavic tribe. The Arabic is much more imprecise. The primary meaning of diqā is "kind, type, variety, species." The term Śakālība (sing. Śakalabī < Gr. Σκαλαβος) while often used to designate the Slavs, was also employed to denote the whole of the fair-haired, ruddy-complexioned population of Central, Eastern and North-eastern Europe. In mediaeval Greek and Latin, sclavus became synonymous with "slave" (the English word < French esclave) deriving ultimately from the ethnic designation (see below). Balasānī, s.a. 22643, fol. 49a, ms. Paris, Bibliothèque nationale 2213, fol. 49a, ms. Vienna, Nationalbibliothek 783, fol. 65a, see also Golden, Khazar studies), notes *nīy river (variously read/identified as the "Tanais" [Tawag] i.e. the Don (so De Goeje), also yitil, i.e. til (= Volga, see Lewicki, Žňôdla or * Tin = Don, see Marquart, or Siverskii Doneta), see Pritsak, An Arabic text on the trade
route of the corporation of ar-Rus in the second half of the ninth century), the River of the $akaliba. They travel to
Baghdad. $aklab slaves translate for them. They carry their goods from Djurcjjan by camel to
sak has, moreover, put forward an interesting thesis
Al-Mas...
The location of this Rűs kaghanate has been and remains the source of much speculation. Equally unclear are the inception point and ultimate fate of his polity. One might suggest that the Rűs kaghanate was founded by a Khazar ruler who fled to the Rűs' ca. 830-40. He places the kaghanate in the Rostov-Yaroslav region of the Upper Volga. Smirnov, was of the opinion that it appeared only briefly, ca. 830, and was soon destroyed by the migration of the Ugro-Turkic tribal confederation that became the Hungarians in Danubian Europe. Since the latter day on it has not been documented that the Rhos embassy from its return route from Constantinople and forcing its diversion to the Frankish lands, this would appear to have been a very short-lived political phenomenon. On the other hand, the sacral ruler described by Ibn Faḍlān in 309/921-2 (see below) certainly possessed many of the attributes of a holy Turkic Khan. The memory of this institution, in any event, endured into the Christian era of Rűs history, and may have been, and could be summoned for ideological purposes.

The location of the Rűs lands

The tradition represented by Ibn Rusta, Gardizi and others (cf. al-Makdisi, Mūḥammad al-Marwazī, al-Kazwī), Ibn Iyās, in Seippel; al-Bakūwī, see also discussion in Zakhoder, place the Rűs on an island of three days' journey in width in a lake (or a sea). It is densely wooded, damp, soggy and possessing foul, unhealthy air. Gardizi (or rather his sources), followed by al-Makdisi, puts the island's population at 100,000. Ibn Iyās and al-Bakūwī comment that the island is a "fortress" that protects them from their enemies. Some scholars are inclined to place this island in the north. Novgorod, it might be remembered, in Scandinavian tradition was termed Ḥilīmgarb "Island-Garth" (Barthold, Arab. ixv.; Novosel's). Other suggestions include Āldeig-jurbok, North-east Rűs, Kieff, Tmutorokan' and the Taman peninsula (see literature in Golden, Question). Fakhr al-Dīn Mūbārakshāh, simply notes that they live on islands. This, however, may refer to a later period. For example, al-Dimāġī, says that they have islands in the "Sea of Māyuṭas" (text has the corrupted form Maṇīsūs = Maeotis, the Sea of Azov). Pritsak, Orkīn, suggests that the Ḥiṣn Rūs, Tituško/Klaoja noted by Conant, Porph., who mentions that the city is also called Zakpāvā, the meaning of which is unclear (Pritsak, op. cit., 44), derives this term from Balkan Latin sambata "Saturday", the principal market day. He further suggests that Kiess is based on the name of the Khazarian vizierial family of Khārazmian origin Kūyā (< *kaopa "peculiar to the Iranian sacred ruling dynasty Kāwyā + -awā"). This form arose in the late 9th century, and the Caucau of Western sources (Thietmar of Merseburg). Old Norse knew it as Kωmgarθ "Boat-Garth!". This is the southernmost of the Rűs lands ("nearest to the Islamic lands"). It is also closest to and bigger than Bulğār. A Rűs king resides in Kūyā. (2) Salāwiyya (Salāba in the Hudūd). Barely commented on by al-Īṣṭakhrī (who says that it is the farthest from them) and Ibn Hawkal, the Hudūd remarks that it is a "pleasant town from which, whenever peace reigns, they go for trade to the districts of Bulğār." Only Ibn Hawkal notes the presence of a king in it. Al-Īṣṭakhrī says that it is on the top of a mountain. The Salāwiyya are clearly the Slovene of the Lake II'men region and Novgorod. The latter was actually founded ca. 930, the earlier "Novgorod" is perhaps to be identified with the "Ryurikovo gorodishe", to the south which contains some Scandinavian finds (Clarke and Ambrosiani). It continued to have a strong trade orientation towards the Finno-Ugric forest peoples, competing here with Yū<r(see also al-Īṣṭakhrī, 917-18). The Ḥudūd also ascribes to them the production of "very valuable blades and swords which can be bent in two, but as soon as the hand is removed they return to their former state." Al-Īṣṭakhrī locates it four days' travel from both Kūyāba and Salāwā. Arṭhān(iyya) is probably to be located near the Volga or in the Volga-Oka mesopotamia (hence some efforts have been made to identify them with one or another Finno-Ugric people, cf. Swoboda). It might be noted that the name of the Arabo-Jewish documents refer to the Volga as Arṭāb and the furs imported from there were referred to as Ṭarka (Goitein). It is unclear which, if any, of these centres may be identified with the Rūs Kahanate. Al-Īṣṭakhrī gives the names of a large number of cities in "Rūsiyya" and its immediate environs: Lūbānš (Lyubět), Zāka (Sakov), Sūdā, Ghallīsiyya (Galicia, Halte), Snūbī, Turūbi (Turov), Baraźlāw
The Islamic sources paint a largely bellicose picture of their relations with the Rus. The Hudud reports that "they war with all the infidels who live round them, and come out victorious." Ibn Rusta, Gardizi and al-Makdisi, note the Sakaliba as the principal victims. The Rus come by boat, capture them and send them off to the slave markets of Khazarân and Bulghar. They also take their foodstuffs since they have no cultivated fields of their own. Gardizi adds that many Sakaliba agree to take service with the Rus, working as servants (confirmed by the Hudud, loc. cit.: "among them lives a group of Slavs who serve them"). It has often been assumed that these were the Sakalâbi servants who functioned as translators for the Rûs merchants who came to Baghdad noted in Ibn Khurrazâdhîbîh (see above). How these translators acquired Arabic, if this was, in fact, the language to which they translated, is unclear. Ibrâhîm b. Ya'kûb remarks that the commerce of the Sakaliba "frequently comes by land and sea to the Rus and Constantinople." The Sakaliba in question here are probably the Western Slavs. That same author, 5, reports that the Rus also attack the Pruss (Burûs), crossing over to attack them in ships "from the West." These would appear to be Rûs operating in the Baltic. Prior to the 10th century Rûs and Sakaliba were to be found in the Khazar military service and as the servants of the Khâkâân, living in the Khazar capital. The Khazar judiciary made provisions for its ethnically variegated subject population. There were seven judges, each for the Jews, Muslims and Christians and "one for the Sakaliba and Rûs who render judgment according to pagan judicial principles (bi-hukm al-dâhîyîyâ), the judgment of reason" (al-Masâ'ûdî, Murûdî; al-Îsârî). Al-Masâ'ûdî, Tanbh, mentions groups of Rûs, who like the Armenians, Bulgarians (Burghan) and Pescenets, had entered the Byzantine military service. By the last 10th century, these contingents, whose assistance, unlike the free-lance mercenaries already found in Byzantine service, had been requested by Constantinople, were used to suppress domestic rebellions in Anatolia (see below). Rûs-Peçenets relations (the Peçenets entered the Pontic steppe, driving out the Proto-Hungarian tribal union in the late 3rd/early 9th-century) were very complex. In 915, the first of a number of Rûs-Peçenets "peace" were arranged, but by 920, Igor' had launched a campaign against the nomads. Thereafter, the periods of hostility largely overshadowed the periods of more peaceful interaction. As a consequence, Ibn Hawkal's statement, that the Peçenets are the "fighting power" (גָּנֻקָה) of the Rûs and their allies (אָהִי), seems quite remarkable, as does also his statement (see above) that Rûs and Peçenets ships attacked Spanish Mesopotamia. Ibn Rusta, however, suggested that "their companions come and stand armed. The two fight and whosoever of the two is more powerful than the other becomes the arbiter in his case as he

Relations with neighbours

The Islamic sources paint a largely bellicose picture of their relations with the Rus. The Hudud reports that "they war with all the infidels who live round them, and come out victorious." Ibn Rusta, Gardizi and al-Makdisi, note the Sakaliba as the principal victims. The Rus come by boat, capture them and send them off to the slave markets of Khazarân and Bulghar. They also take their foodstuffs since they have no cultivated fields of their own. Gardizi adds that many Sakaliba agree to take service with the Rus, working as servants (confirmed by the Hudud, loc. cit.: "among them lives a group of Slavs who serve them"). It has often been assumed that these were the Sakalâbi servants who functioned as translators for the Rûs merchants who came to Baghdad noted in Ibn Khurrazâdhîbîh (see above). How these translators acquired Arabic, if this was, in fact, the language to which they translated, is unclear. Ibrâhîm b. Ya'kûb remarks that the commerce of the Sakaliba "frequently comes by land and sea to the Rus and Constantinople." The Sakaliba in question here are probably the Western Slavs. That same author, 5, reports that the Rus also attack the Pruss (Burûs), crossing over to attack them in ships "from the West." These would appear to be Rûs operating in the Baltic. Prior to the 10th century Rûs and Sakaliba were to be found in the Khazar military service and as the servants of the Khâkâân, living in the Khazar capital. The Khazar judiciary made provisions for its ethnically variegated subject population. There were seven judges, each for the Jews, Muslims and Christians and "one for the Sakaliba and Rûs who render judgment according to pagan judicial principles (bi-hukm al-dâhîyîyâ), the judgment of reason" (al-Masâ'ûdî, Murûdî; al-Îsârî). Al-Masâ'ûdî, Tanbh, mentions groups of Rûs, who like the Armenians, Bulgarians (Burghan) and Pescenets, had entered the Byzantine military service. By the last 10th century, these contingents, whose assistance, unlike the free-lance mercenaries already found in Byzantine service, had been requested by Constantinople, were used to suppress domestic rebellions in Anatolia (see below). Rûs-Peçenets relations (the Peçenets entered the Pontic steppe, driving out the Proto-Hungarian tribal union in the late 3rd/early 9th-century) were very complex. RUS
wishes." A later report, from the 8th/14th century author Naṣḥīm ad-Dīn al-Harrānī (in Seippel, *Fontes*), states that "they do not obey a king or any law (al-‘aqaq)." There is a very distinct tradition found in al-Marwāzī which is repeated and slightly mangled in ‘Awfī. The former remarks that the Rūs king is called Waladīm (bi-waladīmīr). In ‘Awfī this was transformed into "Būlādāmīr" (Kawerau; Barthold, *Novoe musul’manskoye izvestiye o russkikh*). This, of course, is a reference to Volodimīr/Vladimīr I (972-1015), who brought about the conversion of Rūs to Orthodox Christianity. Ibn al-Mas’ūdī, Ibn Khurradābīh, who gives the titles of the various rulers of interest or importance (including those of the Šakālība), makes no mention of the Rūs ruler.

**Economy**

The initial picture presented is that of mobile, urban-based traders/raiders. Ibn Rusta reports that the Rūs “possess no real estate property (‘akdīr), nor villages, nor cultivated lands.” He subsequently notes, however, that they have many towns. Rather than engaging in agrarian pursuits, “their profession is trade (nīghār) in sable, grey squirrel and other such furs which they sell to purchasers. They take the value of the goods in gold and fasten it to their belts.” This strong mercantile emphasis is noted by the other Muslim authors, who universally speak of their involvement in extensive trading relations with their immediate neighbours, the Khazar empire and Volga Bulgharīa (through which their goods reached the Islamic lands), Byzantium, Spain and Central Europe (al-‘Isṭakhri, al-Mas’ūdī, Murūġī). Ibrāhīm b. Yakūb reports that Rūs and Šakālība traders come to “Fārāgha [Prague] from Karākū [Kraków]” for trade. Kiev’s importance as a major commercial centre continued and is reflected in later Muslim sources. Thus al-Ibrāhīm comments that Muslim merchants from Armenia come to Kiev. This finds confirmation in contemporary Georgian sources (e.g. the journey of the “great merchant Zankan Zarabālbi” of T’bilisī who was sent off to Rūs on a diplomatic-marital mission ca. 1184 “by relays of horses”, *K’art’lis ty’khoreba*), using an already well-established route. The importance of this region for trade with the Islamic world would appear to be supported by coinage evidence: Islamic dirhams first begin to surface in what became Russia and the Baltic region ca. 800; on this see Noonan, *Why dirhams first reached Russia: the role of Arab-Khazar relations in the development of the earliest Islamic trade with Eastern Europe*.

The volume of this trade seems to have exceeded that of their commercial relations with Byzantium. Although Sawyer (*Kings*, 123-6) cautions that the presence of these dirhams does not necessarily constitute evidence of a great volume of trade, nor need they have reached these areas solely by trade, Ibn Faḍlān (see below) gives direct evidence of goods being exchanged for Islamic coins. The Rūs, it may be concluded, at least in the early stages of their history, were largely merchant middlemen and on occasion pirates. They produced nothing of their own, but raided, extorted/collected tribute or traded for furs and other commodities of the Northern forest zone which they then brought to the Mediterranean or the Islamo-Central Asian world either directly or through yet other middlemen, Volga Bulgharīa or Khazarīa. However it was obtained, the volume of Islamic coinage entering Rūs’ declined in the late 10th century and had largely stopped by 1015. The causes of this change, much debated, remain unclear. Local sources of precious metals were not unknown. Thus, al-Mas’ūdī (Murūği) mentions silver mines in Rūs territory more or less equal to the silver sources in the Fandūr mountains in Khurāsān.

**Personal appearance and clothing**

Ibn Rusta describes the Rūs as possessed of “long bodies, a (good) visage and fearlessness.” Our sources (Ibn Rusta, Gardīzī) stress their personal neatness; some are clean-shaven, others braid or plait their beard. Iṣṭakhri and Ibn Hawkal attribute this personal fastidiousness to their mercantile pursuits. Ibn Rusta further remarks that they treat their slaves well. This, too, may be viewed as a higher cultural level. Their clothing is made of linen (Gardīzī) and they wear arm bands/bracelets of gold. Their trousers, according to Ibn Rusta and the *Hudūd*, are made out of 100 cubits of (cotton) fabric, which they gather in at the knee and fasten there. They also wear “woollen bonnets with tails let down behind their necks” (*Hudūd*). Al-‘Isṭakhri and Ibn Hawkal report that they wear short coats. Ibn Fadlān, however, who remarks that they are as tall as date palms, blond and ruddy, says that they do not wear short coats or caftans but a *kīṣā* (a cloak, see Dozy, *Supplement*, ii, 476). He goes on to note that each of them carries an axe, a sword and a knife from which they are never parted. Their women are bedecked with various gold and silver ornaments in displays of ostentation commensurate with their husband’s wealth.

**Customs and religion**

Our sources are impressed with the spirit of independence and enterprise inculcated among the Rūs from birth. Ibn Rusta, followed by Gardīzī, al-Maklāšī and the *Muǧīmal*, reports that “when a baby boy is born to one of them, he sets before the baby boy a drawn sword and places it between his hands and says to him ‘I leave you no goods as inheritance. You have nothing except what you may acquire for yourself by this, your sword.’” Marwāzī (in Kawerau) adds that the daughter receives her father’s inheritance, while the son is given a sword and told “your father acquired his wealth by the sword, imitate and follow him.” This same sense of rugged individualism was reflected in their treatment of the ill. Ibn Fadlān remarks that “when one of them falls ill, they pitch a tent for him, in a secluded place away from them, and they cast him away there. They place with him quantities of bread and water” and leave him alone until he either recovers or dies. Transgressors were dealt with harshly. Thieves, this same source informs us, were hung by the neck from stout trees until dead and then left to rot.

This same author was quick to note their human frailties. He appears to contradict, at least in part, the report of their personal neatness noted above, declaring them the “dirtiest of God’s creations” because of their lack of personal hygiene. To this failing were added inordinate suspicion and covetousness. Ibn Rusta and Gardīzī report an example, in this regard, that they go out to perform their natural functions only when accompanied by several friends to guard against others or man on his own would be killed. So great is their distrust and perfidy that if one acquires even a little wealth “his brothers and friends who are with him crave it, try to kill him and dispossess of it” (Ibn Rusta). How much of this is accurate and how much travellers’ tall tales highlighting the greed of the “barbarian” is difficult to gauge. It is highly doubtful, however, that the Rūs’ could have been as effective a commercial and
military force as they were, given such a state of belum omnium. Ibn Faḍlān was also shocked by their lack of modesty (engaging in sexual intercourse with their slave-girls while their friends looked on).

Slave-girls were much in demand. Al-Masudi further adds that they ‘Lord’ and’servants’, they know much about their beliefs. When ships arrive, they report, they each come out bearing bread, meat, onions, milk and wine. They proceed to a long piece of wood planted in the ground on which has been carved the face of a man. It is surrounded by smaller idols and other long pieces of wood- planted into the ground. They prostrate themselves before the large image, which they address as ‘Lord’. Their pronouncements which goods they have brought. They conclude their devotions by saying ‘I want you to provide me with a merchant who has many dinārs and dirhams, who will buy from me everything that I want him to buy, and he will not contradict me in what I say.’ If business is good, more offerings are made. In especially good circumstances, sheep and cattle are slaughtered, much of which are consumed, at night, by dogs. Ibn Faḍlān, occasionally adopting a mocking tone and anxious to display their ignorance to his readers, reports that nonetheless, he who made the offering says ‘my lord is satisfied with me and has eaten my gift’.

According to the tradition preserved in the accounts of Ibn Rusta and Gardizi, their shamans or ‘medicine men’ (qālib minhum) enjoyed a very high status. They could pass judgment on the king and govern them. They could select as sacrifice to their gods whomsoever they pleased, human and animal. These disadvantages were hung by the neck until death. The commandments of their ‘medicine men’ must be carried out (Ibn Rusta; Gardizi). We have relatively brief descriptions of their funerary customs in Ibn Rusta, Gardizi and the Hudūd. Ibn Rusta reports that ‘when one of their important people (qālib minhum) dies, they dig him a grave, like a spacious house, and place him in it. Together with him, they place his personal clothing (qiyāb hadanith), gold bracelets which he wore, much food, vessels with drink and gold money also. They bury with him in the grave the wife that he loved (best). She, after this (sc. his burial) is still alive. She seals up the door of the grave and she dies there’. Al-Īṣāḥārī and al-Mas‘udī, Murādī, also note that they cremate their dead, together with their wife or slave-girl. Al-Mas‘udī further adds that ‘when the wife dies, the husband is not cremated. If one of the unmarried men dies, he is married after his demise, and the women request that they be cremated (with him) so that they may, according to their own thinking, enter among the souls of paradise.’ Ibn Faḍlān, however, provides us with one of the most extraordinary, ethnographically detailed depictions of the funeral of a Rus chief. The customs were related and explained to him on a number of occasions (‘they told me of the things they did with their chiefs at their death, the least of which is cremation’).

He also appears to have witnessed one such spectacular funeral. The deceased was placed in a grave over which a roof was erected. He remained there for 10 days while new clothing was fashioned for him. When a great man dies they ask his household ‘who of you will die with him?’ Those who are affirmative are duty-bound to fulfill this commitment. The majority of those who agreed to do so were slave-girls. One of the slave-girls was then given this honour. The deceased was to be taken out of his grave and placed in a special structure on a boat which was taken out of the river and mounted on a kind of wooden holding frame. The corpse, because of the cold was remarkably well-preserved. An old woman called the “angel of death,” was now put in charge. The deceased was placed in the special structure. Food (bread, meat, onions) was placed before him. A dog was sacrificed, cut in half and thrown on the boat. Two cows were also sacrificed (as well as other animals). The slave-girl who was to die with her master then had sexual intercourse with her master’s relatives or boon companions and she was given copious amounts of wine so that she became dull-witted (tabālatadat). The men outside began to strike their shields with wooden sticks in order to drown her cries as she was strangled. The corpse of the deceased man, completely naked, set fire to the wood under the boat. The sacrificed slave-girl was placed beside her master. In response to Ibn Faḍlān’s questions, one of the Rus explains their views: ‘You Arabs are stupid. You take the most loved and distinguished among you and dump them in the earth. The earth consumes them (as do also) insects and worms. But we cremate them in fire, in the flick of an eye, and he enters Paradise immediately.’ A small burial mound was then set up on the site in which the boat was burned. A large piece of khdadang wood was placed on the spot and the deceased’s name was written on it as well as that of the king of the Rus. This khdadang wood was especially associated with the Rus lands (see Tūsī, Surih mabkhabīrat). The corpses of slaves were simply abandoned to dogs and birds of prey.

Although Artharvathania was famous for its inhospitality to strangers, killing all outsiders who came to it (al-Īṣāḥārī and al-Harrānī), the areas of Rus’ were not. Ibn Rusta says that they were generous to their visitors. They were ferocious, however, in exacting revenge (Mudjmal).

The Rus Caspian raids and the fall of Khazaria

It was undoubtedly the lucrative trade routes of the Volga that first drew the Rus to Eastern Europe. The Rus both traded with and raided the Islamic lands. As early as the era of the ʿAlid al-Ḥasan b. Zayd (250-70/864-84 [q.v.]), leader of the Zaydi Shīʿī principality in Tabaristan, the Rus attempted to raid the region. A second raid took place in 297/909-10, aimed at Ābakūn [q.v.]. A third raid took place in 299/911-12 and a fourth one, according to al-Masʿūdī ‘sometime after 300/912’ (Djalil minhum). Alīev, Aliev, Vinerovsky; slightly different dates, 308/919). The purpose of this last raid the Rus in return for being allowed passage through Khazar lands in order to raid the Caspian coasts, offered half of the spoils to the Khazar ruler. The raid caused much devastation, especially in the regions of Bardha’a, al-Rān, Baylakān, Adhar- baydān, Shirwān and the city of Bakhū. The Rus then returned to the Volga estuary. Here they were attacked, apparently with the acquiescence of the Khazar ruler, by Khazar Muslims (the Urusiyya and others), as well as some Christians, desirous of revenge. According to al-Masʿūdī, those that escaped were finished off by the Burūs and Volga Bulghars. An even more ferocious eruption of the Rus into the Caspian Islamic lands took place in 332/943-4. In that year Bardha’a [q.v.] was again a target. It was taken and the Rus settled in, showing every intention of remaining here. They were strengthened in this resolve by some months. The Khazar-Byzantine entente by this time had come to an end. The Rus now figure prominently in actions that were overtly hostile to Khazaria. According to the “Schechter” document, when the Khazar ruler Joseph, responding to Byzantine persecutions of Jews under the emperor Romanus I (920-44), “did away with many Christians” in his realm, Romanus retaliated by inciting “Helgu
King of Rusia against Khazaria. "Helgi" was forced to flee by sea where he and his men perished. The Letter of the Khazar ruler, Joseph, to Haakon the Harang (Shapur), the Jewish courtier of the Spanish Umayyads, reports, ca. 960, that the Khazars were continually at war with the Rus. "If I left them (in peace) for one hour, they would destroy the entire land of the Ishmaelites up to Bagdad" (Kokovtsov)

The main confrontation appears to have taken place in 354/965. The immediate causes for the Rus assaults on Khazaria are not elucidated in our sources. Given the ongoing hostilities reported in the Letter of Joseph, however, Byzantine involvement in inciting revolts within the Khazar sphere of influence, the Rus attempts to gain unrestricted passage through the Khazar-controlled Volga route to the Caspian, these may be easily conjectured. Khazaria was a fading power. The Rus formed an alliance with the Oghuz Turks and together they advanced on Khazaria. The Primary Chronicle has a very laconic notice reporting only that in 358/968-9, the Rus ruler, Djurdjan who captured the Khazar ruler. He subsequently heard that "an army from Rum, called Rus, Oghuz allies followed a similar pattern 20 years later, thus all Oghuz and Volga Bulghars were still very much on the scene. Thus the Crimean Tatars had raided and burned Moscow in 1571, but another raid the following year was repulsed. Ottoman materials for the history of the later Eastern Slavic peoples have been relatively little investigated (cf. Ewliya Celebi's comments on the Tmutorokan'. He also conjectures that shortly thereafter, the Rus, operating in the Caspian, may have provided some military assistance to the Oghuz in a power struggle in Khazarm. Khakani tells of a Rus raid ca. 569/1173 or 570/1174. These Rus appear to have been Volga pirates who came in 73 ships. At the same time, although it is unclear if their actions were coordinated, the Kipchaks [q.v.] attacked Darband and went on to take Shabaran as well. The Shirwânghâh, Akhsitan/Aghsartan I turned to the Georgian king, Giorgi III (d. 1184), for aid. Together they defeated both the Rus and the Kipchaks. The Georgian sources, however, only mention attacks of the Khazars of Darband. Completely anachronistic, of course, is the tale of Alexander's wars against the Rus found in Nizami's Iskandar-nâma. The Rus king, called Knâtâ, is presented as the ruler of the Burtâs, Khazars, Alans and (W)sû (Vepsi).

Later sources offer little new historical or ethnographical information regarding the Rus, being largely compiled based on the earlier sources. We have a brief description of the Mongol conquest of Rus' in Qiwâynî, lacking in specific details. Other sources, e.g. Djûzçâdînî, merely note them in passing. There are occasional references to the "Rûs", here designating the Russians/Muscovites, in later Ottoman-Šafawid era Islamic sources, e.g. kânûs Ivan (Russ. kânts 'Ivan = Ivan IV "the Terrible")

mentioned in a discussion of Russo-Crimean Tartar relations s.a. 980/1572-3, in Hasan Rûmî, 584-5. The Crimean Tatars had raided and burned Moscow in 1571, but another raid the following year was repulsed. Ottoman materials for the history of the later Eastern Slavic peoples have been relatively little investigated (cf. Ewliya Celebi's comments on the Rûs-i menhûs "inauspicious Rûs" Ukrainian Cossacks).

The conversion of the Rus

The Islamic and Arabic-writing Christian authors provide useful data on the conversion of the Rus to Islam and Arabic-writing. The Islamic and Arabic-writing Christian authors provide useful data on the conversion of the Rus to Islam.
Orthodox Christianity. In 987, the Byzantine emperor Basil II (976-1025) was faced with the revolts of Bardas Sclerus and Bardas Phocas. The latter, having double-crossed Sclerus, with whom he briefly joined forces, proclaimed himself emperor on 14 October 987, as we are informed by Yaböy of Antioch (d. ca. 1066). Basil, now desperate, sent to the Rus, “even though they were enemies,” for assistance. The Rus ruler, Volodimir/Vladimir, agreed to send troops in return for a marital alliance. He was to marry Basil’s sister, a reference to writing on birchwood bark, well known in later Kievan Rus’. The Byzantine missionary Constantine/Cyril was bilingual, in Greek and Slavic, it could only have been the latter tongue, whose writing system he was able to assimilate so quickly. Needless to say, there is much debate over the significance and indeed historicity of this passage. The existence of calendrical and other types of markings among the Eastern Slavs by the 2nd-4th centuries A.D. is posited by some Russian scholars (Riibakov).

The use of a “proto-Cyrillic” alphabet based on Greek, which was already employed in Danubian Bulgaria, was adopted by the Rus’ (Istrin). The oldest Cyrillic monument dates to 863 (from Preslav, Bulgaria). The earliest writings in Cyrillic in Rus’ are dated to the early 10th century. There is still some debate over whether Constantine/Cyril invented the “Glagolitic” alphabet, itself perhaps derived from a Greek or Cyrillic base, but quite different in appearance from “Cyrillic”, or the script that now bears his name.

**Bibliography:** 1. Primary sources (including translations).

**Writing systems**

Ibn Faḍlān speaks of wooden grave markers on which the Rus inscribed the name of the deceased and that of the Rus king. Similarly, al-Nadim writes that one of his informants “believes that they have writing inscribed in wood, and he showed me a piece of white wood with an inscription on it.” This may perhaps be a reference to writing on birchwood bark, well known in later Kievan Rus’. The Byzantine missionary Constantine (Cyril), before his famous mission to the Slavs of “Moravia” journeyed, ca. 860, to the Khazar empire. According to the *Vita Constantinii*, the Karasianese he found a Psalter and book of the Gospel written in the Rus’ or Rush script (roš'ki *frus'kimi, roughkimi* *pizməl pisanon*). He also encountered someone who spoke this language and found that he could understand him. Indeed, he quickly began to read and speak this tongue (Grivec et al.; Istrin). Since, Constantine/Cyril was bilingual, in Greek and Slavic, it could only have been the latter tongue, whose writing system he was able to assimilate so quickly.

Kalinina, Strednye era waist'kikh otrostkov i pokhodakh Rusi temennykh Svyatooslava ["The information of Ibn Hawkal on the campaigns of the Rus' of the time of Svyatooslava"], Drevnoest' i gosudarstva na teritorii SSR. Material i issledovaniya 1975 g. [Moscow 1976, 90-101; F. Kmitowicz, "The term ar-Rus'dniya in the work of Ibn Haradhib in, Folia Orientalia, xi (1969), 165-73; F. Kruze (Kruzie), O prorokah 967-867 [Kievan Rus'] in 2. al-Rusafa, the name of a quarter of the city of Baghdad [q.v.] founded soon after the caliph al-Manṣūr [q.v.] built his Round City. The caliph ribabiya, the name of several places in the Islamic world, from Cordova in the west to Nishapur in the east (see Yakhuti, Buldan, ed. Beirut, ii, 46-50). Amongst the Rusafa settlements of 7th c. were: 1. Rus'fat Abi 'l-Abbās (Abd Allāh al-Saffāh), begun by the first Abbāsid caliph in lower 1907 by the banks of the Euphrates, near al-Anbār [q.v.], and probably identical with that town al-Hāghimiyah.

Bibliography: Ya'kūbi, Buldan, 237, tr. Wiet, 9; Yakhūṭ, Buldūn, ii, 46. 2. al-Ruṣāfa, the name of a quarter of the city of Baghdad [q.v.] to the great military commanders (see al-Diṣr, Baghdād [q.v.], Buldan in. whose obvious function was not completed till 159/776, by which time al-Mansur began the construction of the Round City, for his son and heir al-Mahdi [q.v.]. When the latter returned from Rayy in northern Persia in Shawkāl 151/November 768 it combined a palace complex, with protective rampart and moat, and an army encampment with a review ground (maydan [q.v.]) and with various estates granted out as kniaz' to members of the Abbāsid family and to the great military commanders (see Ya'kūbi, Buldūn, 249, 251, tr. 31-2, 35-6). From this last function as a military centre, it was originally known as 'Askar al-Mahdi. Al-Ṭabarī (iii, 365-7, tr. H. Kennedy, Al-Manṣūr and al-Mahdi, Albany 1990, 56-9) plausibly explains that the caliph wished to separate his Arab supporting forces by the river which divided the two sides of Baghdād, so that if one section of the army rebelled, he could call upon the forces on the opposite bank.

The building of al-Ruṣāfa took seven years, and was not completed till 159/776, by which time al-Mahdi had (in 159/775) succeeded to the throne. The new quarter was connected to the western side of Baghdād by a bridge of boats, al-Anbār, whose obvious strategic importance was such that each end was guarded by a police post of the şūrta [q.v.]. Lassner has suggested that al-Manṣūr began the construction in al-Ruṣāfa of a palace complex of such splendour in order to buttress his son's right to succeed to the caliphate against his nephew 'Īsā b. Mūsā [q.v.], thereby asserting al-Mahdi's claims.

As caliph, al-Mahdi made al-Ruṣāfa his official residence for the remainder of his reign.
630

AL-RUSAFA

residence, but towards the end of his reign preferred
to spend much of his time at a new palace and
pleasure ground, that of clsab§dh, also on the eastern
side of the city but away from al-Rusafa. His successors Harun al-RasJild and al-Amln [q.vv.] chose,
however, to reside at al-Khuld on the western side;
and eventually, al-Muctasim [q.v.] moved his seat to
the new military centre of Samarra [q.v.] some 100
km/60 miles upstream from Baghdad.
The foundation of al-Rusafa was the starting-point
for the expansion of Baghdad into such suburbs as
Shammasiyya to its north-east and Mukharrim to its
south; in later times, the tombs of the cAbbasid
caliphs were located along the river bank above alRusafa.

the historical topography of Baghdad by al-Khatib
al-Baghdadi, 95 ff.).
(C.E. BOSWORTH)
3. In Syria.
This place, distinguished as RUSAFAT HISHAM,
RUSAFAT AL-§HAM, is now a ruinous site 30 km/19
miles to the south of the Euphrates in a depression
near the Djabal Bishri, on the ancient desert route
from Hims-Salamiya to al-Rakka or al-Rahba, containing the pilgrimage place of the "Arab" Saint
Sergius, martyred here in the early 4th century, after
which it was officially named Sergiupolis in Byzantine
times. Archaeological excavations have shown it to be
a Roman site, which in the 6th century was embellished with four churches inside the impressive rectangular city walls; among them, the basilica of the
Holy Cross, founded in 559 and housing the relics,
shows by inscriptions a continuous building tradition
until the 12th century. Also inside the city walls, three
large cisterns and an ingenious system of supply and
distribution of the spring rain water remained famous
throughout mediaeval sources. It seems to be referred
to in the K. al-^Uyun wa 'l-hadd^ik: "It had been a
Byzantine city of ancient foundation with cisterns and
a 'water way' (tank li 'l-md7) from the margins of the
desert" (in Fragmenta, 101). Outside the north gate a
church or praetorium (?) is connected to the Ghassanid
prince al-Mundhir b. al-Harith (569-82) by an inscription, and literary sources point to the presence of
the Crhassanids as well: al-Nucman b. al-Harith b. alAyham is mentioned as a governor there, and is said
to have repaired the cisterns destroyed by a Lakhmid
and to have constructed a large new one (Yakut, ii,
955, 784 (according to the Akhbdr muluk Ghassdri):
Hamza al-Isfahanl, Ta^rikh, Berlin 1340/1921-2, 79
(and quoted by Ibn al-cAd!m, Bughya, i, 114), as well
as Abu 'l-Fida°, Mukhtasar, Cairo 1325, i, 73, only
mention the restoration).
Al-AsmacI mentions, besides the B. Djafha of
Ghassan, the B. Hanlfa (of Bakr b. Wa'il, Ibn alKalbl-Caskel, ii, 156; Kahhala, KabdW, i, 312-13) as
inhabitants (quoted by al-Bakri, Mu^am, i, 441); it is
he who gives a further name of this, Rusafa al-Zawrd^
(compare Bakrl with Yakut, ii, 784, 955; Musil,
Palmyrena, 267; the "Byzantine" name for al-Rusafa,
K.tamfla, supposed by Ibn al-cAdim, i, 113, remains
lamiya, 35 mils from it?). Earlier, the city was within
the region of the Tanukh (al-Baladhuri, Futuh, 145; I.
Shahid, Byzantium and the Arabs in the fourth century,
Washington 1984, 405, 465), and—after them?—of
the Taghlib (al-Tabari, i, 2072; Rotter, Die Umayyaden
und der zweite Biirgerkrieg, Wiesbaden 1982, 131). This
may have led to the occasional attribution of al-

Rusafa to Diyar Mucjar (e.g. al-Tabari, iii, 2219). In
the cAbbasid period, it came under the control of the
B. Khafacjja b. cAmr, a branch of the (North Arabian)
c
Ukayl (al-AsmacI, in Yakut, ii, 284; Caskel, ii, 338;
Kahhala, Kabd^il, i, 351); al-Bakri alone connects this
Rusafa with a verse by al-Akhnas b. §hihab alTaghlibl on the extended animal-hunting of the
(South Arabian) B. Bahra0 (? sharafc"1 ldhibun, 56;
Yakut, ii, 782). Ibn al-cAdIm mentions some B. $alih
of Haghim here at the time of Harun al-Rashid
(Bughya, iii, 1467-8, vii, 3446).
Administratively, al-Rusafa belonged to Kinnasrln
or Aleppo in Umayyad and later cAbbasid times (Ibn
al-cAdim, i, 113-14), under Harun al-Rashid it was
added to the ^awdsim province (Ibn al-Fakih, 111), but
some transmitters were uncertain about its district
(Rusdfat al-Rakka, even al-Rusafa in the Djazira, Ibn alc
Ad!m, v, 2103 with correction; Ibn cAsakir, iv, 259;
Ibn Khurradacjhbih mentions it twice, apparently
with its closer neighbours, 74, and together with Balis
in the cawdsim, 75). From Zangid until Mamluk times
it seems to have mostly been known as a Christian
suburb or in the district of Kalcat Djacbar, which was
also called Kalonlkos/ Kallinikos—in this way a
remark by Barhebraeus, Chronography, ed. Budge,
120, tr. 2111, could be understood: "Hisham died in
Rusafa of Kallinikos" (cf. ibid. tr. 2218; Syriac Chronicle, ad a. 1234, i, 215), and it would fit the reading of
an Arabic inscription on the silver goblet from the
Rusafa treasury suggested by R. Degen, "This is
what Zayn al-Dar, daughter of ustddh Abu Durra,
bestowed to the church of the protected Kalcat
Djacba[r]," probably meaning al-Rusafa (before
1243, in Ulbert, Resafa, iii, 72; for Kalcat Djacbar as
a district (a^mdl), cf. Ibn al-Dawadari, vii, 283, year
624/1227).
Nothing is reported on the Islamic conquest of alRusafa, and the sources rather convey the impression
of its lying in ruins until the building activities of
Hisham (Ibn al-cAdIm, i, 113). But it is mentioned as
being on the march of the Kaysl Djahhaf b. Hakim
from the Djazira against the B. Taghlib with their
poet al-Akhfal and their "day" at Djabal Bishri in
73/692-3 (al-Baladhuri, Ansdb, v, 329; Aghani, Bulak,
xi, 59; Ibn al-cAdim, i, 431 ff.; Khizdnat al-adab,
Cairo, ix, 4); and also, before 724, a Bishop Abraham
of al-Rusafa is documented (Degen 70-1, quoting
Wright, Cat. of Syriac mss., ii, 796 ff.).
The main information on al-Rusafa in Muslim
sources pertains to the caliph Hisham (105-24/72443), whose residence it became at least in summer and
who was buried there. While these sources
unanimously locate the residence in or next to this alRusafa (e.g. Ibn FaoU Allah al-cUmari, Masdlik, Cairo
1342/1924, 332-3), some modern authors have
doubted this and identified it with the ruins of Kasr alHayr al-Sharkl [q.v.] (Sauvaget, Remarques sur les
monuments omeyyades, inJA [1939], 1-13). This theory
was finally rejected by O. Grabar (City in the desert,
1978, 1-2, 31). It is not very easy to recognise the
original tradition within the several additions
transmitted by the historians; the news of the death of
his predecessor and the regalia were brought to
Hisham at al-Zaytuna, where he possessed a small
dwelling (duwayra), and he then rode from al-Rusafa
to Damascus (al-Tabari, ii, 1467); perhaps because of
the unexplained leap, later sources locate either the
transmission of the news and the regalia to al-Rusafa
(al-^Uyun wa 'l-hadd^ik, 82; Abu 'l-Fida°, Mukhtasar,
Cairo 1325, i, 203) or from al-Zaytuna to al-Rusafa
(Yakut, ii, 784). While O. Grabar still thinks of an
identification of al-Zaytuna with Kasr al-Hayr al-


shark (City in the desert, 13-14), a hint by Ibn Bujlan (q. v.) possibly gives the clue to understanding the sequence of residences: Hishām was fleeing from the Mosques on the banks of the Euphrates to al-Rusafa (in Yākūt, ii, 789); this fits the surroundings of the straitened dimensions of his princely residence at Zaytūna, perhaps in the vicinity of his further possessions near al-Raṣṣa. Another often-embellished story mentions him avoiding the Syrian cities in favour of his residence in al-Rusafa, and erected two castles there (kasrayn, Al-Ruṣafa, vii, 1378; al-ʿUyayn wa ʿl-hadrāʾīk, 101; Ibn Butlan, ibid.). Whether their descriptions as possessing a pool and textile manufacturing (Yākūt, ii, 284-5; still in al-İdriṣi, ed. Rome, 549, Ibn al-ʿAdīm, i, 113-14, and Hāǧǧī ʿAbd Allāh b. al-Mughira al-Namūd, 594, without any contemporary observations). Apart from the cisterns and the walls the city is especially famous for its Christian monuments, which do not seem to correspond with reality, as already noticed by Musil (Palmreyna, 268; cf. the story connected to the visit of al-Mutawakkil in 244/858, Ibn al-Adīm, iii, 1436; al-Himyārī, Rawd (Beirut 1975), 253; Ibn al-ʿAdīm, i, 114, quoting the K. al-Deḥyarī to al-Shimḥaṭī; for the cīnah of the monastery, see L. Conrad, in The quest for understanding, ed. S. Seikaly et alii, Beirut 1991, 271-2). Only the Christian Ibn Butlan was interested in the great church, of which he describes the external gold mosaic in 440/1048-9 (cited in Yākūt, ii, 785). Judeo-Arabic inscriptions in the building, dated 1102 and 1127, prove the presence of a Jewish community there (A. Caquo, in Syria, xxxiii [1955], 70-4).

Ibn Shaddād gives an account of the end of habitation in al-Rusafa, added to a long quotation from Ibn al-ʿAdīm (ed. A.-M. Terrasse-Édédé, 394, tr. 21-2): the Mongols had spared the inhabitants on their march in 658/1260, and after the Mamlūk reconquest, a governor was left there until 668/1270, when the inhabitants left for Salamiyya, Hāmāt and other places, apparently because of the destruction, which is also archaeologically evident. Since then, the site has been deserted.

4. In Muslim Spain.

Munyat al-Rusafa, in Spanish Arriaza, Arruzafa, is the name of the country residence founded by ʿAbd al-Rahmān 1 (138-72/756-88 [q. v.]) to the north-west of Cordova and to which he gave the name of the Rusafa in Syria (see 3 above) founded by his grandfather Hishām b. ʿAbd al-Malik.

The first Umayyad amir of al-Andalus purchased lands which had belonged to a Berber chief of Tārīk's army, built a palace and gardens (ṣāfīr) and gardens. The Arabic sources class the Cordovan Rusafa amongst the three most important constructions of ʿAbd al-Rahmān I's reign (the other two being the Grand Mosque and the palace of Cordova). The amir enjoyed living there very much and spent most of his time there. In the course of his residence at al-Rusafa, he ordered the execution of three rebels: his nephew al-Mughirī b. al-Walid, Wahb Allāh b.
Maymūn and Abūyūh b. Sulaymān al-ʿArābī. Their corpses were dragged as far as Cordova and gibbeted on the banks of the Guadalquivir. In his reign, it became, in some measure, the seat of power, since at the time of his death, his son Ḥāshim, who happened to be at Mērida, hastened to arrive there before his brother Sulaymān (who was at Toledo and who was disputing with him the right of succession).

Moreover, Abū al-Raḥmān I made the gardens at al-Rūṣafā the first botanical gardens in the history of al-Andalus. He had planted in his grounds exotic plants, mainly brought from Syria, to which he sent envoys to contact his sisters. The most famous of these fruits imported from the East was the so-called safaṭī pomegranate, whose name is connected with Saḥīf b. Kaydād al-Ifrānī in 335/946. Al-Nāṣir’s son and the North African chief Ayyūb b. ʿAbd al-Ḥādī al-Mukhlīd during his reign, al-Rūṣafā is mentioned as a residence of the counts of Hornachuelos. Later, a monastery was established on the site.

The Rūṣafā of Cordova early became a favoured subject of the court poets. Some very famous verses on its solitary palm tree are attributed to the founder, Abū al-Raḥmān I (according to other version, its author is said to have been Abū al-Malāk b. Bishr b. Abū al-Malāk b. Marwān). A poem of ʿAbbās b. Fīrānā on al-Rūṣafā, reproduced by Ibn Ḥayyān [q.v.], describes at length its buildings, streams, plants, birds, etc. After its destruction, Rūṣafā became, like Cordova, a poetic subject for the expression of nostalgia for departed splendours (texts of Ibn Ẓaydūn and Ibn Burd, given by Ibn Bassām, Ibn Khākān and al-Makkāri; this same Ibn Ẓaydūn mentions the existence of a garden of marguerites, raṣāl al-ṣukhwān). In Almodāh times, poets still gathered before the site of al-Rūṣafā in order to drink and to recite poetry. The poem of al-Ḵāsim b. ʿAbbād al-Raḥmān moves the title of ʿubi ʿsunt.

The second al-Rūṣafā in al-Andalus was situated at Valencia, between the town and the sea (the place-name is still preserved under the form Ruzafá, a quarter of the modern town). There is no information on the foundation of this Valencian Rūṣafā. E. Lévi-Provençal was the first to suggest the name of the Umayyad prince ʿAbd Allāh al-Balansi, son of Abū al-Raḥmān I, as its possible founder, at the same time warning of the lack of documentary evidence. This hypothesis has nevertheless been commonly accepted by Spanish and Arab scholars. The Arabic sources stress above all the beauty of the grounds of al-Rūṣafā, considered as the most attractive pleasure-ground in the vicinity of Valencia (together with the nurra of Ibn Abī ʿĀmīr). The poet Muḥammad b. Ḥālib al-Raḥmānī (d. 572/1177) was originally from there and devoted some poems to it. In 480/1087, Castilian troops commanded by Alvar Fáñez, giving aid to the prince al-Kādir, installed themselves at al-Rūṣafā. It was likewise there that king James I of Aragon encamped with his army, besieged the town and conquered it in 636/1238. Like its Cordovan homonym, this Rūṣafā became a literary subject in the poetical or rhymed prose texts written on the occasion of the loss of Valencia (texts of Ibn al-Abbār and Ibn ʿAmīr preserved under the names ʿAlī al-Samārī and al-Makkāri).

Between the residential palace complex and the city of Cordova there developed a suburb (rabāt), equally attractive, with no real basis in truth, by some Arabic authors to a palm tree at al-Rūṣafā. Abū al-Raḥmān I’s successors continued the tradition of periods of residence at al-Rūṣafā. It was probably in the reign of Abū al-Raḥmān II (206-38/822-52 [q.v.]) that the poet ʿAbbās b. Fīrānā tried, at al-Rūṣafā, to imitate the flight of birds, dressed in a garment of silk covered with feathers and bearing wings. But above all, it was the amīr Muḥammad (238-73/852-86), known for his zeal as a builder, who enlarged and improved the buildings and the gardens of this residence, where he loved to take rest and where he organised hunting parties. The amīr transferred from Cordova to al-Rūṣafā accompanied, whilst he was still young, his grandfather Abī al-ʿĀzīz with the construction of a new madjālis at the Umayyad court. He charged his wāzir Ḥāshim b. al-Raḥmānī with the construction of a new madjālis at the Umayyad court. He charged his wāzir Ḥāshim b. Abī ʿAlī b. Marwān. The poet ʿAbbās b. Fīrānā on al-Rūṣafā, reproduced by Ibn Ḥayyān [q.v.], describes at length its buildings, streams, plants, birds, etc. After its destruction, Rūṣafā became, like Cordova, a poetic subject for the expression of nostalgia for departed splendours (texts of Ibn Ẓaydūn and Ibn Burd, given by Ibn Bassām, Ibn Khākān and al-Makkāri; this same Ibn Ẓaydūn mentions the existence of a garden of marguerites, raṣāl al-ṣukhwān). In Almodāh times, poets still gathered before the site of al-Rūṣafā in order to drink and to recite poetry. The poem of al-Ḵāsim b. ʿAbbād al-Raḥmān moves the title of ʿubi ʿsunt.

The second al-Rūṣafā in al-Andalus was situated at Valencia, between the town and the sea (the place-name is still preserved under the form Ruzafá, a quarter of the modern town). There is no information on the foundation of this Valencian Rūṣafā. E. Lévi-Provençal was the first to suggest the name of the Umayyad prince ʿAbd Allāh al-Balansi, son of Abū al-Raḥmān I, as its possible founder, at the same time warning of the lack of documentary evidence. This hypothesis has nevertheless been commonly accepted by Spanish and Arab scholars. The Arabic sources stress above all the beauty of the grounds of al-Rūṣafā, considered as the most attractive pleasure-ground in the vicinity of Valencia (together with the nurra of Ibn Abī ʿĀmīr). The poet Muḥammad b. Ḥālib al-Raḥmānī (d. 572/1177) was originally from there and devoted some poems to it. It was likewise there that king James I of Aragon encamped with his army, besieged the town and conquered it in 636/1238. Like its Cordovan homonym, this Rūṣafā became a literary subject in the poetical or rhymed prose texts written on the occasion of the loss of Valencia (texts of Ibn al-Abbār and Ibn ʿAmīr preserved under the names ʿAlī al-Samārī and al-Makkāri).

This text seems to be a historical document discussing various topics such as literature, poetry, and history. It includes references to specific dates, places, and authors, indicating a historical context. The text appears to be discussing the historical and cultural significance of various regions, possibly in Arabic-speaking areas. It mentions the city of Ruse in Bulgaria, its history, and its role during different periods. The text also discusses the influence of Islamic and Arabic culture on the region, including the presence of mosques and the role of Islamic scholars. It seems to be an academic or historical record, possibly used for research or education purposes. The text is written in a formal style, typical of scholarly works, and includes detailed references to other works and publications. The overall tone is informative and descriptive, providing insights into the historical context and cultural traditions of the region.
in 1640 found in Ruse 3,000 Turkish houses with 15,000 inhabitants and 10 mosques of stone (fate de piatra bianca), and 200 Armenian houses with over 1,000 inhabitants and a citadel with five towers (cf. Eug. Fermendžin, Acta Bulgarica ecclesiastica — vol. xviii of the Monumenta sanctitatis et meridianalitatis, Zagreb 1887, 74). In 1659 Filip Stanislawow counted 6,000 Turkish wooden houses with 20 mosques (ibid., 263; cf. also 7, 10, 26, 31, 88, 137, 299 [Russi o Ruščik: 1655], 300 with further particulars). Ewliyā Celebi (Şeyhâ-
name, v. i, 313-14; cf. the Bulgarian tr. by D. G. Gadjanova, in Periodiško spisanje na bbugarskoto knizevno družestvo v Sofija, lxx, Plovdiv 1909, 654-5) about the same time mentions 2,200 houses of wood, also three Christian quarters, the mosque of Rusehma Paša, baths and three caravanserais in "Urucšuk". The only Jews, he says, were those who visited the place on their trading journeys. The people, whom he praises for their hospitality, lived by commerce and spoke Bulgarian as well as the "language of Wallachia and Moldavia". Ewliyā Celebi says the melon (kawun) there was particularly good, 10 being sold for 1 pen(e)x (5 of which = 1 Vienna groschen or 3 kreuzers, 150 = 1 taler).

Ruščuk is regularly mentioned in the many records of travel on the Danube in the following centuries. References to the town in the 18th and first half of the 19th century are in general agreement. The inhabitants seem at all times to have conducted a busy trade in wool, cotton, silk, leather and tobacco, which was partly undefended. Turks, Greeks, Bulgars and Armenians in some 7,000 houses and conducted a busy trade with Turkey (cf. R. Walsh, Narrative of a journey from Constantinople to England, London 1828, 207). Helmhout von Moltke who visited Ruščuk in 1835 and described it (cf. Briefe über Zustände und Begebenheiten in der Türkei, Berlin 1877, 11 ff., 132 ff., 424 ff.), was surprised that "this important Turkish fortress with its long, dominated and enfiladed lines without outer works, half armed and defectively planned" could offer the enemy such resistance. As an important fortress, Ruščuk was a military prize in the Russo-Turkish wars. Besieged in 1773, it was the site of a great battle on 4 July 1811. The fortunes of war favoured the Turks, led by the Grand Vizier Ahmed Paša, after which the Russians, commanded by Kutusov, constructed fortifications and fell back on the "language of Wallachia and Moldavia". Ruščuk was the birthplace of the Grand Vizier Celebi-zâde Sherif Hasan Paša (d. 1205/1791), of the kaššâ Amâni Celebi (d. 1000/1591) according to von Hammer, G.O.R., iii, 83, and of the famous Ottoman author Ahmed Sherif Hasan Midhat Bey (1841-1912, cf. F. Babinger, G.O.R., 389-90), not forgetting the novel of Sephardic Jewish origin and writer in German, Elias Canetti, the Nobel Prize-winner for literature in 1981.

The post-Ottoman history of Ruščuk, which became officially Ruse, begins in 1878. The Westernisation begun by Midhat Paša increased in momentum under Bulgarian rule. In accordance with the Treaty of Berlin, the fortifications were partly demolished, an urban plan transformed the main Muslim cemetery into a public garden, and numerous mosques disappeared (Kanitz numbered them at 29 in 1874; there were no more than seven in 1936). The eclectic architectural style of Central Europe triumphed. The Muslim population, despite being socially reduced in status and weakened by the exodus of its elites, nevertheless managed to maintain a certain cultural life. Thus eight journals in Turkish appeared up to 1910, essentially on account of the activity of Ahmed Zeki. Turkish education remained active, with two secondary schools in 1921-2; from 1932 to 1957 there functioned in Ruščuk the sole Turkish lyceé for girls in Bulgaria. After the 1960s, the policy of national assimilation pursued under the régime of Todor Zîkov gradually stifled all signs of a specifically cultural and religious life. The town's population, which had risen from 26,000 in 1880 to 49,500 in 1934, grew rapidly with industrialisation, actively promoted by the Communist régime. The former centre of the Turkish community of the region managed to maintain a massive influx of rural Bulgarians. In 1985 the town had 195,000 inhabitants; nevertheless, the villages of the administrative district of Ruščuk have a 25% Turkish population.

AL-RUSHATI, ABU MUHAMMAD CABD ALLAH B.
c
ALi b. cAbd Allah b. c All'b. Khalaf b. Ahmad b.
c
Umar al-Lakhmi al-Marl al-AndalusI, traditionist
and historian of Muslim Spain.
He was born in 466/1074 at Orihuela (Murcia). His
nisba al-Rushati is of Romance origin and refers to a
physical characteristic. One of his ancestors had on his
body a mole (shama) of the type known as "rose" (warda) called by the Christians "rusha"; the Romancespeaking servant (khddim '•adjamiyya) who cared for
him as a child called him "Rushatelo", from which
the nisba of the family derived. When he was six years
old, al-Rushati's family moved to Almeria, where he
completed his studies and where later he taught.
Having witnessed the conquest of the town by the
Almoravids in 484/1091, he himself died a martyr
when the Christians conquered Almeria in 542/1147.
His teachers were the two most famous traditionists of
the time, Abu CAH al-Ghassam (d. 498/1104) and Abu
C
A1I al-$adafi (d. 514/1120), the roi**n°Abu '1-Hasan
Ibn AkhT '1-Dush and his maternal uncle Abu '1Kasim Ibn Fathun (d. 505/1111), author of a K. alWathd^ik. Al-Rushati also obtained the idjaza from
Abu cAbd Allah al-Khawlanl (d. 508-1114), author of
a fahrasa, and from his famous contemporary Abu
Bakr b. al-cArabI (d. 543/1148 [q.v.]). Like many
other scholars of his time, al-Rushati did not perform
the rihlafi talab al-^ilm abroad. His most famous work
is the Iktibds al-anwdr wa-iltimds al-azhdr ft ansablasma?
al-sahdba wa-ruwdt al-dthdr, a book praised by Ibn
Kathlr and one similar in methodology (uslub) to the
genealogical work by al-SamcanI (d. 562/1167 [tf.y.]).
The only extant edition of this most important
genealogical tract is the partial text by E. Molina

635

Lopez and J. Bosch-Vila, restricted to the entries
related to al-Andalus. According to H. al-Djasir,
c
Abd al-Rahman al-cUthaymm is preparing a complete edition of the preserved text. The Iktibas contained five parts, of which only parts one, three and five
have reached us (the mss. are found in Tunis and
Karawiyyln; their description can be found in
Molina-Bosch Vila's and al-Djasir's works). Part of
the missing contents can be restored by means of the
preserved abridgements (a list in Molina, 541-3, and
al-Djasir, 623-38) written by later authors, among
them, Ibn al-Kharrat al-Ishbfli (d. 581/1180) and
Madjd al-Din Ismacil b. Ibrahim al-BilblsI (d.
802/1399), in whose talkhis he added what Ibn al-Athir
had added to the Ansdb of al-Samcani. The parts of Ibn
al-Kharrat's Ikhtisdr dealing with al-Andalus have
been incorporated by Molina-Bosch Vila into their
partial edition of al-Rushati; they have also used material from al-Bilbisi's abridgement.
Al-Rushati's other works are the Kitdb al-IHdm bimdfi Kitdb al-Mukhtalif wa 'l-mu ^talif li 3l-Ddrakutni min
al-awhdm and a refutation of the famous mufassir cAbd
al-Hakk b. c Atiyya (d. 541-2/1146-7), who had
criticised certain passages of his own genealogical
work. Although he is remembered as an expert in ansdb and cilm al-riajal, al-Rushatl also studied grammar,
adab, fikh and hadith. In the last field, he transmitted
the K. ^Ulum al-hadith by al-Hakim al-Nlsaburl [q.v.].
Among his numerous pupils, we find especially traditionists (some with an interest in Cz7m al-ridjal and
history) like Abu Bakr b. Abl Djamra (d. 599/1202),
Abu 'l-Walld b. al-Dabbagh (d. 546/1151), Ibn
Bashkuwal (d. 578/1182 [q.v.]), Ibn Kurkul (d.
569/1173), Ibn Hubaysh (d. 584/1188 [q.v.]), two
authors offahdris, Abu Muhammad b. c Ubayd Allah
(d. 591/1195) and Ibn Khayr (d. 575/1179 [q.v.]), as
well as the grammarian Ibn MadaD [<?.y.].

RUSTAK, Arabised form of M. Pers. rustāk, meaning "rural district, countryside", and given the broken pl. rustāk.

(1) In the mediaeval Islamic usage of the Arabic and Persian geographers and of the Arabic writers on finance and taxation, rustāk is used both as a specific administrative term and in a more general sense. Thus, reflecting the more exact usage, in Sāsānīd and early Islamic šrāk, each šāra [q.v.] or province was divided into tassāqūs or sub-provinces, and these last in turn divided into rustāks, districts or cantons, last centred on a madina or town. According to Hīlāl al-Sābī, K. al-Wuzārād, a tassāqūt might contain up to twelve rustāks, and a rustāk might contain up to twelve villages (cited in F. Lokkegaard, "Islamic taxisation in the classic period", Copenhagen 1950, 164-7).

Al-Mukaddasī's usage, however, is less neat and formal. Thus the rustāk which he gives for the šīlīm [q.v.] of Syria are extensive rural districts, such as the six ones of Damascus province (šīrā: al-šuţiya, the Hawrān, al-Bājaniyā, al-Djāwlān, al-Bikād and al-Ḫula (text, 154, Fr. tr. A. Miquel, Ahsan al-şaqūṣin ... (La meilleure répartition ...), Damascus 1963, 160, cf. also 23 and 51), thus, the šīlīm speaks of rustāks as administrative subdivisions, but in a vaguer sense (see tr. Minorsky, index at 324).

(2) In wider literary usage, the rustāk/rustā or countryside may be contrasted with the urban centres, and its populations regarded as country bumpkins compared with the more sophisticated town-dwellers, so that in Persian, rustāb "having a rustic nature" was a contemptuous expression. Thus the šīlīm in this case, the small country town of Mayhana [q.v.] in northern Khūrāsān; cf. C.E. Bosworth, The Ghaznavids, 152.

(C.E. Bosworth)

AL-RUSTAK, the name of a town and area in "Umān [q.v.] which finds no place in the classical Arabic geography. The town is situated about 112 km/70 miles west, as the crow flies, of the chief town of the Sultanate, Muscat [see MAŠKĀT], on the northern side of the range of al-Djābal al-Aḫdar. The district, according to Lorimer (Gazetteer of the Persian Gulf, Calcutta 1908, IIB, 1603-4), is the region of western Ḥadjar from al-Humz with all the villages thereof.

The word itself is universally defined as Arabised Persian (see the previous article) meaning "village", "market-town", "encampment of tents or huts", "rural area". The Arabic lexica invariably gloss it with the word sawūdī "rural district", "environs of town" (Fīrūzābādī, al-Kāmīs al-muḫātī, L4). The town was the centre of the province during the pre-Islamic Sāsānīd period, with Šuḫār [q.v.] as the port. The massive fort which can still be seen, and was known even in the 20th century as Kalʿat Ibn Šahrān (i.e. Anūshirvān), had, one assumes, a pre-Islamic predecessor, though the present building dates in all probability from the times of the Yāʿarība (11th-12th/17th-18th centuries). The early and late Yāʿarība imāms, as well as the Āl Bū Saʿīd imāms [q.v.] (also 12th/18th century), regarded al-Rustāk as their capital.

The district today comprises 150 villages, including al-Humz, and has an estimated population of 7,500.

It is the centre of the Oman date industry and also produces limes, grapes, quinces and mangoes. Al-Rustāk has its own research apiary and is a centre for the production of honey in the Sultanate. The exports later attributed to Rustam would be the result of a blend of the legends of Kārsāsāp with historical memories of Gondophares, the ruler of the Indo-Parthian empire in the first century A.D. It is now generally accepted, however, that in the Avestan tradition Zal and Rustam did not yet belong to the cyle of legends about the Kayanid kings. Some scholars (in particular Nōdeke) assumed that they had their origin in the legends of the original populations of Drangiana and Arachosia; others assigned them to the traditions of the Sakas people who came to the same lands (later known as Sīstān and Zābulistān) in the late 2nd century B.C. (cf. Camb. hist. of Iran, iii, 454-6).

The oldest form of the name known is the Middle Iranian Rōštadah (in Pahlavi writing, laštām), from which the Soghdian rotṣmy was derived. It is likely that tales about Rustam were given a place already in the Khvādīyā-nāmag, the synthesis of various legendary cycles compiled in the late Sāsānīd period. This lost source is reflected in the works of Muslim historians and writers of adab works, who already mention a few stories about Rustam, in particular his guardianship of Siyāḵwakh, his combat with Ḫisāndīyār and his death. These stories are, however, far less elaborate than they are in the Şāh-nāma. Relatively close to the Persian rotṣmy is the pre-Islamic name of some epic content. Rustam's father Zal, who especially in the Arabic sources is also called Daštān, married Rūdāba (Rūdāsawdād according to al-Thaʿalībī [q.v.], written in the early 9th/11th century, but also in this source many of the best known adventures are missing. Indications of Rustam's popularity in early Islamic times are the occurrence of his name in the 1st/7th century, both as that of a Sāsānīd general and of Christian monks in Mesopotamia (cf. Nōdeke, 11). Fragments of his legends are to be found in the work of the Armenian Moses of Khōrēn (7th or 8th century A.D.) and in a Soghdian manuscript found at Turfan which relates Rustam's fights with the demon (see Camb. hist. of Iran, iii, 457, 1229, with further references).

Only Firdawī's Şāh-nāma contains a continuous story of the hero. His ancestors were local rulers of Sīstān and Zābulistān, who were vassals to the kings of Iran. Among them Gārgāsh and Narīmān are mentioned, but only his grandfather Sām is a figure of some epic content. Rustam's father Zal, who especially in the Arabic sources is also called Daštān, married Rūdāba (Rūdāsawdād according to al-Thaʿalībī), the daughter of the king of Kābul who was descended from the "dragon-king" Daḏhāk. This indicates a demonic streak in Rustam. His body, commonly compared to that of an elephant, was already at the time of his birth so enormous that he could only be delivered with the help of the miraculous bird.
Simurgh. When he grew up, he besought God to reduce his weight so that he could walk without sinking into the ground. In Arabic, a common epithet to his name is al-ghadib, in Persian he is called tahamtan, "the one with the mighty body". Rustam's steed Rakhsh is as formidable among horses as his master among humans. In Arabic, a common epithet to his name is tahamtan, "the one with the mighty body". Rustam's steed Rakhsh is as formidable among horses as his master among humans.

His earliest deeds are the killing of a white elephant escaped from his father's stables, and the conquest of Shdh-ndma, his grandfather Nariman. The philological evidence points out that these two narratives were later added to Firdawsi's text (cf. Shh-nama, i, 273-81). With the assignment to bring Kay Kubd down from the Alburz mountains, in order to become the king of Iran, begins his service to the Kayanid dynasty. He rescues Kay Kawûs from the hands of the White Demon in Mazandaran and, another time, from his captivity with the Hamawaran of Yaman. Conspicuous is his role in the wars with the arch-enemy Afrasyâb (Frâyîyî in Arabic sources) of Tûrnân. Major tales in the Shh-nama with Rustam as a prominent character are the revenge for prince Siyâwakhsh (or Siyâwush), his fight with the demon Akmân, the story of Bihân and Manîhûz and the duel with his son Suhûrûsh. The Herculean Seven Deeds (kht bhrdn) of Rustam were in all likelihood copied from similar deeds ascribed to Faramurz.

The final episodes tell about a tragic controversy with the last Kayanid kings. According to the version of al-Dinawari, the cause of this conflict was Rustam's refusal to accept the new religion, which king Gustâshp (Avestan Vistaspâ; in Arabic, Bishâbûs or Bîshtrîsûf, the protector of Zarathustra, had embraced. Other sources only mention Rustam's refusal to fulfill the duties of a vassal. Gustâshp sends his son Isfandiyâr (Avestan Spanô-dâta; called Isfandiyâhad by al-Dinawari) to capture the disobedient Rustam, who kills the prince in a man-to-man fight. Finally, the hero himself falls victim to the treachery of his own brother Shâghâd, who lures him into a trap during a hunting-party. In a last effort before he dies, Rustam manages to kill his murderer by a miraculous shot from his bow. Isfandiyâr's son Bahman takes revenge for Rustam's family and has his son Farâmûrzs executed.

Heroes modelled on Rustam appear many times over in Persian epics written after Firdawsi. The characters in those works often bear the names of his ancestors or descendants. In lyrical poetry, comparisons drawn with Rustam are particularly frequent in the panegyrics of Farrûghî (q. v.), who himself came from Sistân and was a near contemporary of Firdawsi. He was also used as an exemplum by mystical poets, notably by Sanâ'î and Djâlâl al-Dîn Rûmî (q. v.), especially in the latter's Dîwân-i Khâtîb.

2. In Islamic art.

The earliest representation of Rustam in Islamic art is probably that in the Edinburgh University Library manuscript of Rashîd al-Dîn's Dâmî al-tawârîsh (1306; ms. Arab 20, fol. 6b). He is there represented seated before King Mikû'ârî, wearing a headcloth and tiger-skin morocco shoes, and grasping a mace; he is bearded and has long horizontal moustaches. In the celebrated Demotte Shh-nâmâ (ca. 1330), Rustam wears Mongol dress or armour, but in the 14th century manuscripts of the epic produced at Shïrâz under the Indjû'îd and Mu'azzâfardr rulers he is once more distinguished by a tiger-skin surcoat, and this convention, once established, persisted throughout Persian painting.

The next stage was the addition of a leopard's head or mask fixed over his helmet, and this originated under the patronage of Iskandar Sultan, its earliest appearances being in the British Library Miscellany of 1410-11 (Add. 27251, fol. 298b) and a fragment dated to 1413 in the Topkapi Sarayi Library (B. 411, fol. 161b). It seems not unlikely that this very effective addition to the hero's panoply was due to the initiative of the young prince himself; it could easily have seemed or been told of, classical or Hellenistic portrayals of Heracles in the skin of the Nemean lion with its mask on his head. It took a little time for this complete panoply to be universally established. In Bâysungur's Shh-nâmâ of 1430, Rustam always wears an ordinary helmet with his tiger-skin surcoat, but in the copy made a year or two later at Shïrâz for his brother Ibrahim Sultan (Bodleian Library; Ouseley Add. 176) the leopard's head appears in several miniatures. In the Royal Asiatic Society Shh-nâmâ of Muhammad Djûkî (ms. 239, Herat, ca. 1440) it appears in only one miniature (fol. 145b). Shh-nâmâ manuscripts produced under Turkman patronage in the middle years of the 15th century also present the hero sometimes with, and sometimes without, the leopard's mask on his helmet. But in the numerous copies of the epic illustrated in the Commercial Turkman style, and in Rustam manuscripts produced under Shïrâz during the last quarter of the century, the leopard's mask is invariable.

Thus by the beginning of the Shâfawid dynasty, Rustam's full panoply is well established, and to this period (ca. 1505) belongs the most splendid portrayal of Rustam in the whole of Persian painting: "Rustam lassoing the King of Shäh" in the Kunstgewerbemuseum, Leipzig, in which the leopard's head helmet is topped by a magnificent seven-fold plume, and the hero's moustache and beard are red. This miniature is probably the work of Sultan Muhammad in his young days. Later in the Shâfawid period, attempts were made to represent Rustam as an old man in the latter stages of his career, but at the same time painters sometimes failed to show him as a child in his earliest exploits; thus, in depicting his killing the mad elephant, artists sometimes show him in full panoply with moustache and beard.

In the 17th century, the languid and slightly decadent style of Ridâ 'Abbâsî (q. v.) was ill-suited to epic illustration, and Rustam sometimes presents an awkward and distinctly unheroic figure. His late appearances under the Kâdjârs show him with the wasp waist and luxuriant black beard of Path 'Ali Shh (q. v.). But the traditional panoply survives to the end.

Bibliography: B. W. Robinson, Persian painting
and the national epic, London 1983, and references there given. (B.W. Robinson)

RUSTAM B. FARRUKH HURMUZD (thus in al-Tabi'arī, al-Mas'ūdī, b. Farrukh, Persian general and commander of the Sā'ānid army at the battle of al-Kādisiyya [q.v.] fought against the Arabs in Muharram 15/February-March 536 or Muharram 16/February 637, the battle in which he was killed.

His father is described as the ispabadh [q.v.] of Kurhārān, for which province Rustam was deputy. In the lengthy account by al-Tabi'arī of the battle of al-Kādisiyya, derived mainly from Sayf al-Dīn al-Umar, there is much folkloric material, doubtless derived from materials used by the kusdās [q.v.s], in which the Persian Emperor Yazdagird III and Rustam try to dissuade the Muslims from battle by a use of verbal parables and a show of superior splendour and luxury; but these are of no avail, and Rustam leads his forces into battle and is killed by Hilāl b. Ullafa al-Taymi (See F.M. Donner, *The early Islamic conquests*, Princeton 1981, 397, for the various traditions concerning this episode).

---

**RUSTAMIDS** or RUSTUMIDS, an Ibdāi dynasty, of Persian origin, which reigned from Tāḥart (in what is now Algeria) 161-296/778-909.

The birth of the Ibdāi principality of Tāḥart is bound up with the great Berber rising begun by Maysara (called, as a tribute from his enemies, al-Hakir "The Vile") in 122/740. As a result of this rising, the greater part of the Maghrib fell away definitively from the control of the caliphate in the East, with the exception of the principality of Kāraywān (Kairouan), which only achieved virtual independence with the coming of the Aghlabids in 234/848-9, "broke up the circles of innovators (ahl al-bida") (M. Talbi, *Biographies Aghlabides ..., Tunis 1968, 104), and for-bade them to spread their "deviations" (zayghahum). In 135/752, like others, he took the high road towards the East (riḥla) in order to complete his education at Baṣra, at that time the spiritual centre of Ibdāism, at the feet of Abū 'Ubayda Muslim b. Abī Kairma, the greatest and most learned of his age, who gave him instruction in which political theology necessarily played a large role, conformable to the general principles of Ibdāism which had itself arisen from of a succes-sion to power crisis. Five years later, in 140/757, together with Abū 'l-Khaṭṭāb, he was one of five mis-sionaries, the ḫamalat al-'ilm (lit. "bearers of knowledge"), who set out for the Maghrib in order to pass on to the phase of the Khāridjī, i.e. open insurrec-tion, with the aim of installing a just Islamic regime con-formable to the Ibdāi ideas of an elective and equilibrarian theocracy, considering that all the previous existing authorities had more or less betrayed true Islam since the time of the arbitration (sakāīm) at Sīffin (37/657) (see IBADIYYA).

The conjunction of affairs was at that moment especially favourable. Khāridjīte propaganda had been introduced into the Maghrib some decades previously, and it found there its most fertile ground. The Sufīs were the first to enter the lists and, thanks to some resounding victories, had founded three prin-cipalities: at Sidjīlimās, at Tlemcen and in the region of Salē on the Atlantic shores. The Ibdāīs had the am-bition of assuming for themselves power over the eastern Maghrib, and nearly succeeded.

However, Baghdād was not yet disposed freely to relinquish its position of first-rate competence, Yazīd b. Hātim al-Muhallabī, and then decided to found their own principality in the Tāḥart region where 'Abd al-Raḥmān b. Rustam had already found refuge. There, in 151/768 he besieged, without success, the chief town of the Zāb, Tubnā, the ancient fortress of Tubunda, which had become an advance bastion protecting Ifīrīya.

The Ibdāiyya in the end had to renounce the cap-ture of Kāraywān, firmly held by a governor of first-rate competence, Yazīd b. Hātim al-Muhallabī, and then decided to found their own principality in the Tāḥart region where 'Abd al-Raḥmān b. Rustam had already found refuge. There, in 151/768, "on a slope which dominated, from a height of a thousand metres, the steppes and their pasture-grounds" (Ch.-A. Julien, *Histoire de l'Afrique du Nord*, ii, 34), and in a place where there was abundant water, they con-structed their capital, New Tāḥart or Tṛḥart (9 km/6 miles to the west of present-day Tīhert, founded in 1663, the administrative centre of a wilāya or province in modern Algeria), around which was built a protec-tive wall with four gates. The Ibdāīs had the advantage at the same time for sedentaries and nomads alike, and constituted a natural fortress.

After his return from Baṣra, 'Abd al-Raḥmān b. Rustam had already been in charge of various respon-sibilities, whence the uncertainty of the sources regarding the date of his investiture as Imām. This probably did not take place officially till after the foun-dation of Tāḥart, sc. in 162/779. Ibn Rustam evidently-ly combined in himself the conditions of knowledge and piety required by the Ibdāiyya for the election of their Imām. But the main reason which tipped the balance in his favour was that, if disputes should arise, he had "no tribe to bring him aid, and no clan to sup-port him" (Ibn al-Saghir, *Akbār ..., in CT*, nos. 91-2 [1975], 321-2).

Externally, Ibn Rustam practised a pacific policy with regard to his neighbours, the 'Ašābādī governors of Kāraywān, the 'Aalīthīs ('Abd Idrīsīs in Fis or Fez and the Sufī Midrāmīs in Sidjīlimās. Internally, he devoted his efforts to strengthening his power and to furthering the economic prosperity of his principality, thanks, in particular, to financial support from the Ibdāiyya of the East, to the impulse given to trans-Saharan trade, and to agricultural and urban develop-ment. Tāḥart speedily became a rich and...
cosmopolitan metropolis, and the Sunnī Ibn al-$aghlr observed a host of people there, people stemming from Baṣra, Kūfa, Kayrawān and other places, all attracted by the justice and order which prevailed there.

Before his death, which probably took place in 171/788, ʿAbd al-Rahmān b. Rustam appointed a council to choose a new Imām. The choice fell on his son ʿAbd al-Wahhāb. Till the end of the kingdom of Tāḥart, the succeeding Imāms all came from his line, but with a chronology more or less uncertain and with many troubles which often took on the character and form of schisms. In a theocracy guided by religious leaders no less pious than himself, in a theocracy which was in principle equalitarian, austere and puritanical—ʿAbd al-Rahmān is depicted as perched on the roof of his modest house, finishing off its construction with the help of a slave—such an evolution was inevitable. In Tāḥart, wrote Julien, c. cit., ii, 37, "people lived in a permanent state of religious exaltation". The following is the most likely succession of the Imāms, theoretically elected but in fact succeeding by virtue of the dynastic succession rule against a background of schisms and political crises:

\[\text{Abd al-Rahmān b. Rustam, 161-71/788-88} \]
\[\text{Abd al-Wahhāb b. ʿAbd al-Rahmān, 171-208/788-824} \]
\[\text{Abū Bakr b. Aflāḥ, 258-60/872-74} \]
\[\text{Abū ʿIyākūn Muhāmmad b. Aflāḥ, 260-81/874-94} \]
\[\text{Abū Ḥātim Yūsuf b. Muhāmmad, first reign 281-2/894-5} \]
\[\text{Yaʿṣūb b. Aflāḥ, first reign 282-6/895-9} \]
\[\text{Abū Ḥātim Yūsuf b. Muhāmmad, second reign 286-94/899-907} \]
\[\text{Yaʿṣūb b. Aflāḥ, second reign} \]
\[\text{Yaʿyān b. ʿIyākūn, 294-407/909-7} \]

The first schism (jītrīd) broke out as soon as ʿAbd al-Wahhāb came to power, with his election contested by a splinter group of the Ḳabāʾiyya. It took shape as the Nukkārīyā [see also Ṣukkārīā], who had their hour of glory under the command of Abū Yazīd [q. v.], the "Man on the Donkey", who almost succeeded in putting an end to the Fāṭimid caliphate of Mahdiyya. Towards 195/811, a conflict broke out between the Ḳabāʾiyya of Tāḥart and their Zānātā Berber neighbours, who professed Muʿtazilism in its Wāṣili form. It is related that the controversy preceded the open conflict which was finally resolved in favour of Tāḥart, thanks in particular to intellectual and military support from the Nafūsa [q. v.]. Berbers of southern Tripolitania.

The second schism which broke out amongst the Ḳabāʾiyya was that of the "Hafṣaliyya, from the name of Ḵalāf b. al-Samb, a grandson of the Imām Abū ʿIyākūn, who succeeded his father as governor of the Ḳabāʾiyya, to the south of Tripoli but without the agreement of the Imām ʿAbd al-Wahhāb, who rightly feared that a new dynasty would become inextricably enmeshed in the internal affairs of the dynasty, who was thereby plunged into the perpetual schisms of the Ḳabāʾiyya. The accession of ʿAbd al-Wahhāb to the throne when the troops of Abu Bakr b. Aflāḥ's reign was relatively peaceful. He was able, by a combination of pliant policies and largesse, to impose his authority on the nomadic tribes, which were quartered by nature.

His successors were less fortunate or skilful. The Tāḥartic principality had fluid frontiers, more human than geographical ones. It was very little urbanised, and had no cities or frontier march supported by a line of powerful fortresses. The Imām's territory had no other frontiers except those of the tribes which considered themselves Ibnātā and, consequently recognised his authority, and this ultimately on the spiritual rather than the temporal level. This was the case e.g. of the Ibnātā within the Aglabid principality. Moreover, the principality was a mosaic of very differing ethnic elements: Berber tribes, predominantly nomadic and having divergent interests, Persians who had got rich in the shadow of Rustamid power, and factions of the Arab qurūd—through their profession, bellicose in nature—who had fled from Ifrikiya. Once the religious bond became relaxed, all these ingredients became a typically explosive mixture. Hence the internal history of the Rustamid state was full of ups and downs, especially after Aflāḥ's death.

Armed clashes forced Abū Bakr to yield his power to his brother Abu ʿIyākūn, who was supported by the Arabs. The latter was nevertheless not able to take up residence at Tāḥart until 268/882, thanks to the support of the Lawāriya and Nafūsa Berbers. Having learnt from these occurrences, he followed, it is recorded, a policy of justice, tolerance and balance, on an indispensable foundation of piety, austerity and erudition.

During his own lifetime, Abu ʿIyākūn appointed his son Abū Ḥātim to succeed himself, a procedure not at all, at least in principle, in accordance with the Ḳabāʾiyya tradition. It is true that the make-up of Tāḥart had, meanwhile, changed considerably. Henceforth, at the side of a cosmopolitan plebs or ʿamm, there were all sorts of groups of people, including a great number of Māliki and Ṣhīʿīs, whose weight began to be felt on the checkerboard of politics. In these conditions, an uncle of Abū Ḥātim, Yaʿṣūb b. Aflāḥ, preferred to leave the capital and settle amongst the Zuwayḥa Berbers who formed part of the Khulafiyā. Civil war raged. In 286/899, Abu Ḥātim was driven out of Tāḥart and his uncle Yaʿṣūb took his place. But this was not for long, and political alliances, from now onwards no longer reserved for the Ibnātā community, were made and unmade according to shifting interests. Yaʿṣūb, in turn, lost his capital, and Abū Ḥātim returned to power, supported by the ʿamm, a mixture of both Ibnātā and non-Ibnātā. Disorder got worse and the central power became more relaxed. Abū Ḥātim was ruler only in name, and was assassinated by his nephews, who merely added to the disorders. Yaʿyān b. Abū ʿIyākūn was on the throne when the troops of Abū ʿAbd Allāh al-Ṣhīʿi came to extinguish the Rustamid principality; Tāḥart offered no resistance.

Wedged between two hostile regimes, that of the ʿAlid Irīsids on the west and that of the ʿABBĀSID governors, and then the Sunnī Aglabids on the east, the Rustamids practised, by force of circumstances, a policy of rapprochement: to their south, with the ʿUffī Midrārids of Sidjīlma, who, moreover, controlled the vital route by which gold came; and to their north, with the strongly Māliki Umayyads of Cordova, disregarding, in the interests of practical politics, the fact that Mālik had condemned to death the Ibnātā heretics (Ṣahmīn, Mudawwana, Cairo 1323/1905, ii, 47).

To the east, after vain attempts to seize Tripoli
from the Aghlabids, the Imam 'Abd al-Wahhab, who had directed the battle in person, relinquished the town itself to the Aghlabids, and contented himself with the hinterland, having been neither conqueror nor vanquished, and with a reversion to the status quo ante. In 239/853-4, the Aghlabid Abu 'l-Abbas Muhammad I built a town in the neighbourhood of Táharta, which he provocatively called al-Abbâsîyya in honour of his suzerains. The Imam Aflâh burnt it down and informed the caliph in Cordova of his action; the latter sent him 100,000 dirhams. Finally, in 239/853 Ibrâhîm al-Rustami II inflicted a severe defeat at Mâna, near the sea and to the south of Gabbès, on the Nafusa, the spear-head of Ibacjl power. In the west, the Imam 'Abd al-Wahhab allowed Idrísl I to capture Tlemcên in 173/789 almost without any adverse reaction.

Across the seas, the Ibacjl Imams of Tahart and the Mâlikî amîrs of Cordova had extremely amicable relations, despite their doctrinal differences, united by a common political interest. In 207/822, 'Abd al-Rahmân II gave a warm welcome to three sons of the Imam 'Abd al-Wahhab arriving at Cordova on an embassy, probably to greet the amîr on his accession to power. In 229/844, 'Cordova informed Táharta officially of its victory over the Northmen' (Lévi-Provencal, Hist. Esp. mus., i, 245), and in 239/853 Muhammad I sent a sumptuous present to the Imam Aflâh on his accession. Furthermore, members of the Rustamid family, installed in Muslim Spain, held high offices in Cordova, up to the ranks of commander and vizier. Possibly one might think, as did Lévi-Provencal, of links of vassalage (loc. cit.).

Rûstem Pasha (906-968/1500-1561) Otto- man Grand Vizier. Born ca. 1500 in a village near Sarajevo, Rûstem Pasha came of a family most probably of Bosnian origin (though some sources mention Croation or possibly Albanian ancestry), whose pre-Muslim surname had been either Opuković or Gigalic (cf. Albéri, Relazioni degli ambasciatori veneti al senato, ser. iii, vol. iii, 89; C. Truhelka, Bosnische Post, Sarajevo 1912, no. 80). A register from the kâdî's [q.v.] court at Sarajevo, dated 974/1561, records the sale of a house by Hâdimî Ali Beg b. Khayr al-Dîn, muteswâli of Rûstem Pasha's bedesten in the city, on behalf of one "Neftîa Khaman, daughter of Mustafâ and sister of Rûstem Pasha". A brother, Sinân Pasha (d. 961/1554), was also in the service of the Ottoman government, rising to the rank of Kapudân Paşa [q.v.].

Educated both in the palace school, Rûstem Pasha's first recorded post was as îlâhdâr on the Mohâcs [q.v.] campaign, and then as mirâkdâr-i ewvel. The date of his appointment as beglerbegî [q.v.] of Dîyar Bâr is unknown, but it was from this post that he was appointed beglerbegî of Anatolia in 945/1538 (Peçêwi, Tarih, Istanbul 1281/1861, i, 206). The following year, he became third vizier and was married to
RUSTEM PASHA — RUSWA

Mihrimah, the daughter of Kanuni Süleyman and Khurrem Sultan. In 948/1541 he was promoted to second vizier, and in 951/1544 succeeded Khodim Süleyman Paşa [q.v.] as Grand Vizier. Dismissed in 960/1553 during the outcry caused by the execution of Süleyman's eldest son Mustafâ. Rûstem Paşa spent two years in retirement before being re-appointed Grand Vizier in 962/1555, following the execution (at which he is said to have connived) of Kara Ahmed Paşa [q.v.], grand vizier since 959/1553 (of Kara Ahmed Pasha, Siajill-i 'Othmdni, ii, 377-8, iii, 106).

F. Babinger, Rûstem Pasha; St. E. Forster, Istanbul, the Rûstem Pasha mosque, at least four medreses, khatirûns, and other structures throughout Anatolia and Rumeli. Many of these were also designed by Sinân. However, it is now thought that the historical work Tavârîkh-i Âlî: Oğlûmân (or Ta‘rîkh-i Rûstem Paşa) for long attributed to Rûstem Paşa's authorship, is in fact part of the Dâmini ul-tawârîkh of Maâyâkâl Nâshû [q.v.], compiled at Rûstem Paşa's request (L. Forrer, Die Osmanische Chronik des Rûstem Paşa, Leipzig, 1909, by H.G.YS.)

Bibliography: For further references in addition to those in the text, see the bibl. to S. Altundag and Ş. Turan, IA, art. Rûstem Paşa; F. Babinger, E.T., art. Rûstem Paşa; Süğîli-i Oğlûmân, ii, 377-8, iii, 106).

Rûstem Paşa was Süleyman's longest-serving Grand Vizier (a total of fourteen-and-a-half years in two periods of office), but one whose reputation, both contemporary and historical, was mixed. During his first period of office a major treaty was concluded with the Hapsburg Emperor (in 1547) stipulating the annual payment of 30,000 ducats' "tribute" by the latter. Internally, his tenure was marked throughout by his successful efforts to build up government finances, neglecting no possible sources of income, even, according to the Habsburg ambassador Busbecq, selling vegetables and flowers grown in the grounds of Topkapı Sarayi [q.v.] (Ogier Ghiselin de Busbecq, The Turkish letters, tr. E.S. Forster, Oxford 1968, 30).

On the other hand, Rûstem Paşa was held largely responsible for introducing the sale of government offices and for allowing imperial hâdiyât [q.v.] to be given out in tax farms, thus paving the way for the bribery and corruption detected by later Ottoman historians. He amassed an immense personal fortune (see the inventory of possessions on his death given by PecevT, Ta^nkh-i Rîistem, iv, 21-2) and was accused of greed and avarice both on his own behalf and that of the state (for several complaints against him, see M.T. Gökbilgin, Rûstem Paşa ve hakkndaki tıtkamlar, in Tarit heserisi, viii/11 [1955], 11-50).

Rûstem Paşa appears to have enjoyed the sultan's full confidence, due partly to his abilities and partly to the mutual agreement between himself. Mihirimâh Sultan had named her son Khürrem Sultan to be his successor, however, his positive achievements as Grand Vizier were overshadowed by his involvement in the conspiracy leading to the execution of the popular prince Mustafâ, which cleared the way for the eventual succession of one of Khürrem Sultan's two surviving sons, Selim II [q.v.] (Gökbilgin, op. cit., 20-4, 38-43). Rûstem's dismissal in 960/1553 may have been at his request, in order to forestall demands from supporters of Mustafâ for his own execution.

Busbecq's description of Rûstem Paşa as "a man of keen and far-seeing mind" is largely borne out by Ottoman sources, who attest his capable administration and loyal service, stressing his financial acumen and the fact that even where offices were sold these were only to worthy people who were never thereafter dismissed. Whereas to Busbecq he seemed "always gloomy and distrustful" and "âlî criticized his dislike of dervishes and poets, Peçevi stresses his correct manners, sobriety and piety (Busbecq, Turkish letters, 29, 190; J. Schmidt, Pure water for thirsty Muslims: a study of Mustafâ Âlî of Gallipoli's Kânhû l-âkhabâr, Leiden 1991, 133, 89, 159; Peçevi, Ta‘rîkh, i, 21-2). He was nevertheless a master of political intrigue and a controversial figure.

As a patron of architecture, Rûstem Paşa commis-
philosophical interest, he founded the bi-monthly Ish-rdk, a journal devoted to the dissemination of philosophical ideas. It appeared for the first time on 5 May 1886 and was edited by poets who, for the most part, were of Ruswa’s kind. However, it was short-lived, and had to be discontinued after one and a half years due to a lack of enthusiasm on the part of Urdu readers. In addition to his original contributions, Ruswa published in this journal his Urdu translations of two of Plato’s works, namely the Apology and Grito. At a later date, while working at Haydarabad, he translated several works dealing with philosophy and psychology. He also translated into Urdu, and composed some works on these subjects. Among his other accomplishments was his participation in the development of a system of Urdu shorthand and a keyboard for the Urdu typewriter.

In the literary field, Ruswa is known primarily for his novels. He was also a poet of a minor sort, writing conventional verses. His first poetical work, a recognizable entity, the reading public (“Sphang”), appeared in 1886. He also composed a verse drama, in the maghawwi form, under the title Murakkki-i Layla Maftun (“An album of Layla and Madjnun”), which was completed probably in 1887. He used the penname of “Mizrā” for his poems, reserving the pseudonym “Ruswa” for his novels. In the beginning, his mentor in poetry was the respected contemporary poet of Lucknow, Darbīr (1803-75). As a novelist, Ruswa was the author of five original works, namely Afshār-i āzi (“Exposed secret”), Umrā’s Dān Adā, Dāhi-i sharif (“A perfect knave”), Sharif-zāda (“Of good breed”), and Akhtarī Begum. Afshār-i āzi (1896), of which only the first part seems to have been completed, represents Ruswa’s earliest attempt at novel-writing. Its theme, dealing with the decadent culture representative of the Muslim upper class in society and providing an insight into the traditional lifestyles of society, was longed to the same free society. In addition to the Adharbaydjan and Azeri Turkish served as the literary language among the Rutuls. Since that time, Russian has been the primary literary language used by the Rutuls of Daghistan, and Azeri by those in the Rutul region around the 5th century B.C. Later Christiantion, and a number of these peoples, especially early Christian influences penetrated the Rutul region from the Caucasus starting to the late 1930s, Lezgin and Adharbaydjani influence, and until the Soviet period. The Rutuls traditionally inhabited 20 villages in Rutul district in southern Daghistan (18 of which are in the Samur valley and 2 others in the Aghjai valley) and 2 villages across the border in neighbouring Agdharbaydjan. The Rutuls lived under very strong Lezgin and Agdharbaydjan influence, and until the Soviet period. The Rutuls lacked a common free society or clan federations found in Daghistan prior to the Soviet period. This is one of the few cases where all of the members of a given ethnic group belonged to the same free society. In addition to the Rutuls, who dominated this free society, a number of Turkic villages were also members of the Rutul Magal. The establishment of a distinct Rutul ethnic group during the Soviet period.

ed among the Rutuls and other southern Daghstani peoples with many Christian, Zoroastrian, and polytheistic holdovers. During the 18th-19th centuries conservative Sūfī movements were active among the Rutuls and during this period many of the pre-Islamic cultural rituals and beliefs were eliminated. The Rutuls today are Sunni Muslims. As among all other Daghstani peoples, and many other North Caucasians, pre-Islamic clan vendetta laws are still common among the Rutuls to this day.

Until the mid-20th century, patriarchal-clan endogamy and clan exogamy predominated among the Rutuls in the Rutul region by young people developed during the Soviet period. Derbend and Makhaczala in the Rutul region are the largest and most powerful tribe in the northern Arabian desert. Shaykh Faysal b. Fawwaz Shaṭṭān estimates there to be about half a million, most of whom are in northern Saudi Arabia, with a few in Syria and Jordan.

Incon sistencies, noticeable in the sources, in the precise relationships of the Ruwala to other parts of the Dania and to the other parts of the group, locations and numbers, may be understood by reference to Ruwaylii genealogy. The genealogy is seen as a way of talking about political and jural relationships of closeness and distance between constituent parts of the group, not actual descent. The shaykhi family often personifies the tribe in historical and political discussion; this encourages a shift in political focus to be seen as a migration from one area to another which is not justifiable when more detailed information is available. The Ruwala say they have always been, concerned with living their lives in their own terms; they see their shaykhs as ambassadors, or agents, between them and the agencies of other governments, rather than leaders as such. From this point of view, the movement northwards in the late 18th century is a political and economic shift on the part of the Ruwala and those Ruwala who saw the shift as a useful option.

The Ruwala say they are from ʿAnaza, who was the brother of Maʾaz, the sons of Wāʾil. This ʿAnaza b. Wāʾil genealogy is not totally consistent with the information of Hishām b. Muhammad al-Kalbi in his *Dhamarat al-nasab* on ʿAnaza b. Asād, “after Stamm, später zu Rabīʿa gerechnet” (tr. Caskel and Strenzki, Band ii, 189, and Band i, tables 141 and 172).

The Ruwala and Bakr b. Wāʾil tribesdominate the recorded history of northern Arabia in the early and mediaeval periods. Yakūt, iii, 644, records the ʿAnaza in Khaybar, as does Abu ʿl-Fidāʿ, *Tawqir*, tr. Reinard, 120. Sections of the Ruwala continue to own date gardens there and in Tayma (Lancaster, 1981, 128). The Djas (identified with the Ruwala by Burckhardt, *Notes*, i, 6), and other ʿAnaza, are mentioned in the early Islamic tax registers of 1558, as wintering around Safad (A. Cohen and B. Lewis, *Burckhardt*, Princeton 1979, 160). The Ruwala are, as they have always been, concerned with living their lives in their own terms; they see their shaykhs as ambassadors, or agents, between them and the agencies of other governments, rather than leaders as such. Musil, quoting other tribes in the region, says the Ruwala were the “most Bedu” tribe in northern Arabia. At this date (1908-16), “being Bedu” meant camel-herding. The camel herds provided subsistence and enabled the Ruwala to provide services of protection and restitution to those parts of the wider population unwilling or unable to protect themselves, to provide guides and protectors to caravans, and to sell camels in the markets of Syria and Egypt for meat, transport animals and for agricultural work. Camel herding, in conjunction with tribal political processes, permitted a system of government (hukūma—based on mediation and consensus) that was an alternative to that of states. Raiding (ṣawāṣ) took a variety of forms (Lancaster 1981, 140-5), the purpose being the acquisition of booty and personal reputation.

Burchhardt, Wallin, Guarnani, the Blunts, and Musil provide a partial history of the tribe during the 19th century and up to the First World War. During this period the Ruwala became pre-eminent among the ‘Anaza tribes. Although opposing Wahhābi political ambitions, in 1809 they defeated a Turkish government army outside Baghdad in pursuit of the Wahhābi forces; thus the Ruwala achieved independence of both Ibn Su‘ūd (who relieved them of the obligation to recognise his overlordship) and of the Turks (Lancaster, 1981, 128-9). Relationships with their northern bedūin Damascus were always ambivalent shifting between open hostility and uneasy compliance (Euting, 1896, i, 93; Musil, 1928). In 1909, Nawwāf b. Nūrī Sha‘lān, with his father’s reluctant support (Musil 1927, 1928) retok Dīwāf from Ibn Rāshīd of the Shāmmar, whose political fortunes were in decline [see Rāshīd, A]. After the First World War, Nawwāf had plans for the Sha‘lān kingdom of northern Arabia, to which Nūrī was opposed. The rise of the power of Ibn Su‘ūd, and the French and British mandates over Transjordan and Syria, together with the death of Nawwāf in 1921, ended any possibility of this, and amīr Nūrī handed over Dīwāf and the Wādī Sīrān to Ibn Su‘ūd in 1926, signing the Treaty of Hadda. Amīr Nūrī, according to one of his great-grandsons, Shaykh Faysal b. Fawwāz, was conscious of the contradictions inherent in his role as a traditional beduīn ruler. The present amīr Mi‘shīḥ b. Fawwāz, and his generation of Sha‘lān shaykhs, see their function as maintaining freedom of access for tribemen to the economic and political resources of the various states in which the Ruwala live.

The increasing use of motor transport exacerbated a trend signalled by the opening of the Suez canal in 1870 and the Hijārī railway in 1908, to the point where there was little market for surplus camels, except for meat and some agricultural work. This was the real cause for the ending of raiding. The Ruwala had lost, between a declining market for camels, and the loss of services now provided by the Mandate governments or Ibn Sa‘ūd, a substantial part of their income. They managed, between the late 1920s until the 1950s, by having vastly increased herds, and employment in the Arab Legion, as Mēḥārātis, and with Ibn Su‘ūd. Some Ruwala became herders, while a few, under Firbān al-Maḥbūrī, were involved in the likhān revolt of Faysal al-Darwīsh of the Mūṭayr (Glubb papers; Philby papers). There were also problems with the authorities of the French and British Mandates, and with Ibn Su‘ūd, over whether the Ruwala were a Syrian or a Saudi tribe. As their amīr was based near Damascus, and many Ruwala used Syria in the summer, it was decided the Ruwala were a Syrian tribe, while those who stayed in Saudi Arabia in summer and paid taxes to Ibn Su‘ūd were Saudi citizens. The Treaty of Hadda guaranteed the Ruwala their traditional markets and grazing areas. During the thirties, al-Awrens b. Trād Sha‘lān based himself outside H4 (IPC pumping station) in eastern Jordan from where he advised the Iraq Petroleum Company and developed an extensive political network. The amīr Nūrī, and after 1936 his grandson amīr Fawwāz b. Nawwāf, were members of the Syrian Chamber of Deputies.

With the escalation in oil wealth in Saudi Arabia, together with the drought of 1958-62, many Ruwala joined the newly-formed National Guard in Saudi Arabia or became employed in the oil companies. The rise of the Ba‘th party to power in Syria in the 1960s, and the resulting political and economic difficulties for particular tribes, encouraged the Ruwala to concentrate on options in Saudi Arabia. At this date amīr Nā‘īf b. Nawwāf filled a position similar to that of Speaker of the House of Commons in Saudi Arabia. After the Sha‘lān lost their assets in Syria, many of them, under the leadership of Shaykh Nūrī b. Fawwāz, together with Ruwala tribesmen, collected at al-Riṣā in eastern Jordan and began smuggling from Saudi Arabia into Syria as a political action (Lancaster 1981). The antagonism to Syria was simultaneously expressed as active support for King Husayn of Jordan in the troubles with the Palestinian Fiddiyin.

The smuggling ended with some reconciliation between the Sha‘lān and the Syrian authorities, together with pressure from the Jordanian government. The closing of the desert roads between Syria and Jordan by the Syrian authorities during the 1980s ended the viability of al-Riṣā as a base for trading (legitimate and otherwise) by the Ruwala and others. Profits from smuggling were invested in sheep herds, gardens, property and businesses, especially in Saudi Arabia but also in Jordan and in Syria. The Ruwala are an important group in the National Guard of Saudi Arabia, and are represented in the Army and Air Force; they play an active part in government, the professions and business in Saudi Arabia. Their political influence is apparent in Saudi Arabia, Jordan and Syria.

While they say they are no longer Beduīn, as they do not depend on the bīḍiya or desert as in the past, they maintain their strong tribal identity.

**RUYÄ (a.),** derived from the Semitic root *ru^yd* which gives rise to formations expressing “sight” (*ru^ya*) and “vision” (*ru^yaft*), one of the aspects of vision being nocturnal vision, the dream.

1. In the meaning of dream.

On relations between “seer” (*ro^e* = Aram. hâzâ = Ar. ḥâzî), “soothsayer” (*kâhin, *arrâf, etc.) and “prophet” (*nâbi*), see the articles *kâhin, kîhâna, nubuwâa.

The Semitic terminology of the dream and of the vision evolves in two fundamentally different semantic zones:

(2) The second is situated in a specific period of life, sc. puberty, a period marked by the development of sexuality (*TÂ*, viii, 355). The dream is then expressed in all Semitic languages through the root *h-l-m*, which indicates, in the adolescent, a degree of physical maturity (becoming fat, ugly, expansion of the sexual organs, nocturnal pollution) and of intellectual maturity (acquiring good judgment, being kind and gentle, patient and master of oneself).

Concerned to distinguish the true dream, rendered by *ru’yâ*, from the false dream, resulting from the passions and preoccupations of the soul, or furthermore the dream inspired by God from that inspired by Satan, Muslim tradition adopted *h-l-m* for the expression of the latter, on the basis of the following tradition: “The *ru’yâ* comes from God and the *hulm* from Satan” (cf. *Concordance*, i, 504; al-Buhârî, ii, 324 = *Khdîd*, 11; Ibn Khaldûn, *Mukadimah*, iii, 8 ff., tr. Rosenthal, iii, 103 ff.; other references in Goldz., *Abhandlungen zur arab. Philologie*, i, 110). However, the lexicographers continue to treat them as synonyms, as is the case with Ugaritic *h-l-m*, Hebr. *hîlôm, Aram. hîlâm/Syriac helmô*, etc., which refer to the prophetic dream as much as do the derivatives of *r-r-y* and of *h-z-y* (cf. Ehrlich, op. cit., 1).

The Kurânsk seldom uses *hulm* in a pejorative sense with the meaning of dream; *ahlâm appears twice, in XII, 44 and VII, 102, in the sense of “confused dream”, and once unqualified in the former of these verses, in the expression *ta’wil al-ahlâm*, “interpretation of dreams”, while the innumerable verbal and nominal forms of *r-r-y* are used to denote all kinds of vision, whether it be real, intellectual or metaphorical (see *Concordance*, s.v. *ru’â*). The verb *ru’â* and the substantive *ru’ây* convey the dream of Joseph (XII, 4-5) as well as that of his fellow-prisoners (XII, 36) and that of the Pharaoh (XII, 43). The order communicated to Abraham to sacrifice his son (XXXVII, 102, 105) was given to him in a dream; Allâh fulfilled the dream (*ru’ây*) of Muhammad that he would return to Mecca (XLVIII, 27); the dream of the *sîr* and of the *mi’âd* which he had before the emigration to Medina, were given to him to test the faith of those who had followed him; this, in a sense, the “Tree of Temptation in the Kurânsk” (XVII, 60).

After *ru’ây* the Kurânsk uses *manâm* (XXXVIII, 102), of which it makes a divine sign (XXX, 23) a summons before God, analogous to death (XXXIX, 42) and an instrument of divine direction, used by God to guide His Prophet and the believers step by step (VIII, 43-4). The *Sirâ* and historiography relate a large number of dreams which marked the major events of the Prophet’s life, those of his contemporaries and of his successors (cf. *La divination arabe*, 255 ff.).

Shortly before his death, the Prophet is supposed to have said: “Nothing remains of prophecy other than the good dream; the just man sees it or it makes itself seen by him” (Ibn Sa’d, *Tabâkid*, iii, 18). This gives an impression of the importance accorded by him to the dream which he saw it, as well as of the梦见 of intervention (on dream and prophecy, see *Nubuwâa*).

As a result of the conduct of the Prophet, which consecrated a pre-Islamic usage, the study of dreams was developed considerably under Islam. The oneirocritics, of whom Abû Bakr, the first caliph was one, proliferated and Arab oneiromancy was born, nourished, at the outset, by the inexhaustible sources of the oral tradition, in which certain symbolic constants, certain techniques and even an oneirocritical style and clichés began to be established; they are to be found dispersed in the *Sirâ*, the *Maghdâr*, in *Hadîth* and before long in the *Tabâkid* of Ibn Sa’d (d. 230/845), secretary of al-Wâkidî (d. 207/823), where there is a list of dreams interpreted by Ibn al-Musayyab, who lived in the time of the Umayyad caliph *Abd al-Malik b. Marwân (65-86/685-705). This was the first attempt at the compilation of an literary genre which was to undergo a considerable expansion (*Tabâkid*, v, 91-3; list quoted in full in *La divination arabe*, 310-12).

Ibn al-Musayyab was succeeded by Ibn Sirîn (*q.v.*), whose renown as an oneirocrit has survived to this day (cf. Abdel Daim, *L’oniromancie arabe d’après Ibn Sirîn*, Damascus 1958; *La divination arabe*, 312 ff.; Fahd, *L’oniromancie orientale et ses répercussions sur
l'oneirocritica de l'Occident medieval, in Oriente e Occidente nel Medioevo: Filosofia e Scienze, Rome 1971, 347-74). His name figures among the ancestors of onirocritalogy in the earliest treatise of Ta'bir which is known, the Dastûr fi l-ta'bir of Abû Is'hâk Ibrâhîm b. 'Abd Allâh al-Kirmanî who lived under al-Mahdi (158-69/775-85), a treatise which has not survived, but the existence of which is confirmed by Abû Bakr al-Anbârî (d. 328/940); it served as the basis for numerous later works, in particular for al-İshâra illâ al-İshârâ al-kulûmî (cf. La divination arabe, 315, 345, 352).

At this stage, oneirocritics used the classification of dreams, according to precise categories, illustrated by concurrent examples which would make clearer the significance of symbolic constants in a secular spirit. The Arabic translation of the Oneirocritica of Artemidorus of Ephesus (cf. Le Livre des Songes, Arabic tr. by Hunayn b. Is'hâk, ed. Fahd, Damascus 1964), commissioned by al-Ma'mûn, and al-Kâdirî fi l-ta'bir, composed by Abû Sa'id Nâbir b. Ya'kûb al-Dinawârî for the caliph al-Kadir bi 'llah cld Nasr b. Ya'kûb al-Dinawârî (d. ca. 400/1009). It is the most ancient Arab oneirocritical treatise which has survived in its entirety, in spite of its substantial length. It exploited all the information from the Book of Dreams by Artemidorus that was susceptible of adaptation to its milieu.

The introduction to this treatise, composed of 30 chapters (fâsîhs), divided into 1396 bâsîs, comprises 13 sections: the yardsticks of the states of the dreamer, the modalities of the dream, the angel of the dream, the nature of the dream, the varieties of true and of false dream, the times and seasons of the dream, the definition of interpretation, the rules to be followed by the narrator of the dream and by the interpreter, the omens to be observed at the time of interpretation, interpretation and the days of the week, and the types of sleeponeirocritics (cf. La divination arabe, 356-7; for more detailed information, see Les songes et leur interprétation en Islam, 133-47).

Finally, it may be noted that incubation, practised by the ancient Semites (cf. Ehrlich, op. cit., 13-55; Oppenheim, loc. cit., index s.v. Incubation dream, 352; A. Haldar, Associations of cult prophets among the ancient Semites, Uppsala 1945, 81-2; Sources orientales, ii, 39-41 (Egypt), a tradition, the time of interpretation, interpretation and the days of the week, and the types of sleeponeirocritics (cf. La divination arabe, 356-7; for more detailed information, see Les songes et leur interprétation en Islam, 133-47).

Finally, it may be noted that incubation, practised by the ancient Semites (cf. Ehrlich, op. cit., 13-55; Oppenheim, loc. cit., index s.v. Incubation dream, 352; A. Haldar, Associations of cult prophets among the ancient Semites, Uppsala 1945, 81-2; Sources orientales, ii, 39-41 (Egypt), a tradition, the time of interpretation, interpretation and the days of the week, and the types of sleeponeirocritics (cf. La divination arabe, 356-7; for more detailed information, see Les songes et leur interprétation en Islam, 133-47).

Krenkow, The appearance of the Prophet in dreams, in JRAS (1912), 77-9 (completed by I. Goldziher, in ibid., 503-6); J. de Somogyi, The interpretation of dreams in ad-Damiri’s Ḥayāt al-Hayawan, in ibid. (1940), 1-20. (T. Faun)

2. In its philosophical-mystical meaning.
In its philosophical-mystical meaning, the term, like manām, describes the dream as a means to transmit fictitious observations or, in the best instances, information and knowledge which convey another, higher reality. As such, this information has its origin in God or in persons near to God, such as prophets and Sufis. Starting points in this interpretation of dreams are found in the Kurān (sūras VIII, 43/45; XII, 43; XXXVII, 102/101; etc.) and in the tripartite subdivision of dreams, found in Islamic hadith and in other cultures (see Gätje, Traumlehren, 258): true dreams, which have their origin in God and bear a prophetic character; false dreams, which come from Satan; and dreams connected with man’s nature and therefore unable to predict anything about the future. In Sufi literature, the dream mainly appears as a means for having a dialogue with deceased Sufis and holy men, or even with the Prophet, and to receive messages, warnings or pieces of advice (see the works by Schimmel and Smith, in Bibl.).

Islamic philosophy, going back to the Kurānic-mystical interpretation of the dream, considers it as a means to transmit the truth, its prophetic-divine origin serving as a criterion. This criterion, however, caused discussions about the postulates of dreams. Galen’s explanation that they originate from a mixture of the fluids in the human body, and his localising (as against Aristotle) fantasy and thought in the brain and not in the heart, is often drawn into the argumentation. Beyond this, with reference to the Neoplatonic philosophy of the divine emanations as well as to the Aristotelian-Persipathetic doctrine of the soul and of the divine intellect, the dream is given an important part in the process of human perception. This development culminates in the precedence of divinely-inspired prophetic knowledge over human knowledge (see Daiber, Abū Hātim, defended by the Isma’ili Abū Hātim al-Rāzī [q.v.], against Abū Bakr al-Rāzī [sec al-Rāzī, Abū Bakr], and in the transmission of this prophetic knowledge by way of portentous dreams, which owe their existence to the divine active intellect. The latter view is represented by Abū Naṣr al-Fārābī [q.v.].
The origin of this development can already be found in Abū Yusuf al-Kandī [q.v.], who links up with Aristotle (De anima), but puts new accents, which he owes to the Alexandrian exegesis of Aristotle and which presuppose a Neoplatonic-hermetic concept of the soul (see Genequand, in Bibl.). In his Fi Mīḥāṣat al-na‘um wa ‘l-nuyūd (= Rasdīl, i, 293-311), which was translated into Latin by Gerhard of Cremona (ed. Baeumker, 12-27), and in his as yet unpublished treatise on the anamnesis of the soul (see Endress, Al-Kindī’s theory), the soul appears in an intermediate position between the perception of matter and the eternal ideas of the divine intellect; in the process of its purification, and in its endeavour to return to its divine situation, the soul’s “shaping capacity” (al-ka‘uwa al-maṣawwūra), i.e. of the fantasy, the carrier of the dreaming activity, which increasingly liberates itself from sensory perceptions. After that, the soul remembers more and more its originally divine situation i.e. the world of the intellect. In its most complete form, the dream is no longer confused dreams (adghāth), or mere opinion, but the remembrance of the shape of sensible objects, or of the genus

and species of intelligible objects. Thus the soul is capable of anticipating the future in a dream (al-Kindī, Rasdīl, i, 303).

Al-Kindī’s doctrine of the dream is part of his doctrine of the intellect (see Jolivet, L'intellect, esp. 128 ff.), in which the cogitand constituent appears as being integrated in a Neoplatonic doctrine of anamnesis. This accentuation was not continued by al-Fārābī. In the latter’s doctrine of the dream, the remembrance of intelligible is not mentioned. On the contrary, in a newly created terminology al-Fārābī speaks of the “imitation” (mudāḥā) of perceptible particulars (al-maṣāḥa), and of the “exalted intelligibles” (al-maṣāḥākh al-maṣāḥkhah) which ensue in a dream. The imaginative pictures in the dream are thus the result of a cooperation between perception, imagining imitation or fantasy, and the divine “active intellect”. If this imitation is not limited to sensible phenomena, if it is not solely oriented towards the activities of nutrition and desire, and if it is not shaped by the constitution of the body (see Galen, De dignatione ex insomniis), then the dream represents “exalted objects” (maṣṣaḥ-lū‘a sharī‘ah), i.e. the intelligibles of the divine “active intellect”; the point at issue then is prophecy, prophesying “divine things”. From this al-Fārābī, while modifying Plato’s doctrine of the philosopher-king, deduces his well-known thesis on the sovereign of the Ideal State, who should be both philosopher and prophet. His starting-points in literature are first of all Aristotle’s works, in particular, De anima, the Nicomachaean ethics and the theory of the dream and divination in the Parva natura, and also the exegesis of Aristotle by Alexander of Aphrodisias. The parallel between al-Fārābī and the new accentuation of Aristotelian doctrines, found in the transmitted Arab version of the Parva natura, is remarkable. Deviating from the Greek text, the latter emphasises the divinity of the intellect, which causes the “images” (jwar) which come into being in “true dreams” (see the Arabic ms. Raza Library, Rāmpūr, no. 1752, dating from the 11th/17th century, fols. 7a-54b, of which fols. 44b 1. 11-fol. 47b 1. 25 deal with the dream; cf. Davidson, 340 ff.; Pines, Ravitzky).

Above all, al-Fārābī is convinced that, as Aristotle said, the soul thinks in images, and for this needs perception; its imaginative power imitates reality and produces imitating images. The most perfect imitations of the particulars and intelligibles, which originate in the divine active intellect and are realised in a dream by the imaginative power, are made into statements about the future and into prophecies. They are then transmitted to mankind by the sovereign, either in the form of philosophical arguments or in the form of prophetic “warnings”. At this, al-Fārābī, in his thesis on the perfect “religion” as imitation of “philosophy”, presupposes the reciprocal dependence of the two. Religion is an indispensable “instrument” of philosophy because, in the Ideal State (al-madinah al-fāḍilah), it realises the practical part of the latter, namely ethics. In agreement with Aristotelian epistemology, according to which the soul does not think without the images of perception, its imaginative power imitates reality and of philosophy and of the intelligibles, which experience their realisation in the most perfect form in the prophetical revelation (for further details, see Daiber, Prophetic, Rule). And so prophetic revelation in a dream is not only a perceptive representation of what had been pre-existing in the mind, and what has been inspired by the active intellect; for by transmitting laws and prescriptions of “religion”, this revelation also clears
the way for realising the practical part of philosophy, namely the ethics of every single person in the Ideal State.

Later philosophers, above all Ibn Sinā and Ibn Rushd [q.v.], were decisively influenced by al-Fārābī’s doctrine of the divine active intellect as the cause of prophetic dreams. They took up al-Fārābī’s Neoplatonic attachment of separate intellects to certain heavenly spheres, a doctrine which had further developed Aristotle’s conception of the spirits of the sphere, as well as al-Kīndī’s doctrine of the active intellect. In their works, the divine active intellect (al-šāli al-fās’ilāllāh-fās’il), the tenth and last member of these intellects, appears as an emanation of the ninth intellect which rules the sphere of the moon. However, Ibn Sinā and Ibn Rushd did not adopt al-Fārābī’s idea of religion as being the visualisation of philosophy. Contrary to Aristotle, but in consequent continuation of al-Kīndī’s Neoplatonism, they maintain that thinking does not need perception through the senses; the active intellect leads the thinking soul out of the stage of potentiality.

Ibn Sinā’s explanations in his Kitāb al-Shajā‘a and in his Risāla al-manāmīyya show that al-Fārābī’s doctrine of dreams was modified. He gives more attention to the elements mentioned by Galen, and al-Fārābī’s explanations are completed; in the common sense (hiss muḥayarad), the dream is the representation of the forms which have been abstracted from the matter. This representation has been realised by the preserving ‘forming power’ (masawawai‘a), together with the combining ‘fantasy’ (mutakhabayyila). The interpretation of dreams (ta‘bir al-rū‘a) deals with the ma‘ānī, the intentions of these abstractions, which belong to the realm of the perception, of the intellect of or of the heavenly world. In Ibn Sinā’s work the function of the prophetic dream appears, in a modified form, as providence (‘inā‘a) of the ‘divine power’, or of the ‘intellectual’ and ‘heavenly angels’; the ‘inā‘a becomes their tool, and is allotted to just rulers, to outstanding scholars and, beyond them, to all mankind; it is no longer a privilege of the prophet.

Ibn Rushd, in his Épisteme of the Parva naturalia, essentially follows Ibn Sinā and does not bring any new element. The dream is a spiritual process and gets its bearings from the ma‘ānī, which are deposited in the faculty of memory (hāfiza, ḥākira), abstracted by the faculty of thought (al-mufakkirīn) from the individual perceptions, which at first have been united in the common sense, then preserved by the imaginative power (musawwai‘a, mutakhabayyila). Beyond that, the prophetic dream is an activity of the active intellect; in as much as the sensual representations and their ma‘ānī are already potentially present in the soul, the dream enables the actualisation of the potential intelligence of the human being, of his ‘material’ intellect, that is, by the active eternal intellect. Certainly, the possibility of scientific knowledge through dreams, admitted by al-Fārābī and, to a certain extent, also by Ibn Sinā, is limited by Ibn Rushd (as already had been the case with Ibn Badājnī (see Davidson, 342 ff.)); the inspiration given by dreams is limited to what is useful or harmful, and to a few practical arts; it does not extend to theoretical science. Prophetic revelation recedes here into the background.

Instead, Ibn Rushd propagates a connection between the form of the soul, understood as eternal potentiality of the ‘material’ intellect, and the divine, eternal, active intellect. This connection is said to be the road to the most perfect form of human knowledge. For Ibn Rushd, the universality of this general form of the soul excludes all individuality (and thus also the individual immortality of the soul). Here, too, can be detected a basic tenet of Islamic philosophical thinking, which had become apparent with al-Kīndī and which could appeal to the Kur‘ān, to mystics, and to the religious tradition of Islam, namely tracing human knowledge back to God, considering prophetic knowledge as superior to human knowledge, and dreams as the road along which God transmits knowledge to mankind. However, Ibn Rushd limited the traditional appreciation of this road.

where it is said that on the Day of Resurrection faces will be ilā nabiḥā nāẓira, "their Lord regarding". To which the Mu'tazzils reply that nazarā is equivalent here to ināzāra, and the expression is metonymical. It is the reward of their Lord which they "will wait for".

The Sunnis also have recourse to VII, 143: since Moses, a prophet, asked to see God, it follows, they say, that God can be seen. To which the Mu'tazzils reply, following al-Djubā'ī, that it was not for himself that Moses made this request, but for his incorruptible people, who demanded it in this world.

The Sunnis also base a major part of their argument on a well-known hadīth according to which the Prophet, on a night of full moon, is said to have promised his Companions "You shall see (tāra'ama) your Lord as you see this moon" (al-Bukhārī, masā'ib, 16 and 26; taṣawwīd, 24, 1-3). For the Mu'tazzils, either the hadīth is inauthentic or else tāra'ama is to be understood in a figurative sense, as a synonym of tā'lamāna.

In the realm of rational controversy, the Mu'tazzils place the greatest emphasis on the argument that, in order to be seen, a thing must be either substance or accident, and God is neither one nor the other. The solution proposed by al-Āsh'ārī (and also adopted by the Māturīdīs) is that visibility is not confined to substances and accidents; it is a necessary characteristic of all existing things—and God exists.

RUYyat ALLAH, the vision of God. It is usually qualified by the phrase bi 'l-ābyār, "through perception", to distinguish it from a metaphorical concept, sometimes acknowledged, of vision "through the heart", cf. al-Ash'ārī, Makāli, 157, ll. 10-13 and 216, ll. 11-13.

Whether it is or will be possible for men to see God with their own eyes is one of the questions which have deeply divided Muslim theologians. Sunnis of all persuasions (Hanbalis, Kullābiya, Ash'āris, Karāmiyya and Māturīdīs) maintain that it is so. The earliest theologians (Hishām b. al-Hakam, Abu 'l-Yusr al-Mughni, Djabbar, 216, ll. 14-15; al-Māturīdī, cūt, 139, ll. 4-6; Abu 'l-Yusr al-Mughni, Djabbar, 216, ll. 14-15; al-Māturīdī, cūt, 139, ll. 4-6; Abu 'l-Mu'tamad, Beirut 1974, §§ 147-53; ʿAbd al-Djābbār, al-Mughni, iv, 139, ll. 4-6; Abu 'l-Yusr al-Pazdawī, Usūl, 78, ll. 6-7). Among the Imāmī Shīʿīs, only the earliest theologians (Ḥāfiz b. al-Hakam, etc.), adherents of a "corporalistic" conception of God, acknowledged His visibility; but early theologians such as al-Kalaynī and Ibn Bābawah (thus, even before the "conversion" of the Imāmīs to tazīlīs, also, it is not the notion was absolutely refuted, on the other hand, by God denies that perceptions "comprehend" Him, not that they "see" Him.

The Sunnis, for their part, invoke LXXV, 22-3,
The earliest Muslim astronomers adopted a simple Indian visibility condition, namely, that the difference in setting times of the sun and moon be at least 12 equatorially degrees (or 48 minutes of time). Using this, they calculated tables displaying for a specific latitude and for different solar longitudes the minimum elongation between sun and moon necessary for visibility (see PI. XXXVI). More complicated tables involved directly the lunar latitude or served a series of different latitudes. Some later astronomers used conditions so complex that they had to calculate by hand the various astronomical quantities involved and then investigate whether these satisfied their visibility conditions, not always explicitly stated (see PI. XXXVII). The results of their labours were circulated in astronomical ephemeredes [see Ta'kwim], in which for each day of a given year the positions of the sun, moon and planets would be tabulated and for each month the lunar visibility calculations and predictions, as well as astrological prognostications, would be recorded (see PI. XXXVIII) and occasionally-illustrated (see PI. XXXIX). There are no known mediaeval records of conflicts with the 'alamāt, who favoured actual sightings of the crescent (see HIlāl. i) and used simple arithmetical procedures (based on alternating months of 29 and 30 days) when adverse weather conditions prevailed.

This is a subject on which a great deal of work remains to be done. First, there are numerous astronomical discussions of the subject yet to be studied. Second, there are even more legal discussions awaiting study (see, for example, the volume by 'Abd al-Wahhāb cited below). And third, there are references to actual practice scattered throughout the historical literature. Of particular historical interest are various šīfi treatises.

In the modern world, with instant communications between places where the crescent can be seen and others where it cannot, as well as less mutual understanding between religious scholars and scientists, there is occasionally some confusion about the beginning and end of Ramadān.

RUYĀN, a district of the Caspian coastlands region of Persia comprising the western half of Māzandarān [q.e.].

Geographical studies. According to Ibn Rusta, 150, and Ibn al-Fakīh, 304 (the latter cites Bālahārī as authority, but the passage is lacking in the Futūḥ al-balūḍ), Ruyān was at first an independent kāra attached to Daylam. It was conquered by ‘Umar b. al-ʿAlī (after 141/758), who built a town there with a minbar and attached it to Tabaristān. Ruyān comprised an extensive area the districts of which lay between two mountains (Ibn al-Fakīh: “between the mountains of Ruyān and Daylam”); each township could supply from 400 to 1,000 soldiers (Ibn al-Fakīh: in all 50,000). The khrādād levied on Ruyān by Hārum al-Raḥīd was 400,050 dirhams. The town of Ruyān called Kadhīja was the headquarters of the wūlī. Ruyān was near the mountains of Rāy and was reached via Raya. The text of the two authors above quoted suggests that Ruyān and between it and Daylam, was a region which formed the military zone from which operations were conducted against Daylam. To this zone belonged Shāhūs or Čālūs, a town called al-Kabība (situated opposite Kadhīja), another (?) town called al-Muḥbatha and lastly Mūzn. (But on these frontiers, see the Hudād al-ʿilām and Zahīr al-Dīn.)

Al-Iṣṭakhrī, 206, enumerates the mountains of “Daylam (in the broad sense) as the following: Đibāl Kārin, Džibāl *Fāshubān* and Džibāl al-Rūbānd (according to Barthold, *al-Rūyānd = Rūyān*). In these last-named highlands, there were formerly kingdoms (mamlākā); in the part adjoining Tabaristān the kings were of Tabaristān, and in the part adjoining Rāy they were of Rāy. According to the Hudād al-ʿilām (written in 372/982), tr. Minorzky, 133, comm. 387, Nāṭīl (according to Jāzīrāt, 217, one mahala west of Ámūl) Čālūs, Rūdīhān (= Rūyān) and Kalār (west of Čālūs) formed a province of Tabaristān, but the authority there belonged to a king named Ustândūr. Rūdīhān produced red woolen materials for waterproofs and blue gilim (a kind of carpet material).

Rastomdār. From the Mongol period we find the geographical term Rastomdār. According to Ḥamd Allāh Mustawfī, *Nuzhāt al-ʿulāmī*, ed. Le Strange, 161, the greater part of its territory was irrigated by the
The crescent visibility theory of Abū Dja'far al-Khārizmi [q.v.] from the early 3rd/9th century. The table, which serves the latitude of Baghdād (taken by the author as 33°), displays the minimum distance between the sun and moon for each zodiacal sign. From ms. Cairo Tal'at falak fārisi 11, fol. 61a, courtesy of the Egyptian National Library.
Calculations of the possibility of crescent visibility on the first day of the civil months of the year 1125 AH [~1713-14]. The tables, part of a set for the years 1125-30 AH and serving Cairo, show the lunar longitude and latitude (but, alas, for the purposes of analysis not the solar longitude), the apparent distance between the sun and moon, the altitude of the moon, the difference in setting times of the two luminaries, and then at the end of each line a prediction. If the crescent cannot be seen, the new month will start on the next day. From ms. Cairo Dār al-Kutub jinda 166,2, fol. 40a, courtesy of the Egyptian National Library.
In these extracts from a Yemeni ephemeris for the year 808 AH [≈ 1405-6], the information at the top of the double-page for a specific civil month relates to the astrological implications of the full moon in the middle of that month and to the new moon on day one, for which the prediction is that it will not be seen (īḍyrā). The main tables show the ecliptic positions of the sun, moon and five naked-eye planets, as well as the implications of the relative positions of the moon and the other celestial bodies, for each day of the month in question. From ms. Cairo Dār al-Kutub Taymūr 274, pp. 104-5, courtesy of the Egyptian National Library.
In this Egyptian ephemeris for the Djalālī year 936 AH [ = 1614-15], the position of the crescent relative to the horizon of Cairo is shown for each month. From ms. Cairo Dār al-Kutub miḥāi 141,3, courtesy of the Egyptian National Library.
Shah-rud (?) and Ābī b. Shams al-Dīn Lahidji, Ta^nkh-i Khdnt, ed. Dorn, 298, says that Talakan (on the upper Shah-rud) adjoined Rustamdar. On the other hand, Zahr al-Dīn gives the term a larger connotation and uses it sometimes as a synonym of Ruyān and sometimes with a special meaning. An examination of the passages led R. Vasmr, Die Eroberung Tabaristdns durch die Araber, in Islamica, iii/1 (1927), 115-25 (a detailed analysis of the sources); H.L. Rabino, Māzandārān and Astarābād, London 1928, see index; idem, arts. listed in the Bibl. to Māzandārān; W. Barthold, An historical geography of Iran, Princeton 1984, 233-4. (V. V. Masoudi)

Rūzbihān b. Ābī Naṣr al-Fāsī b. al-Daylami al-Bākli al-Shārazi, Ṣadr al-Dīn Abū Muḥammad al-Bākli al-Shārazi, ed. Nurbakhsh, Tehran 1349/1970, and Rūzbihān-ndma, Ghalatdt al-sdlikin (both ed. Dj. Nurbakhsh). The lands of the Eastern Caliphate, e.g. H. Corbin, The lands of the Eastern Caliphate, Paris 1913, 79-108; (v) Mantik al-asrdr (commentation and a lexicon of shathiyydt). He recorded his spiritual experiences with directness and power, using a prose style of great rhetorical density. Although the tarika Rūzbihānīyya did not endure as an institution, his writings, particularly his mystical Qur’ān commentary, have been studied, preserved, and commented on by a select group of readers in the Ottoman regions (e.g. ʿAyni Simbā), in Central Asia (Qāmī [q.v.]), and in India (Dārā Shukūk [q.v.]), as well as in Persia proper, up to the present day.

Arabic and Persian, plus numerous other works on standard religious subjects such as hadith, exoteric Qur’an commentary, and Shafi'i jurisprudence, some of which have only been preserved in excerpts in his biographies.

**Rûznamedji** (Ş.-Tish.), the Ottoman term for the keeper of a daybook (rûzname or rûznâmé), referring principally to the official in charge of the register of daily income and expenditure of the central treasury, *kahân*.

From its place(s) of origin in India or China ca. 3,000 BC., the use of rice spread to the Middle East, where it was also cultivated in pre-Islamic times, albeit in limited areas such as Mesopotamia and Jordan. Knowledge of rice spread slowly among the known varieties of wild rice, although several types may well have been employed in addition to the domesticated kind.

From its place(s) of origin in India or China ca. 3,000 BC., the use of rice spread to the Middle East, where it was also cultivated in pre-Islamic times, albeit in limited areas such as Mesopotamia and Jordan. Knowledge of rice spread slowly among the known varieties of wild rice, although several types may well have been employed in addition to the domesticated kind.

In the ‘Abbâsid caliphate’s financial departments, the rûznâmé was the day-book (*kiyûb al-yawm*) in which all the financial transactions of the day—incoming taxation receipts, items of expenditure—were recorded before being transferred to the awûrâdâ, the register showing the balance of taxation in hand. The form rûznâmé points to an origin of this practice in Sâsânî administration. Later, in Fâtimid and early Ayyûbid Egypt, rûznâmâ was used in a sense contrary to its etymological meaning and its usage in the eastern Islamic world, sc. for the rendering of accounts every ten days.

In the sense of almanac, calendar [see TAKWIM].

**Rûznâméddî** (p.-Tkish.), the Ottoman term for the keeper of a daybook (rûzname or rûznâmé), referring principally to the official in charge of the register of daily income and expenditure of the central treasury, *kahân*. From the diminutive form rûznâmâ, this official was known alternatively as rûznâméddî, a title often contracted to rûznâmé and identical with the name of the daybook itself. The rûznâméddî and his scribal staff formed part of the financial bureaucracy headed by the başî defterî [q.v.]. The late-15th century kânînânâmé of Mehmed II assigns a relatively high status to the rûznâméddî. This, together with the essential nature of such a register, indicates that the post probably dates from the earliest period of Ottoman administration.

By the mid-10th/16th century, the rûznâméddî’s office was developing two relatively distinct branches. The rûznâméddî-yi ewwel, later bûyûk rûznâméddî (chief daybook keeper), was the senior official with overall responsibility for recording all kinds of income and expenditure; the rûznâméddî-yi qâfî, later küçük rûznâméddî (second, or lesser, daybook keeper) became specifically concerned with recording expenditure on the wages and salaries of palace servants and lesser officials of the central administration.

The designation rûznâméddî was also applied generally to the daybook clerk(s) in various other offices of the central and provincial administration, e.g. keepers of timâr rûznâmeleri, registers of appointments to timâr and zemânet [q.v.] holdings. During the 19th-century Tânzimât [q.v.], the kâhzîne daybook was retitled synonymously yeþewînîye defterî, and the rûznâmêddî as yeþewînîye kâhzîne. Bibliography: Pakhalîn, iii, 60-2; I. H. that rice bread produces thick humour, causes obstructions in the intestines and has an astringent effect upon the stomach.

The general medical view of rice itself was that it inclined towards the "cold" element by nature which, it was said, could be modified when cooked with milk or fat and eaten with sugar. When cooked with milk, oxymel was recommended to be drunk afterwards to counter obstructions in the stomach caused by it.

Food preparation with rice was not, however, confined only to bread among the lowest classes. The mediaeval Arabic culinary manuals, which reflect the urban milieu of a rich, sedentary society, give several recipes where rice is employed in a number of ways. The following is a representative selection taken from the anonymous work of probable Egyptian provenance of the 7/13 or 8/14 century (see anon., Kanz, index).

These include rice as an alternative to cornstarch as a thickening agent in stews made with meat and vegetables, where the rice is added in the last stage of preparation. In another receipt, washed rice cooked in milk, milk and sugar, with dates and cinnamon appears to be close to the modern popular rice pudding dish, muhallabiyaa. The mediaeval version of muhallabiyaa, by contrast, was made with meat or chicken, sweetened with honey and seasoned with spices to which saffron-coloured rice is added. Indeed, the most common way of using rice in a substantial dish was to cook meat and/or vegetables with it in the same pot. A variation called al-aruzziyya, containing meat and leeks or onion is cooked in milk (laban) together with a little powdered rice. A dish called al-aruzziyaa contains meat and seasonings (pepper, dried coriander and dill), into which a small amount of powdered rice is added during cooking and washed (whole) rice towards the end of the preparation. A further use for rice is found in the well-known Egyptian spiced beverage sabiyya, which could be made with either wheat or rice. And, as with certain other beverages, this could have been made in both an intoxicating and a legal, non-alcoholic, version. The method of preparing rice flour is given in one receipt for use in another preparation called waqihan, a perfumed (powdered, pasty?) mixture for washing and scenting the clothes and hands. Finally, rice was also used in making vinegar.

The remaining extant mediaeval Arabic cookbooks contain recipes similar in style to these just mentioned. One, aruz muulfal, which appears in several versions, was evidently very popular and resembles a type of Turkish pilaw. Made with spiced meat and/or chick peas or pistachio nuts, the dish may contain rice coloured with saffron, white rice alone or a combination of both. A variation of this dish, called al-muqaddara, made from lentils and plain rice, is similar to the modern preparation of the same name. Modern uses of rice which may not go back earlier than the 8th/14th century include rice presented alone as an accompaniment to other dishes and as a filling for vegetables such as courgettes and the leaves of the cabbage and vine.

Ruzzik did not have time properly to put into practice his reforms since he could not make firm his own power. Talai b. Ruzzik, on his death bed, had warned his son against the danger posed by the amir al-dajakh Abu Shudja al-Salih al-Salih Fars al-Islam, governor of the Sarid or Upper Egypt, and had advised him not to provoke him unnecessarily. However, Ruzzik wished to replace him at Kus [q.v.] by the amir Nasir al-Din Shyakh al-Dawla Ibn al-Rifa. Shyakh then marched on Cairo with his troops; repulsed towards the Delta, the Qa`idi returned back to Taradja, to the west of the Delta, and finally occupied Cairo in Muharram 558/January 1163. Ruzzik fled to one of the intimates of his sister, the wife of the caliph al-`Adid, Sulayman, Ya`kub or Munil b. al-Fayd, al-Bid, or of al-Nays al-Lakhmi, possibly a Christian, who betrayed him and handed him over to Tavyy b. Shyakh. The latter killed him in Ramadan 558/August 1163, putting an end to the attempts of this family, of Armenian origin, to assume supreme power in Egypt (its ancestor Ruzzik had arrived in Egypt with Badr al-Djamal [q.v.]). As a convert to Twelver Shi`a he had been fiercely anti-Sunni, and his son followed him in this.

Bibliography: The Arabic sources mentioning Ruzzik are numerous but jejun and repetitive. See, above all, Ulumara al-Yamani, K. al-Nakat al-musulmia fi was/or, ed. K. al-Mamari, Beirut 1909, 67-90; Ibn Zahir, Akhbar al-duwal al-munkari`a, ed. Ferré, Cairo 1972, 111-13, with rich annotation and bibl.; Makrini, Iltisas al-hunafa`, iii, 242-63 and index. Further information on this vizierate and on the sources in Ayman Fuad Sayyid, al-Dawla al-fatimiyya fi Misr, tafsir qadiid, Cairo 1413/1992, notes, 219-21. See also Ibn al-
Rzewuski, (Count) Wenceslas Severin (1785-1831), the son of a Hetman or supreme general of Poland.

Born at Lemberg (Lvov), he was eight years old at the time of the Second Partition of Poland in 1793. Deeply moved by the dismemberment of his native land, Wenceslaus later voluntarily exiled himself to Austria and chose Vienna for his home. He established friendly relations with the Viennese aristocracy and the French emigres, and it was in this Franco-Germanic milieu that the young Rzewuski was brought up. Under the influence of his uncle, Jan Potocki, he early acquired a great love for the Orient and avidly studied oriental languages. Together with the famous orientalist Josef von Hammer, he began in 1809 the publication of a periodical, Die Fundgruben der Orients "Treasures of the East".

Also, whilst applying himself to the study of Arabic, he set up his own stud farm, having conceived the extravagant idea of improving the European horse breeds by bringing in new blood from the Arabian desert. A journey to the East was now vital for him. In 1817, having made various preparations, he set out for Istanbul in order to realise his plan. His journey took two years and had no element of the merely pleasant jaunt. He explored Turkey and Syria, went into the mountains of Nadji; ploughed through the desert with Bedouin tribes who proclaimed him amir, joined up with, in their company, the escort providing the safety of the Pilgrimage Caravan and thus was able—although a non-Muslim—to get into Mecca, whose site and the rites there he describes briefly; had a long stay with Lady Hester Stanhope; took part, against his better judgement, in the rising at Aleppo of 1819; and returned to Europe with 140 horses chosen from amongst the best of the Nadji stock.

Once back home, he wrote in 1822 a work in two volumes, totaling some 800 pages, Sur les chevaux orientaux et provenants (sic) de races orientales. Vol. I is devoted to the Bedouins, their natural habitat, their customs and their tribes. It is thus a lively and vivid travel narrative, rich in anecdotes and descriptions of all kinds. Everything goes past in review: towns, notably Aleppo and Damascus, the countryside, the desert, famous historical sites (Palmyra, Baalbek), the Caravan to Mecca, eminent personalities (Lady Hester Stanhope and the explorer Ali Bey, whose last moments he describes, dying, he affirms, in the Christian faith) and the main events, especially the great revolt at Aleppo, whose course is recorded day by day.

(J. Chelmow)
breakdown that 'Ridwān undertook to repair. Moreover, 'Ridwān himself was not an engineer and his description, though containing some valuable information, omits to deal with some important constructional details.

Al-Dżazari's two clocks, on the other hand, were manufactured and constructed in a very workmanlike manner. Although very similar in principle to al-Sā'āti's, they did not incorporate any design defects. The first and larger of the two was described in such careful detail that it was possible to construct a full-size working facsimile from al-Dżazari's instructions and illustrations for the World of Islam Festival, in the South Kensington Science Museum, London, in 1976.

The working face of the clock consisted of a screen of bronze or wood about 225 cm high by 135 cm wide, set in the front wall of a roofless wooden house which contained the machinery. At the top of the screen was a Zodiac circle about 120 cm in diameter, its rim divided into the twelve 'signs'. It rotated at constant speed throughout the day. Below this circle were the time-signalling automata which were activated at each hour. (The clock worked on 'unequal' hours, i.e. the hours of daylight or darkness were divided by twelve to give hours that vary in length from day to day.) These included doors that opened, falcons that dropped balls on to cymbals and the figures of five musicians—two drummers, two trumpeters and a cymbalist. The musicians were operated by the discharge of water from an orifice, whereas all the other automata were operated by a heavy float that descended at constant speed in a reservoir. A cord tied to a ring at the top of the float led to a system of pulleys that activated various tripping mechanisms.

The speed of descent of the float was controlled by very ingenious water machinery that included a feedback control system and a flow regulator, the latter for varying the rate of discharge daily in order to produce the 'unequal' hours. The same system was used by 'Ridwān, and both writers attribute its invention to Archimedes. There is a treatise that exists only in Arabic and is attributed to Archimedes (On the construction of water-clocks, ed. and tr. D.R. Hill, London 1976). The treatise almost certainly contains Hellenistic, Byzantine and Islamic material, but its first two chapters, dealing with automata invented by Archimedes, are essentially the same as that used by 'Ridwān and al-Dżazari. There is every likelihood that these chapters were indeed the work of Archimedes.

Al-Dżazari's book also contains descriptions of four other water-clocks, two of which embody the principle of the closed-loop, and four candle-clocks which on a small scale are as impressive from an engineering point of view as the water-clocks.

Other Arabic works add to our knowledge of Islamic hydraulic timekeeping. A certain Ibn Djālab or Ibn Khālaf al-Murādī worked in al-Andalus in the 5th/11th century (D.R. Hill, Arabic water-clocks, Aleppo 1981, 36-46). Unfortunately, the unique manuscript of his treatise on machines is badly defaced, but it is possible to determine the essential details of the automata and water-clocks that are described in it. Other important features that they incorporate are complex gear-trains, which include segmental gears (i.e. gears in which one of the wheels has teeth on only part of its perimeter, a device that makes intermittent action possible).

Al-Khāzmī's justly famous book on physics, Kitāb Mīzān al-hikma (ed. Hāshim al-Nadwa, Haydarābād 1940) was completed in 515/1121-2. In the eighth treatise, two steeple-clepsydras are described. On the short arm of the beam was a vessel that discharged water at constant speed from a narrow orifice. Two sliding weights were suspended to the long arm, which was graduated into scales. At a given moment, the weights could be moved to bring the beam into balance and the time could then be read off from the scales (Hill, Arabic water-clocks, 47-62).

In 1276-7 a work entitled Libros del saber de astronomía was produced in Castilian under the sponsorship of Alfonso X of Castile (5 vols., ed. M. Rico y Sinobas, Madrid 1865). This consists of various works that are either translations or paraphrases of Arabic originals. It included five timepieces, one of which is of significance in the history of horology. This consisted of a large drum made of walnut or jujube wood tightly assembled and sealed with wax or resin. The interior of the drum was divided into twelve compartments, with small holes between the compartments through which mercury flowed. Enough mercury was enclosed to fill just half the compartments. The drum was mounted on the same axle as a large wheel powered by a weight-drive wound around the wheel. Also on the axle was a pinion with six teeth that meshed with 36 oaken teeth on the rim of an astrolabe dial. The mercury drum and pinion made a complete revolution every four hours, and the astrolabe dial made a complete revolution in 24 hours. This type of timepiece had been known in Islam since the 5th/11th century—at least 200 years before the first appearance of weight-driven clocks in the West (S.A. Bedini, The compartmented cylindrical clepsydra, in Technology ad Culture, iii [1963], 115-41).

The mechanical clock was invented in western Europe towards the end of the 13th century. Almost certainly its inventor came from the ranks of the makers of water-clocks. The verge escapement made the mechanical clock possible, but all its other features—weight-drive, automata, gear-trains and segmental gears—were present in Islamic water-clocks. It is highly probable that these ideas were transmitted from Islam to the European makers of water-clocks. An Islamic influence on the genesis of the mechanical clock may therefore be postulated.

Several of Taṭā' al-Dīn's writings are concerned with timekeeping, and one of these, The brightest star for the construction of mechanical clocks, written about 973/1565, contains many ideas that are essentially the same as that used by 'Ridwān and al-Dżazari. There is every likelihood that these chapters were indeed the work of Archimedes.

The clocks in the Ottoman Empire... (Ankara 1966). In this he described the construction of a weight-driven clock with verge-and-foliot escapement, a striking train of gears, an alarm and a representation of the moon's phases. He also described the manufacture of a spring-driven clock with a fusee escapement. He mentions several mechanisms invented by himself, including, for example, a new system for the striking train of a clock. He is known to have constructed an observatory clock and mentions elsewhere in his writings the use of the pocket watch in Turkey. Taṭā' al-Dīn's descriptions are lucid, with clear illustrations, showing that he had mastered the art of horology. Clockmaking did not, however, become a viable indigenous industry, and Turkey was soon being supplied with cheap clocks from Europe, especially after the invention of the fusee escapement. The low price of these European clocks, which entered Turkey, he said, from Holland, France, Hungary and Germany.

mechanical devices, Dordrecht 1974. Further bibliography given in the text. (D.R. Hill)

3. In eschatology, *Sā'a* ("the Hour") is one of the most notable concepts of Kur'ānic eschatology, for which numerous parallels can be detected in Judaism and Christianity. *Sā'a* indicates throughout the scripture the time of the resurrection (XXII, 7) and of the Last Judgement (XXII, 55-7) [see *bā'th; riyāma*]. When the *Sā'a* comes, people will meet Allah carrying their sins with them (VI, 31). Each soul will be given the reward due for its works ("XX: 15"); the believers will enter Paradise, whereas the idolaters will not be saved by their gods (XXX, 12-16). Those who disbelieve deny the *Sā'a* (e.g. XXXIV, 3). The *Sā'a* is inevitable (XL, 59), and expected to occur suddenly (XLVII, 18; XIII, 66), and within a short time (e.g. XVI, 77; LIV, 1; XII, 17; XXXIII, 63). It will be swift (LXXIX, 42-6). Its exact time is, however, known to Allah alone (XIII, 85).

The materialisation of the *Kur'ānic Sā'a* will be preceded by a cataclysmic catastrophe. The moon will be split (LIV, 1), the earth will quake, and the people will be terrifed (XXII, 1-2). The preceding signs (ṣahrū) of the *Sā'a* are already manifest (XLVII, 18). The *Sā'a* is already heavy in the heavens and in the earth (VII, 187).

In post- *Kur'ānic hadāth*, the portents of the *Hour* became the subject of numerous traditions in which they were described as natural disasters. The sun will rise from the west (al-Bukhārī, Sahīh, 81 [Rīkāk], 40), a "fire" [i.e. volcanic eruption] will thrust the people from the East to the West (Bukhārī, 92 [Fītān]), or will burst out in the Hījāz, and illuminate the necks of the camels in Syria (Muslim, 52 [Fītān]). Entire tribes will be swallowed up (kha'af; cf. Kur'ān LXVII, 16) by the earth (e.g. Aḥmad b. Ḥanbal, Musnad, Cairo 1313/1895, iii, 483, v, 31).

The statements about the portents of the *Sā'a* are usually traced back to the Prophet himself; his knowledge about the coming events is taken to demonstrate his prophetic capability, for which reason the traditions containing his apocalyptic utterances concerning the *Sā'a* sometimes appear in chapters about his miracles (e.g. al-Bukhārī, 61 [Manākbī], 25).

The most typical structure of Muhammad's apocalyptic utterances was: "The Hour will not come, until..."—*lā tak'amū l-sā'a hatta...* (for a thorough survey of the various traditions of this type, see Ibn Haḍjar al-Asqalānī, Fāth al-bārī, sharh Sahīh al-Bukhārī, Būlāk 1310/1892, repr. Beirut n.d., xiii, 72 f.).

Several traditions of the Prophet comply with the Kur'ānic tenet that the time of the Hour is known to Allah alone (e.g. al-Bukhārī, 2 [Imām], 37). But other traditions stress that it is near at hand, and that Muhammad was sent as a prophet at a distance of one or two fingers away from it (e.g. ʿAbdallāh b. al-Mubārak (d. 181/797), Musnad, ed. al-Sāmarrāʾī, Riyaḍ 1987, no. 87). Sometimes a specific date was indicated for the *Hour* (e.g. at the turn of a century). After the date had elapsed while nothing happened, the traditions had to be reinterpreted, and new traditions shifting the end to a later date were put into circulation (see S. Bashear, *Muslim apocalypses and the Hour: a case-study in traditional reinterpretation*, in IOS, xiii [1993], 75-99).

The eschatological chaos which was to antedate the *Sā'a* did not remain limited to natural disasters, but was also expanded in Muslim tradition to human society. Many traditions are based on the conviction that the *Sā'a* will come when the orders of cultural and social structures are turned upside down; nomads will construct high buildings, masters will be born to slave-girls, the poor and naked will become leaders, etc. (e.g. al-Bukhārī, 2 [Imām], 37; Ibn Ḥanbal, i, 27, 51-2, 319). Religious and moral degeneration was turned into the most characteristic symptoms of the *Hour*: Knowledge will vanish, ignorance will prevail, fornication will become routine, and wine drinking will spread (*ibid.*, iii, 151). Spiritual values will give way to showy ambitions. The *Hour* will not come, says a tradition, till people start competing with each other in (erecting grandiose) mosques (e.g. Ibn Mājdā, 4 [Musnad], 2). These signs of religious degeneration antedating the *Hour* are such that the Arab tribes will revert to the idolatry of the Dāhiliyya (al-Bukhārī, 92 [Fītān], 23), and that the pilgrimage to the Ka'ba will be renounced (*ibid.*, 25 [Hadīth], 47). The delay of the Muslims before the *Hour* will eliminate the distinction between them and their non-Muslim predecessors. A tradition of the Prophet states that the *Hour* will not come until his community starts following in the footsteps of the previous communities (*ibid.*, 96 [Fītān], 14; Ibn Ḥanbal, ii, 325, 336, 367).

Other traditions focus on specific Islamic groups whose decline is said to indicate the impending *Sā'a*. A tradition says that the *Hour* will not occur as long as one Companion of Muhammad is still alive (*ibid.*, i, 89, 93). Another tradition says that one of the portents of the *Hour* is the perdition of the Arabs (al-Tirmīṇī, 46 [Manākbī], 60). Some traditions stress that, like many other topics, that of the *Sā'a* was, too, used for advertising the virtues (fāḍā'ī) of various groups and factions within the Islamic community.

The great bulk of the traditions about the *Sā'a* are recorded in the *hadīth* compilations in the sections entitled *Fītān* (sometimes also called *Malāḥim* [q.v.]), i.e. tribulations, civil strife and wars which started since the murder of ʿUkṣār in (erecting the earliest *hadīth* compilations. In the *Dāmī* of Maʿmar b. Rāshid (d. 154/770) (preserved in the *Musannaf* of ʿAbd al-Razzāk (d. 211/827), *x*-xi, ed. Ḥabīb al-Rahmān al-Aʿẓāmī, Beirut 1970), a tradition is recorded in which ten symptoms of the *Hour* are counted (*Abd al-Razzāk, xi, no. 20792). Some of them reflect Kur'ānic imagery. The signs are: Three instances of people being swallowed up in the ground; the emergence of the Dādžīl; the Descent of ʿĪsā; and his clash with the Dādžīl appear amongst the portents of the *Hour* in the earliest *hadīth* compilations. In the *Dāmī* of Maʿmar b. Rāshid (d. 154/770) (preserved in the *Musannaf* of ʿAbd al-Razzāk (d. 211/827), *x*-xi, ed. Ḥabīb al-Rahmān al-Aʿẓāmī, Beirut 1970), a tradition is recorded in which ten symptoms of the *Hour* are counted (*Abd al-Razzāk, xi, no. 20792). Some of them reflect Kur'ānic imagery. The signs are: Three instances of people being swallowed up in the ground; the emergence of the Dādžīl; the Descent of ʿĪsā; and his clash with the Dādžīl (Gog and Magog; see Kur'ān, XXVI, 82); the Smoke (*Dūkān*; see Kur'ān, XLIV, 10); the breaking loose of Yādūjūd and Māṣūdī (Gog and Magog; see Kur'ān, XXI, 96-7); a chilly wind which will take away the soul of every believer; and the rising of the sun from the west. Historical enemies of the Muslims were turned into
the evil party of the eschatological wars. In the early Sahifa of Hammam b. Munabbih (d. 132/749), they are the Turks. Battles with various Turkish tribes are said to mark the approaching Hour (Hammam b. Munabbih, Sahifa, ed. Rifat Fawzi 'Abd al-Mu'taibb, Cairo 1985, no. 126). In the Dāmīt of Ma'mar b. Rāqib, the Rūm, i.e. the Byzantines, appear as the eschatological rivals. The traditions about them reflect the greatest military ambition ever nurtured by the Muslims, namely the conquest of Constantinople [see Ḳustanṭīnya]. At the same time, they also reveal the Muslim apprehensions of the grand military eschatological context. It is stated in 'Abd al-Razzāk (xi, no. 20812) that the Hour shall only come when the battle with the Byzantines breaks out. During the battle, Constantinople will fall, the Dādīḏāl will appear and the Muslims will die fighting him. But according to other traditions, the Dādīḏāl will soon be defeated by 'Īsā (Ibn Hibban, xv, no. 681). See also W. Madelung, Apocalyptic prophesies in Hijms in the Umayyad age, JSS, xxxi (1986), 158 f.

In a tradition appearing in other hadith compilations (e.g. al-Bukhārī, 58 [Qiyṣa], 15), the anticipated combat with the Byzantines is again set in an eschatological context, but this time, it is not the much-desired fall of Constantinople which is predicted but rather a massive Byzantine attack of which the Muslims seem to have been worried at the time when the tradition was first prompted. This attack is the last of six events which, according to Muhammad's prophesy, will precede the Hour (for a detailed analysis of this tradition, see Conrad, art. cit.). The first five are well known from Islamic history: Muhammad's own death; the conquest of Jerusalem; a frightful epidemic (interpreted by Muslim commentators as the plague of 'Amwās [q.v.] in 'Umar's days); abundance of wealth with which no one will be satisfied any longer (said to refer to spoils coming in from the occupied lands in the days of 'Uthmān); a devastating fīna (explained as the events which took place following the murder of 'Uthmān). The sixth sign is a truce with the Byzantines, which the latter will soon violate and then attack the Muslims with a mighty army. According to Muslim commentators, only the latter event is yet to come (see Ibn Abi Shayba, Fath al-bāri, vi, 30).

In less prevalent traditions, the expected eschatological wars include battles against other historical enemies of Islam, namely the Jews. Muslim tradition had turned them into the supporters of the Dādīḏāl. It is related that when the Hour occurs, inanimate objects will be able to talk, and each stone will surrender to the Muslims the Jew who hides behind it (e.g. al-Bukhārī, 56 [Dhikr], 94; Muslim, 52 [Fitan]; Ibn Hibban, ii, 398, 417, 330).

The messianic expectations for salvation following the eschatological wars were not only focused on the Descent of 'Īsā who would defeat the Dādīḏāl, but also on the appearance of the Mahdi [q.v.]. His exact identity was disputed between various political groups, and their disparate pretensions are often reflected in the traditions, including those referring to the Hour. For one group, it was the Mahdi who would not occur until a man from Muhammad's family comes and fills the earth with justice (e.g. ibid., iii, 17, 36). A more specific tradition attributes to Muhammad the statement that the man's name will coincide with that of the Prophet (ibid., i, 376). Such statements could confirm the claims of the Ḳalīds, who anticipated a Mahdi of Muhammad's family. But other groups expected their own Mahdi. Muslims of Yamani descent awaited the emergence of a South Arabian ("Ḳaḥṭān"); i.e. non-Kurāshī, leader, whose chief achievement would be the conquest of Constantinople (see Madelung, Apocalyptic prophesies, 149 f.)

Some identified him with the prophet Shu'ayb b. Sālih (Ibn Hadżār, Fath al-bāri, xii, 67-8).

Such expectations triggered off the reaction of those who believed that leadership should only be invested with members of Kurāsh. The latter included the predicted advent of the Kaḥṭān among the ominous portents of the Ša'ī'a. A tradition stating that the Hour will not come until the Kaḥṭān leads the people was recorded by al-Bukhārī under the derogatory heading (92 [Fitan], 23: "The change of time till idols are worshipped"). In other traditions with the same statement about the Kaḥṭān, the hopes for the conquest of Constantinople are scorned (‘Abd al-Razzāk, xi, no. 20816). Another tradition of the Prophet predicts the advent of a man from the masu‘ili whose name is Dādīḏāl; he will lead the people at the end of days (al-Tirmidhl, 31 [Fitan], 5; Ibn Hanbal, ii, 329).

Some Muslim scholars identified him with the Kaḥṭān (Ibn Hadżār, Fath al-bāri, vi, 397).

already indicate that mankind, because of divine predestination, is divided into “happy” inhabitants of Paradise and “unhappy” dwellers in Hell. However, the impact of predestination is mitigated by utterances according to which an active effort of the human being is required. Next to human acceptance (rida [q.v.]) of what God has predestined, Musnad, i, 168, 26–7, also mentions the prayer to God for obtaining what is good (istikhra [q.v.]) as a characteristic of sa’dá.

Under the influence of various classical doctrines (especially those of Platonic political philosophy, of Aristotelian ethics, of Neo-Platonism, and partly also of Islamic mysticism, the possibility for a human being to strive after sa’dá is often described in Islamic philosophy as the pursuit of “assimilation to God” (ismawiyya, Plato, Theaet., 176 B), of nearness to God, and of knowledge of God through a virtuous life. At the beginning of Islamic philosophy, this interpretation is found in al-Kindî’s works. His Risâla fi hududi al-asrâb wa-rumûldh (ed. Abû Ridâ, Rasâ’il, i, 177 ff. = Cinq épîtres, 37 ff.), his utterances transmitted in the Munâqshah Siwâan al-hikmâ of Abû Sulyâmân al-Sijîstânî (ed. Dunlop, §§ 246–8), his Risâla fi alifis Subrât (ed. Fâkhry, Dirâsât, 45–60), his Risâla fi Ahlabeides wa-Sukrdt (cf. Atiyeh, 123 ff., Alon, 131 ff.; Butterworth, in Political aspects, 32 ff.) and his Risâla fi ‘ilâs fi-duf al-ahzân (ed. Walzer-Ritter, 1958), which goes back to a lost Hellenistic treatise, describe a concept of virtue which is inspired by the Platonic cardinal virtues. Socrates is named as the ideal of moderation and of spiritual values, which are superior to worldly possessions. The person who turns his attention to intelligibles, and who in his doings keeps to the virtues, will “not be unhappy (shakîy)” in the hereafter, will be near to his Creator and will know Him (Munâqshah, § 248, Eng. tr. Atiyeh 1966, 225). This image of Socrates was adopted, with some modifications, by Abû Bakr al-Râzî [q.v.] in his al-Sina al-falsafyya (ed. Kraus, Rasâ’il, 99 ff.; tr. Arberry, Aspects, 120 ff.; cf. Walker in Political aspects, 77 ff.).

The person who leads a moderate life and who, as far as possible, restrains his passions, “assimilates himself to God as far as possible” (Rasâ’il, ed. Kraus, 108, 8 ff.). In his Maktaba fi amûrad al-iskab wa-l-tawwâl (“political success”), Abû Bakr al-Râzî expresses this as follows (Rasâ’il, ed. Kraus, 145): “progress (tanaqqul) and knowledge (‘ilm) belong to the symptoms of ‘happiness’ (ikbâl) and indicate that a person ‘is attentive to happiness’ (tawakkul sa’da laha).” Knowledge and justice are named as the main aims of the human being.

This ideal of virtue was adopted by Abu Bakr’s opponent, the Ismâ‘îlî Abû Hâtim al-Râzî [q.v.], with one alteration: the bearer par excellence of the Platonic cardinal virtues and of the Aristotelian principle of the golden centre is the Prophet Muhammad, who possesses knowledge revealed by God. He who follows him and does not rely upon his own intuition, is able to understand the religious laws and can be sure of salvation (nâdîs) (Abû Hâtim, A’dâm, ed. Al-Sawy, 77 ff., esp. 110, 9 ff.; cf. Daiber, 1989).

The high appreciation of reason as the guideline for a practical philosophy, understood as ethics in the first place and as a practical philosophy of philosophers mentioned so far, and culminates in al-Fârâbî’s [q.v.] thesis of the ideal sovereign as philosopher and prophet (cf. Daiber, Ruler). His knowledge, inspired by the divine active intellect, enables him to govern the Ideal State by ordering religious laws. Religion appears as the imitating picture (“imitation”) and the “instrument” of philosophy, which is essentially understood here as practical philosophy and as ethics of the individual person in the State. In this way, philosophy, thus understood, realises itself through religion and becomes an ethical insight into “what is good and evil in the actions usually performed by human beings” (al-Farabi, Mahabîd, ed. Walzer, 204, 1–2). As was the case with Aristotle (Nicomachean Ethics, 1144a, 5–6), philosophy is not exclusively “scientific perception” or theoretical philosophy; rather, it provides a human being with an ultimate degree of happiness (al-sa’dá al-kayd = eudaimonia; cf. Daiber, Prophete, 733–4; Shahjahân) with the help of the above-mentioned ethical insight, i.e., practical philosophy. When al-Fârâbî speaks of “political happiness” (see Galston, in Political aspects, 100 ff.), he has in mind the Aristotelian concept of the human being as θω̑ν πολιτικῶν (Politics, 1253a, 2), who needs the help of his fellow-citizen in an Ideal State, governed by a philosopher who possesses prophetic knowledge.

This “political happiness” is reflected in the practical aspect of al-Fârâbî’s concept of sa’dá. It is part of the ultimate happiness, namely that of the hereafter: the human being can reach this when his soul liberates itself from its corporeal existence, actualises its potential intellect and arrives at the level of the active intellect. But happiness, in its complete form, is at the same time practical perfection. For practical philosophy, on the one hand, shows the way to theoretical perfection, to contemplation; on the other, theoretical perfection is the signpost towards practical philosophy, the ethical insight into the Perfect State. The latter’s sovereign, the prophet-philosopher, transmits it to his subjects, the state’s citizens, in the form of religious laws, religion being the sum total of these laws.

In this way, theoretical philosophy develops into practical-ethical perfection through practical philosophy and through religion that is, through the guidance of religious prescriptions, transmitted by the philosopher-prophet. At the same time, practical-ethical perfection in the Ideal State, in society, is the prerequisite for theoretical perfection, i.e., contemplation. The theoretical and practical aspects of knowledge, of moral-ethical insight respectively, are thus inseparably united in al-Fârâbî’s concept of sa’dá.

This link between ethics and knowledge is also found in the Epîstles (Rasâ’il) of the Ikhwân al-Sa’fâ [q.v.], possibly composed in A.D. 959–60. Their political philosophy betrays the influence of al-Fârâbî (Enayat; Abouzeid), but they accentuate more strongly the Neo-Platonic elements and are eschatologically inspired. Through “purification” of his soul and reform of his character, the human being acquires increasing knowledge of “intelligibles” (al-umûr al-‘âkhlîyâ), for it is only knowledge (ma’âﬁa) of God which leads to ultimate happiness and to salvation in the hereafter (Rasâ’il, iii, 241, 322–3; tr. and comm. Diwald, 203 ff., 419 ff.). For this, a human being needs as a preliminary step the fraternal society, a society which is aware of its solidarity in being obedient to the divine law (nâmûs [q.v.]), and jointly pursues “the good of the religion and of the world” (sa’dâ al-dîn wa-l-dunyâ) (Rasâ’il, i, 225).
tion (al-kamāl al-khulqī) (Tahdhib, 72, 10 ff.). For the individual in society, he thus offers ethics which are inspired by the Platonic-Aristotelian doctrine of virtues (Fakhrī, 1991, 107 ff.). Just and virtuous acts and increasing knowledge of the “spiritual things” (Tahdhib, 83 at the end) purify the soul of the “physical things” (al-umur al-tabfayya; see Tahdhib, 91, 18; cf. Plotinus, Enn. I, 6), lead to “tranquility of the heart” (Tahdhib, 40, 5) and to “nearness to God” (dwarr rabb al-dālim; see Tahdhib, 15, at the end). This is the state of perfect knowledge and of wisdom, in which the human being resembles the divine first principle, the divine intellect (Tahdhib, 88-9). Miskawayh called it the ultimate happiness, which is preceded by several preliminary steps (saʿādāt) (Miskawayh, al-Saʿadda; Ansari 1963; Fakhrī, 1991, 121 f.).

Among the Islamic thinkers who followed Miskawayh’s ethics (Fakhrī, 131 ff.), mention may be made here of al-Rāghib al-Iṣfahānī [q.v.]. In his Kitāb al-Dhārur wa taḥdībat al-ṣayyara’s he offers an original adaptation of Greek ethics as it was known to him through al-Fārābī, Miskawayh and the Rasāʾil Ikhwān al-Safāʾ, to the statements of the Kur’ān (Daiber, Griechische Ethik). He replaces Miskawayh’s Platonic-Neoplatonic concept of the assimilation to God by the Kur’ānic concept of khilāfū (sūra II, 30, VI, 165). As the “representative” (khālid) of God in this world, the human being imitates God as much as he is able to, by following the ḥaḍāt and by concerning himself about his sustenance on this earth (cf. sūra XI, 61/64: istamanakum). Thus a human being acquires happiness in this world, which, as in Miskawayh, is a preliminary to the “real happiness” in the hereafter (al-Dhārur, 128, 4 ff.; cf. Taṣfīl al-nasīhāt). In his Rāghib al-Iṣfahānī’s ethics, by which al-Ghazālī [q.v.] was deeply impressed, a mystical tendency can be detected which was already visible in the Rasāʾil Ikhwān al-Safāʾ and in Miskawayh’s work. There is not so much concern about the role of the individual in society, but rather about striving after the happiness lying in the knowledge of, and the nearness to, God, which is a happiness of the hereafter. This corresponds to the Neoplatonic ḥudāmat al-dīn, that ideal of the philosopher who withdraws from society (cf. Kraemer 1986, 128).

In accordance with this view, the prophet, for Ibn Sinā, is a Sūfī who preaches the divine laws as a way to the mystical path, to the liberation of the soul from the body, to its intellectual perfection, and to the vision of God (Ibn Sinā, Risāla fi l-saʿāda; Ansari 1962-3, E.I.J. Rosenthal, 144 ff.). But for Ibn Sinā too, life in society remains an indispensable preliminary to happiness in the hereafter. Obedience to the lawgiver, to the prophet, is postulate, as is the fulfillment of duties towards God and towards the fellow man. According to Ibn Sinā’s view, which is clearly associated with that of al-Fārābī, the sovereign, who is a prophet and a Sūfī, unites in his person practical and theoretical wisdom (Morris, in Political aspects, 153 ff.). This union creates happiness (al-ṣāḥīh; al-ḥādīth, ii, 455, 14), but is also a postulate for the sovereign, who preaches the law with the laws with the sovereign’s qualities.

It was the Andalusian philosopher Ibn Bādīdā and, above all, his younger contemporary Ibn Ṭufayl [q.v.], who drew the final conclusion from the increasingly mystical-Neoplatonic orientation of the saʿāda concept. Society is no longer a postulate for the individual to strive after happiness. On the contrary, it is only the isolated philosopher (al-mutawāhid), the Sūfī, who, withdrawing from society, obtains ultimate happiness through his self-government (taḍābir) and his vision of the truth (Altmann, Daiber, Autonomie, 242 ff.; Harvey, in Political aspects, 199 ff.). For him, it is possible to achieve a mystical ascent to higher forms of knowledge, namely by liberating the soul from the matter and by the union (itiṣāf) with the divine active intellect, which is an emanation from God. Society is only a place to meet (līqla, līṭhākh), which may be useful for the individual and may stimulate his emulation in striving after intellectual perfection. In opposition to Plato’s view, the citizen no longer serves society; at best, society can stimulate the individual in his striving after happiness, to be found in intellectual perfection.

In his philosophical novel Ḥāyy Ibn Yākūz, Ibn Ṭufayl (cf. Fradkin, in Political aspects, 234 ff.) consequently developed the thesis that the individual’s philosophy and society’s religion are not contradictory, but do not support each other either. Ibn Ṭufayl’s compatriot Ibn Ruḫd, who was twenty years his junior did not share with him this radical running-away from al-Fārābī (Daiber, Autonomie, 246-7). In his Epistle on the possibility of conjunction with the active intellect, he declares that in this life, too, it is possible to strive after happiness as long as this is not hampered by society. For this, theoretical study should be combined with acts (tr. Bland, 108-9). The aim of such a striving is the immortality of the soul, which is achieved when the soul increasingly unites its acquired knowledge with the active intellect. This union, which is the most perfect form of human cognition, is possible because the active intellect is the form of the intellectus materials, which in its turn is the form of the soul, i.e. its eternal potentiality. It is not only remarkable that Ibn Ruḫd denies (against al-Ghazālī) the individual immortality, deriving this denial from the union of the soul with the eternal form of the active intellect, much more important is his conclusion that striving after philosophical knowledge, i.e. after happiness, is not a duty of individuals or of individual states, but a task of mankind. This philosophical knowledge is the most perfect form of the universal human knowledge of religious truth which is reflected in the ḥaḍāt. Accordingly, the Ideal State, i.e. the Philosophical State, comprises all mankind; the best Islamic State, a State which only existed during the period of the first two caliphs, is at best an imitation of such a Philosophical State.

Ibn Khālīdūn [q.v.], the last great Islamic thinker, incorporated into his philosophy of history Ibn Ruḫd’s universalistic opinion, as well as al-Fārābī’s and Ibn Sinā’s doctrines (Mahdī, 1957). He put new accents and, by introducing the term waḥībīya [q.v.], he gave a new significance to the concept of society. The polis, the state, is dispensable for the entire human society, for its progress (Mukaddima, iii, 54 at the end: islāḥ al-bāḥr) and for its preservation. In his philosophy, which he preaches to mankind in the form of “political laws” (abdāmak al-siyāṣa), the sovereign of the Ideal State, the prophetic lawgiver, deals with the well-being of the world (masālik al-dunya) and with the “salvation” of mankind “in the hereafter” (salāḥ ad-dīn) (Mukaddima, i, 343). Philosophy, understood as ethical and political, as the task of the society of the state, are seen here as indispensable materials for the well-being of all mankind in this world and for their happiness (saʿāda: Mukaddima, i, 343, 4) in the hereafter.

ADAT ALI KHAN. Nawab of Awadh or Oudh (regn. 1798-1814).

His brother Aṣaf al-Dawla had died in September 1797, but after a four months' interim, Aṣaf al-Dawla's putative son Wazar ʿAli Khān was set aside and the British governor-General Sir John Shore installed in his place ʿAli Khān, who had been living under British protection in Benares since 1776. His reign is noteworthy for the extension of British control over the Oudh territories. A treaty concluded with the late Nawab in 1775 had placed these territories under the protection of the East India Company, which undertook to provide troops for their defence in return for an annual subsidy; in 1798, a new arrangement was made with the late Nawab in 1775 had placed these territo-

threatened his person, Saʿadat ʿAli Khan was at first eager for this reform, but afterwards refused his consent and also refused to abdicate, and only in 1801 yielded to pressure and signed the Treaty of Lucknow; this relieved him from all pecuniary obligations to the Company, by the cession of six districts yielding a revenue equal to the cost of the Company's troops, and the Nawab undertook to introduce into his territories a system of administration conducive to the prosperity of his subjects and calculated to check the ruin that threatened the resources of his country. Thus Wellesley's fears that the buffer state of Oudh might become too powerful were unfounded, in particular from the ruler of Afghanistan Zaman Šāh (who had already invaded the Pandjāb in 1797) in alliance with the Rohilla [q.v.] Afghans, were set at rest. With the cession of the western part of Oudh and its lands along the Ganges and Diamānā rivers, only a rump of the state remained until its complete annexation in 1856. Europeans already controlled much of Oudh's economy by the early 19th century, especially the textile trade in fine cloths and raw cotton, and this commercial control now increased.

Saʿadat ʿAli Khan's reign was an Indian summer of the Mughal culture of Hindīstān, with Lucknow especially florishing as a centre of ʿShīʿī culture [see LĀJHANA]. Saʿadat ʿAli Khan died in 1814 and was succeeded by his second son ʿAlī al-Dīn Haydar, who subsequently became the first king of Oudh [see AWADH].

SAʿADDĀY BEN YOŚĒF, Saʿid (Ani) Yaʿqūb ʿUyūn al-Fakūmī (269/331/882-942), Jewish theologian, philosopher and philologist who wrote in Arabic, considered through his independence and breadth as the initiator of several Jewish intellectual disciplines, and a pioneer in Jewish intellectual disciplines, posed challenges, to which the creative genius of Saʿid was able to respond. Stopping up the breaches, he consolidated Rabbinical Judaism's authority, faced as it was with the twin threats of schismatic movements, in part inspired by Islamic heriesis, and of Muslim polemics. According to Maimonides, "If it had not been for Saʿadyā, the divine religion might well have almost disappeared, for he made clear its mysteries and strengthened its weak points by spreading it and supporting it by his word and pen" (Epistle to the Yemen, ed. A. Halkin, New York 1952, 64). In 316/928, despite his non-Babylonian origin, he was nominated as Gaʿon or Chief Scholar of the academy at Sura (though not by the name by which he is best known), and under his direction, this institution enjoyed a remarkable renaissance.

Through political intrigues in which the caliph al-Kāhir had to intervene, Saʿid Gaʿon was deposited in 320/932, but was restored in 327/938 and functioning in the office till his death in 331/942. During the interim years of isolation, he had devoted himself to his literary work.

2. Works

H. Malter, Saʿid's biographer, listed over 200 titles, covering almost all the domains of learning cultivated at that time, such as exegesis, philosophy, philology, law, liturgy, polemics and chronology. In the legal sphere, Saʿid was the first Jewish author to have composed his decisions in Arabic. He made the first attempts at codification, in the form of monographs whose structure is clearly inspired by the model of the Islamic fatwā.

His main work in philosophy, and the first systematic attempt at a synthesis between the philosophy of kalām and Jewish dogmas, was the K. al-ʿĀmānāt wa ʿl-ʿīrahādd (ed. in Arabic script S. Landauer, Leiden 1880, in Hebrew script, ed. Y. Kaff, Jerusalem 1970, Eng. tr. S. Rosenblatt, The Book of beliefs and opinions, New Haven 1948), written in 322/933. It had a deep influence on Jewish thought, also written at this time, only fragments exist. In the course of his period of education, he addressed to Ḩāšā b. Sulaymān al-ʿIṣāfī (d. ca. 344/955) at Kayrawān, a physician at the Aḥghāzī court, a philosophical correspondence which did not, it seems, meet with the approval of this Neoplatonist. In 303/915, he put together his defence of Rabbinical Judaism against the Karaites [q.v.], very numerous in Egypt.

In this same year, Saʿid left for Palestine, where, according to al-Masʿūdī (Tanbih, 113), he perfected his educational and literary efforts at Abū ʿAbd Allāh the Kāhir (d. 320/933). The latter is also mentioned by Ibn Ḥazm in his K. al-Fisal wa ʿl-nihāl, iii, 171, as being, together with David al-Mukammis and Saʿid himself, one of the mutakallimān of the Jews. In 309/921, very likely with the aim of getting to know the great Jewish academies of Mesopotamia, Saʿid left for Baghādād, stopping en route at Aleppo. In 310/922 he was the main protagonist in the controversy over the calendar, in which the heads of the Babylonian community were in opposition to Aḥarōn Ben Mēʾir, head of the Palestinian academy. Saʿid emerged victorious from this quarrel, which is mentioned even by the Syrian historian Elias of Nisibin (11th century) in his chronology. This victory had a determining influence on his career, since, in recognition of his services to the Rabbanite cause, Saʿid was elected ʿalīf or master of the Babylonian academy of Fūm Pēdīthā.

A Jewish society in full transition, becoming progressively Arabised and intellectually enriched by new philosophical and scientific disciplines, posed challenges, to which the creative genius of Saʿid was able to respond. Stopping up the breaches, he consolidated Rabbinical Judaism's authority, faced as it was with the twin threats of schismatic movements, in part inspired by Islamic heriesis, and of Muslim polemics. According to Maimonides, "If it had not been for Saʿadyā, the divine religion might well have almost disappeared, for he made clear its mysteries and strengthened its weak points by spreading it and supporting it by his word and pen" (Epistle to the Yemen, ed. A. Halkin, New York 1952, 64). In 316/928, despite his non-Babylonian origin, he was nominated as Gaʿon or Chief Scholar of the academy at Sura (though not by the name by which he is best known), and under his direction, this institution enjoyed a remarkable renaissance.

Through political intrigues in which the caliph al-Kāhir had to intervene, Saʿid Gaʿon was deposited in 320/932, but was restored in 327/938 and functioning in the office till his death in 331/942. During the interim years of isolation, he had devoted himself to his literary work.

In the legal sphere, Saʿid was the first Jewish author to have composed his decisions in Arabic. He made the first attempts at codification, in the form of monographs whose structure is clearly inspired by the model of the Islamic fatwā.

His main work in philosophy, and the first systematic attempt at a synthesis between the philosophy of kalām and Jewish dogmas, was the K. al-ʿĀmānāt wa ʿl-ʿīrahādd (ed. in Arabic script S. Landauer, Leiden 1880, in Hebrew script, ed. Y. Kaff, Jerusalem 1970, Eng. tr. S. Rosenblatt, The Book of beliefs and opinions, New Haven 1948), written in 322/933. It had a deep influence on Jewish thought,
above all in its Hebrew translation Sefer ha-emunot we-
ha-de^ot, made in 582/1186 by Yehudah Ibn Tibbon. 
Its importance only faded with the appearance of 
Maimonides’ Guide for the perplexed. The arrangement 
of the seven points to completion, as it also does in book 
seven degrees through the Mosaic revelation. 

There are indications that Sa^id had presumably at 
his disposal the Arabic translation of the dox-
ographical compilation De placitis philosophorum made by 
Kust^a b. L^uk^a [q.v.]. He seems equally to have utilised the 
Kust^a’s contemporary Ibn Daw^ud b. Misk^a al-Kalidi (Fr.
Tr. M. Lambert, Commentaire sur le Sefer Yesira, Paris 
1891, in 319/931, Sa^id, as a true mutakallim, was partic-
ularly interested in the problem of the origin of things. 

Sa^id was also the author of the first translation of 
the Hebrew Bible into Arabic (Ta^ifir). Each book was 
preceded by an Arabic preface, explaining its struc-
ture and contents. Faithful to the rationalist tenden-
cies of the Mu^tazila, Sa^id endeavoured to attenuate the 
antropomorphisms. With the accomplishment of 
a commentary of a philosophical character, his trans-
lation became the Vulgate for Arabic-speaking Jews and served as a basis, too, for the Arabic version 
adopted by the Samaritans and by the Copitic Church.

The first published edition, at Constantinople in 
935/1546 within the polygol Sorcino Pentateuch, was the 
first Arabic text to be printed in the East. The 
Arabic versions of the polygol Pentateuch of Paris 
(1645), with the Latin translation of Gabriel Sionita, 
and of Walton (London 1654-7), were those of Sa^id.

SABA’, SABB’A (A.), seven, is a number of greatest 
importance in both the Semitic and the Iranian tradi-
tions as it combines the spiritual Three and the mate-
rial Four. Its history probably begins in Babylon with 
the observation of four lunar phases of seven days 
each. The seven planets (including sun and moon) 
have reigned supreme in human thought since Anti-
quity. Each of them is connected with a specific col-
our, scent and character. Niz^ami’s (d. in the early 
7th/13th century [q.v.]) Persian epic Haft paykar is the 
finest elaboration of these ideas. The imagined seven 
stations between the sublunar world and the trans-
planetary sphere served as models for the way of the 
smoker in almost all religions (the Mithras cult is 
a good example). In Islam, it found its best-known ex-
ample in the seven valleys in ‘At^ar’s (d. in the early 
7th/13th century [q.v.]) Man^i^k al-fayr. Before him, al-
Nuri (d. 294/907 [q.v.]) had spoken of the “city of the 
heart” with its seven walls. To this group of ideas 
belong also the 70,000 veils of light and darkness 
which, according to Sufi thought, separate God and 
between Jew and human beings. For the Baha’i al-Sa’id [q.v.], divine 
creation reaches human kind in seven degrees through 
the First Intellect.

Seven was often connected with periodicity; the 
development of human life, especially, was thought to 
depend upon a seven-year rhythm. Here, the classical 
example is Ibn Tufayl’s (d. 581/1185 [q.v.]) Hayy Ibn 
Yaqzan.

Seven plays a considerable role in early Islamic 
thematics: the Kur^an often mentions the seven 
heavens, and heptads appear frequently in Sura Yusuf. 
Al-Bukhari speaks of seven major sins, and many 
ritual acts, prayers and invocations should be 
repeated seven times in order to yield a positive result. 

But according to a hadith, the infidel eats “with seven 
stomachs.”

The Seven Sleepers, mentioned in sura XVIII, 22, 
may be the models for numerous groups of heptads, 
such as the haft ‘affa, the seven virtuous women, who 
are venerated in Sind and the Pandjab as a unit, or the 
seven protective saints in Marrakesh. In popular 
usage, one finds customs such as begging alms for a 
religious purpose from seven women called Fajina; in 
Pakistan, the material for the bridal dress is cut by 
seven happily-married women. In all these cases, 
seven points to completion, as it also does in book 
titles like Haft kulzum “The seven climes” or Haft 
kalam “Seven oceans” (which, however, is a work on poetic 
rules).

Sufism knows the seven la’dat, fine spiritual points 
in the body, and seven major prophets are connected 
with them. Heptads appear in visions (see Rumi, 
Ma’nauna, iii, 11. 1983 ff.). The mystical hierarchy has 
seven degrees of light, and in some sects, seven 
saints are sometimes called “the eyes of God.” The 
Tij^aniyya [q.v.] dervishes believes that the Prophet 
honours their meeting with his presence when a cer-
tain litany of blessings over him is repeated seven 
times.

(P.-B. Fenton)
In the Persian tradition, expressions with Seven abound. For Nawruz [q.v.], haft sin are prepared, that is 7 items (fruit, plants, etc.) whose names begin with $; heroic acts such as Rustam's Haft $an appear sevenfold. Sindbād's seven journeys too belong in this category. The spheres are often called the "seven mils", Ursa Major appears as "seven thrones", haft awrang, and to ward off evil one may say "Be seven awrang, (seven mountains) between [the disaster and us]!" To do the work of seven millās means "to achieve nothing."

Seven reigns the whole philosophy of the Ismā'īlīs, the Severen Shī'īs [see ISMĀ'ĪLIYYA], who have developed a complicated system of heptads: seven prophets are the seven pillars of the House of Wisdom, the seventh imām in the succession of a prophet will bring the resurrection. From God's creative words "Be! and it becomes", with its seven Arabic letters (k.n.f.y.k.w.n), are formed the principles (k.n.f.y.k.w.n), the seven spheres in the four prophetic cycle, to the seven imāms in each prophetic cycle, to the seven earths. The heptagonal fountain in the Ismā'īlī Centre in London symbolises the structure underlying everything in Ismā'īlī thought in an artistic form.

Nevertheless, the number seven leads only to the goal at the end of the created universe, beyond which lies the Eight of eternal bliss—hence the hadīth, according to which Hell has seven gates, while Paradise has eight.

SABA$ for the Sabaeans (Greek Σαβαῖοι), the name of a folk who were bearers of a highly developed culture which flourished for over a millennium before Islam, together with three other folks, Maʿān, Kataban and Hadramawt [q.v.]. The main Sabean centre was Maryab (later Mārib, see MAʿRIB) in Yemen with its fertile oasis on the western edge of the desert known to Arab geographers as Sayhad (modern Rumal al-Sabāʾ atayn). In early historical times there were also Sabaeans settlements in Wadī Hadhramāt, more than 1,000 m above sea level. The montane plains lying west of Mārib and having an average level of 2,000 m above sea level were the home of other folks who spoke the same language as the Sabaeans proper, and seem to have formed some kind of federation under the hegemony of Saba$.

2. History. For the pre-history of Saba$, that is, before the beginning of the epigraphic record, there is no evidence available as yet. Silt deposits in the Mārib oasis point to intensive agricultural exploitation by artificial irrigation going back to at least the early second millennium B.C.; but what, if any, connection there may have been between these ancient agriculturalists and the Sabaeans as we know them, is wholly obscure. Trade links between South Arabia and Mesopotamia there must have been judged by Akkadian references to South Arabian products such as frankincense and myrrh; but the first specific mention of Sabaeans in Akkadian sources is in the 8th century B.C. Yet it still remains not altogether easy to discount completely one point which led Pirenne to propose a dating a couple of centuries later. Inscriptions of this period have rigidly geometrical forms, subjected to strict canons of proportion, astonishingly like Greek inscriptions of the 6th-5th century, but wholly unlike those of other Semitic alphabets. In earlier dating. It is hard to envisage how this style can have evolved totally independently, with a time-lag of two centuries, in two adjacent cultures with ancient trade links between them. In the latter part of the first millennium B.C., the musnad script developed (as was the tendency in Greco-Roman inscriptions) more decorative embellishments, at first with the introduction of serifs at the ends of the strokes.

Our knowledge of the Sabaeans is derived principally from their own inscriptions. Modern scholarship was first made aware of these by Carsten Niebuhr, member of a Danish exploratory mission in the end of the 18th century, and the number of inscriptions was published and studied during the earlier part of the 19th century, but it was Eduard Glaser's travels in the last decades of the century which produced a large number of copies (mostly squeezes) forming the real foundation of subsequent research. It must be admitted, however, that later 19th and early 20th century scholars indulged too freely in speculative deductions based on insufficient evidence. A turning point came in 1950; from then onwards, an ever more rapid archaeological activity resulting in the discovery of new texts has overcome not a few conclusions too confidently advanced by earlier researchers. At the time of writing, the flow of new material is still in full course, and it has to be anticipated that some of the presently current hypotheses may in their turn prove to be invalid. Any account that can be written at the moment must be taken as still tentative.

1. Script and language. The monumental inscriptions are drafted in a variety of South Semitic alphabets, the so-called musnad script [see MUSNAD]. The Sabaeic language, with the languages of Maʿān, Kataban and Hadramawt, forms an independent branch of Semitic, having in common one distinctive feature that is found nowhere else in Semitic: the use of prefixed- $ān in the function of a "definite article" corresponding to the Arabic prefixed al-. Within this language group, Sabaeic is distinguished from the other three by using 6 as prefix of the causative verb and as base of the 3rd person pronouns, where the others have a sibilant. On the southern borders of the Saβaean domain, the area between the Yislih pass and Dhamār used Sabaeic language, as did the non-Sabaean Radmān folk to the east thereof, in the Radāʾ area. By the end of the 3rd century A.D. the other three languages had fallen into disuse, at least for epigraphic purposes, and the Sabaeans, now under Yemen, now under Himyarite domination (see below), are in a late form of Saβaic; there are indications that the language may by this time have become a prestigious "learned" language, not in everyday use (this is comparable with the case in North Arabia, where the Nabatean inscriptions are in Aramaic, though the everyday language was probably Arabic).

The general consensus today is to assign the oldest substantial body of Sabaeic inscriptions (apart from a handful of seemingly earlier examples) to the 8th century B.C. Yet it still remains not altogether easy to discount completely one point which led Pirenne to propose a dating a couple of centuries later. Inscriptions of this period have rigidly geometrical forms, subjected to strict canons of proportion, astonishingly like Greek inscriptions of the 6th-5th century, but wholly unlike those of other Semitic alphabets. In earlier dating. It is hard to envisage how this style can have evolved totally independently, with a time-lag of two centuries, in two adjacent cultures with ancient trade links between them. In the latter part of the first millennium B.C., the musnad script developed (as was the tendency in Greco-Roman inscriptions) more decorative embellishments, at first with the introduction of serifs at the ends of the strokes.
The archaic flowering of Sabaean culture lasted until some time after the middle of the first millennium B.C. The fact that through the fourth, third and second centuries B.C. the important frankincense trade was in the hands of the Ma'in folk suggests some falling-off in Sabaean ascendency.

The second great flowering of Sabaean culture was in the first three centuries A.D., by which time a very different political picture had emerged. The various folks of the 2,000 m highland zone played a much more dominant role; and some of their leaders, who traditionally bore the title 'khw (i.e. Bedouin) in the highland and the Tihama' may be seen as the true founders of the modern Sabaean state. The second flowering of Sabaean culture lasted from the end of the fourth century B.C. to the beginning of the 2nd century A.D.

yet Garbini has produced cogent arguments to show that the attributes of īmḥīk are rather those of a warrior-deity like Greek Herakles or a vegetation god like Adonis. The remarks made in the article KATĀBĀN on this topic as it affects the situation in Kataban went to press before Garbini's article had appeared, they now need modifying in the light of that article.

Nevertheless, the moon certainly had much religious significance. A very common symbol engraved on altars and religious buildings shows a crescent embracing a disc, and it is presumably this symbol that the Muslim writers had in mind when they say that the first act of the day for an ancient Yemeni king was to "bow down to the images of the sun and moon". This is not to say, of course, that they were right in seeing the disc as representing the sun; some modern scholars have been inclined to think it represents the planet Venus.

The place occupied by the sun in the pantheon is not easy to assess. The Radfan folk had as their national patron-deity ʾāmil ṣiyāṭ "Lofty Sun", and elsewhere there are mentions simply of "Sun" without qualification. But it is dubious whether the majority belief is justified, that numerous references to a feminine deity described simply as "She-who-is-possessed of (ḏāt)" a certain quality, are necessarily to a solar goddess (too often, the interpretation proposed for the term describing the quality has been dictated by the preconception that it must be a quality of the sun).

Certain of the ancient religious practices have a special interest in that they have survived in some form or another until the present day. Worth mentioning are the communal pilgrimages (ziyārat) on prescribed days; a code of ritual purity (see Ryckmans); and ritualized hunting of the ibex, thought of as connected with the divine blessing of rain (Ryckmans and Serjeant).

4. Saba in Bible and Kurʾān. The visit of the Queen of Sheba to king Solomon, and the abundant accretions of legend around it [see mlkš], have been too extensively discussed to need mention here, except for the remark that there is a possibility that such a visit might have been associated with a trade mission, like Dionysus. (The remarks made in the article KATĀBĀN in this symposium are presumably this reference.) In the Kurʾānīc allusion (XXVII, 27 f.) the name Saba does not occur; she is simply "the queen of the south". But Saba does feature in a passage (XXIX, 15-16) which is one of those where the fate of ancient peoples is mentioned as a warning against worldly pride. The prosperity of the Mārib oasis (situated on each side of the wadi bed, hence "the garden of the left" and "the garden of the right") had been dependent on the maintenance of the great dam in good order; after the death of king Abrahā the political fabric that had made repairs possible crumbled, the irrigation system was destroyed and the oasis was devastated.

5. Sabaēans in Africa. Around the middle of the first millennium B.C., there were Sabaēans also in the Horn of Africa, in the area that later became the realm of Aksum (Eritrea). The evidence consists of 141 inscriptions, a very small number of inscriptions, which, however, make it clear that we have to do with genuine Sabaēans, holding to the national cult of īmḥīk. They were mixed up with various non-Sabaēan communities, and it is still much in dispute how one can envisage the actual demographic (and political) situation. There are five places in the Bible where the writer distinguishes Sheba ( moot) son of Yokṭān (who appears in the Arab genealogies as Kāḥṭān [q. v.]), i.e. the Yemenite Sabaēans, from Seba ( moot) son of Kugḥ, implying an African habitat. This spelling differentiation, however, may be purely fictitious; at all events the indigenous inscriptions make no such difference, and both Yemenite and African Sabaēans are there spelt in exactly the same way.

SABA — SABA

SABA, FATH ʿALI KHĀN, Persian poet, was born in Kāhšān, probably in 1179/1765, and died in 1238/1822-3. His people belonged originally to Adharbaydjan, and came from the Dunbali stock, a tribe of Kurds settled in the region of Kūhv. Members of his family held jobs as governors and administrators under the Zands and Kāḏjārs. His father, Ākā Muhammad, was governor of Kāhšān under the Zands, and his eldest brother, Muhammad ʿAlī Khān, was minister to the Zand ruler Lutf ʿAlī Khān (r. 1203-9/1789-94). Sābā also seems to have been identified with this monarch, and is reported to have composed poems in his praise. When Lutf ʿAlī Khān fled from Kirmān in 1208/1794 from the Kāḏjārs, Sābā’s brother was captured and put to death by the governor of Āḏrān, Aḥā Mertya Shāh (r. 1193-1212/1779-97 [q. v.]), founder of the Kāḏjār régime. Following this tragedy, the poet wandered from place to place in fear of his life until he was fortunate to find refuge with Fath ʿAlī Khān (afterwards Fath ʿAlī Shāh, r. 1212-50/1779-1834 [q. v.]), who was governor-general of Fārs at that time. Sābā transferred his allegiance to the Kāḏjārs, and reportedly destroyed the dviḻa which contained poems composed by him in praise of his former patrons, the Zands.

In 1212/1797, on the occasion of Fath ʿAlī Shāh’s accession to the throne, Sābā presented a kasīda which was well received by the new ruler. His fortunes prospered until he was appointed poet-laureate at the court. For some time he was also governor of Kun and Kāhšān, and held the honorary title of Itisāb al-Mannālīk ("Censor of the Provinces"). Eventually, however, he abandoned his administrative assignments to remain permanently at the court. He accompanied the monarch on his various travels and campaigns. It was during one of these campaigns in 1228/1813, involving Persia’s hostilities with Russia, that Sābā, at the behest of the Shāh, undertook the composition of his long epic poem, Shāhansāh-nāma ("Book of the King of Kings").

Sābā died in 1238/1822-3 in Tehran. His eldest son, Mirzā Husayn Khān (d. ca. 1264/1848), who

SABAB (s.), pl. asbwb, literally "rope" (habd), the basic sense as given by the lexicographers (cf. L'Ar), coming to designate anything which binds or connects. It is "anything by means of which one gains an end (maksud; al-^ilm); or an object sought" (mash^ib, in the Bahar al-^ilm). One can mention asbbw with the sense of "bonds" in Kurrân, ii, 166: "When the bonds [which unite them] are broken..." Ibn 'Abbas interpreted this as friendship (masouda); Mudjâhîd, "alliance" (tasawwul) in this context. The sense is also found of "a means of achieving s. th." Ibn Mansqrfis cites the expression "I made such a thing into a means of obtaining what I needed"; here, sabab is a synonym of waqf (one of the "ways of knowledge"; cf. Gardet and Anawati, Introduction à la theologie musulmane, 66, 375). From this same point of view, asbbw has assumed the sense of "means of subsistence."

1. In philosophy and medical science.

The hukmâ use the term as a synonym of illsa (one may consult 'illa, which deals with both terms in falsafa and kalâm). Al-Tahâwî gives in his Islâhî, following the Bahar al-^ilm, an interesting general presentation. The sabab is also called madrb "principle"; it is "that which a thing needs, whether in its quiddity or in its existence.... It is either complete (tâm: this is the divine causality in its perfect unity) or else incomplete (nâsîs), and then is divided into four types (that is, the causes in the metaphysical sense). The cause may be interior to the thing, and if the thing is with it potently, it is the material cause (sabab mâdd). If it is in activity, it is the formal cause (sabab sûr). Or if it is not interior to the thing, then it has an effect on its existence; it is the efficient cause (sabab fâlî). If it has an effect on the efficiency of its efficient cause (fî fâlîyât fî illsi), it is the final cause (sabab ghâb). One should note that this is
the way Ibn Sina defines the final cause (cf. Ihjadur, ed. Sulayman Dunya, iii, 444-5, with the comm. of Naṣir al-Dīn Tusi). If the efficacious action of the cause (ta‘addi al-sabab) is constant (‘alam) or present in the greater number of cases (akhṭar, cf. Aristotle, το ἐξι το πολλά), the cause is termed essential (sabab ḥāṭīti) and the effect caused (musabbab) the essential end (ḏhiya ḥāṭīsya). If there is efficacity in the smallest number of cases equal to that where it does not occur (ta‘addi akalli aw musdwi), this cause is said to be accidental (sabab ittifdki), and the effect which is caused (musabbab) the accidental end. If there is been said that if all the conditions of efficacity combine, the cause is essential and the end essential. If not, the efficacity is impossible and there is no accidental cause. To put it another way, every cause, such as, has a necessary effect as soon as all the conditions for its action are brought together; if not, it has no action at all and the power which essentially constitutes it as a cause remains without effect. Accordingly, there is no accidental cause but exclusively those which have an effect.

One may reply to this that, amongst its conditions, everything which gives in reality its efficacy to the action of the cause, is taken into account as part of the cause; but one must also take into account the factors which are not part of it, such as the absence of any obstacle (intijw al-mdnī) and the disposition of an obstacle within the human body, whether they produce illness or restore health or preserve health. They are either corporeal nature, and are then either substances like food or medicines, or they are accidents, such as heat and cold. They also distinguish the asbab which are internal to the body, like the dry wood, and if it happens that it is in fact dry wood, the fire burns, but accidentally, since it is accidental that dry wood is involved.

Physicians use the word sabab in a more particular sense than the philosophers. For them, it denoted uniquely the efficient cause, and even, not every efficient cause but exclusively those which have an effect within the human body, whether they produce illnesses or restore health or preserve health. They are either corporeal nature, and are then either substances like food or medicines, or they are accidents, such as heat and cold. They also distinguish the asbab which are internal to the body, like the temperamen t and the humours; those which are external, like warm air; and those which are of a psychical nature (min al-umur al-nafsān) like anger.

Finally, in Kurānic exegesis one should understand the expression asbab al-nasīl in a sense analagolous to its legal sense (see 2. below), the reasons or circumstances which explain the revelation of such or such a verse, and to which certain commentators appeal in their quest for a rational form of exegesis (see Gardet and Anawati, op. cit., 29-30).

Bibliography: Given in the article.

2. In law.

Here, sabab is defined as the designation given by the law maker for an injunction (ḥukm). The sabab itself may not be the actual cause but merely serves as a mark (‘aslum) to indicate that a certain ḡukm should apply. The classic example is found in the case of travelling as permitting the breaking of fasting during Ramadān. The main difference between sabab and ‘illa, when considering kiyās, is marginal in practice, since ‘illa is merely a subdivision of sabab. ‘illa is also termed sabab munāsr, a sabab which can be understood by human reasoning. Travelling is therefore described as both ‘illa and sabab in regard to permitting breaking of the fast during Ramadān since, by the application of reason, it is apparent that the objective is to reduce hardship. However, since there is no rational explanation why Ramadān has been prescribed for fasting, it is therefore sabab but not ‘illa.

The schools of fikh are divided in their opinions about sabab. The Ḥashʿī and Ḥanafī ones, like the modern Germanic school of law, concentrate on the apparent cause, but the modern Mālikī and Ḥanbollah schools and the Ṣḥīṣa focus on the actual intention, a tendency similar to that in Roman law. In contemporary Islamic civil application, the importance of sabab can perhaps be well understood from the UAE Civil Code definition of it as ‘the direct purpose aimed at by the contract’.

3. In prosody (see also ‘anūd).

Here, sabab, lit. ’tent rope’, and wataid, lit. ’tent peg’, denote the two smallest metrically meaningful elements which serve as building-blocks for the feet (rawša; sing. ḍuw). Following the established verse analogy of the ḍawr, the inventor of prosody, al-Khālīl [i.e. al-Khālīl], coined these terms to characterise the variable (sabab) and the stable elements (wataid) within each foot. The sabab consists of two letters/consonants (the wataid of three), of which the second may be either vowelless or vowelled, resulting in the two subtypes of the sabab khāfī, ‘the light cord’, and the sabab ḍhākī, ‘the heavy cord’. Syllabically speaking, the light cord is one long syllable (e.g. lād), the heavy cord two short ones (e.g. lāk). A foot consists of one wataid and either one or two sababs. The ‘heavy cord’ exists only in conjunction with a ‘light cord’ to form the feet maṣfaʿilun and maṣāʿalatan, from which the metres kāmil and wafir are constructed. The combination of ‘heavy cord’ and ‘light cord’ (muṣfāʿ and -alaṭan, respectively; i.e. —) is also covered by the metres fasila (more precisely fasila sughrā), which seems to go back to al-Khālīl also. Since neither this term nor the fasila kubrā (—) is useful for the system, because both can be interpreted in terms of sabab and wataid, they are best seen as elements used in the analysis of the really existing metres (aṣwān) rather than the abstract ideal metres (būḥr) of the system. Breaking the fasila sughrā up into two sababs allowed for a unified definition of the zihāf as a deviation from the ideal norm, that is, the second half of a word (Stoetzer, 42-3). The zihāf, usually elisions, are characteristic of the sabab; they may change from one line to the next.

Some Persian prosodists introduce as a third type of sabab the sabab-i mutawaṣṣīt, consisting of an overall syllable (e.g. yār) (Elwell-Sutton, 9; Ḥāñanal, 94, n. 2, quoting the Durr-i Naṣṣāf of Naṣṣāf Mīrzā Muḥafiz).

II, Literaturwissenschaft, Wiesbaden 1987, 205-7 (W. Heinrichs); and the additions in Bd. III, Supplement, Wiesbaden 1992, 276 (R. Weipert); for a clear presentation of the zihāf in the form of tables, see L.P. Elwell-Sutton, The
SABAB — SABAH, ĀL

4. In grammar

The term is used by Sibawayhi in his Kitāb 39 times (Troupeau, Lexique-Index s.v.) to denote a “semantic link” between words that brings about a change in the expected case ending. Thus alongside zadān lakīta akhāhu we find zadān lakīta akhāhu, where the dependent (manāš) form of zadān is acceptable because it is “semantically linked” with akhāhu (min sabahī, Kitāb, i, 193/226). This pronoun is obligatory: in maat zadān mukhlitihi abu ‘amr it is not enough to know that Abū ‘Amr really is Zayd’s father—without the pronoun this expression is disallowed, contrast maat zadān mukhlitihi abu ‘amr (ibid., i, 193/226; here the suffixed pronoun has moved from dān to its predicate mukhlitihi) and, one stage more remote, “involvement with something semantically linked”, e.g. maratu bi-ragul mukhlitihi dān (ibid., i, 193/226; here the suffixed pronoun has moved from dān to its predicate mukhlitihi) and, later commonly termed the nāt sabahī.

SABAH, ĀL, Arabic dynasty from the ‘Utub branch of the Arabian tribe, rulers of al-Kuwayt [q.v.] from ca. 1165/1752-6, until the present. They presided over its development from a small port dependent on pearling, fishing and the transit trade with India to its current position as an independent, oil-rich state.

Al Sabāb originated in Najd and migrated with other members of the ‘Utub branch of the ‘Utub tribe, rulers of al-Kuwayt [q.v.] in about 1085/1674 and then to al-Kuwayt early in the 12th/18th century. The rise to power of the founder of the dynasty, Sabāb I (ca. 1165-71/1752-6), remains obscure. His claim to authority was of a civil nature, not based on descent from the Prophet or any role as a religious leader, and he does not seem to have imposed it by force but by agreement with other sections of the ‘Utub community. During the late 12th-13th/18th-19th centuries, Al Sabāb managed to maintain their political authority with the internal support of local tribesmen and merchants. They also succeeded for the most part in achieving a delicate balance in handling the relations both with the local Muslim population and with the British, Ottoman and the Su‘udil-Id Wahhābī. Moreover, the succession proceeded relatively smoothly, ensuring family cohesion and stability.

The exception to this pattern was the dynamic figure of Mu‘ābar (1313-34/1896-1915), who came to power by assassinating two of his brothers, Mu‘āban-
mad I (1310-13/1892-6) and Djarrah. Despite Ottoman suspicions of British involvement in the coup and Mubarak’s concern to achieve British protection, it was not until 1316/1899 that an agreement was signed, excluding other foreign powers from acquiring Kuwayt territory by lease or purchase and preventing their representatives from being received in al-Kuwayt without British approval. In an accompanying letter, Mubarak was assured of “the good offices of the British Government”. This close association with Britain proved valuable in maintaining al-Kuwayt’s independence, especially during World War I, and it may also be seen as offering conditions promoting commercial development and modernisation. However, it restricted Mubarak in his dealings with his Arabian neighbours, the Al Rashid and his of Djabal Shammar and Abd al-’Aziz b. Su’ud, effectively preventing any Kuwayt territorial expansion at their expense; easily in the reign of Ahmad I (1339-69/1921-53), it even led to a territory being ceded to the Su’udis.

Following a period of recession with the decline of the pearling industry and economic warfare with Ibn Su’ud, al-Kuwayt won a reprieve with the discovery of oil in 1356/1938. Exploits began on 30 Radjab 1365/30 June 1946, ushering in a new era of prosperity, especially after the accession of Abd Allah III (1369-85/1950-65). Abd Allah oversaw the creation of al-Kuwayt’s modern infrastructure, initiating ambitious construction projects, a comprehensive welfare state, extensive education and health facilities. He also ended the 1316/1899 Anglo-Kuwayt agreement, which was increasingly resented, asserting al-Kuwayt’s full independence as a sovereign state on 6 Muharram 1381/19 June 1961. Immediately, he was threatened with invasion by al-’Irak, laying claim to sovereignty over al-Kuwayt, but on this occasion Britain’s prompt action in sending forces to the border deterred the ’Irakis from invading. The present ruler, Djabir III (1398-1441) was less fortunate when on 10 Muharram 1411/2 August 1990 he was faced with an actual ’Irak invasion, resulting in the occupation of his country and his exile in Su’ud Arabia until after the liberation of al-Kuwayt in the Gulf War of 1990.

Sabahul-Dln was born in Istanbul, the elder son of Damad (imperial son-in-law) Mahmud Djelal al-Din Pasha. His mother was Seniha Sultan, a younger sister of Sultan Abd al-Hamid II. He was educated privately. When his father fled to Paris in 1899, Sabahul-Dln and his younger brother Lutf Allah accompanied him. Sabahul-Dln came to the fore as one of the leading Young Turk emigre publicists and politicians. Backed by his father’s wealth, he soon became a serious competitor of Ahmed Rida for the leadership of the Young Turk movement. In 1902 he took the initiative in bringing together the first “Congress of Ottoman Liberals” in Paris, where his group, that of Ahmed Rida, but also Armenian, Albanian and Arab delegations met. At the congress a split occurred between the centralist and nationalist Young Turk movement of Ahmed Rida (the Ittihad ve Terakki Dernegi [q.v.] or “Committee of Union and Progress”) and the other groups over the question whether armed struggle, including foreign intervention, was acceptable as a means to depose the sultan. Together with the Armenians, Sabahul-Dln supported intervention and armed resistance (an abortive attempt at a military coup with the help of the garrison in Tripolitania was actually undertaken by his followers after the congress). Later on, in 1902, Sabahul-Dln united his followers in a separate organisation, the “Adem-i Merkezisyeti ve Tarbhsisi-a Sabahati Dernegi” (“Society for Decentralisation and Private Initiative”).

The name of the society reflected Sabahul-Dln’s ideological stance. He was a follower of Le Play and, especially, of Edmond Desmolins, whose A quoi tient la supériorité des Anglo-Saxons (1897) influenced him deeply. In Sabahul-Dln’s eyes, society could only progress on the basis of the improvement of its smallest constituent parts, the family and the individual. Unlike most other Young Turks, who saw the state as the only vehicle for the modernisation of society, he saw the secret in creating a strong “individualism” in the Ottoman Empire. Sabahul-Dln was a thinker and writer (from 1906 to 1908 he edited the Paris-based newspaper Terakki [“Progress”]) but not a very astute politician. As a concrete political programme, his brand of sociology had little to offer in the way of solutions for the short-term problems of the Ottoman Empire.

In 1907, his group participated in the second “Congress of Ottoman Liberals” in Paris, which was organised by the Armenian Dashnaks. After the 1908 constitutional revolution, he returned to Istanbul, but, although he had many followers in the Ahrar Firkas (“Liberary party”, 1908-9) and the Hurriyet ve Itilafl Firkas (“Entente Liberale”, 1912-13, 1919-22), he never joined any of these parties and he did not actively participate in the politics of the second constitutional period. He had to leave the Ottoman Empire when he was accused of involvement in the murder of the Grand Vizier Mahmud Shewket Pasha [q.v.] in 1913. After World War I he returned, but as a member of the Ottoman dynasty he was banned from Turkey again in 1924. Thereafter he lived in exile in Switzerland until his death in 1948.

(E. J. Zürcher)
sent to Germany in 1928 by the Ministry of Education to further his studies. He returned in 1930 and taught Gerwar II. As a teenager, the story about his poem Memlekettekin haberi, he was sentenced to one year’s imprisonment for disparaging Atatürk, being freed after 10 months under a general pardon. Between the years 1934 and 1945, he worked in the publications section of the Ministry of Education and later as a teacher in Ankara. He was highly criticised for his political activities and, in 1945, resigning from his duties, he moved to Istanbul, becoming a journalist. Because of an article which he published in the satirical magazine Marko Paşa, he was sentenced to three months in jail. In 1948, after he left prison, he began to work as a lorry driver and wrote in the journal Zinciri Hürriyet. He was under constant police surveillance, hence decided to run away to Bulgaria, but was killed on 2 April 1948, by the smuggler who was helping him to cross the frontier, possibly in an ambush.

Sabahattin Ali began to publish his sentimental poetry and short stories in journals during 1925-6. Later, he abandoned poetry and became known by his novel Kuyucakh Yusuf. His familiarity with the Anatolian villagers, which stemmed from his childhood memories, became clearer as he met more people in the prisons. The bulk of his later work is devoted to the village life and people; their struggle with nature, their social and economic conditions, and their mistrust for officials and intellectuals. Some of his stories are about workers, but these are not as detailed as the village stories. The middle-class people and the intellectuals are reflected as negative personalities who despise and mistreat the villagers; his administrators are corrupt and take sides with the rich. The women in his stories are pushed into prostitution by society. His characters are not well developed psychologically; the plot and the motivation of his characters are more important. His first novel Kuyucakh Yusuf (1937) is his village novel. The events start in Aydin in 1903 and end in 1915 in Edremit. It is based on the oppositions of city: nature; corruption: naïveté; lust: love. His second novel, İçmisdedik şeytan, takes place in Istanbul and is set among the young university students before World War II. Another story, Kuyucakh Yusuf, Paris 1977, (in French: Vous ouf le Taciturne), Ewliya describes it a century later as having 1,000 houses, and Sabandja was at this time the centre of a kadı in the iče or county of the il or province of Sakarya, with fruit-growing as an important local agricultural activity; in 1960 the town had a population of 5,788 and the iče one of 13,114. The lake of Sabandja (15 km/9 miles by 5 km/3 miles) has been important for its fish since antiquity; it is mentioned by Ammianus Marcellinus as lacus sumonensis, and in later Byzantine times the mountain by the lake was called Siphones. The project of connecting the lake by means of a canal with the Gulf of Izmit was mooted as far back as the Emperor Trajan’s time, and in the Ottoman period, during the reigns of Mustafa III and Murad III in the 10th/16th century, and after 1871. German, K. Kuyucakh Yusuf nehrini Izmit körfezinin akışımısını Marmara ve Karadeniz’in bireştilirmesi hakkında vestikal ve tekik raporu, in Belletten, iv/14-15 [1940], 149-74.

SABAŞTIYYA, SABASTIYYA, the Arabic name of various towns in the Near East.

1. The ancient Samaria, which Herod changed to Sebaste in honour of Augustus. The form Σαβάστια—as in the case of other towns of this name—was presumably also used, as the Arabic name (which is sometimes also written Sabaštiyya) suggests. By the end of the classical period, the town, overshadowed by the neighbouring Neapolis (Sichem; Arabic, Nablus), had sunk to be a small town (Σαβάστιον) and played only an unimportant part in the Arab period. It was conquered by ‘Amr b. al-‘As while Abū
Bakr was still caliph; the inhabitants were guaranteed their lives and property on condition that they paid poll-tax and land-duties (al-Baladhuri, 138; Ibn al-Athir, 140). SABBAGH (A.), lit. dyer, is a technical term the Arab geographers to mention it, but gives already much less accurate figures for its position than Ptolemy had done. In the later Arab geographers, Sabastiyya appears as a place in the Dājund Filiastín. According to a tradition found as early as Jerome, for example, the tomb of John the Baptist was there (Ibn al-Athir, loc. cit.: Yahya b. Zakariyya; xi, 333); on its site there was in Late Antiquity a basilica built and in the Crusading period (in the second half of the 6th/12th century) a church of St. John; remains of the latter still survive. According to western sources, Sabastiyya was again a bishopric at this time (Lequien, in Orients Christianus, iii, 650 ff.). Usāma b. Munkidh, about 534/1140, visited the town and its sanctuary. Salāh al-Dīn advanced on Sabastiyya in 580/1184, but its bishop, by handing over 80 Muslim prisoners, saved the town from the terrible fate of Nabulus (Ibn al-Athir, xi, 333; Abu 'l-Fidā', Annales, in Recueil des hist. orient. des croisades, i, 53; Ibn Shaddād, in ibid., iii, 82, Epis tola Bāttanī, in Röhrich, Regesta regni Hierosol., no. 638). In the year 583/1187 it was finally taken from the Crusaders by Husam al-Dīn 'Umar b. Lāḏūn; the church of St. John was turned into a mosque and the bishop brought to 'Akka (Ibn al-Athir, xi, 357).

1. A place in the Thghūr al-Shāmīyya, according to Ibn Khurraḍāḏībīh, 117, on the Cilician coast, 4 mls. from the coast from an unknown city, which again was 12 mls. from Kurāṣāsī (Kurāṣī) in Syria. It is the ancient ʿElāʾīnūs or ʿSawāṭī, the modern Ayāş.

**Bibliography:** Pauly-Wissowa, v, 2228, s.v. Elaisuss; ii/A, 952, s.v. Sebaste no. 5; Tomaschek, in SB Ak. Wien (1891), Abb. viii, 65; E. Herzfeld, in Peterm. geogr. Mittelt., iv (1909), 29, col. 2.

2. A place in the Thughūr al-Shāmīyya, according to Ibn Khurraḍāḏībīh, 117, on the Cilician coast, 4 mls. from the coast from an unknown city, which again was 12 mls. from Kurāṣāsī (Kurāṣī). It is the ancient ʿElāʾīnūs or ʿSawāṭī, the modern Ayāş.

**Bibliography:** Pauly-Wissowa, v, 2228, s.v. Elaisuss; ii/A, 952, s.v. Sebaste no. 5; Tomaschek, in SB Ak. Wien (1891), Abb. viii, 65; E. Herzfeld, in Peterm. geogr. Mittelt., iv (1909), 29, col. 2.

3. A town in Asia Minor, which was abandoned by al-ʻAbbās b. al-Walīd in 93/711-12 along with al-Marzuḥānayn and Tūs (ref. Tabari), whose situation is unknown. In some manuscripts of al-Ṭabarī and Ibn Taḥrīrībdī, the name is wrongly written Sabastīyya (or something like that) which can hardly, as Brooks suggests, stand for the Byzantine Μωάθα in Phrygia. The reference is rather to the Phrygian Ṣawāṭī (Pauly-Wissowa, ii/A, 951, no. 1).

**Bibliography:** Ibn al-Athīr, iv, 457; Tabārī, ii, 1295, note b; Ibn Taḥrīrībdī, Nūḏūm, ed. Popper, i, 251; E.W. Brooks, in Jnl. of Hellenic Studies, xviii (1993), 198.

4. A town of this name said to be not far from Sumaysāt on the upper Euphrates is mentioned by Yaḥūbūn, iii, 33. It might be Bulūpis in Cappadocia (Pтоломей, v, 6, 25, ed. Müller, 893), which was presumably called after Augustus and perhaps may have also been called Sebastia; but perhaps we should rather assume there has been some confusion with Siwās on the Upper Nahr Alis (Halys or Išānī) (E. Honnemann).
writing, the Arab writer al-Djahiz argued that the dyers, tanners, cuppers, etc. were exclusively Jewish in the early Islamic period, but historians like al-\textit{Khwâlî} al-Baghdâdi and other writers have indicated names which were not necessarily Jewish, which may indicate the involvement of Muslims in the dyer's profession at least during later Islamic centuries. A statement attributed to the Prophet Muhammad said that "the most habitual liars were the dyers" (\textit{sâkhab al-nâl al-sâbäghun}); but, according to Abu 'Ubây Ybn Sallâm (d. 232/846), al-sâbäghân acquired a new shade of meaning and was applied to particular groups who were engaged in "forgery and embellishment of hadîd" (al-\textit{Khwâlî}, \textit{Tārīkh Baghdâd}, xiv, 216).

According to a tale in the \textit{Al layla wa-layla}, the dyer's trade tended to be hereditary. The dyers had a low status in society due to the foul odour associated with their work. The \textit{hisba} manuals speak of the trickery of the dyers, who allegedly cheated their customers by applying non-permanent dye for their cloth. The modern era, the Damascene dyers were well known, providing entrancing dye ingredients (al-\textit{nif}, lapis lazuli (\textit{lauward}), dark blue dye (\textit{kului}) and a variety of other shades for their customers' cloth (al-Kâsimî, \textit{Kâmûs}, 267). The Yemeni dyers of the early 20th century have preserved some of the traditional skills of their trade. The biographer al-Safâdl (d. 764/1362) recorded the biographies of some notable Muslims affiliated to the dyers' families who had unusual names like 'Abd al-Sayyid Muhammad b. 'Abd al-Wâhid b. Dîfâr al-Sâbâghân (d. 477/1084), who lectured on jurisprudence at the Nizâmiyya college in Baghdâd and wrote some books. His grandson 'Abd al-Sayyid b. 'Ali al-Sâbâghân (d. 563/1168) was also a man of some distinction.

1. Abu 'l-Hasan Thabit b. Kûra b. Mâwrân b. Thabit [a.v.] (died 288/901), the celebrated mathematician, astronomer and translator of Greek books, was the first member of the Sabian community to come to the notice of Muslim intellectuals. He was born in Harrâm but spent most of his life in Baghdâd, where he enjoyed the especial patronage of the caliph al-Mu'tadîd.

(2) The \textit{Sâbi'at al-batâ'în}, or \textit{mughâtîsîa}, of Southern \textit{kurr}a, the remnant of an ancient Jewish-Christian sect, the \textit{Ekhêasaites}. They owned the designation "\textit{Sabians}" evidently to the fact that some of the early \textit{kurr}ân commentators in Basra or Kûfa saw in them a possible candidate for identification with the Sabians of the holy book.

(3) The Sabians of Harrâm, a community following an old Semitic polytheistic religion, but with a strongly Hellenised elite, one of the last outposts of Late Antique paganism. These adopted the \textit{kurr}ânic name \textit{sâb}î'â in the 3rd/9th century so as to be able to claim the status of Muslims and thus avoid persecution. (Arabic Muslim and Christian authors occasionally also apply the name \textit{sâbi'ê}, by extension, to the pagans of ancient Greece and to other polytheists.) It is only with these last that Muslim authors of the \textit{Abbâsid} period were acquainted at first hand and, except in discussions of the \textit{kurr}ân, the name \textit{sâbi'ê} is normally applied either to Harrânian pagans or else to their Muslim descendants (e.g. the astronomer al-Shâbîbî (d. 438/1047) who applied in effect as a \textit{nisa}, to two distinguished families of scholars and secretaries of Harrânian origin who flourished in Baghdâd between the 3rd/9th and 5th/11th centuries, and it is with these that the present article is concerned.

The two families in question were related to each other by marriage, although the exact nature of their relationship has been the subject of much confusion. Ibn al-Kîfî (\textit{Târîkh al-Hukamûn}, ed. A. Müller and J. Lippert, Leipzig 1902) says (twice on pp. 110-1) that \textit{Thâbit} b. Sinân (no. 4) was the maternal uncle (\textit{kâbi}) of the historian Hilâl b. al-Muštâsîb (no. 9) and he says again (on p. 110) that Hilâl was "the son of his (i.e. \textit{Thâbit}'s) sister"; this information is repeated by the sources dependent on Ibn al-Kîfî (i.e. Ibn Abî Usayyîbî 'a and Ibn al-Ibrî) and has been accepted by modern authors. However, Yakût (\textit{Udâdâ}, ii, 397) quotes a poem by Abû 'Ishâk Ibrîhîm (no. 7) lamenting the death of "his maternal uncle" \textit{Thâbit} b. Sinân; i.e. \textit{Thâbit} was the maternal uncle not of Hilâl, but of his grandfather Ibrîhîm (similarly, al-Safâdl, x, 464, paraphrasing Yakût, says of Ibrîhîm \textit{aw huwa <ibn> ukt Thâbit}; badly "emended" in the edition.) Yakût's version is confirmed by Hilâl himself when he introduces one of the anecdotes in his \textit{Mathnî} (ed. R. M. 267; M.A. J. Beg, \textit{Social mobility in Islamic civilization - the classical period}, Kuala Lumpur 1981, 64; R.B. Serjeant et alii, \textit{Sanâ'at: an Arabian Islamic city}, Cambridge 1983, 265). (M.A. J. Brito)
Genealogical table of the Sābih family

(1) Thābit b. Kurra b. Marwān
d. 288/901

(2) Sinan d. 331/943

(3) Ibrāhīm 296-335/908-946

(4) Thābit d. 365/976

(5) Thābit d. 365/976

(daughter) = (6) Hilāl

(7) Ibrāhīm 313-384/925-994

(8) al-Muhassin d. 401/1010

(9) Hilāl 359-448/969-1055

(10) Harūn (?)

(11) Muḥammad, d. 480/1088

(12) Muḥammad 481-563/1088-1168

(13) Muḥammad, d. 619/1222

2. His son Abū Saʿīd Sinān served as personal physician of three successive caliphs: al-Muktaḍir, al-Kāhir and al-Rāḍī. Al-Kāhir forced him to convert to Islam, but his children apparently remained in the ancestral religion. Sinān was responsible for building hospitals and supervising the medical profession in Baghdād, and is credited with introducing a system of examining and licensing the practising doctors. The sources list various writings of his on history, mathematics and astronomy; strangely, they mention no medical titles. His only extant work seems to be a short treatise on ethics, Siyṣāt al-nufūs (Brit. Mus. Cat., p. 205). He died (according to al-Sulī and Yakūt) on 1 Dhu ‘l-Ka‘da 331/943.

Bibliography: Sulī, Akhbd al-Ruddi wa l-Muttaqi, ed. J. Heyworth Dunne, London 1935, 245; Masʿūdī, Murūġ, i, 19-20 = § 14; Fihrist, 272, 302; Biruṇī, al-Aṯbār al-bākīya, 243-75 (detailed summary of Sinān’s Kitāb al-Anwār); Yākūt, Udabah, ii, 220-3; Chwolsohn, i, 569-77; Brockelman, i, 244-5, § I, 386; Sezgin, v, 291, vii, 331; Y. Dold-Samplonius, Sinān ibn Thābit, in Dictionary of scientific biography, xii, 447-8; M. Ullmann, Die Medizin im Islam, Leiden 1970, 124.

3. His son Abū Ishāk Ibrāhīm was an important astronomer and mathematician. He was born in 296/908-9 and died in Muharram 335/946 (according to Ibn Abī Usaybiʿa; the earlier authorities give no dates). A collection of six of his scientific writings has been published under the title Rasāʾil ibn Sinān (Haydarābād 1366-7/1947-8).

Bibliography: Biruṇī, al-Aṯbār al-bākīya, 326; Fihrist, 272; Ibn al-Kīfī, 57-9; Ibn Abī Usaybiʿa, i, 226; Chwolsohn, i, 577-8; Brockelman, i, 245, § I, 386; Sezgin, v, 292-5, vi, 193-5, vii, 274-5; R. Raashed, Ibrāhīm ibn Sinān, in Dictionary of scientific biography, vii, 2-3.

4. His brother Abu ʿl-Ḥasan Thābit succeeded his father as physician to the caliph al-Rāḍī and served then in the same capacity under al-Muttaqi, al-Muttaκīf and al-Muṭṭī. He died on 11 Dhu ‘l-Ka‘da 365/976 (thus Ibn al-Nadīm and also Yākūt, quoting Hilāl; others differ). He was, however, best known as the author of a history of events from 295/908 (i.e. the ascension of al-Muktaḍir, with whose reign al-Ṭabarī’s history breaks off) up to the year of his own death (according to Ibn al-Nadīm) or to the end of 363/974 (Ibn al-ʿAjīr, vi, 476). Although this work is lost, it is quoted extensively not only in the surviving writings of Thābit’s great-great nephew Hilāl (below, no. 9), but also by Miskawayh, al-Hamadānī, Ibn al-ʿAjīr, al-Dhahabī and others, and is thus indirectly doubtless one of the most important sources for the events of the period in question.

As a court physician, Thābit was evidently especially well informed about the private affairs of his masters. The Taʾrikh akhbār al-Karamīsh which has been published as the work of Thābit (ed. Suhayl Zakkār, Beirut 1391/1971) is, in the judgement of the present author, a clumsy forgery knocked together out of extracts from Ibn al-ʿAjīr.

Bibliography: Fihrist, 302; Yākūt, Udabah, ii, 397-8; Ibn al-Kīfī, 109-11; Ibn Abī Usaybiʿa, i, 224-6; Ibn Khallikān, 127; Chwolsohn, i, 578-81; M.S. Khan, Miskawayh and Thābit ibn Sinān, in ZDMG, cxvii (1967), 303-17.

5. Abu ʿl-Ḥasan Thābit b. Ibrāhīm b. Ḥārūn (thus in Tadjaddud’s edition of the Fihrist, 149, 360, and al-Thāʿlabī’s, Yatimā, ed. Damascus, ii, 23; most other sources have Zahrūn) was born in al-Rakkā in Dhu ‘l-Ka‘da 283/897 and died in Baghdād in Shawwal 369/980 (these dates according to Ibn al-Kīfī, 115). He served as a physician to several important persons, among them the Būyid amīr al-umārāʾ ʿAḍud al-Dawla. His writings on medicine and his
translations of Greek medical books are not known to have survived. Ibn al-Kiftl (76) surmised that his father might have been the Abū Ishāk Ibrāhîm b. Zahrūn al-Harrānî al-Manṭîkî of whom Thābit b. Sānîn (as quoted by Ibn al-Kiftl) says that he died in Safar 309/921; however, the identification of the two is not certain.

_Bibliography:_ Fihrist 272, 303; Ibn al-Kiftl 111-5; Ibn Abī Usaybi‘a, i, 227-30; Chwolsohn, i, 584-5.

6. His brother Abū ‘l-Ḥasan Hilāl, whose dates are not recorded, was the physician of the amir Tūrzūn at the same time that his brother-in-law Thābit b. Sānîn was looking after the health of the caliph.

_Bibliography:_ Ibn al-Kiftl 350; Chwolsohn, i, 587.

7. His son Abū Ishāk Ibrāhīm was born on 5 Ramadān 313/929 and, though trained as a doctor and astronomer, he made his name as a secretary in the service of the Buṣyid amir Mu‘īz al-Dawla, who appointed him chief secretary (sāḥib diwān al-īnḫāb) in 349/960. Although ‘Izz al-Dawla Bihākīyār attempted to convert him to Islam and even offered the post of wazīr as a reward, Ibrāhīm remained true to the faith of his fathers. After the death of Mu‘īz al-Dawla, Ibrāhīm got caught up in the rivalry between ‘Izz al-Dawla Bihākīyār and his cousin ‘Adud al-Dawla Fānā-Ḵuṣraw, and his attempts to serve two masters led to his being imprisoned by each of them in turn. The victorious ‘Adud al-Dawla kept him under house arrest from 367/978 till 371/981 and ordered him to spend his enforced leisure composing a history of the Buṣyids, _Kitāb al-Tādji fi ṣakbār al-dawla al-daylamiyā_, the pages of which are reported to have been sent, as they were completed, to the amīr, who then returned them, corrected, to their imprisoned author. The often-repeated anecdote according to which Ibrāhīm provoked the anger of the amīr by confiding to an indiscreet friend that the history he was composing was nothing but a fabric of lies involves a number of chronological errors and cannot be taken at face value (see, in detail, the article by Madelung).

The victorious ‘Adud al-Dawla, who lamented his death (on 12 Shawwāl 384/994) in al-Tha‘alibī, served as a secretary at the time of Mu‘īz al-Dawla and died on 3 Ramadān 401/1010, like his father still a pagan. Ibn al-Kiftl confirmed that ‘Adud al-Dawla (in 372/983) and enjoyed the friendship in particular of the celebrated Twelver Shi‘a poet ‘Alī al-Mu’tamid, called Sahib al-Dawla, died (according to Yakūt) on 8 Muharram 380/990; see also his other elegy on his death in al-Tha‘alibī, Fatīma, i, 48-9 and Abu ‘l-ulado Sā‘īd.

_Bibliography:_ Yakūt, udabī, vi, 244-9; Ibn al-Kiftl, 114, 116, 119; Ibn Abī Usaybi‘a, i, 224-7; Chwolsohn, i, 594-5.

8. His son Abū ‘All al-Muḥassan, called Sāhīb al-Tha‘alibī, died (according to Yakūt) on 8 Muharram 401/1010, like his father still a pagan. Ibn al-Kiftl consulted an autograph of his containing bibliographical notices of the works of Thābit b. Kurra and Sānîn b. Thābit. Yakūt quotes a few of his poems and mentions also his two brothers Abū Sā‘īd Sā‘īd (d. Rādāj 380/990) and al-‘Alī Sā‘īd, who was head of the affairs of state at the time of the caliph al-Muqtadī (in 372/983) and enjoyed the friendship in particular of the celebrated Twelver Shi‘a poet ‘Alī al-Mu’tamid, called Sahib al-Dawla, who lamented his death (on 12 Shawwāl 384/994) in al-Tha‘alibī, served as a secretary at the time of Mu‘īz al-Dawla and died on 3 Ramadān 401/1010. He could well have been the son of Sā‘īd b. Ibrāhīm (see no. 8).

_Bibliography:_ Agrāf al-Sabi‘, no. 8.

9. His son was the famous historian Abu ‘l-Husayn Hilāl [g.v.] (359/969-1055), a convert to Islam and served as a secretary at the time of the caliph al-Kā‘im. He inherited from his father a considerable fortune and was thus apparently able to devote himself to literary and philanthropic activities. Of the latter, we know in particular of his endowment of a public library in Jerusalem with 1,000 books. He died in Dar ‘al-Ka‘da 480/1088. His history, _Dhīl Ta‘rīkh Hilāl al-Sā‘īd_, or ‘Uyun al-tawārikh, which continued his father’s chronicle down almost to the time of his own death, has not survived as such, but it was used extensively by al-Khāṭīb al-Baghdādī, Ibn al-Dalwāzī and, in particular, by Sībīt Ibn al-Dalwāzī, whose account of the events from 448-79/1055-86 seems to be almost entirely dependent on Qhār al-Ninma. Extant is his _Kitāb al-Huṣnāf al-nādira min al-mu‘ākhir al-mahzūn_ (etc.), a collection of over 400 amusing anecdotes (ed. Sā‘īd al-Aqṣāt, Damascus 1387/1967). Fragments survive of his _Kitāb al-Raḥs_, evidently also a compendium of anecdotes in the style of the _Nīshtār al-muhbadda_ of al-Tanākhī.

10. Abu ‘l-Ḥasan Muḥammad b. Hilāl, called Qhār al-Ninma, served as a secretary at the time of the caliph al-Kā‘im. He inherited from his father a considerable fortune and was thus apparently able to retire from official service and devoted himself to literary and philanthropic activities. Of the latter, we know in particular of his endowment of a public library in Jerusalem with 1,000 books. He died in Dar ‘al-Ka‘da 480/1088. His history, _Dhīl Ta‘rīkh Hilāl al-Sā‘īd_, or ‘Uyun al-tawārikh, which continued his father’s chronicle down almost to the time of his own death, has not survived as such, but it was used extensively by al-Khāṭīb al-Baghdādī, Ibn al-Dalwāzī and, in particular, by Sībīt Ibn al-Dalwāzī, whose account of the events from 448-79/1055-86 seems to be almost entirely dependent on Qhār al-Ninma. Extant is his _Kitāb al-Huṣnāf al-nādira min al-mu‘ākhir al-mahzūn_ (etc.), a collection of over 400 amusing anecdotes (ed. Sā‘īd al-Aqṣāt, Damascus 1387/1967). Fragments survive of his _Kitāb al-Raḥs_, evidently also a compendium of anecdotes in the style of the _Nīshtār al-muhbadda_ of al-Tanākhī.
The Mesopotamian dialectal pronunciation of sabî, where the ‘ayn has been transformed into y or i, also occurs in Mandaeans (cf. Lidzbarski, Ginza; Nödelke, Mandatische Grammatik; R. Macuch, Handbuch, 94, i. 16: sabiu). This substantive, which became current in Mecca during the period of Kur'ân preaching, irrespective of its etymology, derives from the Semitic root s-b-î (Aramaic, Hebrew, Arabic. The verb signifies, in the first form, “to dye, to bathe, to immerse”; whence, in the second form, “to baptise (by immersion)”’. Consequently, the noun denotes "baptists", named three times in the Qur'ân (II, 62; V, 69; XXII, 17), in the company of the Believers, the Jews and the Christians, with whom they share the title of "people of the Book" (ahl al-kitâb). In the last of these verses (XXII, 17), the sabî' occupy the third place after the Believers and the Jews, and are followed by the Christians, the Zoroastrians and the polytheists; which would suggest a closer relationship between them and the Jews. A reference to baptism is to be found in sûra II, 138, where the context is that of the "imprint" (sibgha) of God on the Muslim, which is compared to Christian baptism (J. Fenrice, A Dictionary of the Koran, repr. London 1970, 81; cf. al-Kulim, Fârîd, lith. Tehran 1307/1928, 152, where fîna “matter”, is opposed to sibgha which “is Islam” (hiya l-islam); other references (apud Kraus, Jâbir, ii, 171, n. 1).

Given the indisputable monotheism of the sabî'ân of the Kur'ân, this can only refer to a baptising religious community. There is a temptation to think immediately of the Mandaeans, who are dispersed, at the present day, on the banks of the Euphrates and of the Tigris, and along the river Karun in Khuzistan. They are called by their Arab neighbours subha or subbi “baptisers”; they form two groups: the mandâyî (gnostics) and the nâyârî (observers). This is the thesis defended by D. Chwolsohn in Die Sabier und der Sabismus, dating from 1856. Although it has been severely criticised over certain of its conclusions, this work remains a basis for studies of the Sabians (cf. J. Hjärpe, Analyse critique des traditions arabes sur les Sabiens Flammariens, Upsala 1972, 1 ff.).

On the basis of a text of Ibn al-Nadîm (Fihrist, 340), where there is reference to a baptising sect called al-mughtasila, also known as sabat al-batâ-î, “the Sabaeans of the marshes”, whose leader was called ‘îbâs yâh (var. ‘îhâs yâh). D. Chwolsohn identified the latter with Elchasai (i, 112 ff.), thus identifying Mandaeans and Elchasaites. He found evidence for this in information recorded by Hippolytus in Refutatio omnium haeresium, ix, 13 (ed. Wendland, 251), where it is said that Elchasai, founder of the sect, is supposed to have given a revealed book to a man named Sobai. Chwolsohn made of the last-named “a later personification of the name of a sect, this being that of the Sabaeans—the Mandaeans being called al-subba” (Hjärpe, op. cit., 11).

On the basis of the etymological sense of sabî'ân, he considers that the term had been translated by al-mughtasila, “the baptisers” (i, 110). A year before the appearance of Die Sabier, E. Renan had contributed a Note sur l'identité de la secte gnostique des Elchasaites with the Mandaeans or Sabians in Ja. vi (1855), 292-4.

Since then, researches into the Elchasaites have made it possible to correct this confusion (see, for example, A. J. W. Brandt, Elchaisai: ein Religionsstifter und sein Werk, Leipzig 1912, and more recently, A. F. J. Klijn and G. J. Reinink, Patrisiche evidence for Jewish-Christian Sects, Leiden 1973 = Suppl. to NT, xxvi; G. P. Luttikhuizen, "The resolution of the problem of the "Sabians": an essay on the Elchasaites in the perspective of 1985 = Texte u. Studien zum antiken Judenland, 8. It is thanks to the biography of Mâni, found in the Codex Manichaeus Colonensis (cf. W. Sundermann, Mittelein in manichäische Texte kirchengeschichtlichen Inhalts = Berliner Turfantexte, xi, East Berlin 1981, 19, text 2.1, tr. 3.), that it is known that the Elchasaites were not identified with the Mandaeans. In fact, Mâni “grew up, lived, formed his system of thought and matured his vocation” between A.D. 219-20 and 240, in a community of sectaries called, in Greek and Coptic documents, baptitai (“baptisers, baptists”), by Arab authors, al-mughtasila (“those who purify themselves, who wash themselves”) and, according to the Syriac tradition, the maqârâ (“those who purify themselves” or “are purified”) and hêlê hewwârê (“white vestments”). Cf. al-Tabarî, Ta'âfîr, xxviii, 55 f. on the hânîrâyân, a term normally denoting the apostles of Jesus, but al-Dalbakh zëees here al-ghâşidân in Nabataean, since, as others specify “they cleaned their garments”.

These “sectarians” are identical, as is declared by the Codex of Oxyrhynchos, not with the Mandaeans, which has been the general belief until now, but with the Elchasaites, disciples of the doctrine which spread in consequence of a vision experienced in “the land of the Parthians”, around the year A.D. 100, by the prophet Elchasai (Alkhasaios) (H.-Ch. Puech, Le manichéisme, in Histoire des Religions, ii, Paris 1972 = Encyclopédie de la Pléiade). At twelve years old, then again at twenty-four years old, Mâni received from the Holy Spirit the command to leave this community and to show himself in public, vigorously proclaiming his doctrine. Excluded from his community for having “deviated from the Law”, in turning towards “Hellenism” and towards the “world”, he left it accompanied by his father and by his two sole supporters. In his eyes, baptism was said to have been nothing more than a false religion, instigated by the “Spirit of Error” (ibid., 532-3). In spite of this, he “claimed as his own a number of views borrowed from Elchasasm” (ibid.), while criticising “two of their principal practices: the habit of daily and frequently repeated ablutions; the prohibition concerning bread, fruit and vegetables of foreign provenance and of profane origin” (ibid.).

The Elchasaites are one of those sects which are described as “Judaico-Christian”, such as the Nazaraeans, the Ebionites and the Archontics. The Ebionites, established in Transjordania in the time of Trajan, formed one of the groups belonging to Palestinian Christianity; they were very close to Rabbinical Judaism. They have been rejected or accepted in particular the all-too-speculative Christology of St. Paul, in whom “they saw an Antichrist, responsible for the apostasy of so many brothers”. In the eyes of the Hellenistic churches, they took on little by little “the appearance of a heretical sect, while in fact, they were the direct heirs of the primitive Church, even if they no longer had the combative vitality”. They adopted “a Gospel inspired by the synoptic
Gospels, but adapted to their doctrinal idiosyncrasies, the Gospels of the Ebionites, of which only a few fragments are known” (cf. on this subject, E. Trocmé, *Le Christianisme des origines au Concile de Nîmes*, ii, Paris 1972, 234-5).

These Ebionites drew the attention of a major theologian of the last century, A. von Harnack; he saw in their doctrine “Christian parallels with Islam” (*Christliche Parallelen zum Islam*, Vortrag im Leipziger akademischen Docentenverein, 1877-8, 18 ff.).

More recently, three scholars have taken an interest in this problem: P. Roncaglia, *Eléments ebionites et ébionites dans le Goran*, in *Proche-Orient Chretien*, vii (1971), 101-26; M. Hamidullah, *Two christians of Pre-Islamic Mecca: 'Uthmán ibn al-Huwaïrith and Waraqa ibn Naufal*, in *Jnl. of the Pakistan Historical Soc.*, vi (1958), 97-103, and Abú Músa 'I-Harirí (pseudonym of J. 'Azzi), *Kiss wa-nabi. Bahthfi nash'aat al-Isldm* (“Priest and prophet. Research into the origin of Islam”), Jounieh-Kasslik 1979, pp. 223. This is a very methodical study of the Kur'ânic elements which make up the construction of a theorem which has tempted many scholars in the past, the sc. the Judeo-Christian origin of Islam. Identifying “Nazaraeans” (nasūra) with Ebionites, the author makes Waraka b. Nawfal, the cousin of Khadidja, first wife of Muhammad, the teacher and mentor of the latter, preparing him to succeed him at the head of the small Ebionite community of Mecca (on the Christians in Mecca on the eve of the Hidjra, cf. Lammens in *BIFAO*, xiv [1918], 191-230, and A. Jeffrey, *Christians at Mecca*, in *MW*, xix [1929], 24-35).

Having examined all the elements capable of having an origin in the Gospel of the Ebionites, known also by the name Gospel of the Hebrews, current according to St. Jerome among the Nazaraeans, in other words the Aramaic-speaking Judeo-Christian Christians of Palestine and Syria (cf. B. Altaner, *Précis de Paléographie*, tr. Grandclodon, Mulhouse-Tournai 1941, 53-4), the author considers that Muhammad abandoned the path traced by Waraka when he left Mecca for Medina and founded the Islamic state, where the tradition of Arab political isolationism was revived. He sees the signs of this separation appearing in the contradictions arising between what he calls the “Kur'ân of the prophet and the church” and the “mushqf of the Qur'ân”. The thesis in itself is fascinating, but its demonstration will remain based on assumptions which are not likely to be confirmed by new sources.

The “baptismal imprint”, to which there is reference in sūra II, 138, quoted above, may apply to Ebionites/Nazaraeans as well as to Elchasaites/mahdīs/muhājirūn. On the latter, see the interesting study written by F. de Blois, intitled *The Sabians (Sābī'un) in Pre-Islamic Arabia*, to appear in *SS*, which includes an annotated translation of the construction of the *Fihrist* concerning them. In this study the author proposes a new interpretation of the term sābī'un which he translates by “converted”, on the basis of the root ṣ-b-ḥ, which will be considered further at a later stage. He sees in this term, applied to Muhammad and his followers by their Meccan adversaries, a reference to the Manichaean. On the basis of a possible equivalence between sâbî and zindik in the sense of “heretic”, “infidel”, the author believes that, in the time of the Prophet, the word sâbî signifies “Manichean”, being later replaced by zindik. But Kister (Arabica, xv [1968], 144-5, quoted by de Blois, n. 39) supplies evidence for an equivalence zindik = mazdaki.

Two texts seem ostensibly to support the view of F. de Blois:

The text of the first is a description of the zandaka by the 'Abbāsīd caliph al-Mahdī (cf. al-Ṭabarî, *Ta'rīkh*, iii, 588). A zindik was brought before him who refused to repent; then he had him decapitated and crucified and said to his son al-Hādi: “When you accede to the caliphate, devote yourself to the repression of this band (zulma), I mean the followers of Mānî. It is a sect which calls upon people to behave well, by practising ascetism here on earth, by preparing for the life hereafter; then, it incites them to deny themselves the consumption of meat, the touching of pure water, to abstain from killing reptiles in order to avoid the commission of turpitudes, by practising ascetism here on earth, by preparing for the life hereafter; finally, it allows them marriage with sisters and daughters, ablation with urine, the seizure of children in the streets with the object of removing them from the Darkness and leading them towards the Lights. Raise before the followers of this sect the gībbet (khushshab) and draw the sword from the scabbard, for the honour of Allāh, who has no partner”.

The caliph added: “I have seen in a dream your grand-father al-'Abbās handing me two swords and commanding me to slay the dualists (arshāb al-ithnayn)”. Whatever the part played here by folkloric elements, these two texts reflect the opinion held by Muslims, in the Umayyad and 'Abbāsīd period, regarding the Manichaean. However, there is no evidence to suggest that this opinion differed from that current in the time of Kuṭ'ānic preaching. Therefore, it must be reckoned inconceivable that such Manichaean had always, from the time of Kuṭ'ān, as forming part of the “people of the Book”.

The Manichaean had scriptures; but it is questionable to what extent these scriptures were known in Central Arabia at the beginning of the 7th century A.D. There are definitely some convergences to be observed between Kuṭ'ānic and Manichaean concepts in matters of prophecy and revelation. But these convergences derive from “an anonymous tendency of general thought” (T. Andréas, *Muhamet*, 110), where are encountered ideas of the “Messenger of God”, of the “seal of the prophets”, of the Paraclete promised by Jesus, of ecumenism, of possession of total truth and absolute knowledge, the claim of accommodating previous revelations and of achieving “a complete gnosia, a pure and perfect knowledge, of which the clarity and evidence are immediate and the scope infinite” (Puech, *Histoire des literatures*, i, 679).

It is important to bear in mind the fact that Central Arabia was (and remained) heretically sealed to any religious mission emanating from Byzantium, from Persia, from Abyssinia. If Manichaean succeeded in making their way to Mecca, it was only in the role of merchants or of slaves. The latter played a significant part in the penetration of certain Judaic-Christian ideas into nascent Islam. An obvious example is that
of Zayd b. Hārīthah whom Muḥammad emancipated and then adopted. It was he who taught Muḥammad and ʿAll to read and write. Attention may also be drawn to ʿAdās, a Christian slave and a native of Nineveh, who acknowledged the prophethood of Muḥammad, also to the seven djinn inhabiting Nisīb who believed his message and went away to convey it to their fellows (Kūrān XLVI, 29-32; LXXI, 1; etc.).

It may be noted, in conclusion, that the name Muḥammad was not widely known before the time of the Prophet. Among those who bore this name before Islam, Ibn Saʿd, Thāqātā, i, 112, mentions Muḥammad b. Sufyān al-Tamīmī and describes him as a "bishop". This name corresponds to the Greek-Latin Εὐχοῦτος/Eulogius. Did the adversaries of the Prophet see in this an indication of his belonging to a baptising community? Al-Ṭabarānī, sdbP^, 242, renders sdbP^ by muraḍd "renegade", and adds that the Arabs call sdbP^ anyone who abandons his religion for another". The polytheists said of the Prophet: kad saba^a, an expression which could be rendered by kad ta'ammeda, "he has had himself baptised" (cf. Ibn Saʿd, i/1, 123). In the same commentary, Ziyād b. Abīh (d. 53/673) and Katāda (d. 117/735) supply the information that the saba^a "worshipped the angels (malāʾika)", a fact attested by St. Hippolytus, ix, 13, 2-3, with regard to the Elchasaites; see also St. Epiphanius, xix, 4, 1-2; xxx, 17; 623, i, 1, 9 (references given by de Blois, loc. cit.; cf. Marcel Simon, Remarques sur l'angelodltrie juive au début de l'ère chrétienne, in CRAJ [1971], 120-32). It may be noted, finally, that the akwa^b sab^unw, "the seven words", which Ibn al-Nadīm attributes to the maghūfisla, as they have been restored by I. Stern and M. A. Lewy (quoted by de Blois, loc. cit.), find an echo in sūra IV, 199, where, speaking of Jesus, the Kurān says: "On the day of Resurrection, he will testify against them (= those who are said to have believed in Him)".

2. The Sābīʿa of Harrān.

Thus far the discussion has been of baptising sects, whose nomenclature derives from the root s-b-^, not being appropriate for the pagan gnostics of Harrān, this root was replaced by the commentators by a root s-b-^, in the sense of "to bow down" before the celestial bodies, to worship the planets, which fitted the cults of the Harrānian priests. The Sābīʿa of Harrān, Thabit b. Kurra made known through numerous writings (Chwolsohn, ii, 1-6; Wiedemann, in Physica and the Philosophia Arabica, with the aim of evading the caliph's threats. The caliph of the time were then present in large numbers in Bagdhād. The most eminent of them was Thābit b. Kurra (q.v.). Chwolsohn devotes a long chapter to biographies of the Sabian scholars (i, ch. 12); there he introduces some thirty of them: philosophers, doctors, astronomers and mathematicians.

The Sabians of Bagdhād were, it seems, considered to be herodox by the Sabians of Harrān (Ibn Khallikān, Wafqa^yā, n. 127, tr. de Slane, i, 288). The caliph of the time were then present in large numbers in Bagdhād. The most eminent of them was Thābit b. Kurra made known through numerous writings (Chwolsohn, ii, 1-6; Wiedemann, in Physica and the Philosophy of the Harrānians. He succeeded in forging amicable relations with the scholars of his time (Muslims, Jews and Christians) and was therefore capable of diffusing ideas which were to appear in the theoligico-philosophical speculations of the subsequent period, at the time of the development of what has been called "Arab hermeticism" (cf. J. Doresse, L'hermetisme egyptien, in Histoire des Religions, ii, Paris 1922, 479-82), inspired by "Sabian" doctrines and "Indianised" hermeticist alchemy, the expression of which is to be found in:

(4) Naḥfa^i al-nabatīyya (Damascus 1993), a geoponographic treatise probably translated from the Syriac by Ibn Wadhibiya (q.v.) at the end of the 9th and beginning of the 10th centuries A.D., containing "religious data" relating to a stellar theology based on "secrets" and on "revelations" made by the Sun, the Moon and Saturn to Adam, to Seth, his son, to Messus and to other leaders of rival gnostic sects in Babylonia. The author of the third recension of the book, Kūṭhāma, was the leader of the sect of the...
Kukaeans, known from Syriac authors; he relates, in long digressions, the echoes of their quarrels, the essential points of which are to be found in a brief survey published in ZDMG, suppl. iii, 3, Wiesbaden 1977, 362 [see also NABAT. 2].

In a very detailed study, Michel Tardieu sees the Harrānians as Platonists (cf. Sābiens coraniques et “Sābiens... de Harrān”, in JA, cxxxiv [1986], 1-44), “in the academic sense of the term. Plato was the object of their study and the centre of the research activity of their school” (39). He refuses to describe them as “gnostics...” (ibid.), “they were not philosophers by profession. But they utilised the philosophers, and Plato in particular” (ibid.). He bases his argument on a statement by al-Masūdī (Marātīq, ed. Pellat, ii, Paris 1965, 536-7, § 1395; cf. also his K. al-Tanbih wa ‘l-ishrāf, 162, tr. 3-5), declaring that he “saw at Harrān, on the knocker of the door of the meeting-place of the Sābiens, an inscription in Syriac characters, drawn from Plato”, which read as “He who knows his nature becomes a god” and “Man is a celestial plant. In fact, man resembles an upturned tree, the root being turned towards the sky and branches [sunk] in the ground” (Tardieu, 13 ff.). He sees, in the first “an echo of Alcibiades, 133.C” and, in the second, “a reminiscence of Timaeus, 90 A.7-B.2 (cf. ref. 3, n. 8 and 14). It may be noted that echoes of these quotations are to be found in the literature of the “Sayings of the Sābiens” (Placita philosophorum) and that the quotation from the Timaeus occurs twice in the Nabataean agriculture (i.e., 360). There is no evidence to indicate that the Nabataeans of the region of Sūra were Platonists; it has been observed that various currents of a gnostic tendency had developed there.

At the end of this extremely erudite survey, the author identifies the sābi’al of the Kur’ān with “the Platonists R. and S. of Harrān” (cf. the “Archontics” of Epiphanius (Har., xxix, 7, xi, 1. 5), known also by the name of “Stratiotics” (Epiphanius, ibid., xxvi, 3, 7), followers of the “celestial bands”, a Judaism-Christian sect of gnostic character, formed in Palestine and known in Egypt (ibid., xi, 1. 8) and in Arabia (ibid., xi, 1. 5). The Kur’ānic term would be derived from the Hebrew sābā, “army” (an explanation already proposed by E. Pococke). Such an association of ideas, which he traces back to Judaism-Christian circles, among whom the Elchaisaites/mughattâs provide, in the present writer’s opinion, the best explanation of the Kur’ānic sābi’al.

Thus, whatever may be the origin of the name of the sābā’al, the latter are shown to belong to two distinct groups: on the one hand, the disciples of Judaism-Christian baptismal sects (Ebionites, Elchaisaites, mughattâs, Stratiotics) and, on the other, Harrānians astrologers, the last representatives of decadent Greco-Roman paganism. Both groups may be described as gnostic: the first, Christian and the second, pagan. Hence the ambiguity of the term denoting them, and the diversity of commentaries relating to the three Kur’ānic verses which name them. A degree of corruption has occurred over the centuries, both in the terminology and the concepts, and this has greatly hindered the task of the historian of ideas and of religions.

Bibliography: Besides the references in the text, see, for studies and sources in general: D.A. Chwolson, Der Sabi’ und der Sabismus, i-ii, St. Petersburg 1856, where the bibliography of previous works is to be found; J. Hjärpe, Analyse critique des traditions arabes sur les Sabeens Harraniens, typescript thesis, Uppsala 1972, pp. 187, including the remainder of the bibl. F. de Blois, cited in text, has made a selection of important studies of the subject, of which the most recent are: C. Buck, The identity of the Sābi’un: an historical quest, in MW, lxiv (1984), 172-86, and M. Tardieu, cited in text.

(T. FAH)
303); “God created me [Muhammad] and ‘Ali and Fāṭima and Ḥasan and Ḥusayn and the (other) imāms from a light” (al-Kirmānī, Muḥīn, i, 304); “I [Muhammad] was created from the light of God; He created my family from my light and created those that love them from their light; the rest of mankind are in hell” (al-Kirmānī, Fasīl, 71); in one account, the Throne was created from the light of the Prophet, the angels from that of ‘Ali, the heavens and earth from that of Fāṭima, the sun and moon from that of Ḥasan, and heaven from that of Ḥusayn (ibid., 75-6).

The term sābīkūn was also widely used in early Bābism, where it was applied with created those that love them from their light; the rest of mankind are in hell” (al-Kirmānī, Mubīn, 75-6). That love them from their light; the rest of mankind are in hell” (al-Kirmānī, Fast, 75-6). That love them from their light; the rest of mankind are in hell” (al-Kirmānī, Kitāb al-Mubīn, 75-6).

Later, Bābism introduced numerous variations on this theme, and in the early period of Bahā’ī Bābism, several believers were given names of God, preceded by the title Ṣaḥīḥ (thus Ṣaḥīḥ Ṣaḥāb). Bibliography: Abū Ḍayfār Muḥammad... b. Iḥsān al-Kulaynī, al-Uṣūl min al-Kāfī, ed. Muḥammad Bāḏkār al-Bihbītī and ‘Alī Akbar al-Qhāffārī, 4 vols., Tehran, 1392/1972, Kitāb al-Hujjāba, bāb 94 and 111 (pp. 302-7, 434 ff.); Ḥādīth Muḥammad Ḥān Kirmānī, al-Kitāb al-mubīn, 2 vols., ‘Kīrmanī, 1354 šīrīn, 1354 šīrīn, 1354 šīrīn, 1354 šīrīn, 1354 šīrīn.

Thus we find in the Kurgan its literal usage, as in (A.), pi. 91, “whoever is able to make his way thither” (sc. to the Ka’ba in Mecca), “where the sāḥib al-sūbūn was sustained by a loanword in Kur’ānic usage, most likely taken from Syriac, where shirkātā is used primarily as “way of life”, just as in Arabic (The foreign vocabulary of the Qur’ān, Baroda 1938, 162).

Thus we find in the Kurgan its literal usage, as in (A.), pi. 91, “whoever is able to make his way thither” (sc. to the Ka’ba in Mecca), “where the sāḥib al-sūbūn was sustained by a loanword in Kur’ānic usage, most likely taken from Syriac, where shirkātā is used primarily as “way of life”, just as in Arabic (The foreign vocabulary of the Qur’ān, Baroda 1938, 162).

2. As an architectural term.

As noted above, the sābil is used in mediaeval Islamic sources to designate water-houses which provided drinking water for free public use. In Egyptian waḳf documents of the Mamlūk and Ottoman periods, the term sābil is also used to designate other charitable objects, such as bauḍ al-sābil, i.e. a drinking trough for the animals, or maktub al-sābil which is a charitable elementary school for boys. Although public water-supply is not specifically Islamic—it was a basic feature of Roman and Byzantine cities—the significance of the sābil in Islamic cities is due to the repeated precept in the Kur’ān to give drinking water to the thirsty. However, the sābil was not common in all Islamic cities, and in the cities where it was widespread its appearance does not seem to predating the 12th century. In some cities of Cairo, Fez or Istanbul, the sābil is characterised by a distinctive architectural form. It is always richly decorated and thus meant to be an aesthetic element in the street.

1. Cairo. Mediaeval Cairo was at a distance from the Nile and, because of its hot and dry climate, the provision of drinking water was a matter of great importance. Drinking water was transported from the Nile in goatskins by camels and sold in the street by ambulant water-carriers or in shops. However, providing water on a charitable basis gave the ruling establishment a good reason to demonstrate their piety.

As a charitable foundation, a sābil was sustained by waḳf endowments. The waḳf documents of Mamlūk and Ottoman Cairo include a great deal of references to sābīl, though the descriptions are generally brief. Some were attached to mosques, others were independent constructions. In the late 8th/14th century it became customary to combine the sābil with a maktub or primary school for boys; the maktub was built above the sābil.

The sābil is usually built on two levels, an underground cistern (shibrīq) and on the street level a room (bānūt al-sābil) where the masūmātīldī, or attendant of the sābil, served the public. Through the win-
dow grills he issued the water in copper or ceramic cups to the passer-by. The openings at the lowest part of the grills have the shape of a row of arches which are large enough for the cups to be passed. A stone bench was built beneath the window to allow the user to stand at the level of the grill to receive the cup.

The intake of the sabil was filled once a year during the season of the Nile flood in the summer; canals or mules carried the water from the Nile or the Khatibi Canal of Cairo in goat skins. The intake was filled in from an opening on the façade of the sabil. It was made of brick and roofed with domes supported by piers and had an entrance for the maintenance staff. It was cleaned before the yearly refill and sprayed with incense; the water was perfumed with basil leaves.

Water from the intake was raised by means of buckets and filled into basins of stone or marble where the cups were replenished. A more sophisticated type of sabil, such as that of Sultan al-Qhawri, had a cistern located in a back room behind the bânaî. From this cistern a ghadrîn was fed. The ghadrîn in Cairene terminology is a fountain in the wall surmounted by a decorative niche, usually made of painted and gilded wood with mukarnas [q.v.], and connected to a sloping marble panel (salsabil) which led the water from the wall down into a stone or marble basin. The function of the ghadrîn, which faced the sabîl window, was not only decorative but it served also to air the water coming from the cistern.

The floor of a sabîl was always paved with marble. Water was raised from the intake through a round opening surrounded by a marble balustrade (kharaza). The ceiling of the sabîl, which is visible to the public through the grills, was made of wood and as a rule richly painted and gilded. Cairene sabîls are usually adorned with the Kûr'anic inscription of Šurat al-insân (LXXVI, 16-18) which refers to Paradise, where a heavenly ginger-flavoured water from a fountain called Salsabil will be served.

The maktab of the sabîl is a room, similar to a loggia, open with a double or triple arch on each side. It was reached by its own staircase.

The musnamîlitâ was in charge of cleaning the premises of the sabîl and its utensils and of raising the water from the cistern and serving it to the thirsty. WÂ'ef documents usually stipulate that he should be clean, good-looking, free of infirmity and healthy; some documents stipulate that he should have good manners. The musnamîlitâ dwelt in an apartment attached to the sabîl.

Whereas Mamlûk sabîls were served by one person only, some Ottoman sabîls had more than one musnamîlitâ, such as that of 'Abd al-Rahmân Katkhûdâ, which had three. In the Ottoman period the musnamîlitâ was sometimes assisted by a person called the sabîlî.

The opening time of sabîls varied; some were open all day long, and during the month of Ramadan all night; others were open only at specific hours of the day, between the prayers of noon (zuhr) and afternoon (asar); yet others were open only during summer.

Cairo has an important number of sabîls from the Mamlûk and Ottoman periods. The earliest extant sabîl is that of Sultan al-Nâşir Mu'âmmad built in the early 6th/14th century. Today it is ruined and appears as an L-shaped prop on columns built along the corner of the madrasa of al-Nâşir's father al-Manṣûr Kalâwûn. It was surmounted by a small dome decorated with faience mosaic on the base. The sabîl of Amîr Shawkûn (755/1354) is a very different type of building; it is hewn in the rock in the form of a vaulted room.

By the second half of the 8th/14th century, the standard location of the sabîl was at the corner of a religious building with a maktab on the upper floor. With two large iron-grilled windows, one on each façade, it was well ventilated. This device was maintained throughout the Mamlûk and Ottoman periods. Some mosques have more than one sabîl-maktab.

Sultan Kâ'it Bây, who was a great builder, erected a number of separate sabîls all over the city. They had one or two apartments attached to them, sometimes also a shop. Some had a mibrâb in the wall of the bânaî. The only surviving maktab of Kâ'it Bây is at the Šaliba street (884/1479); it has three façades and is one of the most lavishly decorated monuments of mediaeval Cairo, with polychrome inlaid marble, carvings, and inscriptions.

The sabîl of Sultan al-Qhawri, attached to his religious-funerary complex (909/1504) in the centre of the old city of Cairo, is described in the wâ'ef document with more detail than usual. It projects from the street with three façades, each with a large window. Behind each window there was a marble basin connected to a fauswâya, a kind of water tap, which received water through lead tubes from the ghadrîn. In summer the windows of the sabîl were protected with awnings against the sun.

The Ottomans founded fewer religious buildings than the Mamlûks, but they erected an important number of sabîls and maktabs in Cairo, some of which have a mibrâb and were used also for prayer.

Until the 18th century the sabîl-maktabs continued to be built in the Mamlûk style. In the mid-18th century, a new trend for façade decoration in carved stone appears also in sabîl architecture. Amîr 'Abd al-Rahmân Katkhûdâ, a great patron of architecture who created a new style of façade decoration, sponsored in 1157/1744 one of the most handsome sabîl-maktabs of the old city of Cairo. Built at the bifurcation of the main street of al-Kâhirâ, it has three façades with marble carved in Turkish style and inlaid in Mamlûk style. The eastern façade has a trilobe mukarnas portal. The interior is panelled with Turkish ceramic tiles. Two apartments for the staff are attached to the building. It has a mibrâb in the shape of a painted niche in the ceramic tiles surmounted by a representation of Mîhrâb.

In the late 18th century, the architectural style of the sabîls of Cairo shows Turkish influence. This can be seen at the curved semi-circular and faceted façades, the floral carvings, the inscribed cartouches with poems and chronograms, often in Turkish, and the elaborate window grills. However, the sabîl maintains its basic traditional features such as the maktab on the upper floor. The sabîl attached to the madrasa of Sultan Mâhmûd (1164/1750) has five facets and was used also for teaching; along with the sabîls of Rukâyya Dîdû (1174/1761) and Nafîsa al-Baydâ' (1211/1796), it is among the finest examples of the late Ottoman period.

In the 19th century the Turco-Italian influence is even more pronounced, while the Islamic decorative repertoire tends to vanish. The sabîls of this period, unlike their contemporaries in Turkey, however, maintain their façades.

Fâs. The city of Fâs is often said to be built on water because of the abundance of the water which it receives from the river Fâs and its tributaries, as well as from a multitude of springs. In the 5th/11th century an underground system of piped channels was built beneath the city to serve its mosques, houses and fountains.

Fâs has preserved an important number of public fountains known popularly as šâkya (from sabîl "to
Fig. 1. The sabil of ʿAbd al-Rahmān Katkhudā in Cairo (1157/1744) (by Philip Speiser).
give to drink”). Already in the Almohad period, during the reign of al-Manṣūr, the city had 80 public fountains. Today 106 fountains survive, of which 93 are functioning. The earliest datable one is from 840/1436 (Betsch).

Fig. 2. The composition of a sabil at Fās (by William Betsch).

The shape of the fountains of Fās show a persistent continuity over the centuries. The typical fountain is a mural structure which consists of a vertical rectangular panel including a recessed arch. This composition has been compared with that of a gate or a mihrāb and associated with symbolism. At the lower part of the arch are the spigots from which the water flows down into a basin or sundūk protruding from the wall. The fountains are characterised by their faience mosaic decoration or zalādh. Thousands of individually shaped elements cut from glazed ceramic tiles of several colours and cast into plaster or cement are combined to form geometric star designs of dazzling effect. Considering the white introverted architecture which is a kind of self-service ceshme, the resemblance with a gate or a mihrāb can be noticed here. The ceshmes of the 18th century are surmounted by a large crest filled with arabesques, similar to that on manuscripts. Many fountains combine a sebil with a ceshme. White marble is characteristic of Turkish water architecture.

In the late 10th/16th century, the shape of the Ottoman sebils begins to acquire its characteristic features. Sebils like that of Gazarfer Āغا (1599) in Istanbul were built as part of a religious or funerary complex in the shape of polygonal faceted structures with arched grill windows set between pilasters; the leaded domical roof had eaves. Goodwin sees in the late 10th/16th century the genesis of Ottoman water architecture, which reaches its apogee in the late tulp period [see Lale Devri] during the first third of the 12th/18th century, “an age of water”. At that time, instead of the faceted façade of the sebil, it becomes more curved and semi-circular and, when integrated into a tomb, both façades are combined, such as in the complexes of Hekimoğlu Ali Paşa (1147/1734) and Hacı Mehmet Emin Āğa (1572/1710). The marble of this period is carved with baroque foliation and garlands, flamboyant floral and fruit motifs combined with traditional patterns, which also characterise contemporary ceshmes. The grills become intricate with lacy patterns.

The most famous water-house is that of Sultan Ahmed III (1141/1728) built at the gate of the Topkapı Seray as a combination of four sebils and four ceshmes. Built of marble with a wooden roof that runs down into eaves, it consists of a central rectangular cistern with a ceshme on each side. The ceshmes are set within arched panels with polychrome vousoirs and are flanked by a pair of mukarnas niches which include benches. The sebils occupy the corners, each with three concave intricate grills between columns. Five wooden domes protrude from the roof, four at the corners and a central one. Gilded foundation inscriptions written as poems in nastā’īk adorn the upper part of the building. Carved marble, paintings, polychrome vousoirs and tiles contribute to the lavish decoration.

The fountains of 19th century Turkey which stand independently as public spaces, such as that of Cevat ul-Hamdi Āğa at Istanbul (1310/1892), are characterised by their rectangular shape and rectilinear façades, which contrast with the shallow curves of the decorative arches and the volute designs. Their decoration follows European tradition.

Bibliography. L.A. Mayer, The buildings of Qays-bay as described in his endowment deed, London 1938;

It was for this sort of thing that he won the admiration of his contemporaries, for example that of the now much more famous Anwarl [9.9.], who says in one of his poems:

As 546/1151-2, which seems too late.

...for the similarities of Sabir to a much more intricate manner of writing, often qualified as “baroque” [see further IRAN. vii.]

The most noticeable feature of Sabir’s poetry is his dexterous use of artificial devices. ‘Awfi singles out a contrived poem dedicated to MahdT al-Din in which Sabir uses the words sun (cyprus) and heaven in every verse of the first (as main) section, and then the words ḥālī (sun) and āsmān (heaven) in every verse of the second (panegyric) section. He also composed not one, but several long poems in which every verse enumerates three things ("one thing is A, a second is B, a third is C") or again, a kāsinā in which he does without the letter alif. It was for this sort of thing that he won the admiration of his contemporaries, for example that of the now much more famous Anwarl [9.9.], who says in one of his verses:

At least I am as good as Sanā‘ī, even if I am not like Sabir'.

The sabil of ʿAbd al-Rahmān Katkhudā in Cairo (1157/1744).
The fountain of al-Nadjjarin at Fas.
The *sabil* of Sultan Ahmed III in Istanbul (1141/1728).
Literature, at vol. IV, 60aj. For a long time Persian critics have interpreted this development as a decline, which reached its lowest level during the period of the Indian style. The appellation "Indian style" was derived from the fact that the features usually associated with this style were most conspicuous in the works of poets and writers who were attached to Indian courts during the Mughal period. As the poets of the Safavid court of Isfahan in the 17th and early 18th centuries wrote in a similar fashion, some modern Persian scholars have proposed to use the names sabk-i Isfahani sabk-i shiā for identifying the two styles.

Although a development of style as outlined by this classification cannot be denied, it is impossible to determine the chronological boundaries between the three periods with any precision. Only the end of the period of the Indian style can be dated approximately, and then only as far as Persia itself is concerned. In the middle of the 12th/18th century, poets in Isfahan and Shiraz, notably Mohάshd, Mafūn and Lutf-Allî Beg [q.v.] Adhâr, began to criticise the excesses of the Indian style and to demand a return to what they regarded as the stylistic purity of early Persian poetry. This reaction, now known as the bāhsalt-i adabi (the "literary return"), initiated a neo-classicism which dominated the writing of poetry in Persia well into the present century. It also influenced the outlook of Persian critics on the Indian style. This outlook is reflected, for instance, in the introduction to Riđâ Kuli Khân Hidâyât's Magâma' al-fusahâ (completed in 1288/1871), where the word sabk is already used in its modern sense although the geographical qualifications are not yet mentioned. Similar views were expressed in a letter on the subject written by Mirzâ Muhammad Kazwînî to E.G. Browne (LHP, iv, 26-8). This neo-classicist return did not affect, however, Persian poetry written in Afghanistan, Central Asia and, particularly, the Indian subcontinent, where the Indian style held its ground.

According to M.T. Bahâr, the theory of the three styles came into being in the late 13th/19th century, when the question which one of the two early styles should be taken as a model for imitation was much debated. About 1880, literary critics at Mashhad, to Afghanistan, Central Asia and, particularly, the Indian subcontinent, where the Indian style held its ground.

It is less easy to determine the historical starting-point of the Indian style. Some modern scholars have maintained that its roots go back to the very beginnings of Indo-Persian poetry in the 7th/13th century; others have connected them to the rise of the Safavid style in Persia (10th/16th century) and the exodus of Persian poets to the Indian courts which began in the course of the same century. Several names have been put forward as the initiators of these stylistic changes: among them are Fighânî [q.v.], who was attached to the courts of Harât and Tabrîz during the transition between the Timurid and the Safavid dynasties, 'Urri [q.v.], a poet from Shirz̄ who in the late 10th/16th century was one of the first Persians to make a career at the Mughal court, and his contemporary the Indian-born Faydî [q.v.]. Even much earlier poets have been mentioned occasionally as predecessors.

The only statement which can be made with any degree of certainty is that the special traits of the Indian style are noticeable since the beginning of the 11th/17th century in all the countries where Persian poetry was cultivated. Eventually, it also made a strong impact on the poetry in the Persian manner which was written in Turkish, Urdu and other Indo-Aryan languages.

Several attempts have been made to define the distinctive features of Indian style poetry and to explain its appearance. The Indian scholar Shībī Nu'ān [q.v.], in the third volume of his Shīr-âl-'Adâm, drew up a list of such features, which has been seminal for subsequent research. Although the classification of the three regional styles was still unknown to him, he did acknowledge the innovations in the style of the poets of the 10th/16th-11th/17th centuries. The prominence gained by the "ghazal" since the 7th/13th century (due mainly to the influence of Sa'd, Amir Khusrwâ Dihlâtâ Hâfiz) was, according to Shībī, of primary importance. An early new element was the addition of references to actual occurrences of an erotic nature to the usually abstract imagery of ghazal poetry, known as wudâ'gūz, "relating incidents". A remarkable example is the Pîdâlîyâ, a cycle of ghazals written by Muhammad-î Kâshânî [q.v.] to celebrate a dancer he admired. The beloved was often identified as a young craftsman in the bazaar (mas'ud-i bâzâr), especially in sbâhârâb [q.v.], poetry, in which the beauty of the protagonist is described as "creating havoc in the town". The rise of this genre betrays a tendency towards realism noticeable also in the use of images taken from real life and of elements from popular speech, hitherto not regarded as suitable for the poetic idiom.

A second major trend is the conceptual complexity, affecting both imagery and themes, subsumed by Shībī under the headings khâyâl-bâf ("the weaving of the imagination") and madmân-sâzí ("the creation of concepts"). His observations were further developed by A. Bausani, who pointed out that the novelty of Indian style poetry was caused by the increasing disregard of the rule of the harmonious and associative choice of images ("das Prinzip der harmonischen oder beziehungsreichen Bildwahl"). In the phrase of H. Ritter, cf. Über die Bildersprache Nizâmi, Berlin 1927, 25), which had disciplined the phantasy of the classical poet. This greater freedom resulted in the combination of rather incongruous images within the compass of a single verse as well as in a much greater density of expression. The intricate play of the imagination of the Bausani's and the latter's Shībī's teacher Nadîm Bâshî, belonged to have taken a leading part in these discussions (cf. Sabk-ghâmâsi, i, pp. y-yb; see also Armaghân, xiii, 440 ff.).

Among the linguistic innovations, the formation of new compounds, a predilection for constructions based on participles rather than on finite verbs, and the extension of the semantic spectrum of words are particularly conspicuous (on this, see especially the monograph by W. Heinz). The syntax of the verse is not seldom unnatural, and this has become one of the most serious objections against the Indian style.

As a social factor promoting these changes, Shībī pointed to the rise, about the same time, of the
mushadams [q.v.], gatherings of poets where the poetic skills could be sharpened in competitive improvisations. This replaced the earlier tradition of imitating the works of older poets mainly accessible through written sources.

Explanations for the rise of these innovations have been sought in various directions: the political and religious revolution in Persia brought about by the establishment of the Safavid state, the different cultural conditions in India as well as structural changes in Persian society. These theories were discussed, especially in the writings of E. T. Arshadali (1935, 1936) and A. Miquel (1958). It is the terminus of a network of streams delineated by steep sides. After rain, it is more or less completely filled with water impregnated with mineral substances which accumulate at the bottom of the basin with well-marked contours sometimes traversed by crevasses in which the crystals gather. The salt deposit sometimes covers mud, quicksand, and shallow water or to those the floor of which looks like a plain covered with saline incrustations, especially near Siwa, etc.

This definition and description of the features of the sebkha apply equally to the shit. An attempt has been made to establish a distinction between the two, the former term being applied to hollows which always remain more or less moist, the second to those whose evaporation is greater than the access of subterranean water or to those the floor of which looks like a plain losing itself in the horizon. There is no real foundation for this distinction. The two terms are employed indifferently in the same district. For example, we have in Orania the sebkha of Oran and the shit of Gharliu and Sharki, in the Sahara the sebkha of Timimûn (Gurara), the shit of Southern Tunisia, the sebkha of Wargla, of Siwa, etc.

Bibliography: See that to šahāra (G. Yver*).

SABR (A.), usually rendered "patience, endurance". The significance of this conception can hardly be conveyed in a West European language by a single word, as may be seen from the following. According to the Arabic lexicographers, the root š-b-r, of which and the expression jannina sabr, by which is meant an oath imposed by the public authorities and therefore taken under the auspices of Ali, Kâmil al-Shu'ârâ', 741-95; idem, La geographic humaine du monde musulman (Paris, 1926), II, 66, "Serve him and persevere in his service". The expression is applied, for example, to martyrs and prisoners of war put to death; in the Hadîth often to animals that—contrary to the Muslim prohibition—are tortured to death (e.g. al-Bukhârî, Dâbâqî, hâb 25; Muslim, Šuyûd, trad. 58; Ahmad b. Hanbal, Munad, iii, 171). The word has a special technical application in the expression yaminu sabr, by which is meant an oath imposed by the public authorities and therefore taken under the auspices of Ali, Kâmil al-Shu'ârâ', hâb 27; Aymân, hâb 17?; Muslim, Imân, trad. 176).

In the Kurâân, derivations from the root j-b-r frequently occur, in the first place with the general meaning of being patient. Muhammad is warned to be patient like the Apostles of God before him (XXXVIII, 16; XLVI, 34; "for Allâh's threats are fulfilled", is added in XXX, 60). A double reward is promised to the patient (XXXIII, 113; XXXVIII, 34; cf. XXV, 75). In XXXIX, 16, it is even said that the sâbûrân shall receive their reward without kisâb (which in this case is explained as measure or limitation).

The conception is given a special application to the holy war (e.g. III, 140; VIII, 66); in such connections it can be translated by "endurance, tenacity". Form VIII is also used in almost the same sense, e.g. XIX, 66, "Serve him and persevere in his service".

The word is next found with the meaning resignation, e.g. in the sûra of Joseph (XII, 18) where Jacob, on hearing of the death of his son, says "[My best course is] fitting resignation" (fa-sabrân fâmilân*).

Sometimes sâbr is associated with the salât (II, 42, 44). According to the commentators, it is in these passages synonymous with fasting, and they quote in support the name shahr al-sâbr given to the month of Râmâdân [q.v.]. As an adjective, we find sâbrûr in the Kurâân,
associated with ṣabār (XIV, 5 etc.); cf. thereon al-Ṭabarî, Tafsîr, "It is well with the man who is resigned when misfortune afflicts him, grateful when gifts of grace are bestowed upon him, and patient, forgiving when he is wronged." "Wonderful is the attitude of the believer; everything is for the best with him; if something pleasant happens to him, he is thankful and this proves for the best with him; and if misfortune meets him, he is resigned and this again is for the best with him." The ideas of sabr and ṣabr are also associated with al-Ghazâlî, see below.

The later development of the conception is, of course, in the work of Fakhr al-Dîn al-Râzî (Mâdîr al-adab, bdb 19, 41; Ahmad b. Hanbal, iii, 231). Al-Ghazâlî comprises the treatment of sabr under the following heads: (1) the excellence of sabr; (2) its tawhîd, with matters of dogma, e.g. in the doctrine of the Christian and the self-control and renunciation as it includes the ṣabâr of the Stoic, the patience of Sabr, Kur of God. According to him, this again is for the best with him. "It is well with the man who is resigning from evil,20 and shukr. Al-Ghazali comprises the treatment of sabr under the following heads: (1) the excellence of sabr; (2) its tawhîd, with matters of dogma, e.g. in the doctrine of the Christian and the self-control and renunciation as it includes the ṣabâr of the Stoic, the patience of Sabr, Kur of God. According to him, this again is for the best with him. "It is well with the man who is resigning from evil,20 and shukr.

In conclusion, we may remark that in the canonical Hadîth the meaning renunciation is exceedingly rare, a meaning which receives so great an importance in ethic-ascetic mysticism (cf. what has already been said above on sura II, 42, 148). Bah 20 of al-Bukhârî's Kitâb al-Raw'ā (which is much richer in applications in the other collections of traditions, representatives of the oldest stage of this tendency in Islam) has in the tarjama: 'Umar said, "We have found the best of our life in sabr." Here we already can trace the Hellenistic sphere of thought for which renunciation was the kind of life fitting the true man, the wise man, the martyr.

What the Kur'ân and Hadîth say about sabr recurs in part again in ethic-mystical literature; but the word sabr is often transferred into another term and to a very high degree, as sabr is the cardinal virtue in this school of thought. As with other fundamental conceptions (see the series of definitions of Şûfî and Şûfism given by Nicholson in JRAI [1905]), we find numerous definitions of sabr, definitions which often point rather to fertility of imagination than give an exhaustive exposition of the idea, but are of great value for the light which they throw upon the subject like lightning flashes. Al-Kushayri in his Risâla, ed. 'A. M. Mahmûd and M. Ibn al-Sharîf, Cairo 1385/1966, 397-404, gives the following collection: "The gulping down of bitterness without making a wry face" (al-Djûnîyâd); "the refrain from unpermitted things, silence in suffering blows of fate, showing oneself rich when poverty settles in the courts of subsistence"; "steadfastness in fitting behaviour (Huw al-adab) under blows of fate" (Ibn 'Aţâ); "bowing before the blow without a sound or complaint"; "the sabr is he who has accustomed himself to suddenly meeting with forbidden things" (Abû Uthmân); "sabr consists in welcoming illness as if it were health"; "steadfastness in God and meeting His blows with a good countenance and equanimity" (Amr b. Uthmân); "steadfastness in the ordinances of the Book and of the Sunna" (al-Khawâsî); "the sabr of the ascetic, which is of itself superior and more difficult than that of the ascetics" (Yahyâ b. Mu'âdâd); "refraining from complaint" (Ruwaym); "seeking help with God" (Dhû 'l-Nûn); sabr is like its name i.e. [bitter] like aloes (sabr; see the next article) (Abû 'Ali al-Dakkkâk); "there are three kinds of sabr, sabr of the mutasabbir, of the sabr and of the sabbrâr (Abû 'Abd Allâh b. Khâfîf); "sabr is a steed that never stumbles" (Abû 'Ali al-Tâlib); and sabr is not to distinguish between the conflation of grace and its opposite, i.e. the feeling of spirit in both; tabâbûr is calm under blows, while one feels the heavy trial" (Abû Muhammad al-Djûrâyri; cf. ṣabâqa). Al-Ghazâlî treats of sabr in Book II of the fourth part of the Ihyâî, which describes the virtues that make blessed. We have seen that, already in the Kur'ân, sabr and ẓâkîr are found in association. Al-Ghazâlî discusses the two conceptions in the second book separately, but in reality in close connection. He bases the combination given in the Kur'ânic phraseology, but on the maxim "belief consists of two halves: the one sabr and the other ẓâkîr". This again goes back to the tradition "sabr is the half of belief" (cf. the traditions given above which also associate sabr and ẓâkîr). Al-Ghazâlî comprises the treatment of sabr under the following heads: (1) the excellence of sabr; (2) its

20 3.

Significant, in other respects also, is the story of the epileptic woman who asked Muhammad for his ḏârî for her ḏârî for her healing; she replied to her that, if she refrained from her request and exercised sabr, paradise would be her portion (al-Bukhârî, Mâdîr, bdb 6; Muslim, al-Burr wa l-sîla, trad. 54). The word is often found in this connection associated with the proper word for resignation, viz. ṭhisâb (e.g. al-Bukhârî, Ayman, bdb 9; Muslim, Ḍiânâ'î, trad. 11); with this should be compared the following hadîth kudsi: "If my servant is deprived of sabr, it is nothing except paradise in compensation" (al-Bukhârî, Mâdîr, bdb 67; Ahmad b. Hanbal, iii, 283).
nature and conception; (3) sabr, the half of belief; (4) synonyms with reference to the object of sabr; (5) kinds of sabr as regards strength and weakness; (6) opinions regarding the necessity of sabr and how man can never dispense with sabr; and (7) the healthfulness of sabr and means of attaining it. This division is virtually adopted by Bar Hebraeus [see Ibn al-Sakr] in his Ethikon for the masaybrnâsâ (see A. J. Wensinck, Bar Hebraeus' Book of the Door, Leiden 1919, pp. cviii-cxix).

Only the following out of these sections can be given here. Sabr, like all religious makmât, consists of three parts, ma'ârif, hâl and 'amal. The ma'ârif are like the tree, the ahwâl the branches and the 'amâl the fruits. Out of the three classes of beings, man alone may possess sabr. For the animals are entirely governed by their desires and impulses; and the angels, on the other hand, are completely filled by their longing for the deity, so that no desire has power over them and as a result no sabr is necessary to overcome it. In man, on the contrary, two impulses (dâ'âqû) are fighting, the impulse of desires and the impulse of religion; the former is kindled by Satan and the latter by the angels. Sabr means adherence to the religious as opposed to the sensual impulse.

Sabr is of two kinds: (a) the physical, like the endurance of physical ills, whether active, as in performing difficult tasks, or passive, as in suffering blows, etc.; this kind is laudable; and (b) the spiritual, like renunciation in face of natural impulses. According to its different objects, it is called by synonyms like 'îjâfa, dâbi al-nafs, shudâji'a, hîm, sa'at al-sabr, kûmân al-sirr, zuhd and kanâsâ. From this wide range of meanings, we can understand that Muhammad, when asked, could answer, 'simân is sabr'. This kind is absolutely laudable (mahmûdâm inâm).

As regards the greater or less strength of their sabr, three classes of individuals are distinguishable: (a) the very few in whom sabr has become a permanent condition; these are the 'iddâkân and the mukarrabûn; (b) those in whom animal impulses predominate; and (c) those in whom a continual struggle is going on between the two impulses; these are the mudÂhâdûn; perhaps Allah will heal them. One of the gnostics (says al-Qâthâlî) distinguishes three kinds of sabrân: those who renounce desires, these are the ti'ûbân; those who submit to the divine decrees, these are the sâhîdân; and those who delight in whatever God allows to come upon them, these are the 'iddâkân.

In section VI, al-Qâthâlî shows how the believer requires sabr under all circumstances; (a) in health and prosperity; here the close connection between sabr and gratitude is seen; and (b) in all that does not belong to this category, as in the performance of legal obligations, in refraining from forbidden things and in whatever happens to a man against his will, either from his fellow-men or by God's decree.

As sabr is an indication of the struggle between the two impulses, its salutary effect consists in all that may happen to a man against his will, either from his fellow-men or by God's decree.

Sabr means adherence to the religious as opposed to the sensual impulse.

šabr — šabra (a.) denotes the aloe, a species of the Liliaceae, which was widespread in the warm countries of the ancient world, mainly in Cyprus and on the mountains of Africa.

The leaves of many varieties provide fibres ("aloe-fibres") for spinning coarse cloths, and from the aloe's brown-black wood a valued perfumery is won. Important was also the aloe drug, i.e. the juice pressed from the leaves, whose Greek name alyon was borrowed by the Arab pharmacologists as alwûq. In the West, the name apparently was pronounced sibar, which survives in Spanish acabar. The most extensive descriptions of the plant and its drug are found in Ibn al-Baytâr, Dwâmî, iii, 77-81 (tr. Leclerc no. 1388) and in al-Nuwayrî, Nhujâ, xi, 304-7. According to him, the leaves of the plant resemble those of the sea onion (sikil), which are wide and thick, bent back, covered with a sticky liquid and whose ends are thorny. Among the numerous varieties of the aloe, three are generally mentioned: sukûrî, 'arabi (hadfamî), and imandânî (the latter reading is uncertain; it is perhaps sibar, the West, the name apparently was pronounced 'alawûq). The first variety is considered to be the best and probably corresponds with the Aloe Parryi Baker, the Aloe Socotrina, which thrives in great quantities on the island of Socotra (Sukûrî [q. v.]). The leaves, which are full of water, are squeezed, chopped up and pounded until the juice comes out. This is left to thicken, placed in a dish and exposed to the sun until it dries up. The juice resembles that of saffron, its scent that of myrrh. The entire plant has a sharp odour and a very bitter taste. It has only one root. The drug was used above all as laxative, as an amaran or appetiser and as a choleretic; externally, it was applied on badly healing wounds, ulcers and burns; it was also used against inflammations of the eye, and as a means to improve bad breath.

Šabr — Šabra, one of the three ancient cities (Leptis Magna = Lebda; Oea = Tripoli; and Sabratha or Sabrata = Šabra) which made up Tripolitania. Šabra Mansûriyya [q. e.], another town.
Sabra—now a tourist town and the centre of an archaeological zone along the littoral some 75 km/48 miles west of Tripoli and 35 km/20 miles west of Zuwara—is a lifeless desert (khâlîs), adding that it was, like all the other urban centres of the region, “a lifeless desert” (khâlîs bâlka‘). In the middle years of the 6th/12th century, al-Idrīsī merely mentions it, of the 5th/11th century it was the “ancient statues in stone” which attracted al-Ya‘qūbī’s attention. Ibn Hawkal noted that, at the time when he visited the Maghrib, in 340/951-2, a tax was levied on caravans which passed through the town. In the last quarter of the 6th/12th century, al-Mukaddasi wrote that Sabra was a fortified town, surrounded by palm groves and orchards full of fig trees. In 403/1012-13 Sabra was at the centre of rebellions fomented by the Zanata against the Zirids amīr Bādīs. Towards the end of the 5th/11th century, al-Bakrī described it as a prosperous town, populated by Zuwâghâ, who had taken the side of Ibn Khaled against the last Rustamids [q.v.]. In the middle years of the 6th/12th century, al-Idrīsī merely mentions it, adding that it was, like all the other urban centres of the region, “a lifeless desert” (khâlîs bâlka‘), having been devastated by the Arabs of the Banû Hilâl and given over to pillage by the Mirdâs and Râyâh, as confirmed by Ibn Khaldûn. In Şafar 707/August 1307, al-Tâjînî noted that the biggest populated unit of the region which he was passing was Zuwâghâ, and that in its environs, by the sea coast, were to be found “the ruins of an ancient city known as Sabra, which may also be sometimes written with a sâ‘īn”. In the mid-10th/16th century, Leo Africanus/al-Hasan b. Muhammad al-Zayyatī no longer mentions Sabra. He merely mentions Zuwârah, describing it as a small town in full decay. It was in the neighbourhood of this town that there was held, in a tent, the conference of March-September 1893 between France and the Ottomans which delimited the Tunisian-Libyan frontier.

The resultant dissatisfaction in Kayrawan, now deprived of its economic role, was not perhaps unconnected with the revolt which broke out there in 407/1016 at the coming of Al-Muzz [q. v.] and which spread to Al-Mansuriyya, which was badly damaged. Finally, in 519/1124, under pressure from the Banū Hilāl, Al-Muzz fled to Al-Mahdiyya. Al-Mansuriyya was then totally devastated, and, unlike Kayrawan, never rose again from its ruins. Al-
Idrīsī, in the middle of the 6th/12th century, depicts it as ruinous and deserted: "One no longer meets any living soul there" (Opus geographicum, Naples-Rome 1984, ii, 280). Over the ensuing centuries, the site was pillaged, and the excavations, begun in 1921, have only yielded a few remains: paving materials, sculpted plaques, pottery with geometric or life-like decorations, etc.

ique du Nord, Paris 1956, ii, 65, 68, 70, 107; G. Mar-
larr, L'architecture musulmane d'Occident, Paris 1954, 66, 79-81; idem and L. Pinsott, Objet kraouanais, Tunis 1948-52, ii, 371; B. Roy and Pinsott, In-

SABT (A.), the sabbath, and thus (yawm al-) sabt, from the Hebrew shabbat (see shabbat), is not a term derived from the Arabic sabt, from the verb sabta, "to rest", which was said to be restricted in its meaning to senses of "ceasing" or "being still", without conveying an implication of "rest"; the word sabt was still seen to have that meaning, however, as was necessary in XXV, 47, and LXXVIII, 9.

Muslim-Jewish polemic often focussed upon the ac-
cusation that the Jews entertained an anthropomor-
phic concept of God because of the notion of his "resting" from creation on the sabbath. For Muslims, yaum al-djumā, while it contained aspects of a day of rest in its celebration (a facet which has become more pronounced in modern times), was generally not seen as a holiday from work, any more than yaum al-sabt was.

SABTA, CEUTA, A TOWN OF NORTHERN MOROCCO. It is situated 16 km/10 miles to the south of Gibraltar on the Moroccan coast, 60 km/38 miles to the north-
west of Tetouan and 210 km/130 miles from Fās. Sab-
ta has the form of a peninsula, ending in a small mountain (the Djabal al-Mīnā or Mt. Hacho, 193 m/633 feet), which has played the double role of a natural acropolis and a watch point. The tip of the peninsula, 60 m/197 feet in height, is attached to the mainland by a narrow strip of land, easily defensi-
ble. The old town had its counterpart in the Marindún town, the Afragh [q. v.].

Explanations of the placename's etymology abound. Thus it is said that Sabta derived from the Latin Septim Fratres, which denotes the seven nearby hills;
most of the Arabic chronicles attribute its foundation to one Sabt, a descendant of Noah and eponymous hero, whose form Sabt al-šabtī was still venerated at the beginning of the 9th/15th century. The Phoenician trading depot of Abyla and the Roman Julia Traiecta have been situated there, but Rome does not seem to have attached much importance to the place (C. Posac Mon, Estudios arqueología de Ceuta, in Actes du IX Congrès, Valladolid 1965). As successors to Rome, the Byzantines clashed with the Visigoths, who besieged Sabta in 534, but the Byzantines managed to occupy it. They set up a fort on the isthmus, provided with new fortifications. After the Portuguese check before Tangier in 860/1437, a treaty was signed.

The accounts of the conquest of al-Andalus bring into prominence Count Julian, the Visigothic governor, Byzantine Exarch or lord of the Ghumāra, according to the various chronicles (see Ibn 'Abd al-Hakam, Conquête de l'Afrique du Nord et de l'Espagne, ed. and partial tr. A. Gateau, 2nd ed. Algiers 1947). It was a refuge for Arab forces during the Kāhirījītī rebellion, an Idrīsīd principality (it was allegedly occupied by Idrīs I in 173/789-90), as the capital of the Banū 'Isām, who appear more as an independent dynasty than as Idrīsīd governors, occupied by the Umayyads of Cordova in 319/931 and became a pawn in the struggle against the Fātimīds. Al-Nāṣīr proclaimed himself caliph and called himself “master of the two seas” after the conquest of the town. As a base for intervention in the Maghrib, it had strong ramparts and could gather in the populations of towns threatened or ruined (Nakūr al-BAse, Tāhār, etc.). The decline of the caliphate allowed the Hammūmiddīdīs to establish a principality which included Tangier, Ceuta, Algeciras and Malaga. The town’s mint coined gold pieces, the mancus caedimus, which became widely current. The Hammūmiddīdīs’ lieutenant, Sakkūt al-Barghawātī, professed from the ancestry within al-Andalus to seize power and set up his own dynasty (al-Ma‘kārī, Aṣḥār, i. 34; Ibn Khalidūn, Prolegomena, tr. Rosenthal, ii, 220; V alive Bermejo, legomena, Al-Andalus, Pro-

The later al-Zafīdīs, whose dynasty was to last until 720/1320, including some temporary hiatuses (J. D. Latham, The rise of the al-Zafīdīs of Ceuta, in IOS, ii [1972], 265-87; idem, The later al-Zafīdīs, in ROMM, xv-xvi [1973], 109-25; idem, The strategic position and defence of Ceuta in the later Muslim period, in IQ [1971], 189-204; and see “Aṣafi, banu ʿl-”, in Suppl.). The Banū ʿl-Zaṣū bi instituted a consultative régime (al-shūrā) which preserved the town’s autonomy whilst recognising the Almohad caliph. As a bridge-head between the Saharan region and the Mediterranean, Sabta played a leading role in commercial exchanges and minted coins of excellent quality (J. J. Rodriguez-Lorente and T. b. Hafiz Ibrahim, Numismatica de Ceuta musulmana, Madrid 1987).

Taken by Granada in 705/1306, Sabta was sacked and its élites expelled. The inhabitants appealed to the Marinids, who re-occupied it in 789/1387. Marinid control, the loss of the Andalusian towns and a general regression in the region, weakened the town and its commerce; it was replaced regarding commerce into the interior by Genoese, Barcelonans and Majorcans established along the Atlantic coast of Morocco.

As the home of the geographer al-Idrīsī, of the kādī ʿIyād and of Abu ʿl-Abbās al-Sabṭī, Sabta played an important role as a centre of learning, and especially of fiqh, hadīth, grammar and medicine (H. al-ʿArifī, Bulghat al-umniyya wa-maksadal-anf and the school of Almeria. Abu ʿl-Hasan al-Shārī founded there the first madrasa in the Maghrib; al-Aṣafi began there the Mawlid, a festival adopted officially by the Marinids (al-Durr al-Munazma, ms.). If nothing now remains of the monuments of Sabta, Muḥammad al-Ansārī describes at length the situation just after the town’s fall (Iḥtiṣār al-akhārī taswīrān kāna bi-thaghr Sabta…, tr. F. A. Turki, in Hespéris-Tamuda [1982], 83).

The Portuguese seized Sabta in Djumādā II 818/August 1415. It was abandoned, also the village of Bālūnhāsh, which had played a great role in its history, by its population. After the annexation of Portugal by Spain in 988/1580, Sabta was transferred to Spanish sovereignty and despite numerous Moroccan attempts to regain it, Ceuta has always remained a Spanish presidio and a free zone.

After the Portuguese capture of Sabta in 818/1415, it was attacked by the kādī ʿIyād, who led resistance in the district. Meanwhile, in 824/1421, a bishopric was created there. The quarters on the mainland were razed and the town, now reduced to the isthmus, proved with new fortifications. After the Portuguese check before Tangier in 860/1457, a treaty was sign-
ed, the return of Ceuta to Morocco was envisaged and Don Ferdinand sent as a hostage to guarantee the promise, but the Cortes refused to ratify it, and the prince died, as a martyr; at Fas in 847/1443. After the Battle of the Three Kings (986/1578), Spain seized Ceuta definitively. Nevertheless, the town was regularly attacked by neighbouring tribes and by the principality of Tétouan [see ṭṭṭāwīn]. The siege decided upon by Mawlāy Iṣām al-Ṭaʿlabī from 1104/1693 to 1133/1721; that of 1180/1766 was ended by an ambiguous treaty, completed by the convention of 1188/1774 (J. Caillaux, Les relations de l'Espagne et du Maroc pendant les XVIIIe et les XIXe siècles, Paris 1905; R. Ricard, Le Maroc septentrional au XVIIe siècle d'après les chroniques portugaises, in Hesp. xxii (1936), 89-143; V. (Halima Ferhat)

Al-SABTĪ, Ahmad b. Ẓafar al-Khadatī. Abu ʿAbd Allāh al-Sabtī, renowned Moroccan saint, born at Sabta (Ceuta) in 524/1130, not to be confused, in the text of Ibn Khaldūn (Mukaddima), with a homonym who lived in a later period and was the inventor of a circular divinatory table known as the zaʿradja al-ʿālam.

Two accounts afford a glimpse of his career, which was contemporaneous with that of the great saint of Tlemcen Abu Madyan al-Andalusi (520/934-1126-97): that of the kāfī al-Tādirī and that of Ibn Ḥamayawī, which is more concise, recounted by al-Maḳkāri. Born into a modest family, he lost his father at a very early age and became an apothecary to a trader. After a course of study in the textiles (bazzāz) of Sabta, a town which was then enjoying a high level of commercial and prosperous prosperity. His principal teacher was Abū ʿAbd Allāh al-Fakhkharī, himself a disciple of the kāfī Ṭāyād, one of the most eminent representatives of the Hispano-Maghribī Mālikī school of the period. About sixteen years old, he left Sabta with a companion and made his way to Mount Gilliz where the Almohad ar-

my was encamped, commanded by ʿAbd al-Muṭmin who was laying siege to Marrakesh (540/1146). After the capture of the city, he established himself there in a fandūk known by the name of fandūk Mūḥārī. He then taught grammar and arithmetics, for which he received payment. He also apparently enjoyed an allowance in his capacity as a member of the ṭalabat al-ḥadād (a category of teachers supported financially by the Almohad authorities) and established a considerable household. He rapidly gained popularity as a result of his generosity. His doctrine was simple, according to the Tādirī, who knew and visited him, and his personality contained in religion (dār) may be reduced to the deprival and to the bestowal of the goods which one possesses. He insists on the religious duty of zakāt. Charity (ṣadaqā) is the essential theme of his sermons and of his injunctions. He denounces avarice (al-ḥukkāt) and parsimony (al-ṭabīr) and preaches generosity (al-ṣāqī; al-ṣādūq), and beneficence (al-ḥisn, quoting Kur'ānic verses to illustrate his purpose (IX, 30; X, 88; LI, 33; LVIII, 17; XCII, 3-10). His symbolic interpretation of prayer and of its various manifestations illustrates his doctrine of asceticism, since it signifies the sharing and the abandonment of all goods.

Of presentable appearance, always carefully groomed, he was furthermore admired for his eloquence and his knowledge of dogma and for the case with which he succeeded in convincing the most sceptical. His conduct earned him the reputation of a pious man, having no wish to publicise his virtues and willing to accept criticism (the Oriental mystical tradition of the Malāmātīyya). The philosopher Ibn Rūḥī the son of a student to observe his ideas and, on his return, concluded that "the entire existence of Abu ʿAbd Allāh is in interaction with charity" and that "his doctrine is that of a philosopher of antiquity ..." He then resolved to meet the man in person and travelled for this purpose to Marrakesh, where he died and was initially buried, before being transferred to Cordova. Abu ʿAbd Allāh died soon afterwards, in 601/1205. He was interred outside Bāb Taghūṭī.

Significant similarities of circumstances and events in the lives of Abu ʿAbd Allāh and of Abu Madyan are evident: their modest origins; their beginnings as youthful apprentices in the textile trade, a substantial element in the economy of North Africa at the time; their theological training concurrent with the exercise of their profession; the departure and the journey (ṣiyāḥa) in search of their path (a major Sufi theme); their installation in an important city where they became known for their teaching and their piety; the themes, repeated in all circumstances, of humility, of submission to the divine will (tawakkul) and of the renunciation of material goods, a doctrine making a synthesis of Mālikī orthodoxy and of oriental mysticism and adapted to the Maghribī soul; the interest of the Almohad authorities in their knowledge and their popularity; and the policy of enticement and control of scholars which led to their installation at Marrakesh. Finally, each became the patron saint of the town in which he was buried. But the originality of Abu ʿAbd Allāh consists in his withdrawal from political life and in the fact that he claimed allegiance to no school or great master. He did not found a school either. He devoted his life to the defence and promulgation of values which were promoted in North Africa principally by the Sūfis and which exerted influence on the Christian culture of the Middle Ages, represented among others by the originators of the concept of chivalry, the Arabic-speaking Majorcan Ramon Lull. In the 20th century
he still serves as a model for reformers (muslihun) who aspire towards moral rigour and social justice, such as Ibn al-Muwaqqit [q.e.].

Popular imagination has not been slow to transform the life of this pious individual into a legend, attended to him. In the same mountain there is a sacred cave dedicated to him (Sidi Bel-Abbes, [q.v.]), as well as the mausoleum and the building of a madrasa dedicated to him (Sidi Bel-Abbes, [q.v.]).

There exist a large number of studies concerning, in detail or in general, the legends and the cult of the illustrious Ibn al-Khaflb, Ibn Kunfudh of Constantine, the king of Grenada Abu l-^Abbds as-Sabti (524-60111130-1204), la Divination arabe, Leiden 1966; A. Provenzali, Sidi Abbas (Abd al-Qadir al-Fasi, in Actes du Congrès international des Orientalistes, Paris 1907, iv, §§ 102-3; idem, 

6. Place Names. Al-Sabti, he still serves as a model for reformers (muslihun) who aspire towards moral rigour and social justice, such as Ibn al-Muwaqqit [q.e.].

[extensive details on soap altogether.

According to al-Antakl, loc. cit., soap allegedly came into the Hermetic writings through a revelation, and is also said to be found in Hippocrates and Galen, partly among the compound drugs and partly among the simple ones. The best soap is said to be that made of clear olive oil, pure potash and good water. In medicine, soap finds manifold applications, see e.g. Ibn al-Baytár, Dāmt, Bâlûk 1291, iii, 36-7; Ibn Ṭasūl al-Qhassâînî, Mu’tamad, ed. M. al-Sâkîkâ, 280-1. Soap softens hard ulcers and ripens them; and it loosens colic pains and removes scabs and psoriasis if the affected spots are rubbed with a piece of cloth soaked in soap. Mixed with salt in equal parts, soap removes itching and festering scabies. Boiled up with attar of roses and rubbed on ulcers on children’s

(A. DIETRICH)

SABUNDJ [see SABUKTIGIN].

SABUN, a person of the second rank in the Nâhâî (q. v.), born at Dayrak on 20 April 1877. He became a British representative in Cairo, accompanied ʿUrâbi Paşa [q. v.] into exile in Ceylon, served the ruler of Zanzibar and then served the Ottoman sultan in Istanbul. From 1909 onwards, he lived in the United States. This traveller and adventurer (al-Tawf hawla kurat al-ard, Istanbul 1896, pp. 84), eternal lover (Divân al-naḥla al-manzum fî hâlal al-risâla, Alexandria 1901, pp. 584) and opportunist, often showed his sympathy for Islam in the form expounded by ʿAbdallâl al-Dîn al-Afghânî [q. v.] (K. al-Hikâh al-ṭâmir li-tâšār al-ʿumr miḥmin min al-ṣīn, New York 1919, pp. 255). Sâbundjâ was a partisan of the naturalist school of evolutionism.

SABUR B. ARDASHIR — SABZAWAR

SABUR B. ARDASHIR, Abu Nasr Baha’ al-Din (330-416/942-1025), official and vizier of the Buyids in Fars. Beginning his career in high office as deputy to Sharaf al-Dawla’s vizier Abu Mansur b. Sahlān, he subsequently became briefly vizier himself for the first time in 380/990 and for Sharaf al-Dawla’s successor in Shīrāz, Bahā’ al-Dawla [q.v. in Suppl.]. He was vizier again in Shīrāz in Djamād I 386/ May–June 996, this time for over three years, and in 390/1000 in Baghdad as deputy there for the vizier Abū ʿAli al-Muwafakī. Sabur, although a native of Shīrāz, seems to have been a youth apprenticed with his uncle, a business man in Gwārā. Thus he acquired an interest in learning more about Ismāʿīli thought and began to deliver lectures on religious topics to members of the community.

He moved subsequently to Karachi to continue his business activities and became prominent in the community as a wāzīr and a leader in social development programmes initiated by the Imām. He was also sent to promote the development of institutions in the newly settled Ismāʿīli communities of Africa. His most noteworthy achievement was an extensive journey he undertook in 1923 as an emissary of the Imām to contact Central Asian Ismāʿīli communities in the mountainous regions of the Pāmr (including parts of modern Afghanistan, Tadkifā and Sinkiang province in China), as well as the former principalities west of the Karakoram, Hunza and Čārl, in the northern areas of what is now Pakistan. He kept a diary in which he gave an account of his travels, sketching the hazardous terrain of the region, the location of various communities, often referring to the tumultuous changes affecting these areas after the 1917 Russian Revolution and the period of modernisation and European influence. After his return he continued to be an influential leader and a very effective preacher.

He died in 1938 and in recognition of his services was posthumously endowed with the title of pīr by the Imām.

Bibliography: An account of the journey based on Sabz ʿAli’s diary can be found in a Gudjarāti work, Pir Sabzālī ni Madhya Asia ni Madhri, Bombay 1968. Biographical details are preserved in S. Abu Turabī, Dhanmā dawāshāt, Bombay 1981.

AZIM NANJI

SABZAWAR, the name for two towns of the eastern Islamic world.

1. Sabzawār in western Khurāsān was, together with Khurāsānī, one of the two townships making up the administrative district of Bayhāk [q.v.], the name by which the whole district was generally known in mediaeval Islamic times. It lay in the cultivable zone of the northern rim of the Daʿīrī Kawrār or Great Desert. Sabzawār itself is described in the Hudūd al-ʿĀlam, tr. 102, §23.2, as a small town and as the chef-lieu (kašāba) of a district; the Arabic geographers merely mention it as a stage along the roads of Khurāsān and as a rūṭāt of Nishāpūr. In Hamd Allāh Mustawfī’s time (8th/14th century), Bayhāk was a flourishing district containing 40 villages (Nuzha, 149–50, tr. 148). The Sabzawār district was one of the prominent members of that same century the centre of the Sarabadārīs [q.v.], who dominated central Khurāsān during those years, and it is mentioned as the scene of fighting between the invading Ozbekhs and the Safawīds [q.v.] in the later 10th/16th century.

The modern town of Sabzawār (lat. 36°13’ N., long. 52°38’ E.) lies on the highway connecting Tehrān with Nishāpūr and Maghāhad, and is ad-
ministratively the centre of a *bakhsh* or county within the province of Khurasan; in ca. 1950 it had a population of 28,151 (Razmára, *Farhang-i diğhírfáh* 1: 193-35), but 40 years later this had risen to 148,129 (Preliminary results of the 1991 census, Statistical Centre of Iran, Population Division).

*Bibliography* (in addition to references in the article): Le Strange, *The lands of the Eastern Caliphate*, 291; *Elr* art. Bayhag (C.E. Bosworth); and see Bayhag.

2. Sabzawār of Harat (thus called to distinguish it from 1. above), the name by which the early medieval Islamic town of Isfizar or Asfizar in eastern Khurasan was more recently called. It lay on the road connecting Sisān with Harat, and the mediaeval geographers connected it administratively as much with Sisān as with Khurāsān. There were four small towns in the district of Isfizar; the region was agriculturally rich, with its lands irrigated by water from perennial streams running down from the mountains of Ghūr [q.v.] in central Afghanistan. The early mediaeval geography of the region is characterised by violent Khārījite activity, and the *Hudūd al-Salām* (372/982), tr. 104, § 23.29, comm. 327, describes the people of Isfizar as bellicose Khārījīdītes; however, by the time of Hamd Allāh Mustawfi, the region was strongly orthodox and Shāfi′ī.

Sabzawār of Harat is now known as Shīndand, a town within the Farah province of modern Afghanistan (lat. 33°18' N., long. 62°08' E.) and is on the modern highway connecting Harat with Farāb and Kandahār.

**SABZAWĀRĪ** Ḩājjī Mulla Ḥādi b. Ḥādī Mahdī (1212-95 or 1296/1797-1878 or 1881), Persian philosopher of the Kādjar period, best-known for his commentary on, and revival of the ideas of Sadr al-Dīn al-Shīrāzī, Mulla Sadrā (d. 1050/1640 [q.v.]). Born in Sabzawār to a landowning merchant family, Mullā Ḥādi studied Arabic language and grammar in his home city and fīkā, logic, mathematics and ḥikma in Mahād. He then studied in Isfahān with such scholars as Mullā ʿAlī Nūrī (d. 1246/1830-1), the first of the Kādjar-period scholars of Sadrā, and Nūrī’s student Mullā Ismāʿīl. Sabzawārī returned to Khurāsān, performed the pilgrimage and married in Kirmān on the homeward journey. He taught for some years in Mahād and then returned to Sabzawār, where he taught until his death.

Among his most famous works are his *Qurān al-fard* ʿd or *Ṣadr-i masāna*, an Arabic philosophical poem on which he wrote his own commentary (the first part of which, on metaphysics, was published by M. Mohaghegh and T. Izutsu, Tehran 1969); *Isrāʾ al-ḥikam* (published by H. F. Farzad, Tehran 1936), written at the request of Nāṣīr al-Dīn al-Shāh (d. 1313/1896 [q.v.]); a Persian *dīwān* written under the pen-name of ʿIsrāʾ; and commentaries on Sadrā’s *Al-Asfār* and *Al-Shawāhid al-rubūbīya* (the latter published together with Sadrā’s original by S. Ḍjalāl al-Dīn Aḥṣāyiyyat, Mahād 1934, 1936) and on Rūmī’s *Maḥnawī*.

**ṢĀD**, the fourteenth letter of the Arabic alphabet, transcribed /s/, with the numerical value of 90, according to the eastern order [see ʿĀBDA]. In the Maghribi order /s/ takes the place of /s/ (thus 90) and /d/ the place of /s/. For an explanation of this fact, similarly attested in a Thāmudic abecedary, see M.C.A. Macdonald (in *BibL*). Definition: an alveolar sibilant, voiceless and velarised ("emphatic") in articulation. As a phoneme /s/ is defined by the oppositions /s/ - /ʃ/, /s/ - /ʃ/, it is thus velarised and sibilant.

In Kurānic recitation, or elevated style of recitation in general, the following assimilations occur: the /s/ at the end of a word becomes assimilated to the /z/ at the beginning of the following word (z > z), but the velarisation may be retained (z > z). Within a word, the /s/ is partially assimilated to /z/ immediately following it (z > z), but the velarisation may also be retained (zd > zd). A /zd/ at the end of a word becomes assimilated to a /zd/ at the beginning of the following word (z > z). In the 8th form of the verb the sequence /st/ becomes /zd/ by assimilation, carried further by some to complete coalescence, i.e., /sz/ (e.g. mustafir and musabir). In analogy to this, initial /t/ of the perfect suffixes, when following /s/, is pronounced /t/ by some (e.g. habsata); according to Sabwāyī, it is better Arabic not to do so, because the /t/ suffixes of the perfect are variables indicating the subject, while the /t/ infix of the 8th form is stable throughout the paradigm.

An /s/ may be velarised to /zd/ in pronunciation, when preceding a /g/, /kh/, /k/ or /t/ in the same word (e.g. salakha for salakha, sātī for sātī). This assimilation, though being only regressive and restricted to the four triggers, is nonetheless probably due to the spread of "emphatic" as a suprasegmental phonemic element throughout the word. That this phenomenon was more general than the orthoepists allow is shown by the spelling variants in the šdāl works [q.v.], cf. pairs like saṭī'ī 'salātī, sukanī 'sukānī, but also tirīnī 'tārīnī and kharsīxharsī in Abu l-Tayyib al-Lughawi, K. al-Šdāl, ii, 172-96.

For al-Ḫallīl, the šd, like the other sibilants (ṣīn and ẓay), is pronounced with the point (asāla) of the tongue, i.e., the tapering part (mustadāk) of its end (not the tip). The surviving fragments do not mention the other features of šd articulation. For Sibwāyī, the sibilants (ṣād,ṣīn, and ẓaqī) have their point of articulation "between the end (farāq) of the tongue and a place slightly above (fuwayk) the incisors (ṭamāyā)."

In addition, the šd is characterised as "muffled" (maḥmūs), "soft" (rūkū), and "covered" (muṭabk), which amounts to saying that it is "voiceless" (?), "non-occlusive", and "velarised". Šd, like all the sibilants, is characterised by a whistling sound (ṣafir). Its "elevation" (ṣaṭī') prevents the vowel /a/ from inclining (isāla) towards /i/.

Sibwāyī mentions two variants (far) of šd: šd realised like šī (mesdar > mazdar, yasdar > yazdār) and šād realised like śī (mashā > yasīḥ), the first variation being the one which is alone considered to be good (mustahsan) in the recitation of the Kurān and poetry.
In modern Arabic dialects, sad seems to be mostly stable. Due to the common spread of velarisation over whole words, original /s/ often becomes /z/ (for historical attestations of this phenomenon, see Blau, Christian Arabic, 111-113 and n. 163); in the Judaeo-Arabic of Taif this occurs also with /sh/ (gabur > /ʃ/, see ZAL, ix [1982], 40). Sporadic derivational of /s/ to /z/ is not uncommon: sadr > sder (in certain Maghribi dialects, see ibid. and Cantineau, 48), sadaka > sadca (and other, but not all, derivatives of this root in Egyptian, see Hinds-Badawi, A dictionary of Egyptian Arabic, Beirut 1986, s.v., and Blau, op. cit., 109-109). This derivalised /s/ is further voiced in the word zghirl zghayyir “small”, common in several dialects. Unconditioned deviations are attested for Hadramaut (/z/; see Landberg, Hadramoiti, 239), and for parts of North Yemen (a monophonemic /s/ as in stibrin for sabr, see Behnstedt, 7-184-85).

In borrowings from other languages, /s/ renders Middle Persian /š/ (as in sangš < šang and in names like Mark šahšin < šahšin) and sporadically Greek ς (as in ἵτις < hitës, kamëš < kamasion [Latin camisa], kysar < kisar).

In Persian and Turkish, sad in Arabic loanwords is pronounced /s/. Some genuine Persian words show irregular spelling with the grapheme /s/, such as sad “100” and gësh “60”. In Ottoman Turkish, sad is used to render /s/ in the vicinity of back vowels, whereas sin denotes /s/ in front vowel words, as in şam vs. sûmek.

(G. Troupeau, expanded by the Editors)
Kufa, it is widely reported that Sa'd was named by Umar as one of the group of six Companions (the ṣahaba) which he appointed to choose his successor as caliph in 23/644 (see, however, al-Baladhuri, Ansāb, v. 21, where Sa'd's membership of the ṣahaba is explicitly denied on the authority of al-Wakīdī ... Musā b. ʿUkbā and of al-Zuhri). At the time of appointing him to the ṣahaba, according to a report often cited, Umar said that he had not removed Sa'd from Kufa because of any weakness or treachery, and that, if he were chosen as caliph, the choice should be accepted, and if not, then whoever was chosen should ask Sa'd for advice.

The last important event in the early history of Islam in connexion with which Sa'd is mentioned is the struggle between ʿAlī b. Abī Ṭālib and Muʿawiyah b. Abī Sufyān. Sa'd had done more than any other of the Ansār to ensure the growth of Islam.

Bibliography: Ibn Hisham, index; Wakīdī, ed.

Yet others supported him at the conquest of Mecca; they were being punished for accepting Jewish bribes to give military help against Muhammad.

SA'D b. MUʿADH, chief of the clan of ʿAbd al-Ashḥal in Medina in succession to his father. At the time of the Ḥiḍra he seems to have been the strongest man in the tribe of al-Aws, of which his clan was a part. He had taken part in the fighting prior to the battle of Buʿātha (q.v.) and been wounded. The leader of al-Aws at Buʿātha, Hudayr b. Simāk, is reckoned to another clan, but his son, Usayd b. Hudayr, seems to have been second-in-command to Sa'd in ʿAbd al-Ashḥal. Sa’d and Usayd were both for a time opposed to Islam and wanted to stop its spread, but first Usayd and then Sa’d were won over, and Sa’d became probably the strongest supporter of Islam in Medina and made an important contribution to its wide acceptance. He did not, however, go with others to Baghdad and the second mecca of ʿAbd al-Malik (q.v.), though he is said to have made the pilgrimage to Mecca on the first occasion after the Ḥiḍra. He was the most prominent of the ʿAnṣār to join Muhammad in the expedition which led to the battle of Badr (q.v.), and encouraged many others to participate. In the course of the battle, he made special arrangements for Muhammad's safety. Three years later, when the Meccans were besieging Medina (the battle of the Khandaq), the Jewish clan of Kurayza (q.v.) was subjugated; they were being punished for accepting Jewish bribes to give military help against Muhammad.

SA`D b. MUHAMMAD [see RAYSA BAYSA].

SA`D b. UBADA, chief of the clan of Sa`ida at Medina.

The clan appears to have been small since it is not mentioned in the fighting leading to the battle of Bu`A`th [q.v.], but it may have been more influential than its size warranted, perhaps because it was wealthy. Only two members of the clan were at the second meeting with Muhammad at al-`Akaba [q.e.v.] but both were included among the nakaba2 or representatives. One of these was Sa`d b. Ubada, who had become a Muslim at an early date. Sa`d was badly treated by some Meccans on his way back from al-`Akaba because they had heard something about "the pledge of war", but he eventually received the protection of other Meccans and was able to return to Medina. He appears to have been a wealthy man, because, when Muhammad needed the support of the `Ad against the Jews, Sa`d provided a tent and also a large quantity of dates for the army. On an expedition shortly before the conquest of Mecca, his son Kays is said to have purchased camels to be slaughtered as food for the army. Ibn Ishak says that Sa`d was not at the battle of Badr [q.e.v.] because suffering from snake-bite, but al-Waki`id and others say he was present. The snake-bite was probably genuine and not an excuse, for Muhammad seems to have trusted him fully.

At this period, Sa`d was probably the second most important man in the tribe of al-Khazraj after `Abd Allah b. Ubayy [q.e.v.], and the latter was never a whole-hearted supporter of Muhammad, since before his arrival he had been hoping to become "king" of Medina.

The struggle for power between Sa`d and Ibn Ubayy led Sa`d to give his fullest support to Muhammad. In the "affair of the lie" against `A`i`ha, shortly before the Khandaq attack on Medina, when Ibn Ubayy helped to spread the scandal, it eventually came to a showdown, with Muhammad wanting to punish Ibn Ubayy. The tribe of al-Aws gave this full support, but Sa`d opposed them on behalf of al-Khazraj and urged leniency. From this point onwards, Ibn Ubayy faded out and Sa`d presented himself as an Islamic

Abd, to whom the governor of the Buhayra province, Muhammad Fadl Pasha, had allocated about 230 faddans in around 1850. Although several rumours circulate in law, the Zaghlulu war, in 1870, was mostly of Turkish origin and that they were originally Turkish coming from Algeria, the family presumably belonged to those "new Egyptian notables" (then called abna` al-balad) who gained fortunes and social power after 1750. It should be noted, however, that the Zaghlulu originally were Maliks and that only later did Sa`d Zaghlul become a Shi`i. In contrast to this, many national historians have tried to present Zaghlul as a son of a certain family in Fustat, but it may be more influential than its size warranted, perhaps because it was wealthy. Only two members of the clan were at the second meeting with Muhammad at al-`Akaba [q.e.v.] but both were included among the nakaba2 or representatives. One of these was Sa`d b. Ubada, who had become a Muslim at an early date. Sa`d was badly treated by some Meccans on his way back from al-`Akaba because they had heard something about "the pledge of war", but he eventually received the protection of other Meccans and was able to return to Medina. He appears to have been a wealthy man, because, when Muhammad needed the support of the `Ad against the Jews, Sa`d provided a tent and also a large quantity of dates for the army. On an expedition shortly before the conquest of Mecca, his son Kays is said to have purchased camels to be slaughtered as food for the army. Ibn Ishak says that Sa`d was not at the battle of Badr [q.e.v.] because suffering from snake-bite, but al-Waki`id and others say he was present. The snake-bite was probably genuine and not an excuse, for Muhammad seems to have trusted him fully.

At this period, Sa`d was probably the second most important man in the tribe of al-Khazraj after `Abd Allah b. Ubayy [q.e.v.], and the latter was never a whole-hearted supporter of Muhammad, since before his arrival he had been hoping to become "king" of Medina.

The struggle for power between Sa`d and Ibn Ubayy led Sa`d to give his fullest support to Muhammad. The tribe of al-Aws gave this full support, but Sa`d opposed them on behalf of al-Khazraj and urged leniency. From this point onwards, Ibn Ubayy faded out and Sa`d presented himself as an Islamic
Tall al-Kabīr (13 September 1882), Sa’d accepted a position at the Law Court of Dīţa. This was his first opportunity to work as a jurist. Sa’d could now change his outfit and become an Afandī. But in early October 1882, Sa’d resigned and was officially consider- ing following ʿAbduh, who had left Egypt on 7 January 1883. But ʿAbduh advised him to stay in Egypt; hence Sa’d worked with his friend Husayn Sakar as a lawyer at the Dīţa court. As British officials suspected him to be a member of an obscure “society of revenge”, Sa’d was arrested on 20 June 1883; it was Aziz’s four months later the accusation proved to be false. Already in February 1884, he resumed his work as a lawyer and kept this position for the next eight years.

When Muhammad ʿAbduh returned to Egypt in 1888, Sa’d Zaghlul again had an intercessor within the intellectual and cultural urban elites. ʿAbduh invited him to join the famous salon of Princess Nazli Fāḍīl, who had been an ardent supporter of Ahmad ʿUrābī. Now, however, the salon became a most important place of British-Egyptian private diplomacy. Here, Zaghlul met for the first time the Consul-General Evelyn Baring, later the 1st Earl of Cromer, and many influential journalists and politicians. In 1890, he had already become a great name; as gossip concerning Zaghlul’s liaison with Princess Nazli was spreading, he gained public recognition within colo- nial society. Wilfred Scawen Blunt even suggested to him to Cromer as a possible minister in an “Egyptian government” which should outst the traditional elites from power. Two years later, Sa’d’s lobbying proved to be a success. He was appointed as a Deputy Chief Judge at the Court of Appeal on 27 June 1892. From now on, Zaghlul had a well-established position in the Egyptian upper class; but this was only the beginning of his rapid career. From 1892 to 1897, he went several times to Europe in order to study languages and law, and in 1897, he got a diploma in law from the University of Paris. Obviously, he considered himself as a political personality, since he now started to keep a diary which recorded day-by-day summaries of events and cases at the law court and which was meant as an aide-mémoire for future activities. Only in 1903 did he begin to use the diaries for private purposes. By 1896, when he married Safiyya, Zaghlul was a rich man. He possessed everything which was important in those days to become a politician: a position, money, reputation, a good marriage and a good knowledge of French and a bit of German. In 1902, he finally led Zaghlul as a reform-minded Afandī to parliament and the traditional structures of governmental institutions; in early 1910, he thought of retiring from politics as he did not see any progress for the na- tionalist constitutional movement. In addition, urban nationalists heavily attacked him for promoting nepotism, and others even made propaganda for Fathī Zaghlul, that he should replace his brother in office. Zaghlul now backed him after his deposition. Per- sonal problems and a career crisis may have added to the fact that Zaghlul gradually changed his political attitude towards British rule in Egypt. In his view, Britain had now become an opponent of a true con- stitutional order in Egypt. Being unemployed and showing symptoms of an addiction to gambling, he had lost most of his fortune and riches. He was highly in debt. In order to avoid the gambling salons of
Cairo, he retired to his newly-built house in Masdjid Wasif. His political ambition continued to aim at reinvesting the Legislative Assembly, which had been prorogued in late 1914, with power. After the death of Sultan Husayn Kamil, the new Sultan Fu`ad declared on the occasion of the New Year 1336 (18 October 1917), that the Assembly would “soon” resume its work. This, the parallel discussions on a new Constitution and Woodrow Wilson’s declaration on 8 January 1918, encouraged Zaghlul to revive his role in the Legislative Assembly and by the “Egyptian people”. This campaign paved the way for the restoration of the nationalist movement. He accepted the idea which Prince T`usun had promoted of sending a delegation (wafid) of the Assembly to the British High Commissioner in order to get permission to travel to Paris and to present Egypt’s demand for independence to the Peace Conference. The idea was also favoured by the government; but the Prime Minister Husayn Ruhidj (1863-1928) and `Adl`Yegen (1864-1933) disputed the right of Zaghlul to speak in the name of the nation. On 13 October 1918, Zaghlul was deputed to see the High Commissioner Wingate with his political friends `Ali Sha`rawi and `Abd al-`Aziz Fahmi and to present a demand for self-determination. The British, however, declared that Zaghlul was unrepresentative of the Egyptian nation and cold-shouldered the three nationalists. Consequently, the small group started a campaign and issued a circular in which seven members of the Assembly, with Zaghlul as their “president”, were vested with the power to negotiate for the “complete independence” of Egypt, and which should be signed by the members of the Assembly and by the “Egyptian people”. This campaign paved the way for the restoration of the national movement, and already in December 1918, the pro-Zaghlul agitation had reduced other political factions to silence. Even the Prime Minister Ruhidj had to accept Zaghlul’s new power position and finally resigned on 1 March 1919, as the British authorities continued to refuse the Wafd’s permission to leave for the Peace Conference. On 8 March 1919, after Lord Curzon had accepted resolute action against the nationalists, Zaghlul, Muhammad Mahmud, Isma`il Sidqi and Hamid al-Basir were arrested and exiled to Malta.

From afar, Zaghlul monitored the manifold unrest in Egypt which reached its peak in March-April 1919. In accordance with his nationalist world view, he considered the revolts to be a firm expression of the people’s will to make him the “people’s cabinet”. He soon began to centralise control over the Egyptian administration. The British authorities also implicitly accepted this view, as they wanted to act within the legal framework of a protectorate which required a functioning “indigenous” government.

On 7 April 1919, after the Egyptian elites had openly condemned the rebellions, the Special High Commissioner General Allenby released the four exiles and allowed them to leave for Paris with 11 others. Two days later, Ruhidj formed a new government; but he soon had to resign again, as he was not able to accept the demands of state officials to recognise Zaghlul as the nation’s sole representative. Meanwhile, since the Wafdists regarded themselves as the only true expression of the Egyptians’ political will, Zaghlul’s compatriots started to build up an efficient nationwide organisation which should be the nucleus of a future Egyptian administration.

Zaghlul spent the next two years in Europe. After the British Protectorate in Egypt was recognised by the Treaty of Paris (11 April 1919), the Wafdists tried to mobilise the public opinion in their favour, but had only a limited success. They also tried to control the boycott of the Milner Mission, which had been formed in order to investigate the spring revolts. Zaghlul and his delegation stayed in Europe till the end of March 1921. Having reached Cairo on the demand of `Adl`, who wanted to shift the responsibility for the negotiations with the British officials on to the President of the Wafd, Zaghlul started his famous campaign favouring the complete independence of Egypt. It tried to find a political position between `Adl` and the court faction on the one side and the urban nationalists’ activists on the other side. The British warned him several times not to exploit the freedom of press and speech by attacking the government. Zaghlul, however, did not give in. On 23 December 1921, he was again arrested together with five other leaders of the Wafd (Mu`afa`an Nahhas, Markam `Ubayd, Sino`Hann`a, Fath Allah Barakat and `Atif Barakat) and sent to Aden. They arrived at the Seychelles six days before the unilateral British declaration of Egypt’s independence (15 March 1922). In September 1922, Zaghlul was sent to Gibraltar, where he was told that he was no more a prisoner but a guest of the British Government. In April 1923, he was allowed to leave Gibraltar for wherever he wanted; as usual, Zaghlul first went to France (Aix-les-Bains) for a summer course of treatment. He finally returned to Cairo on 17 September 1923 and was welcomed by a large crowd. This embarrassed the Liberals, who thought that, after the last elections which had given them a comfortable majority and the fact that Zaghlul had not had any direct control over the Treaty of Paris (11 April 1919), the still unsolved questions concerning the Egyptian republic. The murder of the British Sirdar Sir Lee Stock (19 November 1924) provided British officials with a pretext to get rid of the troublemaker. Five days later, Zaghlul had to resign. Though he continued to play an important public role in Parliament, his deposition ruined his political career. He saw his
organisation turned into a political party accepting other parties as partners. Thus his hope of being the head of an organisation which should be the organic expression of the nation's will vanished. His contemporaries Ataturk and Ridâ Khân were to be more successful than he at becoming heads of state. In Egypt, however, the political public prevented an analogous development. In early summer 1927, his already shaken and poor health deteriorated, and on 23 August 1927 Zaghlûl died in Cairo of erysipelas.

Bibliography: Sa'd Zaghlûl wrote very little. He published a booklet on Shafiî's law, Cairo n.d. (ca. 1878), a summary of Ibn Miskawiyah on India and about 28 articles in Egyptian journals of the late seventies and early eighties of the 19th century. It is doubtful, however, whether he wrote them all personally or whether he edited articles of Muhammad 'Abduh. The main sources of his political views are his diaries and some collections of his speeches. See his Mudhakkîrât, ed. 'Abd al-'Azîm Rasâmânî, i f. f., Cairo 1887 ff. and collections of his speeches by Ahmad Nasîb al-Sukkâri, Cairo 1923; Mahmûd [Kâmil] Fu'âd, Cairo 1924; Muhammad Ibrâhîm al-Djâzîrî, Cairo 1927; and Mahmûd Kâmil Fu'âd, Cairo 1927.

There are quite a lot of biographies in Arabic: by Muhammad 'Abd al-Murâghîd Dâwûd, Cairo 1926; Ahmad Fâhmi Hâfîz, Cairo 1927; Karîm Tâhîrî, Cairo 1929; 'Abd al-'Azîz al-Zâdîn, Cairo 1932; 'Abâs al-Mu'mîd al-Akkâd, Cairo 1936; Ibrâhîm al-Raglîd, Cairo 1937; Kâdî Qalâ'îdji, Beirut 1938; Yûsuf F. al-Nâbâsî, 'Abd al-'Azîz Sa'dî, Cairo 1952; Hâmid al-Mulaydji, Cairo 1954; Muhammût Ibrâhîm al-Djâzîrî, Cairo 1954; 'Abd al-Khâliq Lâshîn, Cairo 1974; idem, Beirut-Cairo 1975; Muhammad Kâmil Sa'idî, Cairo 1975; 'Abâs Hâfîz, Cairo n.d.; Hamdân Sâlim an-Îzâhîî, Danâmûh n.d.

Although there is a huge literature on the Egyptian nationalist movements in Western languages, there are hardly any biographies of Zaghlûl; cf. Fouad Yêghen, Saad Zaghlouli. Le "père du peuple", égyptien, Paris 1927; for a short political account, see e.g. J. de Menil, Arabian races of Egyptian nationalism, London 1960, 52-55, 113, and J. Berque, L'Egypte, Impérialisme et révolution, Paris 1967, 287-295. For his dealings with the British, see E. Kedourie, Sa'd Zaghlul and the British, in idem, The Chatham House version and other Middle Eastern studies, London 1970, 82-159, and also within the frame of national historiography, 'Abd al-Rahmân al-Râzî, Thâbîb al-Ma'idha, 2 vols., Cairo 1946-1947; idem, Fi ʾsbâk al-thâbara, 3 vols., Cairo 1947-51.

(S. SCHULZE)

SA'D (I) b. ZANGI, 'Abî Shu'ayb b. 'IZZ AL-DIN, Turkish Atabeg in Fars of the Salghurid line [q.v.], reigned in Shârâz from 599/1202-3 until most probably 623/1226.

On the death of his elder brother Takla/Tekela (Degele, etc.) b. Zangi in 594/1198, Sa'd claimed power in Fars, but his claim was contested by his cousin Tughîrîl, the son of his father's elder brother Sunkur, who had founded the dynasty. Tughîrîl retained the royal title for nine years, but throughout that period warfare between him and his cousin continued without a decisive result for either, the country was wasted and depopulated, none would till the land, and famine and pestilence smote the people. At length, in 599/1202-3, Sa'd captured his cousin and ascended the throne of Fars (according to Mirhân and this happened in 593/1197, after Tughîrîl had been defeated by Takla), but at the beginning of his reign famine was so severe in the land that the strong grew weak and the weak remained, and even when the famine had abated the pestilence remained; but Sa'd gradually restored prosperity to his people, and, having completed this task, conquered Kirmân from the Shâbânkârâ Kurds. In 614/1217-18 he invaded Irâk, but was taken prisoner by the army of the Khârazm-Shâh 'Alâ'î al-Dîn Muhammad [q.v.], and in order to regain his freedom was obliged to pay a ransom of two-thirds of a year's revenue of his kingdom, to surrender Istaqhr and Ashkûrân, and to agree to pay tribute annually. On his return to Shîrâz, his son Abû Bakr, who had occupied the throne during his captivity, opposed his restoration, and a battle was fought between father and son, in which Sa'd was wounded in the eye with an arrow, but the citizens admitted him into the city by night, and he secured his restoration. When a son of the Khârazm-Shâh Djalâl al-Dîn Mishingburnu [q.v.] passed through Fars on his return from India in 621/1224, he interceded for Abû Bakr, and succeeded in persuading Sa'd to release him.

According to the most reliable sources, Sa'd died in Dhu l'Ca'da 623/November 1226 and after a reign of 29 years was succeeded by his son Abû Bakr. Amongst his building works was a celebrated Madjidi-i Naw or Madjadji-i Abagehî in Shîrâz, completed in 615/1218 (see W. Barthold, An historical geography of Iran, Princeton 1984, 156). However, the poet Sa'dî [q.v.] derived his takhallus or nom-de-plume not from this Sa'd (I) but from his son Abû Bakr b. Sa'dî (I) and grandson Sa'dî (II) b. Abî Bakr.

(T.W. HAIG-[C.E. BOSWORTH])

SA'D b. ZAYD MANÂT al-FIZR is the name by which a large section of the tribe of Tamîn is named.

The curious cognomen Fizr or (according to al-Ashîrî, Fazr) has received no satisfactory explanation, and the philologist Abû Manṣûr al-Azhari asserts that he never met any person who could explain it. Some lexicographers explain it as meaning "more than one", others as "goats", but we may assume that Ibn Durayd is correct when he derives it from the verb fâzara and that that fîzr means "a chip or fragment". The Arab genealogists give the name of the common ancestor as Sa'd b. Zayd Manât b. Tamîn and relate tales to account for the curious name, which amount to the following: Sa'd had much cattle which he ordered his sons, by different mothers, to take to pasture; they refused and he invited the kindred tribesmen of Malik b. Zayd Manât to come and rob the camels. Then when only goats remained, he gave his sons the same
order and they again refused to take them to pasture. In his anger, he declared that he would allow no one to take more than one. Thus the goats were scattered all over the country, and this is said to be the origin of the proverb: “I shall not come to you till the goats of al-Fizr (are collected again into one herd)” (al-Maydānī, Maqāmaṭ al-amīli, ed. ʿAbd al-Hamīd, 2 Cairo 1379/1959, ii, 212b = no 3496). The goats are probably imagined to have had the usum or brand-mark of his clan. The underlying idea appears to be that the divisions of this tribe were scattered over the whole of Eastern Arabia. The tribe of Tamīm [q.v.] is early mentioned, and the genealogies in their case are more fictitious than with other tribes; all they can serve is to show which of the clans shortly before and after the introduction of Islam felt itself as possessing a certain relationship. The poet al-Aṣḥāb b. Rikālī says in The Arabic lexica s.v. Fizr: Ibn Durayd, Kitāb l-lithākā, ed. Wūstenfeld, 150 ff.; A.A. Beván, The Nakād of Jarīr and the Farazdak, Leiden 1905-12, passim; Kalkaṣhāndī, Nihāyat al-arab, Baghdād, 236; Nuwayrī, Nihāyat al-arab, Cairo 1342, ii, 344-5; Ibn ʿAbd Rabbīhī, al-Iād al-farīd, Cairo 1316, ii, 42; Kitāb l-lithākā, passim; Ibn Ḥazm, Dār al-qasūr anṣāṭ al-arāb, ed. E. Lévi-Provençal, Cairo 1948, 204-11; Wūstenfeld, Genealogische Tabellen, L, and Register, 286; Ibn al-Kalbi-Caskel, i, Tafsīr, no. 75, ii, Register, 497; S. Kazzarāh, Die Dichtung der Tamīm in sīratulislamischer Zeit, diss. Erlangen 1982, 145-6 (incs. those fragments of poetry attributed to Saʿd al-Fizr).

(F. Krenkow*)

His tenure of office lasted from Dūmādā II 688/June 1289 until his murder in Rābiʿ I 690/March 1291. His tim and date of birth are unknown. His rise to power must be seen against the background of a radical change of the Mongol political élite in domestic and foreign policies; i.e. from the pro-Islamic policy of the Ilkhan Ahmad (680-3/1282-4) back to the anti-Islamic policy of the Ilkhan after the defeat at ʿAyn Dālīlī [q.v.] on 25 Ramadan 658/3 September 1260. This policy was aimed at a Mongol-Christian-European alliance against the Mamluks [q.v.]. Under Ahmad, a convert to Islam, who strove for a peaceful agreement with the Mamluks (al-Makrīzī, Sulāk, i/3, 707-8, 717-223), the pro-Islamic Mongol élite, together with the amīr Buka, worked with the waṣīr Shams al-Dīn al-Dībawaynī [q.v.]. After the murder of the Ilkhan Ahmad and the enthronement of Ahrūm, the amīr Buka, who had changed loyalties shortly before the coup d'état, became the most powerful amīr in the realm. He tried to preserve the status quo between Mongols and Muslims, even though he could not prevent the fall and murder of the waṣīr Shams al-Dīn al-Dībawaynī. This situation changed abruptly when Buka fell from power and was murdered, and Saʿd al-Dawla immediately after rose to power in Dūmādā II 688/June 1289 (Rashīd al-Dīn, iii, 208-16, 217). One month later, on 3 Rābiʿ II 688/July 1289 the whole Dībawaynī family was liquidated (ibid., 218-19). Ahrūm issued an edict prohibiting the employment of Muslim secretaries (Bar Hebraeus, ed. Budge, i, 484-5). This edict was countered by the Mamluks with an edict in Shabban 689/August 1290 prohibiting the employment of Jewish and Christian secretaries (al-Makrīzī, Sulāk, i/3, 753). Saʿd al-Dawla gave all the key positions in the administration to his family, relatives and co-believers. His internal policy aimed at an increase in taxes and a redistribution of funds to fill the treasury. In foreign policy he, together with the Ilkhan, aimed at an alliance with Pope Nicolas IV and the Christian powers of Europe in order tooust the Mamluks from Syria. A Crusade was planned and eventual possession of Jerusalem by the Pope was envisaged; but nothing came of these plans. Meanwhile, the Mamluk sultan Kalāwūn [q.v.] and his son and successor Ahrūm (683-91/1282-90) tried to get the Dībawaynīs from the Syrian coast. Their last stronghold, ʿĀlkā [q.v.], fell in Rābiʿ II 670/March 1291. Shortly before this, on 7 Rābiʿ II 670/10 March 1291, Ahrūm died, and five days before his death Saʿd al-Dawla was murdered by his Mongol enemies. A persecution of the Jews began that could only be forcibly suppressed by the government.

Regarding Saʿd al-Dawla’s earlier career, he appears for the first time in 682/1283, when Sharaʾ al-Dīn Hūrūn, from the Dībawaynī family, became governor of Baghdaḏ and Saʿd al-Dawla was dismissed from the supervision of the endowments of the Māriztān [see MAZĀR] there. In 683/1284 he became deputy (nāʾīb) of the qāṣīn in Baghdaḏ and in 686/1287 the financial administrator (malik) of Baghdaḏ. Nāṣir al-Dīn Kūṭlūg Shāh, a mamlūk of the Dībawaynī family, complained about him to the Ilkhan, Saʿd al-Dawla was sent to the court of the Ilkhan in his capacity as a physician, and became the private one of Ahrūm (Ibn al-Fuwāṭī, 428, 433, 450). He won the ruler’s confidence and was twice sent to Baghdaḏ to check the finances, being in Dūmādā I 687/June 1288 made supervisor of finances (muḥ₃ṣīf) there, and in the same year a group of Jews from Tīflīs came to Baghdaḏ to oversee the
charitable endowments of the Muslims. This brought about a revolt there, and the group had to resign (Ibn al-Fuwâti, 454-5). Then in Dîmuâdî II 688/June 1289 he was made sâhid al-dawla al-mâlîdî, i.e. wazîr, by Arghûn; numerous sources confirm his administrative skill and abilities in general.

Amsterdam 1974, i, 382-8, 392-3, 396-8; S. M. Makrîzî, ʿAbd al-Muḥammad ibn Kârîm ibn Muhammad, gaḍrîs al-mudżmil-i Fâṣîḥî, ed. R. Tadj al-Dîn, Mashhdâd 1340 A.H.S., 298-310), as well as Rîżwâni, Fâlîs al-uns, Tehran 1370 A.H.S., 128). Unlike Ibn ʿArâbî, Saʿd al-Dîn evidently favoured the Šûfî practice of “listening to music” (ṣamâʾ); cf. Muḥ’ayyid al-Dîn al-Dawândî, ʿAbî Fâsîq al-ḥâtîm, Mashhdâd 1361/1982, 107). Sibt Ibn al-Dîjwâzî (loc. cit.) mentions that he lived with his followers on Mount Kâsîyûn and describes him as a holy man who shunned the rich, even his own cousins, despite great poverty, but says also that he enjoyed later in Khûrâsân the favours of the “kings of the Tatars”. The same source also points out that he spent the last week of his life by the tomb of Muhammad b. Hamûyâ in Bahrâbâd (near Djuwâwân), and that he was buried there. According to Ghiyâth al-Dîn, he spent the last eight years of his life mainly in Amûl and various places in Khûrâsân, including Bahrâbâd, where he died during one of his visits. It must have been during this last period in Khûrâsân that ʿAzîz-i Nasâfî (d. ca. 700/1300) became his disciple. The latter, a prolific Persian writer, published some of his master’s ideas, particularly those concerning the unity of Being (wasâdat al-wusûd) and the special status of the “râjîn” (wafî). “Monistic” trends in Saʿd al-Dîn’s thought were also noted by Dhâhâbi (Al-ʿarbâ, Kuwait 1960, v, 206). His peculiar ideas about wâlîya bear a certain affinity to gnostic Shîʿism, although he belonged, like the rest of his family, to the Shâfiʿî mithâb. Unlike Nasâfî’s, Saʿd al-Dîn’s works were reputedly “difficult to come to his point of view” (wâzîr) speculations. Nasâfî, Kâṣîf al-hâkâbîk, Tehran 1344 ʿA.H./1965, 4, credits him with a total of 400 books, whereas Ghiyâth al-Dîn lists the titles of 32 otherwise uncoded writings but mentions none of the works generally attributed to him (see e.g. Brockelmann, S II, 803). Among the latter, the Persian Risâlât al-Mishâb has been published in 1983 with a useful introduction by N.M. Hirawi as al-Mishâb fi l-ṭaṣawwuf (Tehran 1362/1403).

Kashghar died while performing the midday prayer on 7 Djamād I 860/12 May 1456, and was buried in the Khiyābān suburb of Harāt. The site soon acquired great sanctity, and several of his disciples, including Djamī, were buried nearby. His tomb was nonetheless neglected during the disorders that came to mark the history of Harāt, and ultimately the headstone itself disappeared. The tomb was restored, and the headstone replaced, by Ahmad Shāh Durrānī (q.v.), who also constructed an ʿīsān nearby. This ʿīsān was rebuilt and provided with two minarets in the late 1950s by Muhammad Zahir Shāh, the last king of Afghanistan.

One of the devotees of Kāshghār is said to have been told by the Prophet in a dream that Kāshghār had advanced no fewer than thirty-two people to the rank of saintship (wāḥidīn), but none of these appears to have been clearly nominated as his successor. Djamī was manifestly the most prominent of Kāshghār’s disciples, but being temperamentally averse to assuming the burdens of preceptorship, he encouraged the followers of Kāshghār to gather, after his death, around Mawlána Shams al-Dīn Muḥammad Rūdji (d. 904-1499). Important, too, among the disciples of Kāshghār was Mawlána ʿAlī al-Dīn Maktābdār (d. 892/1487), several of whose devotees carried the Naqshbandiyā to places such as Kāzvīn and Tabriz in western Persia. In general, however, the initiatic lines descending from Kāshghār faded out after two or three generations; it was his great contemporaries, “Ubayd Allāh Aḥrār (q.v. in Suppl.) of Samarkand, who proved more significant for the long-term transmission of the Naqshbandiyā in the Bible Belt. Asli al-Dīn Harawi, Mazārdīr Harawi, ed. Fikrī Sājdujī, Kābul 1967, i, 98-9, ii, 52-3; Djamī, Nafṣulāt al-ʿunṣ, ed. Muḥammad ʿAbīdī, Tehran 1370 ʿah/1971, 408-10; Fakhr al-Dīn ʿAlī b. (Hamid Algar)
important court official of two Seljuk sultans of Rûm, Kaykûbât I and Kaykhusraw II. Kopek's place and date of birth are unknown. He is first mentioned as a tardjumân (Ibn Bibî, 146). Late in Kaykûbât's reign, Kopek had risen to become amîr-i şâhâk (master of the hunt) and mu'mâr (minister of works), entrusted with overseeing the construction of Kaykûbât's new palace at Kûbâbâbâ (g.v.) (ibid., 147). Kopek himself erected in 633/1235 a large caravanserai, known as the Zazadin or Sadeddin Han, between Konya and Aksaray. Two extant inscriptions on its portals record Kopek (k.w.b. k.) b. Muhammad.

After Kaykûbât's death in 634/1237, Kopek wielded considerable influence over his successor, Kaykhusraw II. Murders, aimed at consolidating Kaykhusraw's position, then followed. Kopek suddenly seized a Khârazmian amîr, Kirhân, who died in prison (Bar Hebraeus, 403; Ibn Bibî, 201). Kopek then organised the murders of Kaykhusraw's two half-brothers and their mother (Ibn Bibî, 204). In 635/1238 Kaykhusraw sent Kopek to occupy Sumâyasîn on his behalf. Returning home, Kopek killed off the last of the "old guard" state officials, Kaymârî and Kamîyrâ, who, like him, had served Kaykûbât (ibid., 208). In 637/1240, Kaykhusraw eliminated Kopek, because he was a dangerous rival, who had "destroyed the pillars of the state, one by one" (ibid.). According to Ibn Bibî, who remains the principal source for the events, the malevolent Kopek remained true to form, even in death: one of the spectators, assembled to gloat over Kopek's dismembered body, suspended in a cage from a wall, was killed by the cage falling on him (ibid., 209).

The blame for the murders in Kaykhusraw's reign could, of course, be apportioned differently. After all, Ibn Bibî, the court chronicler of the Rûm Seljuqs, is keen to exonerate Kaykhusraw from responsibility for all the deaths, save Kopek's.

(CAROLLE HÜLLEBRAND)

SA'D AL-DIN TAF Tatçâzâni [see al-Taqatçâzâni]. SA'D WA-NAHS (a.), literally, "the fortunate and the unfortunate".

These concepts are based on the influence exerted by the planets and the signs of the Zodiac on earthly events. The astrologers describe the stars as being either sa'd or našî. Thus Jupiter, Venus and the Moon are said to be sa'd, Saturn is našî and the Sun and Mercury are at times called sa'd, at times našî. But this can vary as a function of their positions in the ecliptic and of their conjunctions (cf. Abû Maslama Muhammed al-Madrîzî, Ḥayât al-hâkim, ed. H. Ritter, Leipzig 1933, 198 ff.; M. Plessner, Picaîux, London 1962, 209 ff.; L'agriculture nabatène, i, Damascus 1993, 10-12 et passim).

Starting out from these basic indications, the astrologers [see MUNATAPAZA] divided their art into two branches: natural astrology, consisting in the observation of the fortunate or unfortunate influence of the stars on the natural elements, whence arises meteorological divination [see ANWÂ' AND MADÂH]; and judicial or apotelesmatic divination, consisting in the observation of the influence of the stars on human destiny, whence arise genealogy (mašu'ûdî) or the art of drawing omens from the position of the stars at a person's birth [see NUDJUM, AMKÂM, 1.], and hermeneutics and demonology [see KITîYARAT], which consist in establishing the calendar of what is fortunate and what is unfortunate [see NUDJUM, AMKÂM, 2.].

One should note that the name sa'd, followed by a noun, is given to some stars and constellations (cf. P. Kunitzsch, Über eine anawû'-Tradition mit bisher unbekannten Sternnamen, in Beiträge zur Lexicographie des Klassischen Arabisch, Nr. 4, in Abb. der Bayerischen Akad. der Wiss., phil.-hist. Kl. (Munich 1983), Heft 5, 57; see this same author's arts. MANAZIL and NUDJUM). This designation does not seem to have borne any divinatory significance.

Bibliography: Given in the article. On Sa'd, the idol of the Banû Miskân, and Sa'dân (nâja), see T. Fahd, Le panthéon de l'Arabie Centrale à la veille de l'hégire, Paris 1968, 147-50.

(T. FAHD)

SA'DA, a town approximately 240 km/150 miles to the north of the chief town of the Yemen, Sa'nân (g.v.), situated on the southern edge of the Sa'da plain, and the administrative capital of the "province (mubâqâfa) of the same name. The town is about 1,800 m/5,904 ft. above sea level and in the 1986 census in the Yemen had a reported population of 24,245 persons. The inhabitants of the province numbered 323,110.

Although al-Hamdanî, 67, informs us that the town was called Djumaî in pre-Islamic times, certain Sabací inscriptions mention Jame al-Djumaî and he, "the town Sa'da", together with reference to the predominant tribe of the area, Khâwâlan (g.v.) (Ja 658/11-13, A. Jamme, Sabací inscriptions from Mahram Bilguîş, Baltimore 1962, 163; Sharaf al-Dîn, 31/14-5; A.G. Lundin, Sabací közlekedési és diplomát III v. e. n., in Palestinskiy Sbornik, xxv/88 (1974), 97; Ja 21097, A.F.L. Beeston, Corpus des inscriptions et antiquités sud-arabes, i/1, Louvain 1986, 49-50). Al-Hamdanî also tells the anecdote of the origin of the name Sa'da: "the weary Hidjâzî stopped for the night in the town and lay on his back contemplating the decorated ceiling which pleased him. Twice he exclaimed, "[Someone has] indeed raised it up (ja'ada-hu, ya'ada-hu!)." The town's fame for the manufacture of arrowheads is also mentioned by the 4th/10th century Yemeni scholar, who refers specifically to ṣa'ādî fûṣâ ṣa'ādîyâ. Iron implements, particularly agricultural, of all kinds seem also to have been made in the town.

The 7th/13th century traveller to the Arabian Peninsula from the east, Ibn al-Mudjâwîr (g.v.), reports in his Ta'rîkh al-Mustabıh, ed. O. Lôgren, Leiden 1951-2, 202-6, that the route north to Sa'da from Sa'nân, originally an important trade and later pilgrim route, was 20 parasangs (on p. 232, the return journey is 19). The town was built in the pre-Islamic era by Shem, the son of Noah, he adds. The old town, however, did not survive and in the time of al-Hâdî ilâ 'l-Hakk, the first Zayîdî imâm (d. 298/911) a wealthy merchant who would take no expenses built a mosque, perhaps the mosque bearing al-Hâdî's name still found in Sa'da to this day. A whole new town followed with markets, residences etc. Ibn al-Mudjâwîr then goes on to describe the wall (dar), towers (burûq) and gates, and the 11th/16th century Istanbul ms. contains a plan of the town which is reproduced in
Löfgren's edition, at p. 205. There were four towers:
Darb al-Kātī (E), Darb al-Kājī (N), Darb Daybān (S), and Darb al-Ghuzz (?). The last two were of Bāb al-Haram, Bāb Darb al-Ghuzz (?), Bāb Darb al-Kājī Ibn Daybān, Bāb Hūth, presumably also a southern gate leading to the town of Hūth between Sa'da and Sa'ā, and Bāb Darb al-Imām. The latter tower was built, according to Ibn al-Mudājwīr, by the Zaydi imām al-Mansūr bīlhāf ʿAbd Allāh b. Hamza (d. 613/1216). The town flourished, watered by rivers and springs, thus producing wheat and barley and abundant trees. Ibn al-Mudājwīr’s final comment concerns the clothing of the local inhabitants; it is made of silk and cotton, he says, since the area is so hot.

The geographer Yākūt (d. 627/1229) refers (ed. Beirut, iii, 406) to Sa'da as a province (mukhabāt [q.f.], 60 parasangs from Sa'ā). He continues that the town is a commercial centre, fertile, and in particular a centre of tanning, the latter facilitated by the abundance of Daybān. The last three of these texts are also mentioned in the margins of Ibn Hazm, iii, 221; Masudi, ii, 366; al-Shahrastānī, in the last two of which formed part of the superstitions of the Mediterranean basin that the essence or the essential being which gave life to a man escaped from the corpse in the form of a bird, above all, in the form of a bird of prey “other refs. in T. Fahd, Le panthéon de l’Arabie Centrale, 3 n. 1).”

Allusions to this belief are frequent in ancient poetry. One may cite, e.g., ʿArāfa b. al-ʿAbd, Mu'allāka, vi, 61; ʿAbd Allāh b. Zayd al-Thalābī of Ghatafān, in al-Buḥūṭi, Hamāsa, iii, no. 93, 585; Abū Duʿād al-ʿiyādī, in Aḥgānī, xvi, 39; Kays b. ʿAṣim, in Ibn al-ʿAṯīr, i, 289-90; and Dūḥi ʿl-Iṣbāfr al-ʿAdwānī, in al-Nuwayrī, Niḥyā, Cairo 1924, iii, 121. In general, these poets reproach the family of the murdered person for delaying avenging him, thus delaying the appeasing of his soul. Other poets refer to the echo (sāda) of a barking announcing a fire implying hospitality [see nār], as in the case of Murra b. Mahkān, cited by al-Tibrīzī, in Hamāsa, 690; or else the echo indicating the way to someone lost, as in the case of Ummiya b. Bubayr al-Mażīnī and Abū Mubīb, cited by ibid., 690, 1 223.

As for the historical and lexicographical sources, they reproduce the same notion set forth above, with slight variants (see esp. al-Shahristānī, Mišāl, in the margins of Ibn Hazm, iii, 221; Maṣūdī, Muḥāfīz, iii, 310-13 = §§ 1191-5; Aḥgānī, xvi, 96; al-Tibrīzī, in Hamāsa, 454; al-Damārī, Ḥaywān, iv, 440, citing Maḥīk b. Anas). The Prophet denied the existence of three things which formed part of the superstitions of the Dhajjīlīya, saying, ʿlā τάδεα ως-λαό κόρα-λάν-σαταρ “there is no contagion, no death owl and no intestinal worms”. People subsequently personified these three things and made them responsible, e.g., for contagion with a camel in contact with another there arises leprosy, or digestive and nervous disorders caused by a tapeworm. It is God, he affirms, who afflicts things and made them responsible, e.g., for contagion with a camel in contact with another there arises leprosy, or digestive and nervous disorders caused by a tapeworm. It is God, he affirms, who afflicts things and made them responsible, e.g., for contagion.
SADAF (A.) (sing, sadafa) denotes two classes of molluscs: 1. Mussels (Lamellibranchiatd); 2. Snails (Gastropoda), both including the mother-of-pearl. Many of these transmissions were of works on cilm al-ridjal by authors like Ibn cAdi, al-Dimashki, Abu '1-Husayn Ibn Bashran, al-Hakim, al-Khatib al-Baghdadl, Ibn al-Djarud and others. He travelled to the East on 1 Muhamarr 481/1088, performing the pilgrimage and searching for knowledge in Madhiyya, Cairo, Mecca, Bašra, Anbār, Wāsiṣ, Baghdad (where his stay lasted five years). Damascus (i.e. 'askir mentioned in his Ti'rīka Dimajžk because of his visit to the town), Alexandria and Tinnīs. Among his many teachers during his Ti'rīka, two were Andalusians, Abu 'Abd Allāh al-Humaydyd and al-Turtūsī q. v., as well as Husayn b. Yūsuf b. Sukkara/Sukkaruh al-Mullakhī, Abu '1-Abbās al-Djurjānī, Abu '1-Fadl Ahmad b. al-Hasan b. Khayrūn, Abu '1-Tābir Ahmad b. Abu '1-Abayd Allāh b. Siwār (author of the Kithāl al-Mustamīn fi il'ākīn, al-Mubārak b. A'1-Djurjānī, Abu '1-Sayrāfī, Tirād b. Muhammad al-Zaynābi and Ahmad b. Yābya b. al-Djurjād. With the Shaffī'ī Abu Bakr al-Shassī he studied al-his al-Ta'rīka al-kubra fi masā'il al-khīsā. In Cairo, al-Sadaft obtained the 'īṣārā from Abū Ishāk al-Habībī, the most reputed traditionist of the time who had been forbidden to teach by the Fātimids. In 940/1056, al-Sadaft arrived in al-Andalus, settling in Murcia, where he taught in the 'īṣārā mosque, attracting students from all over the Peninsula. Although he was considered a competent expert in kīrātāt, he excelled especially in the science of hadīth, not only because of the quality of his knowledge but also because of his "high" isnād (i.e. the fact that his chains of transmission had very few links). His powerful memory apparently allowed him to learn by heart entire compilations of hadīth, memorizing them in his mind. He himself compiled some of those compilations, like al-Bukhari's and Muslim's Sahīk which, together with al-Tirmidhi's Musannaf, constituted the basis of his teachings. It is said that the major part of the copies of al-Bukhari's work in the Maghrīb are either in the riwaya of al-Bajī (from Abu Dharr), or in the riwaya of Ibn Sukkara (transmitted by Ibn Sa'da) onto the riwaya of Ibn Suṣhān al-Djurjād. But al-Sadaft was mostly a transmitter, and as such he plays an important role in 1'yād's Ghunya and in Ibn Khayr's Faḥrasa. Apart from some works in the field of Kur'ānic sciences and ascetism, he transmitted mainly hadīth works by the major transmitters and those of the mystics and philosophers to use them as images'.

Bibliography: The Greek names, mentioned in the article, are all found in Dioscorides, De materia medica, ed. M. Wellmann, Lib. II, chs. 4-9 (pp. 122-5); their Arabic renderings are accordingly found in the translation by Stephanos-Hunayan: La 'Materia medica' de Dioscorides, ii, ed. Dubuler and Teres, 1952, 128-31, and in Ibn al-Baytār, 3qimii, iii, 81-2, tr. Leduc, no. 1993; A. Dietrich, Dioscorides triumphant, Göttingen 1988, ii, 190-202; idem, Die Dioscorides-Erklärung des Ibn Badārī, Göttingen 1991, 92-4. For pearls in general, see al-Durr and Lullii. (A. Dietrich)
al-Buḫrāi, al-Nasāʾī, al-Kalābāḏī, Muslim, Abū Bakr al-Barbahāni and al-Bāḏjī, as well as ṣadāk collections. He is remembered as having recited some verses from Muhammad b. ʿAlī al-Sūrī against those who attacked traditionists and ʿilm al-hadīth. As a Mālikī, he also transmitted ʿībīk works of this school and some ʿaḥārī like those of Ibn Khayrūn, al-Bāḏjī, Ibn Saʿdīn and Ibn al-Tūyūrī. Al-Sadafi was one of the central figures of his generation in the transmission of ʿīm, as has been shown by Urvoy. Among his Andalusian pupils there were members of the Banū ʿAfast, as has been shown by Urvoy. Among his pupils were al-Saʿāda b. Ṣaʿīd, his daughter, who married a man of ʿAbī ʿImrān Mūṣa b. Saʿāda who inherited his books and documents. Al-Sadafi gave the ṣdāqa to Ibn Baḥḵwāl, Ibn ʿAṭīyya and Abū ʿĪṯār al-Sīlāfi. Another pupil of his was Kāḏī ʿIyād [q.v.], who studied with him in Cеuta and who wrote al-Sadafi's Maḥāvīm. Another Muʿādham muḥāḥib al-Sadafi was written by Ibn al-Dabbagh al-Unzī (d. 543/1148 or 546/1151). For his part, Ibn al-Bāḏjī wrote the Muḥām of al-Sadafi's pupils, edited by F. Codera.

Al-Sadafi's career as Kāḏī in Murcia was short-lived on his own choice. Although both the people and the Almoravid ruler are depicted as desiring him to be ʿāli b. Yusuf b. Tāḥufn in the frontier of al-Andalus in the year 514/1120, fighting as a volunteer against the Christians (see Noth and Urvoy's articles on the meaning of the participation of scholars in ghīḍāх).

al-Sadafi, the equivalent of mahāfīz [q.v.], dowry. Lane gives sadak, with the alternative sidāk (noting that the former is more common but the latter more 'chaste'), plurals sādak, sūdak, and astak as 'the mah of a woman'. Among the other alternative forms given by Lane the most commonly found is sadakū (pl. sadaḵūna) and the form IV verb of the same root, astakū, means to name or give a sadakū upon taking a woman in marriage. Al-Dżazlī says that it is derived from sidīk (yazku) of the property from which they are given (e.g. Ibn Battal al-Rakbi, al-Sila, Zahi, Beirut 1980, no. 7; Ibn Bashkuwal, al-Fihrist, ed. Beirut 1985, xix, 376-8, no. 218; idem, Miṣdjam al-muḥallafin, Cairo, iv, 163, derives it from sidīk, rather than sadakū, as being hard on the soul), and zakāt are considered by Muslim religious belief (e.g. Ibn al-ʿArabī, Ḥakām al-Kurān, ed. al-Bujdrī, Cairo 1370/1951, ii, 946-7; al-Shīrīnī, al-Iṣka, Cairo, i, 212; M. Hamīdullāh, Introduction to the Fihrist, ed. Paris 1388/1969, al-Fihrist al-muṣāṣṣ, Būlāk, repr. Beirut 1968, iv, 94; Abū Dāwd al-Sidżdānī, Sanān, part 2, §§ 2105-8. (D.S. EL ALAMI)

Sadaka (a.) has among its meanings that of voluntary alms, often referred to in Islamic literature as sadakat al-tawāṣṣul 'alms of spontaneity', or sadakat al-nafī 'alms of supererogation', in distinction to obligatory alms, frequently also termed sadak, but more commonly known as zakāt [q.v.]. Both sadak and zakāt are considered by Muslim writers to be of purely Arabic derivation; alms being called sadaka as indicating the sincerity (sidīk) of the almsgiver's religious belief (e.g. Ibn al-ʿArabī, Ḥakām al-Kurān, ed. al-Bujdrī, Cairo 1367/1951, ii, 946-7; al-Shīrīnī, al-Iṣka, Cairo, i, 212; M. Hamīdullāh, Introduction to the Fihrist, ed. Paris 1388/1969, al-Fihrist al-muṣāṣṣ, Būlāk, repr. Beirut 1968, iv, 94, followed by al-Zabīdī, ʿIḥāf al-sāda al-muttakīn, Cairo, iv, 163, derives it from sadakū, as being hard on the soul), and zakāt with reference to the increase (yazku) or purification (zakāt) of the property from which they are given (e.g. Ibn Baṭṭāl al-Rakbi, al-Nāṣirī, al-muṣāṣṣ, ed. on the margin of Abū ʿĪṣāk al-Shīrīzī, al-Muhaddhist, Cairo, i, 140). Modern critical scholarship, however, regards both words as...
borrowings, probably directly from Jewish usage (A. Jeffery, The foreign vocabulary of the Qur’an, Baroda 1938, 153, 194). Sadaka reflects the Hebrew *sadáka*, which from its original meaning of almsgiving probably developed the sense of alms given to the poor and is commonly used in this sense in Apocryphal and Rabbinic literature, if not already in the Hebrew Bible (cf. F. Rosenthal, *Sadaka, charity*, in *Hebrew Union College Annual*, xxiii/1 [1950-1], 411-414). Zakát is derived from the Arabic *zakást* or *zakádt*, is of Arabic origin (J. Obermann, *Islamic origins*, in *N.A. Studies*, v, 197-206). In the Kur’än, but not the *hadith* *zakát*, perhaps formed to rhyme with another Aramaic borrowing, *saláth*, with which it is so frequently paired in the Kur’än (A. Spitaler, *Die Schreibung von *Tupas slaut en Koran*, in *WZK*, iv [1960], 217), is used only in the singular, like the Hebrew *sadaka*, and has no denominative verb corresponding to its sense of giving alms (noted by W.M. Watt and A.T. Welch, *Der Islam*, Stuttgart 1930, i, 302, but cf. on the latter point Fr. Schultness, in *ZA*, xxvi [1922], 153, and Horovitz, 206 [62]). Zakát thus appears to have a shorter history as an Arabic word than *sadaka* and is a more pronounced religious borrowing, for only it, not *sadaka*, is used in the Kur’än in connection with prophets before Muhammad (Watt and Welch, i, 302).

According to Arabic lexicographers *sadaka* is broader than *zakát* and is used in the Kur’än for both voluntary and obligatory alms. It thus happens that certain of the most important Kur’änic provisions concerning *zakát* are couched in terms of *sadaka* (e.g. IX, 60). In some cases, it is regarded as doubtful whether *sadaka* is being used to refer to voluntary alms or *zakát* or both (e.g. II, 271). A similar uncertainty extends to verses which refer to “spending” *(infák)* (e.g. II, 3) and “giving” (e.g. II, 177). To complicate matters, *zakát* is on occasion, it is claimed, used to refer to voluntary alms (e.g. Kur’än V, 55, al-Baydawi, *Anwaar al-tansil*, ed. Fleischer, Leipzig 1846-8, i, 263, referring to both *sádik* and *muhitik*. Modern Muslims have tended to distinguish between voluntary and obligatory *zakát* and refer to *zakát* or *sadaka* or both (e.g. II, 271).

Sadaka is a male name and derivatives in the Koran, in *HUCA*, ii [1925], 25, but see J. Obermann, *Die Schreibung von *Tupas slaut en Koran*, in *WZK*, iv, 256 (1938), 194). Sadaka is found as a male name and derivatives in the Koran, in *HUCA*, ii [1925], 25, but see J. Obermann, *Vatican, v, 138). Modern Muslims have tended to distinguish between voluntary and obligatory *zakát*. It thus happens that certain of the most important Kur’änic provisions concerning *zakát* are couched in terms of *sadaka* (e.g. IX, 60). In some cases, it is regarded as doubtful whether *sadaka* is being used to refer to voluntary alms or *zakát* or both (e.g. II, 271). A similar uncertainty extends to verses which refer to “spending” *(infák)* (e.g. II, 3) and “giving” (e.g. II, 177). To complicate matters, *zakát* is on occasion, it is claimed, used to refer to voluntary alms (e.g. Kur’än V, 55, al-Baydawi, *Anwaar al-tansil*, ed. Modern Muslims have tended to distinguish between voluntary and obligatory *zakát* and refer to *zakát* or *sadaka* or both (e.g. II, 271).
or at least encourages, the giving of sadaka before an audience with the Prophet. It is believed to have been in effect only briefly before being abrogated by LVIII, 13 (al-Baydawi, Anwar al-tanzil, ii, 320, cf. al-Zamakhshari, al-Kashshafi, Beirut, iv, 494).

Other Kur’anic verses, although they do not use the term *sadaka*, figure prominently in later discussions. Several verses (II, 177, III, 92, LXXVI, 8) stress the significance of giving from what one loves. In II, 267, believers are told to give of the “good things” (as-siyyabha) that they have acquired, and that they should not be ashamed to have been rewarded with a generous income, now prohibited, was being given away as sadaka. The bountiful reward in store for one who gives “in the cause of God” (fi sabil Allah) (II, 261, seven-hundredfold) or “to seek God’s pleasure” (ibtiqad mardat Allah) (II, 265, twofold) is contrasted with the vanity of giving “in pursuit of the life of this world” (al-bayat al-dunya) (III, 117). “Who is it that will make God a goodly loan?” (khabith hasan), so that He will increase it many times” (II, 245; cf. Proverbs, xix, 17) is said to have been revealed with reference to the Anṣārī Abu ‘l-Daghār, who gave an orchard of 600 palm trees as *sadaka* and was rewarded with one million orchards in the hereafter. Kur’ān LIX, 9 praises those “who prefer over themselves, even though they be in want,” a passage understood to refer to the Medinan Anṣār who, setting an example of self-sacrifice (ṣayba), gave so generously to the Muhājirūn (al-Baghwārī, Sharḥ al-sunsna, ed. al-Arna’ūt, Damascus 1390/1400, repr. Beirut 1403/1983, vi, 181; al-Baydawi, Anwar al-tanzil, ii, 324). In other passages, however, the Kur’ān urges moderation in giving (VI, 141, cf. al-Baydawi, op. cit., i, 312; XXV, 67).

2. *Sadaka* in Ḥadīth. The subject of *sadaka* is dealt with in many Ḥadīth (most easily accessible in Ṣawā’id al-Muttaq al-Hindi, Kanz al-‘umārā, ed. Hayyāni and al-Sakka, Aleppo 1390/1971, vi). Although *sadaka* is sometimes used for voluntary alms in explicit contrast to zakāt, its use in the sense of zakāt (found also in papyri (G. Khan, Selected Arabic papyri, Oxford 1992, i, 53)) remains frequent, with the result that in the classical collections of traditions, the Ḥadīth dealing with voluntary almsgiving are far more abundant in Ḥadīth than in the *Sunnah*. Ḥadīth, however, has in addition a separate section on voluntary almsgiving (in the recension of Yahyā b. Yahyā al-Masūdī, ed. Muhammad Fu’ād ‘Abd al-Bākī, Cairo n.d., 615-18). In the interpretation of neither the Ḥadīth nor the Kur’ān was agreement reached as to which sense of *sadaka* was to be presumed as intended in the absence of further evidence.

Beyond the ambiguity occasioned by the continued use of *sadaka* for zakāt, there is further uncertainty in the interpretation of some traditions created by the not infrequent use of *sadaka* in the sense of permanent alms (*sadaka* dā’irā, i.e. the trust or wa‘f [q. v.] on this use in papyri, see R.G. Khoury, Christomachie de papyrologie arabe, Leiden 1993, 132-3 (Christian)). Some even claimed that *sadaka* was used in the Ḥadīth in the sense of the poll tax (ṣiyān) [q. v.], a usage others reject (confined to the Ṣahih, and other Christian Arab tribes (*Umdat al-ḵātir, i, 4-5,*).

The references to *sadaka* in the Ḥadīth are often of a homiletic character, stressing the excellence of alms given under one or another circumstance, whether that of the giver, the recipient, the time and place of the giving, or the gift (cf. al-Dājāzārī, Kāla’id, i, 309). Thus when asked what *sadaka* was best, the Prophet is reported to have answered: “the *sadaka* you give when you are still healthy and tight-fisted, fearing poverty and hoping for wealth (*ṣarḥ al-suna*, vi, 172-3; al-Tibrizī, Mīghāj al-maṣādib, tr. J. Robson, Lahore 1975, i, 395 (cf. Kur’ān, LXIII, 10)). The merit of almsgiving thus lies in the degree of self-denial (*muṣalhaṭ al-nafs*) (*Iḥāf al-sāda*, iv, 168) a point made more explicitly in the tradition that states that the best *sadaka* is that which the person with little can manage to give (*ṣawāḥ al-muṣṣalha* (*Wensinck, Handbook*, 20, Mīghāj, i, 411 (cf. Kur’ān, IX, 79)). Because it is not the monetary value of what of what is given that is paramount, *sadaka* consisting of a dirham that constitutes but a trifle of the almsgiver’s property is more meritorious than 100,000 dirhams given by a person of great wealth (al-Numān, *Sunan*, Cairo 1383/1964, v, 44; *‘ Alf al-Kārī, Sharḥ *aym al-tīm*, Cairo, i, 157).

Alms given to a nearer neighbour is better than that given to one more distant. Giving alms to a relative is particularly meritorious, since one earns the rewards both for *sadaka* and for cultivating family ties. The reward for *sadaka* given on Friday is double that on other days of the week. Other traditions identify the best *sadaka* as that given in Ramadān. The reward for giving voluntary alms in secret is seventy times that of giving it publicly (al-Baydawi, Anwar al-tanzil, i, 138, on II, 271; *Umdat al-ḵātir*, viii, 284). The place in which alms are given is also significant to its merit. A dirham given in Mecca, according to a Shi’i tradition, merits a hundred-thousandfold reward, in Medina ten-thousandfold, in Kūfah one-thousandfold. “Whoever gives one dirham of *sadaka* in Jerusalem (Bayt al-Makdis) gains his ransom from hellfire, and whoever gives a loaf of bread there is like one who has given [the weight of] of the earth’s mountains in gold” (al-Hasan al-Baṣrī). Of all that might be given as alms, water is pronounced to be best, and one who gives water to a thirsty Muslim will drink of the wine of Paradise.

The importance of giving *sadaka* to avert tribulations in this life and to avoid the punishment of hellfire in the hereafter is the topic of many Ḥadīth. “Whoever can protect himself against hellfire should do so, even if it should be with half a date*”. An angel is said to pray that the almsgiver be rewarded, while another angel prays for the destruction of the property of the one who has been the builder of a medina. Beggars sometimes come to test a family (al-Kādī al-Numān, *Dar’ām al-Islām*, ed. Faydī, Cairo 1389/1969, ii, 333), and it was Jacob’s failure to give alms to an unrecognised prophet in the guise of a beggar that led to the tragedy of Joseph (ibid., iii, 333-4). Where one has nothing tangible to give, one can still utter a kindly word (cf. *Talmud Ba’al Baitrī* 9b). Conduct meriting a reward is in fact frequently termed *sadaka* in the Ḥadīth. Thus a man’s lawful sexual intercourse is *sadaka*, as is giving assistance with the loading of a beast, and every step take toward prayer. Planting something from which a person, bird or animal later eats counts as *sadaka*. One who supports himself and his family is credited with *sadaka* (with proper intention; cf. *Kethubbat*, 50a). In this extended sense, corresponding to a large degree with the Jewish *gemiluth hasadim,* “acts of loving kindness” (*G.F. Moore, Judaism at the Crossroads*, 1975, 171), even greeting another with a cheerful face is deemed *sadaka* (cf. *Avoth de-Rabbi Nathan*, xiii, 4). In short, every good deed is *sadaka* (*kulū ma’nāfīn *sadaka*). Not even affirmative action is required, for a Muslim whose property is stolen is credited with having given it as *sadaka*.

The continuity of Islamic teaching on *sadaka* with certain Jewish and Christian conceptions of almsgiv-
ing is evidenced by more than one tradition. "Alms averts a bad death (mitat al-su'a)" (Kanz al-ulum, vi, 345, in many versions; cf. majasi' al-su'a; Kana al-ulum, vi, 406) reproduces Proverbs, x, 2, "righteousness (fida) delivers from death," understood in the Talmud (Basa Baithra 10a) to refer to almsgiving leading one from an unnatural death (milata meqme'ana; cf. Targum ad loc. milata bish). The depiction of the giver of alms as dressed in an expanding coat of mail is reminiscent of Isa., lix, 17, "He put on righteousness (fida) as a breastplate" which is taken in the Talmud Tishkah (page 85, 1862, i, 851). The model for generosity in almsgiving is provided by the Prophet Muhammad, who is described in the hadith as "the most generous of men, bestowing more good than the loaded wind." He made it a point to give with his own hand and derived more joy from giving than the poor to whom he gave. When asked for anything, he never said no. If he had nothing to give, he remained silent (to elicit others to speak on behalf of the beggar). He is said never to have delivered a sermon without mentioning sadaka.

The hadith as almsgiving, generously provided by the Prophet Muhammad, who is described in the hadith as "the most generous of men, bestowing more good than the loaded wind." He made it a point to give with his own hand and derived more joy from giving than the poor to whom he gave. When asked for anything, he never said no. If he had nothing to give, he remained silent (to elicit others to speak on behalf of the beggar). He is said never to have delivered a sermon without mentioning sadaka.

Sadaka in secret extinguishes the wrath of the Lord." renders Proverbs, xxi, 14, "a gift given in secret sooths anger" as interpreted in Tashrib 9b. Christ's exhortation "do not let your left hand know what your right hand is doing so that your giving may not be in secret" (Matt., vi, 3, 4) appears at the teaching of Muhammad in several traditions (Wensinck, Handbook, 20; Misiki, i, 407; noted by Goldziher, Muh. Handb., ii, 384, and L. Shaykh, al-Navsnaa wa adaddaha bayna arab al-djdhiliyya, Beirut 1923, ii/2, 319). The model for generosity in almsgiving is provided by the Prophet Muhammad, who is described in the hadith as "the most generous of men, bestowing more good than the loaded wind." He made it a point to give with his own hand and derived more joy from giving than the poor to whom he gave. When asked for anything, he never said no. If he had nothing to give, he remained silent (to elicit others to speak on behalf of the beggar). He is said never to have delivered a sermon without mentioning sadaka.

Sadaka as a distinct juristic institution only partially including Abu Hanifa, Abu Yusuf and Muhammad al-Shaybani, held that he was prohibited from taking it. Among the explanations offered for this prohibition are the indignity, inconsistent with the prophetic office, of accepting alms, the appearance of self-interest (tawma) were the Prophet to accept sadaka while urging others to give it, and the meritoriousness of the Prophet's special deprivation. A minority of scholars, including al-Shafi'i (al-Umm, Cairo 1321-5, iii, 279), entertained the possibility that the Prophet was permitted to accept sadaka but refrained from doing so out of pious self-denial. In the assembly of a kind of cloak of armour, chain by chain, with the growth of small acts of almsgiving to a considerable sum. Several hadiths which stress the merit of secret almsgiving have exact Biblical parallels.

reflects the various forms of charitable giving known to Islam. For the jurist, sadaka falls under the general heading of charitable gifts (hijr) or gratuitous transfers (zakāt). Among the various species of gift, hiba "in the wider sense" (bi l-mu'nā al-a'amm), that is, a gratuitous transfer of tangible property (also 'atīyya). It is distinguished from other species of gift by the intention with which it is given, which must be to please God (li-nadāh Allah) in the hope of a reward in the hereafter (thaaww al-ākjīra (al-San'ānī, Beirut 1405/1985). Subul al-salām, ii, 196) and not for any worldly purpose such as to acquire a gift from the donee, which would render it an ordinary gift (also termed hiba) or to honour the donee (hadīyya). It must, that is, constitute a kurba, an act performed as a means of coming closer to God. The significance of the donor's intention is evidenced by the Prophet's acceptance of gifts as haddiya but not sadaka, a distinction also found in the form of an explicit prophetic tradition and reflected in the classification of gifts attributed to 'Ali. Gifts of usufruct (māna'a) are by definition excluded from sadaka, and fall under the heading ofakis (ṣibā, ḏi'āyya), loan (ṣiryya) or trust (waqf). The extent to which sadaka is separately treated in legal works varies from text to text, and even in those cases where there is a separate discussion of sadaka, some of the rules governing it are to be found in the chapters on gifts and zakāt, although it is not to be regarded as a recommended (ṣuna) form of zakāt (recommended zakāt is, however, known to Imam al-Nihdya, abū Djafrā, al-Tusi, al-Nihdya, Beirut 1390/1970, 176).

Islamic law, by way of the hadīth, has preserved only a few of the distinct forms of gift giving known to the Arabs, e.g. the minba or manība, said to be the best kind of sadaka. With Islam there came a radically simpler set of distinctions (even the difference between hiba and hadīyya is a terminological innovation), in which sadaka, defined by its religious intention, held a special place. Not surprisingly there was a discernible tendency for those giving gifts to prefer the label sadaka, with its connotation of a pious motive, for their gifts, even in those cases where there is a separate discussion of sadaka, some of the rules governing it are to be found in the chapters on gifts and zakāt, although it is not to be regarded as a recommended (ṣuna) form of zakāt (recommended zakāt is, however, known to Imam al-Nihdya, Abū Djafrā, al-Tusi, al-Nihdya, Beirut 1390/1970, 176).

sadaka, may be given to the ‘wealthy’ (ghani) (as defined for zakāt or zakāt al-fitr). Traditions such as ‘give to one who asks even if he is mounted on a horse’ (abū ‘l-Hudū al-Šaybāni, ad-Dhil al-isldmiyya, ix/28 [1403/1983], 3540, 3342).

Just as there is no minimum for sadaka, according to most jurists there is no maximum (al-Nawawī, Sharḥ Muslim, Cairo, vii, 125 quoting Kādī ‘Iyād; but cf. Ibn Hazm, al-Muhallā, ix, 138 for a list of early jurists who rejected this). A Muslim of sound mind and body who is able to accept poverty is encouraged to dispose of all his property as sadaka, beyond narrow exemptions. Although there are Kurānic verses (VI, 3:102; VII, 26, 29) and traditions calling for moderation in giving, other verses (II, 262, IX, 79, LIX, 9) and traditions set no such limit, and it was to these as well as to the practice of early Muslims, not to speak of the Prophet, that the majority of jurists looked. The tradition stating that the best sadaka was that which left a sufficiency (‘ān sahr ghina), which the Zāhiri Ibn Hazm took as the only criterion for how much one might give (al-Muhallā, ix, 136-42) was widely interpreted to mean ‘self-sufficiency’ (ghina al-nafs), i.e. contentment. It is thus permitted to reduce oneself and one’s family to penury if those affected are capable of enduring it without becoming a burden on society and without complaint; otherwise it is reprehensible to give away all of one’s property, and subsequently to reject one’s sadaka deprives it of its reward.

A minority of jurists set down specific limits on how much one might properly give: one-half, more commonly one-third, the proportion set down by Mālik, the Syrian jurists Makhbūl (d. 1127/1330) and al-Awzā‘ī (d. 157/774), and the Zaydi Imām al-Hādī (d. 298/911) and recommended by al-Tabārī (d. 310/923), or one-fifth, one-seventh, or one-tenth (depending on wealth, attributed to Djabir b. Zayd (d. 93/712) (cf. one-fifth in Talmud Kethubboth 30a).

Unlike zakāt, which is designated for specified classes of recipients, there are virtually no restrictions on the poor to whom it is given, and the giver is not encouraged not to restrict his giving to one group, although the law, following the hadīth, does identify preferred donees such as relatives and neighbours (al-Nawawī, al-Majdūnī, Cairo, vi, 260: consensus that relatives are preferred to strangers). A mosque or other institution can be a recipient of sadaka, which is accepted on its behalf by its representative, who can be the donor himself.

Most jurists understand the prohibition against the receipt of sadaka by members of the family (āli) of Muhammad (as variously defined) to apply only to obligatory sadaka, that is, zakāt, although the matter was much controverted, with Abū Ḥanīfa, Abū Yūsuf, and Muhammad al-Šaybānī and Ahmad b. Ḥanbal reported to have maintained that a father has a right to revoke sadaka given to his child. The view of the Imām Abū Ḥāfar al-Ṭūsī (d. 459/1067) (al-Mabsūt, iii, 314) that sadaka and ordinary gifts were legally in-
distinguishable, even as regards revocability, was regarded as exceptional, and it was, in fact, argued by others that *sadaka*, being irrevocable, should not be classified as a species of gift (al-'Tahānawī, *Koshkhoj*, ii, 1449).

Various explanations are offered for the irrevocability of *sadaka*. One is that the donor’s heavenly reward for *sadaka* provides moral consideration for the gift, and gifts for which consideration has been given are irrevocable. This explanation, characteristic of the Ḥanafīs (al-Sarakhsī, *al-Mubāhī*, xii, 58), for whom it is part of a general theory of irrevocability, is rejected by others, but is open to criticism. It is also suggested that *sadaka* is irrevocable inasmuch as it is given in the first instance to the giver, the obligation to whom is discharged by delivery to the poor person (al-Sarakhsī, *al-Mubāhī*, xii, 58; cf. al-Zurkānī, *Shahr al-Muwatta*, iv, 47 (irrevocable because for the sake of God)). Where the nature of the gift is disputed, the donee resisting revocation has the burden of proving that it is *sadaka*. Significantly, the rule of irrevocability was applied to gifts to the poor which were designated by their donors as ordinary gifts and not *sadaka*, but which were treated by the jurists, who looked to the substance, not the form, of the transaction, as within the scope of *sadaka*.

Closely related to the question of the irrevocability of *sadaka* was that of the re-acquisition of property given as *sadaka*. In a tradition the Prophet is reported to have told ‘Umar not to purchase a horse that he had previously given as *sadaka* and to have compared the person who goes back to his *sadaka* to a dog that returns to its vomit. For most jurists, re-acquisition by a voluntary act of the donor, such as purchase, gift or *sadaka*, is disapproved, but not passive re-acquisition by inheritance or a wife’s re-acquisition as support of what she gave her husband as *sadaka*. For the Mālikīs, but not the Ṣaḥīhīs, the disapproval of re-acquisition extends to cases in which the property has passed through one or more intervening owners prior to its re-acquisition. A minority of jurists, including the Zāhirists, regarded all instances of re-acquisition, even by inheritance, as prohibited. The disapproval of re-acquisition extends to obligatory *sadaka*, that is *zakāt*, and property given as expiation (*khafīfah*) or in discharge of a vow (nasīb), and to the enjoyment of the usufruct of what has been given, but not to *sadaka* intended for the public such as water for a mosque. The rule against re-acquisition (at least by purchase) is variously explained. According to one explanation, the donee in selling the *sadaka* to the donor will not feel free to bargain at arms’ length, and the lower purchase price, coming as a consequence of the *sadaka*, will vitiate the original gift. A second explanation regards re-acquisition as compromising the “form” (*fāwu*) of the *sadakā*, which requires completely divesting oneself of the gift. The Imām Mūḥammad b. Idrīs al-Hilli (d. 598/1202) rejected the rules against re-acquisition as inconsistent with the donee’s full right of ownership (K. al-Sarā’ir, Kumm 1410, iii, 174).

The acceptance of *sadaka* is subject to its own rules. Most consider acceptance under ordinary circumstances to be a “recommended” (*sunna*) act, obligatory only when the donor insists or when the donee has urgent need (*mussarrat*), and in such cases, the reward for taking may well exceed that for giving. A minority, including Ibn Hazm, require that a gift of *sadaka* be accepted, if only to be at once returned to the giver (al-Muhālī, ix, 152-4).

Apart from a limited number of exceptions, including that of utter want, begging is prohibited, and even then the poor are encouraged to accept their fate without soliciting alms (cf. *Ihyā‘*, i, 298), the poor who do so being preferred as recipients of *sadaka* to beggars (cf. Kur‘ān, ii, 273). In any case, if one is able, it is better to earn one’s livelihood by the most menial tasks than to beg (to thus be able to give *sadaka*). Beggars have its own etiquette. Importunate begging, begging in a mosque, and begging in the name of God are all disapproved, although in the latter case, according to some, the beggar invoking God’s name should not be turned away empty-handed. It is forbidden for a person of sufficient means to beg as if in need and disapproved for him to put himself in the way of receiving alms. Otherwise, such a person may accept unsolicited alms.

4. The practice of *sadaka*. The giving of *sadaka* was and remains widespread among Muslims, encouraged as it is by many Kurānic verses and traditions. These indicate that the giving of *sadaka* serves a number of distinct functions. *Sadaka* acts, in the first place, as expiation for sins, and it is recommended that it be given immediately following any transgression (*ma‘ṣīya*) (*Ihyā‘*, i, 298, the advice of the legendary sage Lukmān), for example, after intercourse with a menstruating woman. Voluntary almsgiving can thus make good shortcomings in the past payment of zakāt.

Closely related to the expiatory function of *sadaka* is its special role in affording protection against all manner of evils. According to a tradition, the *sadaka* that a Muslim gives wards off afflictions in this world, questioning in the grave, and punishment on Judgment Day (Ismā‘īl Hakki, *Tafsīr rūh al-hayān*, Istanbul 1915-21, i, 418). Accordingly, it is recommended to give *sadaka* at the start of each day as insurance against personal troubles (cf. Kur‘ān, ii, 274). The constant giving of little is said to please God more than the occasional giving of much. Although giving *sadaka* is recommended at all times, it is especially appropriate to give it upon significant occasions such as going to war or on a journey, and the tradition stating that “it is better for a man to give a dirham in alms while he is alive and healthy than one hundred dirhams when he is dying” did not prevent al-Ḥasan al-Bāṣrī from teaching that “the most appropriate time for a man to give *sadaka* is his last day in this world and his first in the next” (al-‘Abbās b. Ahmad al-San`ānī, *TadhkIr al-rasād al-tanwir al-majmu‘ah al-mu‘āṣirah al-tadhkIrīyāt*, ii, 122-3).

The positive side of giving *sadaka* lies in the merit that accrues to the giver, greater according to some than that of zakāt. *Sadaka* is encouraged as a means of bringing down sustenance (*rizq*) from heaven. The giver of *sadaka* is promised a reward many times what he has given, from ten times for *sadaka* given to a healthy person, ninety for a blind or handicapped person, nine hundred times for a needy relative, one hundred thousand for parents, and nine hundred thousand for a scholar.

The merit of giving *sadaka* does not stop with the giver. “Cure your sick with *sadaka*,” the Prophet is reported to have said. Nor is the benefit of *sadaka* limited to the living, for according to the Ḥadīth, *sadaka* may be given in the name of deceased Muslims, especially by a child on behalf of a parent, and its reward will be presented to the latter by means of light (*tawwāb min nigr*). Although most of the Muḥaddiths are alleged to have denied the efficacy of alms in the name of the deceased, a consensus is claimed for it (al-Nawawī, *Shahr Muslim*, vii, 90; al-Zurkānī, *Shahr al-Muwatta*, iv, 56). The deceased is credited with the merit of having given the *sadaka*, a reward that does not diminish that of the giver.

In the giving of *sadaka* Muslims have found also a
means of moral edification. According to the Malikî jurist Ibn Rashid al-Kafsi (d. 736/1336), the rationale (hikma) of the law of gifts is to purify the soul from the malady of avarice (büyûk) (K. Luḥāb al-ibûtâb, Tunis 1346, 243), and sadaka embodies the virtue of generosity (qiûd, sakka), a reflection of the generosity of God the “All-Giving” (al-Wahhâb). “The believer is obligated to instruct his child in generosity and charity just as he is obligated to instruct him in monotheistic doctrine and belief, for the love of this world is the source of all sin,” according to Abû Man¬sûr al-Makki. However, the Malikî jurist Al-Qarqûlî (d. 1344/1435) and Ibn Na¬bi al-Baḥrî al-raqî, vii, 284). The transformation of sadaka in the act of giving is depicted in a tradition in which sadaka, personified, addresses its giver: “I was little and you made me great, I was your enemy and you made me your friend, I was guarded and you made you my guard.” On the other hand, the role of sadaka in the redistribution of wealth has tended to be neglected in the growing literature by modern Muslims on Islamic economics, which has understand¬edly focused on zakât (but cf. A. Qureshi, The economic and social system of Islam, Lahore 1979, 91-7).

The Kurânic charge believers not to undo their charitable gifts with “obligation” (man) and “in¬sult” (adhd). “Kind speech and forgiveness,” it teaches, “are better than sadaka followed by insult” (II. 263-4). The hadith, according to the legal school, as having conferred a benefit on the taker, an attitude than can be exhibited in thought, word or conduct or to demean the taker in any fashion. Man is deemed to be a grave sin (kabita), although there is disagree¬ment as to whether it entirely destroys the reward of the sadaka or merely diminishes it (on the Mu’tazili teaching of the cancellation of good deeds by bad (ibâdât), see M. J. McDermott, The theology of Shukri al-Mu’îdî, Beirut 1978, 258-62). “Obligation” and “in¬sult” can be avoided by giving one’s sadaka in secret. The Kurânic recommendation of “kind speech” is respected by the use of stereotyped replies in turning down the requests of beggars (see e.g. M. Piamenta, The Muslim conception of God and human welfare as reflected in everyday Arabic speech, Leiden 1983, 65-6; C.A. Nallino, L’Arabo parlato in Egitto, Milan 1939, rep¬ublished 1978, 139-40). In contrast, some Sufis, like the Prophet, are reported to have preferred silence.

5. Sadaka in Sûfism and Sûfi esoterism. The giving and receiving of sadaka have a special place in Sûfism with its encouragement of self-imposed poverty. This had led Sûfis to be distinguished as givers of sadaka and by virtue of their poverty as suitable recipients. There are reports of fabulous sums given away as sadaka by those seeking to elevate their spiritual state (Abû Nasr al-Sarrâjî, Kistâb al-Lumâî, ed. Nicholson, Leiden 1914, 158; Ibn al-Djawzi, Talbis Iblîs, ed. al-Munîr, Cairo, 170). Such Sûfis could claim the Prophet and Abû Bakr as their models. In the light of the prophetic tradition that the “upper hand [of the giver] is superior to the lower hand [of the recipient]”, pious givers of sadaka, unwilling to assume an attitude of superiority, resorted to such devices as putting their hand below that of the poor person (Iblîs, i, 286) or throwing the gift on the ground (al-Kâshâyîrî, al-Risâla, Cairo, 114).

Sûfis differed in their attitudes toward the accept¬ance of sadaka. Some, not wishing to compete with the rest of the poor (being themselves spiritually wealthy) and to avoid being indebted to anyone other than God, studiously refrained from accepting sadaka. But Ibn Kutayba (d. 276/889) already criticizes a Sûf interpretation that the upper hand in the pro¬thetic tradition refers to the recipient (Talbis Iblîs, 179). In accepting sadaka the poor Sûfis were actually conferring a benefit on the giver (al-Hûgîwîrî, Kâﬁ’ al-mahdîâb, tr. Nicholson, Leiden 1914, 316-17 (reject¬ing the interpretation of the literalist abî-i hâshw; cf. Lev. Rabbi 34:8), and the Kurânic reference to God accepting sadakât (IX, 104) and the tradition that the All-Merciful accepts sadaka in His right hand encour¬aged the view that the actual giver of sadaka was God (Kâﬁ’ al-mahdîâb, 316-317; Iblîs, i, 285; anon., K. Abû al-mulâkî fi hayân hâkîk al-tasawwuf, ed. Radîk, Beirut 1983, 95-103), a view said to have been current among the wealthy Sûfis in justification of their abusive amassing of fortunes from alms (Talbis Iblîs, 179). Al-Djûnaydî (d. 298/910 [q.v.]), who was among those who regarded it as better to take sadaka than zakât (Iblîs, i, 302), strongly approved the practice of preferring the poor Sûfis as recipients. The humiliation of begging was, in addition, imposed by some Sûfî masters on their novices as a form of spiritual discipline.

The influential Andalusian Sûfî Ibn ʿArabi (d. 638/1240) offered novel interpretations, at once paradoxical and harmonising, of sadaka. The superiority of voluntary alms to the obligatory zakât is expounded on the basis of a metaphysical analysis of obligation (Futûhât, i, 590-1), but from another point of view the superiority of zakât is upheld (ibid., i, 587). The “upper” and “lower” hands of the tradition are said to be the same but, to the Sûfis, one hand is superior. The high point of the influence of sadaka upon Sûfî thought probably came with his predecessor Abu ʿl-ʿAbbas al-Sabtî (d. 601/1205), whose entire teaching revolved around sadaka, the other institutions of Islam and even the nature of ex¬istence being interpreted in its light (al-Tadîlî, Abî Aibi ʿl-ʿAbbas al-Sabtî, with his al-Tâshâwûf ilâ rījâl al-tasawwuf, Rabat 1404/1984, 453-4; C. Addas, The quest for the red sulphur, Cambridge 1993, 176-7).

The Shî’î tradition of esoteric interpretation (ta’wîl) did not ignore sadaka. The giving of sadaka is taken as representative of the various forms of assistance that could be offered to the Imam of the Twelve Shî’îs and his followers. The givers of sadaka mentioned in the Kurânic tradition, the “hands” of Islam and even the nature of ex¬istence being interpreted in its light (al-Tadîlî, Abî Aibi ʿl-ʿAbbas al-Sabtî, with his al-Tâshâwûf ilâ rījâl al-tasawwuf, Rabat 1404/1984, 453-4; C. Addas, The quest for the red sulphur, Cambridge 1993, 176-7).

SADAKA — AL-SADAT

Societas, V/2 (1975), 105-115 (charitable institutions). (T.H. WEIR-[A. ZYSOW])

SADAKA, Banū, a name sometimes given in the medieval Arabic sources to the princes of the Mazyadids or Banū Mazyad [q.v.] in central Īrāk. The name derives from the most famous member of the line, Sādakā (479/1086-1108 [q.v.]).

Bibliography: See that to Mazyad, Banū.

SADAKA, B. Mansūr b. Dubays b. 4Alī b. Mazyad, Sayf al-Dawla Abu 'l-Ḥasan al-Asadī, ruler of al-Hilla of the Arab line of Mazyadids [see Mazyad, Banū]. After the death of his father in 479/1086-7, Sādakā was recognised by the Saljuq sultan Malik Shāh as lord of the territory on the left bank of the Tigris. During the fighting between the sultan Berk-ya'rūk and his brother Muhammad, Sādakā was at first on the side of the former, but when Berk-ya'rūk's vizier, al-Ḥāzz Abu 'l-Ḥāsān al-Dihlānī, demanded a large sum of money from him in 494/1100-1 and finally threatened him with war, Sādakā abandoned Berk-ya'rūk and had the khutba read in the name of Muhammad. The sultan then tried to win him back by peaceful means; but Sādakā demanded that the vizier should be handed over to him, and as Berk-ya'rūk could not grant this, the negotiations fell through. Instead of agreeing with Berk-ya'rūk, Sādakā drove the sultan's governor out of Kufrūm and himself occupied the town. In the following year al-Hilla [q.v.] was founded; previously, the Banū Mazyad had lived in tents.

When Ḥumūḡṭekhtīn al-Kaysārī by Berk-ya'rūk's orders appeared in Baghdaḏ in the middle of Rabi' I 496/end of December 1102, Ḥīḏāzī b. Aṛūḳ, Muhammad's governor there, made an alliance with Sādakā. In the meanwhile, the caliph al-Muẓarrīh had Berk-ya'rūk again proclaimed sultan; nevertheless, Sādakā still declined to acknowledge his suzerainty. Soon afterwards Berk-ya'rūk's name was again dropped from the khutba and the īmāṃs confined themselves for the time being to praying for the caliph only without mentioning by name either of the two contending sultans. But the war continued; by Rabi' 11 496/January 1103, Ḥumūḡṭekhtīn had to evacuate Baghdaḏ and, as he was unable to hold out, Wāsīṭ, his governor, was again recognised as sultan in both cities. Sādakā then extended his power over a great part of the Īrāk; in the same year, he took the town of Hit [q.v.] on the Euphrates, which Berk-ya'rūk had granted as a fief to one of his followers, and appointed his cousin Ḥabībī b. Ḵāmil governor of it. In Ḡawwāl 497/June-July 1104, Wāsīṭ met the same fate and here Muḥābdīḥīb al-Dawla al-Sādī b. Abī Ḥabībī was appointed governor. Next came the turn of Baṣrā, which had fallen into the hands of the Saljuq Ismā'īl b. Aṛslāndīg during the war between Berk-ya'rūk and his brothers. It was not till after the death of Berk-ya'rūk that Sultan Muhammad was able to think of dislodging Ismā'īl from it and in 499/1105-6 he asked Sādakā to fight him. In Djuμādā 1 of the same year/January-February 1106, Sādakā took the field against Ismā'īl, who was soon forced to surrender, whereupon Sādakā appointed one of his grandfathers, Abū Ḥālīmānī b. Māfīdī al-Duṣṭūbī of the Banū Ṭabībīnūh to govern Baṣrā. But as the latter was very soon surprised and captured by Bedouin bandits, the sultan himself appointed another governor in his place. In Ṣafar 500/October 1106, Kaykūbād b. Ḥaẓārap al-Dāylāmī, lord of Takrit [q.v.], had also to yield. After the death of Berk-ya'rūk, Muhammad had sent the amīr ʿAṣḵurūk al-Bursūqī [q.v.] to Takrit to occupy the town. As Kaykūbād would not obey, he was besieged. After several months had passed, he saw the impossibility of holding out any longer, and sent to Sādakā and surrendered the city to him. Wārūm b. Abī Fīrās was then appointed governor of Takrit. But Muhammad could not always look on quietly while Sādakā's power kept growing, especially as the latter never had any scruples about affording shelter to anyone who had fallen into disgrace with the sultan. When Abū Dulaf Ṣurkībād b. Kaykūhraw, lord of Sāwa [q.v.], took refuge with him and Sādakā refused to hand him over, the sultan sent to Sādakā and the sultan only resulted in an open breach between suzerain and vassal. The sultan set out in person from Baghdaḏ with a large army, and in the fierce battle which was fought (according to the most usual statement) in the latter half of Ṣadḏab 501/beginning of March 1108, Sādakā was killed at the age of fifty-nine. Like his ancestors, he bore the title Malik al-ʿArab; the highest praise is given him by Arab poets and historians for his virtues, notably his liberality and readiness to give assistance, and he is rightly described by A. Mūller (Der Islam im Morgen- und Abendland, ii, 122) as "a true Bedouin, brave, stubborn and wily.

(K.V. ZETTERSTÉEN)

AL-SA'DANI, "the two lucky (planets)", a technical term in astrology referring to the two beneficent planets Jupiter and Venus. On the opposite site, Saturn and Mars are al-naḳṣ, "the two unlucky, maleficent (planets)"; cf. al-Khāṣārizmī, Maḥfīẓ al-ʿulām, ed. van Vloten, 228-9. In more detail, al-Būrūnī, K. al-Taqīm li-waṣāṭaṣ al-ṭaṣawwūr al-ṭanqīfī al-ʿulāmī, ed. and tr. R.R. Wright, London 1934, §§ 381-2, in the explanation of the "natures" (ṭaṣawwūr) of the planets, describes Saturn as al-nahṣ al-akbar, and Mars as al-naḳṣ al-asghar, i.e. the greater and the lesser evil, and, correspondingly, Jupiter as al-ṣa'd al-akbar and Venus as al-ṣa'd al-asghar, i.e. the greater and the lesser luck. This division goes back to Poleney, Tiṁābiysis, i, 5 (on the ṣa'd), beneficent, and naḳṣ, maleficent, planets, according to the teachings of "the ancients", i.e. the planets, and is based on the mixture of the four humours—warm, cool, dry, humid—in each planet. Mercury, according to Poleney, is ambivalent; when associated with another planet, it reinforces its power, either beneficent or maleficent; al-Būrūnī (loc. cit.) adds that Mercury, when standing alone, is inclined to beneficence. Cf. also A. Bouché-Leclerc, L'astrologie grecque, Paris 1899, 101; J. Ruska, ʿAl-aṣ-Dān in EI.

(P. KUNTZSCH)

AL-SADAT, ANWAR, Egyptian statesman (1918-81). He was born into a poor family in the Egyptian village of Mit Abū Kūm, 60 km/40 miles north of Cairo. His father was a civil servant who had to support his wife and thirteen children. Sādāt spent his first seven years in his village, where he was left in the
care of his grandmother while his parents were working in Suddan (his mother was Sudanese). He went to the village school and thoroughly enjoyed his life amongst the local peasants. He later claimed that his early experiences gave him a deep understanding of the Egyptian peasant's mentality and of his deep roots in the countryside. He considered the falsād to be the foundation of society and the guardian of its traditions. When in power, he enjoyed return visits to his village in order to re-establish contact with ordinary people.

In 1925 he moved with his father to Cairo, where he went to secondary school in 1930. In 1936 he just managed to pass his General Certificate of Education. Perhaps more importantly, he was drawn into the political atmosphere of street demonstrations against the British presence and of calls for evacuation and independence. This was the background of a number of young Egyptians at the time, among them ʿAbd al-Nāṣir [q.v. in Suppl.], who were later to play an active role in politics. Like ʿAbd al-Nāṣir, al-Sādāt entered the Military Academy, newly-open to sons of lower class families and previously the preserve of the upper classes.

He graduated as an army officer in 1938 and was sent with ʿAbd al-Nāṣir to Mankāšābād in Upper Egypt. The two of them, with one or two others, formed a group of disgruntled soldiers who were eventually to form the core of the Free Officers. Al-Sādāt was transferred to Cairo, where the circle of officers dedicated to the overthrow of the regime gradually expanded. ʿAbd al-Nāṣir was the real leader of the group, although al-Sādāt in his memoirs tended to exaggerate the centrality of his own role. In his Revolt on the Nile (London 1957) he glorified ʿAbd al-Nāṣir as the leader of the movement. In his autobiography In search of identity (London 1978), he put himself at the centre and was much more critical of ʿAbd al-Nāṣir. Unbiased accounts would place al-Sādāt very much in the secondary role.

During the second World War, al-Sādāt showed distinct pro-Nazi sympathies in the belief that Germany would be victorious and give Egypt her independence. He was arrested by the British for dubious activities, tried by an Anglo-Egyptian court and imprisoned until October 1944. He escaped from jail and was not to wait until the end of the war.

After the war, he did not go back to the army but was active on the fringes of political violence and terrorism. He admitted to being implicated in the assassination of Amīn ʿUṭtmān, the former Minister of Finance, in January 1946. He was re-arrested and tried only in 1948, when he was released without conviction. He then drifted into business and journalism without any great success. Surprisingly, he did not take part, with ʿAbd al-Nāṣir and his comrades, in the 1948 war in Palestine which had such a deep effect on their thinking about the future of Egypt. However, al-Sādāt's lack of success in business led him to rejoin the army as a captain in 1950, when he met again ʿAbd al-Nāṣir and ʿAbd al-Ḥakīm ʿAmīr. They joined together in planning the 1952 coup, although ʿAbd al-Nāṣir did not quite trust al-Sādāt, who had suspect links with al-Ḥādīṣīn al-Muḥāsin [q.v.] and even with the palace. He was thus not given a leading role in the coup. On 21 July 1952 he was chosen to read a prepared statement on the radio announcing the coup and the army takeover.

From then on until ʿAbd al-Nāṣir's death, al-Sādāt was a faithful son of the revolution; some would say, a trimmer. He certainly worked loyally in ʿAbd al-Nāṣir's shadow and was at times mocked for his assiduous, self-effacing sycophancy. Once again, al-Sādāt provided two versions of his life with ʿAbd al-Nāṣir. In My son, this is your uncle Gamal (Cairo n.d.), published during ʿAbd al-Nāṣir's lifetime, he provided an extravagantly eulogistic picture of his master who could do no wrong and who was the only person who could lead Egypt to a bright future. In his later autobiography, he blamed ʿAbd al-Nāṣir for his dictatorial attitude, his unwillingness to heed advice and for having led Egypt into numerous disastrous situations, the Suez crisis, the Yemen war and the 1967 Israeli defeat.

Al-Sādāt held a number of posts under ʿAbd al-Nāṣir none of any great significance. He edited the newspaper al-Djumhuriyya, where he was able to express his own rather extravagant views. In 1962 ʿAbd al-Nāṣir appointed him Secretary-General of the Constituent Assembly with the task of drafting the National Charter. Al-Sādāt was later to claim that this document was merely a front to show that, ostensibly, ʿAbd al-Nāṣir was interested in freedoms. Al-Sādāt's most important role was to lead Egypt into one of the greatest setbacks. In 1962 ʿAbd al-Nāṣir sent him to Yemen to advise on whether Egypt should intervene in the struggle between Royalists and Republicans. Al-Sādāt wrongly reported that the Royalists could soon be defeated and that Egypt should send troops to support the Republicans. ʿAbd al-Nāṣir allowed himself to be dragged into a quagmire of fighting until 1967. Al-Sādāt was discredited and reeled into the background for a time.

ʿAbd al-Nāṣir's prestige fell to its lowest ebb with the defeat in 1967 in the Six-Day War against Israel. He stayed on as President, tired and ill, and in 1969 he appointed al-Sādāt his deputy in an ostensible attempt to share the responsibilities of office. To what al-Sādāt owed this elevation, other than his total loyalty to ʿAbd al-Nāṣir, is not clear. However, when ʿAbd al-Nāṣir died in September 1970, al-Sādāt was there, ready to take over.

Emerging from the shadows, he quickly showed himself to be his own man, with policies radically different from those of his predecessor. He especially chafed under three of ʿAbd al-Nāṣir's bequests—the close ties with the Soviet Union, socialism and the Israeli occupation of the Sinai. He immediately made moves to lessen the burdens of socialism with his "revolution of rectification" and by opening the economy to Western investment, the falsād. His relationship with the Soviets was uneasy from the first, and he surprised the world when he ordered all Soviet military experts to leave the country in July 1972. He had, however, to replace Russian aid, and, against all previous wisdom, he turned to the West and, in particular, to the Americans. He became popular in the West, the moderate after ʿAbd al-Nāṣir, who seemed to forgive and to forget all his past criticism of Britain and the United States.

He then turned to the real enemy, Israel, and after months of careful military planning on the morning of 6 October 1973 he launched an attack across the Suez Canal against Israeli fortifications. The Israelis were taken completely by surprise, but after fierce battles in which they were able to cross the canal and surround the Egyptian army. The battle ended in a stalemate, but al-Sādāt had shown that Egyptians could plan and fight successfully and it gave him a new basis on which to negotiate. It gave him popularity in Egypt, and he was able to bring the Americans into the search for peace. Henry Kissinger helped to bring about a disengagement; the Israelis moved back across the
Canal, which was reopened for the first time since 1967.

At home, al-Sadat was facing severe economic problems. He wanted peace with Israel in order to pursue economic development in an atmosphere of stability and security which would encourage foreign investment. A big drain on the budget were the large subsidies on basic foodstuffs and other items. To try to obtain loans from the World Bank (which disliked subsidies), al-Sadat agreed to withdraw subsidies from several items. The result was immediate and shocking. In January 1977 rioting broke out all over the country. There were many deaths and the army had to be brought in to restore order. Al-Sadat was stunn-
ed. He restored the subsidies and looked around for scapegoats. He blamed the Left and the Marxists, and arrested hundreds of them. It was the beginning of a gradual decline in his popularity. He overreacted as he felt threatened, and introduced stricter censorship and declared a state of emergency.

He had to look for an unwillingness of regaining some of his popularity. He felt the peace process was stalled again, and stunned the world by making a dramatic visit to Jerusalem in November 1977 to present his case to the enemy. In a speech to the Knesset he made clear his conditions for a stable peace. The Israelis made no commitments immediately, and it needed the intervention of President Jimmy Carter to bring the two sides closer together during meetings at Camp David in March 1979. A peace treaty was signed be-

tween Egypt and Israel by which Israel agreed to withdraw from Sinai, diplomatic and trade relations were to be established and Israeli ships were to be al-

lowed to use the Suez Canal.

The rest of the Arab world believed that al-Sadat had betrayed the Palestinian cause, since the Israeli Prime-Minister, Menachem Begin, had made no con-

cessions at all to the Palestinians. Egypt was expelled from the Arab League and opposition to the treaty was widespread in Egypt itself. The more extreme Muslim religious groups were very bitter in their op-

position. They also believed that al-Sadat had sold the country to the West, and to the United States in par-

ticular. They preached revenge against the traitor, and one group, Djahd, put its message into practice when they assassinated al-Sadat in October 1981 during a parade to celebrate the October crossing of the Canal.

Al-Sadat was in many ways a leader who had the courage to bring in radical new policies, but he al-

lowed himself to be carried away with his popularity in the West. At the same time he was viewed with deepening indifference or hostility by his own people and hated by other Arabs. Corruption spread around him, while he retreated into an isolation of utter self-

confidence and an unwillingness to tolerate any criticism or opposition. His killers claimed that they had complete justification in ridding Egypt of a corrup-
tyran.

SADD AL-DHARATI (A.), a term of Islamic law, literally, closing of the means that can lead to evil.

The concept is based on the Sharî’a’s tendency to prevent evil (dar’ al-maslahah) and a legal maxim states that it has preference over achieving good (djalb al-maslahah). Sadd al-dhardal is viewed as a continuation of maslahat musalaha rather than an independent source. Despite this, sadd al-dhardal is often included in the books of law as an alternative legal source. Said to be based on the Kur’an and sunna, it represents a mechanism devised by Mâlik jurists to resolve loopholes in the law. The practical function of sadd al-
dhardal is to prevent improper usage of a legal means to achieve an illegal end. However, unlike maslahat and ‘urf, sadd al-dhardal is probably the only source of Islamic law that is manipulated in a negative form. Some scholars, including Muhammad Abû Zahra, have at-
tempted to study it from a positive angle by focusing on dharrat al alone. This, however, would appear to deprive the source of an essential dimension in favour of a preconceived proviso to prevent a prohibited ac-

tion. As Ibn al-Kâyyam states in his Fâmâm, ‘when ob-
jectives cannot be reached without certain means, these means become a part of these objectives and are treated as the objectives themselves’. Sadd al-dhardal does not target what is good, but what is evil or leads to evil. Muslim lawyers use the ‘likelihood’ of an evil result to prohibit the action that could lead to it. They differentiate between three frequencies, rare, frequent and imminent, although imminent is only labelled as such by assuming the oc-
currence of the result on the basis of circumstance. An example of a rare (sadr) occurrence is planting vines. Although vines could be used to produce alcohol, planting them is not prohibited, since they have many advantages that outweigh the small chance of harm.

Selling the grapes to a person known to make wine would be prohibited. In that case, the chance of a harmful result is kâthîr (frequent) and should be prevented. The third category is based on the inten-
tion of the person rather than the possible outcome. Due to the significance of the intention, the four schools vary in how often they refer to sadd al-dhardal, with the Hanbali and Mâlikî schools referring to it most frequently. This is largely caused by their dif-
ferent methodology in establishing the intention of a person. The Imâm al-Shaﬁ’î did not give a share of the inheritance to a wife divorced during her hus-
band’s last illness. Al-Shaﬁ’î argued that “there is no proof that theurgical and divorced her in order to prevent her inheriting”. The Hanafî school, like the Mâlikî and Hanbali, refers to the circumstances to find the proof. The fact that the man pronounced the divorce during his last illness is an indication that he did so to prevent his wife’s inheriting. This unjust intention is thus blocked by giving her her share of the inheritance in spite of her divorce.

AL-SA’DI, ʿABD AL-RAHMÂN b. ʿABD ALLAH b. ʿImrân, chronicle of Timbuktu, b. 1004/28 May 1594, d. after 1065/1655-56. His father’s male line was traced to the Banû Sa’d, though the family had been settled in Timbuktu for several generations. Nothing is known of his youth, but in 1036/1626-7 he became imâm of the Sankore mosque of BenenearJenne. In mid-life he was employed by the administration of the Bâshâlik of Timbuktu (an
institution which owed its origins to the occupation of the area by the forces of the Sa‘dian sultan al-Manṣūr al-Djāḥabī (999/1591), especially in the 16th century. A Mara dynasty emerged in the Inland Niger Delta. In 1056/1646 he became chief secretary to the Bāshālīk in Timbuktu.

His chief claim to fame is his history of Timbuktu and the Middle Niger, simply entitled Ta’rikh al-Suḍūn. This work, in 35 chapters, is mainly concerned with the history of the Songhay empire from the mid-9th to the mid-16th century and the history of the Bāshālīk of Timbuktu from that date down to 1655. The latter period occupies about half of the work. The early chapters are devoted to brief histories of earlier Songhay dynasties, of imperial Mali and of the Tuareg, and to biographies of the scholars and saints of both Timbuktu and Jenne. His acknowledged sources are few. For the 11th/17th century, he relies mainly on personal knowledge, evidence supported by notes (there are several chapters of obituaries and noteworthy events), and on records of the Bāshālīk, for earlier periods he rarely mentions his sources, other than “trustworthy persons” or “one of my colleagues”. He does, however, cite Ibn Bāṭūṭa, the anonymous al-Hulal al-mawshiyya and, for some of the biographies of Timbuktu scholars, the biographical dictionary of Ahmad Bābā al-Timbukti (d. 1036/1627 [q.v.]), Jārīf al-muḥīṭāt (a supplement to Ibn Faras al-Dīdāb al-majdīyya). The Ta’rikh al-Suḍūn is a prime source for the history of the Middle Niger from the mid-15th to the mid-17th century, our only other chronicle being the Ta`rikh al-fatāṭākh of Ibn al-Mukhtar (based on Mahmūd Ka‘tī) which effectively stops at 1001/1593.

An annotated English translation is being prepared by the writer of this article. (J.O. HUNWICK)

SA‘DĪ, `ABU ‘ABBĀS ALLĀH MUṢHARRĪF AL-DIN b. Muṣliḥ Sa‘dī, known as Shaykh Sa‘dī, poet and prose writer of the 7th/13th century, is one of the most renowned authors of Persia.

He was born in Shīrāz early in the 7th/13th century, probably between 610-15/1213-19, and died in the same city on 27 Dhū ‘l-Hijjah 691/9 December 1292. More perhaps than any other Persian writer who preceeded him, or of his own period, Sa‘dī refers to himself constantly and in highly specific terms throughout the course of his writings; from shortly after his death until the present century elaborate biographies of the poet have been inferred from these references (the fullest and best known being that of Ḥusayn al-Dīmānī, 1791). Most biographies relating to the period and a greater awareness of the sophistication of medieval authors’ constructed authorial persona has called many of these details in doubt. The virtual certainty that some are poetic inventions (for example, his capture by Europeans and subsequent deliverance by ransom (Gulisān, Book 2, anecdote 20), his unmasking of a fraudulent Brahmin at the Hindu temple in Somnāth (Būsān, Book 8, anecdote 8), his claim to have seen someone ‘in the west’ be borne across water on his prayer-mat (Būsān, Book 3, anecdote 15)), has caused the authenticity of the remainder to become questionable, with the result that few facts can be deduced with certainty about the poet’s life. We are left with the paradoxical situation of knowing very little about an author whose life and personality are considered to be familiar to all students of Persian literature. Among the stories which Sa‘dī recounts about himself which may or may not be true are that he was orphaned at an early age, that he studied and subsequently taught at the Nizāmiyya college in Baghdād, that al-Suhrawardi and Ibn al-Djāwzi were his teachers, that he was married at least twice (once in the Yemen, once to the daughter of the individual who, he claimed, ransomed him from the Europeans), and that he travelled extensively throughout the dār al-Islām and beyond. His work reveals a mastery of traditional Islamic education and a general intellectual sophistication that could well have been gained in an institution such as the Baghdādī Nizāmiyya. One claim can be accepted with little doubt; his writings imply wide knowledge of the world beyond Persia, and extensive travels clearly played a part in his life (he frequently admonishes his audience to treat travellers well), though whether he ever ventured into either Hindu areas in the East or Christian areas in the West is more problematic. With characteristic humour, Sa‘dī cautions his audience not to believe travellers’ tales (Gulisān, Book 1, anecdote 32) since they are often exaggerations or outright lies, and as his most insistently presented persona in his works is that of a traveller, this should be taken as a warning when considering the truth of many of his statements.

As to his being orphaned at an early age, it is true that Sa‘dī does show strong sympathy for orphans in his works. As with the admonitions to treat travellers benevolently, the sentiment could well have been traditional Islamic, rather than personal, causes, but Sa‘dī’s concern does seem unusually strong and is perhaps drawn from personal experience. The anecdotes about his marriages are both incidental to his making moral points; both are placed in relatively distant lands (Syria, the Yemen)—it is noticeable that Sa‘dī’s stories seem to become less reliable as their provenance gets further from Shīrāz and are probably to be adjudged as highly subjective. The anecdotes would seem to have been for young males (Southgate 1984) (no doubt poetic convention played a role, but here too his concern is so insistently presented as to make it seem at least partly personal) and this too perhaps makes the stories of his two marriages slightly less probable, though marriage for reasons that had nothing to do with sexual preference was of course expected of adult Muslims. The reference to al-Suhrawardi does not occur in the earliest mss. of the Būsān, besides which Sa‘dī was, as G. M. Wickens has remarked (Morals pointed and tales adorned, Leiden 1974, 267) “a great name-dropper”, which makes the statement dubious. Some authors, however, e.g. Zarrīnkūh (1988, 175) consider that the reference may have been a later addition to the Būsān by Sa‘dī himself, as he lived almost forty years after the poem was first compiled, and subsequently caught as an authentic incident in the poet’s life. His claim to have been a pupil of the theologian Ibn al-Djāwzi (Gulisān, Book 1, anecdote 20) has been doubted on the compelling grounds that Ibn al-Djāwzi was dead before Sa‘dī’s birth, but the statement is more credible if we accept that it was al-Djāwzi’s less illustrious grandson who was Sa‘dī’s teacher (Ṣafā, iii, 1987, 594). Sa‘dī was also said to have met his great contemporary the Sūfī poet Mawlānā Djalāl al-Din Rūmī [q.v.], and a
passage in a perhaps apocryphal treatise (risāla) attributed to Sa'dī suggests that he met the historian Djuwayni (author of the Ta'rikh-i Djuwayni) and Djuwayni's brother, chief of the Il-Khanid civil service in Persia. There seems no particular reason to credit these anecdotes (stories of meetings between well known contemporaries being a common invention); the meeting with the Djuwayni brothers is the more likely as Sa'dī wrote panegyrics to both of them, but this need not imply actual contact so much as a wish for patronage.

It is in examining the identity of Sa'dī's patrons and dedicatees that the most reliable information about his life and the world in which he lived can be gained. At least fifteen historical personages were either the subject of panegyrics by Sa'dī or had works by him dedicated to them. His first datable work, completed after his youthful travels and his return to Shirāz, was the Bustān (655/1257) which he dedicated to the local Salghurid atabeg Abū Bakr b. Sa'd b. Zangi, the ūlā, as well as panegyric. Later, was dedicated to this ruler's son, Sa'd b. Abū Bakr b. Sa'd [see Salghurids]. The poet's ta'kallalus or pen-name of Sa'dī is taken either from the latter, or from his grandfather Sa'd b. Zangi. (Both derivations present problems: the grandfather died in 623/1226 when Sa'dī in all probability was still an adolescent; the grandson ruled for only twelve days. The adoption of the ta'kallalus may have been made in honour of the grandson while he was still heir presumptive.) Abū Bakr b. Sa'd ruled as atabeg for over thirty years, and managed to persuade the Mongols, who were busy devastating the north of Persia and 'Irāk, to leave him and Shirāz in relative peace. Though his son ruled for a mere twelve days (one of Sa'dī's most affecting public poems is an elegy on his death in the strophic form known as tānīz-bānd), the succession stayed within the same ruling house until 662/1264, and Sa'dī continued to write panegyrics to its members. In a sense, the control of Shirāz may be said to have stayed for a little longer under the control of the house of Sa'd, as a granddaughter of Abū Bakr b. Sa'd married Mengūtemūr, a son of the Mongol conqueror Hūlegū, and she assumed the governorship, at least nominally, of Fārs. The very complex and dangerous political allegiances of the time are reflected in the list of dedicatees of Sa'dī's works. On various Mongol appointees to the government of Fārs, and to Abīsh Khātūn, granddaughter of Abū Bakr b. Sa'd and wife of Hūlegū's son Mengūtemūr. As Abīsh Khātūn and Sa'dī both certainly knew, survival at this period depended on accommodation, and Sa'dī's multiple allegiances, as evidenced by his panegyrics, are but the literary equivalent to the political manoeuvrings of his masters. Sa'dī has received some blame in the history of Persian poetry for his frequent change of allegiances; he might be in power in Fārs, but the practice was expected and such expediency was both prudent and commonplace (the Djuwayni brothers, and their brilliant civil, scholarly and literary work done under Mongol patronage, are another case in point). Further, some of his public poems (e.g. his elegy on the death of the last Abbāsīd caliph) cannot have been written with the hope of gain and could have been construed as politically risky. Sa'dī himself claimed it was indifference that drove him to write panegyrics, and it may also be seen as a natural consequence of the political circumstances of his day. The epithet "Machiavellian" which has sometimes been applied to Sa'dī as a reproach is in many ways a valid characterisation, in that both Machiavelli and Sa'dī, writing in turbulent and potentially disastrous political circumstances, strove to provide advice that would ensure their audience's successful negotiation of an exceptionally risky and faction-ridden world. The crucial difference is that, whereas Machiavelli writes directly to and for a central actor in such political upheavals, Sa'dī's intended audience, despite his dedication of both works to powerful if provincial

...
rulers, would seem to be much more those on the sidelines of major events, hoping to survive by luck and their wits. Further, in Sa'di's case, to this 'Machiavellian' preoccupation with survival must be added a strong sympathy for the vulnerable and weak, especially if they are in any way ill-treated (it is very noticeable for example how often children figure in Sa'di's anecdotes, more perhaps than in the writings of any comparable figure in Persian literature), and a constantly reiterated plea for tolerance, perhaps the result of the poet's travels (but see below), the most famous example of which is the poem on Benefitting from the Evil of an Enemy. Sa'di's work is not, therefore, an attempt at a unified vision of the two works, and their immense popularity may perhaps be traced largely to this combination of goals. Although Sa'di's extreme facility in the writing of metrical aphorisms has led to many of his lines passing into the common stock of proverbial moral exhortation, the cumulative effect of the anecdotes in both the Bustan and the Gulistan is not that of an inflexible, internally coherent and absolute ethical system. Occasionally, the moral with which a story closes seems to have little to do with the story itself; anecdotes that offer contradictory moral advice can appear in close proximity (e.g. anecdote 17 of Book 1 of the Bustan recommends honesty when dealing with oppressive rulers; anecdote 19 of the same book recommends dissembling prudence when dealing with oppressive rulers) and, similarly, contradictory moral aphorisms are not uncommon (e.g. anecdote 20 of Book 2 of the Bustan ends with the advice to return evil with good; anecdote 26 of the same book ends with the statement that oppression of an oppressor is appropriate justice). The dilemma of whether to treat well enemies who may later have it in their power to harm you is one that Sa'di very frequently refers to, and anecdotes can be found supportive of both: on the one hand, the wisdom of pre-emptive draconian punishment and, on the other, the wisdom of insinuating subterfuges. That this relativism is at least to some extent deliberate is suggested by the books' structure; in the seventh books of both the Bustan and the Gulistan, there are long passages that imply the impossibility of absolute standards when dealing with fallible humanity. In the Bustan, the passage in question is that on calumny (towards the end of Book 7), in which it is stated, with typical humorous exasperation on Sa'di's part, that no course of action can meet with universal approval. Relativism is even more apparent in the last very lengthy anecdote of Book 7 of the Gulistan; here Sa'di presents a debate between himself and a dastagh on the relative merits of poverty and wealth; the debate is inconclusive and the two take their question to a religious judge, who admonishes each of them to take account of the truth of the other's arguments and to be reconciled to one another. This conclusion, that moral conclusions are elusive (and that mutual respect and tolerance are preferable to disruptive ethical solutions) can be gleaned from both the Gulistan and Bustan, if the anecdotes are taken as balancing and occasionally contradicting each other rather than singly.

Sa'di's innovations, or refinements and organis-
so from pure human sympathy, from a sense of the validity of life at any social level in and for itself. On a par with this is the relative simplification, and thus greater accessibility, that makes Sa'di the most read and appreciated among a wide variety of audiences, of his language when we compare it with that of many of the court poets who preceeded him. Such wide sympathies have led to Sa'di being seen as a kind of universal deist (Emerson) or a “humanist” by some western commentators (Yohanan 1987), but there are clear limits to Sa'di’s sympathies and these should not be overlooked. They are defined with few exceptions by the boundaries of Islam, and are operative within the strictures, hardly beyond it. His writings contain disparaging references to Jews (especially), to Christians and to Hindus (the anecdote concerning the Hindu temple at Somnath (Bustân, Book 8) is such a farrago of misinformation as to make one suspect that it is a deliberate joke, but even if this is so, the joke is hardly one that will appeal now). A notable exception to this tendency is the anecdote (Bustân, Book 2, anecdote 1) that has Abraham reproved by God for acting incorrectly with a poor horseman. This passage, however, be seen as an example of a general unwilliness, discernible in the works of many mediaeval Persian authors, to disparage the customs and civilisation of pre-Islamic Persia, rather than as an indiscriminate tolerance of non-Muslims). Even within Islam, Sa’di’s sympathies clearly stopped short of being extended to blacks, and certain of his remarks about women have been seen by some as verging on misogyny (the penultimate story of Book 1 of the Gultisân is evidence of an at least temporary violent contempt for both blacks and women). Much of this must undoubtedly be attributed to the time in which Sa’di was writing, in that he was merely repeating the common prejudices of his age and culture (and part of the shock registered at such moments in Sa'di is because he seems so sympathetic to the disadvantaged and/or unfahmiliar elsewhere), but there were other Persian writers of his period, and previous periods, who did not indulge in such gratuitously disparaging language to the same extent. Attar and, in general, Rumi are examples. That these poets were exclusively Sufi authors is significant; their sense of the illosoriness of the physical world, and therefore of the irrelevance of its categories for judging people’s true worth, is not shared by Sa'di, whose world-view accords in the variety, hardly beyond it. His writings were consistent on his own fame, recounting stories of how he has heard his works recited as far away as India. Much of this must surely be taken as the deliberate creation of an authorial persona. It is, for example, similar to the persona created by the English mediaeval writer Chaucer, and probably for the same reasons; both poets present themselves as charming raconteurs—wise, attractive, avuncular companions, men with broad sympathies who have seen the world but still basically share the plain man’s “common sense” world-view. This cosmopolitan, compasionate, shrewd persona is to be regarded chiefly as an advertisement for the work. Significant here, too, is Sa’di’s strong sense of humour and his previously-noted warning that travellers are liars; Sa’di’s presentation of himself is a brilliant literary device that he undertook with every sign of relish at his undoubted skill; it is perhaps the greatest of his literary triumphs.

Perhaps in part because of their self-consciously “international” and unprovincial interests, Sa’di’s writings were highly influential as models not only in Persia itself but also in Turkey of the Seldjûks and subsequently in the Ottoman empire. Similarly, in Mughal India, his works quickly achieved great fame, and his ghazâls were imitated by Persian-speaking Indian poets within his own lifetime or shortly afterwards. Generally speaking, in countries that have at different periods looked to Persia as a cultural model, he is thought of as the archetypal Persian author, and his works have been a fundamen tal part of the educational curriculum of those wishing to become acquainted with Persian belle-lettres. His popularity in the Ottoman empire and Mughal India led to his name being known in the West at a relatively early period. French, German and Latin translations of parts of his oeuvre appeared in the mid-7th century, and Gentius brought out an edition of the Gultisân, with a Latin translation, in Amsterdam in 1651. The benevolence of Sa’di’s usual sentiments and his frequent advocacy of irenic tolerance made him particularly attractive to Enlightenment authors, and Voltaire pretended, tongue in cheek, that his country had “four Sa’dies.” He was, through his work, a cultural model, and in England Sir William Jones, was both enthusiastic advocates of Sa’di’s work. In America, Benjamin Franklin borrowed an anecdote from the Bustân (that of Abraham and the Zoroastrian) “on account of the importance of the moral, well worth being made known to all mankind”, and Emerson saw the poet in more or less the same light—i.e. as an Oriental version of a pragmatic Enlightenment deist. By the mid-19th century, Sa’di had been more extensively translated into European languages than any other Persian author, with the possible exception of Hafiz.

2. Studies. Sa’îd Nafisi, Ta’rîfh-i durust-i dar gudâsht-i Sa’dî, in Modjalla-yi Dânishkade-yi...
Since the 8th/14th century, they had lived in the central valley of the Dar'a, at Tagmaddart. In the following century they established themselves in the Sús at Tidsi. The first of the Sa'dis to play a role in the internal politics of Morocco was called Abū ʿAbd Allāh Muhammad b. ʿAbd al-Rahman al-Kā'im bi-amr Allāh. He was a saintly man, a disciple of al-Ḥāmidī, who enjoyed genuine prestige among the neighbouring tribes. In 916/1510 he was appointed war-leader and commander against the Portuguese, formally established at Agadir [q.v.] since 919/1513 (in reality since 1505). In 917/1511, he had named his eldest son ʿAbd al-Arādā governor of the Sús; two years later he appointed him his successor. On his death in 923/1517-18, at Afūghāl in the Hāṣa, two of his sons shared the political power which he had built up: al-Arādā governed to the north of the Atlas, the younger, ʿAbd al-Rahmān al-Ṣāhīkh, in the Sús. These two sharīfs were the real founders of the Sa'dian dynasty, the first Sharifian dynasty to take power in Morocco.

The two principal objectives of these princes were the struggle against the Christians, in this case the Portuguese, and the conquest of northern Morocco, in other words the eviction of the Ṭaṭāṣīds. In 929/1523, Mawlay al-Ḥarrān, entered Tlemcen. It did not stay there long, since a large proportion of the Maroccan troops had to be transferred to the Taṭāṣīds in order to fight against ʿAbd al-Arādā, who had rebelled against his younger brother. In the summer of the same year, when the Sa'dīan garrison, left in the Za'yānīd capital under the command of two of the sons of al-Ṣāhīkh, was attacked by the Pasha of Algiers, it was unable to resist, and in February 1531, the Algerian army took possession of Tlemcen, which remained henceforward under Ottoman control. The Mouloya/Malwiya serving as a frontier between Morocco and the Algerian regency.

However, the Ṭaṭāṣīds had not lost hope of regaining power: an uncle of the prince defeated in 956/1549, Abū Hassūn, who had for some time found refuge in Spain, succeeded with the aid of the Algerians in defeating the Sharīfīs under the walls of Fās, which he entered on 14 Safar 962/7 January 1554. He even allied himself to al-Arādā and to the latter's son, Zaydān, who had succeeded in making themselves masters of the Taṭāṣīd. And if a message addressed by Abū Hassūn to his new ally had not been intercepted by Mawlay ʿAbd al-Rahmān al-Ṣāhīkh—with the result that the defeat of his son Mawlay ʿAbd Allāh was transformed into victory—the Ṭaṭāṣīd would probably have been able to regain the Moroccan throne. But al-Arādā and Zaydān advanced towards the west. Between the two new powers in the Maghrib lay an ancient “kingdom”, Tlemcen, ruled by an enfeebled dynasty, the Banū Zayyān or ʿAbd al-Wādīds [q.v.]: the conquest of Tlemcen seemed a necessity both to the Ottomans and to the Sa'di. On 23 Dhū'l-Qa'da 1557/9 June 1550, a Sharīfī army commanded by one of the sons of Mawlay ʿAbd al-Rahmān, entered Tlemcen. It did not stay there long, since a large proportion of the Moroccan troops had to be transferred to the Taṭāṣīds in order to fight against ʿAbd al-Arādā, who had rebelled against his younger brother. In the summer of the same year, when the Sa'dīan garrison, left in the Za'yānīd capital under the command of two of the sons of al-Ṣāhīkh, was attacked by the Pasha of Algiers, it was unable to resist, and in February 1531, the Algerian army took possession of Tlemcen, which remained henceforward under Ottoman control. The Mouloya/Malwiya serving as a frontier between Morocco and the Algerian regency.

Three years later, on 29 Dhū 'l-Ka'da 964/23 October 1557, Mawlay ʿAbd al-Rahmān was assassinated by a member of his Turkish bodyguard, ʿAbd al-Ṣāḥīb b. Kyāhīya. Shāhīzād, before this ʿAbd al-Arādā, imprisoned in Marrākūš, had been executed by the governor of the town, along with seven of his sons and grandsons. The senior branch of the Sa'dīs was thus eliminated and the succession of the sharīf Mawlay ʿAbd al-Rahmān fell to his son, Mawlay ʿAbd Allāh al-Ṣāhīb b'il-lāl. At the start of his reign, which was marked by an anti-Turkish policy, three of his
brothers advanced as far as Algiers, and two of them even reached Istanbul. In 965/1558, the new sovereign succeeded in defeating the Turko-Ottomans of Algiers near Wadi 'l-Laban and invading the Regency. He attempted, without success, to forge an alliance with the king of Navarre, Antoine de Bourbon. On the other hand, he succeeded in establishing peaceful relations with Spain, which earned him the hostility of the marabouts whose influence was increasing throughout the Maghrib. He also sought to deprive the Portuguese of Mazagan, their last fortress, but failed. Mawlay 'Abd Allah died in 981/1574, and his son Mawlay Ahmad, who became governor of Fas, was recognised as sovereign without hindrance. But another Sa'did prince was a pretender to the Moroccan throne, Mawlay 'Abd al-Malik, one of the brothers of the late sharif, who from 1557 onward was consipping with the Ottoman Sultan to obtain military and financial support. Two years after the death of his brother, Mawlay 'Abd al-Malik, with a Turko-Algerian force, supplemented by Arab contingents, defeated his nephew and entered Fas on 10 Dhu 'l-Hijjah 983/11 March 1576. As for Mawlay Mahammad, he reached Marrakush, and then, following a further defeat at the hands of his uncle, he took refuge in the Sūs. Subsequently, with the help of the king of Spain, he made his way to Peñón de Vélez.

While the uncle had been sided by the Ottomans, the nephew ultimately obtained the aid of the Christian princes, especially that of the king of Portugal, Don Sebastian, who dreamed of conquering Morocco. In Djamāda I 986/July 1578, a substantial Christian army set out in support of Mawlay Mahammad. The clash between this army and that of Mawlay 'Abd al-Malik took place on 4 August near the Wādi Meḥzhāzen; the two Moroccan pretenders and the king of Portugal died in the combat. This battle, the so-called Battle of the Three Kings, had vast repercussions in Europe as in Morocco, where it aroused a veritable surge of national consciousness. The victor was another brother of Mawlay 'Abd Allāh, Mawlay Ahmad, who became sultan. His reign was one of the most significant in the entire history of Morocco, as well as one of the longest, since it lasted until 1012/1603. Having reorganised the country, Mawlay Ahmad established diplomatic relations with the Ottoman empire, as well as with Christian nations including Spain, Portugal and England; in 993/1585 English merchants founded the Barbary Company which enjoyed free and exclusive trade with Morocco for twelve years. But the major achievement of the reign was the conquest of the western Sūdān; contacts between the Songhay of the loop of the Niger and Morocco had begun in the 5th/11th century. In the 10th/16th century, the salt-pans of Tegheza, between Timbuktu and Marrākhush, were coveted by the Moroccans, and in 986/1578 Mawlay Ahmad asked Askia Dāwūd, the ruler of the Songhay, to allow him the occupation of these salt-pans for a year. Three years later, the Sa'dīan sharif ordered the occupation of Touat and the Gourara, and in 992/1584 sent to the western Sūdān a first expedition, which was a disasterous failure. The conquest of Sūdān was decided upon and in 1591 the Padhga Dīdār, commanding the Shari'īnī troops, entered first Gao and then Timgakhtu. In 994/1596 the Moroccans occupied the loop of the Niger from Kουyka to Djenné; the western Sūdān came under Sa'dīan domination, and every year, tribute of Sudanese gold was paid to Marrākhush. Dissension between the sons of Mawlay Ahmad, henceforward to be known as al-Manṣūr al-Dhahabi, cast a cloud over the end of the reign of the sharīf, who died of the plague on 17 Rabī' 1/25 August 1603.

During his lifetime, Mawlay Ahmad had given some of his sons a degree of administrative responsibility. Following his death, the princes Zaydān and Abū Fāris had themselves declared sultans, at Fas and at Marrākhush respectively. A third brother, Muhammād al-Shaykh al-Ma'mūn, who had been imprisoned by his father for rebellion, succeeded in defeating his brother Zaydān at al-Mouasta and being proclaimed by the allegiance of his nephews. While Mawlay Zaydān gained control of the Sūs; the fratricidal struggles which were to lead to the dissolution of the dynasty had begun.

A fourth prince soon claimed his share of the 'kingdom', sc. Mawlay 'Abd Allāh, a son of al-Ma'mūn who, in 1015/1606, succeeded in establishing himself at Marrākhush. All these struggles devastated the country and destitution was rife. Al-Ma'mūn, who took refuge at Tarfīn and attempted to obtain the support of Tuscany, then appealed to Spain for help, where he was obliged to take refuge in March 1608 as Mawlay Zaydān had regained power in Marrākhush and was threatening Fas. The following year, in the hope of gaining the support of the government of Philip III, king of Spain, the sharīf al-Ma'mūn signed a treaty according to which he guaranteed, in exchange for military aid, to cede to him the port of Larache/al-'Arāqīsh [q.v.], which Spain had long coveted, lest it be occupied by the Ottoman fleet. On 20 November 1610 Spanish troops commanded by the Marquis of San Germán took possession of Larache, the port and the town. But instead of helping Mawlay Muhammad al-Ma'mūn, this action lost him every chance of returning to his throne. He was assassinated in 1022/1613 at Fadjīdī al-Fārās.

In 1018/1609, the above-mentioned prince Mawlay 'Abd Allāh, had had his uncle Abū Fāris strangled. He was thus able to succeed his father at Fas, but the kingdom of Fas was no more than a much-reduced territory. Despite the attentions of one of his brothers, Mawlay Zaghudī, and despite the total anarchy existing in Fas, the reign of Mawlay 'Abd Allāh lasted until his death in 1022/1613. After him another of his brothers, Mawlay 'Abd al-Malik, ruled nominally in Fas for four years, but the descendants of al-Ma'mūn were no longer in a position to exert real power.

After the cession of Larache to the Spanish, the only Sa'dīan prince considered to be a legitimate sovereign was Mawlay Zaydān. While the descendants of Mawlay Muhammad al-Shaykh tried to maintain their position at Fas, Zaydān established his capital at Marrākhush and was recognised by foreign powers as Sultan of Morocco. In 1021/1612 he was subjected to the attacks of a religious leader, Abū Mahālāf [q.v. in Suppl.], who had declared holy war against the Sa'dīds, and who even succeeded in entering Marrākhush. Mawlay Zaydān was obliged to flee to Śāfī [q.v.], whence he attempted to leave Morocco with his retinue, and seventy-three cases of Arabic books. These cases were loaded on a French ship which was intercepted and impounded by the Spanish, who declared it to be legitimate war-booty; the Arabic volumes thus remained in the possession of the Spanish, and were later deposited in the Escorial.

The state of anarchy which pervaded the country enabled various religious chiefs or marabouts to make themselves more or less independent of the ailing central power. Those of the Sūs did not pose a real threat
The princes who actually reigned are given in bold type.

to the dynasty, but those of northern Morocco put the government of the shārifs in danger; the arrival of the Moriscos, especially following their expulsion from Spain (1609-10), and their occupation of Rabat which they declared an independent republic, as well as the agitation of a "marabout", al-‘Ayyābī, in the region of Salā and then at Salā itself, ultimately rendered Mawlāy Zaydān’s authority purely theoretical in the north of Morocco.

The shāfī Zaydān died in 1036/1627, and his successor was his eldest son Mawlāy ʻAbd al-Malik, who reigned only four years: he was assassinated on 6 Sha‘bān 1040/10 March 1631. The treaty which he had negotiated with France was signed by his brother Muhammad al-Sâhîb, on 20 Safar 1041/17 September 1631. Al-Walīd, assassinated in turn, was succeeded by a third son of Mawlāy Zaydān, Mawlāy Muhammad al-Shaykh al-Asghār. The latter succeeded in maintaining control over Morocco, or rather over the region of Marrākush, until 1065/1654; he faced opposition from another maraboutic power, the Dilā‘īyya of the central Atlas [see Dilā‘ī in Suppl.]. The last Sa’dian sovereign was the son of al-Shaykh Ahmad al-Sâhîb, who inherited a thoroughly decadent kingdom. After his assassination in 1069/1659, Morocco became the object of contention between the shūrafā’ of the Taflīlāh, the ʻAlawīs, and the Dilā‘īyya of the Atlas. The last-named were decisively defeated in 1079/1668, and the Sa’did shūrafā’ were succeeded by the ʻAlawī shūrafā’ [see ʻAlawīs].

If the last Sa’did princes were characters without much depth, and were in many cases debauched, the first shūrafīs were outstanding statesmen who encouraged the cultural and artistic life of the country. Although very little remains of the palace of Aḥmad al-Manṣūr, the Bādī’ of Marrākush, various religious monuments from the Sa’dian period have been preserved in this town: the great mosques of Bāb Dukkhāla and of Mouassin, the tomb of al-Džazālī, the Ben Yūsuf madrasa, and above all the mausoleums of the shūrafīs, Kubūr al-Aṣhrāf. At Fās, the Sa’dians built little, but to them are owed the two pavilions at the extremities of the court of the mosque of al-Karawīyīn, as well as the badī‘īn, the northern Burdj and the southern Burdj built by Ahmad al-Manṣūr in 1582.

Until the death of this sultan, the economic situation was such that there were periods of considerable prosperity; the relations of Sa’dian Morocco with European countries facilitated the export of various products such as textiles, horses, wheat, saltpetre, and especially sugar, principally to England (cultivation of the sugar-cane had appeared in Morocco in the 3rd/9th century, and disappeared shortly after the death of Ahmad al-Manṣūr). It is also to the credit of the Sa’did shūrafā’ that they presided over the birth of a genuine feeling of national consciousness, which resisted any attempt at domination by Christians or Ottomans.

SA'DIK — AL-ŠĀDIKĪYYA

SĀDIK HIDAYAT [SEE HIDAYAT, SĀDIK]

SĀDIK RIF‘AT PASHA, MEHMED, OTTOMAN STATESMAN AND DIPLomat (1807-57). He was born in Istanbul, the only son of a very wealthy family. His father was Hādıqī ‘Ali Bey, the governor of the Ottoman cannon foundries (Topkāhane). Sādıq Rif‘at received an education in the palace school, serving his final year in the Enderun-i Hayātim Khāzine Odası (the imperial treasury). Thereafter, he was placed in the correspondence department (Mekkābī Kalem) of the Grand Vizierate, as an assistant clerk. In 1824 he was promoted to the rank of bāb-aga (master) and in 1828 he became a junior clerk in the office of incoming correspondence.

He attracted the attention of Sultan Mahmud II [q. v.] when accompanying the latter on his tour of Edirne and Gelibolu. He also joined the entourage of Pertew Paşa [q. v.], whose protegé he became, just like his more famous contemporary Mustafa Reşid [q. v.]. In 1834 he succeeded Reşid in the position of assistant-receiver (Amēdī Wēkīlī). Next year, Sādıq Rif‘at was appointed Ottoman ambassador to Vienna, where he gained the friendship of the Austrian chancellor Prince Metternich, but struck Joseph von Hammer as a novice in diplomacy. During his stay in Vienna, he published Tratise on morals (Awrudp ahwdllna dd^ir risdle, cumstances of Europe"), which was well received at the imperial courts, as such "the "environment of Europe." (Awrudp ahwdllna dd^ir risdle, cumstances of Europe") in which he pointed out the importance of trade and industry. According to Sādıq Rif‘at, the old Ottoman condescension towards people engaged in trade should end and productivity should be made a central aim of the Ottoman government. The ideas put forward in the memorandum resembled the provisions of the Anglo-Ottoman trade treaty of Malta Limanlı of 1838 and of the famous Gulkhâne edict which issued in the Tanzimat reforms in 1839.

In 1840, Sādıq Rif‘at, now under-secretary of state at the Foreign Office, led a mission to Egypt. Shortly after, he was appointed as under-secretary of state at the office of the Grand Vizier. In 1841, he was promoted to the rank of vizier and served as foreign secretary for three months in 1848, and as minister of state for three months in 1850. In the latter year he also joined the Learned Society (Endümn-i Dânîî). Sādıq Rif‘at Paşa was a close associate of Reşid Pasha and a member of the inner circle of reformers all through the 1830s, 1840s and 1850s. He was a strong supporter of the secularisation of the legal and educational systems and, like Reşid, 'Ali and Fu‘ād, strongly advocated the separation of school from church. As the expectations of many of his contemporaries, he never attained the Grand Vizierate.

Sādıq Rif‘at Paşa died on 11 January 1857 and was buried in Eyyub. He left a daughter (who was married to a son of Mustafa Reşid Pasha, Ahmed Djeîlî Paşa) and a son, Mehmed Ra‘uf Paşa, who edited and published a number of his father’s memoranda under the title Muntakhabât-i aikhâr-i Rif‘at (Selected Writings of Rif‘at). Another small work, called Risālē-yi ebnīk (Treatise on morals) was published at some time in Istanbul schools.

SĀDİK (the transcription often used by Indian numismatists of what should correctly be SĪDIKĪ), the name given by Tipū Sultan of Mysore [see MUSÔR] to a gold coin of the value of two pagodas (Port. pardao, the name of a gold coin long current in South India in pre-modern times and for which various etymologies have been propounded; see Yule-Burnell, Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases, 652-7, 672-8), weighing 106 grains (86.87 gr). The name Siddikī derives from the epithet borne by Tipū Sultan of Mysore [see MAHISUR] in accordance with Tipū's custom of naming the denominations of his coins after the first caliphs and the Shi‘i imāms.

AL-ŠĀDIKĪYYA, AL-MADRASA, in Tunisian Arabic es-Sādiyya, in French, le Collège Sādiqi, a prestigious educational establishment, founded by a decree of Muhammad al-Sādiq Bey [q. v.] of Tunis on 5 Dhu ’l-Hijja 1291/13 January 1875 on the advice of the reforming minister Khayr al-Dīn [q. v.]. Its foundation marked the culmination of a period of reflection by the reforming elite in Tunisia which, from the middle of the 19th century, opened its eyes to the modern world, was disturbed at the social, cultural and economic backwardness of the country, and had the curiosity to make itself familiar with the sciences of the West. It took into account the fact that all reform, political or administrative, would necessarily involve the updating of teaching methods, the development of the programme of studies and its extension to as great a number as possible of pupils.
The foundation statue of the Sadikiyya envisaged a double objective: (1) conservation, "revivification" (sharī'a) and renovation (tadjdid) of the Arabo-Muslim cultural inheritance; and (2) an opening-up to the new world, in its various cultural forms: the mastery of and an initiation into the exact sciences and their manifold applications.

The foundation statue of the Sadikiyya

The College is meant for young Muslim Tunisians (art. 29); instruction there is free (art. 31). There are to be two categories of pupils: those with half-bursaries, and those with full-bursaries (those with half-bursaries and those living externally). Three levels of instruction are envisaged: (1) Primary, in which is to be taught reading and writing, Kurʾān recitation, Prophetic tradition and the usual manuals of Islamic studies (mutānī); (2) Second level, in which the legal science of the sharī'a are to be taught; and (3) (and here are the innovations) the teaching of the exact and modern sciences (mathematics, inc. algebra, geometry, mensuration-engineering); cosmography; geography; natural sciences (the elements of medicine, veterinary science, botany, zoology, mineralogy, agriculture and chemistry); political science and legislation; and, in a word, "everything not prohibited by the sharī'a, which it is necessary to make available to the Muslim community so that it may organise services of public value" (art. 25).

This third level was to take seven years. Art. 23 envisages the possibility for graduates of "continuing their studies" for a further seven years at the most. This last rule was in effect used in order to send certain pupils to France, Turkey and England; from 1878 to 1881 a dozen students followed courses at the Lycée Saint-Louis in Paris.

Installation of the Sadikiyya

The effective inauguration of the Sadikiyya took place on 20 Muharram 1292/27 February 1875. The "new school" was at that time installed in Tunis in a former barracks in the rue Ezenaidya (al-zabā'idīyya "the armourers"), baptised under the French Protectorate as the rue de l'Eglise, and is situated at the present in no. 55 in the rue Dājmi al-Zaytūna. In 1897, the College was moved to a new building, in Arabo-Maghribī style, dominating the hill over the Kaṣba, and in which the legal science of the Habous (hūbās, ānḵāf) and then to an annexe of the National Library (Periodicals Service).

Financial arrangements

In order to provide the College with an assured and autonomous budget, Khayr al-Din allotted to it the greater part of the properties of the former chief minister, Muṣṭafā Khaznādār [q.v.], confiscated by the state. These comprised enormous rural estates, olive groves, building plots in Tunis itself (Tunis-Marine) and in its outskirts (La Goulette, La Marsa, etc.), and houses and shops in the city centre. "By a decree of 10 March 1875, the properties forming the endowment of the Sadiki College were made into an habous (hūbūs) as property held in mainmört, of a religious nature and inalienable. Under the able administration of Muhammad al-ʿĀrif, the College's finances rapidly prospered". These habous were valued in 1906 at about 20 million francs.

However, from the beginning of the Protectorate, the speculations of European colonos, supported by the French administration, allowed, by means of a legal fiction or ruse (hīla), the disastrous exchange (ʿwadād) of the rich properties of the North (ca. 4,000 ha) against rents "of enzul" (însāl [q.v. in Suppl.] or permanent lease), which could be subsequently bought out for the future payment of twenty annual payments.

Practical arrangements and their variations

A decree of 28 March 1906 (2 Safar 1324) fixed the number of resident pupils of the College at 40, whilst that of the half-bursary holders was not to exceed 100.

These pupils were admitted after a competitive examination embracing the whole of Tunisia. A certificate of elementary primary studies was required of all candidates, whose age had to be (on the 31 December of the year of the competition) between 12 and 15. Between 1906 and 1929 the total number of pupils was 625. In comparison, one may note that in 1903, there were at the Lycée Carnot 846 pupils, including 44 Tunisian Muslims. It was not till the 1930s, under the direction of Gabriel Mérat, that numbers passed the peak of 160. But it was above all under the direction of a former pupil of the College, the first Tunisian who had surmounted the barrier of the competition for aggregation in Arabic language and literature, Muhammad ʿAtīyya, that its evolution became spectacular. The number of pupils admitted to the entrance competition passed, in 1951, the maximum of 305. The effective total was multiplied by ten, and the prodigious efforts of the director were crowned by the building, on a plot of land belonging to the Crown demesnes, of an annexe to the College, the Lycée Khaznādār, to which the internal and part of the external students were transferred.

The syllabuses and their successive reform

It was political considerations which usually determined the changes in teaching programmes. Thus it was that, at the beginning of the Protectorate from 1882, the French Minister-Resident Paul Cambon understood the services which the College could render to the new administration. Under the direction of Delmas, in 1892, the secondary education syllabus was modified: kept at a level below that of the lycées, in the scientific field, instruction took on above all a practical and professional aspect. Special courses in literary, administrative and legal translation were introduced there in the light of the certificate and higher diploma in Arabic required for entry into the public service (decree of 1888). The first graduates of the Sadikiyya were caught up by the administration, which dangled before the eyes of the youth an assured position and treatment. The Sadikiyya ceased to be basically a place for shaping the learned education of Tunisian youth, but became a "nursery" for officials of the Protectorate administration, a "producer of white-collar workers".

After 1934, the director ʿAtīyya, going back to the spirit of the College's founder and the letter of its foundation statue (respect for and preservation of the national heritage, with an opening on to the modern world), brought the syllabuses up to the scientific level required by the baccalauréat and assured Arabic language and literature of an adequate role. He diversified studies and, at the second level of instruction, increased the number of specialised sections corresponding to the different series of the baccalauréat:

Section A: classical literature (Latin and Greek introduced for the first time, whence, eventually, were formed cadres for the archaeological service and teachers of the history of ancient Tunisia).

Section B: Sciences plus languages (English, then Italian and German).

Section C: Latin plus sciences.

Section D (crowned by the sole Diploma of completed studies), an education on an administrative (legislative) and legal (elements of law and Islamic jurisprudence) basis.

An innovation should be noted. The director of the Sadikiyya could admit, as an option at the oral examination for the baccalauréat, questions on Arab-
Islamic philosophy (al-Farabi, the Ikhwan al-SafaD, Ibn Sina, Ibn Khaldun, etc.).
The success of the Sadikiyya encouraged an increasing demand from Tunisians for it to be extended to other establishments. After 1944, the Direction of Public Instruction decided to create, on the same model, classes which were described as “Sadikian” and then “Tunisian” in a number of lycées and colleges: the College Aalou, the Lycées of Sousse and Sfax and even, under pressure from the Union of Tunisian employees in Public Education, at the Lycée Carnot in Tunis and, for Muslim girls, at the Lycée Louis-René Millet in the rue du Pacha in Tunis.
In 1955, the numbers of participants in the “Tunisian” classes reached 6,000. Studies there were crowned by the “Diploma of Sadikian studies”, which was replaced, after Independence in 1957, by that of the “Tunisian baccalaureat”.

Finally, one should mention the indelible impact which the Sadikiyya has had on Tunisian society, quite apart from its role in the domain of education. “By bringing together on the same benches, in the same refectory and dormitory, children from all classes of this society, Sadiki went on to create the democratic education of youth ... Thanks to the possibility of boarding there, provincial and country-dwellers, hitherto disdained (as by the children of the capital, found themselves in contact with each other, and learned to know and love each other” (Ali Bach Hamma, 1960).

A mixing-together of youth from all social levels, a free comradeship and close solidarity of feeling, an atmosphere of hard work and a strong feeling of responsibility and duty, have characterised the atmosphere of the Sadikiyya right up to the present day.

SADIN (♀), in early Arabia, the guardian of a shrine (abstract noun, sidana).

The root t - d - n contains the sense of “veil, curtain”, which puts the sadin on a level with the hujdib, the first term designating the guardian of a shrine, and the second, the “door-keeper” of a palace, hence “chamberlain”. The hujdib acts under the orders of someone else, whereas the sadin acts on his own initiative (L.4, xvii, 69, citing Ibn Barrî). However, the two terms may be found juxtaposed, e.g. in Ibn Highâm, who says, “The Arabs possessed, as well as the Ka’ba, tawâqîth which were shrines (bâyât: cf. Fr. le baillant arabe, 132 ff.) which they used to venerate just as they venerated the Ka’ba; these sanctuaries had sadana and hujdâfigh” (Sîra, 55, l. 10). According to him, the personnel of the cult could be reduced to the sadin and the hujdib. The site of the cult itself is called bâyî al-masdan in a verse attributed to Rûba b. al-‘Adîdjâdî (loc. cit., l. 11). For al-Dhâhib, sadin belongs to the Dâjjaliyya; it is replaced by hujdîfigh (Hayyânîn, 1, 160 ult.). Amongst the orders created by Kûşây [q.v.] figures that of the hujdâfigh “guardianship of the Ka’ba”.

As well as his function as guardian of a shrine, the sadin watched over the offerings made to the divinities and practised belomancy [see AL-IŞTIKIŞAM BI ‘L-KALAM]. This was the situation regarding the custodian of the Ka’ba; he shook up the divinatory arrows in the god Hubâl’s [q.v.] quiver.

The sadin appears thus in the sources concerning primitive Islam, when Arabian paganism was in full decadence. Going further back and placing him in the context of the surrounding Semitic world, one notes that there was both a complementariness and a rivalry between the sadin and the kâhin. The first had a mantic and auroral role, the second, an oracular and ecstatic one. But it often happened that the two were in rivalry and trespassed on each other’s territory; also, the absence of one enabled the other to exercise both functions.

SA’DIYYA, a Śūfi tarīka [q.v.] and family lineages particularly Syrian and Shâfiī in identity, still active today, that grew to prominence also in Ottoman Egypt, Turkey and the Balkans. Notable aspects of the Sa’diyya are their distinctive rituals and their role in the social history of Damascus. The eponymous founder is Sa’d al-Dîn al-Shâfi’în al-Djibawi (hereafter “Sa’d”). His dates remain uncertain, but most probably fall in the 7th-8th/13th-14th centuries. To the extent to which any tarîka may be marked by the practice of khâwârik al-‘sâdat (deeds transcending the natural order, such as healing, spectacles involving body piercing, darî al-sîlah, and, best known, the darsa [q.v.]), the shâﬁî riding horseback over a “living carpet” of men and by wide appeal among the middle and lower classes. Few “sâlîm” appear in the Sa’dî silsila and the biographical compendia of notables and “sâlîm” are ambivalent about Sa’dî activities.

Through successful business and generous extension of their inherited baraka, many Damascene Sa’dîs became extremely wealthy and offered a safe haven of hospitality for Ottoman dignitaries at their main zdwîya in the tempestuous Midân quarter. The order has been fraught with an unusually high level of competitive struggles over the mazhâ’îya of the family, the Śūfi order and its awkâf. Because the order by and large is hereditary in leadership, family connections predominate over acquired knowledge and training. The Sa’dîs are a good example of the outcome of the combination of saintliness, Śūfi organisation and wealth in the Ottoman world.

The encyclopaedic Śūfi silsila collections of the 11th-13th/17th-19th centuries do not feature the Sa’diyya prominently. Al-Kushâshî (d. 1071/1661), al-‘Udjaymi (d. 1113/1702) and al-Sanûsî (d. 1276/1859) seem concerned with the order, but Murtada al-Zâbitî (d. 1205/1790) received the Sa’dî tarîka from the Damascene Abraham al-Manînî (d. 1173/1759) and gives a second sanad following the familiar Dûnaydît/Ilmâmî line (‘Ikd al-dawwar fi ’l-nâdkir wa-turuk al-shîb wa-l-tâlîn, ms. Dîr al-Kutub al-Miṣriyya, tasaawwuf, 3, 322, p. 58). Kamâl al-Dîn al-Hârîrî (d. 1299/1882) presents four silsîlas, only one of which he received in a personal encounter (Tibîyân wasâ’dî al-hâbîbh fi bayân salâsi al-tarîkâ, ms. Fâîhîn Ibrâhîm 431, ii, fols. 129a-138a). This line, of his Aleppan shâﬁî Muhammad b. Yâsin (d. 1292/1873), can be collated with al-Muḫabîb and other sources to form a reasonably reliable silsîla (Tibîyân, ii, fols. 130b-131b; Kûshâshî, 1, 34-5).

1. The founder. The hagiography of Sa’d, eponym of the tarîka, serves a symbolic function for the order. Historical details about him are scant as is literary production by members of the tarîka. A 20th-century Sa’dî awrâd work puts his birth in Mecca in 460/1067 and his death in Djibâ in the Hawrân (Golan, see al-Mâlîbî, 1, 144-5). The year 621, closer...
to Margoliouth's 700/1300 reckoning (El 1), as a death date is more probable (al-Hariri, iii, 132, and others) but, based on other members of the siida, al-Nabhan would place Sa’d’s transformation into a Sufi shaykh is the earliest found (1, i35).

The father of Sa’d al-Din, Yûnis al-Shaybânî, is traced genealogically by the Egyptians to Isdîrî, the conqueror of the Maghrib, and, through him and Sa’d’s mother, Sa’d is considered both Hasanî and Husaynî (al-Khûdari, al-Wafâ’ bi L-‘ahd, 168-9). The Banû Shayba [q.p.] have the right to drape the Ka’ba, and in a poem attributed to Sa’d he speaks of being among the ‘‘protectors of the Ka’ba’’ (al-Hariri, ii, fol. 123b; Abâza and al-Hâfiz, n. 2, 505). He claims, as well, to be the ‘‘shaykh of each tarîqa’’ as the direct murîd of the Prophet. This meeting with the Prophet is the climax of Sa’d’s conversion story. The young rebellious son of Yûnis had left Damascus for a life of highway robbery in the Hawrân. Either the Prophet alone, or with Abû Bakr and ‘Ali, or with all the ‘‘ten repentant Paradies’’ posed as victims of Sa’d al-Din on the road. When the answer for Sa’d’s demand for goods and money is the first horseman’s recital of tanka, "Has not the time come for the hearts of those who believe to turn humbly to the remembrance of God (dhikr Allah)?’’ Sa’d goes into ecstasy and falls unconscious. The Prophet制订s some dates in his mouth and feeds them to a now-beardless boy, writing amulets and treating all, ‘‘free of reprehensible acts and halakdt al-dhikr’’ (d. 1010/1601) was reported to the Damascene Sh. Sa’d to the Othmanîs in 967 (iii, 157). It is worth noting that the Sa’diyya never switched from the Shâfî to the Othmanîs Hanafî. One of many inner-tarîqa struggles occurred among the wealthy Aleppan Sa’dîs, whose zaïyiyya stood outside Bab al-Nasr. They held a large dhikr, mainly with fallâhi participants, at the Umayyad Mosques of Aleppo. Sh. Abu ‘l-Wafâ’ (d. 1010/1601) was reported to the Damascene Sh. Sa’d al-Din by a slighted Aleppan for being guilty of sexual misconduct. Sa’d al-Din was convinced to strip the khilâfa from Abu ‘l-Wafâ’ and to confer it on one ‘‘Abd al-Rahîm al-Rawwâs in a written document, which neither Abu ‘l-Wafâ’ nor his disciples obeyed. Thus two competing circles of Sa’di dhikr took place in the mosque. The scandal, coming to civil authorities, was not Abu ‘l-Wafâ’ violent temper or prodigious learning, but the climate of fîna in the mosque as the two groups hurled abuse at each other during dhikr, such that people came to hate both sides (Khulasa, i, 152-4).

Sa’d al-Din’s son Muhammad came to Aleppo, be-moaned his father’s involvement in the affair and ordered the two groups to separate places in the mosque. Abu ‘l-Wafâ’ brother and successor Abu Mahir (d. 1105/1694), a pious and humble man,
avoided conflict with ‘Abd al-Rahīm’s ḥukūrat (al-
Muhībbī, i, 298-9).

A bitter struggle between the brothers Ḫibrām (d.
1190) and Muḥammad ibn Mūsa al-Muwslīmī for
power (d. 1020/1611) led to the former’s being ousted
from heading the Sa’di  dhikr at the Umayyad Mosque
and from the family complex in Kubaybāt (al-Būrīnī, i,
305-6). Muḥammad held control of ṣawādīyat Baṇī
Ṣa’d al-Dīn and safdīyat al-tarīkh for 35 years in
Damascus. Holdings in agricultural and commercial
properties, along with continuous gifts, made him one of
the wealthiest men of his time (al-Muhībbī, iv, 160-
2). Nonetheless, he was also the shrine at the
ṣawīya, and Muḥammad was invited to their homes.
Describe the daily elaborate four-part ritual at the
ṣawīya of offering rare coffees, sweets, savories and
perfumes (al-Qaṣṣāzī, Lutf al-samar, 56-61). In a
telling scene in 1118/1706, Ibn Kānān points out that while
most of the great ḥulamā’ (including the three local
muḥtārs) witnessed Muḥammad al-’I Ṣa’dī’s ceremonial
fard darṣ at the Suṣulmānīya, the Ottoman Kādī
Arīf al-Shāghūnī was there as the shrine of Saṣyīdā Yānāb with a Sa’di  ṣawādīkh in the company of
a crowd of men and women (Hawādīth, 104-5).

A second Sa’di  ṣawīya, in Shāḥgūr, was headed by
Abū ’l-Waḥīf Ḫibrām (d. 1170/1756). Received by three
Ottoman sultans in Istanbul, he established ṣawīyas and
appointed ḥulamā’, probably for the first time outside the
hereditary line, in Anātolia, Egypt, and Aleppo. The new order was the Sa’da-
ṣawīya fi’l-tarīkh (Hilml, 270, not to be confused with the
khalīfāt, zāwiyās and appointed ẓalīmāt. (It should be noted

Sa'diyya. The Fatimid dome over the Sa'di shrine at Bab al-Nasr has been under discussion since the 19th century. However, recent research has suggested an earlier construction date, possibly as early as the 12th century. The dome was originally built as a mausoleum for the legendary Sufi master Hariri, who is said to have been buried there. The dome has undergone several renovations and additions over the centuries, with the latest works carried out in the 1990s.

The current structure was built in 1994, replacing an earlier dome that was destroyed in an earthquake. The dome is considered one of the most popular in Upper Egypt, and it is a significant landmark for both locals and visitors.

The dome is also a site of religious significance, hosting a number of Sufi orders and practices. The Muradiyya, for example, has a tekke (a Sufi lodge) located nearby. The dome is regularly visited by pilgrims and tourists, who come to pay their respects and seek blessings from the venerated saint.

In conclusion, the Sa'diyya dome is a testament to the rich cultural and religious heritage of Upper Egypt. Its history and significance continue to attract the attention of scholars and visitors alike.
SA'DIYYA — SADJ

The most important healing powers ascribed to sa’dî are the following. If the wood, after burning, is extinguished with the juice of the horned poppy (Glaucium corniculatum L., Papaveraceae) and rubbed on the eyes, and so people

...
According to I. Goldzihcr, the oldest form of Arabic poetic metre, since radjaz ['q. v.'], the oldest meter of Arabic prosody, is nothing but a "rhythmisch diszipliniertes saff" ('Abhandl. zur arab. Philologie, i, 76; the same opinion by Wellhausen, Reste, i, 155 n. 3), whilst Landberg (La langue arabe et ses dialectes, Leiden 1905, 712) rejected this view and thought that radjaz and radjaza were equally ancient (cf. A. Musil, Die Gitten der Dichter, New York 1928, 403 ff.). Concerning the connection of radjaz and its derivatives r-dj- in and n-dj- with the pagan cult, see Fahd, op. cit., 153 ff.

In origin, saff and radjaza must have designated approximately the same idea, sc. the state of ecstasy, the oracular pronouncement which ensued and its formal expression. But gradually, radjaz took on a more specialised meaning, sc. that of the oracular utterance of war. Henceforth, radjaz was gradually removed from the functions of the kahin and came to approach more closely those of the shg tir ['q. v.'], two functions primitively combined in one person (see Goldzihcr, Die Gitten der Dichter, in ZDMG, xl [1891], 685 ff.; and Kahin: Muhammad considered as kahin and shg tir, but progressively differentiated, since their respective sources of inspiration grew more diverse. It is in this sense that one can say that radjaz was the origin of secular poetry, whereas saff reigned the mode of expression of the diviner, who was always as conservative as the priest with whom he was often identified.

The sources for the first centuries of Islam have preserved for us a large number of oracular pronouncements in saff, attributed by tradition to the pre-Islamic kahins and kahines. They are generally considered by critics as "more or less successful pastiches" (R. Blachere, Introduction au Coran, 178 n. 242); however, they are taken as pieces of linguistic evidence. Blachere continues, "In effect, these are apocrypha, but capable of evoking compositions now disappeared for ever" (HLA, ii, 189-90). And further on, he adds that one might ask oneself whether these apocryphal oracular sayings do not reflect, more than one thinks, the ancient "prophecies" of the kahins, addressing their tribe in a clumsy and unpolished language (192). Noldke avoided pronouncing on their antiquity, at the same time allowing this to emerge clearly (G des Q, i, 75 n. 1). Wellhausen wrote that the oldest surs of the Kur'an were the most important pieces of evidence for the style of the kahins ('Reste', 137 n. 4). Fück averred that the feature of rhyme in the ecstatic outpourings of the ancient diviners was above all that of the common language, and this was the same for the Kur'an (Arabia, Fr. tr. Paris 1955, 129-30).

References to these oracular sayings are collected together in Fahd, op. cit., 159 1; their themes have been briefly enumerated by Wellhausen, op. cit., 135, see also Noldke, loc. cit.). Wellhausen brings out the following features, often borrowed from procedures attested in the Kur'an. The kuhhan have the custom of covering themselves at the time of their visions, whence the name Dhu l-khamsa "the man with the veil" given to some of them. They use the poetic form saff, short, parallel phrases, of which four to six are held together by a single rhyme. He wrote that "das saff ist ohne Zweifel die älteste Form der Poesie, entsprechend dem hebräischen Parallelismus der Glieder" (i, 153 n. 3). They are often themselves surprised in the face of their strange visions and utterances (mad adhkara), a formula cited 13 times in the Kur'an but not attested in non-Kur'anic oracular pronouncements. They begin with formulae of swearing, and swear by the sun (XCI, 1), the moon (CXI, 1; LXIV, 32; LXX XIV, 18) and the stars (LIII, 1; LXXVI, 1-2), by the evening (LXXXIV, 16; CIII, 1) and the morning (LXXXIX, 1; LXIV, 34; XCI, 1; XCI, 115; XCI, 1), by the clouds (LI, 2) and the winds (L, 2; LXXVII, 1 ff.?), by the mountains (XCV, 1 (Yàkit), BTL, 115 ff.) and the rivers (LI, 7 ?), by the plants (XC, 1) and animals (LI, 1 ff.?) by the woodpecker (?) and the pigeon (?), by the wolf and the frog (see al-Tabari, i, 1933-4). Noldke only enumerates the sites and edges of the roads, animals (?) and birds (?), the day (XCI, 3; XCI, 2) and the night (CXXIV, 33; LXX, 17; XCI, 4; XCI, 1-2), the light and the darkness, the sun, moon and stars, the heavens (LI, 7; LXXVII, 1; LXV, 9; LXXVI, 11; XCI, 5) and the earth (LXXVI, 12; XCI, 6).

The two authors give shape to the model of the Arabic oracular utterance on the basis of the ancient surs of the Kur'an, in so far as they are convinced that Muhammad utilised the style of the inspired persons of Arabia, whose roots go back to the ancient Semitic past. It should, however, be noted that there are some Kur'anic sayings which are marked by the cosmicogonic, eschatological and prophetic ideas of monotheism, such as XXXVII, 1 ff.; LII, 1 ff. (cf. XXXVI, 1; XXXVII, 1; XXXIII, 1; XLII, 1; XLIII, 1; LXXIV, 34; LXIV, 102; LXXV, 2; XCI, 7; LI, 1 ff.; LXXIX, 1 ff.; LXXIX, 1 ff.; C, 1 ff.).

There was, consequently, an adaptation in the Kur'an of the oracular saying to the exigencies of the new concepts which it had to express, a process of adaptation which, on the whole, led to the Prophetic aim of freeing himself from all the compromising forms of paganism in order to place in relief the originality of his own message and its transcendence.

From this fact, one can say that, although its vision of the created universe, whose witness it invokes solemnly, is expressed by the stylistic forms of divination, their spirit and terminology—which must have undergone substantial changes—do not permit us to discern the primitive model which must certainly have been much more sober and poorer in ideas; likewise, in the eyes of the nomads, the image of its inspirer must have been sketchy and the idea which they formed of themselves must have been feeble.

There is an analysis of some oracular utterances representative of the genre in La divination arabe, 192 ff.: one of 'Amr b. Luhayy, two of Tarifa, one of the kahins of the lyd, one of the kahins of the B. Asad, one of the kahins of the B. Ghann, and those of the legendary Shikk and Satîth.
the night—the case of the hdtif [q. v.—or through an idol—this is ventriloquism, cf. Fahd, op. cit., 171-4—or by the summoning of the spirits of the dead—sc. necromancy [see FAL, ]—or, finally, by the interpretation of the behaviour of living or inanimate objects—this is cleromancy [see FAL, ] oneiromancy [see VRV] and all similar procedures [see DAFR, FARA, HURF, KITILAIJ, KAFF, KATIF, KHATT, KUR'A and MAYSIR]. All these forms arising out of the oracular utterances can be found attested in the traditional literature.

Bibliography this article is essentially taken from Fahd, op. cit., Paris 1987, 140-76, where can be found details and references. (T. Fahd)

2. Outside kahana before Islam.

Other uses of rhymed sayings refer to weather phenomena. There are two genres. One is represented by a closed corpus of astrometeorological sayings of the Bedouins, the nasad edages [see ANW], which form a kind of a farmer’s calender. They relate the heliacal rising of a star, or group of stars, to certain weather changes and activities connected with them. Characteristically, they start with nigah tala’a [‘t-nadjm], ‘when [the Pleiades] rise,’ and usually consist of between four and six cola rhyming with the name of the star(s). The oldest preserved book on the anwa3 is Ibn Kutayba (d. 276/889 a[l-]) says at the beginning of his K. Wasf al-matar wa ‘l-sahab, ed. M. Hamdullah and Ch. Pellat, Haydarabad-Deccan 1375/1956; here the sayings are introduced with yakuš sadf u ‘t-arab, ‘the rhymed of the Arabs/Bedouins says,’ or, more freely, ‘a rhymed folk-saying is.’

The other genre is descriptions of clouds and rain in what one might call Bedouin ornate prose. It is mostly characterised by ‘strophic’ sadf; i.e. a change of the rhyme after two, three, or four cola. Typical is also a liberal use of recherché arabic vocabulary. Ibn Durayd (d. 321/933 [q. v.]) says at the beginning of his K. Wasf al-matar wa ‘l-sahab, ed. Izz al-Din al-Tanukhi, Damascus 1382/1963: ‘This is a book in which we have gathered together what the Bedouins (‘arab) before and after Islam have said in the way of rain and cloud description.’ Some of the specimens collected in his book are clearly Islamic (e.g. at 30-1), others leave the impression of lexical études; but given the enormous importance of spotting rain and pasture, there is nothing inherently unlikely in stylised or even somewhat hieratic language already before Islam.

Bibliography (in addition to references given in the article): C. Pellat, Dictions rimés, anwād et mactions tunaires chez les Arabes, in Arabica, ii (1955), 17-41. (W.P. Heinrichs)

3. In Arabic literature of the Islamic period.

Since pre-Islamic times, the word sadf in the sense ‘to recite or speak with assonances, using cadenced verse,’ has denoted a type of more or less rhythmical prose of which the principal characteristic is the use of rhymed units which are generally quite short (from 4 to 10 syllables, on average), terminated by a clausula. These units are grouped sequentially on a common rhyme. The rhymed or assonanced clausula at the end of each rhythmic unit constitutes the essential element of sadf5, which is appropriately translated as ‘rhymed and rhythmic prose.’ It seems that this mode of expression pre-dates free prose and even metrical poetry, with which it has numerous aspects in common, but from which it is distinguished by the absence of metre and of a single rhyme. In the opinion of some scholars, this stylistic form could have been the origin of metrical and prosodic poetry.

A. Principal phases in the evolution of sadf6

The origins of sadf in literature.

Although no doubt apocryphal or corrupt, some examples of pre-Islamic rhymed and rhythmic prose have been preserved. They consist for the most part of proverbs, maxims, stories and legends (R. Blachère, HLA, ii, 190). Here there are also found formulas chanted communally on the occasion of the Pilgrimage to Mecca (see EP, TALIBIA; M. Gaudefroy-Demombynes, Les pélerinage à la Mekke, Paris 1923, 179-80). Sadf had, furthermore, close links with magic; for these, see section 1, above. Also, the group of men who led the pre-Islamic Arab tribe often included among its members an eminent orator (khatib), who should not be confused with the kāhin, although the same person might be both soothsayer and khatib.

When he was not a poet himself, ‘the orator played a role analogous to that of the poet, in acting as the spokesman of the tribe in embassies, gatherings and fairs, also in aiming through his oratory the tribal sentiment of the members of his group’ (Ch. Pellat, Langue et littérature arabes, 58). A semi-legendary individual, Kuss b. Sā‘ida al-Iyādī [q. v.], was considered the greatest orator of the Djāhilīyya [q. v.], (al-Dāhib, Bayān, i, 52). His eloquence became proverbial, so that there were expressions such as ablab ascend Kuss (‘more eloquent than Kuss’) (al-Maydānī, Madjma‘, i, 117-18). The Prophet Muhammad, during his adolescence, is supposed to have encountered him delivering a sermon (kūsha) while mounted on his camel at ‘Ukāk. Then, some years later, the Prophet is said to have had occasion to recite in public a passage from this speech, which is no doubt apocryphal but is famous nonetheless, and which begins thus: ayuha l-nās / 'iddgarna / wa-smarn / wa-tamīna / Man 'āqā mā a-ta ma-na ma-ta fā / w-kul/ka ma hawa dīna ait (Bayān, i, 52, 308-9) (‘O [good] people/gather [around me] / hear / and ponder / Every living being is mortal / he who dies belongs [for ever] to the past / and everything which [must] come to pass will [assuredly] come to pass’).

Connections of sadf with the Kurān.

Form and stylistic refinement play a very important role in the Kurān, of which one of the principal characteristics is assonance. It is striking to ascertain to what extent the monumental poetry of the Arabic language is akin to rhymed and rhythmic prose which—without being used there systematically—nevertheless constitutes its most remarkable artistic peculiarity. The sūra ‘The Men’ (al-Nās, CXIV), for example, consists of eight very short rhythmic units. By means of examples of this type, the Kurān fully legitimised sadf.

However, instead of profiting from this providential legitimisation, of developing and expanding, rhymed prose, contrary to all expectation, encountered a certain reticence on the part of a large number of the disciples of the new religion. Thus, in spite of this evident kinship and probably on account of it, sadf was to experience a net decline and suffer a long eclipse. Although the reasons for this discredit are not entirely clear, it is possible to identify some of the factors responsible. It is known, first of all, that the Prophet Muhammad then was to experience a number of occasions by his adversaries of being a common soothsayer, and that some of them were intent on comparing the revealed text to the vaticinations of the kuhban of the Djāhilīyya. On the other hand, the Muslims of the time dissociated themselves from this mode of expression which, in their view, was still too
closely linked to magic and to certain practices belonging to paganism (al-Djahiz, Bayân, i, 289-90).

Furthermore, the decline of rhymed and rhythmic prose was a logical consequence of the dogma of the ‘rare quality of the Qur’an’ (Kur‘an), a principle respected by the entire community. However, in spite of this suspicious attitude towards saдж’s, the latter was never completely banned. It succeeded in surviving, for almost two centuries, especially in the oral form. Muhammad’s oration at the time of the Farewell Pilgrimage in 10/631 belongs within the framework of this oratorical genre which, subsequently, struck a moderate and considerable success. After the death of the Prophet, the orators (al-khutaba3) spoke in saдж before the first four caliphs without exposing themselves thereby to the least criticism (Bayân, i, 290) (but it should nevertheless be noted that, since at that time, many orators used saдж-less prose, the authenticity of speeches in saдж is very much in question).

Under the Umayyads, the multiplicity of politico-religious parties gave a facet favourable to the development of the oratorical art, skillfully cultivated by political figures who knew how to make an impression on audiences who remained in spite of everything very partial to saдж. Around the mosques, the tellers of edifying stories (kussads, pl. of kass [q.v.]) charmed the crowds, telling them edifying stories (kisja [q.v.]) in seductive language (Pellat, Le milieu bâzîrîen, 108 ff.).

Another resounding speech was that which was delivered by al-Hadîjâdic b. Yûsûf [q.v.], the new governor of ‘Irâk, on arriving in Kûfâ in 75/694 (Bayân, ii, 138-40; M. Messadi, Essai sur le rythme, 117). Of untypical violence, the harangues of al-Hadîjâdic were full of threats designed to intimidate all those who opposed the central power of Damascus. In a general fashion, the expansion of Islam played a capital role in the development of the oratorical art.

Official and progressive rehabilitation of saдж

Under the reign of the Umayyad caliph ‘Abd al-Malik (65-85/685-705), Arabic was finally established as the administrative language of the Arabo-Muslim empire. In gradual stages, a specialised bureaucracy came into being. Scribes distinguished themselves in the epistolary genre, official and private. The most eminent among them, ‘Abd al-Hamîd b. Yâbûk, nicknamed al-Kârîb (d. 133/750 [q.v.]), created the administrative style which was, at the outset, a sort of moderately rhymed and ornate prose. In a well-known epistle (risâla [q.v.]), he established the rules of the profession of the kâtib [q.v.] and authorised to some extent a more or less discreet return to saдж, which progressively becomes fashionable again through the expedients of the administration and of the chancelleries.

Ibn al-Mukafîa (d. ca. 140/757 [q.v.]), a disciple of ‘Abd al-Hamîd, followed the latter’s example in composing manuals to be used by scribes. Subsequently, he attempted to extend the use of this elegant but moderately rhymed and ornate prose. In a well-known epistle (risâla [q.v.]), he established the rules of the profession of the kâtib [q.v.] and authorised to some extent a more or less discreet return to saдж, which progressively becomes fashionable again through the expedients of the administration and of the chancelleries.

Ibn al-Mukafîa (d. ca. 140/757 [q.v.]), a disciple of ‘Abd al-Hamîd, followed the latter’s example in composing manuals to be used by scribes. Subsequently, he attempted to extend the use of this elegant but relatively sober style to texts of a more literary nature. This is what he did in his adaptation in Arabic of the Indian fables known by the title of Kâtîla wa-Dimnâ (collections of Indian fables known by the title of Kalila wa-Dimna [q.v.]), which is considered one of the first books written in literary prose. The successful experiment was followed up and amplified by a number of authors of the 3rd/9th century and most notably by al-Djahiz. This author played a primary role in the rehabilitation of saдж. He contributed to this by adopting attitudes in favour of rhymed and rhythmic prose, which he defended on numerous occasions in his work and in the Bayân in particular (i, 287-91, iii, 29). But the best homage which he rendered to saдж consisted in the fact that he practised it himself ‘with the flexibility, the intelligence and the sense of proportion which appear in all his prose and which give it its subtle and rare quality’ (Messadi, Essai, 159).

The defeat of the modernist trend and the appearance of the neo-classical movement, which engendered a certain latitudo with regard to ancient poetry, seem to have had the effect of compelling a large number of writers of the 3rd/9th century towards the more free and more varied rhythms of saдж.

From the 6th/10th century onward, saдж enjoyed immense success. Little by little, it invaded all domains of literature. ‘It would seem that the basis of this invasion is to be sought in the high respect accorded to the works of poets by the unanimous opinion of the educated classes. Becoming the substance of literature, a fully harmonious prose... represents, in the eyes of people in love with poetry, a Cinderella figure. Her simplicity seems to them like poverty, and in order to keep her preserved they learn to make it appropriate to adorn her with at least one of the ornaments of her sister and rival, this being rhyme’ (W. Marçais, La langue arabe).

In this period, the use of saдж became generalised, in the first instance among the secretaries of the administration who adopted the habit of furnishing their texts with rhetorical artifices and literary reminiscences.

The eminent vizier of the Buayid princes, al-Sâhib Ibûn ‘Abbad (326-85/938-95 [q.v.]), left a collection of letters of great value. The writer and philosopher Abû Hayyân al-Tawhîdî (after 400/1009 [q.v.]) often compared to al-Djahiz for his style, of which one of the essential characteristics was the use of saдж which was both erudite and simple. Bâdî’ al-Zamân al-Hamadhânî (357-96/968-1007 [q.v.]) was one of the most illustrious epistolary stylists of the 4th/10th century. After being the protegé of al-Sâhib Ibn ‘Abbad, he went to seek his fortune at Nîshâpûr. A collection of his letters in artistic prose has been preserved. There was in fact a veritable explosion at this time of ornate prose, seen further in the rasâil (collections of which have also been preserved) by Abû Isâhâk Ibrahim b. Hilâl al-Sâhibî, Abû Bakr al-‘Irânî, Ibn al-Amîd and Kâbûs b. Wûghmâगîr. It was even used for recording history, seen in al-‘Uthîr’s al-Ta’rikh al-Yamînî. Another major name emerges from the host of letter-writers of the later centuries, this being al-Kâdî al-Fâdîl (529-96/1135-1200 [q.v.]) who was for a long time the secretary of administration and then associate and vizier of Sâlah al-Dîn; and he had an equally illustrious ‘competitor’ in Dîyâ’ al-Dîn Ibûn al-‘Atîqî and his collection of rasâil, likewise published. The few specimens of his official writings which have been preserved are characterised by the almost systematic use of rhyme, a highly-affected style which tends to be somewhat wearisome, an abundance of metaphors and of rhetorical devices. This style was to serve as a model in the chancelleries of later periods.

The makâmâ [q.v.]

Al-Hamadhânî’s masterpiece is his collection of ‘sessions’ which are stories characterised by the use of rhymed and rhythmic prose, sometimes blended with verse, and by the presence of two imaginary persons, the hero and the narrator. In his makâmî, al-Hamadhânî did not use saдж in a systematic manner. He resorted to free prose, for example, in the transitions or when he wanted to quicken the pace of the narrative. In any case, ‘he remains perfectly the

SADJ

735
master of his thought; the rhythmic units designed to convey the idea are constructed according to its terms, the idea is not at all dependent on them" (R. Blachère, Stones, 36).

The principal successor to al-Hamadhānī was a grammarian of Bāṣra, al-Hārīrī (446-516/1054-1112 [q.v.]), who not only gave the "session" its classic and definitive form, but also, and more significantly, composed the finest monument of sadf which the Arabs possess. Al-Hārīrī is considered by many Arab critics an incompareable stylist. The interest and the originality of the narrative do not interest him greatly. His principal concern is the style, the rhetoric and the artistic prose and, most important of all, the Kurānic and the Holy Qurān. His rhythmic units can, in fact, be limited to two or three units as diverse as love, wine, religion or Sufism. The subject addressed, history, geography or medicine, were arranged in impeccable sequences. The structure of the Arabic language has without a doubt favoured the emergence of sadf and its considerable development, from the Ḥadhīlīyah to the present day. The great variety of morphological themes of the same syllabic structure and of identical or similar rhythm constitutes an inexhaustible supply of clausulas rich in rhyme for lovers of assonance and of verbal sonority. Thus the pattern fiṭḥā is common to a singular such as kisām ("book"), ḥaḍām ("reproach") or to a plural such as kisām ("doggs"). Similarly, the patterns hamār ("red") and abūrāh ("poets") offer at the end identical cadences (Blachère, HLA, ii, 189).

1. External characteristics of sadf

(1) The arithmetical rhythm

A text written in sadf is articulated in members of a sentence, the length of which remains within the limit beyond which breath is exceeded. The exigencies of breath, in this context, are important since rhymed prose—like poetry—is intended to be recited before an audience, aloud and having regard to a form of delivery which should be neither too fast nor too slow. Nevertheless, the composer of artistic prose has a fairly wide margin of manoeuvre at his disposal. His rhythmic units can, in fact, be limited to two or three
syllables, just as they can be extended to comprise 13 or 14. The hemistich, the rhythmic unit of verse, which like sadf is subject to the requirements of breath, comprises from 8 to 15 syllables, according to the length of the metre in question. For this reason, there is a tendency to recite the line, not in its entirety and in a single breath, which is difficult, but hemistich by hemistich (Messadi, Essai, 17).

In his Maqal al-sârîr (i, 257-8), Ibn al-Athîr distinguished between two types of sadf: a short type and a long. The unit of measure which he used to determine the average length of each of these two types of sadf is not one but the whole line, which leads him to draw very approximative conclusions. In fact, he defined the short sadf as that where each rhythmic unit could comprise from two to a maximum of ten words. Beyond this limit, there begins the long sadf, the members of which may be moderately long (11 to 15 words), long (15 to 20 words), and very long (20 words and more). Ibn al-Athîr stressed his own preference for the short sadf, stating that the fewer words there are in each of the parts of the couplet, so much the better (ibid., i, 257).

The rhythmic units being often coupled with clausulas on the same rhyme, the couplets thus constituted can be perfect or unequal. They are perfect when their two members are equal. Ibn al-Athîr considered this type of sadf as that "which occupies the most noble rank, on account of the equilibrium which characterises it" (ibid., i, 255). But too much equilibrium and regularity engender a monotonity and lassitude, which often spoil the rhymed prose of al-Harîrî but which al-Hamadhanî was able to avoid by means of the rhythmic variety of his style. On the other hand, to perfect couplets, Badiî al-Zamân preferred unequal couplets, of which the first member is longer than the second. This category of couplet has the advantage of conforming to the requirements of breath, demanding less effort in the second, shorter member, than in the first, longer member. Ibn al-Athîr, on the other hand, had no regard for this latter type of combination; for, he explained, being shorter than the first, the second member "then resembles a thing so mutilated that the listener remains tense like one who stumbles, falling short of an objective which he seeks to attain" (ibid., i, 257). This point of view is developed by the author himself, Badiî, who is hardly surprising, given that it was the makâtib of al-Harîrî which served as the basic text for Messadi's study of sadf and that, as mentioned above, al-Hamadhanî had a predilection for couplets in which the first member was longer than the second. The very rare exceptions to this rule, in the work of Badiî al-Zamân, are generally justified by the sense (cf. Messadi, Essai, 23-4).

The third and final category of couplet is that where the second member is longer than the first. It seems that this is less common and less appreciated than the other two. In any case, couplets of this type are rare in the "sessions" of al-Hamadhanî who was, no doubt, obliged to avoid them because they contradicted the requirements of breathing. In this regard, Ibn al-Athîr adopted a more equivocal position. He reckoned, in fact, that unequal couplets with longer final member were acceptable so long as the latter was "of such a length as to detract excessive-ly from equilibrium" (Mathal, i, 255).

If, in sadf, the couplet is the rule, often the rhythmic units are arranged in groups of three, four or more, on a single rhyme, and contain a perceptibly equal number of syllables. In many cases also, one or more free members, not linked by a single rhyme, succeed, for some reason or another, a series of coupled elements. Such an unexpected independent member, abruptly interrupting the cadence, can be refreshing. "It facilitates, by the relaxation thus obtained, the repetition of the cadence" (Messadi, Essai, 28).

While al-Hamadhanî resorted very frequently to free members, which represent approximately a quarter of his sadf, al-Harîrî avoided them, thus excluding free prose entirely from his makâtib but thereby rendering his style rigid and monotonous.

(2) The rhyme

To avoid confusion between the rhyme of verse (kafîya [q. v.]), and that of sadf, the Arab rhetoricians refer to the latter by the name of fâsla, karîna, sadf or sadfâ, which they define as "the correspondence of words in a position of rhyme through an identical [final] consonant" (al-'Askarî, Sûrat'atân, 262; Ibn al-Athîr, Maqal, i, 210). Rather more prolixly, Ibn Wahb al-Kitâb gives the following definition: "The sadf (rhyme) in prose is similar to the kafîya (rhyme) in poetry" (al-Burhân, 208-9). Rhyme is one of the essential components of the rhythm of sadf. It constitutes the most apparent phonetic link between two or more rhythmic units, and permits "the prominent setting of the periodicity which is the distinguishing mark of sonant rhythm" (Messadi, 29). It is this which "regulates the cadence and marks the measure", thus separating, like a frontier, the rhythmic members of a text in sadf.

The richness of the rhyme can be very variable. It is sometimes reduced to the final consonant, then comprising only a single consonantal and a single vocalic element. But more complex combinations exist, formed of two or three corresponding consonantal and vocalic elements, or even more. In the "session" of the Fazâra of al-Hamadhanî, for example, there is a pair of consecutive clausulas in which sadfîn rhyme with djanibât. One might mention also that the rhyme in the pausal form in prose is in contradiction from the rhyme in poetry (at least, in most cases) which has a vocalic element after the rauâ (kafîya muâlaka), i.e. kitâb vs. kitâbâ.

Being the most striking external characteristic of sadf, rhyme gradually comes to be seen as the fundamental element. Inferior composers of rhythmic prose, especially from the 5th/11th century onward, tended to accord it too much importance, seeing it as identical with sadf itself. However, despite appearances, rhyme plays a considerably more modest role. Admittedly, it brings to rhythmic prose the component of timbre and contributes to the regulation of the cadence of the sadf by fixing the limit which separates the rhythmic groupings, but it has no influence at all over the formation and the structuring of the latter.

II. Internal structures of sadf

While the poet is subject to the double constraint of metre and of single rhyme, the writer in sadf enjoys far greater freedom since, in principle, only rhyme is expected of him. Totally unforeseeable at the outset, the internal rhythm of the phrase depends on the talent of the writer himself. The first grouping of a couplet or of a series is always spontaneous and absolutely free, while the construction of the second is determined by that of the first, and should reflect it in a more or less faithful manner. Thus, unlike in poetry, the rhythmic unit in sadf is the whole couplet and not the clausula alone, like the hemistich with regard to verse.
Sometimes the two members of the couple present identical phonetic patterns. The symmetrical correspondences of long and of short syllables are then perfect. Here, for example, is a couplet with numerically equal panels:

yudthu l-shra wa l-shru yudthubh // wa-yadu l-shra wa l-shru yudthubh

... He (sc. the pre-Islamic poet Zuhayr b. Abī Sulmā) poetizes melody and poetry melts him // He calls upon the enchantment and enchantment replies to him ...

Besides phonetic coupling, another element engenders and regulates the rhythm also: this is semantic parallelism. The groupings which rhyme together are very often closely linked by a relationship of sense. Al-Djahiz, who did not seek out rhyme at all costs, but from a love of balance, showed himself very stern in this regard, and, in particular, to

the predominance of short syllables is raised to the highest point, this is rhymed and by definition the rhythm is a reflection of timbre” (in this regard, the remarks made by Messadi concerning the Makdāmī of al-Hamadhānī apply most often to sadī in general; see his Essay, 47-51).
tion of the Ribâb, in obedience to one of her revelations, but were severely beaten. Repairing to al-Nabâb (in Yamâma) they suffered a second defeat at the hands of the Banû Amr, and Sâdжа had to promise that she would leave the territory of the Tamim. Followed by the Yarbâb, she decided to join the prophet Musâylîma [q. v.], who still controlled most of Yamâma, in order to unite their fortunes or to restore her own. Their encounter happened at al-Amwâr or at Hâdjîr. Musâylîma was menaced by the Muslim army, and the neighbouring tribes threatened to shake off their authority. To save the remains of a vanquished, ambitious and desperate colleague, accompanied by many armed followers, proved a trying, indeed a dangerous visitation. There is no reliable account of the hour of his tragic death. Al-Tabârî preserves this union, which must have been rather a political alliance than a lustful orgy; the wedding, according to one version, the strange alliance than a lustful orgy; the wedding, according to one version, the meeting: according to one version, the wedding, according to another, the marriage, and says that the prophet tried to persuade his rival and would-be ally to attack the Muslims, hoping thus to get rid of her; on her refusal he offered, if she consented to depart, half the year's crops of Yamâma; she declined to go unless he promised half of the next year's harvest as well, set off with the first part of the booty, and left her representatives with Musâylîma to wait for the rest, repairing to her kinsfolk. The second part of the ransom was never collected, as Musâylîma was vanquished and massacred by Khâlid ibn al-Hawrân before the next harvest.

Whatever the outcome of Sâdжа's relations with Musâylîma, her own career was either merged into his, or cut short by repulse, and we hear nothing more of her mission. According to all accounts, she went to Yamâma, in order to unite their fortunes or to restore the territory of the Tamim under the Umayyads, lived and died there a Muslim, and was buried with the customary prayers and ceremonies.

---

Village half-way to the east of the route from Kâbul to Ghazni in the vicinity of Sayyidâbâd, dominated by a high-lying citadel, now in ruins, called Takht-i Sâdジャ or Shâh-i (Shabd-i) Djamshid. On the foot of this mound is placed the mausoleum of Khâdjâ Khâmîm (Muhammad). Here, even today, the Shaykh is revered as a great and popular Kurgan reader. His system of five, or seven, kinds of pauses in recitation of the Kurân (1. *lazim = m*, 2. *mu'allak = i*, 3. *dâl = d*, 4. *mu'awwas = wawâd = z*, 5. *mu'akkâl ãafr = d*, and 6. *ka'd kâfr = t*), is retained, as *tâ'ânis* not only in the East but it is also substantially adopted in the official Cairo edition of the Kurân (Gesch. des Qur., iii, 236-7).

The manuscripts of his K. al-Wâkîf or al-Wâkîf uâ 'l-tâbisal are numerous. These are differentiated into: (a) a complete or ‘greater’ book, (b) a brief or ‘shorter’ book, often commented and glossed by others, and (c) compendia on this topic by later compilers who follow al-Sâdжаwândî's system, also in verses (Garrett 2067, 1). The ‘greater’ as well as the ‘shorter’ wâkîf book should have originated from his K. 'Ayn al-tâfisîr, which has not been discovered until today. According to the somewhat younger Ibn al-Kiftî [q. v.] (Inbâh, iii, 153), al-Sâdжаwândî in this commentary on the Kurân treated also kizâ'at, nahu, lughâ, gawhari, âdî, etc. His son Abu Nasr (Abû Dja'far?) Ahmed—father and son are sometimes confused—excerpted and presumably modified his father's work under the title K. Insân al-'âsîn. Under several other titles attributed to the father dealing with specific themes seem to be hidden other excerpts and adaptations of his main work, for example on syntax and etymology, on strange words and morphology (e.g. Mâkhâzî, Gâwar Shâd, iii [1367/1988], 1617 no. 1161).

Allāh [q.o.]; M."A. Mudarris, Rāyḥanāt al-adabā', Tabriz 1347/1968, ii, 443. (R. SELLEHAM)

SADJDJA (s.) "bowing down", the name of two Kur'ānic suras (XXII, also called tanzil al-sadjda, and XLI, more commonly called fassiyat or hā-mīm) and within the technical phrase sadjad (or sadijat, or plural sadjud) al-tildwa, fussilat and XLI, more commonly called D passages (variant traditions suggest 16, 11, 10, or 4 passages) which require a ritual of bowing to be performed at the end of their recitation. The passages are marked in the margin of the Kur'ān text, usually with the word masjid/masjud is used). The passages vary in their suggestions regarding the practice. Some are direct commands to perform it: XXII, 77, "O you who believe, perform the prostration and bow down" (but it is primarily the Shāfi'i tradition which implements bowing here and sometimes omits it at XXII, 18, thus maintaining a total of 14 verses of sadjud; XLI, 37-8, which indicates that God should be bowed down to, not the sun and the moon; LIII, 62, "So bow down to God and worship" (this verse is not included in some versions of the Mālikī tradition of sadjud); and XCVI, 19, "Bow down and approach (God)" (not included in the Mālikī tradition). The command is expressed negatively in LXXIV, 20-1, "What is with those who do not believe? When the Kur'ān is read to them, they do not bow down" (again, not included in the Mālikī tradition).

Less than commands but suggestive of Muslim practice are passages which speak of the past: XVII, 107-09, which speaks of those who "given the knowledge before you (Muhammad), when it is recited to them, fall on their faces, bowing down"; XIX, 58, which describes the patriarchs who bowed when the signs/verses of the Merciful were recited; and XXXVIII, 23 as in the printed text) is mentioned; the practice in relationship to Kur'ān XIX, 58 (not XXXII, 15 as in the printed text) is mentioned; the emphasis of the chapter in this book, however, falls on weeping (bukā') during recitation, a practice which in later texts (e.g. al-Nawawī, d. 1278/1961), al-Dā'ī’ī, ed. M. Muranly, Wiesbaden 1992, 62-78, sadjad is treated fully, in a manner similar to later hadīth collections.

The hadīth books are replete with references to bowing in recitation and the practice of the bowings in the various passages may be established through their testimony. Much of the hadīth material reflects a debate over whether the practice was actually required or simply meritorious. Later jurists discussed many additional aspects of this practice, including what to do when one hears somebody else reciting a verse which requires sadjad and whether (and in what context) the sadjad could be delayed.

After any one of those passages is recited, whether in the context of salāt or sadjad in general, the following ritual will be observed, although the precise details vary between the legal schools: the takbir is pronounced, a prostration is performed such that the forehead touches the ground, words of praise or supplication appropriate to the verse in question are uttered, and the takbir is uttered again upon rising. Performing these acts requires the state of ritual purity associated with prayer.

Among the oldest datable sources dealing with bowing during Kur'ān recitation is Abū Ḫayyād (d. 224/838), Fida’ al-Kur’ān, Beirut 1991, 66, where the practice in relationship to Kur'ān XIX, 58 (not XXXII, 15 as in the printed text) is mentioned; the emphasis of the chapter in this book, however, falls on weeping (bukā') during recitation, a practice which in later texts (e.g. al-Nawawī, d. 1278/1961), al-Dā'ī’ī, ed. M. Muranly, Wiesbaden 1992, 62-78, sadjad is treated fully, in a manner similar to later hadīth collections.

SARDJADHUsayn, Sayyid [see HiojA. iv Urd.)

SADJDJA (s., pl. sadjudjud, sadjudjud, sadjjud), the carpet on which the salāt [q.o.] is performed. The word is found neither in the Kur'ān nor in the canonical hadīth; the occasional use of a floor-covering of some kind was, however, known at quite an early period.

1. Early tradition. In the Hadīth [q.o.] we are often told how Muhammad and his followers performed the salāt on the floor of the mosque in Medina after a heavy shower of rain, so that their noses and heads came in contact with the mud (e.g. abukhrārī, Adīn, bāb 135, 151; Muslim, Siyām, nads 214-16, 218, etc.). At the time when such traditions arose, the use of some form of carpet was not so general that their origin can be dated so far back as the time of the Prophet. In a series of traditions, the saying is put into Muhammad’s mouth that it was his privilege, in contrast with the other prophets, that the earth was to be for him masjid wa-tahur (e.g. al-Bukhari, Taṣawwum, bāb 1; Salāt, bāb 56, etc.). Al-Tirmidhī, Salāt, bāb 130, also tells us that some fakāhī prefer the salāt upon the bare earth.

The canonical Hadīth gives us the following picture: Muhammad performs the salāt on his own garment, protecting his arms against the heat of the soil during prostration with one of its sleeves, his knees with one end of his robes and his forehead with the 'imāma (turban) or the kalansuwa (cap) [see līrās. (i).]
The central and eastern Arab lands; (al-Bukhari, Salat, bdb 22, 23; Muslim, Musnad, trad. 191; Ahmad b. Hanbal, Musnad, i, 320). Al-Bukhari, Salat, bdb 22, tells us that Muhammad performed the salat on his frisht (quilt).

The Hadith also informs us that the salat was performed on mats; e.g. al-Tirmidhi, Salat, bdb 131, where a bizis [q. v. in Suppl.] is mentioned; also Ibn Maja, Ikmat al-salawat, bdb 63; Ahmad b. Hanbal, i, 232; iii, 160, 171, 184, 212; also a bagis (a mat the length of a man), e.g. al-Bukhari, Salat, bdb 20; Ahmad b. Hanbal, iii, 52, 59, 130 ff., 145, 146, 179, 184 ff., 190, 226, 291. This tradition is also found in Muslim, Musnad, trad. 266. It is evident from Abu Dawud, Salat, bdb 91, that at the end of the 3rd/9th century, dressed skins of animals (farwa masdjhada) [see FARWA] were already being used.

We also frequently find it mentioned that Muhammad performed the salat on a khamma (al-Bukhari, Salat, bdb 21; Muslim, Musnad, trad. 270; al-Tirmidhi, Salat, bdb 129; Ahmad b. Hanbal, i, 269, 308 ff., 320, 358, ii, 91 ff., 98; al-Nasa`i, Musnad, bdb 43; Ibn Sa`d, i, ii, 120). According to Muhammad b. `Abd Allâh al-`Alawi's marginal glosses to Ibn Abd Allah al-Madja, Ikdma, bdbs 63, 64, the khamma afforded just sufficient room for the prostration (see above).

The word sadsdjada is found a century after the conclusion of the canonical Hadith literature. Al-Qawa, Sadisb, explains it to mean synonymous with khamma. Dozy, Suppl., quotes passages from Ibn Ba`tisja, who mentions among the customs of a certain zauwiy in Cairo that the whole congregation went to the mosque on a Friday, where a servant laid his sadsdjada ready for each one (i, 73, cf. 72). The same traveller tells us something similar regarding Malik (f.e. Malik [q.e.]) where everyone sends his servant with his sadsdjada to the mosque, to lay it ready in his place. He adds that they were made out of the leaves of a palm-like tree (iv, 422).

Some early traditions survived until this century. In Mecca, everyone in the great mosque performs the salat on a sadsdjada, usually a small carpet just large enough for the sadad [q.v.]. After use it is rolled up and carried off on the shoulder. In place of a carpet, a towel is sometimes used, for example the one used by the karta. In the mosque, the lamp was often replaced by a bouquet of flowers. Sometimes a pair of candlesticks flank the mharab; in later periods, two columns of flowers may be found. Sometimes a short text from the Kur'ân is woven at the head of the mharab. For communal family prayers, a sa`f (row), a long rug with a row of mharabs side by side, may be used. In Turkey, the sadsdjada was known as namazlik (T); in Persia, as đa-yi namaz (P).

A few rare sadsdjadas in museum and private collections are attributed to the 10th-11th/16th-17th centuries, but the majority of "antique" sadsdjadas date from the 12th-13th/18th-19th centuries. A few earlier representations of sadsdjada survive in Persian miniatures. A manuscript of Bal'ami's translation of al-Tabari's Ta[ârîkh, painted in Shiraz about the second quarter of the 8th/14th century, now in the Freer Gallery, Washington D.C., contains a miniature of Muhammad seated upon a sadsdjada, in conversation with Abu Bakr and `Ali. The sadsdjada is here interpreted as a seat of honour, and a kind of spiritual throne. Similarly, a miniature in the Mi`râjdânamâ from Harât, dated 840/1436, now in the Bibliothèque Nationale, Paris, depicts Muhammad with an aureole around his head to indicate his spiritual authority, seated upon a sadsdjada. To the left are Adam, Noah and David; to the right, Abraham, Moses and Jesus. Representations of the salat being performed are rare, but a miniature of the early 11th/17th century, in the Staatliche Museen, Berlin, depicts Djahângir and his son in prayer upon two sadsdjadas; the courtiers share a large bisis.

Turkey has for centuries been famous for the production of pile carpets. When weaving a sadsdjada, the weaver uses the finest materials within his means, and his best workmanship. Turkey adheres to strict Islamic artistic tenets, wherein the representation of living creatures is forbidden. Turkish designs thus have a balanced formal structure, though the decoration is very rich, incorporating flowers with geometrical ornament. The most famous centres for the weaving of sadsdjadas are Gordes (Ghiordes) and Kula.

The artistic tenets of Islam are less rigidly interpreted in Persia, where animals and birds often appear upon many carpets. Sadsdjadas are more graceful in style than in Turkey; but though the mharab may have more naturalistic elegance, and the lamp and floral ornament more realism, when weaving a sadsdjada the injunction against representing living creatures is observed. The mharab is sometimes filled with the traditional "Tree of Life", or with a large flowering plant. A particularly rich sadsdjada may be woven with warp and weft, or even pile, of silk.

In both Turkey and Persia, the rural people and the religious societies and in the dervish orders (see 3. below).

A whole series of mystical interpretations is associated with the sadsdjada or bisid. References are found to the sadsdjada of the paths of salvation, and the profession of tawhid is called the sadsdjada of the faith.

2. Surviving examples. The distinguishing iconography of the sadsdjada as familiar today is the large central mharab [q.v.], the arch of which is placed to one end of the rug; the field may be plain or decorated. The rug is surrounded by a series of decorative borders. When spread in a mosque, the mharab is laid pointing towards the kibla [q.e.]; for private prayer in the home, the mharab is similarly laid pointing in the direction of Mecca. In early sadsdjadas, a representation of a mosque lamp is sometimes placed within the arch of the mharab; by the early 13th/19th century, the lamp was often replaced by a bouquet of flowers. Sometimes a pair of candlesticks flank the mharab; in later periods, two columns of flowers may be found. Sometimes a short text from the Kur'ân is woven at the head of the mharab. For communal family prayers, a sa`f (row), a long rug with a row of mharabs side by side, may be used. In Turkey, the sadsdjada was known as namazlik (T); in Persia, as đa-yi namaz (P).
nomadic tribes practise rug-weaving, including sadjdjadas. The designs are bold, colourful and often profusely ornamented with geometrical and stylised motifs. In addition to pile rugs, tapestry-woven rugs (kilim) are woven. The mihrab of the sadjdjada is often very simply delineated, and usually of angular form.

The rugs and sadjdjadas of the Caucasus have been little known until the 13th/19th century. The sadjdjadas have distinctive geometrical ornament, and stylised motifs of local tradition; many sadjdjadas are kilim-woven.

The normal floor-mat in India is the dari, a flat-woven pile-less rug of thick cotton. In the hot season, a light floorspread of fine cotton, painted and printed, was practical. The art of pile-carpet weaving was not introduced until the reign of Akbar (963-1014/1556-1566) [q.v.], and even then only in the region of Burhanpur, Khandesh, in the 12th/18th century. A few rare cotton sadjdjadas survive, made in the region of Burhanpur, Khândehg, in the 12th/18th century. The design is restrained and dignified, the mihrab and the borders being ornamented with fine painted and printed floral meanders; a particularly Indian feature is the conventional representation of the domed minarets of a masjida rising from the sides of the mihrab (Irwin and Hall [1971], 26 and plate 8). Printed cotton sadjdjadas made in the late 13th/19th century at Masulipatam, at very small cost for the ordinary people, survive in museum collections.

A few rare cotton sadjdjadas survive in museum collections. The rugs are undated, but may be 12th/18th or 13th/19th century. Other dari-woven sadjdjadas, of attractive simplicity, from the 13th/19th century, survive in museum collections.
poses, the prayer rug has become neither an unmistakable sign nor an exclusive prerogative of the Sufi djalāl. Rather, most Muslims considered it to be a symbol of righteousness, an important, albeit optional, condition of ritual purity not necessarily restricted to the realm of Islamic mysticism (see e.g. E.W. Lane, Manners and customs of the modern Egyptians, London-New York 1966, 73). This may explain why Ibn al-Djawzi [q.v.], the Hanbali legist who undertook an exhaustive critique of contemporary Sufi thought and practice, tellingly omits the prayer rug from his discussion of the Sufi ‘accesories’ and exotic ‘innovations’ such as living in isolated lodges (ribāt [q.v.]), donning exotic clothes (murakka’s, khirka), making light of the ablutions and the prayer, encouraging voluntary poverty and begging, indulging in disgraceful musical sessions and dances, etc. (Taḥlib Ibtī, ed. Muhammad ‘Ali Abū l-‘Abbās, Cairo 1990, 145-340). This probably indicates that, in Ibn al-Djawzi’s time at least, the sadjīda was not regarded as an exclusive feature of Sufi piety and the concomitant development of the mystical tradition. On the contrary, it has become an unreservedly link it to the Sufi piety and way of living shared by the generality of Muslims, the blessing and wondrous imaginable qualities it may possess result from the sanctifying presence of the Sufi wali, whose divinely given ‘grace’ (baraka [q.v.]) miraculously transforms everything around him. When a Sufī saint spreads his shabby prayer rug above the waves (Landolt, op. cit., 253) or performs his supererogatory prayers standing on the mat suspended in the air (Ibn ‘Arabi, al-Futūḥāt al-makkiyya, Cairo 1329, i, 186; tr. in R.W.J. Austin, Sufis of Andalusia, Oxford 1971, 28-9), one realises that it is the saint, not his sadjīda, that makes such wondrous things possible. In the case of Ibn ‘Arabi’s narrative, the ordinariness of the prayer mat is intentionally stressed in order to throw into relief the supernatural powers that the presence of God’s friend conveys to it. It is noteworthy that in both cases the flying rugs are brought into play with a view to persuading some sceptical, rationalist onlookers who doubted the reality of the miracles ascribed to the Sufī saint.

In keeping with a widespread Sufi belief that was shared by the generality of Muslims, the blessing and the beneficial grace of the wali pervade all things and individuals that have come into direct contact with him/her. Such miracle-working grace does not cease with the wali’s death. It is thought to be inherited by his/her progeny. On the other hand, it is also immortalised in the wali’s shrine as well as his/her personal effects. Both symbolise the saint’s invisible presence among his/her relatives and followers. This helps to explain why such vestiges often become objects of veneration similar to that enjoyed by the relics of the Christian saints. It is against the background of this belief that one should view the concepts of the shaykh [wali] al-sadjīda and its Persian analogue sādīğīdān-nishin, meaning ‘the prayer rug sitter’ (see e.g. H.A.R. Gibb, Muhammadanism: an historical survey, Oxford 1968, 152). These terms were normally applied to leaders of Sufi communities or heads of holy lineages (see gūr) who fell heir to the spiritual authority of a revered saint. In the case of a revered saint founder (see F. Meier, Abū Sa’dī Abū Ħayr (357/440/1067-1049), Wirklichkeit und Legende, Leiden-Tehran-Liege 1976, 438-67, esp. 458). By extension, the entire mystical ‘path’ initiated by a founding saint was regarded as his/her sadjīda. It can, therefore, be treated as another synonym of ṭarīqa [q.v.], sīsilā [q.v.], and ḥāldīla [q.v.], section 3], i.e. of the terms applied to various Sufi organisations.

This usage superseded particularly prominent in Egypt and, to a lesser extent, in North Africa, whereas in the West it appears only sporadically, and does not carry the precise technical meaning ascribed to it in Western Islam (for such occasional usage, see e.g. H.R. Roemer, Staatsschriften der Timuridenzeit. Das Saraf-nama des Abdallah Marwardi in kritischer Auslegung, Wiesbaden 1952, 64, 158). In Egypt, the phrase maktūb shaykh al-sadjīda (and its correlate the term arbāb al-sadjīda), as technical terms used in official documents, do not seem to have gained wide currency before the end of the 11th/17th century. Both terms were applied to the leaders of Egypt’s major Šufi jurāk and jurāk-linked institutions, i.e. zāwiya [q.v.], takyya, and popular Šufi shrines. The term arbāb al-sadjīda, however, seems to have been reserved for the four family-based mystical associations, namely those
which traced themselves back to the Rightly-Guided Caliphs and the Companions. According to F. de Jong, they were: al-Bakriyya (deriving from Abī Bakr al-Siddīk), al-Sajjadiyya (Umar b. al-Khaṭṭāb), al-Khuḍayriyya (al-Zubayr b. al-ʿAwwām), and al-Wofāʾiya (Abī Taḥlib) (Turq and Turq-linked institutions in nineteenth century Egypt, Leiden 1978, 13-14).

Of the leaders of these family jurūd, the ṣawājī ṣaḥba al-sajjadiyya was to assume special importance when in 1227/1812, in a drive to secure better state control over the Egyptian religious establishment, the Viceroy of Egypt Muḥammad ʿAlī (q.v.) invested the holder of that office with authority over all mystical communities (waṣīfāʾ al-fukard*A al-ṣaḥfiyya) as well as the Ṣūfī shrines and lodges of that country (al-Djabarti, ʿAhydrate al-bakriyya Cairo 1297, iv, 165; for a tr. of Muḥammad ʿAlī’s firman, see de Jong, op. cit., 192-3).

For almost a century the holders of this office endeavoured, with varying success, to steer a middle course between the assertive temporal rulers and the restive leadership of Egyptian mystical associations who were anxious to preserve their independence vis-à-vis the Egyptian government (the policies pursued by the incumbents of the al-sajjadiyya al-bakriyya from 1227/1812 until 1321/1903 are analysed in de Jong, op. cit.). In the 19th and early 20th centuries, the leaders of the newly-founded Egyptian jurūd had to obtain the title of al-ṣawājī ṣaḥba al-sajjadiyya from the current holder of the Bakriyya “prayer mat”, whose hereditary office was called ṣawājī ṣaḥba al-turuk al-ṣaḥfiyya. Only after the latter’s approval were they recognised by both the government and the Śūfī establishment of Egypt represented by the so-called “Śūfī Council” (al-maḏdiṣ al-ṣufī). The latter, in turn, was always presided over by the ṣawājī ṣaḥba al-bakriyya (ibid., 132-46, et passim; P. Kahle, Zur Organisation der Derwischorden in Ägypten, in Isl., vi [1916], 152-3; for a recent example of a newly-founded brotherhood seeking such an approval, see M. Gilsenan, Saint and Sufi in modern Egypt, Oxford 1973, 36, where the discussion centres on the rise and subsequent functioning of a modern tariqa called al-haḍimiyah ʿaḍhdīfiyya). In modern Egyptian usage, the central office of a Śūfī order, which today appears to be a rather bureaucratised and centralised institution, is followed over the Egyptian religious establishment (cf. Gramlich, Die Schiitischen Derwischorden, passim). Of the leaders of these family jurūd, see Gramlich, Die Schiitischen Derwischorden, passim.

Within the framework of this imposing pageant, the sadji is or the post served as token representation of the highest witnesses to the novice's oath, i.e. God and his elect saints.

The sheep-skin belonging to the Sufi leader plays a significant role in the exotic "spiritual concerts" of another Anatolian brotherhood, the Mawlawiya [q.v.]. The Mawlawi dervishes treat it simultaneously as the seat of the spiritual pole of the universe (kiyb [q.v.]), the throne of God, and a paradise on earth. It is not surprising therefore that this post enjoys special esteem for being the focal point of the Sufis' religious association. Its centrality for the Mawlawi outlook is reflected in their colourful mystical performances as described by H. Ritter (Der Reigen der "Tanzenden Derwische", in Zeitschr. f. vergleichende Musikwissenschaft, Berlin, i/2 [1933], 28-40; M. Mole, La danse extatique [q.v.]), the throne of God, and a paradise on earth. It is the seat of the spiritual pole of the universe.

Like their Turkish colleagues, modern Persian dervishes have used a post rather than a sadji in their initiatory rites, which otherwise follow the pattern of the Egyptian juruk described above (Gralmich, op. cit., 76-7 et passim). This fact, however, does not change the essence of the rite that logically flows from the mystical doctrine of wusla. This doctrine, in turn, goes back to the pre-Islamic past (for an attempt to trace its origin to shamanism, Manicheanism and Buddhism, see Landolt, op. cit., 249, 251-2).

(A. KNYS)

SADIJDA, a line of military commanders who governed the northwestern provinces of the caliphate (Adharbayjân, Arrân and Armenia) in the later 3rd/9th and early 4th/10th centuries on behalf of the Abbasids.

The Sadjids were just some of several commanders, originally from the Iranian East and Central Asia, who came westwards to serve in the early'Abbasid armies. The family seems to have originated in Ughrûsana [q.v.] on the middle Sîr Darya in Transoxania, the region where the Afshins [q.v.] were hereditary princes until at least the end of the 3rd/9th century, and was probably of Soghdian stock; by the time the family came to prominence in Islamic history, however, it had become culturally Arabicised to a considerable extent.

Abu l-Sâdîq Dwêdâd (I) b. Yusûf Dwêdâghâf fought in the Aghânî Haydar's army against the anti-'Abbasid rebel Bâbâk al-Khurramî [q.v.] (al-Tabârî, i, 1222) and then with Tâhirîd forces in Tabaristan against the rebel Mâyâr [see Karimî] (ibid., iii, 1276). Al-Mu'tazz later appointed him governor of Aleppo and Kinnarîn, and as šâhî al-qurta police commissioner in Baghdât he was deeply involved in the strife involving the caliphs and their Turkish guards in Baghdât and Sâmârî. In 261/875 he was appointed governor of Khûzîstân, but when in the next year the Saifârid Ya'kîb b. al-Layjî [q.v.] prepared to march into Irâq against the 'Abbâsid, Abu l-Sâdîq Dwêdâd joined Ya'kîb and took part in the battle near Dâsyd-âilik [q.v.]: hence his estates and properties in 'Irâq were confiscated by al-Mu'waffak. He nevertheless stayed faithful to the Saifârids, and died at Dîvûndîshâbûr in the service of 'Amr b. al-Laytî [q.v.] in 319/931 (al-Tabârî, ii, 1937).

His two sons, Mu'mâmad and Yusûf, remained, however, in the 'Abbâsid service. Abu 'Ubayd Allâh or Abu 'l-Musâfîr Mu'mâmad was active in the 880s in operations against rebels in the Hijâz, and acted as the representative of the Saifârid 'Amr b. al-Laytî [q.v.] in the Holy Cities. On the death of the governor of Egypt and Syria'Abd b. Tûlûn [q.v.], in 270/884, he accompanied the caliphal expedition against the latter's son Khumârawya [q.v.] led by the general Ihsâk b. Kundâdîkî of Mawûsî, now appointed governor of Egypt and Syria, and took part in the tragic "Battle of the Mills". He subsequently quarrelled with Ihsâk and in the late 880s fought with him in the Mawûsî region. In 276/889-90, however, al-Mu'waffak appointed Mu'mâmad governor of Adharbâyjân, the province which from this time onwards became the focal point of the Saifârid association (12). In 280/893 he acquired Mârâgha [q.v.] from the local rebel 'Abd Allâh b. l-Hasan al-Hamdânî, and was thus involved in warfare with the Armenian Bagratid ruler Smbat (in Arabic, Sunbât) I, temporarily occupying Nahjûjîn and Dwîn [q.v.]. He now felt strong enough to rebel against his 'Abbâsid master, and it may have been at this point that he assumed the ancient Iranian title of Afgânî (see above), which appears on a dirham of his minted at Bardînâ [q.v.] in Arrân in 285/898. But he soon made peace again with al-Mu'tâdîd, was confirmed in his governorship and renewed operations against Smbat, penetrating to Kârî and Tîfîs [q.v.], and into Vaspurakan, then ruled by the Arzrunid prince Sargis Ashôt (Arabic, Ashtût) I. Mu'mâmad died of plague in Bardînâ in Rabî' I 286/March 901. The army of his son Adharbâyjân placed Mu'mâmad's son Dwêdâd (II) in the governorship at Mârâgha, but Dwêdâd was soon forced out (Sha'bân 288/[July-August 901) by his uncle Abu 'l-Kâsim Yusûf. Yusûf transferred his capital to Ardabil [q.v.]. He insisted on maintaining the direct Sa'did suzerainty over Smbat in Armenia, despite the latter's attempts to place himself directly under the caliph al-Muktafi in Baghdât and his seeking aid from the 'Abbâsid against Yusûf. However, on the accession of al-Muktafi'd Yusûf's governorship of Adharbâyjân, Arrân and Armenia was confirmed. Now with the authority of the caliph behind him, and with the powerful support within Baghdât of the vizier Ibn al-Furât [q.v.], Yusûf invaded Armenia and conducted a campaign of violence and devastation there, capturing Smbat and then in 301/914 executing him, but by ca. 304/917 recognizing the rival Armenian dynasty of the Arzrunids as his vassals (see Waqf). Yusûf now turned his attention to northern Persia and conquered Zandjân, Abhar, Kazîvin and Rayy from the governor on behalf of the Sâmânîd Mu'mâmad b. 'Ali Su'lûk, but his relations with al-Muktafi'd deteriorated and the caliph sent against his insubordinate servant an army under his commander-in-chief Mu'nis al-Mu'asâfar [q.v.], who defeated Yusûf in 307/919. At this stage, Yusûf promised to pay tribute and leave Armenian affairs to the caliph. On his release in 310/922, he was appointed governor of Adharbâyjân, Rayy and northern Djîbâl province, securing Adharbâyjân and then Rayy and Hama'dhân. In 314/926 the caliph recalled him and appointed him to command an army to be sent against the Karâmî [see Karmašî] in Lower 'Irâq, but he was defeated near Kûfâ by the Karâmî leader 'Abâ Tâhir al-Dînâbâţî, who killed (Abû 'l-Hîdât) him (February 315/September 928). It does not seem that it was at this point that some of Yusûf's Turkish troops entered the caliphal service in Baghdât, to form there a special regiment of the Sa'dîjîya. This unit is mentioned previously (e.g. by Miskawayh, Tâdîşirît al-umam, in Eclipse of the 'Abbâsid caliphate, i, 116, tr. iv, 130, year 311/923-4), and Ibn Khallûkân, ed. 'Abâsî, ii, 250-1, vi, 415, tr. de Slane, i, 500, iv, 315, cf. iv, 334 n. 11,

expressly states that al-adjndd al-Sddjtyya in Baghdad were named after Abu '1-Sadj Dewdad (I), i.e. they refer to the chest of all animals, or to that of humans only. In the latter case it is contrasted with e.g. the kir kita, the camel-stallion, the labn of the horse, the saur of the lion, the dug' of the bird, etc. (see al-Tha'labi, Fith al-lugha, 109: taksim al-sudur), but the lexicographers are not unanimous in their definitions of these words (e.g. al-Asma'i, Khalq al-insan, 216, I, 12, equates saur and dug' with sudur). From these sources we derive the fact that verbs may be derived: sudara "to hit, wound the chest" and sudura "to suffer from a chest ailment."

The sadr, like "bosom," is also the seat of emotions and convictions, and interestingly this is the only sense in which it occurs in the Kur'an (with the possible exception of sura XXII, 46; see, however, below). In the singular (but, strangely, never in the plural) it is consistently connected with the idea of "constriction" (root sh-r-h, cf. XI 12; XV, 97; XXVI, 13; also root h-r-g, cf. VI, 125; VII, 2) or "dilation" (root g-d-r, cf. VI, 125; VII, 106; XX, 25; XXXIX, 22; XXIV, 1) to express anxiety, grief, and rejection vs. serenity, joy, and acceptance. The plural sudur is mostly used in conjunction with the idea of thoughts and feelings that are hidden in them (roots kh-f-y, see III, 29; III, 118; IX, 5; XL, 19, and k-n-n, see XXVII, 74; XXVIII, 69), but which God knows nonetheless; this is particularly expressed in the refrain-like formula inna 'lladha sadrahu li-l-islam..." which prompted Abu al-Husayn al-Nuri (d. 295/907 [q.v.]) to establish a parallelism between sadr as the seat of islam and— moving inward and upward— between kalb, fa'd, and labb, all Kur'anic terms, as the respective seats of iman, mu'afa, and ta-wedd (Makamad al-kalb, 130, cf. P. Nwyia, Exégèse coranique, 321, who also points to a similar terminology in the Tafsir attributed to Dja'far al-Sadik [d. 148/765 [q.v.]], where the parallelisms are: sadr and submission (taslim), kalb and certainty (piku', fa), and labb and the secret (sim), and the safi as the refuge of all good and evil; damir not being Kur'anic, al-Nuri stays closer to the Kur'anic. A similar scheme is proposed by al-Hasim al-Tirmidhi (d. after 318/930) in his K. fi Bayan al-fark bayn al-sadr wa-l-kalb wa-l-fa'd wa-l-lubb, 33-47, 79-83 (tr. 28-36, 244-5). He offers several analogies to characterise the relationship of the four parts of the heart (note that kalb has two meanings,
one comprehensive and one specific), of which the following two may be quoted:  

He-

Bibliography: Sakkaki (see above); Ibn Rashid.

Similar divisions remain popular with later writers, although the term sadr is not always included, while other terms may be added (relevant sections tr. and ff.). Al-Tirmidhi’s scheme is taken up again, with certain alterations, in the Persian Kur'dh, which assigns the two functions of mithak and shaghaf (Kashf al-Asr Var, viii, 411-12; cf. Murata, op. cit., 296-7).

The sadr is described in a number of metaphorical ways as the place in which the internal dramas of good and evil are staged. According to one passage in al-Hakim al-Tirmidhi, the heart is the home of faith, the soul is the home of passions. Between them is a wide space called sadr, from which emanate (sadara), the orders executed by external organs. Both heart and soul have an opening leading to that place. Through that the heart of light would shoot into the sadr, as the fire and smoke of passion would shoot into the breast through the opening of the nafs. Whichever triumphs over the other brings about obedience or disobedience. “Et telle est toute l’histoire du cœur et de l’âme” (P. Nwyia, op. cit., 279, summarising a passage from the Masadah). For other descriptions, in al-Tirmidhi’s work, of the struggle in the sadr between heart and soul, see al-Furuk wa-man* al-tardduf, apud P. Nwyia, op. cit., 122; Beyân al-jarj, 46-7; Khattam al-ausiy, 130-1; B. Radtke, Al-Hakim at-Tirmidhi, Freiburg 1989, 56-71 and index).

A strangely generalised use of the term sadr appears in al-Futakht al-Makkiya of Ibn al-‘Arabi (d. 638/1240 [q.e.]). Here the sadr is presented as a universal feature of creation; each thing can boast of one. Knowledge of it is among the loftiest knowledge on the Path, since the world and each genus is according to the shape of man (microcosm), who is the last created thing. Man alone is according to the Divine shape, externally and internally, and God has made for him a sadr. Between Him and man there are sadur whose number only God knows (ii, 652). This is followed by an enumeration of twenty-seven sadur, after which Ibn al-‘Arabi adds that every sadr has a kalb and, as long as the kalb remains in the sadr, it is blind (cf. sura XXII, 46), because the sadr is a veil upon it. If God wills to make it seeing, it goes out from its sadr and thus sees. E.g. the causes (ashâd) are the sadur of their existence, and their sadur are like hearts. As long as an existent thing looks at its cause from which it emerges (sadara), it is blind to seeing God as the one who made it existent (ii, 652-3).

In everyday life, the idea of the sadr being the container of something hidden is expressed in the proverb sadraka awwa’tu li-ṣirrâti (‘Your bosom is wide enough for your secret’) admonishing a person to keep his secret to himself (al-Maydani, Magîma’ al-ammâli, ed. Muhammed Muray, ’l-Din ’Abd al-Hamid, 2 vols., Cairo 1379/1959, i, 396a). In a figurative sense, sadr means any “first, front, or upper part” of a thing. A number of technical meanings result.

(a) In prosody sadr has two unrelated meanings. One refers to the first foot of a verse, as opposed to ’adjuz, the last foot. This latter is also known as dahr; this, however, defines it as the last foot of the second hemistich as opposed to the last foot of the first hemistich, the ’arid. The structure of a complete line in terms of characteristic elements (arkân) is the following: sadr-’adjuz-’ardid/bidâ’id-’adjuz (dahr) (see al-Sakkaki, Mu’in, 523-4; Freytag, Darstellung, 117-120; Elwell-Sutton, The Persian metres, 40). Hadj feet occur, of course, only if the hemistich consists of more than the initial and the final foot, i.e. in musaddas and muhamman lines. The terms sadr and ’adjuz are often also loosely applied to the entire first and second hemistich, respectively (see Lane, s.v.). This has influenced their use in the technical term radd al-’adjuz ‘ala l-sadr, referring to the rhetorical figure of anticipating the rhyme word in the first half (at times even the beginning of the second half) of the line (see G. E. von Grunebaum, who compares the epanadiplosis of classical rhetoric, Tenth-century document, 32 n. 247, 116; G. Kanazi, Studies, 56-7; note that, while ’adjuz is still used in its narrow sense of rhyme foot, sadr has acquired the broader meaning).

The other meaning of sadr in prosody occurs in the context of the phenomenon called ma’âkaba, i.e. the obligatory alternation of the shortening of two adjacent lines [see sâbas]. Thus in the ramael metre, the foot fa’iltu has may have its first cord shortened, thus fa’iltu, only if the last cord -tu of the preceding foot is not shortened; this case is called sadr. Or it may have the last cord -tu shortened, thus fa’iltu, but only if the first cord fas of the following foot is not shortened; this case is called sadr. Or, finally, it may have both its first and its last cord shortened, thus fa’iltu, but only if the preceding following cords are not shortened; this case is called fa’iltu or, more logically, su dhila’alayn (the latter in al-Sakkaki, Mu’in, 527). These phenomena occur in the metres madâl, ramael, khaff and mu’âkaba (Ibn Rashîd, al-’Unda, i, 149). The apparent reason for their existence is to avoid a sequence of four moving letters. Bibliography: Sakkaki (see above); Ibn Rashîd,
al-Umda fi 'inda'lat al-dhi'ir wa-adaabih wa-nakdih, ed. M.M. Ab al-Hamid, 2 vols., Cairo 1383/1963-4; Freytag, Darstellung (see above), 108. (b) In epistolography and the composing of texts in general, the term sadr refers to the introductory formulae of letters and prefaces in books (the latter also tasdir). For an extensive disquisition on sadur in epistles, including the way one alludes to the main topic already in the ta'mid and how one moves (idgali) from the sadr to the actual topic (ghara'ar), see al-Kalǎi, lhitam san'at al-kalami, ed. Mub. Ribwǎn al-Dabas (Beirut 1985), 58-72. Sadr is used in the "old translation" of Aristotle's Rhetoric as one of the terms to render πρόοδος, the exordium or proem, of a speech (see M.C. Lyons, Aristotle's Ars Rhetorica. The Arabic version, ii, Glossary, Cambridge 1982, 123-4, 226). This remains the rendition of choice with the later philosophers. Ibn Sīnā compares the proem which leads into the speech with clearing one's throat before the call to prayer and with warbling on a reed instrument before playing the actual piece (al-Shifa', al-Manṣīk, 8. al-Khwāsī, ed. M.S. Šālim, Cairo 1373/1954, 237, ll. 12-24). In books, the sadr may mean a non-technical "beginning, first part", but may also refer to preliminary remarks that precede the actual "introduction." Thus al-Ghazzālī, in his Mustaṣfī min l-İmāl, Bālīk 1322, prefixes the lihim san'at al-usul, i.e., in the "introduction" of Aristotle's Rhetoric as one of the terms to render πρόοδος, the exordium or proem, of a speech (see M.C. Lyons, Aristotle's Ars Rhetorica. The Arabic version, ii, Glossary, Cambridge 1982, 123-4, 226). This remains the rendition of choice with the later philosophers. Ibn Sīnā compares the proem which leads into the speech with clearing one's throat before the call to prayer and with warbling on a reed instrument before playing the actual piece (al-Shifa', al-Manṣīk, 8. al-Khwāsī, ed. M.S. Šālim, Cairo 1373/1954, 237, ll. 12-24). In books, the sadr may mean a non-technical "beginning, first part", but may also refer to preliminary remarks that precede the actual "introduction." Thus al-Ghazzālī, in his Mustaṣfī min l-İmāl, Bālīk 1322, prefixes the following introductory materials to his book: 1. the ta'mid (2-3); 2. the kawsha (after ammi bâd'), mainly in sadr2, with general remarks about reason and knowledge, as well as some autobiographical indications, ending with the titling of the book (3-4); 3. the sadr al-kitāb, expressly so called, dealing with the definition, the hierarchical status, and the internal structure of usul al-fikr, as also with the reason for the introduction (4-10); and 4. the mutaddāma, "introduction," again expressly so named, in which the author presents an outline of logic and epistemology (10-55). Derived from this sadr is the verb sadara kitābah (L4), cf. al-Fārābī's introductory epistle to his work on the Organon, the Riṣāla sadrā rāh bārī 'l-kitāb, ed. Rāfīk al-Adām, in al-Maṣīk 'ind al-Fārābī, Beirut 1985, i, 55-62. Again, this sadr contains general notions indicating the status of logic, such as logic vs. grammar, syllogistic vs. non-syllogistic crafts, review of the five syllogistic crafts, overview of Organon and of Plato, and, particularly, idem, The rise of humanism, Edinburg 1990, 203-7. Bibliography: Given in the text. (c) From the expression sadr al-mađlis, the upper or front part of the assembly, i.e., "the place/seat of honour," the term sadr for an outstanding person is synecdochically derived (cf. kāna sadrā) fi 'l-fard wa 'l-hišāb, "he was an eminent expert in inheritance and computations and arithmetic," Dory, s.v.). This developed into an academic and an administrative sense. For the latter, i.e. the terms sadr and sadr al-suďar for the head of the religious administration in post-Mongol Iran and sadr-i ašām for the grand vizier in the Ottoman empire, see below. In the academic sense, it is mostly applied to a professor in adab and mostly in the derived forms muṣaddar and mutaddādar. The respective verbs, sadara and tapaddara, mean "to appoint s.o. a professor," and "to be appointed" or "to be made professor," all with the implication of insufficient preparation (see G. MakDISI, The rise of colleges, Edinburgh 1981, 203-6, and, particularly, idem, The rise of humanism, Edinburg 1990, 203-7). Bibliography: Given in the text.

(Edward William Heinrichs)

SADR (A.), used in a personal sense, with an ex- tended meaning from Arabic "breast" > "foremost, leading part of a thing", denotes an eminent or superior person or præsumptuare, whence its use for a chief, president or minister; cf. the Ottoman Turkish Grand Vizier's title sadr-i aşām [q.v.]. The title was especially used in the Persian world for a high religious dignitary whose function (sadrat, şidrat) was concerned especially with the administration of religious affairs. In the first mentions of the title and in the structural evolution of the office in the post-II Khaṇīd period, the titles and prerogatives of the sadr evolved considerably, and despite lacuna in our sources of information, their evolution can be traced chronologically, as described below. (J. Calmard)

1. In Transoxania.
2. In the period from the II Khaṇīds to the Timūrids.
3. In the Timūrid and Turkmen periods.
4. In the Safawīd period.
5. In Mughal India.

1. In Transoxania.

In the cities and towns of Transoxania, the Islamic religious institution, by Karakhanid and Saldūk times predominantly Hanafi in madhhab, came to enjoy a special position of religious, social and often administrative power vis-à-vis the Karakhanids [see İLER-KHAŅ] and subsequent incoming Turkish dynasties. The members of this institution who held office as imām and rażī [q.v.] also came to enjoy the title of sadr; such sadrs were to be found, e.g., in Samarkand, Khudjand, Özkend, Almalk, etc. They were especially influential in Bukhārā, where the Burhānī ones (see below) were further dignified by an intensive form of the title, that of sadr al-suđar. Already during the Sāmānid period there is mentioned (e.g. by the local historian Muhammad b. Ahmad al-Bukhrāi, Chowondj, d. 412/1021, cf. Barthold, Turkestän, 15, and by al-Sam'ānī, Anāb, ed. Haydarābādī, i, 243-6) the family of the Ismā'īlī, who held religious and civic power in Bukhārā. After them there came in 5th/11th century the Șafārīs. In addition to their religious and civic authority, such families were clearly economically powerful also, doubtless possessing urban property and/or rural estates; hence in the assertion of what they took to be their spiritual or political and profane may be considered, and, particularly, idem, The rise of humanism, Edinburg 1990, 203-7. Bibliography: Given in the text.

(Edward William Heinrichs)
When the Saldjuq sultan Sandjar (q.v.) came to Transoxania in 495/1102, he apparently deposed the reigning ʿAbd al-ʿAziz b. ʿUmar Maza, who assumed the title of raʾis, and then changed the title of the highest religious dignitary to the sadr al-sudur, hence preferred to flee and to take refuge with the Kara Khitay. But by now, these last members of the family continued to dominate Transoxania in 616/1219) was renowned for his wealth and arrogance. We also know of eulogistic Persian poetry addressed to them by such authors as the satirist Sūzanī (d. 565/1175-6) and Shamsī-yi Aʿrāдж Būkhārī (fl. ca. 1200 AD) (see F. de Blois, Persian literature, v/2, 427, 452).

The end of Burhānī dominance came with the outbreak at Būkhārā of the popular movement led by the vendor of shields Mahmūd Tārābī (636/1239-9), and the last Burhānī, ʿAbd al-Muḥammad (II) b. Ṭabarī, was reduced by Tārābī to the status of khalīfa or deputy of a new sadr al-sudur, hence preferred to flee and to take refuge with the Kara Khiṭay. But by now, these last being hard pressed by the Mongols, and were not strong enough to replace ʿAbd al-Muḥammad in his former status.

In his place, a new family took over the sādara of Būkhārā. The Ḥanafī šāhs Sham al-Dīn Muḥammad b. ʿAbd al-Muḥūbī b. ʿAbd al-ʿAzīz was Tārābī’s candidate, and there now began a line of sādara as long-lived and as influential as the Alī b. Burhānī, that of the ʿAlī Muḥībī, who inherited from his predecessors the additional form of the title, sād-r al-gāhar. The Muḥībīs, like the Burhānīs, traced their ancestry back to the Arabs of the time of the Prophet, and they likewise at times employed the lakab of Burhān al-Dīn. Already in the 6th/12th century they had produced notable Ḥanafī scholars, such as the theologian Ahmad b. ʿAbd Allāh al-Muḥībī (546-630/1151-1232), and in the next century or so members of the family continued to write many textbooks of Ḥanafī fiqh which became standard. They are mentioned in the sources until the second half of the 8th/14th century, it has been incorrectly thought that it was a Timurid creation (R. M. Savory, The principal offices of the Safavid state during the reign of Tāhir al-Dīn I (930-85/1524-76), in BSOAS, xxiv [1961], 103, also in his Studies on the history of Safavid Iran, Variorum, London 1987) or even a Safavid one (K. Röhrborn, Provenienz und Zentralgewalt Persiens im 16. und 17. Jahrhundert, Berlin 1966, 117; and H. R. Idris, Regierung und Verwaltung des Vorderen Orientis in islamischer Zeit, Hb der Or. Leiden-Köln 1979, 46-7; criticisms by G. Herrmann, Zur Entstehung des Sadr-Amtes, in U. Haarmann and P. Bachmann, Die islamische Welt zwischen Mittelalter und Neuzeit. Festschrift für Hans Robert Roemer, Beirut-Westbaden 1979, 278, 282). A detailed study of the chancery literature (ingāla) and of official documents shows that there was no nomination of sadar under the Djalāyirīds (q.v.). The highest magisterial function in Islam was at that time exercised by the lāḥīr l-i kudūd, with other religious affairs being the responsibility of the chief vizier or other officials like the hākim-i dīvān-i wasūkī-i māmālik (analysis of the Dastur al-kūtbī; cf. Roemer, Staatschreiben der Timurid-Zeit. Das Saraf-ndmā des Ḥabdalldh Marwārid in kritischer Auswertung, Wiesbaden 1952, 142, and Herrmann, op. cit., 284-5). Under the Muzaffārids (q.v.), the highest religious dignitary was still the lāḥīr l-i kudūd. The combination of the terms (but not of distinct functions) of wuzūrat and sādara is attested under the Karts (q.v.) or Kurds of Harāt, with the bestowing of the wuzūrat on Shaykh Muḥīn al-Dīn Djamī (J. Aubin, Le khanat de Cağatay et le Khurasan (1334-1380), in Turcica, viii [1976], 30; Herrmann, op. cit., 294). The first document which we possess on the specific appointment to an office of sādara concerns Muḥīn al-Dīn’s eldest son, Diyaʾ al-Dīn Yusuf (mangīr of Rabī‘ II 782/July-August 1380; see Aubin, op. cit., 51; the document is ed., tr. and commented upon by Herrmann, op. cit., 287 ff.). Timūr considered himself as a disciple of Diyaʾ al-Dīn, who took part in the five-years’ war and died at Tabrīz in 797/1394-5. His brother Shihāb al-Dīn ʿUmar was linked with Mīrān Shāh, the prince who held the apnanage of Khūrāsān (Aubin, op. cit., 53). The office of sādara attributed to Diyaʾ al-Dīn encompassed the direction of affairs concerning all the religious dignitaries (imāms, sayyids, shaykhs, kāds, kāṭibs, muḥātib, amins ‘and other religious authorities’) of the city of Harāt and its dependent districts. All decisions concerning judicial sentences, teaching, the leadership of the worship, the mākbū, the supervision of weights and measures (ḥuṣnāb), the administration of the usufrūk, the inspectorship of finance (isgāf) and...
Activities of the treasury (bayt al-mal), as well as nominations, distributions, appointments and participations of all religious dignitaries and theological students, had to be submitted for his approval.

3. The Timurid and Turkmen periods.

Despite Timur's devotion to Diyya al-Din, the mention of three persons bearing the title of sadr (after their ism) in his reign does not clearly show that they occupied the actual functions of sadarat (Herrmann, Zur Entstehung des Sadr-Amtes, 293-4). This is, on the other hand, attested under his son Shâh Rukh (807-50/1405-14). The practice became the rule under Husayn Baykara (875-912/1470-1506). During his reign, the revenues from awkaf which, like other grants and favours enjoyed complete fiscal immunity, became so important that it was necessary to appoint several sadrs at the same time in order to supervise these revenues (Khwândamîr, Tehran 1333, iv, 321; cf. M. Subtelny, Centralizing reform and its opponents in the late Timurid period, in Iran Studies, xxi/1-2 (1988), 126). However, in 910/1504-5, Husayn Baykara appointed a sadr whose functions were especially attached to the ruler's service (mansab-i saddrat-i Khâ'îsâyî humâyîn, Khwândamîr, iv, 327; Herrmann, op. cit., 282). The fact that the office had been held by several dignitaries at the same time leads one to suppose that there was a hierarchy amongst the various sadrs. But the mention of a chief sadr (sadr al-sadur) only appears once, in a late Timurid document, which seems to indicate the provisional or exceptional character of the office (ibid.). The sadr's department (sâdîr-i saddrat or diwân-i saddrat) occupied the third place in the Timurid administration after the diwân-i tawâîî and the diwân-i mîl. The financial support for the sadrs, made up of allowances (istung) and gratuities (inâ'am) came from a specific tax (rasm al-sadur or sahm al-sadarat) raised as a percentage on (ibid., 283-4).

For the social origins of the sadrs, a strong tendency for the post to remain within one family, leading to hereditary control over the office, has been noted (Roemer, Staatsarchive der Timuridener, 143-6; Herrmann, op. cit., 281). Although they were the superiors of the sayyids, it was only occasionally that they stemmed from this last group. Among the forty sadrs mentioned by Khwândamîr for Husayn Baykara's reign, there are only three descendants of the Prophet (iv, 321-8; cf. Herrmann, ibid.). Some sadrs were accused of corruption during this reign. A dispute between the descendants of Ahmad-i Diâm and of ʿAbd Allâh Anšârî provoked the intervention of the Nakshbandî shaykh Khwând Ahrâr [q.v. in Suppl.] (J. Paul, Die politische und soziale Bedeutung der Naqshbandiyâ in Mittelasien im 15. Jahrhundert, Berlin 1991, 57-8).

As well as the supervision of the religious leaders and of the awkaf, mentioned above for the Kart sadr, the Timurid sadr was more explicitly charged with supervising and administering the application of the Shah's as head of judicial authority in the state (Roemer, op. cit., 143-6). This prerogative appears also in the Ak Koyunlu state, in which one finds the sadr al-sadur (J. E. Woods, The Aqquyunlu. Clan, confederation, empire, Minneapolis and Chicago 1976, 11).

The reform-minded minister of the Ak Koyunlu sultan Ya'qûb, the Kâfî ʿâsî Sâwâgî, held both the civil and religious functions with the rank of sadr (V. Minorsky, Turcomanica II. The Ag-Quyunlu and land reform, in BSOAS, xvii [1955], 451-8; Aubin, Etudes safawides. I. Šâh Ismâîl et les notables de l'Iraq Persan, in JESHO, ii [1959], 48-9; Woods, op. cit., 156-7). In general, under the Turkmen Kara and Ak Koyunlu the sadr held the highest religious office (Roemer, op. cit., 14304).

4. In the Safavid period.

The complex of religious institutions inherited by the Safavid administration consisted basically of mosques, religious colleges (madrasa), religious endowments (awkaf), and the offices of šâh and šaykh al-âlim. These were controlled by the state through the office of sadar al-mawṣûfât. The most important post in the realm and one which, in pre-Safavid Persia, had tended to be hereditary in nature (see 2. above). The main function of the sadr was to supervise and administer the awkaf and the distribution of their revenues to students and scholars and also to charity, hence the full title sadr al-mawṣûfât. However, with the advent of Shâh Ismâîl I (r. 907-50/1501-24 [q.v.]), the nature and function of the office of sadr changed considerably. Faced with the problem of how to reconcile the "men of the sword," the Turcoman military élite which had propelled him to power, with the "men of the pen," the Persian bureaucrats on whom the state was largely dependent for the efficient functioning of his state, Ismâîl made the sadr a political appointee. In so far as this arrangement gave the sadr political influence, he built a bridge between the largely Persian ranks of the "alamât" and the political branch of the administration, dominated almost entirely by the Kizilbash military commanders. Although the propagation of religious doctrine and the establishment of doctrinal conformity and uniformity were not the primary function of the sadr, some scholars believe that for a time he had also to supervise the imposition of Twelver Shi'ism and root out heresy and Sunnism. By the time of Ismâîl's death, however, doctrinal uniformity had been largely achieved, and the
energies of the sadr were devoted once more to the preservation of the religious status quo, and especially to the administration of the asfāf. It is clear that although the Persian ‘clerical estate’ from which the appointees to the sadrāt were initially taken was essential to the smooth running of the nascent Safavid administration, it was unable to provide the theological and legal backbone for the new Twelver Shi‘ism establishment. Of the ten sadrs under Shāh Tahmāsp I, for example, only one was versed in Twelver Shi‘i jurisprudence, while the Shi‘ism of the other nine was open to question. Consequently, Shah Sulayman the Great, not a practising Muslim divines and religious institutions also began to receive land-grants, and a rigorous procedure of verification was established in which the sadr al-sudur’s department played an important role. The sadr al-sudur’s office was held, like that of other ministers, at the Emperor’s pleasure, but tended to be of longer duration except during the last years of Akbar, when after the dismissal of the most powerful of these ministers, Shaykh `Abd al-Nahr, 987/1579-80, the incumbents changed quite frequently. Whereas Iranis dominated other ministerial offices in the Mughal Empire, the office of sadr al-sudur remained largely (though not entirely) the preserve of Indian Muslims and Türans, possibly because a Sunni religious orientation was generally expected here.

Bibliography: The bulk of our information comes from Mughal revenue-grant documents largely unpublished, for a catalogue of these see Mughal documents (1526-1627), ed. S.A.I. Tirmizi, New Delhi 1989. The standard official statement on the office and its functioning is to be found in Abū ‘l-Fadl, A‘nīn-ī Akbar, ed. H. Blochmann, Calcutta 1867-77, i. See also Ibn Hasan, The central structure of the Mughal Empire and its practical working up to the year 1657, Oxford 1936; M. Athar Ali, The apparatus of empire, awards of ranks, offices and titles to the Mughal nobility, 1574-1658; Oxford 1985; Rafat M. Bilgrami, Religious and quasi-religious departments of the Mughal period (1556-1707), New Delhi 1984.

(M. ATHAR ALI)
was increased first to three and later to five in the 9th/15th century, the sultan's golden signet (tughrə) which he carried with him at all times worn around his neck on a silk cord; thus əlb-i mür (holder of the seal) was another term used for him. However, the reference in the kānān-nāme [q.v.] of Mehemmed II [q.v.] specified the Grand Vizier as the "head of the waṣerə' and əmerə'," implying that his authority was limited to military-administrative matters (and did not extend to əṣ̄ar, that is, judicial matters). The sa'dr al-Dīn Ardbilī, who was named his əsdh-i muhr (holder of the seal) was an independent in his own sphere in the capacity as the "absolute deputy in all matters" (qāmət umārət-ə wəkəl-i mułaʃkdır). Neither was his position vs. the defterdār (chief of the treasury [q.v.]) clear-cut; the latter was independent in his own sphere in his capacity as the minister of the sultan's own treasury (məltəmə wəkəlili, "the deputy for my treasury") although the Grand Vizier was named his əsdh (or supervisor) (Kānān-nāme, əli 1-ə Quṭmən, ed. Mehməd Ərəf (in TOEM, Suppl. 1330 A.H.); 10). Even in the late 10th/16th century, when the sultan's treasury had become, for all practical purposes, the state treasury, a defterdār accused of corruption was not tried by the imperial council on the grounds that he was directly responsible to the sultan.

From the time of Mehemmed II, the sultan stopped routinely attending meetings of the imperial council and, from the mid-10th/16th century, he was hardly ever present; he left it to the sa'dr as'əm, as the deputy, to chair the proceedings. After the council meeting, the sa'dr as'əm would report in person to the sultan by reading a telkhus (précis) of the most important matters discussed. Sometime during the reign of Murəd III [q.v.], instead of reading the telkhus face-to-face with the sultan, the sa'dr as'əm was required to send in his telkhus and await written instructions, especially on appointments (for examples of telkhus and analysis of its significance, cf. Cengiz Orhonlu, Telχisi, Istanbul 1970 and Suraiya Farooqi, Das telχiş, eine akten-kundliche Studie, in: Istit., xlv [1969], 96-116).

This change allowed the inner circle of the palace, rather than the vizier, to have the sultan's ear and influence decisions. Consequently, in the first half of the 11th/17th century the istiklāl (independence) of the vizier that is, independence of the state in the influence of persons close to the ruler—his mother the dowager sultan (wulidde sultan) or his consort (khasjeh) or companions (muṣābih) emerged as one of the most important political issues in the affairs of the empire. Na'mā [q.v.] claims that in 1066/1556, at a moment of internal and external crisis, Köprülı [q.v.] Mehməd Pəşə accepted the grand vizierate after the young sultan Mehemmed IV [q.v.] and his mother Turākən Sultan accepted to his conditions of absolute independence in affairs of state (for an analysis of this appointment, cf. M. Kunt, Na'ma, Köprülı, and the grand vezirate, in Boğaziçi Üniversitesi Dergisi—Humaniter Bütümler, i [1973], 57-63). The sultan and the dowager were so pleased with the old vizier's competent and wise service that, on his death five years later, he was succeeded in office by his son. Indeed, the Köprülı household supplied no less than seven Grand Viziers in the next half century, providing, after the Dünderli [q.v.] and Şehzadə əl-dər əlb-i mür, the 13th/19th century, a second case of a vizierial dynasty (see also I.H. Uzuncarşılı, Çandarlı vezir ailesi, Ankara 1974). It is in this period of restoration of vizierial authority that the kānān-nāme of Tewkii-šī Abd al-Rahmān Pəşə (1087/1676-7, published in MTM, i/3 [1331], 506 ff.) speaks of very comprehensive and far-reaching duties and powers of the office, without the limitations and the constraints of the two centuries earlier kānān-nāme of Mehemmed II. Barely 20 years later, however, was a particularly ambitious şeyhül əl-islām, Feyd Allah Efendi, with the full support of the reigning sultan, Mustəfa II [q.v.], attempted to dominate the Grand Vizier: this was one of the causes of the rebellion and constitutional crisis of 1115/1703.

In 1837, at the height of Mehmūd II's [q.v.] programme of political restructuring, the title sa'dr as'əm was converted to bəşəbəşlə, chief minister, while at the same time the deliberative function of the imperial state and council was divided among several new councils. These measures served to reduce both the position of the vizier as absolute deputy and the independence and centrality of government: the ruler and his palace once again became the focus of political as well as administrative life. Mehmud II died soon afterwards, in 1839, and the forceful Khusrow Pəşə took over the crown, restoring both the title and the authority of the sa'dr al-Din Ardbiili, at the accession of the young and dilletent ʿAbd al-Mejidd [q.v.]. In the early years of ʿAbd al-Hamīd II's [q.v.] reign, there were two more, equally unsuccessful, attempts to change the title to bəşəbəşlə: this time, however, the impetus came not from the sultan but from reformist ministers, for the purpose of establishing the principle of a government sharing collective responsibility to parliament. In the event, even after the constitution was restored in 1908, sa'dr al-Din remained the title for the chief minister until the end of the sultanate, though now he was responsible to parliament (for an analysis of the grand vizier's position in the transformation of governmental and administrative institutions in the reform period, see C.V. Findley, Bureaucratic reform in the Ottoman Empire, Princeton 1980, 141, 153, 240 ff.).

Bibliography: In addition to items mentioned in the text, see Pakalın, s. vv. Sadrəzam and Vezir, providing extensive details and comments; the most comprehensive discussion is in I.H. Uzuncarşılı, Osmanlı devletinin merkez ve bahriye teşkilatı, Ankara 1948, 111-79; both the Osmanlı tarikhi sponsored by the Türk Tarih Kurumu (authors, Uzuncarşılı and E.Z. Karal), 7 vols., Ankara 1948-59, and I.H. Danışmənd's İlahı Osmanlı tarhi kronolojisi, 4 vols., Istanbul 1947-55, include lists and brief biographical sketches of all grand viziers; see the general account of the viziers by G. Gibtal and B. Bowen, especially i/1, 107-37, is still useful; for an excellent study of the palace of Süleyman the Magnificent's famous vizier İbrahim Paşa [q.v.], see Nurhan Atasoy, İbrahim Paşa Sarayı, Istanbul 1972; the closest we have to a biographical study of a grand vizier is R. Dankoff's translation of relevant passages in Evliya Celebi, The intimate life of an Ottoman sultan, Mélek Ahmed Paşa (1580-1662), New York 1991 (M. Kunt).
Shah 'Abbas I's wakf of porcelain to the shrine (see J.A. Pope, Chinese porcelains from the Ardebil Shrine, Washington 1979).

Although the powerful Mongol amir 'Abdun [see CUBANID] had professed to be a disciple (murid) of Shaykh Safi al-Din (Sharaf al-Din Bidlisi, Sharafnama, ed. V. Veliaminov-Zernov, 2 vols., St. Petersburg 1860-2, ii, 132-3), Amir 'Abdun's son, Malik 'Asraf, possibly alarmed by 'Abdul's growing political influence, threw him into jail at Tabriz. He released him after three months, but again tried to seize him; this time 'Abdul al-Din escaped to Gilan. When Djani Beg Mahmud, ruler of the Blue Horde of Western Kipchak (742-54/1341-57) [see BATUN] overthrew Malik 'Asraf and put him to death, 'Abdul al-Din returned to Ardabil, but Djani Beg's promise to allot all Safavid lands to the Shaykh in the form of a wakf was not been enacted before Djani Beg's death (Silsilat al-nasab, 42-3); see also B. Spuler, The Muslim world, ii, 'The Mongel period, Leiden 1960, 54-5, and J.B. van Loon, Ta'rikh-tdiyya, The Hague 1954, 11).

'Sadr al-Din died in 794/1391-2, and was buried in the Ardabil sanctuary (Silsilat al-nasab, 45). He left three sons: Khazda 'Ali (who succeeded him as head of the Safawid Order); Shihab al-Din and Djamal al-Din (ibid., 40).

Bibliography: Given in the text.

(Professor S. A. RASOY)

'SADR AL-DIN 'AYNI. Russian form SADBIZDIN AYNI, one of the leading figures in the 20th century cultural life of Central Asia and in Tajik literature (1878-1954).

He began as a representative of the reform movement amongst the Muslims of Imperial Russia, that of the Djadids [see MAHDI].A formal education at the traditional madrasas of Bukhara left him intellectually unsatisfied. In the early part of his career he was a talented poet in both Tadjik and Uzbek, but after 1905 he became increasingly involved in the social and educational aspects of Djadidism. In 1917 he espoused the cause of the revolutionary movements and, eventually, that of the Bolsheviks, and when in 1920 the Tadjik S.S.R. was set up, he held leading positions in its cultural life, becoming the first President of the Tadjik Academy of Sciences and retaining this office until his death. He now turned from poetry to prose-writing in a wide variety of fields—literary criticism, history and novels in both Tadjik and Uzbek, culminating in his unfinished memoirs (Yad-dagh-hali Yod-dagh-ho, 4 vols., Stalinabad 1949-54). He is thus the dominant figure in the prose of socialist realism, as also in the moulding of modern Tadjik literature in general.

'SADR AL-DIN MUHAMMAD b. 'ISAM b. MUHAMMAD b. 'YUNUS AL-KUNAWI (b. 605/1207, d. 16 Muharram 673/22 July 1274), disciple of Ibn al-'Arabi [q.v.] and author of influential works on theoretical Sufism.

Ibn al-'Arabi met Majd al-Din Ishaq al-Rumi, Kunaawi's father, in Meeza in 600/1203 and subsequently travelled with him to Anatolia. A source from the late 7th/13th century tells us that after Majd al-Din's death, Ibn al-'Arabi married his widow and adopted his son Sadir al-Din (B. Furuzanfar, Manakht-i Averbâd al-Dîn... Kirmânî, Tehran 1347/1968, 84); the fact that Kunaawi himself never mentions this is not surprising, given his extreme reticence concerning personal matters. The same source (85) tells us that Ibn al-'Arabi entrusted Sadir al-Din for a time to the guidance of his friend Shaykh Averbâd al-Din Kirmânî (d. 633/1238), and this is confirmed by a manuscript letter in which Kunaawi says that he was Kirmânî's companion for two years, travelling with him as far as Qum (Chittick, Faith and Practice of Islam, Albany 1992, 261). By the time he was twenty, Kunaawi appears among the listeners to Ibn al-'Arabi's works in a sama' dated 626/1229 (O. Yahiha, Histoire et classification de l'ouvre d'Ibn 'Arabi, Damascus 1964, 141). He seems to have remained with his shaykh until the latter's death in 638/1240; his name is recorded in many sama's deriving from this period. Presumably, the fa'il kulli, or total unveiling of the invisible world, that he mentions as occurring in Damascus (al-Nafahat al-ilâhiyya, 12) occurred at this time.

Kunaawi was teaching, probably in Konya, by the year 643/1245-6, when he led a group of scholars to Cairo and taught Ibn al-Fârid's Tayyba on the way [see SAID AL-DIN FARGHANI]. Little can be gleaned about his life from his works without occasional references to instances in which he gained visionary knowledge. Thus, for example, on the night of 17 Shawwal 635/19 November 1235, Ibn al-'Arabi appeared to him and confirmed that he was this pre-eminent disciple, even greater than his son Sa'd al-Din (al-Nafahat al-ilâhiyya, 152-3; partial Persian tr. in Djamî, Nafahat al-un, ed. Tawhididir, Tehran 1336/1957, 556-7). Kunaawi reports that he did not receive oral explanation from Ibn al-'Arabi concerning most of his works, but instead gained knowledge of them through God's grace (al-Furûsî, ed. Khâjudâwî, 240). In his Manâkh al-zafin (ed. T. Yazici, Ankara 1959), Aflaki recounts several anecdotes showing that Kunaawi had a highly favourable view of Rumi, and he contrasts Rumi's simplicity with the sumptuous scholarly trappings of Kunaawi's circle (e.g. 96-). Among Kunaawi's important students were 'Afi al-Din al-Tilmânsî, Fâhrî al-Din 'Irâkî, Sa'd al-Din Farghâni [q.v.], and Mu'ayyîd al-Dîn Djamî [q.v.]. The most important work of Ibn al-'Arabi relevant to Kunaawi's teaching is his Fa'il kulli (ed. D. M. G. Chittick, Albany 1992), which is thus the dominant figure in the prose of socialist realism, as also in the moulding of modern Tadjik literature in general.
3. ِصلاح الاَمَّةِ الاَُحَرَمَةِ: A relatively concise explanation of the ninety-nine names of God and their places on the human level.

4. ِفِي عِلْمِ النَّاسِ: A short commentary on the essential themes of Ibn al-ʿArabi’s Fusūs al-ḥikam, focusing on the implications of the chapter headings.

5. ِمُفَتَّحَةُ الْغَيْبِ: (published on the margin of Muhammad al-ʿAynī, Mīṣāḥ al-tun bi-ʿan al-maʿṣūl wa-ʿan muntahā fi sharḥ mīṣāḥ al-ʾadām wa-ʿan laṭṭiṣād, Tehran 1323/1905; partial ed. and French tr. by S. Ruspoli, La clé du monde suprasensible, diss., Paris IV 1978). This has always been considered Kunawi’s key work; it was taught in Persian madrasas after students had mastered the most difficult texts in philosophy. At least nine commentaries have been written on it, mostly in Turkey. One of the more interesting is by ʿAbd Allāh Mūlā ʿIlāhī, written in Persian at the command of Mehmed II Fatih, the author marks several asides to the ruler in the midst of the text, indicating that he was expecting him to read it (see Chittick, Sūlan ʿArabī: the correspondence, in WZKM, lxixi [1981], 37-8).

6. ِنَافِثِ الْحَدِيثِ: (Tehran 1316/1898), a collection of about fifty “inspired breaths”, along with other miscellaneous texts including at least 17 letters written to various friends and disciples. Many of the passages refer to Kunawi’s visionary experiences.

7. ِالْفُلُوسُ: (S. Dż. Aḥṣāṭī, Tehran 1362/1983; appended to ʿAbd Allāh Mūlā ʿIlāhī, Nafaṣ al-nurdnīyā fi hāl akhātīlī al-ʿumām, ed. cit.; and appended to Ibn Turka, Tamhid al-naṣāʾīd, Tehran 1315/1897-8). A collection of 21 texts that persist exclusively to the “station of perfection”; the longest (no. 20), which is taken from the first section of Mīṣāḥ al-ghayb, is perhaps Kunawi’s most comprehensive exposition of the doctrine that later came to be known as wahdat al-wujud.

8.9. ِمُفَتَّحَةُ الْغَيْبِ: (forthcoming critical ed. by Gudrun Schubert). A commentary initiated by Kunawi with Naṣīr al-Dīn ʿUtsū [q.v.]. Kunawi’s first treatise, al-Muṣafih ‘an mutanādī l-tāḥfīr wa-sabab ikhtilāf al-ʿumām, addresses the weakness of human reason and poses a series of questions for ʿUtsū; a good portion of the introductory material is drawn from the beginning of ʿUtsū’s book and treatise, a-ḥadīth al-truṣūdī, which corresponds to ʿUtsū’s replies (for details on the contents, see Chittick, Mysticism vs. philosophy in earlier Islamic history: the ʿUtsū, the Kunawi, correspondence, in Religious Studies, xviii [1981], 87-104).

Minor works include the following: 10. ِالْإِلَمَّةِ البِيْتَاءُ: A long letter to ʿAṣif al-Dīn al-Tilimsānī describing how, when Kunawi was circumcising the Kaʿba, the meaning of certain verses he had heard suddenly became clear to him. 11. ِنَافِثِ ِالمَسْتَرَدَّ قِبْلَةَ ِالْئِفَاحَةِ: or Raḥb al-ḥāl bi-ṣurūrah al-ḥāl, containing about 50 pages of intimate mystical prayers. This work was sent by mistake to ʿUtsū along with work no. 8, and he offered polite criticism of it in his response. 12. ِالْرَيْدَةُ الْحَدِيثَةُ ِالمُرْجُحَةِ: also called al-Rīḍā al-taṣawwūfīyya yahiyā wa-Rīḍā al-tawḥīdīyya yahiyā, Rīḍā al-tawḥīdīyya yahiyā al-ṣāmīm. This short work, of which a Persian translation was prepared during Kunawi’s lifetime, provides practical instructions on the vocabulary that is much more reminiscent of texts on mysticism and not coming under the influence of any specific attributes. Every other created thing manifests specific names of God and is dominated by either oneness or manyness. Although this theme is also found in Ibn al-ʿArabi’s writings, it is not so clearly presented as the key doctrine. Ibn al-ʿArabi roots his teachings in the Kurān and the Ḥadīth, but Kunawi employs a more abstract vocabulary that is much more reminiscent of texts on mysticism, and he highlights a number of technical terms that play no special role in Ibn al-ʿArabi’s teachings, even though they become basic points of discussion in later works. These include al-ḥadādr, al-tāḥfīr, al-ṣurūrah al-ḥāl yahiy, kāmīl al-ṣūrah, l-ṭawḥīdīyya, l-tawḥīdīyya, and l-taṣawwūfīyya (for an outline of Kunawi’s teachings, see the introduction to Chittick and P.L. Wilson, Fakhrud-dīn ʿIraqī: Divine lights, New York 1982). The key term waḥdat al-wujud, although found in at least one passage of Kunawi’s works, has no special technical significance for him. In the works of Fāرغānī based
on Kūnawi’s lectures, the term is used in a way that is not picked up by later authors (see Chittick, Rūmī and waḥdat al-wujūd, in The heritage of Rumi, ed. A. Banani and G. Sabagh, Cambridge, forthcoming).

Kūnawi’s importance needs to be understood in light of Ibn al-ʿArabī’s pervasive influence on the schools of theological Sufism, philosophy and kalām. Ḍāmī had already recognised that Kūnawi was the primary interpreter of Ibn al-ʿArabī’s teachings (Naḥādāt al-uns, 556). In effect, the later intellectual tradition read Ibn al-ʿArabī’s works according to the interpretation of Kūnawi and his immediate disciples. His role is symbolised by the correspondence he initiated with Ṭūsī. In the Persian letter that accompanies al-Hādiyya, Kūnawi explains that he initiated the correspondence in order to combine the rational approach of the philosophers with the “unveiling” (kaʿf) of the Verifiers. In the correspondence, Kūnawi reveals himself as thoroughly familiar with Avicenna’s writings and with Ṭūsī’s commentary on Avicenna’s al-ilmār waʾl-tanbihāt; his philosophical bent, in any case, is already obvious in other writings.

Far more than Ibn al-ʿArabī, he employs clear and reasoned argumentation to demonstrate his conclusions, even if he also depends explicitly upon mystical intuition. Largely because of the themes that Kūnawi establishes in al-Fuṣūkā and in the oral teachings that are reflected in the works of his students, the main body of Ibn al-ʿArabī’s legacy was the fear and concern that Kūnawi’s work would in any way stress certain dimensions of the master’s teachings that are not necessarily central to his own writings. This explains Michel Chodkiewicz’s remark that Kūnawi “a donné à la doctrine de son maître une formulation philosophique sans doute nécessaire mais dont le systématisme a engendré bien des malentendus” (Épitre sur l’Unicité Absolue, Paris 1982, 26).

Despite the influence and respect which Ṣadr al-Dīn enjoyed, the hagiographical and historical sources concerning Ṣadr al-Dīn are often repetitive and controversial. The family’s ambitions in acquiring extensive estates and other landed property took shape. Only a small part of these were constituted as waqf, proper, the remainder being acquired in full personal ownership (milk) or in the shape of family waqf and transmissible to the family’s descendants. These acquisitions were purchased from other notables; sometimes they were obtained by questionable means, and this gave rise to litigation and conflicts, in particular between the Ḍuwayni and Ṣafawī families. As well as the revenues accruing from his direction (sawdiyya) of these sources of wealth, Ṣadr al-Dīn must have had a substantial personal fortune, especially as his mother died soon after his father, and he was the second in line. With these riches, Ṣadr al-Dīn contributed extensively to the growth of the Ardabīl shrine, which became a complex worthy of the order’s prestige and functions. Apparent in a sense of politics as much as by family sentiment, Ṣadr al-Dīn extended his care and control over the whole of the Ṣafawī family.

With these riches, Ṣadr al-Dīn contributed extensively to the growth of the Ardabīl shrine, which became a complex worthy of the order’s prestige and importance. The construction of Ṣafī al-Dīn’s tomb, completed towards 1344, is said to have taken ten years. The Dar al-Huffāz was built on the site of a demolished house, and the building (or perhaps reconstruction?) of various buildings, whose original functions are uncertain, is attributed to him, including one called a ḍīn-khāna in Shāh ʿAbbās I’s time, a cūla-khāna and a shabāt-gīth.

With the respect behind him of the Mongol and Turkmen authorities, Ṣadr al-Dīn continued his father’s work for the extension of the Ṣafawīyya order, in particular, by sending out khalīfās to places like Georgia. The most famous of these khalīfās, a controversial figure on account of his heterodoxy, Ḥurūfī
doctrines [see HURUFIYYA] was Shah Kasim al-Anwar [see KASIM-I ANWAR]. According to an apparently late tradition, Sadr al-Din is said to have made the pilgrimage in 770/1368-9 and to have brought back from his visit to the Prophet's tomb in Medina a banner allegedly held by the Fatimids. Its fame is linked with the history of the Meccan Pilgrimage. The names al-Safa and al-Marwa (this last also sometimes qualified, e.g. by the local historian al-Azraqi [q.v.], as al-Bayda? "the white") both mean "the stone(s)" (see al-Tabari, Tafsir, ad sūra II, 153/158). The twin hillocks mark the beginning and conclusion of the course taken by the pilgrims (the mu'ammar performing the 'umra and the hadj performing the hajj), sc. the area of or more or less rectangular traversing forms the sa'y [q.v.], the prelude to the hadj proper.

According to tradition (see e.g. al-Bukhari, Anbiya, bāb 9), the sa'y between the two hillocks commemorates the fact that Hādjār ran backwards and forwards seven times between these two eminences to look for a spring for her thirsty son. It is certain that cults were located at al-Safa and al-Marwa, even in the pre-Islamic period. According to most traditions, there were two stone idols there, Isāf on al-Safa and Na?ila on al-Marwa (sometimes, incorrectly, on their sa'y used to touch. On the origin of these images, the following story is given in the commentary of al-Nisabūrī on sūra II, 153/158, and al-Shāfi?i gives his approval to it: Isāf and Na?ila were guilty of indecent conduct in the Ka'ba and were therefore turned into stones, which were placed on the two places of raised ground al-Safa and al-Marwa to be a warning to all. In course of time, the origin of the stone figures was forgotten and people began to pay them divine worship [see further, ISAF WA-NA?ILA]. According to another tradition, there were copper images there (cf. Snouck Hurgronje, Het Meekkaanske Feest, 26); according to a third story, demons lived on the two hills who shrieked at night (given in al-Tabari, Tafsir).

Bibliography: This is given substantially in the article SAFI AL-DIN ARDABI, but see also J. Aubin, Le pantheon de VArabie centrale, Paris 1990, 139 ff., 205-210. See also HADJDJ; MAKKA; SAJJA, H. (B. JOEL*)

2. It is further the name of a volcanic region of ca. 55 x 25 km to the south-east of Damascus. It is trapezoid and runs north-west/south-east, to the south of the Dirât al-Tulul and north-east of Djabal al-'Arab (Djabal al-Durūz or Djabal Hawrān). It forms the southern and eastern borders respectively of Mardž Rāḥī and Mardž al-Suljaf [q.v.], the scenes of several notable battles in the Islamic period. The name has sometimes, incorrectly, been extended to cover the whole harra, or basalt desert, east of Djabal al-'Arab, particularly in connection with the misnamed "Safaite" inscriptions [q.v.].

The Safa proper is composed of three distinct volcanic cones, Tulûl Raghâlaya (873 m), Tulûl al-Durs (Dârâr or Dahlr) (860 m) and Tulûl al-Safa (741 m), the first two being separated from the third by a depression, between one and five km wide, known as Missâf al-Yahâyā. It is covered with the twisted and uneven lava flows from extensive volcanic eruptions in the Holocene, which have suffered very little erosion. Movement within the massif is consequently extremely difficult and there is only one track across it, all others running around its edges.

The lack of erosion means that there is very little
soil, and vegetation is limited to a few small, scattered areas free of rocks. However, there is a forest of pistachio trees spread over a dozen km on the south-western edge of the Tell el-Safa.

With the exception of the Miftah al-Ghayla, the interior of the Sa'af is too barren and too difficult of access to attract settlement, or even the attentions of nomads. However, it is bordered on all sides, except the north, by fertile silt-filled depressions, such as the Rubha, which are fed by the seasonal floods from Jabal al-'Arab. These depressions are known as riḥba (sing. ribba) and are not, as some writers assume, kūfān (sing. kēfān), of which the soil is sterile. Some of the water from the winter floods passes into underground channels and some runs on to the riḥba, forming lakes which can last for several months. This compensates for the low rainfall in this area (mean 100 mm p.a., with considerable variations).

The availability of water, together with the fertility of the soil, has attracted nomads to these riḥba from the Epipalaeolithic onwards. Traces of prehistoric campsites, and graffiti by nomads of the Hellenistic and Roman periods [see SAFAITIC] have been found in large numbers near the ribāb on the eastern and south-western edges of the Sa'af, while, in the 19th century, Wetzstein (30-1) describes the Ghayath section of the Ahl al-Djabal sowing grain on the Rubha.

The semi-nomadic tribes known as ʻArab al-Safa (Dussaud and Macler, 52-3) are not in fact resident in the Sa'af but spend most of their time in the Harra of Wādi Rājdil, the basalt desert to the south-east of it. On present knowledge, sedentary occupation seems to have been restricted to the edges of the Sa'af and to have occurred only in the Early Bronze Age (e.g. Khirbat al-Dab').

SAFAD, a small city surrounding the ruins of a once impressive fortress in the hilly region of northern Palestine, 40 km east of 'Akka [q.v.] and 20 km north of Tabariyya [q.v.]. The fortress is situated at the summit of a hill ca. 840 m high, and enjoys a fine view of the surrounding area, including the Sea of Galilee to the east. In the Crusader period, Safad was an important Templar stronghold; in the Mamluk period it served as the capital of a province (mamlaka), while under the Ottomans it was the centre of a sanjak [q.v.]. Today it is the principal town of the upper Galilee region in the State of Lebanon, and is noted—as in the Middle Ages—for its mild and salubrious climate in the spring and summer (see al-Ṭūḥmānī, ed. B. Lewis in BSOAS, xv [1954], 490). The name Safad derives from Hebr. Safat < root ș-f-ș “to look, observe, watch”; appropriate for the site, which was afforded by its location. Safot is not mentioned in the Old Testament, but has been identified with the Sepphor or Seph of Josephus’ Jewish wars, ii, ch. 20, § 6. Its location is mentioned in the Jerusalem Talmud as one of the mountain tops on which bonfires were lit to announce the new moon and festivals.

Little is known of Safad in the early Islamic period, i.e. until the coming of the Frankish Crusaders in 1099. Yākūt, Bulādān, ed. Beirut, iii, 412, has virtually no information about the town, and wrongly locates it in the mountains near Himis, an indication of its relative obscurity even in the early 7th/13th century. According to Ibn Shahaddād, Aṭlab, ed. Dāhhan, 146, Safad was originally a tall on which was found an inhabited village under Burdī al-Yātim, evidently referring to the future Frankish keep (or the main tower of the inner ward). The Arabic niṣba al-Safadī is found in a document from the Cairo Geniza, dating from the first half of the 9th/11th century, as is the Hebrew parallel Hai-Safati in another, almost contemporary document; whether this indicates a Jewish community in the town is a moot point (cf. M. Gil, A history of Palestine, 634-1099, Cambridge 1992, 213-14).

The Arab historians state that the Franks built the first fortress at Safad in 495/1101-2, having taken the town in the initial conquest of the country. In 1140 it was apparently renovated (or perhaps built) by King Fulk, and served as a refuge for Baldwin III after his defeat north of the Sea of Galilee by Nur al-Dīn [q.v.]; and eleven years later, it was transferred to the Knights Templar, since the local lord could no longer afford to keep it up (S. Runciman, History of the Crusades, Cambridge 1954, ii, 343, 376; R.C. Small, Crusading warfare (1097-1193), Cambridge 1956, 102). After the Muslim victory of Hijīn [q.v.] in 583/1187, Ayyūbids troops kept the fortress under observation, but it was not till the next year that Šalāb al-Dīn was able to undertake the conquest of Safad; it surrendered in Shawwāl 584/December 1187 after a fierce six weeks’ siege, and the garrison received amān and departed for Tyre (M.C. Lyons and D.E.P. Jackson, Safad, Cambridge 1982, 141, 145, 283-6, 291; J. Prawer, History of the royal town of Jerusalem, Paris 1969-70, 1, 560, 562; J. Riley-Smith, in Ibn Furūṭ, Ayyūbid, Mamlukes and Crusaders, tr. M. Lyons, Cambridge 1971, ii, 213).

Šalāb al-Dīn initially gave Safad and Tabariyya as an īṭāb [q.v.] to one of his Commanders, but in the early years of the 7th/13th century, al-Malik al-ʻAdil’s son al-Malik al-Mu'azzam Ḥaṣān [q.v.] resumed control over these towns, and in 617/1220 razed the fortress, fearing an attack by the Franks, who had scored initial successes in Egypt. Then 638/1240 al-Malik al-Salāḥ ʿIsā ʿAlādīn of Damascus, seeking a defensive alliance with the Franks against Ayyūbids, made overtures to the Franks, and turned over to the Franks his possessions in Galilee and southern Lebanon, including Safad, whose fortress the Templars now restored (see R.S. Humphreys, From Saladin to the Mongols, Albany 1977, 78, 142-3, 266-8; Prawer, History, ii, 154-5, 166 and n., 279-80, 286). The restoration work was initiated by Benedict d’Alignan, bishop of Marseilles, and took five or six years at an immense cost; its annual upkeep was reportedly 40,000 bezants and its peacetime garrison 1,700, which in wartime swelled to 2,200.

The main strategic value of Safad was that it offered the Crusaders an excellent observation point over the Tabariyya-Toron road, and more significantly, the Damascus-ʿAkka road, particularly the important Jacob’s Ford (Djīsr Banāt Yaḥūk [q.v.], Vadum Jacob) over the Jordan River, which is only 12 km away. Thus the fortress would gain early warning of approaching Muslim troops, be they raiders or invaders, and notify the other Frankish centres so that an appropriate response could be made. It is dubious whether the garrison of Safad had any real control over these routes, particularly if the Muslims were out in any force, but it certainly served as a symbol of
Frankish power in the area. The fortress was the administrative and economic centre for the area, in which some 260 villages were supposed to be found; this figure, which was supposed to refer to the Galilee as a whole and not just the immediate hinterland of the town. In the 12th century, at least, there was located there a court of Burgess, indicating a large Frankish presence.

For the Muslims, Frankish Safad was a continual nuisance, and the Mamlik sultan Baybars (658-76/1250-75) soon set his sights on Safad. In summer 664/1266 he began a six-week siege until the garrison, weakened by dissensions, surrendered under amān, which did not however allow them to take out arms and property; in fact, the sultan broke this amān and had almost the whole garrison killed (the Arabic sources are at pains to justify the sultan’s evident rupture of the amān) (see P. Thorau, *The Lion of Egypt*, tr. P. M. Holt, London 1992, 168-70, 183-4 nn. 61-3; Prawer, *Historia*, ii, 470-4). Baybars set about reforming the fortress, the town, and the administrative centre of a new province, with new civilian buildings, including a mosque, markets, caravanserais and baths (see L. A. Mayer and J. Pinkerfeld, *Some principal Muslim religious buildings in Israel*, Jerusalem 1950, 44-6).

Geographers of the next century or so, including al-Dimāḏki and al-ʿUmārī, describe Safad as quite prosperous, although it was evidently something of a backwater intellectually. The chronicles give little information about events and conditions there, but like the province as a whole, it probably suffered decline from the time of the Black Death (ca. 749/1348) onwards. When the Ottomans took over Syria, the Mamlik province of Safād was transformed into a sāmākı́, part of the larger wilāyatu ʿalādāt or beiylerbeylik of Damascus. Thanks to the relatively systematic tax registers of the Ottoman authorities in the first decades of their rule over Palestine, we have some idea of demographic and economic trends in the district and town. Ottoman rule brought more stability and a consequent prosperity and population increase to both the town and its rural hinterland; by 963/1555-6 there were about 280 villages, mainly Muslim but with a few Muslim-Christian and Muslim-Jewish ones, in the sāmākı́ (see H. Rhodes, *The administration of the Sancak of Safad in the sixteenth century*, diss. Columbia Univ. 1979, unpub.; idem, *The geography of the sixteenth-century Sancak of Safad*, in *Archivum Ottomanicum*, x [1985], 179-218; B. Lewis, in *BSOS*, xvi [1954], 469-501; W.-D. Hütteroth and K. Abdulfattah, *Historical geography of Palestine, Transjordan and southern Syria in the late 16th century*, Erlangen 1977, 175-94). The town, in particular, prospered through the textile industry, having abundant water and accessibility to ports, hence its support of trade and commerce, benefiting from an influx of Jewish craftsmen from the Iberian peninsula. There seems to have been a Jewish presence in Safad since the 11th century, and eventually, the Sephardi and other newcomers outnumbered the indigenous “Arabised” (maidsīrūbūn) Jews there. All this brought a rich spiritual life, so that in the 16th century Safad was a major centre of Jewish mysticism, and the first printing shop of any kind in Syria originated in Safad when a Hebrew printing press was established in 1563. There was some decline in the town’s fortunes in the later 16th century, but in the 1670s Euliyā Ĉelebi (Sevāhān-nāme, ix, Istanbul 1935, 438-41, tr. in *QDAP*, iv [1935], 158-61) still found there three caravanserais, several mosques, seven zāhīyās and six public baths (see Lewis, *Notes and documents from the Turkish archives*, Jerusalem 1952, 5-7; Rhodes, *op. cit.*, 167-9; A. Cohen and Lewis, *Population and revenue in the towns of Palestine in the sixteenth century*, Princeton 1978, 19-30).

By the early 17th century, Safad had reverted to the status of a small town, and had come under the control of the Druze amīr Fakhr ad-Dīn Maʿn (q. v.) of the Lebanon, with his rule subsequently recognised by the Ottoman authorities. In the later 18th century, Safad revived somewhat, probably because of the relatively more stable government provided by the local leaders, Zāhir, Dughāl, Sağhir (d. 1775), who hailed from Safad, and Ahmad al-Dājrāz (d. 1805 [q. v. in Suppl.]), and some fresh Jewish immigration began to take place (see C.-F. Volney, *Travels through Syria and Egypt in the years 1783, 1784 and 1785*, 2nd ed. London 1788, ii, 230-1; P.-M. Holt, *Egypt and the Fertile Crescent* 1516-1922, London 1966, 117, 124; Cohen, *Palestine in the 18th century*, Jerusalem 1975, passim, esp. 119-28). Under Ibrahim Pashá’s governorship of Gallie (1814-17), Safad became the commercial centre of Galilee, but suffered from natural disasters like earthquakes and pestilence until some prosperity began to return in the later 19th century. In 1880 Safad became the seat of a kāfḍā in the sanjūq of Akkā in the wilāyāt of Beirut. Shems ad-Dīn Sāmī, in his Kamās al-ʿalām, (iv, Istanbul 1311/1894, gave the population for the kāfḍā of Safad as 21,313, of whom 15,971 were Muslims, but a more reliable figure for the actual town is probably that of the 1922 census under the British Mandate (Safad was captured by Allenby’s forces in September 1918; 8,760, of whom 5,431 were Muslims, 2,986 Jews and 343 Christians. Under the Mandate, the population gradually grew; at the time of the 1948 war, the total population was 12,000, of whom some 2,000 were Jews. After fierce fighting, Jewish forces gained control of Safad; the Arab populations, some of which had left during the fighting, almost completely abandoned the town (see B. Morris, *The birth of the Palestinian refugee problem* 1947-8, Cambridge 1987, 102-5). At the last census, in 1983, the town’s population was 15,833, of whom 379 were Muslims.

Little now remains of the fortress of Safad, already ruined in Euliyā’s time. It suffered much from earthquakes, and the remains were largely used as a quarry for building stone. Several excavations have been done by Israeli archaeologists, but the area is now covered with trees and is a park.

D. Pringle, Reconstructing the castle of Safad, in PEQ, cxvii (1975), 139-49; T. Ta'Afat, Mamlakat Safad fi 'alid al-Mamluk, Beirut 1982.

AL-SAFA'DI, AL-HASAN B. ABU MUHAMMAD 'ABD ALLAH AL-HASAM, appears to have been a minor government official during the early reign of the Egyptian Sultan Al-Malik Al-Nasir Muhammad b. Kalâwûn [q.v.]. In any event, we know that in the year 694/1294-5 he was appointed by the wazir Ibn al-Khalîfî to head a mission to Al-Fîkus in Shârikiyya provinces charged with cultivating the crown lands over there. While on this mission, al-Safadi reports on a grisly case of cannibalism that he observed at first hand during this famine year, a report which is characteristic of the anecdotal style of his only extant work. This book, Nuzhat al-malik wa 'l mamlik fi kullat al-salatim muru' al-malikî is a short history of Egypt that ends with the year 711/1311-12 or perhaps as late as 714/1314. From a statement in a British Library manuscript (Add. 233326), it appears that al-Safadi composed the history in the year 716/1316. The earlier part of the work begins with the natural and other advantages of Egypt and gives a succinct account of the earlier rulers consisting mainly of anecdotes, but the chief interest lies in the portion which deals with the Turkish or Bahri sultans, in particular Al-Malik Al-Nasir Muhammad. Even here, however, al-Safadi records very little information which cannot be found in other sources. The B.L. ms., written for the Egyptian caliph al-Mutawakkil, proceeds to record events down to 795/1393, but these were obviously added later by another writer. Two other manuscripts of Nuzhat al-malikî are preserved in the B.N., Paris ms. 1706 and 1931, 22. The latter bears the erroneous title of Fadlî al-Miszir.

(F. Krenkow-D.P. Little) AL-SAFA'DI, SALAH AL-DIN KHALIL B. AYBAB, Abu 'l-Salâh al-Albâki (696-764/1297-1363), philologist, literary critic and litterateur, biographer, and all-round humanist.

Safad was his family's home, and he was born there. His father, al-Amîr 'izz al-Din Ayyab (b. 'Abd Allâh) was of Turkish origin; he was twenty when his father passed away. Some mamliq amîr named Albâki, seems to have belonged to him. From the apparent absence of any mention of him by his son, we may conclude that al-Safadi considered him undistinguished. Relations with his father may also have been strained, if the statement known from Ibn Hadjar that his father showed no concern for his professional religious-legal studies until he was twenty was correctly transmitted. The additional indication that he previously studied on his own would seem confirmed by the impression that no early teachers of his are noted. However, he was obviously very gifted. When he went to Damascus as a young man aged twenty and had his first meeting with Ibn Taymiyya [q.v.] in 717/1317 or 718/1318, he displayed great knowledge as he proudly and repeatedly recalls (Wâfî, vii, 20-22; Ghâythî, ii, 14; A'mânî, i, 67); his choice of the controversial Ibn Taymiyya as his spiritual guide and may have been looked upon with disapproval by his family. He soon established ties, often of friendship, with the great scholars and writers of the age in Syria and Egypt such as Ibn Nubâta, 'Abû 'Abd Allâh al-Djâmâtî, Ibn Sayyid al-Nâs, and Ibn Fadl Allâh al-'Umârî [q.v.] among many others. His relationship, both professional and personal, with the older al-Djâhali and the younger Tâdji al-Din al-Subkî would appear to have been particularly close. Al-Subkî claims him as a Shâfi'i, but in the cosmopolitan climate of Damascus and Cairo, it was natural for him to be acquainted with representatives of most Muslim and non-Muslim legal and religious groups of the time.

His abilities as a stylist and calligrapher opened up opportunities in government service. The positions he held, sometimes combined, depended on their importance for location; in roughly ascending order, they were kâsit al-darqâ, al-dast, al-inqâshâ and al-sîr, and also wakil al-khizbâ. In 695/1295-6 he was appointed by the wazir Kâfûrî to head a mission to al-Bahri b. Tawk, but the capital cities of Damascus and Cairo were the centres of his activities. He shuttled back and forth between them, keeping up his intellectual contacts wherever he went and possibly spending more time on his scholarly work than his government employment. The year 755/1354 is attested as that of his pilgrimage undertaken together with the poet Muhammad b. Yusuf b. 'Abd Allâh al-Khayyat (A'âshân, iii, 242); one of his works, Hakikat al-maâdîz 'l-Hijaz, appears to have centred on it (listed in Ibn Taghribirdî, Manhal, 244, 1, 5, cf. the quotations in 'Abd al-Kâdir b. Muhammâd al-Djâzirî, Durar al-fawâ'id, 453 ff. [Cairo 1384], referred to by van Ess, in Ilî, liv, 250, n. 1). He also travelled widely in Syria on lecture tours which led him, for instance, to Aleppo in 759/1358 (sama in Ta'sîshî al-tâsihî). Most of his time, however, was spent in Damascus where during one of the periodic out-breaks of the plague, his energetic activities came to an unexpected end in the night of Saturday to Sunday, 10 Shawwâl 764/23 July 1363.

He had a younger brother, Abû Ishâk Djâmâl al-Dîn Ibrahimî, who died on 4 Dîmâdî 722/1455 November 1341. He devoted to him an emotional obituary notice that included many of his verses on his death (Wâfî, v, 330-7). From sama in his works, we know the names of two sons, both named Muhammad (Abû 'Abd Allâh and Abu Bakr) and two daughters, one of them named al-Sâhâbâh. He appears to have written at least 450 volumes of his own composition (al-Subkî, 244, 1, 5; al-Munaqidîdî [ed.], Umarî? Dîmâshqî, pl. 3; Ta'sîshî al-tâsihî, at end of first ms., etc.).

His numerous works provide an enormous amount of varied information. They are uniformly instructive and consistently entertaining. Moreover, they are characterised by sound scholarly method and, to all appearances, even a good measure of originality. He himself spoke of 300 volumes of his own composition (al-Subkî, x, 5) or, more plausibly, of 50 volumes and 500 volumes copied (Ibn al-'Imâd, Dîshâhîr). His co-panning activity is attested already from 718/1318 for a manuscript of Ibn Nubâta's Kûshâb, according to the Princeton Catalogue of the Garrett collection, no. 1907 (298B); his own copy of one of his sources, Ibn Khallîkân, is preserved in ms. Gotha 1731 (Pertz, iii, 319). An unusual number of autographs of his own works is preserved, as is often noted by scholars and editors, see e.g. H. Ritter, in RSO, xii (1929-30), 79-88, and R. Sellheim, Materialien zur arabischen Literaturgeschichte, Wiesbaden 1967-87, i, 200-1, pl. 30, ii, 111; they require comprehensive study, together with autograph sama and摘叶. The preservation of so many autographs, the large number of preserved manuscripts, which still await a world-wide census,
SAFAITIC is the modern name given to a group translated by E. Amar in JA, having appeared by 1993; its introduction was (repr. 1962). Publication was resumed in 1949, with probably inspired by the exam-
twenty-two volumes edited by different scholars Bibliotheca Islamica first volume appeared in his wafaydt which will Tadhkira, content of ms. Chester Beatty 3861 in 7Q, vi (1961), yield further information on his literary production (so correctly in sawddji*- bayn al-bddi^ wa 'l-murddji*-, ^Ayn al-nab*-, Ikhtiydr in ms. Chester Beatty 5183, dated 753/1352, on the pangs of O. ZakI, Cairo 1329/1911, cf. F. Malti-Douglas, in Cahiers d'onomastique arabe [1979], 7-19, and, in The Islamic world. Essays in honor of Bernard Lewis, Princeton 1989, 211-37), and the later and much shorter al-Safadi, 21(1909-1910), 147-53; for a reconsideration of his sources, see D. Krawluskly, in waft, x, 241-257, with a good list of titles of Safadi's works, is only rarely marked by modern bibliographers as spurious, cf., for instance, ms. Berlin, Alwardt 4216, as against Princeton, Yahuda collection, Mach 5123; T. Fahd, La divination arabe, Strasbourg 1966, 226-7. A collection of stories and geographical data entitled Magdsma' al-bid'an wa-fawdkh al-djinin in ms. Yale Landberg 516 = Cat. Nemoy 469 is likewise wrongly ascribed to him. Bibliography: While the autobiographical sketch mentioned by Ibn al-Imad has not yet been recovered, Safadi's habit of frequently indicating the place and date of receiving information provides much biographical detail. This has been successfully exploited by D.P. Little, al-Safadi as biographer of his contemporaries, in Essays on Islamic civilization presented to Niyazi Berkes, Leiden 1976, 109-20, mainly based on 7ayn, and, in greater detail, J. van Es, Safadi-Saygi, in I.I, liii (1976), 242-66, and liv (1977), 77-108. Already his contemporaries, such as Dhababi, in al-Mutqam al-mukhtattat, al-Tarif 1408/1988, 91-2, mentioned him as he did them, but the formal biographical notices are very limited as to the factual data they contain; if some are lengthy, this is due to ample quotations from his literary production. See, for instance, Muhammad b. 'Ali al-HasaynI, Dhayl al-Tar' iv, 203, in the Beirut 1405/1985 edition of Dhababi, ^Ib; Ibn KadhAr, Bida', xiv, 303; Ibn Rafi', Wafayat, Beirut 1402/1982, ii, 268-270: Tadj al-Din al-Subki, 'Tabakat al-Shai'iyya, x, 5-32; Ibn Hadjar, Durar, ii, 87-8; Ibn Kadi Shubha, Tabakat al-Shai'iyya, ed. al-Hafiz Abd al-Allm Khair, Beirut 1407/1987, iii, 89-90; Ibn Taghribirdi, al-Manhal al-safi, Cairo 1980—, v, 241-257, with a good list of titles of Safadi's works, and idem, Nafqun, Cairo, xi, 19-21; Ibn Taghribirdi, in ShihabShair, i, 27-9. F. Krenkow, in EF, s.v., and the introductions of modern editions are basically uncritical. Cf. also M. 'A. Sultani, al-Nad al-adabi fi 'l-karn al-thamin al-hijriyan al-Safadi wa-mu'jithin, Damascus 1394/1974. For a reconsideration of his sources, see D. Krawluskly, in waft, xvii, 704-14. (F. Roseenthal) SAFAITIC is the modern name given to a group
of graffiti in a North Arabian language, expressed in a variety of the South Semitic script. They are found mainly on rocks in the deserts of southern Syria, north-eastern Jordan and northern Saudi Arabia, with isolated finds in ‘Irāk, Lebanon and at Pompeii (see M.C.A. Macdonald in Syria, lxx [1993], 304-5 for references), and their distribution and content show that they were written almost exclusively by nomads. They are conventionally dated between the 1st century B.C. and the 4th century A.D.

While the majority consist of the author’s name and between one and 17 generations of his genealogy, a significant number also contain statements describing his actions or emotions, or events of which he was aware. Many also contain prayers to a variety of deities, and a considerable number refer to adjacent rock-drawings. This was the only period in which literacy has been widespread among the nomads of the Syro-Arabian desert—there are inscriptions by men, women and slaves [95]—and these texts (and most of the Thamudic [q.v.] graffiti) are therefore the only surviving first-hand records of their way-of-life, before the pre-Islamic poetry. They are thus of considerable importance since they contain historical, linguistic and palaeo-ethnographic information which is not available from any other source. For a discussion of the phenomenon of literacy among these nomads, see Macdonald, op. cit., 382-8.

The inscriptions were first discovered in 1857 near the eastern edge of the Ṣafā [q.v.] in southern Syria, and continue to be known by the 19th-century misnomer ‘‘Ṣafaitic’’, despite the fact that none have ever been found within the Ṣafā itself (see ibid., 305-10). More were discovered in 1860, and by 1901 the script had been deciphered. Throughout the 20th century a handful of expeditions have recorded vast numbers of these texts, and by the 1950s over 20,000 had been found in the limited number of areas which have been searched. There are clearly scores of thousands still awaiting discovery.

The Safaitic alphabet belongs to the North Arabian branch of the South Semitic script. The palaeographic development, and the exact relationships within and between the North and South Arabian branches of this script are still disputed (see B. Sass, Studia alphabeticca, Freiburg 1991, 28-93, and Macdonald, in Proc. of the Seminar for Arabian Studies, x [1980] 68-72). The Safaitic script appears to have been used solely for graffiti and to have been spread informally rather than in schools (idem, in ibid., 382-8). Gemination of consonants is not available from any other source. For a discussion of the phenomenon of literacy among these nomads, see Macdonald, op. cit., 382-8.

The language of the Safaitic graffiti belongs to the group known as ‘‘North Arabian’’. Safaitic, together with Lihiyante/Dedanite, the different types of Thamudic, and Hasaitic, form a sub-group, known as ‘‘Frühnordearabisch’’, which is most obviously distinguished by its use of the definite article h-the, in contrast to the other sub-group (which includes pre-Semitic and late Aramaic, a group which uses al-; see W.W. Müller, in W. Freiberger (ed.), Geschichte der Philologie, Wiesbaden 1982, i, 17-36). For descriptions of the grammar, see E. Littman, Safaitische inscriptions, Leiden 1943, pp. xii-xxiv, and Müller, in Proc. of the Seminar for Arabian Studies, x [1980] 68-72.

The nature and number of the Safaitic inscriptions have produced an extraordinarily rich onomasticon (see Müller, op. cit., 72-3 for a brief survey). Affiliation to a social group is expressed by taking the lineage back to the eponymous ancestor, or to one of his immediate descendants, or by use of the nisba (h-dh the Dayfite) or by use of the phrase dh ‘I at the end of the genealogy (dh ‘I of ’the tribe of Dayfite’). However, the word ‘I (cf. Ar. ‘I) is used of all social groups from immediate family to tribe, and even of peoples such as the Romans. On tribes, see Lankester Harding, in al-Abhath, xxii (1969), 3-25, and Macdonald, in Syria, lxx (1993), 352-67.

There is no trace of Christians or Islam in the Safaitic inscriptions. Prayers are offered to a number of deities among which the commonest are Lī (variants ?) ‘I (as in Nabaitean and Palmyrene), and in theophoric names h-‘I, presumably equivalent to the nūh ‘it in the 5th century B.C. Aramaic inscriptions on bowls found at Tell al-Maskhūṭa in Egypt, one of which is by a king of Kēdrā (Rabinowitz, in JNES, xv [1956] 1-9 and xviii [1959] 154-5), the Alilat of Herodotus 3:8, and Arabic al-Lāt [q.v.]; Lh (variants ?) ‘Ih and h-‘Ih: Rduh/Rdy—appears to be of the same name, for a deity of uncertain sex, but probably male and to be identified with Rudutau mentioned in the Assyrian Annals, Orotal in Herodotus 3:8, Arīṣat at Palmyra (see J.T. Millik, Déséances faites par les dieux, Paris 1972, 49) and Rudan of Ibn al-Kalbi, K. al-Asnam, Cairo 1914, 30-1; Būt’m (the great Aramaean sky god, whose name usually appears in Safaitic as a direct loan from Aramaic Baʿalʿgamin, though occasionally it is found as a calque in the form Buʿtam), Dīr (a loan from Nabaitean Dūghr, Dūṣhara, but with variants dīr, dīr, and the etymologically correct dīr [cf. Dhu l-ʿSand [q.v.]], which is, naturally, the common form in the Thamudic E texts of southern Jordan); Sīh-qmn (equivalent to Nabaitean ḥṣ[q]-l-qmn) ‘the companion [or ‘succour’, cf. Syriac ʾṣṣq] of the group’; and Yḥk (see Macdonald, in Anchor Bible dictionary, iii, 422). Invocations are also made to the Ga (i.e. Tyche or ‘Fortune’) of the two major tribal groups, thus Ga-Df and Ga-ʾwāḥ.

Any of these deities can be invoked singly or together and there is no discernible difference in the requests made to them. By far the commonest is for security (ʾlmn), but there are numerous prayers for relief (rwb) from privation, freedom from want (ghnyt), beauty (ghnyt), and a variety of other requests made to deities. Religious expressions include ʾwāḥ b hʿkh (‘and he sought protection in hʿkh’; WH 3923, re-read by Macdonald in M. Ibrahim (ed.) Arabian studies in honour of Mahmoud Ghul, Wiesbaden 1989, 65-6) which is paralleled by ʾwāḥ b rdy (WH 390). A number of other deities are attested in Safaitic only in theophoric names, Nāl (cf. Nabaitean Munūṭ, Arabic Munāṭ [q.v.]), wdh b hʿkh (cf. Nabaitean ʾṭ ṭ and Arabic al-ʿUzza [q.v.]), and, most common of all, ṣr (ṣr). Of religious practice we have virtually no hint. The supposed Safaitic evidence for pilgrimage to the temple of Baʿalʿgamin (LP 350) is based on a misreading (see Macdonald, in Syria, lxx [1993], 315, n. 75 and 366, n. 414), though another text (CSNS 424) which refers to Būtʾmn as ‘‘the god of Sīr‘‘, suggests that the author knew of the temple of Baʿalʿgamin. Inscriptions mentioning sacrifice (dhbh) are usually found in groups, and seldom specify either the victim or the deity, though two texts (C 4358 and 4360) say their authors sacrificed to Būtʾmn and the authors of two others (unpublished) refer to a high place or altar (smd) on which they sacrificed a camel (dhbh gml ʾh).

Some texts record the building of a Cairn (rgm) over...
the dead (though cairns were often used for other purposes as well), a practice maintained by the modern inhabitants of this area, the Ahl al-Djabal (on "Safaitic" cairns, see Macdonald, in Zaghloul et alii, Studies in the history and archaeology of Jordan. IV, Amman, 303-7, and references there; on modern cairns, see W. and F. Lancaster in Arabian Archaeology and Epigraphy, iv [1993], 151-69). Some Safaitic texts also refer to a balyya (q. v.), or camel left to die at the grave of its master, a pre-Islamic practice described by Islamic writers, and which is also mentioned in an unpublished Nabataean inscription from southern Jordan, which was found associated with a burial of this type. Large numbers of texts are concerned with mourning (ugm, ndm, velh, etc.) and a belief in a personified Death or Fate (Manā/mana, Manāyā), paralleled in the pre-Islamic poetry, is suggested by the phrase "humbled by Fate" (rghm mn), which is often used of the dead.

It is clear from these texts that their authors were aware of the beaten-track of life. Herod the Great and his successors appear to be mentioned several times, as are (unspecified) Roman emperors (kr) and at least one Nabataean king (see Macdonald, in Syria, lx [1993], 323-46, and in Trade, contact, and the movement of peoples in the Eastern Mediterranean. Studies in honour of J. Basil Hennessy, Sydney 1994) and there are a number of (mainly enigmatic) references to the Romans (Rm), the Nabataeans (Nh), the Persians (Mdh). Unfortunately, in most cases it is impossible to identify the exact events referred to. There are also indications that some of the nomads were recruited into auxiliary units of the Roman army (see Macdonald, in Syria, lx [1993], 368-77). The Safaitic inscriptions provide no evidence of a "nomadic threat" to the Roman provinces of Syria and Arabia.

These graffiti provide a picture of the daily life of their authors which shows them to have been fully nomadic, rather than sedentaries or semi-nomads, as has sometimes been suggested (see discussion in Macdonald, in op. cit., 311-22). They were mixed pastoralists, migrating annually with their herds, both of camels and of sheep and goats, between the harra or (basalt desert) of southern Syria and north-eastern Jordan, and the hamād (which they called mdrb), in what is now western 'Irak and northern Sahādī Arabia (see Macdonald, in F. Altheim and R. Stiehl, Christentum am Roten Meere, Berlin 1971, 67-74 and the works of Oxtoby and Clark mentioned above. For a detailed discussion of the historical content of the texts, see Macdonald in Syria, lx [1993], 303-408.

SAFAKUS, conventional European form SFAX, a town of Tunisia, on the eastern coast to the north of the Gulf of Gabès.

The historical study of the towns of Tunisia poses a series of problems, the approaches to which are far from uniform, given the sparseness of information. The urban societies did not preserve the pieces of evidence, above all, the written ones, concerning with the urban public life, which would have thrown light on the activity of the towns and the exchange of commodities. Given these lacunae, stretching over a long period of centuries, historical information is necessarily laconic and disparate.

There was nothing which destined Sfax to become a great regional centre. In order to achieve this, the
Muslims did not mark down the site of Taenea, an important settlement some 12 km/7 miles to the south, of the neighbouring tribe of the Methelith. Economic life.
The town's commerce flourished thanks to its in-transition from Antiquity to the Middle Ages, are hidden from us, and archaeological excavations, hardly yet begun, have not provided any decisive information. Nevertheless, the orthogonal character of the Medina of Sfax and the alignments visible in its en-ironments, lead one to recall the typical Roman layout. But one has to have recourse to the information of the Arabic historical tradition, with all the attendant risks.

Origins.
An unusual fact, hence notable, is that, on the model of Tunis and Kairouan, Sfax had—if belatedly—its own historian, Mahmud b. Sa'id Mak đá al-Safa k úsi (d. at Kairouan in 1227/1813), author of the Nuzhat al-an ád ám f t y`árík al-tawd úrik zich la litres ak bár, a compilation in which the author traces the history of his natal town from the Islamic conquest to the reign of Hammúda Paghá (1196-1229/1781-1814) (ed. Ali Zouari and M. Mahfoudh, Beirut 1988). It appears from the historical schema, which he reflects, that the original town had a military function but soon acquired a commercial one. The actual layout of the town and its buildings speedily reflected this process. It seems to have begun with a k ár or burd ú or mabrí) called the Burd ú al-ahmar, on the site of the modern casbah, and in the neighbourhood of the záw i y á of Sidi Djubla. Did this begin as a simple ri b ú or strong-point and then become a ri b ú -mabrí surrounded by an agricultural-artisanal agglomeration? This particular burd ú was in fact merely one of several (Burúiya, Lawza, Inkhila, Mahris 4 Ali, etc.), numerous in the area and amongst which Ksar Ziyad (35 km/20 miles to the north-west from the modern town) was chosen for fighters for the faith, an instructional centre for religious education, or a staging-post for the bar i d (q. v.) before becoming a commercial centre? Whatever the case, the first nucleus of population was one of mará bi tún, to which two groups of fishermen (the A l t i b al- and the N i t ú l a) were to join. The hinterland had a dense network of villages (kádr). The sources all agree that trade by land and by sea was the main cause for the evolution of the town.

Urban evolution.
As a mark of its success, Sfax seems to have acquired its first and last fortifications towards the time of Ibrahim Ahmad b. al-Aghlab, between 246/860 and 249/863. The guiding spirit here was its future hád ú, the fásh ú Ali b. Salúm, a disciple of the Imám Sa b tún (q. v.). The space enclosed by these walls re-main unchanged till the 12th/18th century. It took the form of a quadrilateral 600 m by 400 m, hence covering 24 ha (Sousse, 32 ha; Monastir, 28 ha). The fact that it was only slightly set back from the sea, with a shallow continental shelf there, provided, moreover, a good warming period in case of external attack. The great mosque presumably dated from that same period. It had numerous buildings and extensions (e.g. in 379/989 and 479/1086) and only assumed its final form, the one which we now know, in the years between 1183/1775 and 1197/1783. Restricted within its rampart, the town soon became cramped, over a millennium, of the internal lay-out of the town ended up, towards the mid-19th century, in a repertoire of buildings made up of 83 mosques and various oratories, 72 záw i y ás, 2,066 houses, 19 oil presses, 35 mills, as many ovens for bread-making, and 12 burd ús. With such an array of buildings, Sfax took second place only after the capital Tunis, which had 8,000-9,000 houses. Water was scarce, hence streams had to be utilised, and three basins, as well as domestic and private cisterns, were constructed: the first, the Nassiriya, goes back to the beginning of the 7th/13th century, and the other two date from 1188/1774.

Political history.
Although comparatively important, given the scale of the country, Sfax never assumed a political importance commensurate with its commercial one. Often coveted by outside powers, which often passed it by, it was never subject to any domination except a com-mercial one. Hammú b. Mall resided assuming independent power there in 451/1059 when Zirid power was in decline. After several fruitless attempts, Tamín only managed to recover it in 493/1099-1100. It rebelled in 504/1110-11 against its Zirid governor Abu 4 Futúh. It took the side of the Almohad Al 4 mu min, the master of Ifrikiya, in 532/1136 before passing into the hands of the Majorcan Yáh b ã Ghamriya. It was seized for short periods by the rebels Ibn Abl 4 Umá r (681/1282) and the Ban ú Mak k ã (757/1356). It declared for the Ottoman Turks during the period of Hafsid decline in the 10th/16th century, but only reluctantly. In effect autonomous, a aqás a took the leading political role there. Even Shá hib Sidi 4 Arsá (948/1542) was unable to bring it within his control, though his warriors seized Darb ú udh. When Kairouan had been left in 696/1297, a rás called Abu 4 Abd Allah al-Makk áni was master of Sfax. It was attached to Tripoli and only restored to the san ú dan of Tunis in 996/1588.

However, the people of Sfax were not lacking in initiative when they managed to escape from the domination of their elites or acted in concert with them. Despite its trade, and perhaps connected with it, Sfax was none the less a corsair centre. For this reason, George of Antioch gave control of it to Roger II of Siciliy. Mastered in 538/1143 but occupied in 543/1148, it was only broke free in 551/1156. It was caught up in the policies of Venice and Malta, and local tradition preserves the memory of a naval victory at Rás al-Makk h b in 1160/1747. Venetian attempts at an occupation (1200/1786 and 1205/1791) failed. Ships of Sfax asking permission to go out raiding represented 15% of all requests made between 1212/1797 and 1213/1798. These ships all belonged to the Al 4 Abd Allah al-Makk áni was master of Sfax. It was attached to Tripoli and only restored to the san ú dan of Tunis in 996/1588.

The town's commerce flourished thanks to its in-
habitants’ spirit of enterprise, with a trade orientated towards the Levant. The establishment of the Proctorate dealt a blow to this, but the local people have been recovering their economic enterprise since independence.

Cultivation of the olive has been known from the 3rd/9th century, and after a period of decline under the Hafsid, recovered in the 11th/17th century; a survey in 1852 enumerated 110,518 trees in the area to the north of the town. These were progressively replaced by almond trees from 1910 onwards. But olive cultivation in the whole of the Sfax region enjoyed an immense increase under the Protectorate, with a large injection of French capital, with 350,000 trees just after 1881, 5,159,829 in 1951 and 6,100,000 in 1972. This monoculture was without its dangers, and potential difficulties were only regulated by the creation in Sfax in 1930 of a special Office for Oil, which was to play a leading role in marketing and commerce. Whereas there were only 19 oil-pressing establishments in the mid-19th century, there were some 250 counted in 1972.

The economy of the town of Sfax itself rests on both artisanal production and on service industries (the latter comprising 37% of all enterprises in 1980). As well as the dominant position of olive production, their had been an industrial transformation from the establishments in the mid-19th century, there were commerce. Whereas there were only 19 oil-pressing Oil, which was to play a leading role in marketing and by the creation in Sfax in 1930 of a special Office for

The local commercial mentality expresses itself in private capitalism, not unlike that of the people of Djerba.

Population.

This is difficult to evaluate because of the diaspora, rural emigration and, above all, because of administrative boundary changes. The municipality, created in 1884, had 54,800 people in 1946. The Medina alone had 16,700 in 1954, compared with 130,000 for the rest of the agglomeration. The population tripled between 1936 and 1966, and reached 275,000 ca 1975. The town grew in consequence, at the expense of the Rhât, the Frankish quarter, razed after the bombardments of 1943, of the surrounding sabkhas and even of the nearby sea, whilst the surrounding orchards and gardens, qûnûns, have now olive, cultly disappeared. The urban area continues to grow in an anarchic and uncontrolled fashion. Even the Medina has been affected by the invasiveness of commercial and artisanal activities spreading out from the sâqas and altering the ancient pattern of residential usage. There has also been threats of flooding and of atmospheric pollution. The safeguarding of the historic areas and rehabilitation of residential quarters will require official intervention, and is tied up with a public debate on the nature and characteristics of the towns of Tunisia, their pasts and their presents.

In Islamic law, travelling permits certain mitigations in the carrying out of ritual duties. This applies to three topics: 1. ritual purity: according to most schools, a traveller may extend the period during which he is allowed to perform the minor ritual ablation (wudu? [q.v.]) by rubbing his foot-covering instead of washing his feet, from one to three days; 2. ritual prayer (salât [q.v.]): a traveller is permitted to shorten (kafr) the salâts with four rak’as [q.v.], i.e. the salât al-asr, the salât al-‘asr, and the salât al-zuhr; to two rak’as, and, according to most schools, to combine (gâmî) the salât al-asr and the salât al-magârib with the salât al-zuhr; 3. fasting: a traveller is permitted, or according to some, obliged to break the fast of Ramadan, but must later make up for the days not fasted. A journey has to satisfy certain requirements in order to allow these mitigations. It has to be undertaken with the intention to cover a certain minimum distance (masâfî al-khaq). Most schools define it as 16 farâsâks, which modern jurists equate with ca. 82 km. The Shâfîs mention a distance of 24 miles, i.e. ca. 48 km. According on the Hâfizis, this distance is three days’ travelling with an average speed. The Zâhiris, however, acting on the obvious meaning of the word safâr in Qur’ân and hadîth, hold that any journey permits these mitigations. According to most schools, the aim of the journey is important. The Hâfizis assert that only journeys with a religious purpose, such as performing the hadjî or dhâhil, count in this respect, whereas the Shâfîs, Mâlikis and Shî’is hold that the journey must have a lawful aim. According to the Hâfizis, the aim of the journey is irrelevant.

2. In Islamic life.

See for this, FUNDUK; KHAM; RİHÂL; TİDARÀ. For envoys and ambassadors, see ELÇI; SAFPÊR.2. For the pilgrimages to Mecca, see MECÂ. To these of these articles, add I.R. Netton (ed.), Golden Roads. Migration, pilgrimage and travel in medieval and modern Islam, London 1993.

SAFAR, name of the second month of the Islamic year, also called al-Qâyûr or al-mu'afar because of its being considered to be unlucky (C. Snouck Hurgronje, The Alchemeh, i, 206; idem, Mokka, ii, 56). The Muslim Tigré tribes pronounce the name Shafar, the Achnashen Thapa. According to Wellhausen, in the old Arabian year, Safar comprised a period of two months in which al-Muharram (which was later named, al-Muharram by most Muslim innovators) was included. As a matter of fact, tradition reports that the early Arabsians called al-Muharram Safar and considered an ‘umra during the months of the Hadjî as a practice of an extremely reprehensible nature. They embodied this view in the following saying: ‘Iqqa bâara‘ l-dabar waa-wa-fah l-raqâ or wa-nâla’ka Safar halalati l-‘umra il-man i’sâmar, i.e. “When the
wounded backs of camels are healed and the vestiges [of the pilgrims] are obliterated and Safar has passed, then the "Umra is allowed for those who undertake it."

(A. J. Wensinck) - Safar. Neubrennmann spelling, Shihab al-Mamdhul el-Baghîr a leading figure in the early Tunisian reformist ("evolutionist") and Young Tunisian movements, of Turkish parentage (1865-1917).

Born at Tunis as the third son of Brigadier-General (amir liwa) Mustafâ Safar, he received a strict education, attended first a Kurînic school and then the elitist Sadîkî [q.v.] College from its inception (1875). His excellent record won him the favour of his founder, Khayr al-Dîn Pâsha [q.v.] and a scholarship to Paris. Having lost it a year later owing to the diversion of the school's endowments by Khayr al-Dîn's successor, he entered government service (1882), where he rose in seven years to the position of head of the Accountancy department (ra'is kism al-mukhtabat) of the General Administration, concurrently running and teaching a new Sadîkî branch. More significant were his subsequent roles as (a) founder member of, and contributor to, the semi-official, elite, Islamic, Arabic weekly, al-Ḥâdîrî ("the Capital", first issue 2 August 1888); (b) co-founder and president of the Khâldûniyya Association (opened 5 May 1897 [q.v.]), where he also gave courses in history which fostered national consciousness, won him a following among students of the Zaytûnî [q.v.] and helped bring about a Sadîkî-Zaytûnî alliance. One of his disciples was the future leader of the Algerian Salafîyya [q.v.], Ibn Bâdîs [q.v.]; (c) president of the Beylical Habûs Council (jamî'at al-abhâb or al-aqâifs, in the mid-1890s). In this capacity, he won particular popularity for the renovation of the Tunis hospice (taksiyya, 1905) and for his resistance to colon pressure for acquisition of habûs lands (see inzâl and B.D. Cannon, The Beylical Habûs Council and suburban development: Tunis, 1881-1914, in The Maghreb Revue, viii/5-6 [1983], 32-39 [1984], 59-63 [1984]; P. Lambert, Les origines du protectorat français en Tunisie (1861-1881), Paris 1959, 456, 481-2; Ch.-A. Julien, Colonies françaises et Jeunes tunisiens (1882-1912), in Rev. fr. d'Histoire d'Outre-Mer, liv (1967), 87-150; M.S. Zmerli, Figures tunisiennes. Les successeurs, Tunis 1967, 13-29; M.F. I. Dynastic, political and military history.

The establishment of the Safavid state in 907/1501 by Shâh Ismâ'îl I [q.v.] (initially ruler of Ahdar-bâyqân only) marks an important turning-point in Persian history. In the first place, the Safawids restored Persian sovereignty over the whole of the area traditionally regarded as the heartlands of Persia for the first time since the Arab conquest of Persia eight and a half centuries previously. During the whole of that time, only once, during what Minorsky termed "the Iranian intermezzo" (334-447/945-1055), did a dynasty of Persian origin prevail over much of Iran [see BAKTRIANS; for the rest, Persia was ruled by a succession of Arab caliphs, and Turkish and Mongol sultans and khâns. Secondly, Shâh Ismâ'îl I de facto brought the area of Sea of Iran and Turkistan into the ambit of Shi'i Islam to be the official religion of the new state. This was the first time in the history of Islam that a major Islamic state had taken this step. Ismâ'îl's motives in making this decision were probably a combination of religious conviction and the desire to provide the nascent Safavid state with an ideology which would differentiate it from its powerful neighbour, the Sunni Ottoman empire. At all events, the policy had
far-reaching consequences, because it introduced into the Persian body politic the potential for conflict between the turban and the crown, representations of ‘secular’ government, and the mujtahids, whose dream was theocratic government. This conflict, always latent, emerged into the open from time to time during the Kādgār period, and finally burst forth with cataclysmic force in the Islamic Revolution of 1979.

(i) The origins of the Safawids.

The origins of the Safavid family are shrouded in mystery. This mystery is compounded by falsifications which were perpetrated, probably during the reign of Ismā'il I and certainly during that of Tāhmasp I [q.v.], in order to produce an "official" Safavid genealogy [see Şafi AL-DİN ARDABİLİ, Bibliography]. Petrushevski thinks that the fabrication of the "official" Safavid genealogy occurred even earlier, at the beginning of the 8th/14th century (see B. Nikitine, Essai d'analyse du Safwat al-safd, in Jd [1957], 386). There was never to be a consensus among scholars that the Safavid family hailed from Persian Kurdistan, and later moved to Ardabil, finally settling in the 5th/11th century at Ardabil. There, they lived an uneventful life, gradually acquiring a reputation for piety which attracted to them disciples (murīd), but it is only with the birth of Shāh Şafi al-Din in 650/1252-3, the eponymous founder of the Safawiyah or Safawid order, that Safavid history really begins.

(ii) The development of the Safavid order (700-907/1301-1501).

In 700/1301, Şafi al-Din assured the leadership of a local Şūfi order in Gilân, and, under him and his successor, Şadr al-Din Mûsâ [see ŞADR AL-DİN ARDABİLİ], the order was transformed into a religious movement which conducted its propaganda (da'wa) throughout Persia, Syria and Asia Minor. As yet there was no sign of the militant Shi‘ism which became a feature of the movement later; indeed, Şafi al-Din himself was apparently a Sunnī of the Shafi‘i school. However, the order was beginning to have a political impact, judging by the fact that it attracted the hostility of the Mongol amir Malik Aqârâf. We have few details of the development of the order under Khâqân al-Din (794-892/1391-1492) and İbrahim (815-817/1410-1412). It is tempting to see the esoteric doctrine of the Safavid order assuming a Shi‘ī character under the leadership of Khâqân al-Din [see, for example, W. Hinz, ‘Zusammen- züge zum Nationalstaat im fünfzehnten Jahrhundert’, Berlin and Leipzig 1936, 23; and E.G. Browne, in JRASt [July 1921], 407, quoted in V. Minorsky’s review of Hinz’s book in Deutsche Literaturzeitung, xxiii [1937], 954). In the opinion of H.R. Roemer, however, although Shi‘ī elements were always present in Folk Islam, ‘it cannot be proved conclusively that any of the ancestors of İsmâ‘îl ‘had abjured the Sunna and turned Shi‘ī’ (The Safavid period, in Camb. hist. Iran, vi, Cambridge 1986, 196-7).

At all events, there is no doubt that the Safavid order, like many other religious movements that flourished in Anatolia from the 7th-10th/13th-16th centuries, was the direct beneficiary of the destruction by Hulegii of the Sunnī caliphate in 656/1258, and of the policy of the Mongol Il-Khans of tolerance toward all religious faiths, which facilitated the spread of heterodoxy generally. While not going as far as to endorse Henri Corbin’s famous dictum that “True Shi‘ism is the same as Ta’ṣawwuf, and similarly, genuine and real Ta’ṣawwuf cannot be anything other than Shi‘ism” (quoted in M.M. Mazzauoi, The origins of the Safavids, Wiesbaden 1972, 83 and n. 2), M.F. Köprülû seems correct in saying that, during that period, “Le Soufisme est en faveur, mais l’hétérodoxie recrée facilement des adeptes” (L. Bouvat’s tr., quoted in Mazzauoi, 57).

When Shákh Djiyanaqd [q.v.] assumed the leadership of the Safavid order in 951/1447-8, the history of the Safavid movement entered a new phase. Not only did he possess religious authority; he also sought material power (salâman-t-i sâri) (Khâqân al-Dîn b. Kûbâd al-Husâyni, Tarîh-i ‘Ilî-yî Nizâmî, B.L. ms. Add. 23,513, fol. 443b). The most powerful ruler in Persia at the time was the Shirwânshâh Djinâdî [q.v.], but he was threatened (Amin b. Ahmad al-Hâfiz, Hist. B.L. ms. Add. 16,734, fol. 516a), and ordered Djiyanaqd to disperse his forces and leave Ardabil; otherwise, Ardabil would be destroyed (B.L. ms. Or. 3248, fol. 19a). Djiyanaqd fled, and eventually found asylum with Shîrâwânshâh’s rival, the Ak Kouyunlû, at Diyar Bâkâr. In 864/1460, Djiyanaqd was killed during a foray into Shîrâwân, and his son Haydar [q.v.] succeeded him as head of the Safawiyah. Initially, Haydar continued the alliance with the Ak Kouyunlû and cemented it by marrying Djinâdî’s daughter. After Djinâdî’s death, however, his son Ya’kûb in his turn felt threatened by growing Safavid power, and allied himself with Shîrâwânshâh to defeat and kill Haydar in 893/1488. Safavid supporters were now distinguished by the distinctive headgear (tâḏîg) of twelve gores, denoting the twelve Ikhân ʿAṣâhîr Imâms, surmounted by a red spike; this tâḏîg is said to have been revealed to Haydar in a dream by the Imâm ʿAli, and the wearing of it caused the Ottomans to dub Safavid supporters kizîl bash [q.v.] or “redheads”; this derrisory appellation was adopted by the Safawids as a mark of pride. Halîl Inâlikîc has noted that, already in the 8th/14th century, Turcoman warriors wore a red cap known as kizîl bork.

After the death of Haydar, the Şûfis of the Safavid order gathered round his son ʿAli at Ardabil. The Ak Kouyunlû sultan Ya’kûb, now thoroughly alarmed, seized ʿAli, his two younger brothers İbrahim and İsmâ‘îl, and their mother, and confined them in the fortress of İ斯塔ḫrî in Fârs. He is said to have spared the lives of the brothers only out of consideration for their half-sister, Beqat Aghâ known as ʿAlâmîgûr Begum, whose mother was Šâh Şahrâbakhsh’s sister (B.L. ms. Or. 3248, fol. 24a). In the struggle for power which followed the death of Ya’kûb in 896/1490, one of the contenders, Rustam, released the Safavid brothers from jail after four-and-a-half years (898/1493) and, with the assistance of their followers, defeated his main rival Bâysûkuruk. He soon realised that the political aspirations of the Safawids constituted a danger to himself; he re-arrested ʿAli and his brothers, and planned to kill ʿAli, and his followers at Tabriz and Ardabil. ʿAli escaped from Rustam’s camp, and made for Ardabil, but was overtaken and killed by Ak Kouyunlû troops.

According to Safavid ‘official history’, ʿAli, before he died, designated his younger brother, İsmâ‘îl, to succeed him. However, A.H. Morton, in a paper given at the 2nd Safavid Round Table, held at Cambridge 8-11 September 1993, raised some important questions on this issue: why was İsmâ‘îl given precedence over his elder brother İbrahim, who might normally have been expected to succeed as leader of the Safavid order? Did İbrahim in fact succeed ʿAli, and did İbrahim’s early death make it easier for Safavid historians to “edit him out” of official Safavid history? And, finally, does the passing over of İbrahim in favour of İsmâ‘îl mark a division in Safavid ideology between İbrahim,
representing Sufi quietism, and Ismā‘il, representing militant Shi‘ism or extremism? At all events, Ismā‘il made his way to Qum, where he was given sanctuary at Lāhijān by the local ruler Kār Kiyā Mirzā ‘Ali. Rustam prepared to invade Gīlān, but was prevented from doing so by further dynastic feuds between rival Ak Koyunlu chiefs.

**Prima facie**, one might have expected that the Safawid revolutionary movement, for such it had become, would have petered out after suffering what would normally have been the devastating loss of not one but three leaders within the space of 34 years. The fact that it did not underlines the extraordinary effectiveness of the Safawī da‘wā, particularly among the Turkoman tribesmen of eastern Anatolia and Syria.

There were three principal elements which together made up what Minorsky called the “dynamic ideology of the Safawid movement” (Tādzhikrat al-mulāk, translated and explained by V. Minorsky, E.J.W. Gibb Memorial Series, N.S. XVI, London 1943, 23). First, the Sufi disciples (murids) of the Safawī order went unquestioning obedience to their murgūd-i kāmil (see Mughūtdī), the head of the order, who was their spiritual director. Second, the apothecosis of the Safawid leader as a living emanation of the godhead. Already in the time of Ḏunayd the Safawī murids “openly called” their leader “God (islāh), and his son, Son of God (ibn Allāh) … in his praise they said ‘he is the Living One, there is no God but he’” (Mazzāzū, op. cit., 73). The poems of Shah Ismā‘il, composed in the Adhār dialect of Turkish under the pen-name of Khatā‘ī (see Ismā‘īl i. 2), are unequivocal on the subject of Ismā‘il’s divinity (see R.M. Savory. Some reflections on totalitarian tendencies in the Safawid state, in Studies on the history of Safawī Iran, Variorum Reprints, London 1987, X. 231-2).

Such a deviant doctrine placed the Safawīs squarely between Ak Koyunlu control in 914/1508. In 917/1511 Ismā‘il left Lahijān for Ardabīl to make his bid for power. By the time he reached Ardabīl, 1,500 followers from Syria and Anatolia had joined him (Hasan Rūmī, Ahsan al-tawādhūk, ed. G.N. Seddon, Baroda 1931, 25-6). From there, he sent heralds (dgīrān) and couriers (muhīrān) to summon more supporters from those areas and also from Adhār-bāyḏān and ‘Irāk-i ‘Adjam (see Dījāl) to a rendezvous at Arzīnjān (see Erzīnjān), on the high road between Ak Shehir and Erzerum. His choice of rendezvous dearly indicates where the focal point of his support lay. By the time of 906/1500, 7,000 kizīlbašī had rallied to him; they came from the Usṭāḏā, Shāmū, Rūmū, Takkārū, Dhu ‘l-Kadar, Aḏārghār, Kāḏār and Warsāk tribes. Leading them was the young leader but also with planning the final stages of the Safawid revolution. The first decade of the 10th/16th century was spent by Shah Ismā‘il in extending Safawī rule over the rest of Persia (see Ismā‘īl i.), and also over Baghdaḏ and the province of ‘Irāk-i ‘Arab, which was wrested from Ak Koyunlu control in 914/1508. In 917/1511 Ismā‘il despatched a kizīlbašī expeditionary force to Transoxania to assist the Timurids Zähīr al-Dīn Bābūr (see Bābūr) in recovering his ancestral dominions from the Shībānī Ozbegs. The combined Safawī and Timurid force occupied Samarkand, where Bābūr made good his promise, in return for Safawī help, to have Ismā‘il’s name inserted in the kūthā and coins minted in his name (Aḥsan al-tawādhūk, 127), but “the numismatic evidence for this is equivocal” (see Bābūr, and its Bibliography). Bābūr, having also occupied Bukhārā, sent the kizīlbašī troops home, whereupon the Ozbegs promptly counter-attacked and drove him out of Bukhārā. Further Safawī assistance from the governor of Bālgh temporarily stabilised the situation, but the combined Safawī and Timurid force under the wakil Amīr Naḏīm was annihilated by the Ōzbegs after many of the kizīlbašī had mutinied against their Persian commander (see Savory, The political murder of Mirzā Salmān, in Studies on the history of Safawī Iran, xv, 186-7). This defeat put an end to Safawī aspirations to extend their influence into Transoxania, and, for most of the Safawī period, the problem of the defence of the northeastern frontier against nomad invasions remained largely unsolved.

On the north-western frontier, Safawī expansionism was a major factor in precipitating war with the Ottomans, a war which so threatened the very existence of the nascent Safawī state. Not surprisingly, the Sunni Ottomans were alarmed by the vigorous propaganda of the militant Safawī da‘wā in areas of eastern Anatolia and in the region of the Taurus mountains, which in turn led to circulation of Ottoman emblems and the Mamlūk state. Even more alarming for the Ottomans was the great success of this da‘wā among the Turkoman tribes, and the recruitment of significant numbers of these tribesmen into the Safawī army. In 907/1502 the Ottoman sultan Bāyezīd II (g.v.) deported large numbers of Shīfs from Anatolia to the Morea, and he strengthened his garrisons on the Qum, Freiburg i. Br. 1970, 85) entered Tabriz. Coins were minted in his name; the kūthā was read in the name of the Twelve Imāms, and the Imāmī rite won the proclamation of the true religion (Khāndamir, Ḥabīb al-siyās, Tehran n.d., iv, 467). Although masters initially only of Adhār-bāyḏān, and despite the fact that Alwān was mustering fresh forces; that another Ak Koyunlu prince, Murād, was still in possession of Fārs and ‘Irāk-i ‘Adjam; and that the Timurīs still controlled Kūrūsān, the Safawīs had in fact won the struggle for power in Persia which had been going on for nearly a century since the death of Timūr in 807/1405.

(iii). The establishment of the Safawid state.

Since Ismā‘il was only seven years old in 900/1494 when his brother ‘Ali was killed in battle with Ak Koyunlu troops, and was barely fourteen years old at the time of his accession, it is obvious that the momentum of the Safawī revolutionary movement during that crucial decade was maintained by others. The sources term the men responsible the ahī-i khitās, a small group of about seven kizīlbašī chiefs who were singled out by their special devotion to their leader and who had a special relationship with him. They were charged not only with protecting the person of the young leader but also with planning the final stages of the Safawī revolution.

The main feature of the 10th/16th century was the claim to be the representatives on earth of the Twelfth Imām, who was the spiritual director. Second, the Safawīs squarely between Ak Koyunlu control. In 914/1508 Isma‘il left Lahijān for Ardabīl to make his bid for power. By the time he reached Ardabīl, 1,500 followers from Syria and Anatolia had joined him (Hasan Rūmī, Ahsan al-tawādhūk, ed. G.N. Seddon, Baroda 1931, 25-6). From there, he sent heralds (dgīrān) and couriers (muhīrān) to summon more supporters from those areas and also from Adhār-bāyḏān and ‘Irāk-i ‘Adjam (see Dījāl) to a rendezvous at Arzīnjān (see Erzīnjān), on the high road between Ak Shehir and Erzerum (g.v.)). His choice of rendezvous dearly indicates where the focal point of his support lay. By the time of 906/1500, 7,000 kizīlbašī had rallied to him; they came from the Usṭāḏā, Shāmū, Rūmū, Takkārū, Dhu ‘l-Kadar, Aḏārghār, Kāḏār and Warsāk tribes. Leading them was the young leader but also with planning the final stages of the Safawī revolution. The first decade of the 10th/16th century was spent by Shah Ismā‘il in extending Safawī rule over the rest of Persia (see Ismā‘īl i.), and also over Baghdaḏ and the province of ‘Irāk-i ‘Arab, which was wrested from Ak Koyunlu control in 914/1508. In 917/1511 Ismā‘il despatched a kizīlbašī expeditionary force to Transoxania to assist the Timurīd Zähīr al-Dīn Bābūr (see Bābūr) in recovering his ancestral dominions from the Shībānī Ozbegs. The combined Safawī and Timurīd force occupied Samarkand, where Bābūr made good his promise, in return for Safawī help, to have Ismā‘il’s name inserted in the kūthā and coins minted in his name (Aḥsan al-tawādhūk, 127), but “the numismatic evidence for this is equivocal” (see Bābūr, and its Bibliography). Bābūr, having also occupied Bukhārā, sent the kizīlbašī troops home, whereupon the Ozbegs promptly counter-attacked and drove him out of Bukhārā. Further Safawī assistance from the governor of Bālgh temporarily stabilised the situation, but the combined Safawī and Timurīd force under the wakil Amīr Naḏīm was annihilated by the Ōzbegs after many of the kizīlbašī had mutinied against their Persian commander (see Savory, The political murder of Mirzā Salmān, in Studies on the history of Safawī Iran, xv, 186-7). This defeat put an end to Safawī aspirations to extend their influence into Transoxania, and, for most of the Safawī period, the problem of the defence of the northeastern frontier against nomad invasions remained largely unsolved.

On the north-western frontier, Safawī expansionism was a major factor in precipitating war with the Ottomans, a war which so threatened the very existence of the nascent Safawī state. Not surprisingly, the Sunni Ottomans were alarmed by the vigorous propaganda of the militant Safawī da‘wā in areas of eastern Anatolia and in the region of the Taurus mountains, which in turn led to circulation of Ottoman emblems and the Mamlūk state. Even more alarming for the Ottomans was the great success of this da‘wā among the Turkoman tribes, and the recruitment of significant numbers of these tribesmen into the Safawī army. In 907/1502 the Ottoman sultan Bāyezīd II (g.v.) deported large numbers of Shīfs from Anatolia to the Morea, and he strengthened his garrisons on the
SAFAWIDS

eastern frontier after Isma'il overran Diyar Bakr and large areas of Kurdistān in 913/1507-8. In 916/1510, after his great victory at the Marw the Özbeg leader, Muham- mad Shībānī Khān, to Bāyezīd III. The following year, 917/1511, when a major Shī'ī revolt broke out in Teke, and at the same time civil war erupted be- tween Bāyezīd and two of his sons, Selīm and Shāh Isma'il sought to turn the situation to his advan-
tage. His scheme to mobilise support for Murād, son of Ahmed, came to nothing, but a Saifawī state under ʿĀli Asfālī Rūmūtī died a sudden death. As a result, Shāh was at least as far as Tūktā, where the kadāwa was read in the name of Isma'il, and defeated a large Ottoman force under Sinān Pāsha. Meanwhile, Bāyezīd II had been forced to abdicate in favour of his son Selim on 7 Şafar 918/1 April 1512. At once, Selim set about muster-
ing a huge army of 200,000 men for the invasion of Persia, and, as an initial measure, "proscribed Shī'īsm in his dominions and massacred all its adherents on whom he could lay hands." (H.A.R. Gibb and H. Bowen, Islamic society and the Weī, 1/2, Oxford 1957, 189). Marching by easy stages across Anatolia into Adharbāyjān, Selim reached Cādirān [g.v.] on 1 Radjab 920/22 August 1514, where a battle was fought the following day (see M. J. McCaffrey, Cādirān, in Encyclopaedia Iranica, v, 656-8; Naṣr Allāh Falsāti, Dāng-i Cādirān, in Maqālāt-i Dānīškādā-yi Adabī-yi Dānīškādā-yi Tūktā, 1/2 [1953-4], 50-127). The Safawī army was heavily defeated. Most sources say that the Ottomans outnumbered the Saifawī forces two to one, but the Ottoman artillery and hand-
guns, of which as yet the Saifawīs had little expe-
rience [see BĀRūD. V], were the decisive factor. After their victory, the Ottomans entered Tābrīz, the Saifawī capital, but recalcitrant Janissaries thwarted Selim's plan to winter there and complete the con-
quest of Persia the following year, and he withdrew eight days later, on 23 Radjab 920/13 September 1514.

The consequences of the defeat at Cādirān were both material and psychological. In terms of territory, the result was the annexation by the Ottomans of the regions of Diyar Bakr, Marāq and Albānī. In terms of casualties, many high-ranking kizilbāsh amīrs, and three prominent members of the 'islama', were killed. Naṣr Allāh Falsāti, Dāng-i Cādirān, in Maqālāt-i Dānīškādā-yi Adabī-yi Dānīškādā-yi Tūktā, 1/2 [1953-4], 50-127). The Safawī army was heavily defeated. D'Alessandri's charge that Tahmasp was "a man of very little courage" (op. cit., 216) must be rejected (see Savory, op. cit., 57-8). In the course of his reign, the Žezbeks launched five major attacks on Khorasan, and the Ottomans, under their most powerful sultan Suleyman II, made four major invasions of Persia. It is true that Persia lost territory (Baghdad in 942/1535), and that Tahmasp was forced to move the Safavid capital from Tabriz to Kāzvin in 953/1548 (L. Lockhart, Persian cities, London 1960, 69; A.K.S. Lambton, in KAZWĪN, gives 962/1555), but, with the meagre resources available to him, he successfully fough a series of theocratic wars on two fronts (Savory, op. cit., 58 ff.) and, in 962/1555, he was successful in negotiating with the Ottomans the Treaty of Amasya on terms not unfavourable to Persia; peace remained unbroken for the remainder of Tahmasp's reign (see op. cit., 57-8). In the course of his reign, the kizīlbdsh, a political appointee, one must beware, of the concept of "wakil" as the alter ego of the ghālūdān (Tadhkirat al-mulūk, vi), and, in 962/1555, he was successful in negotiating with the Ottomans the Treaty of Amasya on terms not unfavourable to Persia; peace remained unbroken for the remainder of Tahmasp's reign (see EIr, i, 928; AMASYA; N. Itezkowitz, Ottoman empire and Islamic tradition, New York 1972, 35-6; S.J. Shaw, History of the Ottoman empire and modern Turkey, 2 vols., Cambridge 1976, i, 109).

Although it was Shāh ʿAbbās I who accelerated the process of converting the Safavid state from a Turk-Persian condominium into a multi-cultural society, it was Tahmasp who began it by introducing new ethnic elements from the Caucasian region, namely, Armenians, Georgians and Circassians, and by recruiting them into these groups into Safavid service. Such recruits were called ghulām-i kābīs-yi shanfa (see SHULAM, ii, Persia), an obvious analogy with the Persian kabīs khwālar. After the death of Tahmasp in 984/1576, the struggle for a dominant position in the state was no longer only between the two "founding nations", Turcomans and Tadjiks, but was a three-cornered fight for power involving ambitious members of the new Caucasian factions. This fight was complicated greatly by the emergence of the barān as an important source of political power, as Circassian and Georgian mothers of royal princes intrigued to secure the succession of their particular sons. From the time of Djiunay onwards, all Safavid leaders had had Turcoman mothers. After the death of Tahmasp, however, because neither of the "kīlībādūn" candidates, the mentally unstable Ismaʿīl and the purblind Sultān Muhammad Khudābanda, was suitable as a ruler, one kīlībādūn tribe, the kūrčībdshī, threw its support behind Tahmasp's third son, Haydar, whose mother was a Georgian. The majority of the kīlībādūn saw the prospect of a ruler strongly supported by the Georgian faction as a threat to their own pre-eminence, and assassinated Haydar; they then placed on the throne first, Ismaʿīl II (984-5/1576-7), and then Sultān Muhammad Shāh (985-96/1578-88). The history of the Safavid state prior to the accession of ʿAbbās I (q.v.; see also EIr, art. ʿAbbās I) is an evolutionary phase, during which attempts were made to deal with certain basic problems posed by the establishment of the state. An attempt was made to incorporate the original Şīʿī organisation of the Safavid order in the state. An attempt was made to prevent the kīlībādūn from acquiring a dominant position in the state at the expense of the Tadjiks or Persians. Both failed. As a result of this failure, there was a marked movement away from the political theocratic form of government of the early Safavid state toward a greater separation of spiritual and temporal powers. The second failure led to the introduction of elements which were neither Turcoman nor Persian, but Caucasian Christian, as a sort of "third force" to offset the influence of the other two.

The pre-ʿAbbās period was one in which the functions of the principal officers of state were not precisely defined, and the boundary between the political establishment and the religious establishment was not clearly demarcated. For example, one finds a military officer, the amīr al-umāra, exercising a considerable measure of political authority, and one finds sadrs and other religious officials holding military rank and leading troops into battle; the sadr himself, as already noted, was a political appointee. One must beware, therefore, of using terms like "civil", "military", "religious", and the like, in any precise sense. By the end of the reign of Tahmasp, the power of the sadr had declined. This was due in part to the fact that one of the sadr's important functions in the early Safavid state, namely, the imposition of liḥnā ʿ Ağhari uniformity throughout Persia, had largely been achieved by the end of the reign of Ismaʿīl I. With the gradual abandonment of the concept of wakil as the alter ego of the ghālūdān, the importance of the wazir as the head of the bureaucracy increased and, by the time of ʿAbbās I, the wazir had emerged as one of the most powerful officers of state.

The Safavid state at the height of its power under Shāh ʿAbbās I (996-1038/1588-1629).

The kīlībādūn inter-tribal rivalry, the succession struggles, and the attempt by a Tadjik faction to end the kīlībādūn dominance, went on for eleven years after the death of Tahmasp, and so weakened the ability of the state to resist its external enemies that the Ottomans made inroads in Adharbaydžan and the Žezbeks in Khorāsān; the citadel at Tabriz had been in Ottoman hands since 993/1585; Harāt had fallen to the Žezbeks in the spring of 996/1588. When ʿAbbās, the third son of Sultān Muḥammad Shāh, was placed on the throne in 996/1588, the prospects for the survival of the Safavid state were bleak as they had been in 920/1514 after the battle of Kālīrān. The events of ʿAbbās's youth had made him determined to make himself independent of the untrustworthy kīlībādūn tribes; yet he could not dispense entirely with their fighting qualities. His solution was to raise a standing army, itself an innovation in Persia, from the ranks of the ghulāmī. The new regiments would be paid from the royal treasury, and would be loyal to him personally, and not to a tribal chief; they included regiments of mūsūms [see MUSULMĀN, v. The Safawids]. The reorganisation of the army necessitated a reduction in the number of provinces under kīlībādūn administration (mamalik), in which the greater part of the revenue was consumed locally, and an increase in the number of provinces under direct royal administration (khāṣṣa), the revenues from which accrued to the royal treasury. Ghulāms were not only recruited for military service but were appointed to positions within the royal household and the khāṣṣa administration. These policies set in train a social and political revolution. Minorsky has calculated that, by the end of the reign of ʿAbbās I, about one-fifth of the high-ranking amīrs were ghulāms (Tadhkīrāt al-mulūk, 17-18); by 1007/1698, only ten years after the accession of ʿAbbās I, an Armenian from Georgia had risen to the position of commander-in-chief of all the Safavid armed forces (see EIr, art. ABBĀS). The changes in the status and form of government of the early Safavid state toward a greater separation of spiritual and temporal powers were not only reflected in its administrative structure. The offices of wakil and amīr al-umāra, relevant to the period of kīlībādūn domination, fell into disuse. The kurčībdshī, or commander of the elite corps of kūrčīs [see KURČĪ] continued to be listed among the principal officers of state, but his importance, too, declined pari passu with the decline of the kīlībādūn. Instead, we hear of a new officer, the ḥāṣīšīr, or
commander-in-chief of all troops, kizildag and non-kizildag. The commanders of the two of the new regimented army, the kalaur-akdis, or commander of the ghulams, and the tufangeri-akdis, or commander of the musketeers, join the highest echelons of the uazir, who now boasted such titles as i'timad al-dawla ("trusty support of the state") or sadr-i 'azam ("exalted seat of honour").

The new army could not be organised and trained overnight, and it was ten years before Abbâs felt ready to take the field. In the meantime, he had been forced to sign a treaty by which he ceded to the Ottomans large areas of Safavid territory, including Adharbaydzjan, Karâbâg, Gandja, Karadja-dagh, Georgia, and parts of Luristan and Kurdistan; in the east, the Ûzbegs overran the province of Sistân, and in 998-9/1590 the Mujâhids recaptured Kandahâr, which had been in Safavid hands since 965/1558. The tide began to turn in 1007/1598, when Abbâs scored a signal victory over the Ûzbegs and recaptured Harât, but the Ûzbegs remained a formidable enemy, and in 1011/1602 a Safavid army was forced to retreat from Balsh with heavy losses. In 1012/1603 Abbâs launched a series of major offensives against the Ottomans in the north-west. Tabriz was recaptured, and the Ottomans were pushed back behind the river Aras. By 1016/1607, the last Ottoman soldier had been expelled from Safavid territory as defined by the Treaty of Amasya in 962/1555, and in 1033/1624 the Safavids recaptured Bagdad.

The reputation of Abbâs I does not rest solely on his military and political achievements. His reign is notable for a remarkable flowering of the arts, both fine and applied. It is also notable for a major exercise in urban planning, when Abbâs I in 1007/1598 transferred the capital from Kazvín to Isfahan, and in 1011/1602 a Safavid army was forced to retreat from Balsh with heavy losses. In 1012/1603 Abbâs launched a series of major offensives against the Ottomans in the north-west. Tabriz was recaptured, and the Ottomans were pushed back behind the river Aras. By 1016/1607, the last Ottoman soldier had been expelled from Safavid territory as defined by the Treaty of Amasya in 962/1555, and in 1033/1624 the Safavids recaptured Bagdad.

The economic prosperity of Persia also increased dramatically under Abbâs I. The new capital, Isfahan, became a thriving metropolis, and Western diplomatic representatives began to make their way to it. The primary objective of all European diplomats was the development of trade (see 2. Economic and commercial history). The secondary purpose of envoys, from Roman Catholic countries was the furtherance of the interests of the various religious Orders operating in Persia: Dominicans, Franciscans, Augustinians, Carmelites, Jesuits and Capuchins. The first envoy who was not a member of a religious Order was Don Garcia de Silva y Figueroa, ambassador from King Philip III of Spain, who arrived at Isfahan in 1025/1617; next, after Abbâs I had enlisted the aid of ships of the English East India Company to expel the Portuguese from Hormuz in 1031/1622, was the first official English ambassador to the Persian court, Sir Dodmore Cotton; finally, in 1076/1665, Louis XIV of France followed suit, and sent two envoys to Persia.

Chardin's well-known dictum: "When this great prince (Shah Abbâs I) ceased to live, Persia ceased to prosper!", though exaggerated, contains within it a kernel of truth. Shah SafT, the grandson and successor of Abbâs (1038-52/1629-42), seemed intent only on maintaining his own position by putting to death or blinding possible rivals such as princes of the Safavid house and powerful officers of state such as kizildag. In 1047-8/1637-8 two important cities, Bagdad and Kandahâr, were lost. SafT's son and successor, Abbâs II (1052/1642-66), was a more able ruler, resembling his great-grandfather Abbâs I in his administrative skill and powers of military leadership. He was less tyrannical and the pressure from the religious leaders, however, and although Christians continued to enjoy considerable freedom of worship, Abbâs I's policy of religious tolerance was breached by Abbâs II's treatment of Jews. In fact, it was becoming clear that many of the policies put in place by Abbâs I could be maintained only by a ruler endowed with his outstanding abilities. It is the tragedy of the reign of Abbâs I that, by his own act, he made it unlikely that his successors would be of similar calibre. To begin with, he followed the traditional Safavid practice of appointing the royal princes to provincial governorates, where they were placed in the care of a kizildag chief who held the title of lala [q.v. in Suppl.] "guardian" or "tutor". The lala was responsible not only for his ward's physical well-being, but also for training him in statecraft. Thus in 998-9/1590 Abbâs I appointed his eldest son, Muhammad Bâkir Mirzâ, governor of Hamadân and amir al-umara of the province (Iskandar Beg Munshi, Tâhirih-i 'Alam-ar-ya-yi Abbâsî, text, ed. Iradj Afgâr, 2 vols., Tehran 1334-5 Sh./1955-6, i, 440, tr. Savory, 2 vols., Boulder, Colo. 1978, ii, 614). In 1024/1614, however, his son was murdered, probably with the Shah's connivance, on suspicion of plotting against him (ibid., text, v, 235-9). From then on, the royal princes were closely confined in the harem, where their only companions were their tutors, the court eunuchs, and the women of the haram. The new policy bore obvious similarities to the Ottoman kafes ("cage") system, which was introduced slightly earlier, during the reign of Selim II (974-82/1566-74) (see Shaw, History of the Ottoman empire and modern Turkey, i, 179). Shaw notes that the new system resulted in a marked increase in the political power of the women, the harem, and introduced the "sultanate of the women", which lasted well into the 11th/17th century. In Safavid Persia, there was a similar result. Chardin calls the harem "un Conseil privé, qui l'emporne d'ordinaire par dessus tout, et qui donne la loi à tout" (Voyages du Chevalier Chardin en Perse et autres lieux de l'Orient, ed. Langlès, Paris 1811, 10 vols., v, 240). Moreover, the new policy failed in its essential purpose, namely, to prevent treasonable behaviour or the suspicion of treason on the part of the royal princes. On the contrary, once confined to the harem, they became the centre of intrigue to a far greater extent than had previously been the case. This led Abbâs II to blind his sons Sul'tân Muhammad Mirzâ in 1030/1620-1 (Iskandar Beg, text, ii, 965, tr., ii, 1187), and Imam Kurt Mirzâ in 1036/1626-7 (ibid., text, ii, 1684, tr., ii, 1288); two other sons had died young of natural causes, and so Abbâs had left himself without an heir.

The third factor in the decline of the Safavids was the inordinate extension of the policy, begun under Abbâs I and continued under his successors, of converting manâshik to khdss provinces. By the end of the reign of Abbâs I, only those frontier provinces in which an instant response to enemy invasion was essential, remained in the hands of kizildag gover-
The military strength of the Safawid state was allowed to decline, the consequences were predictable; second, the administration of the provinces, by officials who were royal bailiffs or intendants and were little more than tax-farmers, was more oppressive than that of the khizilbash governors of mameluk provinces. As Minorsky says, Chardin, "in his paragraph on the Khāṣaqa, has unmasked one of the basic evils of administration which contributed to the fall of the dynasty" (Tadhkirat al-mulūk, 26).

The extent to which Safawid military power had declined was dramatically demonstrated in 1135/1722, when a small band of marauding Afghans succeeded in starving the Safawid capital into surrender.

Under the last two Safawid shahs, Sulaymān (1077-1105/1666-94) and Sulṭān Husayn (1105-35/1694-1722), the pace of decline accelerated. Both were weak and pliable rulers, products of the haram system. Sulaymān, an alcoholic, had little interest in affairs of state. His son, Shāh Sultān Husayn, was not better, and his derisive nickname "Mullā Husayn" is significant. Unrestrained by the authority of the ruler, the "privy council" of the women of the haram and the court eunuchs usurped power at the centre of the ruling institution. Equally serious was the emergence of the mudjāhidūn and other religious leaders as a powerful political force. The political role of the sadr was assumed first by the shaykh al-islām, and then, after the accession of Sultān Husayn Mīrzā, by a new official called the mudjāhidūn. There was an outpouring of works on Ithnā ‘Ashrī theology, jurisprudence and tradition and, as Shī‘ī orthodoxy became more rigidly formalised, there was increasing persecution of heretics. Sūfis, who had brought the Safawis to power, were now a principal target of the mudjāhidūn, one of whom even acquired the sobriquet of sufi-kūsh or "Sufi-slayer" (see Browne, LHP, iv, 386 ff.). ‘Abbās I’s policy of religious tolerance, which had been responsible for much of the economic prosperity of Persia during his reign, was abandoned. Not only did the usual targets, Christians and Jews, suffer as a result, but philosophers and non-conformist Muslims as well (see Morgan, Medieval Persia 1040-1779, London and New York 1988, 149). The upsurge of religious intolerance resulting from the increased power of the ‘ulamā’ also had economic consequences (see section II), and this factor must be added to Minorsky’s "more conspicuous factors" (Tadhkirat al-mulūk, 23) for Safavid decline.

In 1121/1709 Miḥr Wāṣīṣ, chief of the Ghalzay Afghans [see ghalsays], hitherto a vassal of the Safawids, rebelled and occupied Kandahār, and this was followed by the revolt of the Abdālī [q.v.] Afghans. Miḥr Wāṣīṣ’s successor, Mḥmūd, subdued the Abdālī and, in 1131/1719, led a force across the Dağht-i Lūl and entered Kirmān unopposed. Thus encouraged, he returned two years later with a larger force, and marched on Isfāhān. Vaccination on the part of the Shāh, treachery within the ranks of Safawid officials at Isfāhān, and the pacifically weak state of the Safawid army, enabled Mḥmūd to rout a mainly scratch Safawid force at Gulnābād near Isfāhān on 20 Dīnārī 1134/8 March 1722. Mḥmūd, his force too small to carry the city by storm, starved it into surrender six months later; on 1 Müharram 1135/12 October 1722 Sulṭān Husayn Shāh surrendered unconditionally, and handed over the crown to Mḥmūd.

The third son of Shāh Sultān Husayn, Tahmāsp Mīrzā, had escaped from Isfāhān during the Afghān siege, and had proclaimed himself Shāh at Kazvin on 30 Müharram 1135/10 November 1722 with the title of Tahmāsp II, but was driven out by the Afghāns and took refuge at Tabriz. An uprising of the townspeople of Kazvin against the Afghāns precipitated the slaughter by Mḥmūd in Isfāhān of Persian government officials, members of the nobility, and about 3,000 khizilbash guards. In 1137/1722 a report that Shāh Sultān Husayn’s second son, Sāfī Mīrzā, had escaped from Isfāhān caused Mḥmūd to put to death at least eighteen members of the Safawid royal family. Shortly afterwards, Mḥmūd was overthrown by his cousin Aḥsaf, who was proclaimed Shāh on 12 Shab‘a‘ān 1137/26 April 1725. The Afghān writ only ran in central and south-east Persia, and Aḥsaf’s efforts to seize Tahmāsp II failed. The strife in Persia tempted Tāṣrīpate the Great to occupy Darband and Bāḵū in 1135/1725, and in 1138-9/1726 the Ottomans also took advantage of the situation and once again invaded Aḏḥarbāyjān; this invasion led Aḥsaf to execute Shāh Sultān Husayn. In 1140/1727 Aḥsaf was forced to negotiate peace with the Ottomans and to recognise as Ottoman territory large areas of Persian Kurdistan, Aḏḥarbāyjān, Karābāgh and Georgia. In 1139/1726 Tahmāsp II was joined by Nādir Khān Aḥṣaf (see NĀDIR SHĀH AFSHAR), who dubbed himself Tahmāsp Kūlī Khān and claimed that his goal was the restoration of the Safawid monarchy. After winning a number of victories over the rival Kāḏārs and their Turcoman allies in Khūrāsān, and over the Aḏḥābīs, Nādir rout ed Aḥsaf, entered Isfahān on 16 Dūmādād 1142/7 December 1730, and placed Tahmāsp II on the throne.

After five years of campaigning (1142-2/1730-35), Nādir regained all Persian territory lost to the Ottomans (see Shaw, op. cit., 238-9, 245), and peace was negotiated on the basis of a reversion to the frontiers laid down in the Treaty of Zūhāb in 1049/1639. Nādir’s campaigns against the Russians were equally successful. By the terms of the Treaty of Raḥq (4 Shab‘a‘ān 1144/1 February 1732), Russia returned all Persian territory south of the river Kura, and by the Treaty of Gandja (28 Dhu ‘l-Hijja 1147/21 May 1735), Russia surrendered Bāḵū and Darband. On 17 Rabī‘ 1145/7 September 1732, Nādir deposed Tahmāsp II, and placed the latter’s son on the throne with the title of Ābbās III. Four years later, Nādir abandoned the pretence of restoring the Safawid monarchy, deposed ‘Abbās III, and had himself crowned Shāh on 24 Shawwāl 1148/8 March 1736 as the first ruler of the new Āfghān dynasty. During Nādir’s absence in India, his son Rīdā Kūlī Khān had Taḥmāsp II and ‘Abbās III put to death in 1152/1740, together with ‘Abbās’s younger brother Ismā‘īl (L. Lockhart, Nadīr Shah, London 1938, 177-8, 180). The accession of Nādir Shāh brought to an end more than two centuries of Safawid rule, which had enjoyed in name only since 1135/1722, but Safawid power, which was first restored under Shaḥ Sulṭān Husayn Shāh during the reign of the Afghān Aḥsaf, continued to manifest themselves as late as 1187/1773, under the Zands (see J. R. Perry, The last Safawids, in Iran JIBPS, ix [1971], 59-69).

II. Economic and commercial history; trade relations with Europe.

(i) European attempts to develop trade with Safawid Persia.
Trade has a way of ignoring national boundaries and the wishes of political leaders. Thus it was that, when the capture of Constantinople by the Ottomans in 1204 did not put an end to the trade of the Republic of Venice in the Black Sea, the Venetians found a temporary gap in the Ottoman defences in Karaman, and continued to trade with the Ak Koyunlu ruler Uzun Hasan via this route. The decisive defeat of Uzun Hasan by the Ottomans on the Upper Euphrates in 878/1473, and the final incorporation of Karaman into the Ottoman empire in 880/1475, sealed the end of this line of trade. In 1488, however, the Portuguese sea-captain Bartolomeu Dias rounded the Cape of Good Hope, thus outflanking the Ottoman empire and also the Italian city-states of Venice and Genoa, and opening up the possibility of trade with Persia via the Persian Gulf. In 913/1507, less than a decade after Vasco da Gama had reached India, the Portuguese, under the command of Afonso de Albuquerque, arrived in the Persian Gulf. The Portuguese Viceroy in India, at once saw the great strategic and commercial importance of Hormuz [see Hurmuz], and in 921/1515 he returned and occupied the city, thus establishing the first European foothold on Safavid territory. For the Portuguese, although the vassal (titulado) King of Hormuz had, by the Treaty of Minab (929-30/1523) granted them inter alia a site for the construction of a factory, the most lucrative aspect of their occupation of Hormuz was control of the customs.

The English, conceding control of the Persian Gulf to the Portuguese for more than a century, attempted to turn the northern flank of the Ottoman empire by opening up a trade route to Russia and Persia via the hazardous sea route north of Scandinavia to Archangel. The first English joint-stock company formed for this purpose, in 1553, was called "The Mysterie and Company of the Merchant Adventurers for the Discoverie of Regions, Dominions, Islands and Places unknown", and had Sebastian Cabot as its Governor. The Company was successively named "The Muscovy Company" and "The Russia Company". In 964-5/1557, Anthony Jenkinson and two other merchants reached Astrakhan, and crossed the Caspian Sea to Bukhara. Four years later, Jenkinson returned, and this time crossed the Caspian and landed on Safavid territory in Shirwan. On 23 Rabii* I 1562, he was received in audience by Shâh Tahmâsp, and delivered to him a letter from Elizabeth I, in which the Queen desired "to treat of friendship, and free passage of our Merchants and people, to repaire and traffique within his dominions, for to bring in our commodities, and to carry away thers to the honour of both princes, the mutual commoditie of both Realmes, and wealth of the Subjects" (Anthony Jenkinson, Early voyages and travels to Russia and Persia, Hakluyt Society, 1st Series, nos. Ixxii-Ixxiii, 2 vols., London 1886, i, 147). Although Shâh Tahmâsp dismissed Jenkinson with the remark "oh thou unbeliever, we have no neede to have friendship with the unbelievers", the Shâh's brother-in-law, Abd Allah Khân Ustadâ, governor of Shirwan, granted important trading privileges to the Muscovy Company; but the dangers of the sea-route to the White Sea, and attacks by bandits in the Volga region, caused the Company to abandon this route in 988-9/1581.

In the same year, English merchants tried to gain access to the Persian market by the overland route from the eastern Mediterranean across Syria and Mesopotamia. John Newberie, having reached Hormuz on the Persian Gulf by this overland route, persuaded the merchants of the recently formed Levant Company to interest themselves in trade with Persia, and in 996-7/1585 he returned to Persia hoping to open a factory at Hormuz. He and his fellow merchants were seized by the Portuguese commandant as heretics and spies, and sent to Goa to stand trial; they were subsequently released. In 1008-9/1600 John Middelhain, a London merchant, again took the overland route to Persia, and went on to India, but English attempts to open up trade with Persia by the overland route from the Levant proved no more successful than for their attempts to use the sea route north of Scandinavia.

By 988-9/1581, the Portuguese had fought off a challenge to their supremacy in the Persian Gulf from the Ottomans (see Savory, The history of the Persian Gulf, in A.J. Cottrell (ed.), The Persian Gulf states, Baltimore and London 1980, 23-4), but a new challenge faced them from the merchants of the English East India Company, founded in 1008-9/1600. On 12 Ramadan 1024/5 October 1615, two merchants of this Company, Richard Steele and John Crowther, obtained a farmân from Shâh ʿAbbâs I which ordered the Shâh's subjects "to kindly receive and entertaine the English Franks or Nation, at what time any of their ships or shipping shall arrive at Jasques (Djask), or any other of the Ports in our Kingdome: to conduct them and their Merchandise to what place or places they themselves desire: and that you shall see them safely defended about our Coasts, from any other Frank or Franks whatsoever" (Samuel Purchas, Hakluytus Posthumus or Purchas his pilgeroms, 20 vols., Glasgow 1905-71, iv, 279). The following year Edward Connock arrived at Djask to open a factory, and was cordially received by ʿAbbâs I, who granted the Company further privileges. This second farmân does not appear to be extant, but the gist of it is probably contained in the farmân of Shâh Saft dated 1038/1629, which inter alia gave English merchants the right to buy and sell freely in Persia; moreover, the English ambassador, when appointed, was empowered to appoint agents and factors in Persia (Sir Arnold T. Wilson, The Persian Gulf: an historical sketch from the earliest times to the beginning of the twentieth century, Oxford 1928, 139). In 1027-8/1618, ʿAbbâs I agreed not to export any silk to the Company in exchange for the payment of 5,000 rupees to Europe via Ottoman territory. He also promised to supply the English East India Company with a quantity of silk annually at a fixed rate, and to allow this silk to be exported from Persia free of duty. Portugal did not give up its monopoly of Persian Gulf trade without a fight, but a strong Portuguese squadron under Ruy Freyre de Andrade was defeated in two naval battles off Djask in Muharram-Rabi* I 1039/December-January 1621. These victories paved the way for the combined operation in 1031/1622 in which Safavid troops, transported by ships of the English East India Company, dislodged the Portuguese from Hormuz.

English ascendency was short-lived. The formation of the Dutch East India Company in 1602 signalled the determination of the Dutch to challenge both England and Portugal for control of the East Indies spice and pepper trade, and within a few years they were challenging the position of England in the Persian Gulf as well. In 1031/1622, under the terms of the agreement with ʿAbbâs I, the English East India Company was to receive one-half of all customs dues levied on merchandise passing through Bandar ʿAbbâs, but the Dutch refused to pay. On the accession of Saft I in 1038/1629, the Dutch outmanoeuvred the English and obtained important privileges from
The Safawids founded a factory at Bandar 'Abbās, and rapidly established a monopoly of the spice trade between Persia and the East Indies. In 1055/1645 they obtained from 'Abbās II a licence to buy silk and export it free of customs duty. The English, who succeeded in getting their privileges renewed by Shāh Safī only in 1042/1632, were fighting a losing battle. They started to move their factory from Bandar 'Abbās to Baṛa, but a Dutch squadron sailed to Baṛa and destroyed it. In the second half of the 11th/17th century, the Dutch reigned supreme in the Persian Gulf. The English, however, were maintained until 1722. The average value of Persia's exports in the 11th/17th century, of which silk constituted a major part, was between £ 1-2 million

The bases of the Safavid domestic economy were agriculture and pastoralism, and, as formerly under the Saljūqs and the Mongols, there was a dichotomy between the settled rural life of the peasants and the semi-nomadic life of the pastoralists. In addition, there was an ethnic dichotomy. The Turcoman tribes were cattle-breeders and lived apart from the surrounding population. They migrated from winter to summer quarters. They were organised in clans and obeyed their own chiefs (A.K.S. Lambton, Landlord and peasant in Persia, Oxford 1953, 106). The Persian peasants tilled the land and were subject to a system of land-tenure which had changed little since Abbas I's policy of making the silk trade a royal monopoly is said to have stifled the entrepreneurial spirit of Persian merchants. European travellers, however, attest to the flourishing state of the bazaars in Kāzvīn, Isfahān and Shīrāz, and it is doubtful whether Persian merchants could have survived European competition in the silk trade without state support. Indeed, they lacked sufficient capital to sustain trade on a large scale at all (R.W. Ferrier, Trade from mid-14th century to the end of the Safavid period, in Camb. hist. Iran, vi, 484).

Domestic trade alone could not have raised the Safavid state to the level of prosperity to which 'Abbās I aspired, and he devoted much effort to the development of international trade. In this effort, Jews and Indians played an important role as brokers, and Armenians as providers of international credit. 'Abbās I created a new suburb of Qulūfā [q.v. in Suppl.] at Isfahān, and transferred there several thousand Armenian families from Qulūfā in Aḍhar-baydā'īn. The third European Christian faith without harassment by the state (the Shāh even made a donation toward the cost of the Armenian cathedral), and 'Abbās I, by granting them the privilege of being represented by an Armenian mayor (kaldīntar [q.v.]), made them virtually an autonomous community (again, Ottoman parallels should be borne in mind [see Miller]). The Armenian merchants prospered, and travelled throughout Europe in pursuit of commerce. Much of their wealth derived from the silk trade, the organisation of which "must be regarded as one of 'Abbās's great organizational achievements" (N. Steensgaard, The Asian trade revolution of the seventeenth century, Chicago 1973, 381).

English merchants who tried to force down the Shāh's price by buying silk on the free market found themselves unable to do so (ibid., 377). Persian ambassadors accredited to European capitals were customarily required to include in their baggage some bales of silk; this rule applied even to ambassadors who were Europeans. With the accession of Shāh Saft (1038/1629), the royal monopoly on silk was broken, and money was diverted from the royal coffers to the pockets of Armenian merchants. For a time, Dutch merchants who, unlike the English East India Company factors, were not reluctant to co-operate with the Armenians, turned a profit by buying silk privately. In desperation, the English East India Company offered the Armenians in 1059-1100/1688 the status of "honorary Englishmen" (Ferrier, The Armenians and the East India Company in Persia in the seventeenth and early eighteenth century, in Economic History Review, 2nd series, xxii [1973], 50), but it was too late; the Armenians preferred the security of the Aleppo route, in cooperation with the East India Company. In the second half of the eighteenth century, the sea-route from the Persian Gulf (hostilities between the Ottomans and the Safawids had militated against the use of overland routes to Mediterranean ports, but the Treaty of Zuḥāb (1049/1639) ushered in a long period of peace between the two, and the overland routes once more became attractive). The English East India Company was no longer able to compete in the silk trade, and stopped buying Persian silk after 1049-50/1640 when silk prices in Europe slumped (J. Foran, Fragile resistance: social transformation in Iran from 1500 to the Revolution, Westview Press 1993, 65). In any case, by about 1059-60/1650 Bengal silk had become a cheaper source of supply for the East India Companies. In general, however, the patterns of trade established with Europe in the 1620s were maintained until 1722. The average value of Persia's exports in the 11th/17th century, of which silk constituted a major part, was borne in mind (ibid., 69). Carpets never constituted a large part of Safavid exports. Carpet workshops existed at Isfahān, Kāshān and Kirmān, and Shāh 'Abbās I, like his grandfather Shāh Tahmās I, was personally interested in developing the carpet-weaving industry. It was quicker, easier and cheaper for Europeans to import carpets from Turkey than from Persia during the long periods when the Ottomans and Safawids

SAFAWIDS

"..."
were at war. Safavid carpets were exported to Mughal India, to the Portuguese colony at Goa, and to Indonesia, mostly shipped by the Dutch East India Company. Some of them found their way to the Netherlands and the London market. The Safavids transformed a "simple produit artisanal des régions rurales" into "art dignes de la cour et des palais princes" (Naderer Ahrar-Zanganeh, Le tapis persan aux XVII et XVIII siècles: contribution à une sociologie de l'art persan, Lausanne 1984, 12), but the luxury carpet trade, depending as it did on royal patronage, declined after the overthrow of the Safavids (see Savory, in EIr, art. Carpet). Introduction, iv, 834-41.

Both internal and external factors contributed to the decline of the Persian economy after the time of 'Abbās II, and by the end of the 11th/17th century the balance of trade had turned against Persia. Silk production probably declined, and Persia began to import large quantities of cloth from India for which it had to pay cash. Furthermore, the Dutch drained large amounts of gold and silver from Persia as payment for spices (Foran, 67-79). The merchants with the greatest reserves of cash were the Armenians; the royal treasury tended to hoard the best coins, and in addition Indian moneylenders and Armenian merchants tended to take the better coins out of circulation or out of the country altogether. The result was a considerable degree of debasement of the currency. Nevertheless, there was little inflationary pressure on the economy until the Afghan occupation in 1135/1722, when it became a significant factor. Finally, the collapse of 'Abbās I's multicultural state with its policy of religious tolerance caused serious harm to the economy. The increased political influence of the 'ulamā in the last half-century of Safavid rule (the persecution of Jews under 'Abbās II was an earlier portent of things to come) led to persecution of Armenians and Hindu merchants and the forcible conversion of Jews and Zoroastrians to Islam. Many Zoroastrians fled to the Kirman area, where they welcomed the Afghans as "liberators". From 1131-2/1719 onwards, there were uprisings among non-Shī'ī minorities in Shirwān, Kūstār, Kūhžistān and Balūdžistān (Foran, 75 ff.). The dynamic struggles which followed the assassination of Nādir Shāh in 1160/1747 did still further damage to the economy, and, despite some of these found their way to the Netherlands under the Zands, a Select Committee appointed by the Court of Directors of the English East India Company concluded in the 1780s that "the comparison between the past and present state of Persia, in every respect, will be found truly deplorable" (see C. Issawi (ed.), The economic history of Iran 1800-1914, Chicago 1971, 86).

III. Literature.

It is still difficult to assess properly the effects of the Safavid conquest on the cultural life of Persia. There can be no doubt about the importance of the Safavid period to the history of Persian art. During the first half of the 16th century, the arts of the book flourished like never before. Calligraphy and book-painting benefited greatly from the patronage of the ruling dynasty and there was an equal interest in architecture, exemplified in particular by the magnificent buildings constructed in Fars during the first half of the 17th century. Philosophy also reached a high point of development in the works of Mullâ Ṣadr al-Dīn al-Shīrāzī [q.v.] and other members of his school. Literature, however, fared less well, according to a generally held view. The founding of the Safavid state, with all its momentous consequences for the social structure of the country and its religious life, allegedly brought the golden age of Persian literature to an end. From there on, a long period of decline set in, which was not only poor in new heights of literary art but actually led to stagnation and a deterioration of style.

One of the factors which helped to create this negative view on Safavid literature was the change of literary taste in Persia which occurred about the middle of the 18th century, shortly after the Safavid period had come to an end. This brought about a strong condemnation of excesses to which the Indian style [see SABK-I HINDI] in Persian poetry had led and a "return" (baṣaghā) to the standards of earlier styles. As a result, a neo-classicist view of post-Tīmūrid literature was established which not only left its mark on Persian literary criticism until the present day, but also had a great impact on evaluations by Western scholars. Only recently a more positive ap-
precipitation of the Indian style is emerging. This seems however not yet to have led to a proper distinction between Safavid literature and the Indian style, notwithstanding the fact that the latter did not have an effect on the poets of Persia until the second half of the rule of the Safawids. This seems however not yet to have led to a proper distinction between Safavid literature and the Indian style, notwithstanding the fact that the latter did not have an effect on the poets of Persia until the second half of the rule of the Safawids (see, for instance, E. Yarshater’s essay The Indian or Safavid style: progress or decline?). As a matter of fact, the 16th century constitutes a separate chapter in the history of Persian literature. The tadhkira writers of the period provide us with a lively picture of the literary scene in Safavid Persia, which is often quoted out of context. It has been given the significance of a radical turn from the traditions of court patronage by the Safavid dynasty as a whole, whereas it probably only points to a personal change of heart of one monarch, which temporarily brought to an end a period of exceptional- ly lavish patronage to the arts during the first half of the 16th century. It is, on the other hand, evident that a very substantial part of the poets and prose works produced in this period could be labelled either secular or mystical, but do carry specifically Shi‘i characteristics.

The Safawids, both the shahs and the other members of the royal house, were well-educated and often participated personally in artistic and literary pursuits. Already Isma‘il I (reigned 907-30/1501-24) resumed the traditional function of royal patronage, which had been fulfilled so brilliantly by two of his predecessors in the late 15th century: the Timurid Husayn Baykârâ (d. 912/1506) at Harât and the Ak-Koyunlu sultan Ya‘kîb (d. 896/1490) at Tabriz. In 917/1511, during ancup of state events, Ismail’s son Sharaf Djihan (d. 968/1560), the satirist Hayratî (d. 961/1553), Damîrî (d. after 985/1578), and ‘Abdî Bîg Nawudi (d. 988/1578). After Tahmâsp lost his interest in patronage, about 951/1544-5, the support of the central court to literature remained drastically reduced for several decades. This attitude had two noticeable consequences: the aforementioned emphasis on religious poetry, as exemplified in the works of Muhtasham (d. 996/1587), and the beginning of the exodus of poets and artists to Indian courts.

This emigration of literary talent, in which also many artists and scholars took part, began in the late 16th century and continued up to the reign of the Mughal Emperor Aurangzîb (1068-1118/1658-1707), should be seen against the background of the internationalisation of Persian civilization, which transformed the Islamic lands in Asia, in particular the Indian subcontinent, Uzbek Central Asia and the Ottoman Empire, but India was by far the most important. A great demand for poets from Persia arose which could not be matched by the often wavering patronage of the Safawids. As it appears from biographical sources, the motivations to travel to India were quite varied. Ghâzâlî of Ma’dhâd (d. in Gudjrât 980/1572), one of the first to leave Persia, fled from Shîrâz after he had been accused of heresy (sibâ’d). Others had run into difficulties with their patrons at home, or were allured by the prospect of fame and riches to be won at the Indian courts.

Patronage in Safawid Persia was not restricted to the court of the Shâh. Especially during the first century of Safawid rule, the courts of provincial governors, usually appointed by the Shah himself, attached to his personal court, or were allured by the prospect of fame and riches to be won at the Indian courts. This emigration of literary talent, in which also many artists and scholars took part, began in the late 16th century and continued up to the reign of the Mughal Emperor Aurangzîb (1068-1118/1658-1707), should be seen against the background of the internationalisation of Persian civilization, which transformed the Islamic lands in Asia, in particular the Indian subcontinent, Uzbek Central Asia and the Ottoman Empire, but India was by far the most important. A great demand for poets from Persia arose which could not be matched by the often wavering patronage of the Safawids. As it appears from biographical sources, the motivations to travel to India were quite varied. Ghâzâlî of Ma’dhâd (d. in Gudjrât 980/1572), one of the first to leave Persia, fled from Shîrâz after he had been accused of heresy (sibâ’d). Others had run into difficulties with their patrons at home, or were allured by the prospect of fame and riches to be won at the Indian courts.
Safawids

Sahabl of Astarabad (d. 1010/1601-2 [q.v.]), the master of the rubad of this period, who lived for many years as a recluse in the earliest period of the Safawids. Up to a certain extent, court poetry revived under Abbâs I (996-1038/1588-1629), first at Kazvin, and since 1598 at Isfahan. The position of a malik al-
gharârâ' [q.v.], was filled by Ruknâ Mašîh (d. 1066/1655 or 1070/1659-60), and then by Shâhî (d. 1037/1627). They both also served the Şâh as physicians. In 1006/1597 Mašîh went to India after he had been accused of giving too little attention to the patron's health. Discontent with the situation of the poets at the court of Isfahan was expressed by Kâthârî of Hamadân (d. after 1015/1606) when in a poem dedicated to Şâh Abbâs he made a reference to the lavish patronage offered at the courts of India ([Abd']l Ghani, ii, 168-71). On the other hand, it is reported that the poet Shânî received his weight in gold as a reward for a single felicitous line in honour of the Imam ʿAlî (ibid., ii, 163). Among the poets at Abbâs' court were further Fârîgeh (fl. ca. 1000/1591), Kamâlî (d. 1020/1611-2), and Zulâlî of Khânânsâr (d. 1024/1615).

A last period of great literary activity at the court of Isfahân were the reigns of Safî I (1038-52/1629-42) and Abbâs's II (1052-77/1642-66). This was the time of Djalât al-Dîn Asîr [q.v.] (d. 1049/1639-40), Kûshî (d. 1056-67), Amânî of Mâzânârân (d. 1061/1651), and Fâshî (d. ca. 1080/1670), but above all of Şârîb (d. 1088/1678-83 [q.v.], the greatest poet of Safawid literature.

The ghazal continued to be the principal poetic form, but the poets of the 16th century tried to renew its rather soulless and abstract features by developing a new style called already by contemporary writers wukâ'-guî or zâhân-i wukâ'. By this they meant the fashion to introduce references to actual experiences of love and incidents occurring in the relationship of lovers and their beloveds. Although the motives they used were usually conventional most of them belonged to the tradition of taghâzâl from the earliest period onwards, they succeeded in creating an elegant lyricism, written in a simple language, often close to everyday speech, and an unadorned style.

Bâbâ Fîghânî [q.v.] is frequently mentioned as a precursor near the shrine of Naqshbandi's representatives of which was Shâhrij Dîjâh. The wukâ' style generated a number of subsidiary genres, like the one called wa-sâkht, the theme of which was the lover's turning away from the beloved (cf. Gulînî-i Maşâni, Wukâ', 681-8), and kâda wa kâdar, on erotic incidents which exhibit the workings of fate. Towards the end of the 16th century, a much more ingenious idiom began to develop: it was characterized by the search for new and unusual images and a sophisticated use of the traditional motifs. In the 17th century, Şârîb brought the ghazal back to a more abstract level, without adding much to its stock of themes and motives. Recently his poetry, marked by the frequent use of proverbial illustration (irasât-i muthâf), has been revalued by Persian critics as an acceptable form of the Indian style, to which the term "style of Isfahân" is applied.

Ruba's was still occasionally used for courtly panegyrics, but far more often as a medium for mANKABA poetry, i.e. hymns praising the Prophet and the Imâms. Stanzaic poems became extremely popular for Shî'î elegies, like the famous dawzâdah-band of Mûbâţghâm. As a secular form of love poetry, expanded patterns known as musamadâr and murabba' were put into currency, especially by Wâbah; some of these poems have survived as popular songs. Mystical rubâ'îs were written in great numbers, as is evident from the anthologies compiled in this period. Intricate rhetorical artificialities, which had come into fashion already during the Timûrid period, continued to be used in topical quatrains, especially in chronograms. The quatrain was also frequently used for poems featuring young craftsmen, known as shahrangû [q.v.] or shahrâshûb. This genre was introduced at the court of Tahmûsp by Lîsânî and Wâhîdî. Many poets attempted to compose a šûmû [q.v.] after Nasîrî's example, or even a sa'da on the lines of Djamî [q.v.]. The most well-known new artistic genre was introduced: they were either taken from ancient lore (eg. the love between Sultan Mahmûd and his slave Ayânî, or they were newly invented as allegories. Outstanding muhâwâ'î poets were 'Abdî Bêg Nawîdi, who also wrote a work in imitation of Şâdî's Bâstân, Zulâlî, whose Mahmûd wa Ayân became very popular, and Shîfà'tî, the author of Namâdân-i ba'dîlak, in the style of Sanâî. Short mughâwâ'î usually dealt with themes related to the wukâ'-guî as it was fashionable in ghâzâl. Most court poets produced a Sâkî-nâmâ, based on motives derived from anacreontic verse, which could be either devoted to panegyrics or to mysticism.

Among the prose works written in Safawid Persia, the tadhkîras took a prominent place. They were written according to the principles of this genre, which had been established in the late Timûrid period by Djalâtâshâ and 'Ali Shîr Nawâ'î [q.v.]. The latter's work provided the model for Mâdînî's al-khawâvî, written in Caghatay Turkish by the painter and poet Sâdîkî Bêg [see further MUKTÂSAR]. 2. In Persian literature. The tadhkîras are also valuable sources of critical judgments on contemporary poetry. Among the historical works written under the Safawîs, Hasan Bêg Rûmî's Ahsân al-sawârîrî (980-1577) and Iskandar Mînâhî's [q.v.] Tâdhkîrâ-i 'alamârî-yi 'Abbâsî (1038/1629-89) deserve special mention. The Tâdhkîrâ-yi Şâh Tahmûsp is a contribution to historiography made by the Şâh himself on the basis of a speech delivered to Ottoman ambassadors at his court in 969/1562. In the religious sciences, including the flourishing school of Shî'î philosophy, Arabic remained the common linguistic medium. However, several remarkable works were written in Persian as well, e.g. the Djamî'î-i 'Abbâsî by Bahâ-dîn Aâmîlî [q.v.], on religious law and various related subjects, and the theological treatise Gauhar-i marunî by Mûllâ 'Abd al-Razzâk Lâhîdî [q.v.], one of the pupils of Mullâ Sadrâ, and a long series of theological writings by Muhammad Bâkîr Maqâlsî-yi Thânî [q.v.]. Persian literature of the Safawid period has been dealt with also elsewhere in this Encyclopaedia: see Vol. IV, Iran; VIII-Literature. 340b-344a; on the most important stylistic trend of the period [see SABK-I HIND].

IV. Religion, philosophy and science.

As for all pre-modern societies so Safawid-period developments in both the "high"/"elite" and the "low"/"popular" religious discourse, philosophical inquiry and certain areas of scientific theory and practice are most usefully understood in terms of the association of the practitioners with the patronage, 'lines of interest', links or influence of different segments of society. Because of a continuity with immediately preceding social formations, developments in the discourses of these disciplines tended to be enriched and enhanced rather than to suffer breaks with the pre-Safawid heritage. More often than not the written legacy of these disciplines is dominated by the producers of "high"/"elite" discourse, i.e. the literate few, usually protégés of the socio-economic and political elite. So limited was their number that the same few names frequently appear as practitioners in different disciplines. "Popular" expression in these disciplines is also visible in this period, however, in the religious and medical realms in particular. Indeed, such was the extent of "popular" antipathy of various non-elite, social groups to some "high"/"elite" practitioners and their sponsors among the political and socio-economic elite, that only the continuous support of the latter insured the survival, if not the triumph, of their protégés and their contributions in their own time sufficient to provide some legacy for the future.

1. Religious trends

The importance of such links of association and the extent of "popular" animosity toward elite practitioners and their court patrons is particularly evident in the religious discourse of the period.

There had been Shi‘i communities scattered throughout Persia since the disappearance of the Twelth Imam in 260/873-4. The establishment of Twelver Shi‘ism by Shah Isma‘ili I [q.v.] in 907/1501-2, the Southern capital (Tehran), the adoption of a repeat of the short-lived conversion to the faith of the Il-Khanid Sultan Öljeytu (d. 716/1316 [q.v.]) an event which must later have appeared to stem more from Realpolitik than from genuine conviction. Indeed, in the first century of the Safawids, the court's identification with, and efforts to patronise and promulgate, the faith met with limited success in Safawid territory and won little credibility within the Twelver community itself and, in fact, exacerbated existing differences between and among the Akhbariya and the Usuliyya [q.v.].

Isma‘ili interest in the faith had no basis in the history of the Safawid Sufi order. Initially, the order had comprised mainly Ṣafavi Sunnis, had maintained an attitude of political quietism and had claimed no special relationship to any member of the Prophet's family [see 1. above]. Following an influx of peasants and traders, the order had become militantly messianic movement under Shaykh Haydar (d. 851/1447) and Shaykh Djinayd (d. 893/1488) [q.v.]. During Isma‘ili's reign members of the Kizil-Bash [q.v.] elite evinced little interest in the details of the doctrines and practices of the newly established faith. Safawid religious discourse simply appended extremist Twelver interpretations to similarly radical representations of other religious traditions in order to legitimise the divine nature of the ruler and his mission: Isma‘ili depicted himself variously as "Jesus, son of Mary", various pre-Islamic Persian epic figures, as well as al-imam al-ṭalā al-kāmil ("the just, the perfect Imam"), the latter title being a reference both to a just secular ruler and, in Twelver terminology, to the Hidden Imam himself. Such allusions encouraged the reverence among the lower-ranking Kizil-Bash warriors required to fuel the constant struggle against such of the order's enemies as the Sunni Ozbegs and Ottomans, rival Shi‘i elements such as the Mughal ‘ilah [q.v.] and, through the competing Shi‘i messianic movements, whose social origins and religious inclinations often approximated those of the Safawids (Newman, The myst., 68-76).

If the Safawids' commitment to orthodox Twelver Shi‘ism seemed problematic, so was the existence of the Safawid polity itself. The constant wars between the Kizil-Bash and their opponents and the Safawids' repeated losses of territory to both the Ozbegs and the Ottomans throughout this period, only underscored the fragility of the Safawid experiment.

For Arab Twelver clerics resident outside Safawid territory, a special, additional source of aggravation was the open association with and services rendered to Safawid Shi‘ism by ‘Ali b. al-Husayn al-Karaki (d. 940/1534 [q.v.]) beginning soon after Isma‘ili's profession of faith, as well as the compensation for these which al-Karaki received in land and cash. In the Djabal ‘Amil region of Lebanon, both well-established and such younger scholars as Shaykh Zayn al-Din b. ‘Ali, called al-Shahid al-Thani (the second martyr) (d. 965/1557) and his student and associate al-Husayn b. ‘Abd al-Samad (d. 984/1576) expressed their disapproval of Safawid Shi‘ism and of al-Karaki by shunning all Safawid entanglements and territory, even though both al-Karaki and Shaykh Zayn al-Din were opponents of the Usuliyya tendency within Twelver Shi‘ism.

By this period, oying especially to the contributions of such scholars as Dja‘far b. al-Ḥasan al-Muḥakkiḥ al-Hillī (d. 676/1277) and al-Ḥasan b. Yusuf al-Allāmah al-Hillī (d. 726/1325) [q.v. who had "converted" Oldjeytu, the Usuliyya had stressed the application of subjective disciplines and rationalist principles, particularly the idea of certain scientific understandings, to "establish the certainties of faith") [q.v.]. A great number of Twelver-accepted revelation and the authorisation of al-fakih al-djami‘ is sharā’i al-fā‘a ("the legitimized of such those disciplines and principles permitted him to issue a fatwa") undertaken to perpetuate the period of occultation (ghayba [q.v.]) many practical activities reserved for the Imam during his presence, based on the Imam's designation of the fakih as his nābī (deputy). The Usuliyya also divided the community into the unschooled šammi (lay believer) and the mudajahid [q.v.], requiring the former to practice taklif [q.v.] of the latter's legal ruling and accept his authority over other matters of doctrine and practice within the community. In addition, the Usuliyya permitted to the fakih a wide scope of interaction with the secular political establishment, especially insofar it might protect or further the interests of the community. Al-Karaki initially argued that his involvement with the court was permitted by virtue of his being na‘īm to al-imam al-ṭalā, an implicit acceptance of Isma‘ili's claims to the imamate. Criticised on this point, al-Karaki advanced the concept of niṣāba ‘amma ("general delegation of the Imam's authority"), identified al-fakih al-djami‘ as l-sharā’i as nābī ‘amīm ("general deputy") of the Imam, and justified his involvement with the court as that permitted by the na‘īm’s status (the tyrannous ruler)
as leader of a non-Twelver political institution.

The open criticism of al-Karaki’s association with the court by some clerics from the Gulf and the Shi‘i shrines in cities like Isfahan, Shiraz, and Kerman, demonstrated the seriousness of al-Karaki’s linkages with the Twelver community. The continuing losses by the Safawids of substantial territories to the Ottomans, beginning a year after al-Karaki’s death in 941/1534 (including Baghdad and the shrine cities), the 962/1555 treaty formalising those losses, the chaos that further shook the ‘empire’ at the death of Tahmasp, and the effort to re-establish Sunnism under Isma‘il II (984/1576-9) only pointed to the imminent demise of the Safawid experiment and underlined the precarious position of the faith in Safawid hands. Indeed, pockets of Persian Sunnism, e.g. in Kazvin, remained viable over the entire period.

Prominent Twelver Uṣūli scholars continued their boycott of Safawid Shi‘ism in the latter part of the century. Neither Zayn al-Dīn’s son al-Hasan (d. 1011/1602-3), aged seven at his father’s death, or his relative and associate Sayyid Muhammad b. ‘Ali (d. 1009/1600)—authors of the important Ma‘ālim al-dīn and Madārīk al-akhām respectively—were removed from Ottoman territory. Both studied with al-Husayn b. ‘Abd al-Samad in the Lebanon and in ‘Irak with the Persian clerics ‘Abd Allāh al-Yazdī (d. 981/1573) and Ahmad b. Muhammad al-‘Arabī (d. 993/1585, author of the influential Maqāls fi al-fāʻāda wa Zuhbat al-baqā‘īn), both of whom had abandoned Safawid territory. Both also later forsook plans for a pilgrimage to Ma‘ūsh for fear ‘Abbās I (q.v.) would press them into his service.

The existence of significant Twelver communities located at and around the shrine cities of ‘Irāk, as well as the Gulf and the Lebanon, as alternative points of focus and independent bases for the community, facilitated both the Uṣūli and Akhbārī critiques of Safawī Shi‘ism in general and the manner in which al-Karaki had cast his lot with Safawī Shi‘ism in particular.

In the 11th/17th century, however, in a gradually improving politico-military atmosphere, the patronage of the court and the Safawī political and socio-economic circumstances proved to the establishment of Twelver communities in Persia. The development of these as alternatives to the educational centres and shrines located in Ottoman territory, especially those of ‘Irāk—captured in 1033/1623-4 but lost to the Ottomans in 1048/1638 and never retaken—and Mecca and Medina, complemented Safawī efforts to develop Persian centres of commerce and trade and stem the outflow of precious metals. Attention to economic considerations grew with rising expenditures and falling revenues over the century, particularly after the accession of ‘Abbās II in 1052/1642 (Matthee, Politics and trade, esp. 218-77, and 239, citing the 17th-century account of Tavernier; idem, The career of Mohammed Baj).
SAFAWIDS

efforts made to enhance the fame of that city and its

shrine.

Many individual clerics were often direct recipients of the

patronage which these programmes involved. As part of his

massive building programme in Isfahan, ʻAbbās built a school for ʻAbd Allāh al-

Shūghtari (d. 1021/1612-13), who had come to Persia from Nağšāb, where he

had studied with al-ʻArdašīr. ʻAbbās built a mosque for Luṭf Allāh al-Māvsī (d.

1032/1622-3), grandson of a Lebanese cleric who had avoided the court. Shaykh Bahā’ī,

who had served as Shaykh al-Īslām in Harāt and composed his Zad al-

wāli, an important work of Usūlī jurisprudence, was appointed to the same

post in Isfahan, took an active role in the capital's building programme and also

undertook domestic political missions for ʻAbbās, managing the shīḥ's constitution of his estates as

wakīf.

As these clerics' close connection with the court paralleled that of al-Karāki, so many observed and

built on his Usūlī pronouncements. All staunchly sup-

ported the conduct of Friday prayer service during the

occultation, for example, Mir Dāmād (d. 1040/1630-1

[q.v.])—whose father was son-in-law to al-Karāki, and

who had studied under students of al-Shāhīd al-

Thānī, including the father of Shaykh Bahā’ī, and

was a close associate of the courts of both ʻAbbās I and

Ṣafār—triumphed that prayer, and defined the

latter as the muddāžahid/fākīh who had attained

ghāṣī al-ṣiṣṭ. Shaykh Bahā’ī supported an active role for

the fākīh in the collection and distribution of the

zakāt, and khums, following similar rulings by earlier

Usūlī clerics. Their court connections affirmed these

clerics' committment endorsement of the fākīh's

associating with the established political institution,

and legitimised the court's claim to a special, indeed

exclusive, relationship with the faith itself.

These Persian centres and clerics increasingly

became a focus for the region's Twelver community,

attracting both Persian and Arab students and

producing many of the most prominent scholars of the

later 11th/17th century. Thus among Shaykh Bahā’ī's

students were Sadr al-Dīn Muhammad al-Shīrāzī (d.

1050/1640) [see Mullā Sadrā, and also below], Muhammad Takl al-Maqālī (d. 1070/1659

[q.v.], Bābāyān, 182-5, 189-91). The same

was to lead that prayer, and defined

open association of such of the Usulls as Shaykh

Abbas I with the

court. By later in the
century, the dispute had flourished to such an extent

that among the ever-larger number of Twelver clerics

in Persia following the accession of ʻAbbās I with the

open association of such of the Usūlīs as Shaykh

Bahā’ī and Mir Dāmād with the court. The Usūlīs and the moderate

Akhbārīs (muddāžahid-muhaddithīn), however, agreed on the

authority of the fākīh as ḍāmī ṣharā’ī al-ʿidghtahād

over matters of doctrine and practice and permission for him to interact with the established political

institutions. This latter group included Muhammad Aḥmad al-Āstārābādī (d. 1030/1640) (often identified

as the 'founder' of the Akhbarī school, see Kohlberg, 1957, and 1961; and such higher-ranking, court-

connected scholars at Isfahan and provincial centres as Muhammad Takl al-Maqālī, Khalīl al-Kazwīnī

(d. 1088/1677), Fayd al-Kāshānī, Muhammad Tāhir

b. Muhammad Husayn al-Shīrāzī al-Kumlī (d. 1098/1687, and Shaykh al-Īslām in Kum during the

reign of Shāh Sulaymān) and Muhammad b. al-

Hasan al-Ḥurr al-Amīlī (d. 1104/1693 [q.v.]) (who
came to Persia, settled in Mashhad, and was there ap-

pointed Shaykh al-Īslām). By contrast, the radical Akhbarīs (muhaddithīn) were particularly a force in the provincial and smaller cen-
tres of the faith inside Safavid Persia, such as Mashhad, and peripheral regions outside Safavid ter-

nery, where they were more likely strong among lower-ranking urban clerics and recent immigrants to the

cities. Unschooled in, and rejecting the validity of recourse to the juristic legal science of these clerics

relied solely on the ḍāmī ṣharā’ī in all matters of doctrine and practice; some rejected the Kurān itself as evidence (Newman, The nature of the Akhbarī Usūlī dispute).

Religious orthodoxy did not always win the day among all segments of the 'lay' community. "Popular" religious practices and customs, of which the court and its clerical protégés disapproved and tried to suppress or control, remained widespread.
Coffee-houses, for example, were a ubiquitous feature of the country, particularly in the second Safavid century owing to the rapid urbanisation of such cities as Isfahan. These were patronised by all classes of people, but especially by such of the "lower" orders as artists, poets, tellers of religious stories, scholars, musicians and Sufis. When the court perceived its interests were threatened, it enlisted the clergy to crack down on these and other "popular" pastimes and activities. The "purge" of 999/1593 coincided with the "victory" of al-Karaki over his opponents, for example (Rumië, 115). In the second Safavid century, the mid-century encouragement of the court to develop independent religious centres, the court capitalised on clerical orthodoxy to check any coffee-house based dissent and to focus popular attention on minority merchants as prominent, subordinate, actors in the country's economic life. 'Abbâb I feared the overtly political nature of coffee-house conversations, and assigned clerics to monitor activities in coffee-houses and to preach sermons on Islamic law or lead prayers. 'Abbâb II's vizier Khâlîfâ Sulțân launched a widespread, if also temporary, suppression of certain coffee-house excesses, wine-drinking and prostitution, and a similarly short-lived effort to convert the country's Jews—like that undertaken by 'Abbâb I—and to restrict certain activities of Armenian merchants (Matthee, Coffee in Safavid Iran, esp. 26-50; ibidem, The career of Muhammed Beg, 27-9; Al-e Dawud, Coffeehouses, 1-2; Babayan, The warning, 255-6).

Also problematic were Sûfî influences rivalling the paramounty of the Safavid Sûfï order and the associated hegemonic position of the Usûli clerical establishment. These challenges frequently involved elements of rural and urban jârri Sûfism and became especially ominous when linked with messianic revivals among both rural and intra-Khâtîl-Bâsh tribal movements. The various phases of the Nuktawîya [q.v.] "herezy" typified these connections and the resultant Safavid concern, especially the Nuktâwî rebellion against 'Abbâb I in 1002/1593, in which both members of the Khâtîl-Bâsh Confederation and disaffected urban elements were implicated (Babayan, op. cit., 46-7; Amorotti, Religion, 644-5). The khârîj of Elîlâr al-Brû (853) warned against its messianic overtones and the support the latter engendered among some Safavid gnêns (Babayan, op. cit., 103-4). The urbanisation trends of the second Safavid century further encouraged the rise of urban-based lower-class "popular" Sûfï movements.

The Usûli/Akhbârî polemic intersected with the broader concern with Sûfî influence. Members of each madhhîb denounced Sûfî orders and their "heretical" practices, but imputing "low" Sûfî tendencies especially became a device of the lower-ranking, or otherwise peripheralised, clerics with which to assault the small number of court-supported Usûli and moderate Akhbâri clerics and their associates. These were a small group, often conveniently related by ties of family and education, whose interests in aspects of ûlûm-"high" philosophical or gnostic inquiry were as exclusive and elitist in doctrine and practice as their jurisprudence. These denunciations were especially frequent during the second Safavid century, coinciding with court efforts to combat such Sûfî-oriented movements as the Nuktâwî and that of Darwîsh Ridâj, the still-strong Sûfî proclivities among the Khâtîl-Bâsh and the Sûfî influence in the rapidly expanding urban centres, including e.g. Isfahan. Such criticism won sufficiently widespread appeal to help force the resignation of Shaykh Bahârî as Shaykh al-îslâm in Isfahan. Bahârî's student Mullâ Sadrâ Sîrîrazî was likewise charged with Sûfî inclinations; Rahman (The philosophy of Mullâ Sadrâ, 2-3) has suggested that Sadrâ's disagreement with his teacher Mîr Dâmîd and his subsequent repudiation of such concepts as wa'hdât al-wujûd, as in his Tarh al-kawâым, can at least be partly explained as the result of such attacks. Sadrâ's only Persian-language prose work, Sîh asl, was a defence against allegations of Sûfî tendencies.

The interest of Fayd al-Kâschâni—a student of Bahârî, Mîr Dâmîd, and Sadrâ, and the latter's son-in-law—"offered an incitation, stemming from a growing appreciation of the potential and real attacks against him for his court and family connections and his own philosophical interests. In fact, Fayd accepted enough of Usûli doctrine—arguing that the command of the ghârî was sufficient justification for the performance of Friday prayer, leading Friday prayer in Isfahan and ruling that the fâkâh, based on al-nâyâb, ought to oversee the collection and distribution of al-khums—to qualify him as a mudjibdân-mudâdith, whose philosophical proclivities similarly tended to the "high", exclusive gnosticism of his teachers. Sazâwârî was also attacked for his purported Sûfî tendencies.

Later in the century, Muhammad Bâkir al-Maqâlî, another associate of the court and Shaykh al-îslâm of the capital, was forced into a posthumous defence of his father Muhammad Ta'akî—like Fayd al-Kâschâni a mudjibdân-mudâdith with philosophical tendencies—against charges that the former was a Sûfî. His own disclaimer of interest in and his censure of Sûfism and philosophy, and also his work with Twelver hadîth, at least partly stemmed from concern lest he be subjected to similar attacks from the same quarters. Nevertheless, al-Maqâlî exhibited some interest in Islamic exoterica, and his essay on the Jews at-tâbîc al-Yahûdî, a balanced, if stern, discussion of the general duties enjoined on the ahl al-dhimma, in which he stated that some prohibitions were without legal foundation and in which he permitted Muslim rulers a widelatitude in implementing any or all of them.

If widespread approval for anti-Sûfî polemics increased such "distances" in Usûli discourse, the court's backing for its clerical supporters nevertheless assured their dominance of key religious institutions, and thus the material wherewithal to continue their intellectual activity throughout the period. By later in the Safavid period, the Persian centres of the faith were on a par with, if they had not eclipsed, the Irakî shrines, and developments in the Usûli and Akhbârî traditions in this period enabled the faith to weather its disestablishment following the fall of the Safavid house. Akhbaris fled to the Sufi shrines and were eventually defeated as a force within the community by al-Wâhid al-Bihbahânî (Cole, Shi'i clerics, esp. 15-23).

Crucial to and further cementing this Sûfî triumph, however, was the Safavid-period articulation of concepts enhancing clerical authority within the community. The final formalisation of the concept of al-mudjibdân-mudâdith, for example, was crucial in their differentiation in the clerical hierarchy and the subsequent evolution of such concepts as mardûf'i taklid (the source of emulation) [q.v.], the rankings of hadjâj al-îslâm [see Hudjâj] and ayûbîlîh [q.v. in Suppl.] and, eventually, the principle of government by an expert in jurisprudence, or 'ulûmî-îslâm. The Usûlîs' recovery of control over the Persian Shi'i religious institution—the schools, shrines and mosques—and Khâzâr patronage of the faith, on the
Safavid model, provided the clergy with resources to maintain and eventually activate these concepts in spite of, if not also as much because of, the hostility of the various established political institutions and their ubiquitous foreign backers.

II. Philosophy in the Safavid period

The written legacy of the practitioners of ‘‘high’’ philosophical and rationalist religious discussion identifies them as members of the same tiny, scholarly class who traditionally served and identified with the agencies of the established clerical institutions. The conditional nature of court interest and support, the inherent tendency to restrict the scope for inquiry permitted the untrained, and the extent to which the scope and style of their inquiry was determined by the preceding discourse, were thus as much features of ‘‘high’’ philosophical inquiry as the ‘‘high’’ religious one. As leading Usuli scholars, these philosophers also participated in the teaching and training of future generations of Shi'i philosophers, thus enhancing the reputation of the Persian centres of education and study as well as creating a new class of clerics whose interests were linked with those of the political and socio-economic elite.

That the careers and scholarly agenda of the ‘‘high’’/‘‘elite’’ philosophers of the Safavid and earlier periods were more similar than not, is evident from examining figures who lived through both. Djalal al-Din Muhammad Dawani (830/1426-908/1502-03 [q.v.]), for example, was based in Shiraz and studied with students of al-Sjarif al-Djurdjani (d. 816/1413 [q.v.]) and teachers of Ibn Hadjar al-Askalani (d. 892/1449 [q.v.]). Dawani enjoyed the patronage of and served the region’s pre-Safavid political establishments, including the Timurid Abu Sa‘id (d. 878/1471-72 [q.v.]) and the Ottoman sultan Bayezid II (d. 910/1512 [q.v.]).

Although his philosophical contributions have yet to receive detailed, comparative attention, Dawani appears to have been primarily a reviver of aspects of the Illuminist tradition, while remaining loyal to the rationalist aspects of Ibn Sin’a’s thought (Rahman, The philosophy of Mulla Sadra, 9). Like Suhrawardl (d. 578/1191 [q.v.]), he is said to have rejected Ismail’s messianic claims. Dawani maintained that existence had one reality and no multiplicity. Like Nasr al-Din Tusi’s observatory at Maragha (see also below, subsection II. ii), Dawani’s cosmology involved the gradual unfolding of intellectuals, spheres, elements, and kingdoms. The active intellect—which he identified with the original essence of the Prophet—bridges the gap between heaven and earth.

The revolutions of the spheres, by nature stationary but changeable in quality, control the material world and create new situations wherein the active intellect engendered a new form to reflect itself in the mirror of elemental matter. In this way, the intellect passes through the various states of matter and finally appears in man in the form of acquired intellect, eventually re-acquiring its original form of unity of collective potential. This circular process he termed harakat-i wadwi. The motions in the process are in fact the shadow of motions proceeding from God’s desire for self-manifestation; the mystical term this the flashing of Self upon Self. In his metaphysical al-Zauna, Dawani elevated mysticism above philosophy, even as he asserted both had the same goal, because mysticism benefited from divine grace and so was free from doubt and uncertainty and thus nearer to prophethood.

At the same time, some of his works clearly reflect his other role as a royal scribe, the career for which he was probably as well, if not better, known at court. His works in this genre, written for royal benefactors, included a description of a military review in Fars entitled ʿArdr-nama, and his contribution to the ‘‘mirror for princes’’ genre Al-Safar al-ʿUqalı. Indeed, he also dedicated his royal patrons his Ibn Badis-style commentary Sharawil al-ʿnur on the Hayakal al-ʿnur of Suhravardi.

Although later sources contend that he was a Shī‘ī practising takyyiyya prior to the rise of Isma‘ili, Dawani’s Sunni proclivities were unequivocal in his early works. Even after the Safavid occupation of Tabriz, he is said to have identified with ʿAla‘ al-Din al-Hilli. The court functionary’s traditional capacity for adjustment was evident, however, in Dawani’s almost perfunctorily Shī‘ī work Nūr al-hildya, probably composed as the Safawids approached Shiraz, where he died before the city’s capture. Dawani’s student Djamal al-Din al-Astarabadi (d. 931/1524-5) was the sixth Safavid sadr but, like his teacher, was more comfortable with philosophical disputes than the tenets of the newly established faith (Newman, The myth, 75 n. 24).

Dawani clashed with his contemporary Sa‘d al-Din Muhammad Daštaki (d. 903/1498), another ‘‘high’’ philosopher associated with both the Timurid and Safavid courts, both in treatises and also in glosses on works by al-Tusi and Suhravardi. Sa‘d al-Din’s son Ghiyath al-Din Mansur (see also the preceding section) continued the anti-Dawani polemic after the death of the original protagonists. Although the details are still poorly understood, the disagreement involved points of debate well within the tradition of Islamic ‘‘high’’ philosophy to date. Dawani, like Suhravardi, argued e.g. that existence had but one, single reality, where Ghiyath al-Din argued there was no existence at all.

Like Dawani and his own father, Ghiyath al-Din was as much a court protégé and functionary as other Shirazi philosophers in the tradition of Kurb al-Din al-Sharazi [q.v.; see also below, subsection III. ii], himself a student of al-Tusi. Ghiyath al-Din maintained good relations with Bayezid II, and served as vizier to the Timurid Sultan Husayn Baykara (r. 874-911/1469-1506 [q.v.]). Although for the Safawids the religio-political proclivities of both Daštakis were less important than their status as prospective court functionaries, later Safavid and post-Safavid biographers claimed that Sa‘d al-Din Muhammad was the first openly Shī‘ī member of the family. Shah Isma‘ili reportedly called on Ghiyath al-Din to undertake repairs to al-Tusi’s observatory at Maragha [q.v.] (see also below, subsection III. ii), and in 936/1529 Ta‘mînasp appointed him co-sadr with al-Hilli. Ghiyath al-Din’s challenge to al-Karaki coincided with, if it did not support, that of al-Hilli and certain tribal elements (see above). At his dismissal, Ghiyath al-Din returned to Shiraz’s Manṣūriyya school.

Members of Nasr and Corbin’s ‘‘Isfahan School of Philosophy’’—Shaykh Bahâ‘i, Mir Dâmdâr, Mullâ Sa‘dâr, Fâydl al-Kâshâni, Mir Findiriski (d. 1050/1640 [q.v. in Suppl.]) and ʿAbd al-Razzâk al-Lâhidji (d. 1072/1662 [q.v.])—the ‘‘high’’ philosophers of the second Safavid century, were similarly close associates of the court but with clear-cut allegiances to the basic tenets of Usuli Shi‘ism. Like Ghiyath al-Din, their fortunes varied with broader socio-religious and political trends. Like him also, they served the court also as scribes. However, spurred on by the interest of Nasr and Corbin, analysis has revealed they advanced important contributions to Islamic philosophy.

Nasr and Corbin distinguished Mir Dâmdâr—student of both Shaykh Bahâ‘i and the latter’s...
father—as the outstanding figure of Safawid-period philosophy. Subsequent Persian evaluations have only echoed this assessment, according him such titles as Sayyid al-bukamal ("Master of the wise men"), Sayyid al-jalâlisâ ("Master of the philosophers"), and mu'allim-i nûsâbû ("the third teacher"), after Aristotle and al-Fârâbî [q.v.].

Mir Dâmad's contribution to Usûlî doctrine and practice has been noted. His philosophical accomplishment was to build on the interpretations of Shârârî and Sayyid al-fâldsîfa ("Master of the philosophers") and the manuscripts of Mulla Dârâ and to revive Ibn Sinâ's metaphysics and transform it from a purely rational, abstract system of thought into a spiritual reality through the application of Ishrâkî principles within a Shi'î framework. His reconfiguration of issues of time and the relation between the eternal (kîdan) and the created (hududh) produced his most famous philosophical contribution, the concept of hududh-i dâhri ("origination, or creation, in perpetuity"). The latter distinguished three, separate and distinguishable levels of being and postulated a middle level (dâhri) between the immutatable world (sarmad) and the changing world (zamân), in which the two are related and through which the eternal, unchanging reality manifests itself in the world. Mir Dâmad's merging of Avicennan philosophy with Shârârî's illuminationism within a Shi'î framework informed the thought of later Safawid-period philosophers, including that of his students Mulla Sa'drâ, Mir Dâmad's son-in-law Sayyid Ahmad 'Alawi and Mullâ Shamsâ Gilânî (d. 1098/1686-7). The latter, especially, continued Mir Dâmad's efforts to harmonize aspects of the contributions of Ibn Sinâ and Shârârî.

Sa'drâ al-Dîn Muhammad Shîrâzî was born ca. 980/1571 to an aristocratic Shîrâzî family. In Isfahan he studied the Twelver Shi'î religious sciences with Shâhîk Bahâ'î and the rationalist, philosophical disciples with Mir Dâmad, spent more than a decade in Kahak near Kum, after which he was invited by 'Abbas II to return to Shîrâz to teach. He spent the last thirty years of his life teaching at the court of Khâân Khân. In 1025/1617-18, he was invited by the governor of Fars—during which time he completed many of his best-known works. Sa'drâ's thought built on that of Mir Dâmad in order to integrate Ibn Sinâ's thought with Ishrâkî interpretations through a Twelver Shi'î framework. Initially, Sa'drâ agreed with Mir Dâmad and Shârârî on the principality of essence, while existence was an unreal mental, phenomenal derivative. Eventually, however, as he made clear in his magnum opus al-Asfâr al-arba'â, when he was nearly sixty, he agreed with Ibn Sinâ's understanding of the principality of existence (îsâlat al-wududh) over essence, even as he accepted the notion that existence, while a single reality (thus following Dâvânî and Mir Dâmad), manifested itself luminously in different degrees and stages (Rahman, The philosophy, 1-3; Nasr, Three Muslim sages, 67).

Sa'drâ's debt to Shârârî was manifested itself in his adherence to the notion of "trans-substantial motion" (al-haraka al-djawhariyya). Ibn Sinâ had rejected this concept and denied the reality of "Platonic ideas". As Sa'drâ held that a single reality revealed itself in varying degrees and stages and upheld the notion of Platonic ideas of archetypes of things which became manifest in the world, al-âharaka al-djawhariyya became the means by which the substance of these changed and evolved to a stage where they achieved immutability. Likewise, man himself can achieve this state. Indeed, for Sa'drâ the goal of hikma is precisely the realisation of this status. Thus trans-substantial motion is Sa'drâ both a point of metaphysics and of natural philosophy.

Sa'drâ's doctrines also included many of the basic principles of gnosticism as formulated by Ibn al-Arâbî [q.v.], as Sa'drâ understood the necessity for a relationship between mystical experience and logical thinking.

In harmonising philosophy and gnostics, Mullâ Sa'drâ was building on the work of Islamic thinkers from the 6th/12th to the 10th/16th century, including Kubb al-Dîn Shîrâzî, al-Djûrdjâni, Haydar Amûlî, Radjab Bursî, Ibn Turka Iṣfâhânî, Ibn Abl Dîmîurmûr Ahsâ'î [q.v. in Suppl.] and Mir Dâmad himself. However, unlike some of these earlier scholars, Sa'drâ grounded his reconciliation of these two traditions of inquiry firmly in the revelation of Twelver Shi'ism.

Note is the fact that Sa'drâ composed nearly all of his works in Arabic, reflecting the fact that his intended audience was based in the exceedingly tiny class of highly sophisticated, mainly religious thinkers of the time. In his own time, the influence of Sa'drâ's thought was quite limited, though links to Aḥbârî and Shaykhî thought have been suggested (Morris, The wisdom, 49). In the Kâṣîrî period, Sa'drâ's contributions were re-activated by Mullâ Hâdî Sabzawârî (d. 1295/1878 or 1298/1880-1 [q.v.]).

Sa'drâ's students included his son-in-law Fîyd al-Kâhânî and al-Lâhîdî, another son-in-law, who himself taught Muhammad b. Sa'îd Kummî, Kâdî Sa'îd Kummî (d. 1103/1691). In addition to being a judge, Kummî was also a physician and a gnostic, even as he, like the earlier generation of Iṣfâhân School members, worked solidly within the framework of Twelver Shi'ism. Indeed, as summarised by Corbin, at the hands of Mir Dâmad, Sa'drâ and Kâdî Sa'îd Kummî "the two principles of gnosis and hikma became the Shi'îte philosophy" (Creative imagination, 23).

It has been suggested that Mir Findirîski was also a student of Mullâ Sa'drâ. Mir Findirîski was a prominent figure both at court and among such of his contemporaries as Mir Dâmad and Shaykh Bahâ'î, involved himself in some Sûfî practices, lived a simple, ascetic lifestyle, travelled to India several times and was familiar with aspects of Hinduism as well as with such of the occult sciences as alchemy. If he studied with Sa'drâ, his own "high" gnostic interests manifested themselves in a closer affiliation with Ibn Sinâ and included a denial of Sa'drâ's notion of trans-substantial motion. Among his students were Mullâ Râfî'î Gilânî (d. 1082/1671-2), the Usûlî jurisprudent Muhammad Bâkîr Sabzawârî (see the preceding section), the jurisprudent and philosopher Aghâ Husayn Khân 'Aqînî (d. 1080/1670-90), and Radjab 'Ali Tabrizî (d. 1080/1670-70). The latter, also an opponent of trans-substantial motion, taught Kâdî Sa'îd Kummî.

The prolonged attack against the "high" scholasticism practised by these philosophers and like-minded religious scholars in the second Šafawî century is discussed in the preceding section.

III. Science and society in the Šafawî period

As the patrons and practitioners of "high" philoso-
The court and its associates were themselves directly affected by illness in this period. Isma'il died in 965/1557 from a fever which the great medical writer Baha'I, in his son's testament, said his father had a great fear of (tab-i muharrak), an event leading to a fina at court (Kumml, i, 588). He was cured, but died of another illness two years later; in that instance one attending physician was executed for his treasonously unsuccessful efforts (ibid., i, 600). Muhammad Kuhdabanda had an eye problem which Elgood put down to "corneal opacity"—this being acknowledged as a universal cure, but are perhaps better known for separate monographs on specific, practical medical issues, many of which were written for their royal patrons. Bahā' al-Dawla's magnus opus Khulsat al-ta'jīrāb was arranged like al-Rāzi's al-Ḥāwī. ʿImād-al-Dīn composed a general medical work in the style of the older books, but also an essay on the chinese root (ṭibb-i dīn)—this herb was reckoned for a universal cure, and which ʿImād tested cured internal addiction, baldness, rheumatism and haemorrhoids—and one on the bezozar stone. His essay on syphilis is said to have caused Ghīyāth al-Dīn Daḥtakī's fear of the illness (Elgood, 52-3, 24). In addition to his essay on alcohol, Hamawī also wrote an essay on the chinese root, tea and coffee for Abābū I on ophthalmology during the later's Tabriz campaign; in fact, probably owing to the circumstancies of its composition, it also covers wounds, ulcers and syphilis (Elgood, 69). Hākīm Muhāmmad's work on surgery was dedicated to Shāh ʿAbbās, and included chapters on pre- and post-operative procedures. This work suggests that most surgery was for accidents and wounds; the few operations of choice included castration and circumcision. The author devoted some space to description of surgical instruments, and a section to anaesthetics (Elgood, s.v., and esp. 153-4). A large number of pharmacopoeias [see AKBĀBĀHĪN] were written in this period, including the Tābīb-i ḥelal of Muḥaffāz b. Muhāmmad al-Husaynī al-Shīrāzī (d. 974/1565), the basis for the French work of 1681, the Pharmacopoeia persica of Father Angelus (Elgood, 33-4).

Although belonging to the Galenic tradition, these writers were not themselves unobservant or uncritical.
Elgood, himself a practising physician, credited Baha al-Dawla with the first accounts of whooping cough decades before the European account (Elgood, 279-80, xiv). He also commended Bahâ's awareness of raised blood pressure during pregnancy (270-1). The surgeon al-Madžîli devotes a lengthy section of his book to the necessity of cleaning surgical knives between uses, perhaps, as Elgood suggested, having observed the problem of implanting diseased cells from one patient to another (160). Hakim Muhammad also noted the tendency for cancer of the breast to reappear elsewhere in the body after a mastectomy (ibid., 188, 231).

Indeed, women's illnesses and matters of pregnancy and fertility were frequently addressed in both medical textbooks and monographs. The latter included the essay of Murtaza Kull Khan b. Hasan Shamli—not a medical practitioner at all, but one-time governor of Kurn—dedicated to Shâh Sulaymân and titled Khiṣâ-yi Khânûn dar 'ilm-i tibb (“Women's rags on the science of medicine”), and that of Shâh Sulaymân's court physician, Mirâ'ât al-Qanâl (“Mirror of beauty”). Such writings, some of whom derived from earlier medical and religious texts, covered such matters as birth control and abortion, morning sickness, breast feeding and early childhood illnesses.

Given the occasional, spectacular lack of success of these court physicians with their most important patient/patron, and probably also due to the shâhs' tribal backgrounds, the court was also sympathetic to non-Galenic theories and practices.

Prophetic medicine was also a source of medical understanding. Among the Shî'as, in particular, there was a tradition of medicine based on the hadith of the Imâms and thus amenable to easy memorisation. As early as the 3rd/9th century collection Tibb al-a'tûma, this Shî'î medical tradition included elements of the Galenic tradition, but also cited the Imâms' advice on preventive medicine, abstention from certain foods, cupping and cauterisation, the use of particular blends of herbs and spices, and statements involving 'magic' and warnings about and prayers to counter the evil eye (Tibb al-a'tûma, Preface). In his anatomical treatise Ibn Ilyâs, although not a Shî'î, accorded equal weight to the prophetic and Galenic medical traditions. In the Safavid period, 'All Afdal Kâfî included citations from earlier prophetic traditions in his Karhâhid (Elgood, 36-8). Muhammad Bakir al-Madjîlî, author of the treatise of Ibn Ilyâs, declared his allegiance to the Imams' advice on medicine, including a Galenic-style discussion of human anatomy followed by chapters of medical statements credited to the Imâms drawn from such early sources as Tibb al-a'tûma. As al-Madjîlî's compilation was the product of the Uslûl court effort to promulgate its vision of orthodoxy throughout Safavid territory, however, the inclusion of a medical section also suggests an effort to challenge less orthodox—perhaps especially, for example, Sunnit—based, or radical Albâhârī—prophetic medical traditions.

Evidence of other sources of medical theories and customs of the semi-literate and especially the illiterate classes (the bulk of the population in Safavid Persia) can also be inferred. Pre-Safavid medical texts often included citations of Persian-language medical verses on a variety of subjects. The anatomical treatise of Ibn Ilyâs, Taqârî-yi Manşârî, cited verse 391 using the formal Arabic anatomical terminology similar to the medical verse of Ibn Sinâ, already available in Persian. In style, however, Ibn Ilyâs's citations resemble the little-known Persian verse of the 3rd/9th century Persian physician Hakim Maysarî (Dânîsh-nâmâ dar 'ilm-i pazâgî) the mid-19th century. The scanning and rhyming schemes of such verse facilitated its memorisation, and might have been especially useful for the semi-literate practitioners with whom the bulk of the population was most likely to come into contact.

Safavid-period medical writers continued this tradition. In the early 10th/16th century, Yusuf b. Muhammad of Harât composed several works of medical verse, including a versified discussion of illnesses which an individual far from any doctor might have to treat himself. 'All Afdal Kâfî, author of the phyarmacopoeia Karâhîdîn, quoted some medical verse (Elgood, 18, 113-15, 117). Ibn Ilyâs's anatomy, with its medical verse, was also much copied in this period.

Other traditions of medical explanation were also available. Celestial events, including the appearance of a fiery comet in 1027/1617-18, for example, were blamed for subsequent wars and uprisings in Europe and the Ottoman empire, widespread pestilence in Gîlân and Mâzandarân (predicted by astrologers after the comet's appearance), an earthquake in Kûrânshâh in 1028/1618-19, the death of many commoners and nobles, and, together with the terrible heat of Mazandarân, the illness of 'Abbas himself the next year (Munshi, ii, 1162-8, 1176). Shaykh Bahâ's death in 1030/1620-1 came after hearing a voice during prayers at the tomb of Bâbâ Rûkûn al-Dîn Isfahânî. After this incident he 'prepared himself for death' as he predicted, three months later he fell ill and died (Munshi, ii, 1189-90).

Aware of their own limitations and of the challenges of other traditions, the court-based medical practitioners did practice some medical pluralism. Bahâ al-Dawla prescribed certain incantations in the case of plague, and magic before surgery in the case of certain instances of the urethra being blocked (Elgood, 173-4, 179). Hakim Muhammad, although generally disavowing all sorts of magic, charms, and the evil eye, noted certain bone fractures required divine intervention (Elgood, xvi). The court's interest in astrology is also clear, as recounted above. Indeed, sometimes rulers consulted its practitioners about the suggestions of the Galenic practitioners (Minorsky, 57-8, 128).

The court was keenly aware of the importance of public welfare generally to the stability of the broader socio-political fabric. In response to the 910/1505 famine and the death of Bâbâ Rûkûn al-Dîn Isfahânî, Isfahân ordered the sale of grain, and eventually also the execution of the responsible official owing to his poor response to the crisis (Rumlu, 36). 'Abbas I, following an earthquake that struck Shîr-wân [q.v.] while he and his party were in the region, ordered court phlebotomists to bleed the injured after which, it was reported, they 'revived a little' (Munshi, i, 928-9).

The court also took practical measures to secure the flow and quality control of health services in particular. In the second Safavid century, 'physicians, including druggists and perfume-sellers (qâbârdîn)—probably including such individuals as the opium seller, the seller of henna, and the seller of musk and perfume, and perhaps the surgeon (gârâst), the stitcher (bakhva-dûz) (Keyvani, 263-4) and perhaps also the eye specialist (kawkâz) (Elgood, 56, 63)—comprised one of the thirty-three main guilds in Isfahân, each of which would have been headed by a bâgh (Keyvani, 49-50). Some of these professions apparently had well-defined ranks: the surgeon rank comprised the master surgeon (ustâd), the bone-setter (mudjâbîr), and the barber (sâlmâni) who, however, was considered of lower-status and did not have a shop in the bazaar.
The court's purpose in maintaining an administrative apparatus for the guilds was both to maintain quality control and to organise these crafts for its own use. The court met its needs from the ministerial apparatus for the guilds was both to jurisprudent Fayd al-Kashanl was among those who within the royal workshops for such groups as "drugists and perfumers" (Attdr-bdshi (chief pharmacist")—with the position of chief of the entire profession. He also designated a physician for any member of the court requesting one (dispensary), the latter

Such earlier medical writers as al-Djurdjrnl spoke called were drawn from the same small circle of orthodox" practices and individuals.

The Safawids were more interested in and exercised greater control over guilds than had Timurids (Keyvani, 63). Indeed, sometime in the 11th/17th century, the court established the post of Hakim-baği ("chief doctor"), combining the position of the şah's personal physician—in which he was assisted by the ʿAjār-baği ("chief pharmacist")—with the position of chief of the entire profession. He also designated a physician for any member of the court requesting one (Minorsky, 57, 128).

Such earlier medical writers as al-Djurdjrnl spoke with respect of the importance and role of midwives (Elgood, 205-7, 219-20, 227-8, 266-7, 281). Keyvani (177) noted the preponderance of Jews among Isfahan's midwives. He also cited the presence of Jewish druggists and observed that the Armenian barber could perform cupping as well as bleeding, and...
the latest European discoveries; the subsequent influence of these plates appears to have been negligible, however (Savage-Smith, Celestial mapping, 65-8). Shaykh Bahāʾī, again, dedicated a short essay on the astrolabe to a minister of ʿAbbās I (Winter, 592).

Divinatory methods considered less orthodox today also appear to have enjoyed official support. Djalal al-Dīn Muḥammad b. ʿAbd Allāh Yazdī, author of the court chronicle Tarāḥ-i ʿAbbāsī and chief astronomer to ʿAbbās I, also composed an essay on ramī (geoman- cy) for Kāhn Ahmad al-Husaynī, ruler of Gilān.

Related to the work in the astronomical sciences was that done in ʿilm al-hisāb [q. v.] or mathematics. Not surprisingly, perhaps, such close associates of the court as Shaykh Bahāʾī were among those who composed essays in this field.

iii. Military technology

Patterns of developments in military technology are similarly explicable in relation to the larger Persian social formation and the Safavid politico-military achievement itself.

Firearms were available and used in Persia from the 9th/15th century and cannon were used by the Safavid armies in their sieges of Anatolian cities of the Ottoman empire. The Safavid interest in the new technology was spurred on by the Čaldārīn defeat in 920/1514. Šafawī dākhās received both firearms and cannon from the Tsars and requested both of these from Tuscany and the Pope. ʿAbbās I received ar- quebues from Russia, Venice and England, the latter after the East Indian Company established relations with the court (Matthee, Firearms). There are frequent references to musketeers (ṣafangīli) and artillery (tūfāngā) in the late Safawī administrative manual Tuḥfahāt al-mulūk, and one of the 33 main guards of Isfāhān (Ṣafavī guardsmen)3, comprising makers of bows and arrows as well as makers of rifle stocks, rifles and gunpowder (Keyvanī, 50).

Nevertheless, muskets and arquebues, cannon and siege artillery, never achieved widespread use in Safawī armies. The mounted warriors of these armies spurned use of the former, "clumsy, cumber- some, and quite ineffective", noisy form of weaponry, which was continued to be used by the Kīzīl-Baḥāī in Persia at this time (Matthee, The nature of the Kīzīl-Baḥāī forces, under-utilised these weapons, by contrast with such similar formations as the Ottoman Janissaries, and a similar Russian contingent, who were trained in and equipped with the latest technology (Matthee, op. cit.).

Especially in comparison with Persia's Ottoman and Mughal neighbours, the general lack of wheeled transport and the Persian physical environment—e.g. the lack of navigable waterways—hindered the wide-spread incorporation of heavy field and siege artillery, although it was clearly available. The mining of ingre- dients crucial for the production of cannon and gunpowder—sulphur, saltpetre, charcoal and such metals as iron, copper and tin—was extremely difficult in this period. Heavy artillery also was of little use to Persian military strategy, which was based on the ambush and a scorchcd earth policy and not on open confrontion with the enemy (ibid.).

Siege artillery was little used by the Safawī armies for a variety of reasons. In this period, rulers left many cities unvalled or did not maintain city walls, devoting attention instead to the citadels within the cities. The extension of Šafawī power kept Persia's cities safe from internal threats and protected the interior ones from external threats. Moreover, the con- tinued importance of the Šafawī Bābā Ābbās in Persia society ensured that non-urbanised regions, the stepspe in particular, were the subject of comparably greater at- tention.

Finally, the Šafawīs' main enemies on the north and east, particularly the Özbegs, Afghans and Balōţī, utilised firearms less than the Šafawīs themselves, providing little impetus for the Šafawīs to change their military tactics. Unwieldy artillery was of little use in battle involving mounted cavalry. The Balōţī and Afghan advance into Šafawī territory, culminating in the capture of Isfāhān in 1135/1722, was accomplished mainly without firearms. It was starvage which finally forced the city's surrender to the invaders, and not the few mounted guns which did appear there (Matthee, Firearms; and see further on the whole topic, Bākī, v. Šafawīs).

SAFAWIDS 787

V. Arts and architecture.
